Still, to our home growers such information would be of much use in guiding them as to their future conduct of barley-growing. We have reached a point which is urgently calling upon us to have it cleared up. Should we continue in our effort to grow fine barleys? Or shall we give it up, and sacrifice

quality for quantity?

On this point many growers would be glad to learn the opinions of their friends the maltsters, and also would like to know how brewers feel about it. All further reduction in the total bulk of malt made has a vital bearing upon the case. If smaller amounts of malt are to be brewed year by year it need not necessarily follow that such action should be allowed to shatter the industry. Other modes of working must be tried, and foremost amongst these is the deliberate adoption of the policy of throwing over all further attempts to please brewers, and to grow the greatest possible bulk of the best description of food for stock. Fortunately, it happens that the last position is a reconcilable one, and it may ultimately work out that by the use of the best types of manures to secure bulk, barley of the maximum feeding value may be grown also, and at remunerative prices.

There is another aspect of cleaning up which should not be overlooked. Many maltsters as soon as they leave off work leave everything at rest, and even if they intend to make structural improvements or enlargements, let everything stand over till later in the summer. This is a great mistake. All alterations contemplated should be commenced promptly, and in no case should

dirt and dust stand.

Its removal can be just as readily effected now as later, and if cleared away it ceases to act as a hotbed of contagion and evil.

The old idea of starting clean, is one that is best modernised into keeping clean. Cisterns, growing-floors, and kilns should be taken in hand at once, and whatever methods of purification may be used by any maltster, he is wise to put them in hand now, instead of wasting three or four of the most beautiful months of the year. The very conditions that make it impossible for him to keep on work are those that give potency for evil to dirt and filth of every type. It is better to clean up twice than to leave it now, for the ultimate cost or loss will in every case turn out smaller. Barley stores can be carefully freed from all dust, and it is wise to whitewash them. Kilns and growing-floors call for prompt treatment, but the special kind depends upon the individual judgment of their owners. Whatever is done should be better than leaving them alone.

Home Notes.

The Borough.

Business has been naturally interfered with by the Whitsun holidays, but on the whole the present tone of the market is satisfactory. Inquiries continue to be fairly numerous, and some transactions have been completed on terms that are fully equal to previous currencies. The main demand is still for choice samples, but such selections being practically non-existent, except a few parcels that are held by merchants, they can only be bought at prices which are almost prohibitive, therefore buyers are forced to accept other grades, the best of which will now command advanced figures. Some attention is also being given to the more plentiful low qualities, and in their turn they are feeling a little of the prevalent firmness, which is stimulated by the continued cold weather, and the consequent relaxation of selling pressure recently exercised by planters. The main bulk of the unsold stocks left in first hands appears to consist of Sussex and Worcester growths, and under present circumstance it is probable that the values of these lots will tend towards improvement.

From the Plantations.

I hear that, generally, the young plants are sound, but very backward. Recent reports refer to the shoots turning yellow in some places, and everywhere there has been but little progress in growth during the past fortnight. The inland parts of Kent have suffered rather severely from the keen winds and night frosts. I am told that near Maidstone, no less than 10 degrees of frost were registered on one recent occasion. It is, therefore, reasonable to expect that the delicate hop plants must have been damaged, in common with other vegetation, the whole of which is held in check by our trying climate. That this is actually the case is proved by the action of some growers, who, seeing that the shoots are weak, have decided to rouse them up by the application of strong nitrogenous manures. I trust that these will not be generally resorted to, as I am convinced that such policy is erroneous, for if any measures are taken to raise anything beyond a very moderate field, a fatal blunder will have been committed. It may result in a crop which will be far in excess of actual requirements, and accompanied by deterioration of quality, by which we have lost and are still losing so heavily. An expert correspondent writes to me: "An average crop this year will be too large to be a paying one, while a big crop will be an appalling disaster." I emphatically endorse these striking words. They are absolutely true, and should be seriously taken note of by every English planter. Therefore every stimulant to the growing hops should be studiously avoided. They should be left to take their natural course, however unfavourable the climatic conditions may be. Can it be that

growers have forgotten the existence of the cold stores, or do they disbelieve the statements made concerning this most urgent matter? Should either of these suppositions be true, let me try to emphasise the reality of the risks they are running by a short narrative of my own recent experience. Last week, in company with a friend from the Continent, I visited one of the

Largest Cold Stores

in London. I was deeply impressed, though not much surprised, by what I saw. Elaborate and costly machinery is constantly at work, supplying currents of air at 28 to 29deg. Fahrenheit to a range of warehouses with a capacity of 900,000 cubic feet, which will contain 30,000 pockets of hops. Every foot of this great space has been engaged during the whole of the season, and at the present moment over 28,000 pockets are in the stores. Had the warehouses been larger they would have been filled, as application for space for over 15,000 pockets have been declined. When we entered the massive, hermetically-closed doors, we were greeted with the delightful strong aroma of freshly-bagged hops, proving that the flavour is not in the slightest degree destroyed by the process. We passed through apparently interminable narrow alleys formed by pockets and bales, piled to the ceiling of each warehouse. The atmosphere we breathed, though intensely cold, was, in consequence of its dryness, not unpleasantly perceptible. We were informed that within 48 hours from the time the hops are warehoused the centre of each pocket becomes as cold as the exterior, and we had proof that the condition is not damaged, or even affected, by examining some pockets, from which an opening enabled us to extract the contents. There are some lots that have been kept under these conditions upwards of four years, which still retain all the characteristics of the latest growths, and the increased demand by brewers for storage space is sufficient practical evidence that they approve the system.

These are facts comparatively new in the history of our trade, the immense importance of which to the future of our industry cannot possibly be over-estimated. Our planters will realise it when they are told next September that brewers are well supplied, and can afford to postpone buying. Weariness of waiting will probably result, and if the crop is more than very moderate our produce will again be slaughtered, as brewers will be able to dictate their own terms. The only weapon we possess wherewith to defend ourselves is

Limitation of Supply.

If we may hope to sharpen the appetite of our customers, we can only do so by growing a small crop, not exceeding 200,000 to 250,000cwt. To this end farming operations this year should be regulated, and if, with such a moderate yield, exceptionally excellent quality can be secured, we may be certain that, not only will remunerative prices rule next season, but a foundation will have been laid on which a superstructure of permanent prosperity may be ultimately raised.

Hops at the Brewers' Exhibition.

At a meeting of the Executive Council of the Herefordshire and Worcestershire Hop-Growers' Association it was resolved that a prize of £25 be offered for competition in hops at the Brewers' Exhibition, October 18-24, 1902, the prizes to be awarded to any hop-grower producing the sample that upon analysis shows the greatest amount of resins, or, in other words, the best brewing properties, all hops grown in England, irrespective of district, eligible. Entrance free, but cost of analysis to be paid by entrant, except in the cases of those awarded first or scond prizes in Classes I., II., IV., and VI., who will only have to pay half the cost of analysis, the association being prepared to defray the other half, in order to secure a representative competition.

Foreign Notes.

Nuremberg.

A very moderate amount of business is passing, local buying having been much reduced. A little support was given to the market by some export orders, but these were not large enough to check the tendency towards weakness, which has been recently manifest. The range of prices is now very wide, owing to the superabundance of inferior lots still remaining unsold. Consumers will not entertain these qualities, therefore they are quoted in some instances as low as 30s. to 40s. But the value of any samples that can lay claim to colour and condition is still well maintained, best scaled Hallertons being held at 100s. to 105s., best Wurtembergs at 85s. to 90s., Badens 85s. to 95s., Saag 95s. to 105s., and Russians 80s. to 90s. Dealers are not anxious sellers of the higher grades, as they fully expect to realise better figures as the summer opens, but their patience is sorely tried by the continued cold weather, which has culminated in snow and frost in many districts.

The new growth

is being held in suspense, the progress made in April practically remaining at the same point for several weeks past. The young shoots need warmth, and although the condition of the soil has been favourable to cultivation, and the roots are healthy, the low temperature and cold rains have hindered development above ground. Nevertheless, planters are looking forward with confidence, and it appears probable that the yield throughout Germany, from the increased acreage, will be substantially larger than that of last year. In addition to the enlargement of the hop area in Germany previously referred to, I am advised that in Russia, and especially in the district of Volkynia, the plantations are more numerous this year.

Belgium.

Although business is quiet, values of hops have not materially declined. Alost 8 marks are quoted up to 48 francs, and Poperinghes stand at 47 to 48 francs. The present tendency is, however, towards lower quotations, the prolongation of the cold spring having checked the consumption of beer and diminished the output of the breweries. The plantations generally present a satisfactory aspect, although the progress of the growth is extremely slow, and warmer weather is anxiously looked for by traders in general, and by hop-growers in particular.

America.

Brewers are not buying many hops, but when compelled to replenish their stock, they do not hesitate to pay the advanced prices now firmly established. The New York market is very strong at the higher figures, which are now far in excess of the same period of two years ago. State hops are relatively holding a firmer position than Pacific Coast growths, in consequence of the scarcity of choice samples of the former, and yearlings and olds from all districts are in demand by dealers at full prices. Choice grades are being closely followed upwards by medium qualities, the lowest quotations for this class now standing at 16 to 17 cents, and the commonest Pacific being held at 11 to 12 cents.

From Madison Co. (N.Y.) I hear that new yards are being planted to replace some old ones that are ploughed up. Growers appear to be encouraged by the firm position of the market, and confidently anticipate a remunerative season this year.

The receipts of hops at New York from September 1st to May 2nd last were 79,312 bales, against 133,422 bales same time last year. Exports to Europe during this period have fallen from 58,534 bales in 1900-1 to 40,230 bales this season. Judging by the increasing consumption of beer in the U.S.A., it does not seem probable that the local demand for hops is likely to diminish. The outlook for the industry is therefore favourable on the whole survey of the position, and it does not at present appear that American competition will be a serious factor in the course of English business next season.

Appleby Whitsuntide Hirings took place on Monday, when there were plenty of masters and a good number of servants present, but business was slow, and high wages were asked. Female labour was scarce, particularly young girls. Good experienced men got £16 to £18, and in exceptional cases to £20 for the half-year to Martinmas. Second-class men £13 to £15, and young lads £6 to £8. Young women £10 to £12, and girls £9 to £10 the half-year.

Birmingham Horse Fair.—As a useful institution the Birmingham Horse Fair has practically ceased to exist. On Thursday the Whitsuntide fair took place in the Horse Fair, Bristol Street. The attendance of buyers and sellers was the smallest on record, and the market officials were unable to obtain any reliable prices. The animals were, as usual, drawn up on either side of the thoroughfare, along which they were in turn ridden or driven. Speaking generally, the animals were of an inferior character, fully a score changing hands at prices under £10. The really good cobs and heavy horses on show could have been counted on one's fingers. Very little business was done.

Carlisle Whitsuntide Hirings.—The Carlisle Whitsuntide hirings of farm servants were held on the 17th inst., in wet and stormy weather. There was a large attendance of all classes of servants, and being the first hirings in the district, high wages were asked all round. The best class of men asked up to £20 for the half-year ending Martinmas next, but £16 or £17 was, generally speaking, the highest wages obtained, anything above this being exceptional. Second-class men were engaged at from £10 to £13, and lads at from about £5 to £8, according to their age and capability. Women were scarce and difficult to hire, engagements being come to at £12 to £13 for the most experienced; others obtained from £9 or £10 upwards, whilst girls were hired at from £5 to £8, according to their age and usefulness. On the whole the hirings were slow and dragging.

SOCIETIES.

The Royal Agricultural Society.

Annual Meeting.

The sixty-third anniversary meeting of the Royal Agricultural Society was held on Thursday in the Society's House, 12, Hanover Square, London, H.R.H. Prince Christian (president) in the chair. Among those present were the Earl of Coventry, the Earl of Derby, Viscount Sidmouth, the President of the Board of Agriculture (Mr. Hanbury), Sir Walter Gilbey, Bart., Sir Oswald Mosley, Bart., Sir William Vincent, Bart., Mr. T. H. Elliott (Permanent Secretary to the Board of Agriculture), and Sir Ernest Clarke (Secretary of the Society).

The first business of the meeting was the election of president for the ensuing year, and the secretary read a letter from His Royal Highness the Prince of Wales, in which His Royal Highness expressed the pleasure he would have in accepting the position, and stating that he looked upon it as a duty as well as a pleasure to accept the honour they offered him.

Mr. Hanbury, who was received with cheers, said the letter which they had just heard read from His Royal Highness the Prince of Wales, accepting the office of president for the ensuing year—a letter the gracious character of which, he thought, was enhanced by the fact that the reply to their invitation was sent on the very day on which it was received—was a further proof of the active patronage and cordial co-operation which the Royal Family had always shown in connection with that great Society. Agriculture was, of course, the prince of industries, and it was surely well that our Princes should exhibit the special interest in that industry, which for so many years they had invariably shown. The presence of Prince Christian in the chair that day was proof of the distinction with which the office of president of the Society was being held during the present year. But this was not the first year, by any means, in which they had been so honoured. During 61 years, covering nearly the whole period of her illustrious reign, Queen Victoria was patron of the Society, and during the Jubilee year, when the meeting was held at Windsor, she was president of the Society. The Prince Consort was also president during another year. His Majesty King Edward VII. had been president on no less than four occasions, and now they were glad to know that the King had succeeded Queen Victoria as Patron of the Society over which, during four years, he was president. With regard to the Prince of Wales he joined the Society ten years ago, in the year 1892, as a Life Governor. In 1895 he became a Member of the Council, and in 1897, the year in which he became president of the Society, he also became a trustee. Therefore, the Prince of Wales would not enter on his duties during the ensuing year as a novice. A novice, indeed, they could not take him to be in any sense of the word, because they all knew the great success with which the Prince of Wales and the King had exhibited at their various shows. They had taken deep interest in agriculture generally, particularly in connection with the Society. Perhaps he might be allowed to refer to the speech which the Prince of Wales made on his return from his tour at the Mansion House. Possible the advice which His Royal Highness then gave, to "Wake up," might be applicable also to our oldest industry, that of agriculture, or, at any rate, to some branches of it; but he felt quite sure that the vivifying influence of His Royal Highness, as president of the Society, would have a most encouraging effect on that body. Agriculture, although the oldest industry, was one which must constantly renew its youth. Perhaps more than any other it had to deal with new discoveries, new methods, and, he was afraid also, with new competitors from year to year. Therefore it was well that they should have a president of a progressive character. It was a very high honour to be allowed to propose, as he had now the privilege of proposing, "That His Royal Highness the Prince of Wales be elected president of this Society during the year following the meeting at Carlisle.' (Cheers.)

Mr. C. S. Read, in seconding the motion, referred to the association of the King and the Prince of Wales with Norfolk, and to the deep interest they took in every charitable, patriotic, and philanthropic movement in that county. The Royal Agricultural Society, in giving up its wanderings for a settled home in London, was only too glad to be honoured with the presidency of the Prince of Wales in the coming year. (Cheers.)

The chairman congratulated the Society upon the fact that the Prince of Wales would be president during the ensuing year, and the resolution was carried.

The trustees, vice-presidents, and council having been re-elected,

The Secretary then read the annual report, extracts from which were printed in our last issue.

Sir William Vincent, in moving the adoption of the report, said it was satisfactory to note that

the assets of the society showed a considerable increase over last year, and that no insect attack had been reported. On the whole the report was satisfactory, and showed the value of such an institution constantly on the watch to help agriculturists to find out some of the causes which were a constant source of disappointment. He asked if any information could be given with regard to the attack on oak trees, which had been so prevalent where they were largely grown. The state of things with regard to the contagious diseases of animals was in some respects very satisfactory.

Mr. James Edwards (Bristol), in seconding the motion, referred to the permanent showyard near London, to which the society was committed, and said he hoped opportunity might be taken to give an area for a trial ground for tillage implements.

The President said they had suffered a great deal in Windsor Park from caterpillars. The moths laid the eggs in the bark of the trees, and the early caterpillars grew with the leaves. He had been in communication with people in Germany on the subject, but could obtain no remedy. The only thing seemed to be to encourage the starlings, which destroyed the caterpillars, as much as possible.

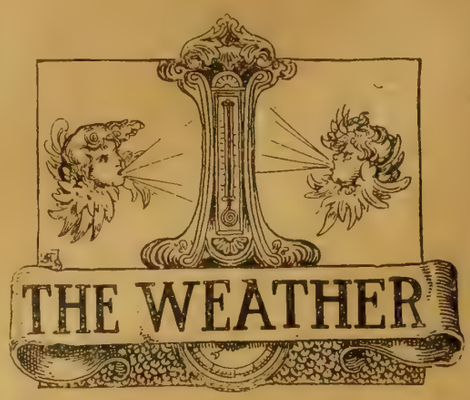
The report was carried unanimously.

Mr. Clare Sewell Read suggested that the Council should consider the practicability of having a permanent seed-testing establishment for national use, open to every owner, farmer, and seedsman, for certain well-regulated fees. The Central Chamber of Agriculture was about to ask the President of the Board of Agriculture to undertake the task, but he hoped that gentleman would make a better use of his money, for he thought it had better be done by the Royal Agricultural Society. (Hear, hear.)

Sir Ernest Clarke said there would be a conference on June 5 next between the delegates of the Highland and Agricultural Society of Scotland and the Royal Agricultural Society for the purpose of ascertaining whether it was possible for the two national societies to agree upon a common line of action on the question and upon a uniform method of testing seeds and reporting results. (Hear, hear.) Mr. Read's suggestion would be placed before that conference.

A vote of thanks to the President terminated the proceedings.

Yorkshire Union.



The next general meeting of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture will be held at the Agricultural Club House, Pavement, York, on Thursday, June 12th, at 2.30 p.m., the agenda for which is as follows:

1. General business.
2. Communications.
3. Sheep scab and the dipping of sheep.—Report of the General Purposes Committee.
4. The Rating of Machinery Bill and the Education Bill.—Report of the Parliamentary Committee.
5. The butter regulations.—Report of the Education and Dairying Committee.
6. The supply of empty railway waggons.—Report of the Railway Rates Committee.
7. Sheep-worrying by dogs.—To be introduced by the President.

Sleaford May Hiring.—The May hirings at Sleaford took place on Monday, when the attendance was the largest on record. Wages had an upward tendency, but a large amount of hiring was done. Milkmaids were extremely scarce, and experienced females commanded higher wages than ever previously. Head waggoners made £20 to £25; second hands, £16 to £18; horsemen, £18 to £20; plough boys, £12 to £15; farm lads, £8 to £10; young girls, £8 to £10; generals, £16 to £18; cooks, £18 to £22.

Twenty per Cent. Reduction of Rent.—At the Earl of Derby's rent audit on Thursday for the townships of Macclesfield Forest, Rainow, and Wildboarclough, the tenants received an allowance of 20 per cent. for the half-year. A telegram was received from the Earl of Derby regretting that his duties in connection with the Coronation, and as Guild Mayor of Preston, prevented him being present.

Helmsley Spring Fair.—At this fair on Monday there was a large attendance of both buyers and dealers, and a lot of stock on offer. There was a general disposition to sell, and prices were low. For sheep, good Leicester hogs in wool made 36s. to 46s.; ewes, 25s. to 40s.; and Masham hogs, 22s. to 30s. each. For bullocks, three-year-olds in forward condition made £11 to £14; two-year-olds, £7 to £10; year old, £4 to £6; and calving cows, £10 to £16. There was a big show of horses, and fairly good prices were realised. Good carters made up to £40; young carters, from two years old, up to £20; 'bus horses or light drays, £27 to £28; and army cobs, up to £30 per head. Young stock were not much in evidence, and inferior quality were a drug on the market.

Friday (May 16th).—The weather was generally very unsettled over our islands, but a considerable rise of temperature had occurred. Rain was measured nearly everywhere in the morning, as the result of the fall in the preceding twenty-four hours, but the amounts were mostly small. There was a large amount of cloud during the day over the whole country, and rain again fell in many places. There was no frost in any part of England during Thursday night, but temperatures during the day were again low for the time of year.

Saturday and Sunday (May 17th and 18th).—The weather continued very unsettled over our islands during these two days, and heavy rain fell over the whole country. On Saturday a cyclonic disturbance had its centre over Scotland, and later in the day it travelled South-Eastwards, occasioning a considerable increase of wind from the North-West. During Saturday evening a North-West gale was experienced in the English Channel, and the wind was strong on our coasts yesterday. The nights were fairly warm, the thermometer generally not falling below 40deg., but the days continued cold for the time of year, the readings nowhere touching 60deg.

Monday (May 19th).—Strong and squally North and North-West winds prevailed over our islands, and showers were again experienced in many places. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, over the entire country, but the amounts were not generally large. The mid-day temperatures were again unseasonably low, the thermometer in the shade nowhere touching 60deg. There was a fair amount of bright sunshine during the day, especially in the Northern and Western districts.

Tuesday (May 20th).—A cold Northerly wind was blowing over our islands, and the temperature still remained very low for the time of year. Small amounts of rain were measured in the morning, as the result of the fall in the preceding twenty-four hours, except at a few of the Western stations, and slight showers were experienced again during the day. Temperature varied considerably in different part of the country during Monday night, readings ranging between 35deg. and 45deg., while during the day the highest readings were generally 10deg. or more below the average.

Wednesday (May 21st).—Fine weather prevailed in most parts of our islands, and although the wind continued chiefly from the North and North-West, it had moderated considerably. Slight rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, at a few places in different parts of the Kingdom; but the air had become drier than of late. Temperature had risen in most places, although readings were still low for the time of year, the thermometer at mid-day standing highest in the South-West districts.

Thursday (May 22nd).—A considerable change has occurred in the weather over our islands, and the winds were everywhere Westerly or South-Westerly. A further rise of temperature had occurred, but, owing to the great prevalence of cloud, the day readings continued low for the time of the year. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, at many places in the North and West, where further rain again fell during the day, and the rain area was extending to other parts of the United Kingdom. The temperature nowhere touched 60deg., and in London, where rain fell throughout the afternoon, the highest reading of the thermometer was 57deg.

Friday (May 23rd).—A further rise of temperature had, yesterday, occurred over our islands, and in Scotland and the north of England, notwithstanding that the weather was dull and rainy, the thermometer touched a higher point than on any previous occasion this month, the reading in the shade exceeding sixty degrees. Rain had fallen since Thursday morning over the entire Kingdom, and the measurements were large at some of the western stations. There was a further fall of rain in many places during the day, and fog or mist was very prevalent. The day was dull and gloomy in London, but there was no rain after the early morning; the temperature in the afternoon touched sixty degrees, which is warmer than any previous day this month.

Saturday and Sunday (May 24th and 25th).—Very fine weather prevailed over our islands during these two days, and the temperature touched a higher reading than on any previous day this year. In the Midland districts the thermometer in the shade rose to seventy degrees, and the temperature was generally above the average. The nights were also warm, and the whole character of the weather had changed in this respect. Scarcely any rain fell anywhere, and very little rain is reported from any part of Western Europe. A light westerly wind continued over the whole country.

Great Harwood Agricultural Show.

The forty-fifth annual show of the Great Harwood (Lancashire) Agricultural Society, held on Tuesday, was in every way a success. To begin with, the entries reached a record number—1,020, as compared with 935 last year. Then, the weather was most favourable and the attendance of visitors very large. The quality of the cattle and horses was of a high order, whilst the minor departments of the show were very full, dogs and poultry being particularly well represented. Luncheon was served in a marquee on the ground, the President (Captain Trappes-Lomax) being supported by Mr. J. Rutherford, M.P., and other gentlemen. In proposing the toast of the Society, the President observed that theirs was one of the most ancient agricultural shows in the county, and in this respect, he believed, it was only headed by Whalley. Since its foundation, in 1857, its history had been almost symbolic of the town it represented. The present exhibition had beaten the record for the number of entries. The horses were judged by Mr. C. W. Brierley Brimfield, and the cattle and sheep by Mr. Dewhurst (Southport); and their awards were as follows:—

CATTLE.

Bull, any age: 1, F. Miller; 2, T. Atkinson; 3, W. Walsh. Ditto calf, under 12 months: 1, R. and T. Harrison; 2, T. Atkinson; 3, exors. Thomas Horsfall. Cow for dairy purposes: 1 and silver cup, W. Walsh; 2, E. Farrow; 3, Eli Smith and Sons. Heifer, under three years: 1, John Harrison; 2, John Haslam. Ditto, not more than two broad teeth: 1, R. and T. Harrison; 2, W. Walsh. Ditto calf: 1, R. and T. Harrison; 2, John Harrison. Geld or fat cow: 1, J. and W. Lord; 2, T. Walker. Fat heifer or bullock: 1, Pickup and Oddie; 2, R. Green. Lying-off cow: 1, Eli Smith and Sons; 2, E. Farrar.

TENANT FARMERS' CLASS.

Geld cow: 1, T. Walker; 2, Wall Paper Manufacturing Co. Extra stock (open): Collection of not less than three: 1, R. and T. Harrison; 2, T. Atkinson.

SHEEP (Open).

Dodded tup hogg: 1, R. Cockshutt. Half-bred ewes, three, with lambs at foot: 1, J. Blackburn; 2, W. Walsh. Three lonk ewes: 1, J. Blackburn; 2, J. C. Ashworth. Three fat wethers, any breed: 1 and 2, R. Pickup. Three fat lambs, any breed: 1 and 2, R. Pickup. Ditto, lambed in 1902: 1, W. Walsh; 2, J. S. Haworth.

HEAVY HORSES (Open).

Colt or filly, foaled 1902: 1, J. Billington; 2, J. Crook. Ditto or gelding, foaled 1901: 1, H. W. Kearns; 2, J. Maudsley. Mare or gelding, not over two years: 1, H. W. Kearns. Ditto, not over three years: 1, J. Whittaker and Sons; 2, John Smith; 3, John Sharples. Ditto, not over four years: 1, Miss Hick; 2, T. Tomlinson. Brood mare: 1, E. Whittaker; 2, J. Crook; 3, J. Billington. Mare or gelding, not exceeding 16 hands: 1, A. M. Peebles and Son, Limited; 2, T. Hanson; 3, J. Sharples. Ditto, over 16 hands: 1, T. Edwards; 2, H. W. Kearns; 3, Miss Hick.

TENANT FARMERS' CLASS.

Mare and foal: 1, silver cup, James Crook; 2, E. Whittaker.

LOCAL CLASSES.

Mare or gelding, team or agriculture: 1, J. Whittaker and Sons; 2, A. M. Peebles and Son; 3, T. Tomlinson. Ditto for saddle or harness: 1, W. C. Moon; 2, W. Houldsworth; 3, J. S. Haworth.

LIGHT HORSES (Open).

Brood mare: 1, A. Nuttall; 2, C. V. Haworth. Colt or filly, foaled in 1902: 1, C. V. Haworth; 2, A. A. Haley. Mare or gelding, foaled in 1901: 1, J. Shorrock; 2, R. Horn. Ditto, not over two years: 1, W. Lawson; 2, A. Nuttall. Ditto, not over three years: 1, W. Lawson; 2, A. A. Haley. Ditto, not over four years: 1, J. C. Glover; 2, A. Nuttall. Ditto, for road or field: 1, silver cup, A. A. Haley; 2, A. L. Goodson; 3, T. A. Collier. Ditto hunter: 1, J. L. Irving. Cob, mare or gelding, over 14 and not exceeding 15 hands: 1, W. Lawson; 2, T. A. Collier; 3, T. C. M'Kibbin. Ditto, over 13 and not exceeding 14 hands: 1, T. R. Evans; 2, A. D. Oates; 3, T. C. M'Kibbin. Ditto, not exceeding 13 hands: 1, Richard Harrison; 2, Charles Ibbotson; 3, A. R. Robinson. Cleanest decorated mare or gelding, shown in cart gears: 1, L. and Y. Railway Company; 2, J. Sharples; 3, T. Hanson.

Ashbourne May Fair.—The annual fair for horses, cattle, and sheep at Ashbourne was held on Wednesday. The show of horned stock was about an average one, but trade was very slow, except for beef and nice young barren cows, which made good prices. Beef realised 6d. to 7½d. per lb., calving cows £15 to £20, nice fresh barren cows or heifers £10 to £12, calving stirks £10 10s. to £13, and yearling bulls £5 to £8 each. Sheep were not a large show, prices ruled low, except for mutton, which was very dear. Hogs made 30s. to 35s. each. Ewes with lambs 50s. to 60s., good fat lambs 30s to 40s. each. Not a large show of horses. Useful animals in good demand, and changed hands at high prices.

FARM PROSPECTS.

Derbyshire (West).

The weather is getting more like spring, much milder, and there has been several hours' rain to-day. The pastures are very backward, as is the spring, altogether very late. Owing to the exceptionally cold weather we have had several hail storms this week. There is a good show for fruit if the frost has not damaged the blossoms. If we get genial, warm weather, the prospect of crops will be better than last year. Beef and mutton very scarce, and selling higher than for some years past. Milch cows are milking well, where they are fed, in addition to the grass, with a little cake.—C. M. (May 22nd.)

Devon.

We have had a very cold May, the coldest the writer ever remembers. Last week there were some heavy showers, and as the temperature is getting warmer, the appearance of the country is slowly improving. Grass is very scarce on most farms, the stock having eaten it down close to the ground; more rain is wanted to ensure a crop of hay, although warmer weather will help it onward. Wheat looks well on the whole; spring corn varies a good deal, the early-sown looking very well, whereas the late-sown is backward, the cold dry weather having hindered its growth. Mangold were sown early, and are just coming up, the rain having helped them; land is now being worked for the turnip crop. Fat stock has sold well this spring, but store cattle and sheep have not been in much request lately, owing to scarcity of keep; wool keeps at a very low price. Orchards are in full blossom, and there appears to be a good prospect of fruit, unless untoward weather occurs. A good rainfall is still needed for almost everything.—L. B. G. (May 22nd.)

Essex (Mid).

The month of May has been one of the very coldest of recent years, with two nights in succession of 5deg. of frost, and unfortunately all the crops have suffered. The wheats were last to give way, but now this last few days they have wasted and turned yellow, and it is doubtful if they will recover except on lands in good heart. Early picking peas have suffered much, and all fruit outside must be next to nothing. Water is again very scarce in this district, the ponds being as low as they generally are in the middle of summer, and the prospects of next year's harvest are not very bright as things in general look at present. Wheats have risen in price, but there is very little left to sell. The young clovers have wasted very considerably, and a short crop of hay must now be the result of both clover and grass, there not being time for otherwise. Beef has been selling well, mutton fairly; pork dear, also store pigs. Store cattle only fair trade. Store sheep and lambs a bad trade on account of scarcity of feed, and fat lamb trade is only a fair market. It is difficult to understand the idea of the present Budget taxing all feeding stuffs, which is really a protection to foreign meat trade against the English farmer, and has already increased offals 5 to 7 per cent. at the very least. It is also difficult to understand increased burdens on the rates for schools, when certainly 75 per cent. of our rural population migrate into the towns, and there is no doubt that in any universal scheme for education the expense should fall on the Imperial taxes, which should be controlled by an elected committee for each school.

All parishes round here are propounding some scheme to celebrate the Coronation. One very general idea is giving about 1lb. of meat per head to all parishioners, thus securing a good feed to everyone on that day, beside getting up other festivities for the occasion.—C. P. B. (May 23rd).

Glamorgan.

As a rule, we generally expect some cold days in the month of May, but during the first three weeks of this month we have had the coldest weather I can remember for this season, without one warm day, consequently vegetation has been much checked, and grass and cereal crops are looking badly for the time of year. Yesterday we had a change; temperature became several degrees warmer, and welcome showers of warm rain continued throughout the day. This will change the outlook.

Owing to the slo wprogress of the cereal crop, the ravages of wireworm are visible in many parts, and more especially in the case of wheat, which is certainly thin in places.

A considerable area of mangolds have been drilled, but the cold and frosty nights have checked growth of the young plants. The sowing of swedes will now be commenced, and, where the land was cleaned in the autumn, can be proceeded with; but if we should get a wet time the uncleaned lands intended for swedes and turnips will be delayed in the sowing thereof. Up to the present the land is deficient in moisture. The rain we have had has only been sufficient to keep plant-life going. The present state of pools and water-storage is quite inadequate to meet farmers' requirements and enable them to get through another dry summer, and more rain at once would be acceptable and beneficial for the country. Prices of beef and mutton are now satisfactory, but there are only a few farmers who have any beef to sell at this time of year.—C. J. S. (May 24th).

Gloucestershire (North-West).

What a difference weather makes to farming. On Tuesday last we had one of the sharpest frosts of the spring, which cut all the early potatoes and made many feel anxious for their mangold plants just coming through; whilst at our local market, with beef and mutton selling at over 8d. per lb., store cattle and sheep were almost unsaleable; but two days of warm rain have greatly improved the prospects of this year, as probably we may now get fair crops of hay and clover. But as the grass will be very succullent, and stock generally is in low condition, great care will be necessary to prevent loss amongst cattle and sheep.

Wheat keeps a good colour, but is thin on the ground. Spring corn was got in well, and came up satisfactorily, but much of it is badly damaged by wire-worm, which this year are unusually prevalent. Apple and pear trees continue promising, and the nice rain we are now having should help set the fruit; but plums are almost a failure. Work is well forward, with labourers rather more plentiful.—J. H. W. (May 16th.)

Lincolnshire (South).

After a long, cold, and dry N.E. wind, we were favoured with a splendid S.W. rain last night, which should improve the outlook in this district very much.

The grass and mustards are in particular need of warmer weather. Wheats on the whole are looking well, also the barleys, oats, and peas and beans. Very little turnip seed is standing, the flies having worked the young plants last autumn, and the sharp frosts which we have had nearly every night during the past fortnight are not at all suitable for the earlier pieces, which are now in full bloom. The same may be said of the early potatoes, which have just managed to peep through, having all been levelled to the ground. A very small stock of old potatoes now remains to be cleared out, and prices have somewhat improved during the last few weeks. An old wheat stack is almost a novelty here now, and I am afraid a very little lies in the granaries; 32s and 33s. the price at market last week. Keeping is very scarce and most of the stock are now out in the fields, as nothing remained in the yards.

Those who bought in their sheep some two months ago should find them leave a fair margin for profit, as both mutton and beef are selling well. We are once more free from swine fever, and the market is open again, which is a great boon to the whole district. All kinds of pigs are very dear.—R. M. W. (May 18th.)

Salop.

I should think we could not imagine better weather for the crops all round, unless we could have rain and sunshine at the same time. The sun is gaining more power now, while the showers fall and saturate the ground. All crops look very promising, while in the stock market there is a demand in all stock and a sharp inquiry for pigs to put up to feed.—J. E. (May 23).

Somerset.

On the whole, the growing crops of corn look very promising. The cold, dry winds have told adversely on some fields of wheat, where the land is cold and thin in soil. A few fields of late wheat, barley and oats have been a good deal damaged by the wireworm. Rain, which was badly needed, came in beautiful soft showers during most of the day yesterday, also in the night. The weather is much warmer to-day, so that a fair crop of hay and roots will, in all probability, be gathered in due season from the greater part of the useful land in this county. The apple trees are in full bloom, and promise another abundant crop. Beef, pork, and mutton fell at better prices than for some time past, also grazing cattle, which are scarce and dear. There will not be much early grass beef, on account of the cold winds, which have prevented the cattle from putting on flesh, except in a few favoured and sheltered spots, and where a good deal of cake has been fed.—J. B. (May 23rd.)

Wiltshire.

The promise of an early, or at least a normal, spring has been broken by a very frosty and ungenial May, consequently the food of sheep is very scarce, and a vast area of seeds, which should have produced hay, has been eaten by them. Wheat on the best land is very gross, some dangerously heavy. Such pieces will be good if the summer is very dry, but if wet will be useless. Barley and oats promise well on light land, but are very backward on heavy soil, some only just appearing. Roots have gone in under favourable conditions. The value of all live stock has been satisfactory, except in the case of store sheep. The scarcity of food is likely to keep down prices for some months.—J. S. (May 23rd.)

Wilts (West).

With the splendid rain of yesterday, the prospect has greatly improved, but unless the weather continues genial for some time to come the season cannot be favourable, more especially to pasture farmers, grass being very short, and the hay crop is likely to be very deficient, with practically no old to fall back on, which makes the outlook somewhat serious.

Clover and sanfoin promises a fair crop. It has been a good time for working the land. Mangold, kale, and early turnip seed has never gone in better. Wheat, of which there is only a small acreage, is variable. The higher prices will benefit only a few, as nearly all last year's crop was thrashed and sold at a wretchedly low figure. Spring corn looks much as usual at this time of year. Beef, through scarcity, is making a good price. On the other hand, mutton is plentiful and has barely paid for producing. Store sheep are selling worse than for many years past.—T. P. (May 23rd).

Worcestershire (South).

Everything in this district is quite a fortnight behind what it should be, and the season is one of the latest in my remembrance; there have been frosts almost every night this month, which has done great damage to all kinds of fruit trees, plums in some plantations being nearly all destroyed; bush fruits have also suffered severely. Wheat is looking well, as a rule, but on poor, cold land, is a thin plant and a bad colour. Barley went into a good seed bed, and is looking well and healthy. Beans are fair, but will be short in the straw. Oats have suffered in many places from wire worm. Peas generally are not promising, as they have been much injured by the frost, and have made but little progress. Beef is a good trade, being very scarce. Mutton not so good. Store cattle of all kinds fetch good prices, which is rather surprising as keep is so very short. There must be a poor crop of hay. Whatever weather comes now, the outlook for next winter is a very dark one, as almost all the old haystacks are gone. Wheat has advanced in price, but that cannot benefit the farmer, as all feeding stuffs have gone up in comparison, so it is only putting the money in one pocket and taking it out of the other.—F. W. H.

Foreign Prospects.

FRANCE.—The renewal of unsettled weather, with thunderstorms in various places, is making farmers rather apprehensive of definite injury to the cereal crops; at the same time they are thereby induced to hold on to their wheat reserves, while millers buy very sparingly, and the demand for 6d to 1s. advance almost completely stopped business on Paris market.

BELGIUM.—Crop prospects are regarded as normal.

GERMANY.—The unusually cold and damp season is causing uneasiness as to the well-being of cereal crops, and higher temperature and less rain are earnestly desired. However, although vegetation is backward, prospects remain, on the whole, fairly good, but harvest is expected to be late.

HOLLAND.—Weather unsettled, and at times inclement, and crops, although backward, are not considered to be in much danger.

HUNGARY.—The recent official report tells of some damage to the cereal crops, but, in the aggregate, their condition is fairly satisfactory, and warm weather would soon restore them.

RUSSIA.—Weather has become milder, and rain fell all over Central and Southern regions. In Baltic provinces the temperature was below the normal.

ROUMANIA.—With weather fine and mild, the crop outlook is satisfactory.

SPAIN.—Cold and frosty weather is reported to have somewhat impaired the fine condition of the cereal crops.

ITALY.—Last week, rain, hail, and snow were prevalent in many parts of the country, proving injurious to autumn-sown crops, except wheat, which looks well, and interfering with the completion of spring work.

SWITZERLAND.—Cold and rainy weather has been detrimental to the crops, and wheat is losing colour.

NORTH AFRICA.—In Tunis the harvest will be backward, by reason of unfavourable weather.

ASIA MINOR.—Advices from Smyrna say crop prospects continue excellent.

UNITED STATES.—This week has been a little less uniformly favourable for vegetation than the preceding one, but the condition of all crops is maintained. The wheat condition is fairly good, but heading is low in some instances. In California slight showers fell recently, bringing the rainfall this season up to 18⅞in., compared with 20¼in. same time last year.—*Dornbusch.*

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—The attendance was moderate, and the market for wheat ruled firm for English and white foreign sorts, but American were dull and 3d to 6d lower on the week. Flour quiet, unchanged for all kinds. Maize firm and 3d to 4½d dearer, with a fair demand. Barley firm and 1½d to 3d dearer, but quiet. Oats firm and 3d to 6d dearer. Beans and peas quiet.

Mark Lane, Friday.—Prices remain at a high range, both as to bread and feeding stuffs. English wheat remains nominal here, being out of supply, and what little offers in local resorts is readily taken up. Whites range at 33s to 35s, and reds 32s 6d to 34s 6d per qr, delivered. Free on rail in country, good, 63lb, reds, held for 33s, and rather over. American reds rather easier since last Friday, owing to more liberal arrivals. The spot premium of 6d per qr, which was current a fortnight ago, has now quite disappeared, and No. 1 Northern Duluth inspection rules at 31s 6d; No. 1 Northern Manitoba, 31s 6d; and No. 2, 31s ex ship. White is smaller compass. Australian, 32s 6d to 32s 9d, ex ship, 496lb. Californian, in same position, 32s 6d, with Walla Walla held for 32s. Flour, although again manifesting a subdued tone, showed no actual weakness, while bakers' grades are still extremely scarce. Arrivals of American, while less kept down than of late, go readily into consumption, and there is no pressure to sell, 25s being quoted for Golden Lily, Pillsbury best, and 25s 6d for Mayblossom. Of second patents, Guinea Gold, 23s 6d. Of bakers' grades, Iron Duke 20s 6d, and Princess Royal 21s ex store. English unaltered. Top price town-made, 30s net; No. 1 households, 23s per sack delivered at the mill door; Cascadias, 23s to 23s 6d; whole meal, 184s per ton. Australian patents quoted at 23s 6d to 24s per 280lb ex store. Grinding barley remains firm and in small supply. Malting unaltered. Oats 3d better since Friday last, and very scarce. Common Libau, 20s 6d to 20s 9d 38lb, ex quay; Riga held for 21s ex quay; 40lb Libau, etc., fair 23s in same position, and bold 23s 6d. Fine Konigsberg, 23s 3d to 23s 6d, ex quay, 40lb. New Zealand ordinary bluff, 27s to 28s, ex store, 384lb. English oats fully supported. Black winters, 42lb, 25s 6d; and fancy qualities, 26s; grey winters, 24s to 25s 42lb. Scotch oats, weighing the same, 25s 6d up to about 27s for choice potato. Maize 3d dearer on the week for round corn, and sparingly offered. Odessa held for 22s 9d, ex ship to come up, and 23s 6d ex quay. Mixed American maize remains out of supply and nominal. Imported beans and peas unaltered.

COUNTRY.

Ashford, Tuesday.—Wheat: Owing to short supply, late high prices were sustained, though the amount of business was limited. Barleys were unaltered. Oats steadily supported recent quotations. Beans and peas scarce and dear. White wheat, 33s to 35s; brown ditto, 33s to 35s. Malting barley: None; grinding ditto, 24s to 26s. Black oats, 20s to 24s; white ditto, 22s to 26s. Old beans, 33s to 38s. Grey peas, 35s to 36s.

Ashford, Tuesday.—Wheat firm at 34s to 35s per qr for both red and white samples. Feeding corn unchanged. Household flour, 29s; whites, 30s per sack.

Banbury, Thursday.—Wheat, red, 32s to 33s per qr. Beans, new, 37s to 38s per qr. Oats, black, 23s to 24s per qr. Wheat in small supply, with no alteration in prices.

Braintree, Wednesday.—A fair supply and quiet trade at last week's prices, reds making up to 33s 6d, and white 34s per qr.

Brighton, Thursday.—New white wheat, 33s 6d to 34s 6d; new red ditto, 33s to 33s 6d; barley, 32s to 34s; grinding ditto, 23s to 24s; English oats, 23s to 26s; English wheat, 6d per qr. lower. Oats and barley firm at last week's prices. Quiet trade. Small attendance.

Birmingham, Thursday. — Poor attendance, and trade quiet. Foreign wheats about 3d easier. English firm at 12s 9d to 13s per bag. Grinding barley unchanged to 3d dearer, realising £1 6s to £1 1s per qr Liverpool. Maize firmer, round commanding 22s 6d to 23s 6d per qr Sharpness. Galatz-Foxanian, 23s to 23s 6d Sharpness. Oats scarce and firm.

Boston, Wednesday.—Wheat, 37s 6d; oats, 24s; beans, 34s to 36s.

Bristol, Thursday.—The holidays have affected the trade this week, and in consequence there seems to have been very little doing. What English wheat was offering made fully late rates. American red wheat was, owing to rather large arrivals, about 3d lower. Maize 3d dearer. Barley and oats unaltered. Flour market quiet, owing to holidays, and not many sales.—GRACE BROTHERS.

Bury St. Edmunds, Wednesday.—Wheat: The supply was rather better. Trade was quiet, but the prices made were about equal to last week's; reds, 32s to 33s; whites, 32s to 33s per 504lb. Oats scarce and firm, and again the turn dearer; good samples now make as much as 24s 6d to 27s per qr; black, 24s to 25s 6d; German, 25s 6d to 26s per 336lb. Maize, 3d per qr. dearer, at 24s 6d, delivered. Beans, peas, and lentils firm; Dun peas making 35s to 36s; and tick beans, 36s to 39s per qr. Feeding stuffs steady.

Cambridge, Saturday.—During the week the wheat trade has been very dull; supply is too limited to drop much, but millers are indifferent buyers. At this market to-day there was only a limited supply of wheat, but buyers were careless, and sellers were forced to make a slight concession in price. Wheat, red, 32s to 33s; white up to 33s per 504lb. Spring corn was very scarce and dear, oats making up to 25s per 336lb. Beans, 36s to 38s per 384t.

Canterbury, Saturday.—Wheat scarcely so firm; oats still dearer. Ruling prices: White wheat, 33s to 35s 6d; red, 32s to 34s; grinding barley, 22s to 24s; white oats, 24s to 26s; black oats, 22s to 24s; grey peas, 35s to 36s; tick beans, 38s to 40s; mazagans, 34s to 35s; round maize, 24s to 26s; flat, 29s to 30s per qr.

Carlisle, Saturday.—Small supply of oats in our market to-day; good demand at last week's prices, 23s 9d to 25s per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—Wheat and oats firm and unchanged, and beans and barley quiet at recent values. Lower grades of round Indian corn more plentiful, and 6d per sack cheaper. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 60lb; grinding barley, 3s 6d to 3s 8d per 64lb; beans, 5s 10d to 6s per 80lb; oats, new, 3s 2d to 3s 4d; old, 3s 4d to 3s 6d; Indian corn, new, 12s 6d to 14s 3d; old, 13s to 14s 9d per 240lb.

Colchester, Saturday.—There was but a small supply of wheat to-day, which sold at 6d reduction on last week's prices. Beans and oats: Prices were well maintained.—FRANCIS AND CO.

Croydon, Thursday.—White wheat, 33s to 34s; red ditto, 32s to 33s. Malting barley: None; grinding, 23s to 25s. Oats, 21s to 23s. Beans, 33s to 35s. Peas, 31s to 32s. Trade for wheat firm, only a very little on offer. Oats dearer. Beans and peas no alteration.

Glasgow, Wednesday.—There was about the usual attendance at our market. Wheat and flour steady, with small trade passing. Indian corn, still none on spot; round corn 1½d to 3d per 280lb cheaper, owing to fresh arrivals. Home and foreign oats quiet trade, with prices steady. Grinding beans and Canadian pease, fair trade at late rates. Barley quiet. Bran and thirds unchanged. Oatmeal, 1s per sack dearer.—GIBSON AND CLARK.

Leeds, Tuesday.—Weather again cold and ungenial. The holidays naturally restrict business, and there is little change in the general position from last week. Wheat must be called fully as dear, with a moderate consumption demand. Maize, 6d dearer. Beans, 3d lower. Oats firmly held, but slow.—DUNNS AND CO.

Leicester, Saturday.—Fair attendance of buyers and dealers. Small supplies of home-grown wheats. Trade quiet at 31s to 35s per 36st. Oats firm.

Lewes, Tuesday.—New white wheat, 33s to 35s; new brown ditto, 33s to 34s. Malting barley, 33s to 36s; grinding ditto, 21s to 24s. Oats, 22s to 26s. Beans, 37s to 40s. Peas, 36s to 42s per qr.

Liverpool, Friday.—The market has had a fair attendance, but wheat generally has been in slow request, although in some cases a fair business has been put through, but, owing to large arrivals, prices are ½d to 1d lower than last Friday. Flour has not been in much request, but, in view of the small stock available, holders of foreign brands are very steady in their views. No change is quoted in price of either foreign or home-milled flour. Maize: Mixed is quiet; but steady at previous quotations. European experiences a quiet trade at about ½d under last Friday. Plate, new crop, owing to continued free arrivals, shows a loss of 1½d on the week, but meets a fair inquiry at the decline. Barley: Malting is very slow, and prices are unchanged. Feeding steady, but quiet. Beans: Saidis are again 6d lower, but hold steadily at the decline. Peas rather quieter owing to more liberal arrivals. Oats are firm. White English meets a fair demand at full prices, particularly for the better qualities. Foreign sorts are quiet except Canadian, which, being scarce, are held at ½d per bushel advance. Oatmeal firm, and, owing to scarcity, 6d to 1s per load is wanted for Canadian; other quotations unchanged. Oilcake: A good demand has again been experienced for cotton cakes. Linseed is only in moderate den and.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Quiet wheat trade to-day, at full prices of last week, but as most millers are fairly well stocked a rise in cost is not stimulated. The high price of feed corn results in a small business; no disposition to go beyond present need. No change of any importance in other grains, seeds, or meal.

Manchester, Thursday.—A holiday tone has ruled throughout, and values have undergone little testing in any direction. English wheat and foreign also are pretty much as seven days ago. A quiet tone continues to rule in wheat, but millers on the whole are steady at quotations. Indian corn maintains late rates. Oats and barley are moving quietly at firm prices. Peas and beans on the week are scarcely firm.

Newport, Wednesday.—A small number of buyers were present, doubtless owing to the holidays, and the little business done was at last week's prices.

Newcastle-on-Tyne, Saturday.—A fair demand for wheat at our to-day's market at last week's quotations. Oats firm, with an upward tendency. Peas scarce and prices favouring sellers. Beans 3d to 6d per qr lower on the week. Barley unchanged, with a quiet demand. No change in flour. Maize 6d to 9d per 480lb dearer since last Saturday.—JOSEPH POLLARD AND CO.

Norwich, Saturday.—The quantity of wheat on offer here to-day was somewhat smaller than of late; the demand from the milling trade was somewhat inactive, but no reduction in prices was noted. There was no barley offering. The weather has greatly improved in Norfolk during the last day or two, to-day having been warm and genial, and calculated to bring on vegetation, which is somewhat backward.

Northampton, Saturday.—Good attendance, but a very limited number of samples of farm produce on offer. Nobody appeared anxious to do business, especially buyers. Business very quiet, at about last week's prices. White wheat, 32s to 34s; red ditto, 32s to 33s; oats, 20s to 23s; old, fine, 26s; beans, 34s to 40s; flour, 23s to 24s; fine, 28s.

Nottingham, Saturday.—Wheat: Hardly a sample offering from the grower, and full rates supported. Grinding barley: Steady trade at unaltered rates. Oats: Small supply, and 6d to 1s higher. Beans scarce, and full prices maintained.—ROBT. HUBBLE.

Norwich, Saturday.—There is no alteration to note in the wheat trade since my last report. The weather of the past week has been cold and showery, but a change has set in to-day for the better, the atmosphere being mild and balmy, with a southerly wind, which is very acceptable. Wheat, red, 32s 6d to 33s 6d per qr, weight 63lb per bushel imperial. Corn inspector's return for the week ending 19th May, 1902:—Wheat, 2,399, 31s 7d.—J. ARTHUR MILLS.

Peterborough, Saturday.—The change to more seasonable weather made the wheat trade slow to-day, and sales were only possible at 6d per qr less money. Oats still scarce and tending upwards; other feeding stuffs unaltered.—THOMAS HILL AND SON.

Reading, Saturday.—A shortness in the supply of wheat was again observable at our market to-day, and this had the effect of making trade fairly brisk; while throughout the day a firm tone prevailed, and the recent advanced figures were well upheld, ranging from 33s to 36s per qr. Grinding barley only on offer, and this, as well as oats, sold slowly at recent quotations.

Ripon, Thursday.—Poor attendance, with a very light show of samples. Wheat, English, new, 31s 6d to 32s 6d; ditto foreign, 31s to 34s 6d; barley, grinding, 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s 6d to 26s 6d per qr; beans, 1s per stone.

Romford, Wednesday.—Wheat trade firm at last week's prices. Small supply on offer. Red wheat, 33s 6d, white wheat, 34s 6d per qr.

Rye, Wednesday.—White wheat, 32s to 34s; red ditto, 32s to 34s; white oats, 22s 6d to 26s; black ditto, 22s to 25s; grey peas, 33s to 35s; barley, 23s to 30s; tick beans, 33s to 35s.

Sheffield, Tuesday.—The Corn Exchange was sparsely attended. Business, however, was firm in tone. Wheats were held for fully last week's prices. Oats scarce. Barley and beans unchanged. Prices:—Wheat, white, 32s 6d to 34s; ditto red, 32s 6 to 34s per 504lb; oats, new white, 26s to 27s; ditto new black, 23s to 24s per 336lb; barley, grinding, 23s 6d to 24s; ditto malting, 30s to 32s per 448lb; peas, grinding, 35s to 37s; ditto blue, 53s to 80s; beans, Egyptian, 34s to 35s per 504lb; ditto English, new, 37s 6d to 38s per 532lb; Indian corn, small, 24s to 24s 6d; ditto American mixed, 28s 6d to 29s per 480lb

Spalding, Tuesday.—A small market, and very little offering. Wheat trade firm at 32s 6d to 33s; oats, 24s per qr. Beans firm and unchanged.

Stamford, Friday.—Few samples of wheat were shown, and prices realised 32s 6d to 33s in the mill; 26s was asked for foreign oats, and English oats made 27s. There was a very slow trade, and little was done in all departments.

Stockton, Wednesday.—There were few samples of farmers' wheat showing, which made 33s per qr. The foreign wheat trade keeps quiet. Red wheats were in plentiful supply, and 3d to 6d lower; white wheats unchanged. Maize, 6d dearer. Oats unchanged.

Sunderland, Saturday.—Moderate show of wheat, which made last week's prices. Little doing in barley and oats. Arrivals: Coastwise, wheat, 1,200qr; foreign, wheat, 6,643qr.—E. AND F. RICHARDSON.

Tegmouth, Thursday.—Wheat unaltered; barley, 3d dearer; maize and oats firm and unchanged. Only a fair attendance.—ORLANDO, DAVIS AND CO.

Wakefield, Friday.—There is little or no change to report in the wheat trade, which remains healthy in tone and steady in price; buyers vainly try to get in at less money, being compelled to concede full rates for both English and foreign. Feeding stuffs firm at last week's prices.—DUNS AND CO.

Wisbech, Saturday.—A very small supply of grain. Wheat sold slowly at about late rates; reds, 32s 6d. Oats fully as dear, 24s 6d to 25s 6d. Beans, 36s to 39s.—JAS. FLETCHER.

Wolverhampton, Wednesday.—This market was scantily attended owing to the holidays, and there was practically no business passing. Quotations were unaltered. There was no local grain on the market.

Worcester, Saturday.—Scarcely any trade during the week, and the market showed very little revival to-day. English wheat scarce and firmly held. Foreign quotations rather lower. Oats scarce and firm. Grinding barley and beans unaltered.

Worksop, Wednesday.—Very poor attendance, small show of grain at last week's full prices. Oats scarce. White wheat, 31s 6d to 32s 6d; red ditto, 31s to 32s; grinding barley, 27s to 28s; white oats, 26s to 28s; black ditto, 25s to26s; round maize, 25s to 26s 6d per qr.

York, Saturday.—Small supply of wheat, which sold slowly at last week's prices. Oats scarce and firm.

FOREIGN.

Hamburg, Saturday.—The unseasonable weather appears to have affected the rye more than the wheat plant, but subsequent favourable weather may repair the damage. Spring corn did not get well up, and, like meadows and vegetation in general, it is very backward. All feeding stuffs are in good demand at rising prices. The imports during the week amounted to: 20,758 tons wheat; 5,443 tons rye; 3,190 tons barley; 8,429 tons maize. Wheat rather quiet, prices unaltered. Hard winter 2 is offering at 28s 9d to 29s; No. 1 Northern spring Chicago at 28s 6d; No. 2 Duluth and Manitoba at 28s; 80 ho. River Plate at 29s per 400lb; Walla Walla arrived, at 30s per 500lb. Rye firm. American N. L. Western, prompt shipment, has been sold at 24s 3d; 9 10-15 South Russian at 23s 9d; August-September shipment at 21s 6d to 21s 9d per 480lb c.i.f. There is some demand for cheap malting barley, and all that was left on the spot is now sold, 24s 6d to 25s 6d per 448lb being paid for Holstein and Prussian. The young crop in Hungary has a satisfactory appearance. In Bohemia it is less so, and in Germany it is very backward. Feeding barley in brisk demand, but scarce. For 60s ld South Russian near at hand there buyers at 18s 6d to 18s 9d, July-August shipments are held at 18s 3d; September-October 1F per 400lb c.i.f. Maize more inquired after. Odessa and Danubian present and August-September shipments are selling at 23s 9d to 21s; River Plate at 21s to 21s 3d; American mixed is held at 24s 6d per 480lb c.i.f.—JOHN TATLOCK.

Hamburg, Saturday.—Barley Report.—Market rules quiet here, but prices maintained. Stocks here and in the interior are rather limited, and all will have gone into consumption before the new crop is ready. The outlook of the growing crop is quite satisfactory, although we have had a good deal of moisture, so that fine sunny days would be welcome to improve matters.

Paris, Wednesday.—Owing to the thunderstorms reported yesterday in certain places, the temperature has lowered perceptibly; it was rather cold yesterday morning in the metropolis, but conditions were a little more normal in the afternoon. This renewed inclement weather cannot but aggravate the apprehensions of farmers, who are impatiently awaiting the return of fine weather for all the cereals which are now in the greatest need of it. Native wheat: The attendance was an average one at to-day's market, which, from a business point of view, presented no interest. Here, as well as in the provinces, the same reserve as of late was noticed both on the part of buyers and sellers. This is not to be wondered at, in face of the absolutely disastrous meteorological conditions which are being experienced at this period when vegetation should be most luxuriant. It is true, the mischief is not very great at present, still anxiety is general, for unsettled weather seems likely to persist. Under these circumstances, offers of wheat to-day were most moderate, and holders not only manifested more reserve but demanded an advance of 6d and even 1s per qr., but in the face of the extreme slackness of demand, values may be considered as about unaltered on the week. Choice red wheat, 37s 5d to 38s 3d; and white, 38s 3d to 38s 9d per 480lb. Term wheat opened firm at 5c to 10c improvement, and closed quiet and easier at the following rates: May, 38s 3d to 38s 9d; June, 38s 9d to 39s 2d; July-August, 37s 10d to 38s 3d; and Sept.-Dec., 35s 8d to 36s 1d per 480lb. Consumption marks flour: The tone is quiet and unchanged; dealers and bakers continuing to purchase for their immediate requirements. Quotations are as follows: Choice marks, 31f to 32f (31s 5d to 32s 5d); first marks, 30f 50 to 31f (30s 11d to 31s 5d); good marks, 29f.75 to 30f 50 (30s 2d to 30s 11d); ordinary marks, 28f.50 to 29f 75 per 100 kilos (28s 11d to 30s 2d per 280lb). Rye: The persistence of rain is beginning to become disquieting, and there are fears for the blooming period; moreover, the plants are much "lodged" on the strong lands, while frosts have done serious damage in the East and North. Sellers are therefore more exacting, and ask 26s 1d, with buyers at 25s 8d per 480lb. Oats: The weather continues most unfavourable for this cereal, which requires dry and warm weather. Here the situation remains unchanged. Grey Beauce, 23s 2d to 23s 6d; white, 22s to 22s 4d; red, 22s 11d to 23s 2d; black, from the Central provinces, 24s 1d; white Libau is quoted 22s 7d to 22s 11d; black, 22s 11d to 23s 2d; and Swedish, 24s 4d per 320lb. Barley: There is only a retail business passing in this article, and quotations are merely nominal: Malting, 17f.50 to 17f.75 (25s 4d to 25s 9d); grinding, 17f to 17f.25 (24s 8d to 25s); and feeding, 15f to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lb). Buckwheat: This article is still supported at late rates, viz., 28s 9d per 480lb.

CORN STATISTICS.

IMPERIAL AVERAGES.

Statement showing the Quantities sold and average price of British Corn, Imperial Measure, as received from the Inspectors and Officers of Excise in the week ended May 24, 1902, conformably with the Act of the 45th and 46th Victoria, cap. 37.

THE BALTIC.

Wheat cargoes on Tuesday resumed with some firmness, but on Friday there was a reactionary tendency, and on Saturday holders were glad if they could effect sales at the terms of the previous Saturday. Actual transactions include Australian at 30s. 3d., Californian at 30s., Walla Walla at 29s. 6d., Fine Bombay at 32s., No. 2 Hard Winter at 28s. 6d., No. 1 Northern at 28s. 3d., and Hard Manitoba at 29s. 10½d. per qr. For No. 2 Calcutta 31s. 9d. is asked, but 31s. 3d. is the best offer made.

Maize favours buyers of Argentine cargoes, which are offered for June shipment at 21s. and at 20s. 9d. for July. Round corn is steady at 22s. 3d., for Galatz and 21s. 6d. Danubian.

Barley is firm for Californian Kreunz, at 24s. 6d., but weak for Taganrog feeding at 19s. 3d. per qr. Other London sales include Smyrna beans at 28s., Riga oats at 19s. 3d., Bombay linseed at 57s. 6d., and Bombay poppyseed at 46s. all per qr.

At Hull sales include La Plata linseed at 52s., Calcutta at 55s., Egyptian cottonseed at £8 1s. 3d. At Liverpool linseed oil makes £32 10s., and cottonseed oil £26 10s. These two inlets for oilseed and products are very strong.

The arrivals of grain and seed-laden vesels at ports of call for the week were 4 wheat (1 Buenos Ayres, 1 Melbourne, 1 Portland (O.), 1 San Francisco.)—1 flour (Tacoma.)—Total 5.

The sailings of grain and seed-laden vessels from ports of call for the week were: 8 wheat (1 Antwerp, 1 Belfast, 1 Birkenhead, 1 Cardiff, 1 Dublin, 2 Hamburg, 1 Plymouth.)—1 flour (Liverpool.)—1 barley and wheat (Dublin.)—Total 10.

Since 1st January, 1902, the total arrivals have been 137 wheat, 4 flour, 20 barley and wheat, 3 maize, 8 barley, 2 beans, 2 linseed, 4 canaryseed—total 180.

The Hull Corn Trade Association's price for Indian wheat cargoes are: White Kurrachee, 29s. 10½d.; Red, 29s. 1½d. per qr.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter—The demand for New Zealand butter is now confined to few sellers, and the season may be considered virtually over. The Wakanui, which arrived to-day, has brought the last shipment. Prices remain unchanged from last week, at 102s to 104s for "choicest," and 98s to 100s for "finest." Canadian does not rapidly increase in quantity, although good pastures are reported only a fair make up to end of June is expected. Prices for Canadian may be quoted at 98s to 102s for "choicest," which term, however, when applied to Canadian, expresses a wider range of quality than in Australian and New Zealand. The Copenhagen market remains firm, and the official quotation is unaltered at 90 kroner. The North of England markets are all firm for Danish butter, and the holidays appear not to have had any influence on prices. Irish butter is coming forward in increased quantities, and if the present Russian supply continues values of Irish must decline. Cheese—The demand for old Canadian and present season's New Zealand is steady at 60s to 62s for Canadian, and 59s to 60s for New Zealand. New season's Canadian is being cleared as fast as it arrives at about 56s. Grocers and cheesemongers mostly favour the new, as it brings them a few shillings per cwt. more profit than the old make.—W. WEDDEL AND Co.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, S.E., write that the quietude usual at this season now characterises the trade for field seeds consumptive sowing wants being naturally at a minimum, whilst no speculative business of any importance has yet sprung up. Cloverseed stocks all round turn out unusually light, and prices generally leave off at a moderate level. There is a small inquiry for new French trifolium for July delivery. Mustard seed, meantime, attracts increasing attention, and at rates which favour sellers. Rapeseed, however, remains dull and neglected. Small Koenigsberg tares appear quite exhausted. As regards canary seed, an upward movement seems to be developing, values in Turkey having advanced 3s. per qr., whilst stocks on this side have shrunk to quite narrow limits, Liverpool indeed only holding 1,630 bags. Hempseed, likewise, moves adversely to buyers. Blue peas have continued in good request at full rates, whilst the haricot market exhibits considerable firmness. The Board of Trade give the imports for last month into the United Kingdom of clover and grass seeds as 19,061 cwts., value £39,676, as against 23,686 cwts., value £51,746 for April 1901.

HOPS.

Canterbury, Saturday.—Flea is troublesome in the hop gardens, so that the change to warmer weather is greatly appreciated. On the hop market a fair amount of business has been done at the full rates lately current.

Worcester, Saturday.—Trade is very quiet on our market, only a few small orders coming in, which are executed from merchants' stocks. Prices are well maintained for any good, bright, sound lots, but lower sorts are almost unsaleable.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Cold nights have hindered the growth of vegetation to an extent almost unparalleled in May. Grass is poor in colour as in growth, wheat shows on the whole a far better colour, but is singularly backward, no appreciable advance in stature has been made for three weeks. The April-sown barley is most unpromising, but oats have stood the season better. Everything now depends on June, but while a favourable month may do much to repair the evils of untoward weather ever since Easter, no ideas or hopes of bumper crops can possibly be entertained. Wheat threatens once more to be short in the straw, and unless we have plenty of summer heat the grain will be deficient also. In France crop prospects have retrograded somewhat seriously, but reports are in the main favourable from Spain, Italy, Hungary, Roumania and Russia.

The American states devoting over a million acres to wheat are Dacota, California, Pennsylvania, Ohio, Michigan, Indiana, Illinois, Minnesota, Missouri, Kansas, and Nebraska. From one only of these, California, are the reports favourable, but California is a great exception, having 3,100,000 acres in which the wheat is ripening to a full yield. Dacota has 5,500,000 acres under wheat, but is a spring wheat state, and sowings are seldom completed before the second week of May. We hear of large areas sown with oats in April in Illinois, Iowa, Wisconsin, and Minnesota, while in Kansas and Nebraska the winter wheat which failed has been we learn replaced by oats even more than by maize. America is believed to make a profit on oats for 12s. per quarter on the farm, and 5s. per quarter will cover usual costs of ferrying and the rest of the charges incidental to transit. This makes 18s. a paying price at Mark Lane, where to-day a guinea is asked for anything American. These prices naturally encourage oat sowings in the States.

So far as can yet be ascertained, the April and May wheat harvests of 1902 thus compare with the previous year:—

	1902. Qrs.	1901. Qrs.
India	24,000,000	27,500,000
Algeria	4,000,000	3,500,000
Egypt	1,000,000	1,200,000
Asia Minor	4,000,000	4,000,000
Syria	1,000,000	1,000,000
Persia	2,800,000	2,000,000
Total	35,800,000	39,200,000

Algeria has not yet completed wheat harvest, neither has Asia Minor, but Algeria is credited with an excellent crop. Persia, on the other hand, has a deficiency, and in Egypt the area devoted to wheat is diminishing. The total production of the "early" group of countries is reduced very seriously by the Indian deficit. India is now shipping wheat only, we imagine, to import it later on.

The imports of the United Kingdom last week were liberal of breadstuffs, despite the holiday interval. The supplies of feeding stuffs though below the mean were not so palpably deficient as in the week preceding. Actual supplies of bread stuffs were as follows:—

	Qrs.
British wheat	100,000
Foreign wheat	443,000
Foreign flour	139,000
Supply: Total	682,000
Requirements	567,000
Added to stocks	115,000
Stocks on 17th May	2,402,000
Stocks on 24th May	2,517,000

The sales of imported feeding stuffs were:—

	Qrs.
Maize	172,477
Oats	123,600
Barley	94,285

Total sales this season, September 1 to May 24, thus compare with the same period of last cereal year:—

	This season. Qrs.	Last season. Qrs.
Wheat	11,178,500	11,764,000
Barley	5,387,000	4,318,000
Oats	4,574,000	5,350,000
Maize	7,426,000	9,198,000

Imports of flour this season amount to 5,525,000 sacks, against 6,710,000 sacks last campaign.

The quantity of wheat on passage to the United Kingdom though still very considerable, is not quite so large as it was at Whitsuntide. It is in the Californian and Australasian items that a diminution is marked.

	Qrs.
Californian	2,045,000
American	480,000
Argentine	426,000
Russian	60,000
Indian	100,000
Australasian	700,000
Various	40,000
Total	3,851,000
A year ago	3,095,000
Two years ago	2,940,000

The quantities on passage of feeding stuffs are as follows, the comparison being with May 24 last year:—

	1902.	1901.
Maize, qrs.	805,000	795,000
Barley, qrs.	335,000	330,000
Beans, qrs.	21,000	15,000
Linseed, qrs.	175,000	270,000
Rapeseed, qrs.	15,000	9,000
Cottonseed, tons.	42,000	50,000

Of flour, there are 282,000 sacks on passage, against 384,000 sacks a year ago. Present expectations include 198,000 sacks of American.

Wheat imports since January 1 show the following percentages or origin:—

From Russia	5 per cent.
From Roumania	3 per cent.
From Atlantic Ports	45 per cent.
From Pacific Ports	20 per cent.
From Argentina	7 per cent.
From India	8 per cent.
From Australasia	7 per cent.
From Various	5 per cent.
Total	100 per cent.

"Roumania" includes Turkey in Europe, "Atlantic Ports" include Canada, and "Argentina" embraces all South America. A briefer, and at the same time interesting, division is—

From the Old World	28 per cent.
From the New World	72 per cent.
Total	100 per cent.

Of flour, the chief receipts, as usual, have been from the United States; our maize has for once been principally round corn from South-Eastern Europe; and our barley has been about equally divided between Russian grinding and Californian brewing descriptions.

Corrected returns of oilseeds imports this cereal year are as follows:—

	Linseed. Qrs.	Rapeseed. Qrs.	Cottonseed. Tons.
September	150,000	14,000	18,000
October	118,000	24,000	29,000
November	76,000	12,000	72,000
December	148,000	13,000	60,000
January	135,000	13,000	79,000
February	121,500	17,000	80,000
March	293,000	17,000	49,000
April	279,000	29,000	61,000

As these arrivals have not depressed a market sustaining high mean prices, a large and regular consumption enquiry may be judged to have prevailed, and, as a matter of fact, such an enquiry is still ruling.

The chief shipping countries last week sent off the following quantities: America, 393,000qrs. of wheat, 155,000sks. of flour; 12,000qrs. of oats, and 3,000qrs. of maize; Argentina, 115,000qrs. of wheat, 134,000qrs. of maize, and 49,000qrs. of linseed; Russia, 294,000qrs. of wheat, 79,000qrs. of barley, 81,000qrs. of oats, and 86,000qrs. of maize; Roumania, 47,000qrs. of wheat, 19,000qrs. of barley, 13,000qrs. of oats, and 93,000qrs. of maize; and India, 30,000qrs. of wheat. The totals of wheat are good, but of barley and oats they are much below an average. Those of maize are fair, but not large.

London, Monday.—Linseed cake market quiet, and lower prices accepted for Western, which were high against London made. Decorticated cotton cake and meal firm. Undecorticated as before. Linseed maintains its price. Dutch and Russian are getting scarce.

ROBERT AND JOHN HEWETSON,

THIS DAY'S MARKETS.

MARK LANE, MONDAY

[FIRST REPORT.]

The market to-day was rather better from a fortnight ago (last Monday was a *dies non*), but rather weaker from last Friday. English wheat was scarce and dear; even chicken or feeding wheat made 31s. to 31s. 6d. Foreign was not easily placed at quotations given, but holders did not abate demands. Barley was firm for fine brewing and good malting, despite the small inquiry. Feeding sorts were a little dull. Oats felt the effect of large imports and of warmer weather. The lighter sorts were a trifle in buyers' favour. Maize was a little easier for flat, round, and yellow, but there is so little of the first-named on offer that high prices continue to be quoted. Beans were quiet. Indian green peas made 31s., with 36s. offered for white. Rye, buckwheat, and millet were a little dearer on the fortnight. Cottonseed made 5s. per ton advance.

THE FLOUR TRADE.

MARK LANE, MONDAY.

There was but a dull trade in fine London makes, and Town Households were said to have been parted well at 25s. 3d. per sack. Country flour was in large supply, but kept old prices. American made 25s. 6d. for Washburn superlative, 21s. 5d for Iron Duke, 20s. 6d. for Gilt Edge, 26s. for Stars, 25s. 9d. for Ceresota, 20s. 9d. for Ceres, 20s. 6d. for Morrison's "Bakers' Grade," and 19s. 6d. for ordinary Milwaukee Bakers' Flour. Hungary offered feeding flour at 14s. 6d., while 35s. 6d. was paid for the best Hungarian. Rye flour made 22s. 6d. to 23s. Rice cones, 20s. 6d. to 24s. per sack. Groats made £16 per ton for white, and £13 10s. for brown.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
May 20 11 a.m.	6 2 ... 6	2 ... 6	5
4 p.m.	6 2 ... 6	2 ... 6	5
May 21 11 a.m.	6 1 ... 6	2 ... 6	5
4 p.m.	6 1 ... 6	2 ... 6	5
May 22 11 a.m.	6 1 ... 6	2 ... 6	5
4 p.m.	6 1 ... 6	2 ... 6	5
May 23 11 a.m.	6 1 ... 6	2 ... 6	5
4 p.m.	6 1 ... 6	1 ... 6	4
May 24 noon	6 0 ... 6	2 ... 6	4
To-day, noon	5 11 ... 6	1 ... 6	4

Maize made 4s. 5d. per cental, for June and July, and 4s. 8d. for September to October delivery.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the Finance Bill being passed, the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement, however, the Acts of 1876 and 1901 throw the burden on the buyer, a fact which those who operate on these prices without being members of the Term Market would do well to note.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100lb. Maize, when quoted, is fair average quality from the United States.

The deposit required from members of the Term Market is £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

CHEESE.

Glasgow, Wednesday.—The market is of a holiday character. Merchants are not disposed to try new Cheddars and Dunlops; they prefer to work off their old stocks. New Cheddars are quoted at 54s per cwt, and new Dunlops at 52s. A moderate business is passing in New Zealands and Canadians at previous values.

GRAIN AND FLOUR FACTORS REPORT.

Trade has been good during the past fortnight, and values have again improved in the interval. American markets generally have been firmer, as a result of the "bullish" Washington Bureau report. Maize is firm, and held for more money. Barley and oats are in good request at full rates. Supplies of English wheat have continued scanty, and holders have been able to make more money. Good reds are now selling at 34s. to 35s. per 480lb. Recent arrivals of Australian wheat have met a good demand, and values have remained about steady. We quote: 33s. to 33s. 6d. per 496lb. The supply of Australian flour is trifling, and values are nominally 6d. dearer for spot stocks. We quote: 23s. to 24s. per 280lb. for patents. Stocks of New Zealand wheat are exhausted. We quote nominally: Tuscan, 33s. to 34s.; and Hunter's and Pearl, 31s. 6d. to 32s. 6d. per 496lb.—W. WEDDELL AND CO. (Mark Lane).

Flour.—There is no material change in the flour trade during the past week. There is a fair demand; operations limited chiefly to present requirements. Values on spot are as follows:—First spring patents, 25s. 6d. to 26s. 6d.; second spring patents, 24s. 9d. to 25s. 9d.; American winter patents, 25s. to 25s. 6d.; extra fancies, 23s. 6d. to 24s.—GREENHILL BROTHERS (Belfast).

Offals.—The weather being now warmer, lower prices are being accepted for bran, and further reductions are anticipated; buyers, consequently, are indisposed to purchase, except for present requirements.—GREENHILL BROTHERS (Belfast).

Flour.—The market is steady, but the demand is rather slow. Grain.—Maize is now more plentiful, and 3d. per boll cheaper; pease and beans quiet; barley firm; Scotch and foreign oats in demand at higher prices; oatmeal firm. Mill stuffs.—Bran and thirds are the turn in buyers' favour.—MCKINNON AND MCDONALD (Glasgow).

Flour.—A quiet trade at about 3d. under last week's prices.—T. S. MEDHILL AND SONS (Mark Lane).

There has been a large arrival of American wheat, and prices have give nway 3d. to 6d. per qr., other descriptions also tending in favour of buyers. Maize is steady and unchanged. Oats quiet; lower qualities rather cheaper. Flour shows no alteration in value.—W. P. WOOD AND CO. (Mark Lane).

We have liberal arrivals of wheat and flour. They have had a ready sale. Prices of white wheat are fully supported. Red wheats are 3d. to 6d. per qr. lower. Flour is 3d. per qr. lower. Maize, barley, and oats, a slow trade at about late prices.—COVENTRY AND CO. (Mark Lane).

Milling offals.—Bran and pollard are 5s. down on the week. Coarse and fine middlings are steady at last Monday's quotations.—JOHN BAWCOME AND CO. (Mark Lane).

BUTTER.

Wednesday.—Dorchester: 10d to 1s per lb. Barnsley: 1s to 1s 1d per lb. Boston: 7d to 8d per lb. Colne: 1s 2d per lb. Goole: 11d per lb. Keighley: Wholesale 1s, retail 1s 1d per lb. Kirbymoorside: 8d to 9d per lb. Knaresborough: Wholesale 1s 3d, retail 1s 4d to 1s 5d per 24oz roll. Market Weighton: 9d per lb. Masham: 1s 2d to 1s 3d per 24oz roll. Stockton: 11d to 1s 2d per lb. Worksop: 1s 1d to 1s 3d per lb. Hereford: 1s 1d to 1s 2d per lb. Market Drayton: Best 11d to 1s per lb, seconds 10d to 11d per lb. Uttoxeter: 1s to 1s 1d per lb.

Thursday.—Brigg: 9d to 10d per lb. Driffield: 9d to 10½ per lb. Penistone: 1s 2d per lb. Ripon: 1s 4d to 1s 6d per 24oz roll. Scarborough: 1s 2d per lb. Wetherby: 11d to 1s 2d per lb.

Friday.—Easingwold: 10d to 11d per lb. Helmsley: 9d per lb. Leyburn: 1s 3d to 1s 4d per 24oz roll. Lincoln: 10½ to 1s per lb. Otley: 1s 3d to 1s 4d per 24oz. roll.

Saturday.—Appleby: 8d to 10½ per lb. Berwick: 9d to 10½ per lb. Carlisle: 10d to 1s per lb. Doncaster: 10d to 11d per lb. Grantham: 9d to 1s per lb. Doncaster: 10½ per lb. Malton: 10d to 11d per lb. Pontefract: 1s per lb. Retford: 10d to 1s per lb. Richmond: 11d to 1s 1d per lb. Stokesley: 11d to 1s per lb. Whitby: 11d to 1s per lb.

EGGS.

Wednesday.—Barnsley: 13 or 14 for 1s. Boston: 16 or 17 for 1s. Colne: 1s 4d per score. Goole: 16 for 1s. Keighley: Wholesale 15, retail 14 for 1s. Kirbymoorside: 17 to 18 for 1s. Knaresborough: 13 or 14 for 1s. Market Weighton: 18 for 1s. Masham: 16 or 17 for 1s. Stockton: 14 or 15 for 1s. Worksop: 1s 5d to 1s 6d per score. Dorchester: 8d to 9d per doz. Hereford: 16 for 1s. Market Drayton: 16 to 17 for 1s. Uttoxeter: 1s 3d to 1s 4d per score.

Thursday.—Brigg: 17 or 18 for 1s. Driffield: 18 for 1s. Penistone: 15 for 1s. Ripon: 14 to 15 for 1s. Scarborough: 16 for 1s. Wetherby: 13 to 14 for 1s.

Friday.—Easingwold: 18 to 20 for 1s. Helmsley: 15 to 17 for 1s. Leyburn: 15 or 16 for 1s. Lincoln: 15 or 16 for 1s. Otley: 14 and 15 for 1s.

Saturday.—Appleby: 15 and 16 for 1s. Berwick: 8d to 9d per dozen. Carlisle: 13 to 15 for 1s. Doncaster: 15 or 16 for 1s. Grantham: 14 and 15 for 1s. Howden: 17 for 1s. Malton: 15 or 16 for 1s. Pontefract: 13 or 14 for 1s. Retford: 1s 2d to 1s 3d per score. Richmond: 14 to 15 per 1s. Stokesley: 16 or 17 for 1s. Whitby: 15 for 1s.

CATTLE.

Mtropolitan Market, Islington.

Monday, May 26th, 1902.

	British	Total May 27, 1901.
Beasts	970	970	760
Sheep and lambs	8,490	8,490	7,780
Calves	10	10	10
Milch cows	75	75	40

Quotations per 8lbs. (sinking the offal).

ENGLISH.

	Inferior.	Second.	First.
Beasts	3s 6d	4s 10d	5s 4d
Sheep	3s 8d	5s 2d	6s 2d
Lambs	5s 8d	6s 0d	6s 10d

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 14; Eastern counties, 573; Midland, Home, and Western Counties, 239; Devon, 20; Ireland, 124.

There was to-day a decrease of 70 in the number of beasts on offer, the majority of which consisted of Norfolks. Trade all round was of a slow nature, owing to the higher rates demanded; the advance in value must be written at fully 2d per 8lb, fat but chering cows and bulls also met with a freer sale at a corresponding advance. A clearance of this part of the market was made.

The following are top quotations per 8lb (sinking the offal):—

	To-day.	May 27, 1901.
Scotch	5s 3d to 5s 4d	4s 7d to 4s 8d
Devons	5s 2d to 5s 3d	4s 6d to 4s 7d
Norfolks	5s 2d to 5s 4d	4s 5d to 4s 6d
Lincolns	4s 10 to 5s 0d	4s 2d to 4s 4d
Irish	5s 0d to 5s 2d	— —
Fat cows	4s 4d to 4s 6d	3s 8d to 3s 10d

We note to-day an increase of 1,120 in the sheep, the supply including 290 Scotch, 2,870 from the Eastern Counties, and 300 from Yorkshire. Trade for wether sheep ruled firm, even at an advance of 2d. per 8lbs., but ewes were no dearer. Best quality lambs were in better request, and made rather more money. Undermentioned quotations are at per 8lbs. (sinking the offal), and are for the best of each class penned.

	To-day.	May 27, 1901.
7½ to 8 stone Downs	5s 10d to 6s 0d	5s 4d to 5s 6d
9 stone Downs	5s 8d to 5s 10d	5s 2d to 5s 4d
10 stone Halfbreds	5s 4d to 5s 6d	4s 8d to 4s 10d
10 stone Yorkshires	4s 8d to 4s 10d	4s 6d to 4s 8d
12 stone Lincolns	5s 2d to 5s 4d	4s 6d to 4s 8d
10 st Down ewes	4s 7d to 4s 8d	3s 10d to 4s 0d
11 st half-bred ditto	4s 6d to 4s 7d	3s 6d to 3s 8d
5 stone Down lambs	6s 8d to 6s 10d	6s 8d to 6s 10d
6 st halfbred ditto	6s 0d to 6s 2d	6s 2d to 6s 4d

Calf trade nominal. No pigs on the market. Milch cow trade firm.

Central, Monday.—Fair supplies. Slow trade. Beef carcases, As 2d to 4s 4d; hind quarters, 4s 6d to 4s 10d; roastings, 5s 6d to 5s 10d; sheep, ewe, 3s 4d to 3s 8d; wether 4s 4d to 4s 8d; hind quarters, ewe, 4s 6d to 4s 10d; wether, 5s 8d to 6s; pigs, large, 3s to 3s 8d; small, 4s 4d to 4s 8d.

St. Ives, Monday.—Beasts, 608; sheep and lambs, 706; Pigs 532; horses, 5. Beef, 8s 9d to 9s 9d; mutton, 7s 7d to 9s 11d; lamb, 9s 11d; pork, 6s 9d to 7s 6d; fat beasts very sharp trade, dearer; stores fair; fat and store sheep fair; fat and store pigs good trade; milch cows fair trade; £14 to £23.

FOREIGN CATTLE.

Deptford, Monday.—Beasts, 349. To-day's supply consisted entirely of shipments from the United States, and, as regards quality, was well up to the late average. Trade was of a rather slow nature, carcase butchers wanting to buy on easier terms, with but little success; a clearance was made at the following quotations per 8lb—offal given in:—80st. beasts, best quality, 4s 11d, and occasionally 5s; seconds, 4s 9d to 4s 10d. No sheep on the market. On Saturday the supply consisted of 1,602 beasts from the United States, for which trade ruled rather slow, at from 4s 10d to 5s per 8lb.

Liverpool, Monday.—Fair demand for cattle, and prices unchanged. A few good grass cattle made fully top quotation. Sheep trade slow, but firm, at full prices for choice handy weights. Good lambs a shade better. Beef, 7¾d to 6d per lb; mutton, 9d to 6½d; lambs, 9½d to 9d; dairy cows, £14 to £25 each. At market, 478 cattle and 8,864 sheep.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat opens in buyers' favour for future shipment, and maize is only firm for American. Barley is fairly steady for summer shipment, but there are speculative offers for autumn (new crop) shipments at low terms. Oats are unchanged. Oilseeds are irregular, but on the whole dear; and a very fair trade.

BUSINESS DONE.

WHEAT.—Californian, 30s 9d, on passage; ditto, 30s, prompt shipment; Australian, 30s 3d, on passage; Azoff, winter, 30s 6d, June shipment; No. 2 hard winter, 28s 6d, June shipment; soft red Calcutta, 30s 3d, June shipment; white Delhi, 32s, June shipment; white Kurrachee, 29s 6d, June shipment.

BARLEY.—Tagaurog, 19s 3d, June shipment; Azoff, 17s 3d, October shipment.

OATS.—Velogda, 18s 3d, June shipment; Viatka, 18s, July shipment; Swedish, 23s, prompt shipment; Roumanian, 15s 3d, October shipment.

MAIZE.—La Plata, 21s, June shipment; Odessa, 21s 6d, on passage.

BEANS.—Saida, 29s 6d, prompt shipment; Smyrna, 28s 3d, August shipment.

LINSEED.—Calcutta, 55s 3d, on passage.

RAPESEED.—Madras, 39s, July shipment.

COTTON SEED.—Egyptian, £7 17s 6d, June shipment.

PROVISIONS.

London, Monday.—The arrivals from Ireland for the past fortnight were 3,643 bales bacon and from foreign ports 21,864 bales bacon. Bacon—The bacon market was a very slow one last week, heavy stocks of Danish bacon having been carried over the holidays, and, with a poor demand, prices fell from 2s to 4s for all bacon, with the exception of a little top-priced Irish. Irish was ranging from 56s to 62s up to 69s; Danish from 54s to 60s up to 65s; and Canadian from 54s to 56s up to 61s. Butter—The butter market was quiet, Danish ranging from 105s to 106s; French, 90s to 104s; Irish, 90s to 102s; and Russian, 90s to 96s. Lard—The lard market was quiet. Ame-

HOPS.

Borough, Monday.—W. H. and H. Le May report there is still a consumptive demand for English hops, which continue to be the best value. Stocks are exceedingly small. The plant is in a very backward state.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

Owing to the chief market day of the week falling on a Bank Holiday, the supply at Islington was of a small nature, numbering only 1,040 head, of which 40 arrived from Scotland and 165 from Ireland, included in the latter being 118 stores from two to three years old, the former being quoted at from £11 10s. to £12 per head, and the latter £15 10s. to £19. For fat beasts of both prime and second quality trade was of a slow nature, entirely due to the higher rates asked, and eventually obtained, to the extent of fully 2d. per 8lb., a practical clearance being made, though on Thursday only about half of the fat beasts on offer found buyers. Fat butchering cows and bulls were in good request, and sold to rather better advantage. At the foreign cattle wharf markets were only held on Wednesday and Saturday, the supply, however, being fairly up to the late average; trade there was of a firm and steady nature, both in regard to tone and value. The total number on offer at both markets was 3,322, as against 3,673 during the previous week. The supply consisted of 1,140 British—decrease 180—and 2,182 foreign—decrease 171. These latter comprised 1,940 from the United States and 242 from Canada. The following were the top rates paid per 8lb. (sinking the offal): 80-stone polled Aberdeens, 5s. 4d.; 90-stone polled Norfolks, 5s. 1d. to 5s. 2d.; 100-stone Shorthorn ditto, 4s. 10d. to 4s. 11d.; 100-stone Lincolns, 4s. 10d.; 90-stone Irish, 4s. 10d. to 5s.; 85-stone States, 4s. 11d. to 5s.; 90-stone Canadians, 4s. 10.; 100-stone fat cows, 4s. 4d. to 4s. 6d.; 100-stone fat bulls, 4s. The sheep trade, which was entirely confined to the Islington market, was of a firm nature, last week's rates governing all transactions, with a clearance of both wethers and ewes on each market day. Lambs on Monday, owing to the cold weather, met a slower sale, even at a decline of from 2d. to 4d. per 8lb., but on Thursday rates were firmer, with an early clearance of the choicest quality. The total number of sheep and lambs penned was 9,960 (previous week, 12,500), consisting entirely of British, mostly Downs and half-breds, with a few Scotch, and 400 from Yorkshire. Best pens made, per 8lb., as follows (sinking the offal): 7½ to 8-stone Downs, in the wool, 6s. 2d.; 9-stone Downs, clipped, 5s. 8d.; 10-stone ditto, 5s. 6d.; 10-stone half-breds, 5s. 4d.; 12-stone, 5s. to 5s. 2d.; 10-stone Yorkshires, 4s. 10d.; 10-stone Down ewes, in wool, 4s. 6d; 4½-stone Southdown lambs, 7s.; 5-stone Down lambs, 6s. 8d. to 6s. 10d.; 6-stone, half-bred ditto, 5s. 8d. to 5s. 10d. The calf trade, with a lighter supply (90), was firmer, at a slight advance in value. The best on offer were quoted at 5s. 8d. per 8lb.

Trade in the West.

The present outlook with regard to keep is a most critical one, for when the water meadows are fed off, stock-owners will then scarce have anything else to fall upon (except in very favoured districts) but barren pastures, many of which are worth stocking. That is the position of affairs on many farms in the West; and only rain and genial sunshine now can in any way repair the mischief threatened. A matter of surprise to many is that stores continue to market as well as they do; but this is due more to scarcity than anything else. Barreners are much wanted everywhere, the demand being still stimulated to some extent by the price fat bullocks are making; but whether this will continue whilst keep is such a commodity as at present, seems a very doubtful matter. Good fresh-condition bullocks make up to £36 per pair for the best heavily-fleshed graziers that require but little in the way of finishing off. The plainer descriptions, though saleable, are by no means finding such a good market, despite the fact that some are only making £17 up to £20 per pair. The same difficulty in procuring good milchers is still being experienced, and, though prices are scarcely as high as they were a little time since, still good bullocks, either heifers or cows, are making very satisfactory prices, ranging from £16 10s. to £20 and even £21, which is the outside price now. In-calvers are also selling well, especially those coming early into profit. As regards fat bullocks, the demand keeps good and prices fairly firm, though there has been a slight reaction of late in favour of buyers; good steers now make £21 to £24 a-piece, and heifers (of lighter weights) £15 to £20, or about 11s. to 11s. 6d. per score; fat cows, too, are a trifle easier, 10s. to 10s. 6d. per score being an outside price now, except for anything very choice. A good inquiry prevails for store sheep for districts where there is no lack of sheep at slightly improved rates, as contrasted with a few weeks since; but prices still keep below those current at this time last year, except, perhaps, in the case of ewes, and also tegs soon coming into mutton, for which about last year's rates rule. Mutton keeps at a disappointingly low figure; wethers only about 8½d. per lb. and ewes 6½d. to 7d. Lamb of the best type has been a little firmer, probably influenced by the holiday demand, but whether this will be maintained now that the season is over is very uncertain; some of the best Down and crossbreds wanted for Whitsuntide made up to 11d. per lb., though a more average figure was 9½d. to 10½d. Calves still keep pace nominally dear; best well-finished veal, 8½d. to 9d. per lb.; seconds, 7½d. to 8d.; and the poorer grades 7d. Rearers also sell well, as many are now wanted to keep up the average of the dairy in butter-making and milking districts. The pig trade, too, keeps very firm all round; stores make extreme rates, and those for slaughter maintain old values; best porkers, 10s. 6d. to 11s. per score, baconers, 10s.; and heavy pigs, 8s. 6d. to 9s. 6d. Taking everything into account, there is a decidedly better trade in most things than might have been in such an adverse and trying season.

Trade in Ireland.

There was an increase of nearly 100 beasts and over 550 sheep in last Thursday's Dublin Market. The attendance of exporters was moderate, but local buyers were well represented, and business was of a decidedly brisk and satisfactory nature. Local butchers paid last week's figures readily, but the high prices ruling damped the export trade considerably in good cattle, while the lower grades were, as a rule, unsuitable for shipping. There were a great many fat cows on the market, and it was found rather difficult to dispose of them. Prime ox and heifer made from 62s. 6d. to 67s., and small lots of extra finish from 68s. to 70s. per cwt.; second quality, 54s. to 57s. 6d.; and inferior, 47s. 6d. to 52s. 6d. per cwt. Some very fine grass bullocks were on the market, and were bought up quickly. The number of beasts exposed for sale was 1,156, an increase of 97 on the previous week.

Though the mutton department was well supplied—there being 7,617 sheep offered—prices were well maintained for best qualities, and for good shorn hoggets for export trade the inquiry was better. It was rather hard to dispose of indifferent sheep, and many pens were left unsold. Prime wethers made from 7¼d. to 8¼d. per lb.; ewes, 7d. to 7¾d.; and inferior sheep, 6d. to 6½d. Small and medium-sized hoggets ran from 27s. 6d. to 37s. 6d., and heavy descriptions from 44s. to 56s. each. There was a good demand for choice lambs, which easily made more money, prime fat ones going up to 38s. and 40s. each; but there were numbers of small, thin lambs which were hard to find purchasers for at any money, and a clearance could not be effected. It was hard to get veal of the best quality, and 8d. to 9d. per lb. was freely paid for it; rough calves sold at very irregular figures. The trade for milch cows, even the best, was rather dull; but some very fine springers made up to £20 and £21 a head; small, inferior cows and middling, from £8 10s. to £13. The very backward state of the grass has had a bad effect on the store cattle trade, buyers holding on in hope of a change for the better in the weather.

The pig market was largely supplied, and there was a good attendance of buyers who were in want of the best qualities, so prices went up 1s. to 2s. per cwt. for the right sort. Choice bacon pigs sold at from 50s. to 52s. per cwt.; heavy pigs, from 46s. to 48s. per cwt.

LONDON.

London (Central). Wednesday.—Supplies moderate, but trade was dull. Beef arrivals include a fair amount of English, 40 tons Scotch, 600 Liverpool sides, 1,500 hindquarters and 650 forequarters American killed. Quotations:—Beef, Scotch short sides, 4s 6d to 4s 10d; English, 4s 4d to 4s 6d; American, Deptford-killed, 4s 3d to 4s 5d; Liverpool, 4s 2d to 4s 4d; American, refrigerated, hindquarters, 4s 2d to 4s 6d; forequarters, 3s 2d to 3s 5d. Mutton: Scotch, 4s 8d to 4s 10d; English wethers, 4s 6d to 4s 8d; ewes, 3s 4d to 3s 8d. English lamb, 5s 4d to 5s 8d. Veal: English and Dutch ,4s to 5s per 8lb.

London Central. Friday.—Supplies good, but generally quiet sale. Arrivals of beef included 90 tons Scotch, 500 Liverpool sides, 2,600 hind-quarters, and 1,600 fore-quarters American refrigerated. Beef: Scotch short sides, 4s 8d to 5s; long, 4s 6d to 4s 8d; English, 4s 4d to 4s 6d; American Deptford-killed 4s 2d to 4s 4d; Liverpool, 4s 2d to 4s 4d; American refrigerated hind-quarters, 4s 2d to 4s 6d; fore-quarters, 3s to 3s 4d Mutton: Scotch, 5s to 5s 4d; English wethers, 4s 8d to 4s 10d; ewes, 3s 6d to 3s 10d; Canterbury, 2s 9d to 2s 11d; Wellington, 2s 8d to 2s 10d; Sydney and River Plate, 2s 6d to 2s 7d; English lamb, 5s 8d to 6s. Veal: English and Dutch, 4s 4d to 5s 4d. Pork: English, 4s 4d to 4s 8d; and Dutch, 4s 2d to 4s 6d per 8lb.

Islington. Thursday.—Supplies of beasts were on a fair scale, and the bulk consisted of fat bulls and rough cattle. A quick demand prevailed, but prices ruled steady. Fat bulls, 3s 8d to 3s 10d. Sheep in fairly good supply, met a rather better demand at steady prices; 7½ to 8st. Down wethers (clipped) 5s 4d to 5s 6d; 9st. ditto, 5s 2d; 10st. half-breds, 5s; 10st. Down ewes, 4s 6d to 4s 8d; exceptionally, 4s 10d; 11st half-breds ditto, 4s 4d to 4s 6d. Calves steady, the best on offer making 5s 4d per 8lb, to sink the offal. No cows or pigs offered. Total supplies:—130 beasts, 2,590 sheep, and 80 calves.

COUNTRY.

Ashford, Tuesday.—Beef very dear, the best making 13s 6d per score, and average bullocks 12s 6d to 13s. Mutton unchanged; small Downs and half-breds made up to 5s 6d per 8lb, and Kents up to 5s. Pork dearer; roasters making up to 11s 6d per score.

Ashford, Tuesday.—Beef very dear, the best making 13s 6d per score, and average bullocks 12s 6d to 13s. Mutton unchanged; small Downs and half-breds made up to 5s 6d per 8lb, and Kents up to 5s. Pork dearer; roasters making up to 11s 6d per score.

Basingstoke, Wednesday.—At Raynbird and Sons' Sale Yard there was a good attendance of buyers to meet a supply of 30 fat beasts, 75 calves, 658 fat sheep and lambs, 344 pigs, and 45 head of dairy and store cattle, for which the following prices were realised:—Very choice young shorthorns made up to £23; young Welsh Runts up to £17 10s; shorthorn heifers reached £22 10s; cows, £19 15s; prime Kerry heifers up to £20 10s; some prime quality young Devon steers made up to £24, etc., etc. Fat Down wethers and young ewes realised from 42s to 55s; old ewes, 34s to 40s; Dorsets up to 38s 6d; choice Down lambs, 28s to 35s; Exmoor up to 24s 6d; Dorsets, 30s. Fat porkers, 42s to 64s; small, 31s to 40s; store pigs from 16s 6d to 33s 6d; fat calves, 80s to 100s; small, 20s to 50s; dairy cows, £8 to £19. The short supply of fat beasts was cleared at extreme prices. A shorter supply of fat sheep. Fat lambs, a few choice lots made an advance, but last week's figures ruled in most cases. A clearance nearly made. Milch cows met a ready sale, with a good demand. Store cattle are difficult to move, the enquiry being limited. Fat calves continue a brisk trade at late prices. Fat pigs of all descriptions found a ready sale. Store pigs were cleared at exceptionally high prices:—Ruling values:—Prime Devon beasts, 7¾d to 8¼d; do shorthorn beasts, 7d to 7¼d; cows, bulls, and inferior beasts, 6d to 6½d per lb; best fat sheep, 8d to 8½d; 2nd ditto, 7d to 7½d; rams, ewes, and inferior sheep, 6d to 6½d; choice three months old sucking lambs, 9d to 10d per lb; fat calves, 7d to 9½d per lb; fat porkers up to 11s per score.

Boston, Wednesday.—A good show of all classes. Stores were plentiful, but the trade was not very brisk. Strong stores realised £10 to £14. There was a good demand for in-calf beasts, cows fetching £18 to £20, heifers £15 to £20, and calves 55s to 60s each. Best beef 8s to 8s 6d, cow beef 7s to 7s 6d. The show of sheep was only moderate. Hogs realised 48s to 50s each, wether mutton 7½d to 8d, and ewe mutton 6d to 6½d.

Braintree, Wednesday.—At Messrs. Balls' auction mart the supply was shorter than usual, and the demand sharp, especially for beasts and hogs.

Bristol, Thursday.—Beef, short supply. Trade firm. Best qualities, 68s to 70s per cwt.; secondary animals, 62s. Limited number of sheep in market, best light wethers making 7¾d to 8d per lb; heavy wethers 7d to 7½d; ewes, 6d; lambs realised 9d to 10d. Fair supply of pigs; baconers, 10s per score; porkers, 10s 6d to 11s. Slow demand for store cattle.

Bury St. Edmunds. Wednesday.—At Messrs. Simpson and Sons' auction mart there was not quite so large a show of either fat or store cattle. There being a good attendance of distant and local buyers, the trade of last week was fully maintained. Fat sheep were in short supply, and the trade was brisk at advanced prices. Several lots of black-faced ewe hoggets were disposed of at prices which looked low; but, owing to the scarcity of feed, these came to market in poor condition. A fair supply of pigs sold at late rates.

Calne. Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 l s.	2½ in. and under ...	10 0
Under 10 sc.	Not exceeding 2½ in. ...	9 6
Under 11 sc. 10 lb. ...	Not exceeding 2¾ in. ...	9 0
Under 12 sc.	Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Beasts, 338. Beef, 7s 9d to 9s 3d. Sheep, 366. Mutton, 4s 8d to 5s 8d. Pigs, 405. Pork, 6s to 7s 3d. It being a holiday market, only a few lots of store beasts to hand, and all cleared. Fat beasts, a fair number to hand, and prices a little higher. Fat sheep a good brisk trade. Stores, very few shown. Fat pigs, a good trade at late rates. Stores not so good as last week. Hay, straw, and roots nil.

Canterbury, Saturday.—Sheep in short supply and trade not brisk. Useful working tegs ranged from 27s to 33s; better class, 35s to 37s; fat animals ranged up to 40s 6d per head. A considerable offering of young horned stock met a fair trade at recent prices.

Dorchester, Wednesday.—With moderately good, though scarcely as extensive supplies as usual, a fairly brisk business was transacted, both at Messrs. Duke's and at Messrs. Sampson's sales, at to-day's market, considering the interruption incident to the Whitsuntide holidays, which always to some extent affects the mid-weekly more than week-end markets. Values showed but very little alteration from the previous market. Fat bullocks maintained their recent firmness, the best bullocks, which are scarce, still selling at 11s to 11s 6d per score, and seconds 10s to 10s 6d. Fat sheep continue to make a dull sale at disappointing rates; and lamb, too, is by no means selling as well as could be expected, scarcely anything making 10d, and the bulk only 9d to 9½d. Veal, on the other hand, is marketing well; best calves, 8½d to 9d, and seconds 7½d to 8d. Pigs also keep well up in price, best light weight porkers making 10s 6d to 11s 3d, and baconers 10s to 10s 6d.

Dublin. Thursday.—Numbers in market:—Beasts, 1,156, increase, 97; sheep, 7,617, increase, 556; calves, 50, increase, 1. Trade for cattle on about same lines as last week, grass beef now coming forward and meeting with good demand. No alteration in price of best suitable sheep. Middling qualities more difficult to place. Lambs, except very choice, making less money. Cattle, by weight (best), 37s to 40s per cwt; Other descriptions 30s to 36s per cwt. Mutton, dead-weight, 6½d to 8¼ per lb.—GANLY, SONS AND CO.

Hereford, Wednesday.—Bullocks and cows, 525; calves, 237; sheep and lambs, 2,080; pigs (fat and sows), 13; sucking pigs, 55; pigs (stores, not more than ten), 229; pigs (stores, more than ten), 28; horses, 5. Prices of stock:—Beef, 6d to 7d; mutton, 7d to 7½d; lamb, 10d; veal, 9½d; pork, 6½d to 8d; and bacon, 5d to 6d per lb.

Ipswich. Tuesday.—Messrs. Robert Bond and Sons report shorter supplies of fat cattle, and with the usual local and distant buyers present a brisk trade was experienced, at from 8s 6d to 9s 3d per stone. A good entry of fat sheep and lambs, which were in fair demand at recent quotations. Breeding sheep and lambs met a dull sale, and could only be disposed of at a reduction on recent rates. Calves were scarce, and sold well. Fat

swine were short, and met a very sharp trade, at an advance of fully 6d per stone; well-bred stores were wanted, and sold well. This being Handford Fair, the usual annual sale of grazing cattle was held, which included several choice lots of North Country and Buckinghamshire steers. The weather and the prospect of feed had a depressing effect on the trade, only exceptionally well-bred lots and those forward in condition maintaining the prices ruling at the previous fair. Cows sold without alteration. At the Drill Hall a special sale of cart-horses was held. Trade was good for the best animals. Numbers at sales and market:—Cattle, 1,051; sheep, 3,226; swine, 922; horses, 215.

Leicester, Wednesday.—Very moderate consignments of Lincolnshire and Norfolk-fed bullocks, and, with a falling-off in the supply, prices improved 10s to 15s per head. Trade ruled rather slow, business being checked by the high prices. Choice bullocks, 7½d to 7¾d; secondary, 6¾d to 7d; cows, 6d to 6¼d; heifers, 7¼d to 7¾d per lb. Sheep were only in moderate supply, and sold very freely at 8d to 8¼d for choice light weights; large sheep, 7d to 7½d; ewes, 6d to 6¾d per lb. Lambs in strong demand, at 10d to 11d; calves, 8d to 9d per lb.

Newport, Wednesday.—Cattle were scarce, but there was a large supply of sheep and calves. A large number of buyers were present, and a very brisk market resulted. Prices: Best beef, 7½d; seconds, 6¾d to 7d; cows, 6d to 6¾d; best wether mutton, 8¼d to 9d; shorn wethers, 8¼ to 8½d; ewes, 7d to 7½d; lamb, 9½d to 10d; veal, 7d to 8¼d; porker pigs, 10s 9d to 11s per score.

Norwich, Saturday.—Supply of store cattle moderate; the lots were principally second rate, and business ruled slow at about late rates. Better show of fat beasts, but trade ruled very firm at 8s 6d to 9s 6d per 14lb. Store sheep made about former terms; keeping hoggets were quoted at 33s to 44s per head, and lambs at 15s to 24s per head. Fat sheep sold readily at 8s 6d to 9s 6d per 14lb out of their wool.

Nottingham, Saturday.—Slightly better trade for milch beasts. Newly-calved cows £18 to £23; in-calf heifers £15 to £18; strong bullocks, £13 to £15; yearling heifers, £8 to £11; younger beasts, £6 to £8. Calves, 5s dearer.

Romford, Wednesday.—Short supply of fat beasts; trade fair. Best animals, 5s 2d to 5s 4d; middlings, 5s to 5s 2d per stone. Calves in short supply; trade dear, at 5s 4d to 5s 6d per stone. Sheep in short supply; trade about the same; best sheep, 5s 4d to 5s 6d; middlings 5s to 5s 2d per stone. Lambs in average supply; trade slow, at 6s 2d to 6s 4d per stone. A few store beasts on offer; slow demand. Pigs in short supply; trade fair; small porkers up to 5s a stone.

Rye, Wednesday.—Number of entries: Sheep and lambs, 560; fat beasts, 1; store ditto, 19; calves, 33; pigs, 28; horses, 2. Heifers and steers fetched 5s to 5s 4d; second quality, 5s; maids and wethers, 5s to 5s 4d; barrens, 4s 6d; calves, 4s 8d to 5s; lambs, 7s 4d.

Salford, Tuesday.—There was a smaller supply of cattle, which met with a good demand at higher prices. The supply of sheep and lambs was much smaller. Trade for sheep was better, and sales more readily made, choice small Cheviots making up to 9d per lb. Lambs also met with a better demand. Calf trade dull, and prices lower. Quotations: Cattle, 6d to 8d; sheep, 7d to 9d; lambs, 8d to 9¼d; calves, 5d to 8d per lb. At market: Cattle, 1,537; sheep and lambs, 12,649; calves, 235.

Sheffield, Tuesday. Nothing doing in the cattle market.

Spalding, Tuesday.—A small show of fat beasts, and a keen demand. Prime, to 9s; secondary, 8s. Small supply of stores, and no demand. Best sheep, to 8d per lb; lambs, 25s to 30s each.

Stockton, Wednesday.—There were on offer 120 cattle, 14 calves, 317 sheep, 68 lambs, and 128 pigs. A small show of best cattle, which met with a firmer trade at 8s 9d to 9s per stone; rougher kinds, 7s to 7s 6d; calves, 6d to 8d; clipped sheep, 8¼d; ditto wool, 9d; ewes, 7d; tups, about 5d; lambs, 25s to 35s each.

Thame, Tuesday.—A smaller market, which is generally the case after Bank holiday, but butchers attended in large numbers, and found some difficulty in meeting their requirements. Beef can be quoted at 5s 4d; mutton, 5s 4d to 5s 6d; lamb, 7s; veal, 5s 6d, whilst bacon and pork continue very dear. Weaning calves continue very scarce and high in price. Messrs. Bond and Bunow's sale comprised 19 fat beasts, 134 fat and store sheep, 47 fat and weaning calves, and 94 pigs. Fat bullocks made from £19 to £21; fat heifers, £18 10s to £20 5s; fat ewes, 45s to 55s; short tegs, 55s to 61s; fat lambs, 28s to 33s 6d; fat calves, 60s to 75s; weaning cow calves, 30s to 65s; weaning bull calves, 20s to 60s; bacon hogs, 10s 6d per score.

Wakefield, Wednesday.—Fair attendance at market, and better trade all round. Best quality beef made up to 8d per lb, inferior sorts 5¾d to 6¼d per lb; clipped sheep made 8¼d per lb, and inferior sorts from 6¾d to 7¼ per lb. Numbers at market: Beasts, 1,338; sheep, 3,726.

Wakefield, Friday.—A very moderate attendance on Exchange to-day, and a nominal trade done in wheats, which are quoted firm at late rates. All feeding stuffs very firm at last week's prices.—MICHAEL SANDERSON AND SON, LIMITED.

Wolverhampton, Wednesday.—Beasts small supply, fair trade. Sheep fair supply, trade slow. Lambs fair supply and trade. Calves moderate supply and trade. Beef, 6d to 8d per lb; mutton, 6¾d to 8¾d per lb; lamb, 9¼ to 11d per lb; veal, 7¾d to 8¾d per lb. There were only eight pigs in the market.

Worksop, Wednesday.—Fair attendance and good trade. Small show of beef, fair show of sheep and lambs. Best beef, 8s to 8s 6d; secondary, 7s to 7s 6d per stone; best wethers, shearlings, and long wools, to 8¼d; ewes, 6d to 7d; lamb, 10d to 11d; veal, 10d to 11d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies to-day amounted to 280 head, this being 281 more than available on Wednesday last, and consisted of 338 United States and 242 Canadian. Trade ruled firm at 4s 10d to 5s and 4s 8½ to 4s 10d per 8lb, sinking the offal respectively. 650 United States were not shown. No sheep came to hand.

Yorkhill, Tuesday.—The usual weekly sale of American cattle was held to-day, when there were on offer 241 animals landed by the Sarmatian (s), from Montreal. The cattle were the best that have been landed from Canada for a number of years back. There was the usual attendance of buyers. Bullocks realised very high prices. The number of bulls on offer was not sufficient for the requirements of the trade, and in consequence they changed hands smartly at high rates. The dead-weight quotations may be given as follow:—Bullocks, best quality, 63s to 67s per cwt.; secondary, 64s to 66s; bulls, 58s to 58s and down to 54s per cwt.

Yorkhill, Tuesday.—A sale of Canadian sheep was held in the morning, at which only forty-two sheep ex Sarmatian (s), from Montreal, were offered. The shipment consisted entirely of ewes of good quality, and suitable for trade. There was a fair attendance of buyers, and trade was good throughout, the rates realised being satisfactory. The dead-weight quotations may be given as follow:—Ewes, best quality, 7¼d per lb.; secondary and heavier, 7d.

MANURES.

Liverpool, Friday.—Nitrate of soda is not so active in demand, and with arrivals holders are desirous of realising landing parcels, and are accepting easier rates, £9 5s to £9 10s per ton, according to quantity and quality. Other fertilizers are also in less request, but at unchanged values. The trade in feeding stuffs keeps quiet, and values tend in buyers favour, excepting rice meal, which is firmly held, and also the better qualities of American decorticated cotton cakes, which are in scanty supply. At auction sales of 625 bags Peruvian cotton cake, at £5 17s 6d to £6 11s 3d ex quay, and 1,450 bags Mexican have changed hands on private terms; other values as annexed:—Nitrate of soda, best quality, i.e., guaranteed 95 per cent. nure, in bags, £9 5s to £9 10s; East India bone meal, fair to prime, in bags, £4 10s to £4 15s; Kainit, prime 23 per cent, in bags, £2 7s 6d to £2 10s; palm nut cake, prime, in bags, £5 15s; linseed cake, American thin oblong, prime, in bags, £7 to £7 2s 6d; English, prime, in bulk, £8 2s 6d to £8 7s 6d; foreign round, rich in oil, in bags, £8; cotton seed cake, N.A. decorticated, prime, scarce, in bags, £7 5s to £7 7s 6d; English ditto, prime, soft, in bags, £7 5s to 7 10s; English, undec., prime, in bulk, £4 10s to £4 15s; crushed, 20-25 per cent. oil, prime, in bags, £7 3s 9d to £7 5s; maize germ meal, prime, in bags, £5 17s 6d; corn oil cake, 10-13 per cent. oil, prime, in bags, £6 5s; rice meal, Rangoon, as imported, in bags, £5 2s 6d—per ton; Indian meal, coarse to fine grinding, prime, in bulk, £3s to 13s 6d per 240lb; linseed, fine bold feeding, in bags, £3 1s to £3 4s per qr. 416lb; D.N.S. brand superphosphate of lime, guaranteed, 25 to 27 sol, in bags, £2 5s to £2 7s per ton at depot; ditto, guaranteed, 30 to 31 sol, in bags, £2 10s to £2 12s per ton at depot; ditto, guaranteed, 35 to 36 sol, in bags, £3 to £3 2s per ton at depot; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos, in bags, nominal; prime quality, guaranteed, 35 to 40 phos, in bags, nominal; finest quality, guaranteed, 38 to 45 phos, in bags, nominal.

WOOL.

London, Saturday.—English—per pk. of 240 b.—Fleeces South Down hoggs, £7 to £8 10s; half-bred hoggs, £6 to £7; half-bred wethers, £5 to £6 5s; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s; Leicester do, £5 to £5 10s. Colonial, per lb.—Vic.—Fleece super, 1s 8d to 1s 11d; scoured good, 1s 9d to 1s 10d; scoured average, 1s 8d to 1s 8¼d; greasy average to fair, 11½d to 1s 0¼d; N. S. W., scoured average, 1s 5½d to 1s 6d; greasy average, 9d to 10d; South Australian Greasy average, 7¼d to 8d; New Zealand, scoured average, 1s 6½d to 1s 7d; grease average, 9½d to 10¼d; Cape scoured super, 1s 6d to 1s 7d; fleece average, 7½d to 8¼d; greasy average, 6¾d to 7½d; Natal, scoured, 1s 1d to 1s 2d; greasy average, 7¼d to 7¾d. Crossbreds—Grs.—Vic. good to super, 11½d to 1s 0¾d; New Zealand fine, 9½d to 10½d; do medium, 6d to 6½d; do coarse, 4¼d to 5¼d.

Canterbury, Saturday.—Improved tone in trade, and 5½d per lb has been given for old Kent fleeces. The new clip, it is hoped, will make 6d per lb. Lamb's wool is still quoted at 4d, and locks at 2d per lb.

POTATOES.

Borough, Saturday.—With adequate supplies the market remained steady. Scottish maincrops, Dunbars, quoted 80s to 90s; Blacklands, Up-to-Dates, 45s to 50s; Lincoln ditto, 60s to 65s per ton; New Jersey, 12s to 13s; Teneriffe, 9s to 11s; St. Malo, 12s per cwt; and Lisbons, 3s 9d per box.

Goole, Wednesday.—Not so many on offer here to-day. Trade was steady, with an advance of 2s 6d for Giants, which made up to 45s; best Up-to-Dates, 52s 6d per ton. A few new potatoes from Jersey have arrived.

Great Northern, Saturday.—A fair supply was delivered this morning, but trade ruled slow. Scotch maincrops, 80s to 90s; Blacklands, 35s to 40s; Lincoln maincrops, 65s to 70s; Up-to-Dates, 60s to 65s per ton. New: Jersey, 14s to 15s; St. Malo kidneys, 13s to 14s per cwt.

Southwark Waterside, Monday.—During the past week the arrivals have been moderate, and the demand being brisk, prices have slightly improved. The following are this day's quotations:—Essex and Kent Up-to-Dates, 50s to 55s; Lincoln Up-to-Dates, 55s to 60s; Blacklands Up-to-Dates, 50s; Forfar and Fife Up-to-Dates, 50s to 60s; Forfar and Fife Bruce, 50s to 55s per ton.

Spitalfields, Saturday.—A steady tone, with improved demand prevailing for a light supply. Best Lincoln Up-to-Dates, 60s to 70s; Blackland ditto, 50s; Wisbech ditto, 55s to 65s; Scotch ditto, 70s; Scotch maincrops (grey soil), 70s; Lincoln maincrops, 70s to 80s; Reading Giants, 50s; Blackland Gartons, 40s per ton. New: Jersey, 13s to 13s 6d; Teneriffe and Canary No. 2, 10s; No. 3, 9s; Maltese rounds, 8s per cwt; Lisbon, 3s 9d per box.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—A good supply of vegetables was available this morning, for which a good demand prevailed. Fair supplies of fruit were received, and met a generally steady demand. Greenstuffs:—Cabbages, 4s to 4s 6d per tally; spinach, 2s to 3s; beetroots, 2s 6d to 3s per bushel; carrots, 5s to 6s; French turnips, 4s 6d; parsley, 4s to 5s; mint, 4s; leeks, 2s 6d to 3s; radishes, 9d to 1s per dozen bunches; horseradish, 1s 6d to 1s 9d per bundle; rhubarb, 2s to 2s 6d per dozen bundles: Egyptian, 9s to 10s per bag. Potatoes:—Maincrops, 80s to 90s; Up-to-Dates, 50s to 60s; Blackland Gartons, 35s; Reading Giants, 40s per ton; new Canary, 12s; Teneriffe, 12s; Jersey, 14s; St. Malos, 12s to 13s per cwt; Lisbons, 3s 3d to 3s 6d per case.—Fruit:—Tasmanian and Australian apples, 10s to 14s per case; English grapes, 3s to 7s; Belgian, 1s 6d to 3s 6d per lb; Denia oranges, 12s to 24s; Valencia, 10s to 18s; Murcia, 7s to 10s per case; English tomatoes, 9d to 1s; Channel Islands, 6d to 9d per lb.

POULTRY AND GAME.

Smithfield, Saturday.—Fair supplies experienced a better demand, and at firm prices a fair amount of business was carried out. Quotations:—Fowls: Yorkshire, 3s to 3s 6d; Essex, 3s 3d to 4s; Boston, 2s 9d to 3s 3d; Surrey, 4s 6d to 6s; Sussex, 3s 9d to 5s; Welsh, 2s 6d to 3s; Irish, 2s 9d to 3s 3d; turkeys (cocks), 6s to 7s; (hen) 4s to 4s 6d; goslings, 4s to 5s 6d; Aylesbury ducklings, 3s 6d to 4s 6d; country, 3s 9d to 4s 3d; pigeons, 7d to 11d; quail, 8d to 10d; wild rabbits, 6d to 8d; tame, 10d to 1s each; Australian, 8s 6d to 11s per dozen. Dutch plover eggs, 2s 6d per dozen. Russian game: Partridges, 1s to 1s 4d; ptarmigan, 10d to 1s; black game, 1s 2d to 1s 5d; brown hares, 2s 3d each.

FEEDING STUFFS.

Hull, Tuesday.—Linseed—There are no arrivals in linseed. Since our last issue linseed has been steady, but quiet, the holiday tone has prevailed. Calcutta, April-June, at the close was 54s 3d. River Plate: Spot, 51s 6d; May-June, sellers, at 52s 6d. Cottonseed—With small arrivals and light shipments the market has continued firm, and is again dearer for old crop, which sold at £7 17s 6d spot, passage, and May loading. A little June done at £6 16s 3d. New crop, November-January, has not exceeded £6 13s 9d, whereat a few sales transpired, and sellers at it to-day, the tone generally being quieter, and May shipment offers at £7 16s 3d. Oils—Exports for the week ending 13th May, 1902:—Linseed oil: 1 Egypt, 4 Germany, 5 Holland, 35 Norway; total, 45 tons. Cotton oil: 249 Austria, 120 Belgium, 1 France, 147 Germany, 152 Holland, 2 Norway, 10 Sweden; total, 681 tons. The market is firm. Linseed oil: 31s 3d spot; 31s 2d June-August. Cotton oil: 25s 9d spot; 25s 9d June-August. Crude: 24s 9d spot; 24s 9d June-August. Rape oil: Jamba naked, 24s 6d spot; 1st quality, 25s spot. —KEIGHLEY MAXSTED AND CO.

London, Thursday.—Linseed—Owing to the loss of the steamer Ehrenfels, with over 3,000 tons of linseed for Hamburg, the market has improved, after declining early in the week. Calcutta to London spot sold at 54s 9d, passage 55s, April-June are now 55s 3d to 55s 6d, June-July 55s 9d. La Plata on passage, 53s. Hull is quiet. Calcutta, May-June, 55s. La Plata spot 52s, May-June 53s. To the Continent, Bombay May-June 56s 3d, June-July 57s. Calcutta May-June 55s 6d. La Plata May-June 53s 4½d. Linseed oil—The market is excited, and everything offering at current rates is eagerly bought up. We quote spot in pipes £33, barrels £33, June-August £33, September-December £32. Hull naked spot £31 15s. June-August £31 10s. September-December £30 2s 6d. Linseed cakes are firm. We to-day quote London made £7 17s 6d to £8 ex mill, American Western £7 7s 6d to £7 10s, Russian £7 12s 6d to £7 17s 6d. Cotton cakes steady, London made £4 12s 6d to £4 17s 6d. Rapeseed steady, with considerable business doing. Brown Cawnpore, May-June 37s 9d; brown Calcutta, May-June 37s. To the Continent we quote yellow Guzerat 42s 6d, yellow Cawnpore May-June 40s, brown Cawnpore May-June 37s 6d, brown Calcutta April-June 37s. Ferozepore May-June 37s 9d. Jamba, June-July to Hull 32s. Cottonseed firmer, but demand is moderate. Passage London sold at £7 17s 6d, May £7 17s 6d, June £7 18s 9d, November-January £6 15s. Hull spot £8, May-June £7 17s 6d sellers, November-January £6 13s 9d. Cargoes, May is held for £7 18s 9d, November-December and January £6 15s. Bombay to Hull May-June at £5 3s 6d. June-July £5 5s.—THE PRODUCE BROKERS COMPANY, LTD.

Mark Lane, Monday.—The demand during the past week has been small, and limited to retail orders, but with a rather firmer tone in c.i.f quotations, values are fully as dear. Russians come to hand rather more freely, while quotations are without change. Americans continue to meet a good inquiry, being relatively cheaply offered at unchanged quotations. Calcutta made in bags move off quietly. London made do not find an active demand; at the same time crushers remain firm. Cotton Cakes.—The trade rules dull, the consumption being particularly small for the time of year, and values in consequence are with difficulty held up. Egyptians may now be bought at 1s 3d to 2s 6d per ton less money, while English are unchanged. Decorticated sell slowly at unchanged prices, and meal at £6 10s. Rape cakes neglected, and unchanged in price. Maize Germ Meal.—Arrivals of American are small, but there are sellers at 3s 9d to 5s per ton less money ex quay. English is only sparingly offered at £5 15s to £5 17s 6d. Rice Meal.—Parcels of Rangoon afloat may still be bought at £4 7s 6d ex ship, while June-July shipments make £4 10s, and September December £4 12s 6d.

HAY AND STRAW.

Whitechapel, Saturday.—Trade ruled very quiet, prices, however, being without alteration. Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 110s; inferior ditto, 80s to 95s; mixture and sainfoin, 95s to 105s; and straw, 30s to 45s per load.

STOCK AND SHOW NOTES.

By Herdsman.

The attendance of visitors at the Somersetshire Agriculture Association's recent show at Wiveliscombe fell considerably short of the number at the Taunton Show last year. This, however, was to be expected, for Taunton is situated in a well-populated district, whereas Wiveliscombe has only about 2,000 inhabitants and the district around is rather sparsely populated, so that the Society were dependent upon visitors from a distance, and as the weather was none too favourable these visitors did not turn up in such large numbers as expected. The "gate-money" at Wiveliscombe amounted to £439 7s. for the three days, whereas at Taunton for the total was £726 16s. 3d. Nevertheless, it is stated that the secretary, Mr. John Risdon, jun., and his energetic associates were very well, if not quite, satisfied with the attendance.

The recent rise in the price of meat has led to much talk of "trusts" and their evil ways. Although it is undoubtedly the case that a powerful organisation exists which controls the price of meat, it is no less a fact that the advance in prices was the natural outcome of the shortage of supplies which is expected to prevail until the spring grass-fed stock comes pouring into Chicago. In the meantime New York prices have been no higher than average London prices, which shows how cheaply the Americans are accustomed to be fed. American prices must slowly advance, as Western feeding grounds get divided into small farms—and the ultimate result must be the great advantage of Canada For the great plains of the North-West will become the supply source for the Americans.

The persons who control the markets and constitute the trust are six in number. These men are multi-millionaires, and are self-made. Philip Armour, who died last year, left his son £8,000,000. Nelson Morris, worth half as much, was a Jewish immigrant, whose first week's wages as an adult in Chicago were 30c. The brothers Cudahy are "Kilkenny boys," who emigrated in childhood with their parents, and began as labourers in a packing-house. G. F. Swift saw the beginning of life through the open front of a New England butcher's shop. G. H. Hammond, last of the great packers, was the only one who did not gain his daily bread in youth by the work of his hands. He inherited some money, and in thirty-three years has built up his gigantic business.

The Suffolk Agricultural Society have made an innovation in connection with their forthcoming show, which other societies would do well to copy. As a rule, the programme of arrangements for a show is printed in a very poor and cheap style, but the Suffolk Agricultural Society have this year issued a most artistic and nicely got up programme in fact, I cannot remember having ever seen one that could in any way approach this. It is printed on fine art paper, has a tasty cover, and is altogether arranged and printed in a style of the highest credit to the Society. The show will be held on June 5th and 6th, and in the programme is given every possible information required by the visitor The judges' names are given in full, the time of each event is clearly given, whilst there are particulars of the prizes offered, prices of admission, etc., and a description of the working dairy.

The Shorthorn Society have issued a list of the pedigree exportation certificates granted by them from March 4th to May 6th of the present year. The list, which is a long one, gives the names of the animals and their breeders, and contains the names of most of the well-known Shorthorn breeders. Russia received the largest number of Shorthorns during that period, South America coming next, then Canada, South Africa, and the United States. For the last-named country only two certificates were granted, and for South Africa four, but for the other countries named quite a large number were granted.

The Wisbech and District Horse Society have issued the prize schedule for their second annual show, which will be held on August Bank Holiday, August 14th. The prize money amounts to £150, whilst there will also be gold and silver medals of the Hackney Horse Society and the Shire Horse Society's silver medal. Classes, of which several are open, are provided for hackney mares and geldings, cart mares and geldings, etc., whilst there will be jumping competitions, driving competition for ladies, and tandem teams and pairs. An evening programme of sports has also been arranged, amongst the items being a polo match, so that altogether a very attractive show should be held. The entries close on July 26th. Mr. W. J. Chamberlin, Old Market, Wisbech, is the Secretary, from whom entry forms, prize schedules, etc., can be obtained.

The thirteenth annual show of the Welbeck Tenants' Agricultural Society will be held at Welbeck, on Tuesday, August 5th, whilst the show of corn, roots, potatoes, poultry, etc., will take place on Friday, October 24th. A sum of no less than £1,025 5s. is offered in prizes, and as in former years, the Duke of Portland has subscribed liberally, he giving £269 10s., whilst the Duchess gives £7. The amounts given in the various sections of the August Show are as follows:—Agricultural horses, £138; half-bred horses (including harness horses, £30), £300; pit ponies, £31 10s.; cattle, £139; sheep, £122; pigs, £33; wool, £6 15s.; butter, £7 15s.; eggs, £7 10s.; cheese, £1 10s.; dogs, £4 10s.; shoeing smiths, £6; block test, £13; long service, £20; farms, £66; growing root crops, £35 10s. Total, £932. The prizes at the October Show will be as follows:—Corn, £15 15s.; roots, £20 5s.; potatoes, £4 10s.; table poultry, £9; butter, £2 5s.; eggs, £4 10s.; poultry, £37. Total, £93 5s. The entries close on Tuesday, July 1st, with the Secretary and Treasurer, Mr. H. W. Woods, Scotland Farm, Worksop

The "Glasgow Herald" states that Mr. John Duncan, cattle salesman, Aberdeen, received a cable on Monday from his agents, Messrs. Adolfo Bulloich and Co., Buenos Ayres, stating definitely that the Argentine ports have been closed upon the importation of live-stock from any part of this country. It was understood that the Argentine authorities had intended only to exclude cattle from the County of Kent, where there was an outbreak of foot and mouth disease some weeks ago, but the embargo applies to the whole country, and will seriously affect the outlook of stock owners and exporters, as many of the latter have been buying largely on the strength of the Argentine Republic being open to British stock.

A highly successful combination sale of Shorthorns was held at Sioux City, Iowa, on May 3rd. Top price was made by the imported Dalmeny Regina 5th, which was sold for £275 to Mr. H. Weiss, of Kansas. Next highest price made was £257, which was given by Mr. J. Rasmus, Lake City, Iowa, for May Queen. The average obtained for forty-six females was £82, while twelve bulls made an average of £73 10s.

THE HAMPSHIRE DOWN RAM which forms the subject of our above illustration was bred by Mr. C. A. Scott Murray, being born in January. At the Witney Show of the Oxfordshire Agricultural Society it was awarded First Prize in the class for shearling Hampshire Down rams

The Annual Show of the Stanhope Agricultural Society will be held in the Castle Park, Stanhope, on Saturday, September 13th. Entries close September 1st. Secretary, J. H. Stephenson, Greenhead, Stanhope, R.S.O., Co. Durham.

A very liberal schedule has been arranged for the Annual Show of the Leicestershire Agricultural Society, to be held at Leicester on Wednesday and Thursday, July 2nd and 3rd. A long list of premiums is offered for farm servants and shepherds who can show a good record of faithful service. Stock of all descriptions are well catered for, prizes being offered for horses, cattle, sheep, pigs, poultry, rabbits, pigeons, and pigs, while classes are also provided for cheese, butter, and dead poultry. A large number of special prizes are offered. Jumping prizes are also provided. Applications for entry forms, etc., must be made to Mr. Ardron, Syston, Leics.

The entire herd of pure-bred Shorthorn cattle, belonging to the late Mr. George Ashburner, is to be sold by auction on June 6th, at Low Hall, Kirkby-in-Furness, Lancashire. The late Mr. George Ashburner's father bred Shorthorns at Low Hall, in Furness, as far back as the thirties, his entries being re-

corded in the fourth and fifth volumes of the Herd Book. Mr. George Ashburner succeeded his father in 1869, and continued the herd, adding occasionally some descendants of Bates blood. The most numerous family in his herd at the present day are the Rubys, lineally descended from Lady by Young Western Comet, and they have well sustained their dairy properties. The present herd contains a number of the old Bates strains, of the Duchess, Oxford, Barrington, Kirklevington, and Winsome tribes, as well as the Gwynnes and Knightleys. The more recent sires have been Cambridge Rose Duke 9th 63752, a very massive roan bull of the Heydon branch of the Cambridge Roses. Mr. Robert Thompson's Profit 64612 was also used, as well as Mr. Langdale Barrow's Fairy Duke 39th 72497, of the old Daisy tribe, and Mr. Morris' Staffordshire Miner 71666, a handsome roan bull from one of the largest dairy herds in the Midlands. Duke of Dromonby 76545, bred by Mr. Frank Dobson, North Yorkshire, full of the old Duncombe and Singleton blood, is the sire of the young stock, and Lord Millicent and Birdsall Waterloo Duke, two red yearling bulls, are in service and for sale.

Mr. George Ashburner inherited his father's good qualities of careful breeding and good management; and of late years his services as a judge were much in request, his quiet, unassuming, genial manner making him highly esteemed in a very wide circle. From 1885 to 1891 he received numerous honours, among them the R.A.S.E. first prize of £50 for the best managed stock breeding farm of 100 acres and upwards; the Earl of Bective's ten guineas prize in the Kendal district for the best general stock of cattle, the milking properties and adaptation of cattle to the district being duly considered. Prizes were won at the Royal Manchester, Liverpool, and North Lancashire Society Shows on frequent occasions, as well as at the local shows for the best Dairy Shorthorns. At the Royal at Shrewsbury, 1884, he exhibited in the family class the beautiful white cow Bride of Lorn, with four of her offspring, and was awarded the first prize. There are descendants of these animals in the sale. The breed has been long and favourably known, especially for its dairy properties, and in addition to the prize winnings, there has been a good demand for the animals by home and colonial, as well as by foreign breeders. The farm is already let, and the herd is consequently to be sold without any reserve. The sale will commence at one o'clock, and will be conducted by Messrs. John Thornton and Co.

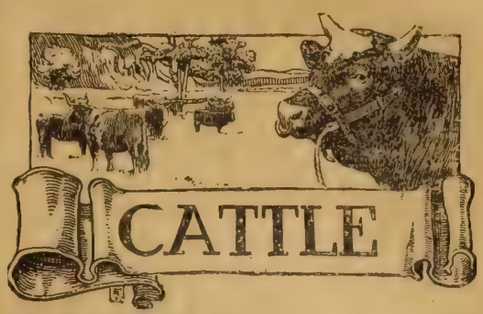
On June 12th the above auctioneers will dispose of the entire herd of pure-bred Shorthorns belonging to Mr. D'Arcy Reeve, and a few animals from Mr. Herbert Leney's herd, the sale to take place at Cryall's Farm, Matfield, near Paddock Wood, Kent. Mr. D'Arcy Reeve's herd was founded about seven years ago by purchases from the sale of Mr. E. T. Chalk and Mr. T. Mathews' herds at Linton, and the late Mr. Charles Collard's at Canterbury. Choice animals of Bates blood were afterwards obtained, and these included several highly-bred animals of the Horsted (or Cambridge) Rose tribe, the Kirklevington, Blanche, Seraphina, and other good families of Bates' blood. Sir James Deans 71613, a fine roan bull, bred by Mr. Joseph Harris, in Cumberland, was bought from the late Mr. Charles Collard, and is the sire of many of the cows and heifers. Roan Duke 75434 has been an excellent sire, the young stock by him being of great merit. Brigham Young, a handsome red bull, who has also been in service, is a son of Sir James Deans, from Bright Daisy of the old Daisy tribe, bred by Mr. Deane Willis, at Bapton Manor, Wilts. The cows are in good ordinary breeding condition; most of them have recently calved, or are forward in calf; the in-calf heifers are large framed, handsome animals, whilst the young stock includes many young bulls of high promise. The entire flock of Southdown sheep will be sold in August, at Tunbridge Wells.

As above-mentioned, the catalogue will also include about half-a-dozen choice animals from Mr. Herbert Leney's small herd at West Farleigh. These comprise Rosetta Blanche 3rd, of the favourite old Blanche tribe, and her three heifers, two of which are by Lord Farleigh 2nd 68956, winner of the Shorthorn Society's prize at the Tunbridge Wells Show, 1895. These are not draft animals, but a regular breeding good family. A grandson of Rosetta Blanche 3rd is also included in the sale, as well as Charming Boy, a good roan two-year-old bull, of Knightley blood, which has lately been in service. Mr. Leney's animals may be seen at Court Lodge, West Farleigh, near East Farleigh Station, S.E.R., until Monday, June 9th, when they will be removed to Matfield.

The annual horse and foal show at Hitchin will take place this year on Wednesday, September 17th, the entries closing on August 26th, with the Secretary, Mr. C. Crouch, Ridgmont, Aspley Guise, R.S.O., Bedfordshire.

The schedule of the North-East Agricultural Association's Show, to be held at Belfast on the 23rd, 24th, and 25th of July, contains a long list of attractive classes. The prizes offered are very liberal, an exceptionally generous list of challenge cups and special prizes being offered. Entries close at single fees on the 28th of June, at double fees a week later. All applications should be addressed to the Secretary, Mr. Kenneth MacRae, Ulster Bank Chambers, 37, Donegall Place, Belfast.

In last week's notes I referred to the Cambridgeshire and Isle of Ely Agricultural Society's Show, and my attention has since been drawn to a printer's error that occurred in the paragraph. The date of the show was given as July 25th, whereas it should have been Wednesday, July 23rd.



The Canadian Government have sent Mr. A. G. Hopkins, Veterinary Quarantine Officer for Canada, to this country to apply the tuberculin test to all cattle over six months old for breeding purposes, intended for export from the United Kingdom to Canada. All communications regarding the testing of animals should be addressed to Mr. Hopkins, at the Canadian Government Agency, 52, St. Enoch Square, Glasgow.

Contagious Diseases of Animals.

NOTE.—The figures for the current Year are approximate only.

Sale of Red Polls at Necton Hall.

Mr. Harvey Mason's old-established herd of the old "Homebreds" is well known throughout the country, and consequently the dispersion of the entire Sparham Hall portion by Messrs. John Thornton and Co. brought a large company together at Necton Hall Farm, Swaffham, on the 15th inst. There were many choice animals for sale, and strict milk records had been kept, the Babcock tester having been regularly used. Some of the older cows went cheaply, but for the heifers there was a good demand. Lord Rothschild got the pick of the heifers in Spitfire at 45 guineas, whilst Sir Oswald Mosley obtained some of the best yearlings and that fine bull Kohinoor. Other principal purchasers were Mr. C. Barclay, Mr. W. Fleming, and Mr. Garrett Taylor. We give below a sale list with the purchasers' names and prices:—

Sale of Shorthorns at Thaxted.

On Friday Messrs. J. Thornton held a sale of the herd of Shorthorns bred by Mr. J. Raven, at the Hydes, Thaxted, Essex. The sale was fairly well attended by buyers from all parts. The cattle were low in condition, especially the cows, which had been milking heavily. Some of the heifers, however, were promising, and looked like growing into good animals. Following is a list of the principal prices and purchasers:—

Sale of Channel Island Cattle at Hayward's Heath.

Mr. T. Bannister's annual spring sale of pure-bred Channel Island cattle was held at Hayward's Heath on the 16th inst. Despite the miserable weather which prevailed, there was a large attendance of buyers, but trade was by no means brisk. The catalogue was a heavy one, consisting of close on a hundred cows and heifers, and about a dozen bulls, the animals being from the herds of various well-known breeders. Not all the animals were sold, and those that were did not fetch good prices, the top figure of the sale being but 13 guineas, which sum was realised for a Jersey cow. Jersey bulls went at prices ranging from 3 guineas to 10 guineas, cows from 3 guineas to 13 guineas; whilst Guernsey heifers realised up to 8½ guineas, and a Guernsey bull 10 guineas.

Sale of Aberdeen-Angus.

On the 15th inst. there took place at Skilmafilly, Auchnagat, N.B., in connection with the displenish sale there, the dispersion of the small but very useful herd of Aberdeen-Angus cattle belonging to Mr. Fraser. There was a goodly company present, and the sale was very satisfactory. The highest price of the sale was 35 guineas, given by Mr. Hay for the four-year-old cow Antibes, with her calf. She is by the home-bred bull Collins, and is descended from the Millicent family. For the five-year-old cow Mary Hay and bull calf, Mr. Walker, Tillygreig, gave 27½ guineas. She is by Conrad of Gorthlick, and is descended from a Portlethen Ida family. Mr. Fowlie, Auchmaleddie, paid 26½ guineas for the seven-year-old cow Corinth by Sulla, and 26 guineas for the three-year-old La Belle France by Collins and her heifer calf. In the three-year-old Phrygia by King of Spades (a son of Conrad and a Millicent cow), Mr. Wilken, Broomfield, gave 26½ guineas. For the stock bull Junior of Morlich, a three-year-old member of the Jemima family and by Rover of Craibstone, Mr. Fowlie, Loanhead, gave 28 guineas. The average obtained for sixteen animals was £28 18s.

Sale of Shorthorns at Rettie, Boyndie, N.B.

The herd of Shorthorns bred at Rettie by Mr. G. Longmore was dispersed by auction on the 15th inst., in the presence of a large gathering. The highest price among the cows was 32 guineas given by Mr. Campbell of the new College of Agriculture of Ireland. He gave this figure for the six-year-old Lady Roy, a red and white, by the Collynie bull Marathon. She is a valuable breeding cow, having at foot a couple of nice heifer calves, which were also taken out by the same buyer at 15 guineas each. Lady Roy was succeeded in the ring by her three-year-old daughter Lady Flower, by the Newton bull Star of Destiny. At 27 guineas Mr. Anderson, Saphock, Oldmeldrum, became the purchaser. The nine-year-old cow Corinne, by the Collynie bull Lord Melville was taken out by Mr. M'William, Stoneytown, for 25 guineas.

The highest price of the sale was paid among the two-year-old heifers, Mr. Campbell, Harthill, taking out the pick of the lot at 62 guineas. This figure he gave for Malignant, a very prettily-fleshed light roan by Star of Destiny, and out of a cow by Lord Melville. Mr. Campbell had also a Rosamond heifer in Claribel by Prince of Rettie for 27 guineas, and Mr. Longmore, Baldavie, had one of the old Flowery family in Lilias, a low-standing, thick-fleshed red and white, also by Prince of Rettie by Prince of Cairnton, and out of one of the Gordon Castle Duchess family, paying for her 25 guineas. The pick of the yearling heifers, Snow Maid, a nice straight heifer with good top, and by the stock bull Massingberd, was taken out by Mr. Smith, Cragganmore, at 36 guineas, and her twin sister was acquired by Mr. Campbell at 27 guineas. Mr. Smith had also at 30 guineas the yearling Rosamond heifer Guardian Lily by Star of Destiny, and Juno, a representative of the Middleton of Troup Jewel family by Massingberd was taken out by Mr. Campbell, Ireland, at 25 guineas. The stock bull Massingberd, bred by Mr. Innes, Cushnie, a big, lengthy, thick-fleshed roan by the Heatherwick bull Roscommon, was taken out by Mr. Dawson, Gordon Castle, at 47 guineas. The average obtained for twenty-eight animals was £23 8s. 9d.

Sale at York.

A special sale of pedigree hackneys, harness horses, and cobs, was held on Thursday by Messrs. Walker and Sons, at their York Repository. Trade for useful horses and cobs was very good, although no high prices were realised. Mr. P. Crawford, Dargavel, Dumfries, offered twelve harness horses and cobs, of which eleven were sold at prices ranging up to 50 guineas. The following were the principal prices realised:—

	Gs.
Chestnut gelding, 5 years, 15.1 h.h.	30
Bay Gelding, 4 years, 14.3 h.h.	35
Bay Mare, 5 years, 16 h.h.	30
Dark chestnut horse, 4 years off, 16 h.h.	35
Bay gelding, 5 years, 16 h.h.	30
Bay gelding, 6 years, 16 h.h.	33
Bay gelding, 5 years, 15.3 h.h.	31
Brown gelding, 6 years, 16.1 h.h.	45
Brown gelding, 6 years, 16 h.h.	39
Brown gelding, 6 years, 16.1 h.h.	37
Brown gelding, 6 years, 16.1 h.h.	40

Sale of Berry Hill Hackneys.

On Thursday Mr. W. Bainbridge, of Warrington, disposed of a number of pedigree hackney ponies, brood mares, young stock, and harness mares and geldings, the property of Mr. W. Hollin, of Berry Hill, Mansfield, Notts. The sale took place on the premises, and although wet weather prevailed there was a most representative company of breeders present, and a satisfactory sale resulted, the total amount realised being upwards of 2,500 guineas. The first fourteen lots comprised brood mares and foals, all of which fetched moderate prices. The highest figure was paid by Sir Gilbert Greenhall, who gave 100 guineas for Berry Hill Braithwaite sire Prospector, dam Miss Braithwaite II., foaled in 1897. Lady Bates, a brown, with brown filly foal, and has only been shown once, and secured the first at the Royal Show at Manchester, was secured somewhat cheaply by Mr. Rushworth, of Harrogate, for 82 guineas. Mr. A. W. Hickling paid two guineas less for Golden Fleece, a 13.3½ hands, brown, foaled in 1897, and Mr. Boydon 77 guineas for Georgina II. and foal. In this section Sir Humphrey de Trafford paid 70 guineas for Berry Hill Queen, brown mare with foal; Mr. G. Taylor, 60 guineas for Georgie, brown mare with foal; Mr. Cockburn, 55 guineas for Novelty, bay mare with foal; and Mr. Jones, of Wrexham, 52 guineas for Pink Pearl, brown mare with foal. Twenty-seven lots were offered in the harness section. Sir Humphrey de Trafford purchased Tortoiseshell, foaled in 1896, sire Lord Derby III., by Tortoise, a chestnut pony, which has won prizes at Mansfield and Welbeck, for 110 guineas, and also paid 60 guineas for a grey gelding foaled in 1897, and the same price for a bay gelding foaled in 1898. A fine bay gelding pair, both 14 hands, one foaled in 1897 and the second in 1896, were sold to Mr. G. Foster. The former, which secured second saddle and third harness awards at the Notts County Show in 1901, made 170 guineas, and the other 75 guineas. Mr. Taylor also paid 71 guineas for a bay gelding foaled in 1897. Mr. C. H. Seely paid 65 guineas and 40 guineas respectively for a chestnut gelding and a bay. The fillies averaged just under 30 guineas a-piece.

Sale of Mr. E. Nichols' Show Horses.

Mr. E. Nichols, of Harford Hill, near Droitwich, having decided to give up exhibiting horses, his four well-known show animals, together with a pair of carriage horses, were disposed of by auction on Thursday, by Messrs. Bentley, Hobbs, and Mytton. Considering the inclement weather, there was a good attendance of buyers. The catalogue comprised Jeddah, a four-year-old gelding, 16 hands high, winner of two £10 Queen's premiums at the Hunters Shows at Islington in 1900 and 1901, and of many other prizes, by Herschel out of a half-bred mare; Flying Fox, three years, and Diamond Jubilee, two years, both own brothers to above, and winners of various prizes; Volodyovski, a yearling, own brother not yet exhibited, but very promising, and a bay mare and gelding, six and seven years old respectively, 16 hands high, a capital match. Jeddah was keen competed for, and eventually realised 135 guineas; Flying Fox made 90 guineas; Diamond Jubilee, 55 guineas; Volodoyovski, 35 guineas; and the pair of carriage horses, 70 guineas.

Dorchester Spring Sheep Sale.

The annual spring sheep sale at Dorchester was held on the 15th inst., when nearly 14,000 sheep and lambs were offered at the sales conducted by Messrs. Ensor and Son and Messrs. H. Duke and Son. There was a good attendance of buyers. A very welcome rain fell in the morning, to the advantage of flockmasters, who had the satisfaction of making 2s. to 3s. a head more for their sheep than they expected, the result of the rainfall, as prices unexpectedly advanced to the extent quoted in comparison with other recent fairs. The trade, particularly for horn sheep, was brisk, and only a small proportion of the sheep remained unsold. A good deal of interest naturally centred in the prize classes, one for ewes (judged by Mr. L. C. Attrill, Isle of Wight) and the other for ram lambs (judged by Mr. J. Chick and M. C. Hawkins). Mr. W. R. Flower, West Stafford, Dorchester, carried off the first prizes of three guineas each both for ewes and rams, with some really magnificent sheep. The general quality was so good that it was found necessary to award numerous "h.c.'s" and "c.'s." As regards prices, horn ewes, with a quick sale, made, for the best, from 46s. to 48s. (Puddletown), and second, 42s. to 47s.; one grand lot of young ewes from Mr. A. Read, Hilton, Blandford, selling up to 61s. apiece; couples, 56s. to 70s.; horn chilver hogs, 41s. to 54s.; tegs, which were very dear, 45s. to 50s.; wether lambs, 24s. to 30s. Down sheep, except tegs and hogs, sold scarcely so well, comparatively speaking, as horns, though prices on the whole were very satisfactory, draft ewes making 38s. to 43s.; couples, 46s. to 60s.; wether tegs, 36s. to 4s. 6d.; chilver hogs, 34s. to 35s. 6d.; Southdown tegs, 33s. to 46s.; cross-bred lambs, 22s. to 27s. 6d. The rams offered at Messrs. Ensor's and at Messrs. Duke's sale numbered about 300 altogether, and a very meritorious lot they were. Competition was very keen. The general run for yearlings was from 5 guineas to 11 guineas; best ram lambs, 12 guineas to 20 guineas; seconds, 4½ guineas to 9 guineas.

Toller Down Fair.

This well-known West Dorset sheep fair was held on Monday, when there was a fairly good supply of sheep and attendance of buyers, but not so good as on many previous occasions. Trade ruled somewhat slow, and recent prices were not maintained excepting for the meaty lambs and wethers in forward condition, the latter of which were both wanted. Messrs. Duke were entrusted with the sale of upwards of 1,000 sheep of different sorts. 46s. 6d. was realised for Mr. John Woolmington's draft horn ewes, the top price of the fair for this class. Other horn ewes sold up to 45s. 6d.; working tegs made from 34s. to 42s.; fat lambs, 31s. to 36s.; and Down couples, 46s. to 62s. Mr. G. Symonds also disposed of a very large number at prices similar to those given above.

East Ilsley Whitsuntide Fair.

At this fair, held on Wednesday, there was a good average supply of sheep and a fair number of dealers in attendance from a distance. Trade was, however, somewhat dull. An exceptionally good lot of young ewes made 48s., but the general price for ewes was from 30s. to 44s.; tegs, from 30s. to 42s.; and lambs, from 20s. to 32s. There was a large number of cattle on offer, and there was a good inquiry at late prices.

PIGS.

Sale of Pigs at Wimborne.

A number of animals from the registered herds of Yorkshire and Berkshire pigs belonging to Mr. H. Standfield were sold by auction at Wimborne Repository on Tuesday by Messrs. T. Ensor and Son. There was a good attendance of buyers and a satisfactory sale resulted. The Yorkshires were the first to be submitted, and these ranged from 3½ guineas to 7½ guineas for elts, the latter price being realised for lot 2, a remarkably fine elt, showing all the true characteristics of the breed. Boars sold at from 3½ guineas to 5 guineas, Berkshire elts, 3 guineas to 7½ guineas, the latter price being realised by lot 5, a capital elt, and which, after keen competition, went to Mr. G. Keynes, Winterbourne Kingston, the same purchaser taking lots 3 and 4 at 6½ guineas each; boars, 2 guineas to 3½ guineas, several selling at 3 guineas each.

THE JERSEY HEIFER "ORLEANS' QUEEN" shown above was bred by J. Journeaux, Jersey, being by "Carnation's Crown" 2,747, out of "Maid of Orleans." At the recent show of the Oxfordshire Agricultural Society at Witney "Orlean's Queen" was awarded the Champion Prize for the best Jersey cow or Heifer in the Show. She also won First Prize in the class for the Jersey heifers in milk or in calf, calved in 1900.

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son, and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

10,462.—Uriah Whatley, John Whatley, and Alfred Whatley, of Chancery Lane, London, for "Improvements in mowing machines for corn and similar crops that are gathered when cut."

10,547.—Frank Horridge, of London, for "Improvements connected with pruning shears."

Patent Sealed.

23,669.—W. N. Whitely, of Springfield, Ohio, for "Mowing machines."

Nottinghamshire.

The Nottinghamshire Agricultural Society's annual show is held during Whitsun week, and it is therefore not always favoured with the kind of meteorological conditions desired for such exhibitions. On some occasions, notably when Whitsuntide has fallen rather late, the show has been held under most auspicious climatic conditions, while, on the other hand, an early Whitsun has brought with it wretched weather. That experienced last week at Colwick Park was a mixture of rain and sunshine. Tuesday morning was very dull, and boisterous winds prevailed, but in the afternoon the sun came out, and more cheerful weather prevailed, whilst on the second day fine weather was experienced nearly the whole of the day. The attendance of visitors was very good, the number paying for admission on both days being 13,500. This total was slightly exceeded last year, when, however, a record was created, so that, all things considered, the attendance of visitors was highly satisfactory. The same may be said of the entries, both as regards quality and quantity. They numbered exactly the same as last year, viz., 814, the numbers in the various sections being as follows:—Horses, 437; cattle, 174; sheep, 40; pigs, 57; implements, 66; and butter, 40. The sectional figures last year were:—Horses, 453; cattle, 173; sheep, 38; pigs, 54; implements, 64; and butter, 32. A sum of £1,100 was offered in prizes, and the gentlemen chosen to award them were:—Shires: Messrs. T. B. Freshney, South Somercotes, Louth, Lincs.; H. R. Hart, Barnsfield, Stafford. Hunters: Messrs. Maxwell Angus, Whissendine, Oakham; E. P. Rawnsley, Girsby Manor, Lincoln. Hackneys, riding and driving horses: Sir Gilbert Greenall, Bart., Walton Hall, Warrington; Mr. John Rowell, Bury, Huntingdon. Jumpers: Mr. T. Firr, Charnwood House, Quorn, Loughborough. Shorthorns: Messrs. Jas. Hobbs, Maisey Hampton, Fairford; T. H. Hutchinson, The Manor House, Catterick, Yorkshire. Lincoln sheep: Mr. F. Ward, Quarrington, Sleaford. Shropshire sheep: Mr. T. S. Minton, Montford, Shrewsbury. Large white pigs: Mr. H. Smith, Cropwell Buder. Berkshire pigs: Mr. T. S. Minton, Montford, Shrewsbury. Butter, etc.: Mr. J. F. Blackshaw, Midland Dairy Institute, Kingston, Derby.

Shire Horses.

The Shire horses usually form the strongest feature of the Nottinghamshire Show; they did so again last week, the display of the favourite breed being of general excellence all round; in fact, some expressed the opinion that it was one of the best ever seen at Nottingham, but that is saying a great deal. However, the judges had no easy task in making their awards, but they met with almost general approval. The yearlings included both colts, fillies, and geldings, and they were a level lot, but Mr. Goulding's Valley Prima Donna by Coalfield Tom, from Darling, won fairly easily, although New Field Beauty, the property of Mr. J. S. Bains, ran the winner somewhat close. Only a couple faced the judges in the brood mare department, but both were splendid in quality. Mr. Horner's Broughton Rose—a typical example of her class—with a beautiful foal by Tres Bon, was first, the second prize going to Mr. Joseph Waddington for a serviceable mare, accompanied by a capital foal by Nailstone Cœur de Lion. In a strong class of yearling colts the Duchess of Newcastle was to the forefront with a long, level colt on strong legs and good feet. The second prize-winner was Kingston Blaze, a capital type of colt, the property of Lord Belper, whilst Mr. Albert Armitage's Newark winner, Cotgrave Marmion, had upon this occasion to put up with third place. The shire yearling fillies constituted another strong county class. The Newark winner, Mr. P. L. Mills's Priscilla Alden, repeated her success, and although not looking quite so new as upon that occasion, is a big, heavy filly. Second prize went to Mr. Casswell's Dunsby Lady Grey, which was a good winner in Lincolnshire last year, a challenge cup at Spalding standing to her credit; Mr. Langham's Brandon Eclipse III., a sweet filly by Nailstone Cœur de Lion, was third. In the class for two-year-old Shire fillies the judges had to call in an umpire to decide between the first two animals. Eventually Mr. James Oakes repeated his Newark success with Riddings Victress Ida 2nd, a grey daughter of Bury Victor Chief, and this award met with general approval.

The second prize-winner, owned by the Nottingham Corporation Farm Committee, was Nottingham Lily, by Royal Rock, from Nottingham Florence, an animal as good as its rival, with the exception of a lack of finish about the hind legs. Mr. Avis also had the third prize-winner, but this animal did not approach the two placed in front of it either in substance or weight. A further success was in store for the Nottingham Corporation Farm in the next class, which was for three-year-old Shire fillies. The fortunate candidate was Durdham Lassie, by Royal Derby, from Durdham Flower, which was second at Newark. Durdham Lassie is a lengthy filly on good feet and nice pasterns, and although heavy in foal, looked at her best. Second came Mr. James Oakes with Riddings Gipsy 3rd, a big weighty one, with a great deal of substance and cart-horse appearance. Messrs. Forshaw and Sons were placed third with Birdsall Carnation, a filly of smaller cast, but standing on good hard legs, and of attractive make and shape. The Shire brood mares, with foal at foot, were headed by Mr. P. L. Mills' Saxon Girl, a nine-year-old bay by Norman Conqueror, from Merry Girl. Saxon Girl, which was first in London, carries her form and feather well, and is indubitably a handsome, thick, mouldy mare. She was followed by a stable companion, Caper Sauce, another big animal, which has done very well since last year. Nottingham Sunflower, from the Nottingham Corporation's Farm, was third. The winner in the colt foal class was another Stoke Bardolph foal, Nottingham St. Patrick, by St. Patrick from Nottingham Duchess. He appears likely to make a splendid colt, if only favoured by ordinary luck. The second, Mr. James Oates's bay, by Markeaton Loyal Harold, also gave promise of future excellence. Mr. Mills sent the winner in the filly class, a brown daughter of Ruddington Premier, and a big, heavy filly, which was the second prize-taker at Newark. Messrs. Moore and Sons, of Beeston Fields, came next with a bay by Nailstone Cœur de Lion, from Sedate. The Corporation carried off both first and second prizes in the class for agricultural geldings with two slashing bays, Nottingham Saint, by Nottingham Conqueror, and Nottingham Sinner, by Harold. The runner-up was Earl Manvers, who showed Warwick, a Colwick Victor colt of a useful stamp.

When the all-England classes came under the notice of the judges a big entry of 17 yearling colts had first to be reckoned with, and it was found that Mr. Jackson's London winner, Knottingley Royal, had been passed over, so far as the first prize was concerned, in favour of Mr. Whitehurst's bay, Markeaton Ransome, by Holker Conqueror, from Jenny of Astwick. In many people's opinion this colt had a very easy win indeed, for he possesses both size and quality, and is a splendid mover. Knottingley Royal is of the heavy sort, with clean legs and plenty of substance, but he lacks the size and the length of the winner. The muster of two-year-old Shire stallions constituted one of the most remarkable classes ever seen out at the Notts. show. Nearly all the fifteen entrants competed, and the candidates included winning horses from all parts of the country. After a great deal of consideration, the judges placed on top the Earl of Egerton's Tatton Chief, by Forest Chief from Millicent, a capital colt, standing on magnificent legs and feet. Alert, a lean colt belonging to Messrs. Forshaw and Sons, was placed second, the third prize going to Conqueror's Boy, a colt with a grand top and flat legs, shown by Mr. J. P. Cross. Messrs. A. Henderson and W. Jackson had first and second in the classes for yearling and two-year-old fillies. There was an extraordinarily good class of barren Shire mares, which included several London winners, and there was not a moderate mare amongst them. When the animals entered the ring, however, it was apparent that Mr. R. A. Yerburgh's Lily of the Valley would be singled out as the leader, notwithstanding that she was accompanied in the parade by Mr. Hamer Towgood's Rolleston Fuchsia, the London winner. The Lancashire filly also took the the championship and one of the Shire Horse Society's gold medals. She won at the Newark Show, and was described in our report, so that we need not repeat her good qualities, but may state that she appeared in even better form at Nottingham than she did at Newark. Rolleston Fuchsia, second in her class and reserve for the championship, is built on the brood mare lines, with plenty of length and size, and grand legs and feet. The Shire Horse Society's gold medal for stallion or entire colt was gained by the Messrs. Forshaw's Alert.

Hunters.

The light horses did not make anything like such a good show as the Shires, and some classes were rather disappointing. Hunters were a fairly good lot, but the county classes were not so strong as they might have been. Mr. Wilkinson, of Cavendish Lodge, Edwinstowe, Newark, was represented by several of the young animals with which he won at Newark, and he gained further successes. In the yearling class he was to the front with The Lady, by Havoc, an exceedingly promising filly, Mr. Linney, of Thurgarton, being second with Smiling Morn, whilst Mr. Duff, of East Bridgford, was the reserve with Jean Aberdeen, by Enterprise. Mr. Wilkinson scored with his two-year-old colt Havoc, Mrs. Kirk, of Gunthorpe Hall, being second with the well-bred Master Douglas, by Cresthampton. In the class for three-year-olds the winner was Lady Sissie, belonging to Mr. R. G. Pinder, of Bilborough. The brood mare class was a small one, and here Mr. Wilkinscon's chestnut, by Bloodshot, by Thurio, with which he carried off a first prize at Newark, again took premier honours. The best of the hunters four years old and upwards was Mr. Machin's (Rapplewick) The Friar, a very handsome horse. The open section was well filled with animals of very high quality, and here Mr. Hodgson, of Newark, repeated some of his Newark successes. He was very much in evidence with his yearlings, Kildare, by Red Prince 2nd, and Perfection, by Hindley, being placed first and second. With his two-year-olds, Coronation, by Hindley, and Brutus, by Active Hampton, he very nearly accomplished a similar triumph, for they were first and third respectively, being divided by a bay by Blankney, the property of Mr. Bankart, of Hallaton Hall, Uppingham. Mr. Hodges also scored with his three-year-old, Toreador, Mr. Hoyle, of Moorlands, Bacup, being second with Roseberry, with Mr. Pinder's Lady Cissie third. The latter also carried off the Society's silver medal, as well as one on the silver medals of the Hunters' Improvement Society. The South Notts Cup was won by Doricles, Mr. W. Pinder's Tommy being the reserve. The brood mares were a very select class. Mr. Wilkinson's celebrated Lady Grosvenor added to her laurels, and the same owner's chestnut was second, with Housemaid reserve. The hacks were not numerous, Mr. Hardy, of Bulwell Hall, winning with Silent, from Mr. Hanbury's Bobs, of Oakham. There were excellent riding classes, Messrs. W. and J. Cheney, of Gidding Grove, Peterborough, won in the class for four-year-olds with John Dory, Mr. Stokes, of Great Bowden, Market Harborough, being second with Haddon, and Mr. Hodges third with Princess. Mr. Stokes's renowned Tennis Ball met with a reverse in the class for older horses, being able to get only third. Mr. Drage, of Chapel Brampton, Northampton, was first with a fine, free moving bay, Messrs. T. and H. Ward, of Great Ayton, Yorkshire, being second with Blackthorn. Lady Grosvenor was awarded one more gold medal of the Hunters' Improvement Society, and Kildare took one of the silver medals. Another of these was captured by Mr. Drage's bay.

Hackneys.

The Hackney classes were but fair, the country classes being the weakest seen at Nottingham for some time past. A solitary exhibit turned out in the class for yearlings, but it was worthy of the first prize. This was the chestnut Beeston Queen, by Lord Den Derby, the property of the Beeston Stud Company, and its merit was proved when it turned out in the open class and again scored. In a poor class of two-year-olds, Mr. Stocker, of Gotham, Derby, was to the front with Masquerade, a nice bay mare, with good action and quality. Mr. Baddiley, of Blyth, Rotherham, scored in the three-year-old class with a harness-looking black which moved well, but he was closely followed by Mr. Stocker's Adbolton Mascotte, by Ganymede. The brood mare class was really the only one of interest. It had secured an entry of eight, and among the exhibitors was Lord Middleton. The first prize, however, was easily won by Mr. Hickling's Lady Elaine, a dark brown mare by Lord Derby II., and the winner of numerous first prizes. A well-known animal in Mascotte, now 17 years old, obtained the second prize. She belongs to Mr. Stocker, and although she is not in the bloom of her early days she carried herself nicely, and went with a great deal of courage. In the open yearling class the Beeston Stud Company were to the fore, followed by Mr. Duncan's Gunda, by McKinley, from Bletchley, Bucks, whilst Mr. Johnson, of Bishop's Stortford, was third with Luffrah Willow, by County Member. The two-year-olds also made a very good class, the first and third prize takers in London putting in an appearance. The verdict then arrived at was reversed, Mr. Oppenheimer, of Thames Ditton, Surrey, winning with Knowle Belinda, by His Majesty. The London winner, Mr. Batchelor's Hopwood Bonnie, from Alvechurch, Worcester, could get no nearer than third, Mr. Johnson's Palmflower, by County Member, being second. The three-year-old open class was an equally strong one in point of quality and numbers, containing, as it did, several London show winners. Mr. Sykes, of Poulton-le-Fylde, won with his chestnut Zazara, by the champion horse Rosador, a mare showing plenty of substance, and second came Mr. Mitchell's Mrs. Bardell, from Eccleshill, Bradford. She is built more on harness lines than the winner, but she is a magnificent mover, and well earned her place. Mr. Livesey occupied the third position with the charming three-year-old mare Miss Keyingham, by Garton Duke of Connaught—Lady Keyingham. Mr. Batchelor's Roselle, by Rosador, was in the honours list in London, but she had in this case to be content with the reserve card. The brood mares made an excellent class, and they were headed by Mr. Livesey's almost unbeaten Orange Blossom, which, in spite of her eleven years, was never seen in greater bloom. She made a magnificent display, and was eventually awarded the Hackney Society's gold medal as being the best of her breed in the show. She was followed by another well-known winner in Mr. Inman's Vivandiere, from Huddersfield, which has taken awards at Islington and many other places. In a very small class of pony brood mares Mr. Foster, of Moseley, was to the front with Mel Valley Mustard, which was second at Islington, the Beeston Stud Company taking the other prize with Beeston Wonder.

Harness Classes.

The harness classes were exceedingly interesting. There were two county classes, Mr. Surfleet, of Beckingham, winning with Miss Hemsley in the one for animals over 14 hands, beating two useful horses in Mr. C. Smith's Cliff Climber and Mr. Hobson's Wollaton Cadet. In the pony class Mr. Cheetham's Gold Dust was successful, Mrs. Hill being second and third with Frolic and Froth. At the top of a very large open class stood Mr. Sykes's Zaizan, with Mr. Scorab's Prince Edward, from Doncaster, second, and Mr. Batchelor's Wild Agnes third, all being very fine movers. Mr. Franklin was first and second in the pony class with Queen Gobang and Lady Gobang, which went in rare style. There were two county classes in the riding section. The first was for mares or geldings, of any age, exceeding 14 hands, and there were five entries. Miss Hemsley, belonging to Mr. Surfleet, of Beckingham, which won in a harness class, repeated her success, but she was very closely pressed by Mr. Hickling's Litcham Twilight, from the Adbolton stud, a chestnut four-year-old, by Rosador. In the class for pairs of mares or geldings, of any age or height, and driven together in double harness, there was never much question as to the winning couple, for Musk and Miss Howard, the property of Mr. Baxter, of Hutton, near Brentwood, Essex, made a magnificent display. Second came Rowton Blackthorn and Rowton Vinca, belonging to Miss Ella P. Ross, of Beechfield. The ponies were a small class. Here, again, the winner in harness was again successful, this being Mr. Cheetham's Gold Dust, from Scarrington, Mr. John Robinson, of Worksop Manor, being second with his beautiful Irish-bred Black Paddy. The open class for mares or geldings of any age was a very fine one. The winner was found in Mr. J. Robinson's Kempton Cannon from Harrogate. He is a fine, big gelding, by Garton Duke of Connaught, and his action was splendid. Mr. Sykes' Zaizan was second, and Mr. Baxter, of Brentwood, was third with Miss Howard, Mr. Batchelor, of Alvechurch, Worcester, being no nearer than the reserve with Wild Agnes. The gold medal of the Hackney Horse Society for the best mare or gelding in single harness was awarded to Mr. Scorab's Prince Edward from Long Sandall, Doncaster. There were jumping competitions on both days, and these were watched with interest by large assemblies.

Cattle.

In the cattle section the total entries received numbered 174, an increase of one over those competing last year. The tenant farmer classes were very poorly filled, only twelve entries being included in the five classes. Though not strong numerically, the tenant farmers' classes brought out a show of excellent stock. In the class for bulls one year old and upwards, Mr. Reuben Shelton's red Marathon secured a first in the face of strong competition. This animal, however, had not come on quite so well since last year as had been expected. Mr. Shelton was also second in the same class, and was placed first or second in the remaining tenant farmers' classes, wherein he was a competitor. Competition was again strong in the county classes, and the entries were well maintained. Lord Middleton secured premier honours in the bull calf class with Birdsall Heirloom, a nice, straight, long calf, while Earl Manvers was placed second with Osberton, a very good calf.

The bulls made an excellent show all through and a better lot has not been brought together in the county classes. Mr. T. Potter's roan yearling, Good Times, was the winner of the district prize given by the Shorthorn Society. Earl Manvers' Conqueror being placed in reserve. The premier award in the bull calf class fell to Mr. A. Henderson, M.P., for his beautiful roan Baron Buscot. This is one of the best bull calves sent out for several seasons, and possessed more substance than Colonel Makins's Rotherfield Emperor, which was put second, but the latter showed a little better on top. The two-year-old bull class brought out a good lot, the honour of first place falling to Mr. R. P. Cooper's red and white Stoneytown Archer, after the judges had called in the

assistance of a third adjudicator. Mr. T. Potter's Good Times was given second place. This bull was bought in Scotland last October, and since then has done wonderfully well. In the two-year-old selling class, the first three were all good bulls, Earl Manvers' Osberton, which was reserved for the district prize of the Shorthorn Society, being the premier prize taker. In the opinion of many experienced ringsiders, Class 17 was one of the best lots of old bulls seen out for years at the Notts Show, the first six being good enough to go into any show yard in the kingdom. Mr. George Harrison's Inspector headed the list. Mr. H. K. Colville's Royal Seal, placed second, is a fine animal, of good colour, and for a big bull is very active. Mr. Henry Dudding was first and third in the heifer calf class, the winner being considered by good judges to be one of the best heifer calves sent into the ring for many seasons. Mr. Philo L. Mills' Carlota was second, and there was little to choose between her and the third, which was taken by many for a twin to the winner. In the two-year-old class the judges could not agree, and a third had to be called in. His decision in placing Colonel Makins's red and white heifer, Ness Cloudberry II., was entirely endorsed by the majority of ringsiders. The second, Mr. A. Henderson's Lady Buscot, is also a splendid show animal, but does not possess the same width and depth as the winner. Mr. G. Harrison's Flora VI., the first in Class 20, is a wonderfully fine heifer, brought out in splendid style, and showing good hair and nice quality, but she had a hard struggle to beat Mr. H. Dudding's Riby Pansy, the two being by far the two best heifers in the yard. The winner was awarded the medal for the best female animal in Classes 3 to 21, thus repeating a similar success achieved at Otley.

Of the ten bulls entered in the shorthorn selling class, eight came under the hammer on Wednesday, the sale being conducted by Mr. W. H. Bradwell. Only two—Messrs. R. and W. Wright's Alpinstock (the third prize-winner), and Major Robertson's Pole Carew—failed to reach the reserve price, and these were withdrawn. The first prize winner, the Earl of Manvers's Osberton, went at 25 guineas, the buyer being Mr. J. Gadd, Edwalton, and the holder of the blue rosette, Newthorpe, belonging to the Rugby Colliery Company, was secured by Mr. J. Butler, Clifton, for 20½ guineas. Bountiful, the property of Earl Manvers, which was placed in reserve by the judges, was bought by Mr. W. Holbrook, Plumtree, for 21½ guineas; Mr. T. Potter's Arnold, from Daybrook, went to Mr. T. Bentley, Wilford, for 19 guineas, and the entry of Mr. T. Diggle, Ewerby, Sleaford, found a buyer in Mr. Elliott, of Wysall, at 15½ guineas.

Sheep.

There was an excellent show of sheep, this being particularly in the case in the Shropshires. There were 11 entries of Lincoln shearling rams, and Mr. T. Casswell, of Folkingham, secured first prize and the Lincoln Long Wool Sheep Breeders' Association's champion prize with a magnificent animal, especially noticeable for its well-covered head and even fleece. S. E. Dean and Sons, of Bourne, were in close competition. The third, shown by Messrs. Wright, Lincoln, is very forward in condition, and well formed. It was optional to show the ewes either shorn or in the wool, and the entries comprised two of each description. Messrs. Wright's were the largest and heaviest in the ring, and were placed first, Messrs. Dean coming second with a very even pen in the wool, broad between the ears, and well covered on the head. Messrs. Dean also obtained third prize with three shorn ewes. As before mentioned, the Shropshire rams were a fine lot, and Mrs. M. Barrs, Nuneaton, secured premier place and the society's silver medal. The second, belonging to Mr. R. P. Cooper, Lichfield, was rather small and short in the legs. It was generally conceded that a finer pen of Shropshire ewes has not previously been seen in May, as the three with which Mr. P. A. Muntz, M.P., of Rugby, headed this class, and there was not a faulty animal to be found among the seven entries.

Pigs.

This section also contained some very nice animals. The breeding pigs brought a large entry, the premier award going to the Earl of Ellesmere. The boars under one year were a good lot, and the first and second winners, belonging to the Earl of Ellesmere, had massive backs and very good feather heads. The Earl of Ellesmere was unhesitatingly placed first with the Duke of York 4th in the boars above one year, which was a splendid type of pig, and was recently bought of Mr. Ascroft, at the record price of 100 guineas. It was followed by Mr. S. Spencer's Holywell Hugh, which showed a little more of the middle bred head than the winner, but was otherwise a massive, useful sire. In the class for sows, ten magnificent animals faced the judge, who must have had great difficulty in giving his decisions. By careful selection they were narrowed down to four, and the Earl of Ellesmere again proved successful. Mr. R. M. Knowles came second with a fine specimen of the large breed, which was rearing a litter of nine.

There were four classes of Berkshires. The prize for breeding pigs was won by Mr. Philo L. Mills, who was represented by three animals of good size and nice marking. Mr. A. Henderson, M.P., was an easy winner in the boars under one year, and Mr. J. Jefferson's Peel King Edward VII. secured the third rosette in the class for older boars. The winner was of fine size, evenly fleshed and well marked. Mr. A. Henderson's exhibit, which followed, was only precluded from the previous class by a day, and among the younger stock would easily have held first place. There were nine sows before the judge, and Harborough Beauty, belonging to Sir H. F. de Trafford, was awarded the palm.

Butter, &c.

There were four classes for butter produce, and there was good competition for the prizes offered. Fourteen samples were staged in the butter class, open to all England, and Miss F. A. Leverson, of Peterborough, secured first prize; Miss Wyles, Bassingfield, being second; and the Earl of Rosebery being third. Miss Wyles succeeded in heading the local class. The whole of the prize eggs were of the white variety. A butter-making competition was held in the working dairy of the Midland Agricultural Institute, and attracted considerable attention, the operations of the competitors being watched with interest. There were eight entries, and points were awarded principally in respect of the granular condition of the produce, general style of work, and speed.

London Cart Horse Parade.

The London Cart Horse Society's seventeenth annual parade took place in Regent's Park on Monday, and although the weather was not so good as wished for, it was fairly favourable, and better than it has been on some previous occasions. The history of the society and the increasing success of the parade is well known, and details need not be given here. Its progress has been really remarkable, and the expectations of the promoters, amongst whom the Baroness Burdett-Coutts and Sir Walter Gilbey were honourably conspicuous, must have been far exceeded. The society has undoubtedly been a great power for good in the metropolitan horse world, and will assuredly continue to be so. A comparative statement of the awards for the last five years shows a steady increase in numbers, with the exception of last year, when the figures fell to 624 from 689 at the previous show. During the fifteen years over which the parade has extended, nearly 9,000 horses have been examined by the judges, and cash premiums amounting to about £5,300 have been paid to deserving drivers. Since 1895 the most successful year was 1900, when 918 horses and 777 drivers competed for the various awards. That, however, was an abnormal figure, and last year the entries reached the more usual total of 801 horses and 673 drivers. For Monday's parade, 806 horses were entered, with 680 drivers, an increase which, although slight, was considered by the judges and the Cart Horse Parade Society to be highly satisfactory. According to the arrangements upon the present occasion every winner of a red rosette received a prize of 10s. for a single horse, 15s. for a pair, and 40s. for a team, the rewards for a blue rosette being respectively 7s. 6d., 10s., and 30s., and for a white one 3s. 6d., 5s., and 10s. In addition to these, the Shire Horse and Suffolk Horse Societies offered special prizes, and the late Miss Isabel Constable prizes for long service were also awarded.

The competitors mustered as early as eight o'clock at the several entrances to the Outer Circle of Regent's Park for the purpose of undergoing a preliminary veterinary examination in Chester Road at the hands of Messrs. Chesterman, F. W. Stanley, and W. Hunting. Year by year, as the result of the much-appreciated efforts of the society, this part of the work becomes lighter, and as the number of animals rejected as being manifestly unsound, dirty, or too light to be properly classed as cart horses decreases, the labours of the judges in deciding the final questions of merit becomes proportionately heavier. Those of the competitors—and they were the great majority—which survived the rigorous veterinary test were passed into the "Inner Circle," and at nine o'clock the judges, of whom there were twelve, acting in groups, began their examination for careful grooming, proper keeping, and well fitting harness. For the premiums and diplomas given by the Parade Society, the judges were Sir Oswald Mosley, Professor Pritchard, and Messrs. H. W. Gilbey, J. W. Kenworthy, Frank and Walter Lloyd; while Messrs. E. H. Cartwright, F. W. Griffin, Thomas May, and Edward Mucklow, jun., decided as to the disposition of the medals offered by the Shire Horse Society, and Mr. A. T. Pratt and Mr. F. C. Starkie occupied a similar position in connection with the awards in the smaller Suffolk Punch class.

The usual preliminaries being settled, the judges took their places soon after half-past nine, and then the single harness classes, first the two-wheeled carts, and then the four-wheelers, began to file by. As on previous occasions, men were rewarded, not only for their skill as stablemen, but also for long service. To Thomas Wilson, who, for half a century, has worked for Messrs. Wooldridge and Co., of the Tottenham Brewery, and who made a little speech on receiving his reward, was given a special Coronation Prize of £5, in lieu of the Miss Isabel Constable prize of £3 10s., which he originally won, but which under the new arrangement was passed on to Abraham King, who has been in the employment of Messrs. T. S. and C. Parry for 43 years; while George Bardwell, John Readman, and Laban Cooke, in the respective employment of Rickett, Smith, and Co. (43 years), Messrs. Eastwood and Co. (41 years), and the New Westminster Brewery Company (40) years, received a sovereign each. Nor did this exhaust the list, as to twelve employés who had been between 28 and 38 years in one service, 15s. each was given; and to four-and-twenty more, whose employment extended to between 20 and 27 years, 10s. each was given. As these old servants also received the money attaching to their rosettes, their winnings were appreciably augmented, but the foremen in the yards doubtless share in the rosette money.

In awarding the rosettes, the points of the horses are not taken into account at all; and it is not until the other prizes are awarded that points tell. The Shire Horse Society is catholic enough to give medals or premiums in cash to a certain number of the best horses in the parade, irrespective of breed. The judges to undertake this duty were Messrs. E. H. Cartwright, F. W. Griffin, T. May, and E. Mucklow, whose awards were in favour of Messrs. J. Simpson and Sons, the Gas Light and Coke Company, the Builders' Material Supply Stores, W. Hampton and Co., Whitbread and Co., J. Walker, Watney, Combe, Reid, and Co., J. Thorley, Rickett, Smith, and Co., and the Borough Councils of Paddington, Islington, Willesden, Stepney, Westminster, and Battersea, and the Corporation of London. For pairs of horses, the winners were Messrs. J. Simpson, Watney, Combe, Reid, and Co., New London Brewery, J. W. Nicholson, M. Patrick and Sons, Truman, Hanbury, Buxton, and Co. The prizes for teams went to Messrs. Watney, Combe, Reid, and Co., Young (of Wandsworth), New Westminster Brewery, and Watney and Co.

The judging of the Suffolk horses was undertaken by Messrs. F. C. Starkie and A. T. Pratt, who gave the prizes for single horses to Messrs. Cockerell and Co., Eastwood and Co., Rickett, Smith, and Co., W. Sharp, and T. Moy. The best pairs belonged to Messrs. Eastwood and D. and W. Gibbs; but no teams were entered. The Suffolk horse has for a long time been popular in London, and the breed made a capital show. Besides the firms above-mentioned, Messrs. Nowell, Colls, the Killingbeck Colliery, and H. Hay sent some excellent specimens, as did Messrs. E. Murrel, the Tyne Main Colliery, Eastwood and Co., Messrs. Teetgen, and others.

Sir Walter Gilbey, as usual, entertained a large number of friends at Cambridge House to luncheon, and at about half-past two the Lady Mayoress, accompanied by the Lord Mayor, Sir Walter Gilbey, and others, went on to the dais to present the diplomas, badges, and premiums, and the march past at once began. The proceedings terminated with the usual votes of thanks, the Lord Mayor and Mr. Burdett-Coutts, M.P., availing themselves of the opportunity for bearing testimony to the immense services which Sir Walter Gilbey had rendered to the Cart Horse Parade.

Ormskirk and Southport.

A record number of visitors were present at the annual show of the Ormskirk and Southport Agricultural Society, which was held at Southport on Wednesday in splendid weather. Entries of stock numbered about the same as in the previous year, but a distinct advance was shown in point of quality, some strong classes being included.

The increased attention paid to horse breeding in Lancashire was reflected in the very strong classes of heavy horses shown, some of the most outstanding prize-winners in Lancashire having been entered. There was no class for aged stallions. Coming to stallions foaled after 1st January, 1901, there was only one entry. The prize was secured by Mr. James Tasker's yearling foal from the sire Sir Anthony. The gelding or mare class was one of the best in the show yard. The leading award was secured by the famous roan-grey gelding belonging to Mr. Edwards, Litherland. The Lancashire and Yorkshire Railway Company gained the second award with a very weighty mare, which has not had the show yard experience of her more formidable rival. Colonel Blackburne, Hale, led with Barron Fashion in the section devoted to brood mares. The runner-up, the property of Mr. John Rimmer, Southport, was another good type of mare. The class for colts and fillies brought out some nice youngsters.

Colonel Blackburne again led here with an animal which was shown for the first time. Mr. John Rimmer was again the runner-up here. Coming next to geldings or fillies foaled in 1899, the winner was Mr. Charles Bell, Norley, Cheshire, with Halstead Queen. The second prize winner, the property of the Rev. Canon Blundell, of Halsall, was the runner-up in this class. There was a better entry in the class of geldings or fillies foaled in 1901. Here Mr. Charles Bell was again the winner with Norley Belle. The second award went to Mr. Robert Jeffs, of Warrington. In the section for geldings or fillies foaled in 1901, Colonel Blackburne came to the front with Orford Lady. The second prize was given to Mr. Woodcock, Aughton, for Moss End Rose. In the local class for geldings or mares, the Lancashire and Yorkshire Railway Company carried all before them.

The sections devoted to light horses contained some well-known hackneys and ponies. The show of harness horses was perhaps not quite so good as might have been expected. Mr. Fred Holmes (Shipley) won Mr. Plummer's cup with his elegant stallion, Lord Loch, from Ganymede strain. Mr. Edward Holmes was awarded the second prize with his chestnut Pedro, the sire of whom was Troubadour. The next class with hackney brood mares was not so well filled. The winner was the chestnut Lady Millie, owned by Mr. Hayley, of Malton. The second prize was won by Mr. Haworth, Poulton-le-Fylde. Foals were just a middling class, the first prize taker being owned by Mr. Hayworth. In the classes for mares and geldings 15 or 14 hands, Mr. McKibbin took the leading award with Cob, shown in very fine condition. The ponies brought out a very good entry. The first prize-winner for those under 13 hands, owned by Mr. Harrison (Preston), is a very fine, compact, snappy, free-going little animal. The winner of the local class for hackneys in saddle (Mr. Brereton) is a nice grey mare, with good flesh and muscle.

Cattle were a small section in point of numbers, but contained some very good animals. The winner of the aged bull class was Mr. T. Miller (Preston). The second winner belonged to Mr. C. Bell, Norley, Cheshire. In the young bull class there were only two entries, and the premier award went to Messrs. R. and T. Harrison, Much Hoole, Preston. In the cow class there were some very good specimens forward. Mr. W. Ackroid (Liverpool) and Messrs. Thomas Wareing, R. Sutton (Churchtown), and Jeffrey Wareing (Southport), were the leading winners. Mr. John Harrison (Preston) won both prizes for heifers, and also the cup in the aged class. In the cows for dairy purposes, Mr. W. H. Smith (Churchtown) secured the premier award with very fine cows.

An innovation was made this year in the institution of classes for fat cattle. Competition was very keen, and the judge, Mr. Bland, of Lancaster, had no little difficulty in coming to a decision in some cases. Messrs. M. H. Rhodes and Sons obtained all the silver medals in the fat stock classes for cattle and lambs. The beasts were undoubtedly some of the finest ever shown in the neighbourhood. The animals by which the firm gained their success were polled Angus heifers, in the classes for the most useful heifers for the butcher, and cross polled Angus and shorthorns in the class for fat bullocks; in the class for tup gimmer lambs the same firm were successful. Mr. Wallace Shuttleworth being runner-up in the tup section, and third for the pair of gimmer lambs.

That the step taken last year in instituting a pig section was a wise one, was proved by the number and quality of the entries, and this year again the section made a very good show. The prize-winning sows and boars were highly praiseworthy.

The judging in the various sections was carried out by the following gentlemen:—Implements, Mr. R. Webster, Litherland; cattle, Mr. George Dewhurst, Southport; fat stock, Mr. James Bland, Lancaster; heavy horses, Mr. J. Richman, Shefford, St. Albans; hackneys, Mr. A. C. Carr, Broxton; tradesmen's turnouts, jumping, and racing, pigs, game and game bantams, Mr. C. W. Brierley, Brimfield; other varieties of poultry, Mr. R. Anthony, Euxton.

Lydney Farmers' Club.

On Whit Monday last the Lydney and District Farmers' Club held their annual show in Redhill Park. Capital entries of stock were received. Entries totalled 370 in all, as compared with 297 received twelve months ago. Eight new classes were provided at the present show. The weather was cold, and frequent showers fell; but in spite of the adverse conditions, a record attendance was recorded.

The heavy horse classes, although the prize winners possessed some merit, were generally poor. Only the prize winners were worthy of notice; and best of those was Mr. Webb's Cherry Rose. Lack of merit among the cart horses was made up in the other classes, in which were embraced military horses, hunters, hacks, and harness horses. Taken all round, they were very good. So numerous and of such level excellence were the animals in Class 17 that the judges had some difficulty in awarding the prizes. Class 19 drew the largest number of competitors, and the smartest set of animals ever seen at the show. To decide their merits was no light task, as the turnouts were very complete, and the driving was splendid. Two kinds of animals being combined in Class 20, the discriminating faculties of the judges were severely exercised here also. Tandems were remarkably fine, and gained general admiration, and the same may be said of the pairs driven in double harness. Jumpers were of an average description, a few particularly good animals being among them. The other classes were commendable.

Cattle were fairly numerous, and there was an improvement in the quality of the animals. The old bulls were prime in strength and substance, if lacking in numbers. More under two years were sent, but they were not quite so good as hitherto. Mr. Cullimore's Western Lad was by far the best of all. Some exceptionally well-formed and useful dairy cows, with splendid milking qualities, were in the third class. Steers and heifers were a praiseworthy lot, but more competition was needed. The entries in the other classes were very middling.

Advance has been made in the quality of the sheep during the three years of the existence of the association, and those sent on the present occasion were the best. More were forthcoming than hitherto, and the competition was sharper. Generally speaking, the shearing was well done, but the weather was too cold for the best results to be obtained.

Butter may be spoken of generally in terms of approval, if it was not all that could be desired. The entries were numerous, and the produce was of fair quality in grain and texture and in colour. Some examples, however, were wanting in flavour, and in two or three instances the salt was too heavily sprinkled, and not evenly worked into the butter, and some of the samples lacked firmness.

Entries in the classes for poultry and eggs were rather small, but there was some excellent produce sent. Chickens were fair, but some better attention in preparing the birds for culinary purposes appeared to be needed in several instances. Ducks were small in number, yet praiseworthy in quality. About 30 competitors sent eggs, and they were of exceptional fineness, especially those which carried off the first awards. The following gentlemen acted as judges:—Cattle, Messrs. B. Read (Quedgeley) and G. F. King (Keynsham); sheep and sheep shearing, Messrs. V. Parsons and P. Price (Chepstow); cart horses, Messrs. John W. Brain (Andoversford) and J. G. Cuss (Cricklade); military horses, hunters, jumping, riding, driving, and pony racing, Messrs. John Curre (Beachley Lodge) and F. J. Townsend (Cirencester); butter, poultry, and eggs, Mr. H. A. Howman (County Council School, Gloucester); shoeing, Mr. T. J. Brain (Cheltenham); dogs, Mr. H. S. Smith, M.R.C.V.S., (Chepstow).

Edgworth and District.

The sixteenth annual show of the Edgworth and District Agricultural Association was held at Edgworth on the 17th inst. The weather, though not of an ideal character, there being frequent showers of rain during the day, did not interfere with the attendance, and the show ground was extensively patronised. There was a capital display of horses, some fine specimens of the weight-lifting type coming before Messrs. P. Blundell Kirkton and J. Whinnarah Carnforth, the judges. In the yearling class, Mr. H. W. Kearns, of Haslingden, was placed first. In the two-year old mare or geldings, Mr. Kearns was again the winner, and also obtained a special. Mr. Lindsay secured the premier card in the section for three-year-olds. There was a numerous entry in the any age class, the red card again going to Mr. Kearns. The Society's gold medal for the best team was secured by Mr. Kearns. In the open classes some keen competition was witnessed. The yearling section brought forth a useful lot. Mr. Edward Whittaker, of Windermere, taking the first and third cards. The winner, Winsome Winnie, is a fine bay, with good joints and bone, by Blythwood Hero. In the two-year-olds, Mr. Kearns obtained the premier position for his Day Dawn, who possesses nice qualities, and has a profusion of feather. In the class for best shire-bred mare, Mr. R. A. Yerburgh, M.P., won with his splendid four-year-old mare Lily of the Valley. It was hardly expected that the judges should award the Derby Challenge Cup to Mr. Yerburgh's Lily of the Valley, but from his first appearance in the ring the issue did not appear to be in doubt. Last year's winner of the handsome trophy was Mr. Ward's Bardon Extraordinary. The Shire Society's medal went to Mr. Whittaker.

The open classes were productive of much interest, and very keen competition was witnessed. In yearlings Mr. A. A. Haley, of Eddlethorpe, with his natty chestnut colt by Star of Langton, came first, and Mr. James Bury was placed second. Mr. W. Lawson, Blackpool, led the way section Mr. Haley gained the premier award. In the any age class Mr. T. B. Sykes, of Poulton-le-Fyde, with his wonderful chestnut mare Zaizan was an easy winner. In the not exceeding 15 hands class Mr. T. C. McKibbin, Windermere, gained the coveted card with Milford Maid. Much interest was evinced in the section set apart for mounted infantry cobs, over four years, and the silver cup and second prize went to Mr. O. L. Ormerod, Bolton, Mr. J. Worsley, Darwen, being third. The handsome Coronation cup for the best hunter was awarded to Mr. Arthur Sowler, of Victoria Park, Manchester, and the second prize was obtained by Mr. J. Starkie, Alderley Edge. In the polo pony class Mr. Sowler was also placed first with his bay mare.

There was a creditable display of cattle, some exceptionally fine animals of the rent-paying type being shown. The principal prize was won by Mr. T. Atkinson, Bury, with his well-known bull Senator.

Reigate Horse and Hound Show.

The second annual Reigate and Redhill Horse and Hound Show was held at Reigate on Wednesday, and, as was the case with the initial event last year, it was an unqualified success. The entries were remarkably good all round, and the weather was most favourable, whilst there was again a very large and fashionable attendance of visitors. The quality of the animals was first-rate, and many of the animals brought into the ring won unstinted encomiums from both judges and spectators. The executive were fortunate in securing the services of some eminent gentlemen to act as judges, viz.:—Agricultural horses: Messrs. A. H. Clark and J. Paisley. Hunters, hacks, and jumping: Hon. E. A. Fitzroy, M.P., and Messrs. C. McNeill, M.F.H., and James Flack. Hackneys and harness horses: Lord Alwyne Compton, M.P., and Mr. Lindsay Hogg, M.P. Hounds: Messrs. E. E. Barclay, M.F.H. (The Puckeridge), and James Bailey (huntsman to the Essex). Beagles: Mr. J. Otho Paget, M.H.

There was an entry of 44 in the thirteen classes devoted to agricultural horses, and they made a very nice display. The silver medal offered by the Shire Horse Society for the best Shire mare, filly, or filly foal, was carried off by Mr. Leopold Salomons, of Norbury Park, Dorking; Mr. T. Jones, of Quarry Farm, Godstone, being awarded the reserve number. Mr. Salomons was the most successful exhibitor in this section, carrying off, in addition to the above, three first and one second prize. In the tenant farmers' classes competition ruled very keen. The honours were fairly evenly divided between Mr. T. Jones, Quarry Farm, Godstone; Mr. T. Luckin, Thakeham Place, Pulborough, and Mr. A. Holm, Buckland. Hunters were a capital lot. The Hunters' Improvement Society's silver medal for the best hunter filly not exceeding three years old was awarded to Mr. J. Hayman-Joyce, of Brede, near Hastings, the reserve number going to the Hon. Mrs. Mark Napier, of Puttenden Manor, Lingfield. There were four classes of hackneys; they all reached 34 entries, the animals forward being much above the average. Mr. R. P. Evans, of Woodhatch House, Reigate, was awarded the silver medal offered by the Hackney Horse Society, and to Mr. R. W. Jay, of Old Southgate, W., was given the reserve number. First prizes also went to Mr. H. Milner, of Burgess Hill; Mr. R. P. Evans, Reigate; and Mr. R. T. Thornton, Brentwood. One of the most popular sections was that reserved for hacks, one class alone claiming no fewer than 28 entries. Mr. E. H. Goad, of Mead House, Redhill, met with great success, carrying off two firsts and one second in the four classes, in which premier awards also went to Mr. F. G. Colman, of Epsom Downs, and Mr. E. Blackman, of Piccadilly. As usual, the harness horses and driving classes proved a great attraction to the crowd, as did also the tradesmen's turnouts, which were wonderfully smart. The jumping classes were a great success, and it is estimated that not less than 5,000 spectators lined the ropes while these were in progress.

As last year, the hound classes were a feature of the show, there being an excellent all-round entry. With few exceptions, all the leading packs in the south were represented, the Walter Winans, the Old Surrey, the Eastbourne, and the Surrey Staghounds being among the winners in foxhounds; whilst in harriers, Mr. Quare's and Messrs. Taylor and Bowen's packs were the most choice. Away from Peterborough we have never seen a finer collection of hounds, and there is little doubt that in time the fixture will become a powerful rival to Peterborough. The judges of beagles had a very "sorty" collection, the Worcester Park, Surbiton, the Pettings, and Woodcote all getting prizes. In no class was competition one-sided, Mr. Paget having considerable difficulty several times in awarding the prizes.

The awards in the horse section were as follows:—

AGRICULTURAL HORSES.

Shire Horse Society's Silver Medal for the best Shire mare, filly, or filly foal, registered or eligible for registration in the Stud Book.—Mr. Leopold Salomons, Norbury Park Dorking; r., Mr. T. Jones, Quarry Farm, Godstone.

Entire horses, suitable for agricultural purposes, for service in any of the districts hunted over by the following packs: Burstow, Crawley and Horsham, Southdown, Old Surrey, Surrey Union Foxhounds, or Surrey Staghounds, Warnham Stag Hounds, or West Surrey Stag Hounds.—1, Mr. L. Salomons; 2, Mr. Walpole Greenwell, Marden Park.

Brood mares, with foal at foot, or to produce foal in 1902.—1, Mr. T. Jones; 2, Mr. R. Barrow, Brockham; r., Mr. C. B. Heywood, Reigate.

Colts or fillies foaled in 1901—1, Lily Duchess of Marlborough; Dorking; 2, Mr. T. Luckin, Thakeham Place, Pulborough; r., Mr. T. Jones; h. c., Mr A Holm Buckland.

Geldings or fillies, foaled in 1900—1 and 2, Mr. L. Salomons; r., Mr. R. Barrow; h.r., Mr. A. Holm.

Geldings or mares foaled in 1899—1, Mr L. Salomons; 2, Messrs. C. B Toms and W. G Mawer, Rowhook, Horsham; r. Mr. A. Holm

Geldings or mares, foaled in or before 1898—1, Mr. L. Salomons; 2 and r., Mr. A. Holm; c., Mr. D. E. Higham, Addlestone

Brood mares with foal at foot or to produce foal in 1902—1, Mr. T. Jones; 2, Mr. T. Luckin; r., Mr. R. Barrow.

Colts or fillies foaled in 1901—1, Mr. T. Luckin; 2, Mr. T Jones; r., Mr. A. Holm.

Geldings or fillies foaled in 1900—1, Mr. R. Barrow; 2, Mr. A. Holm; r., Mr. H. Harker, Nutfield.

Geldings or mares foaled in 1899—1, Mr. T. Luckin; 2, Mr. H. Harker; r., Mr. A. Holm.

Geldings or mares foaled in or before 1898—1 and 2, Mr. A. Holm; r., Mr. W. R. Malcolm, Walton Manor.

Pairs of horses, mares or geldings—1, Mr. A. Holm; 2, Mr. T. Luckin; r., Mr. I. Martin, Leigh.

Pairs of horses, mares or geldings—1, Mr. A. Holm; 2, Messrs. Hall and Co., Limited, Redhill.

HUNTERS.

Silver Medal, presented by the Hunters' Improvement Society, for the best hunter or filly not exceeding three years old and not having won the society's medal in 1902 Mr. J. Hayman-Joyce, Brede; reserve number, Hon. Mrs. Napier, Lingfield.

Entire horses (for service in any district ridden over by the local Hunts). 1st prize, £5; 2nd, £3.—1, Mr. G. Gully, South Godstone; 2, Mr. E. H. Brown, Upper Warlingham; r. Messrs. Alfred Cox and Co., Lewes.

Brood mares, with foal at foot, or to produce a foal in 1902—1, Mr. C. Kelway-Bamber, Horley; 2, Messrs. C. B. Toms and W. G. Mawer; r., Mr. J. Hayman-Joyce; c., Mr. A. G. Ashby, Reigate, and Mrs. A. F. Perkins, Holmwood.

Colts or fillies foaled in 1901—1, Mr. J. Hayman-Joyce; 2, Mr. P. J. Pelly, Merstham; r., Mr. L. Bethell, Epsom; c, Mrs. A. F. Perkins.

Geldings or fillies foaled in 1900—1, Hon. Mrs. M. Napier; 2, Mr. G. F. Young, Oxted; r., Mr. A. G. Ashby; v. h. c., Mr. A. B. Worthington Ashstead; h. c. Mrs. A. F. Perkins.

Geldings or mares foaled in 1899—1, Mr. C. Kelway-Bamber; 2, Mr. W. R. Wells, Leigh Place; r., Hon. Mrs. M. Napier.

Heavy-weight hunters foaled in or before 1898 (to be ridden).—1, Mr. T. Radmore, Cheam; 2, Mr. H. F. Courage, Bolney; r., Mr. W. P. Dare, Epsom; v. h. c., Mr. D. Kelly Surbiton; c., Mr. P. G. Pelly.

Light-weight hunters, foaled in or before 1898 (to be ridden)—1, Mr. H. M. Mackusick; 2, Mrs. A. G. Ashby; r., Mr. G. Brown, Horley.

Heavy-weight hunters, foaled in or before 1898 (to be ridden)—1, Mr. T. Radmore; 2, Mr. J. Powell, Reigate; r., Mr. D. Kelly.

Middle-weight hunter, foaled in or before 1898 (to be ridden—1, Mr. H. M. Mackusick; 2, Mrs. A. G. Ashby; r., Mr. G. Brown.

Light-weight hunter, foaled in or before 1898 (to be ridden), owned by resident within a radius of 15 miles from Market Hall, Redhill—1, Mr. Eustace Frith, Reigate; 2, Mrs. A. G. Ashby; r., Mr. F. Gregory, Earlswood.

Geldings or mares got by a thoroughbred, foaled in or before 1898 (to be ridden)—1, Mr. D. Kelly.

HACKNEYS.

Hackney Horse Society's Silver Medal, for the best hackney or pony mare, filly, or filly foal, registered or eligible for registration in society's stud book—Mr. R. P. Evans Reigate; r., Mr. R. W. May, Old Southgate, W.

Entire horses, for service over districts hunted by local packs—1, Mr. H. Milner, Burgess Hill; 2, Mr. A. Benson, Upper Gatton; r., Mr. E. J. Vaughan, Chobham; c., Mr. T. Radmore.

Brood mares with foal at foot, or to produce a foal in 1902—1, Mr. R. P. Evans; r., Mr. E. J. Vaughan; c., Mr. H. Milner.

Colts or fillies foaled in 1901—1, Mr R. T. Thornton, Brentwood; 2, Sir Weetman D. Pearson, Worth; r., Mr. R. S. L. Boulter, Godstone; c., Mr. R. P Evans.

Geldings or fillies foaled in 1899 or 1900—1, Mr. R. W. Jay; 2, Mr. R. P. Evans; r., Mr. R. T. Thornton; c., Mrs W. Oppenheimer, Thames Ditton, and Mr. E. J. Vaughan.

HACKS.

Park hack, any age—1 and r., Mr. E. H. Goad, Redhill; 2, Mr. F. G. Colman, Epsom Downs; c. Mr. E Blackman Piccadilly, and Mr. E. Baxter, Brentwood.

Covert hacks—1, Mr. E. H. Goad; 2, Mr. Walter Winans, Surrenden Park, Kent.

Covert hacks (15 hands or over, to carry not less than 12 stone).—1, Mr. E. Blackman; 2, Mr. E. Goad; r., Mr. E. Tipply, Croydon; c., Mr. W. P. Dare, Mr. E. Baxter, and Miss D. Hare, Redhill.

Ponies over 14 hands (to be ridden).—1, Mr. Colman; 2, Mr. J. Stevens, South Norwood; r., Mr. E. Blackman.

HARNESS HORSES AND DRIVING CLASSES.

Geldings or mare 15 hands or over—1, Mrs. H. F. Batt, Elgin Avenue, W.; 2, Mr. W. S. Cunard Bracknell; 3, Miss E. K. Cunliffe, Leatherhead; r. Mr. A. Cunliffe; c., Mr. E. H. Goad

Gelding or mare under 15 hands—1, Mr. G. A. Cunliffe; 2, Mr. J. T. Mitchell, Redhill; r, Mr. E. H. Goad; c, Mr. W. P Dare and Mrs. H. Batt.

Gelding or mare under 15 hands (property of a resident within 15 miles' radius of Market Hall, Redhill). 1, Mr. A. Cunliffe; 2, Mr. J. T Mitchell; 3, Mr. E. H. Goad; r., Mr. A. N. Smith, Nutfield; c., Mr. W. P. Dare and Mr. F. G. Colman.

Gelding or mare, 15 hands and over (within 15 miles' radius). 1, Mr. J. T. Mitchell; 2, Mr. A. Cunliffe; 3, Mr. E. H. Goad; r., Miss E. Platt; c., Mr. J. Stevens, Mr. A. C. Paul, Horley, and Mr. A. Benson.

Pairs of horses, geldings, or mares (to be driven in double harness).—1, Mrs. H. P. Batt; 2, Miss E. K. Cunliffe; r., Mr. R. T. Thornton; c, Mr. J. Stevens and Mr. J. J. Taylor, Godalming.

Tandems, geldings or mares, any height. 1st prize, silver cup, value £10, given by the tradesmen of Reigate).—1, Mrs. H. F. Batt; 2, Mr. T. J. Mitchell.

JUMPING CLASSES.

For the gelding or mare, 15 hands or over, that shall jump in the best form over fair hunting jumps (open).—1, Mrs. Blockley, Madeley, Staffs; 2, A N. Smith, Nutfield; 3, J. J. Taylor Godalming.

For the gelding or mare under 15 hands, that shall jump in the best form over fair hunting jumps (open). (1st prize, silver cup, value £10 (or specie), given by the tradesmen of Redhill).—1, A. N. Smith, Nutfield, bay mare, Midget; 2, Miss Pearson, Worth; 3, J. C. Buckland, Woodpigeon.

For mare or gelding belonging to bona fide tenant farmers (see schedule). Restricted to horses that have never won a first prize for jumping.—1, A. Maxwell, Tadworth, Epsom; 2, G. Hamlin, Edenbridge.

For the mare or gelding the bona fide property of a subscriber to any of the Hunts as specified in schedule. Restricted to horses that have never won a first prize for jumping.—1, E. Frith, Reigate; 2, St. G. George, East, Horsley.

King's Heath Horse Show.

A splendid show was held by the King's Heath Horse Show Society on Whit Monday. There were classes for hunters, hacks, and cart horses, and for driving, jumping, and turnouts, and in each there was a keen and close competition. There was a large attendance of spectators despite the unsettled climatic conditions. As to the show itself there was a falling off in entries in the open classes, the increased value of the prizes offered having had the effect of bringing together a stronger entry in point of quality, but frightening off those who would otherwise have entered their animals for competition. In the local classes, however, there was a distinct increase both as to quality and number of entries. The animals shown in the local classes were of exceptionally good quality for work on the roads, and the excellent show condition to which they had been brought indicated clearly that the carters had spent considerable time and care in preparing them to go before the judges.

In the open events in the class for the best one-horse turnout for horses that have never won a prize in harness, the property of residents within seven miles there were not many entries, but the class throughout was of good useful quality. Mr. F. J. Batchelor, of Alvechurch, took first honours with Knight of Hopwood. In the next competition, that for the best pair-horse turnout for gentlemen's coachmen, the first prize went to Miss Ella S. Ross, of Sale, with Rowton Blackthorne and Rowton Vinca. For the best single turnout for gentlemen's coachmen Mr. J. M. Smith, of Edgbaston, was the first prize winner. In the class for the best Hackney mare or gelding, 14 hands and over, to be shown in the saddle, Mr. F. J. Batchelor's Wild Agnes took first honours. Mr. W. Foster, Moseley, won first honours in the class for the best cob or pony not exceeding 14 hands, to be shown in the saddle, with Lady Horace, a well-made bay mare with plenty of bone and action. The class for hunters, four years old and over, qualified to carry 12 stone and upwards to hounds, was a small one, but the quality was good. Mr. J. H. Stokes, of Market Harborough, secured first prize with a bay gelding with very free action, and evidently an easy hunter. Mr. W. Foster carried off the first prize in the competition for the best cob or pony not exceeding 14 hands, to be driven in harness. Wild Agnes, Mr. F. J. Batchelor's, was the winner of the first prize in the class for the best mare or gelding over 14 hands, to be driven in harness. In the class for jumping for horses of any height the judges were unable to award a first owing to the exceedingly close competition.

The jumping resulted in a tie between Mr. F. W. Foster's Paddy, Mr. Jerome's Comet (Sutton Coldfield), and Artist, Mr. F. Firkins, of Worcester. These divided the first, second, and third prizes. Mr. Blockley, of Madeley, took the fourth prize with Alfred. Wild Agnes (Mr. F. J. Batchelor) carried off yet one more first in the class for the best tandem of any height, in which she was driven in company with Enid. In the class for the best pony not exceeding thirteen hands, to be driven in harness, Mr. W. Foster, of Moseley, was awarded first with Mel Valley Don. Mr. A. H. Dixon won the gold medal offered by the Hackney Horse Society for the best mare or gelding, not less than 15.2 hands, exhibited in single harness, with Lord Dazzler, and Mr. Philip Baker secured the reserve with Lady Langton II. The silver medal offered by the Hackney Horse Society for the best Hackney or pony mare registered or eligible for registration in the Hackney Stud Book was won by Mr. F. J. Batchelor with Wild Agnes, and the same gentleman took the reserve with Enid.

In the jumping class for horses that have not won a first prize Mr. W. Foster, of Derby, was first with Surprise. There was a capital entry in the class for tradesmen's turnouts regularly used in business for the last three months, open within a radius of seven miles. Messrs. S. E. Tolman, of Stirchley, was first; Mr. J. Whitehouse, jun., Selly Oak, second; Mr. A. J. Neale, Stirchley, third; and Mr. J. Wotherspoon, Stirchley, reserve.

Ixworth Farmers' Club.

The annual show of the Ixworth Farmers' Club was held at Bury St. Edmunds on Whit Monday, in cold and squally weather. Notwithstanding the weather, there was a good attendance of visitors during the day. The show was, of its usual excellence, the entries being somewhat in advance of previous years, but the excess was chiefly in the swine classes.

Suffolk cart horses took precedence in the catalogue, the judges being Mr. A. E. Cook, Dennington Lodge, and Mr. John Eagle, Walton Hall. The famed Cockfield stud was well represented, Mr. Robert Edgar having two entries in the first and second class. In the former, which was for mare with foal at foot, his fine seven-year-old mare, Hurricane, had to give place to Mr. J. Tiffen's Suffolk mare, Diamond. When, however, it came to be a question of foals, Hurricane's offspring was placed in front of Diamond's, Hurricane's foal being by Mr. Edgar's Titup. There were some good exhibits in competition for the best mare without foal, four years and upwards, and the first prize was awarded to the Rev. H. Taylor for his beautiful mare, Stately II., by Prince F. The same gentleman took a like position in the three-year-olds, with Tiffen III., by the same sire. In the two-year-olds, Mr. Cordy S. Wolton was first with a filly, beating a big gelding by Mars, shown by Mr. Robert Edgar, who was first in yearlings, with a choice youngster out of Hurricane.

As to agricultural horses other than Suffolk, Mr. J. Sturley Nunn was first with a big weighty mare in the mare-with-foal class. In the next two competitions mare without foal and three-year-old filly or gelding, the chief prizes went to Mr. Frank Baldwin, for his well-known Maud and Suffolk Bounce, both mares having beautiful feet and legs. Amongst the two-year-olds was a nice filly shown by Mr. T. Rolfe, while Mr. J. Sturley Nunn was to the front in yearlings, with a particularly promising filly of choice quality. The contest for the prizes for the best pair of plough horses was keen, some grand animals putting in an appearance, and eventually the chief prize went to a choice Shire mare belonging to Mr. J. Sturley Nunn.

The riding horses were judged by Mr. P. G. Barthropp, Throgmorton Street, London, and Mr. Charles J. Dawson, Nacton. The hunters made a good show, Mr. D. W. Taylor taking first prize in the two classes for mare and foal. The two-year-olds formed the best collection in the show, Mr. George Orbell winning with his Milk Boy, by Weymouth. Another specially good entry was that for light-weight hunter mare or gelding, five both prizes. The same gentleman was also first years old and upwards, Mr. D. W. Taylor taking for saddle back. The ponies and hackneys in harness showed up well. In the former, Mr. Washington Charters had a handsome grey, which took the premier place. Mr. Wentworth Reeve was first in the hackney class, 12.2 h.h., and under 15 h.h., with a choice bay mare, while Mr. J. Leatherdale took a like position amongst the 15 h.h. and upwards.

The judges of the neat stock were Mr. Fred. Smith, Woodbridge, and Mr. Shepherd Ewer, Foxearth. Messrs. W. and A. Symonds, of Whelnetham, showed a serviceable animal in the class for polled cow. As to the one for polled heifer, under three years old, Mr. Cordy S. Wolton sent a couple of red polls of a quality seldom seen at a local exhibition. The same gentleman was also first in the polled bull class, with a particularly good exhibit, Red Pepper. There was nothing very special about the other classes.

The sheep and swine also came before the same judges. As to the former, Mr. Robert Barclay, Higham, was a most successful exhibitor in the various classes, carrying off the first and the Suffolk Sheep Society's silver medal, in the class for ten ewe lambs. Mr. Barclay was also the chief winner in both classes of ewes, while as to ram lambs, there was a strong collection, Mr. Sidney Traylen coming to the front with a particularly smart lamb. Prizes were offered for ram hoggets, lambed in 1901, naturally fed in the open field, and shown in the wool, and here, once more, Mr. Robert Barclay was to the front.

There was a big show of pigs. Mr. G. Appleyard was first in the class for sow and pigs, but the largest collection was that of boars of any age and breed, there being close upon a score entries, the majority of them whites. The first honours, however, went to a large black boar, sent by Mr. A. Cobbald, Eldo House, a gentleman who has for a considerable time made a speciality of this class of pigs. Mr. Cobbald was also to the fore with young sows of the same breed, Messrs. W. and A. Symonds being second with large whites. Mr. George Manners, of Fornham Park, offered a special for the best large or middle white boar, any age, and this was taken by Mr. W. N. Champion.

The May Statutes for hiring farm servants was held at Grantham on the 17th inst., when there was a large attendance of farmers and servants, and good wages were given. Head waggoners were engaged at £20 to £26; second waggoners, £16 to £18; youths able to plough, £14; and young boys first year out, £10. The supply of female servants did not nearly meet the demand. Cooks obtained from £18 to £22; parlourmaids, £18 to £20; housemaids, £8 to £16; generals, £8 to £16; nursemaids, £6 to £10; young girls, £6.

COMING SHOWS.

Bath and West at Plymouth

It is more than a quarter of a century since the Bath and West and Southern Counties' Society last visited Plymouth, so that their show to be held there this week will be sure to be appreciated after such a long absence. In 1873 the society had a most cordial welcome, and the cordiality has been repeated on the present occasion; the local committee, representing "The Three Towns" and district, have done all in their power to make the show a success, and the Devon County Agricultural Association has suspended its show for the year in order to co-operate in promoting the success of the meeting. The entries are good, and an attractive programme has been drawn up, so that really all that is needed to make the show a successful one in every respect is fine weather, and it is to be hoped that this will prevail. From the details given below, it will be seen that the show is not exclusively of interest to agriculturists, there being several sections as attractive to dwellers in towns as the country, and this being the case there is every reason to anticipate a very large attendance of visitors. The railway companies, it may be mentioned here, will issue cheap tickets and run special and excursion trains from all parts during the week.

The prize money amounts to about £3,500, and has attracted a total entry of 1,934, a number not quite so large as last year, but well up to the average. Horses number 276; cattle, 515; sheep, 170; pigs, 103; poultry, 398; and produce, 224; whilst, in addition, there are 248 entries in the buter-making, shoeing, shearing, and milking classes. A comparison of the present number of entries with that when the society last visited Plymouth indicates in a striking manner how much the show has grown of late years. In 1873 the entries of live stock and produce numbered 1,027; in 1902 they are 1,686. Then implements and machinery occupied 5,197 feet run of shedding—now they require 5,657 feet run; whilst the open space set apart for larger agricultural exhibits has had to be increased from 5,616 square feet in 1873 to 17,987 square feet in 1902. In 1873 there was no working dairy in the show yard and no competitions outside the live stock and produce classes, except for shoeing smiths, who numbered 14. On the present occasion there are 246 competitors in the shoeing, shearing, butter-making, and milking classes, including those in the local classes provided by the Devon County Council for its pupils. In 1873 the prizes amounted to £1,352, whilst this year, as previously mentioned, they reach a total of nearly £3,500. The society's sphere of work, apart from the show, has been similarly enlarged, especially in the direction of practical education and scientific research.

The Working Dairy.

This is, as last year, a large and most completely fitted-up structure. It is substantially built, with a thatched roof, and seating accommodation is afforded for spectators. Here the butter-making contests, for which there are 115 entries, will be held each day. On the last day of the show the prize-winners of the previous days will compete for the championship and for the society's gold, silver, and bronze medals, and there will also be a local championship competition. There will be daily illustrations of the making of clotted cream and the most recent improvements in butter making, and power and hand cream separators and other dairy appliances will be shown at work.

Implements and Machinery.

There will be a very extensive exhibition of implements, machinery, etc., occupying 5,657 feet run of shedding, most of the leading agricultural firms being represented. There will be a long line of steam and gas engines and other machinery in motion, whilst in the extensive ranges of shedding elsewhere will be found an endless variety of implements adapted to the various requirements of the farm, the road, and the homestead, together with seeds, cattle foods, cattle medicines, and artificial manures, and a multitudinous assortment of miscellaneous exhibits, embracing the latest labour-saving inventions for domestic and other purposes. There will also be collections of carriages and vehicles of every description. In addition to these exhibits, no less than 17,987 square feet of open space have been taken for the display of poultry appliances, rustic houses, pottery, wind motors, etc.

Art Manufactures, Arts and Crafts, &c.

In view of the fact that there are now many more picture exhibitions held throughout the country and greater facilities for visiting them than formerly, the society have discontinued holding an exhibition of pictures on the lines hitherto adopted They have substituted for it an exhibition of work, representative of Arts and Handicrafts, executed by pupils attending classes held in connection with the Technical Education Committees. Schools of Art, and other public bodies, and have added to this an exhibition of specimens illustrating geology, entomology, botany, etc., in their relation to agriculture.

Horticulture.

In the lofty pavilion specially constructed for the purpose, there will be a choice display of exotic plants and flowers, which will be arranged with the special view of illustrating the beautiful effects which can be obtained by skilful groupings and combinations of colour.

Poultry-Keeping and Bee-Keeping.

Lectures and practical demonstrations, illustrating the cramming, killing, plucking, etc., of poultry, will be given by Mr. C. E. Stallworthy, Devon C.C. Lecturer, and practical illustration in bee-keeping by the Devon Bee-Keepers' Association.

Shoeing, Shearing, and Milking.

There will be several competitions of shoeing smiths, for which 86 have entered, including representatives from many different counties, so that unusual interest is likely to be excited in these contests. Special prizes in these competitions will be given by the Devon County Technical Education Committee for smiths who have attended courses of instruction in farriery held in connection with the County Farriery School. There will also be milking and shearing competitions.

Special Features.

There will be daily parades of the horses and cattle in the large ring in front of the grand stand, and also a series of competitions for harness horses, pairs, tandems, and singles, as well as jumping competitions. The entries in the driving and jumping classes are very numerous, and so some good sport may be anticipated.

Miscellaneous Buildings.

There are many buildings in addition to those in which the exhibits are housed. The principal entrance front of the show yard is in the style of an old English timber building, with a gabled roof and latticed windows, with a tower in the centre, and connected with it are rooms for the secretary and his staff, and for the yard stewards

MR. T. F. PLOWMAN,
Secretary of the Bath and West Agricultural Society.

and finance departments. The other stewards are provided with offices in those parts of the yard in which their respective departments are situated. Near the entrance is a commodious pavilion, comprising a suite of apartments for the use of the president and the council. There is also a reading room and writing room in the centre of the yard for the use of members of the Bath and West Society and the Devon County Agricultural Association, the offices of the latter being near at hand.

Some of the society's stewards will sleep in the yard, and for the accommodation of these a neat row of apartments has been erected. The various rooms for the Press, police, railway officials, etc., will be found in prominent positions, and other buildings include postal, telegraph, and catalogue offices, lavatories, cloak rooms, parcel offices, forage stores, stock hospital, and servants' sleeping sheds. There will be two large luncheon pavilions, whilst provision will also be made for light refreshments at counters and for workmen's dinners, etc. A special arrangement has been made for the serving of afternoon tea in the proximity of the band stand, and this is likely to afford a popular rendezvous.

A covered building has been erected near the main entrance, where cycles will be taken charge of.

Duration of Show, &c.

The exhibition will open at 9 o'clock to-morrow (Tuesday), at which hour judging will commence, and at half-past ten o'clock on the same day the exhibition will be formally inaugurated by the Mayors of Devonport and Plymouth, and the chairman of the Stonehouse District Council, who will attend in state, and will be received by the president of the society, the Earl of Morley, and council.

The show will open on the other days at the same hour, and will close each day at 7 p.m., except on Saturday, when it will close at 6 p.m. On Thursday morning the annual general meeting of the members of the society will be held, when the president for the ensuing year will be elected. Friday will be the first shilling day, when a very large attendance is anticipated.

The show will finally close at 6 p.m. on Saturday, May 31, and as exhibits will not be permitted to leave their places until after this hour, the exhibition will maintain its attractiveness up to the closing time.

Prices of Admission.

On the opening day of the show, when the judging in all the live stock classes, except those for harness and jumping horses, takes place, the charge for admission will be 5s.; on the second and third days, 2s. 6d.; and on the last two days, 1s.

Season tickets for the whole period of the show are issued at a charge of 7s. 6d. each. These permit the holder to go in and out from the show as often as he or she desires, whereas the ordinary admission payment only gives a single access to the show, and does not allow the visitor to leave the ground and re-enter it without paying again, no pass-out cheques being issued.

Annual Meeting of Members.

The annual meeting of the members of the society will be held in the show yard on Thursday, at twelve o'clock, at which the council's report for 1902 will be presented. At the outset the council state they have particular pleasure in recognising the friendly co-operation with respect to the Plymouth meeting of the Devon County Agricultural Association, who have suspended their show for the year and have contributed £100 to the prize list. Under these circumstances, the council felt that they would be acting in accordance with the feelings of the members generally if they conferred the same privileges for the meeting upon the members of the association as are enjoyed by members of the Bath and West Society, and this has accordingly been done. The council also gratefully acknowledge the receipt of special prizes from various gentlemen and societies.

The report further states that during the past year the council have continued their efforts for the promotion of technical education in agriculture by organising and conducting, on behalf of the Somerset County Council, a cheese school at Mark, and it has had, since its opening in April last, as many pupils as it was possible to accommodate. Experiments upon the improvement of grass land are in progress, and the council are also conducting, in conjunction with the Board of Agriculture, an experiment for ascertaining the influence of various manures upon the production of mutton.

With the co-operation of the Board of Agriculture and the Somerset County Education Committee, the council have embarked upon an investigation into the origin and cause of flavour in dairy produce, the cost of which will be defrayed by annual grants for three successive years of £200 from the Board of Agriculture, of £100 from the Somerset Committee, and of £150 from the Bath and West Society. The council have also followed up the practical and scientific investigations, initiated by the society a few years since, in connection with cider making, and the Board of Agriculture has borne testimony to their utility by making an annual grant in aid of them. The council have suggested to the Board the desirability of extending this work, and have asked it for some additional monetary help (to be supplemented by an increased grant from the society) towards the cost.

The council have accepted a very corial invitation to hold the annual meeting at Bristol in 1903, and recommended that the Duke of Beaufort be elected president for the ensuing year.

At the meeting votes of thanks will be moved to the local committee, representing "The Three Towns" and district for the cordiality with which they have received the society, and for their efforts to promote the success of the meeting; to those gentlemen who have kindly acted as judges in the several departments; and to the Right Hon. the Earl of Morley for presiding over it during the past year.

Official Programme of Arrangements.

Below we give the official programme of arrangements for the week:—

TUESDAY.

GENERAL PROGRAMME.

9 a.m. to 7 p.m.: Exhibition and Judging of Horses, Cattle, Sheep, Pigs, Produce, etc.; Exhibition of Implements, Machinery, Art Manufactures, Science and Art Collections, etc.; Working Dairy (see Programme below).

10.30 a.m.: Inauguration of Show by the Mayors of Devonport and Plymouth and the Chairman of the Stonehouse District Council.

11 a.m.: Performances by the Band of the Royal Marines, and also at intervals during the day.

12 noon: Practical Instruction in Bee-Keeping by the Devon Bee Keepers' Association, and at intervals during the day.

1 p.m.: Exhibition of Poultry.

2 p.m.: Horticultural Exhibition.

WORKING DAIRY PROGRAMME.

9 a.m. to 9.30 a.m.: Dairy will be open for Inspection of Appliances.

10 a.m.: Hand Cream Separator will be shown at work.

10.30 a.m.: The best method of Butter-making will be shown.

11 a.m.: The making of Clotted Cream will be shown.

11.30 a.m.: Local Butter making Competition (Class 201).

12 noon: Power Cream Separator will be shown at work.

3 p.m.: Butter-making competiton (Class 197).

IN HUNDREDS

and hundreds again of practical tests—Governmental and official—held in different parts of the world, the "ALFA-LAVAL" has unfailingly demonstrated its absolute superiority to other Cream Separators in all that is vital and essential in an up-to-date centrifugal creamer: clean skimming, actual capacity, power necessary, durability, and comparative cheapness.

Bear in mind that the "ALFA-LAVAL" will do as much for you under actual working conditions as any imitating machine can possibly achieve, ***and fully as much more*** as will comfortably recoup its cost within a twelvemonth.

A post-card with your address will bring you an amply illustrated catalogue.

Sole "ALFA-LAVAL" Agents for British Isles:

DAIRY SUPPLY CO., LTD., Museum St., LONDON, W.C.

Sole "ALFA-LAVAL" Manufacturers:

AKTIEBOLAGET SEPARATOR, Stockholm (Sweden).

PAYING POULTRY

A HANDBOOK FOR ALL INTERESTED IN THE PURSUIT OF POULTRY-KEEPING.

TWENTY ILLUSTRATIONS OF WELL-KNOWN BREEDS.

PRICE ONE SHILLING (by post, 1/2½).

WILLIAM A. MAY, "Farm, Field, and Fireside," 1, Essex Street, Strand, London, W.C.

FOR FINE HEALTHY CALVES USE

VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a ***perfect milk substitute.***

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal I consider it excellent in every way"

15s. per cwt. Carriage Paid to Nearest Station.

LIVERPOOL VESTA CAKE CO.

Blackstock Street, LIVERPOOL.

A HALF GUINEA FOUNTAIN PEN

FOR

POST **5/6** FREE.

The PERFECTION Fountain Pen, fitted with 14-carat Gold Nib. Iridium Pointed.

Always ready to write. Simple in Construction. Easily filled and cleaned. Ink commences to flow immediately Pen touches the paper.

CAN BE SUPPLIED WITH MEDIUM BROAD, OR STUB POINTS.

LOVE & MALCOMSON, LTD., Great Queen Street, W.C., and 3 & 4, Great Winchester St., London, E.C.

BARLEY AND THE BEER DUTY.

By H. STOPES.

Price 1s. Postage 2d.

LONDON: W. A. MAY, "The Mark Lane Express," Office, 1, Essex Street, Strand, London, W.C.

VERMOREL'S KNAPSACK SPRAYERS

For Fruit Trees, Charlock, Potatoes, &c.

420 FIRST PRIZES and MEDALS.

"ECLAIR" Spraying Pump. Price 35/6.

"TORPILLE" Powdering Pump. Price 25/6.

"VERMORITE" (ECLAIR BOUILLIE). The best Spraying Mixture for instantaneous use.

WEDNESDAY.

GENERAL PROGRAMME.

9 a.m. to 7 p.m.: Exhibition of Horses, Cattle, Sheep, Pigs, Poultry, Cheese, Butter, Cider, etc.; Exhibition of Implements, Machinery, Art Manufactures, Science and Art Collections, etc.

10 a.m.: Shoeing Competitions (Classes 214, 215, and 216).

11 a.m.: Performances by the Band of the Royal Marines, and also at intervals during the day.

11.30 a.m.: Parade of Cattle in the large Ring (weather permitting).

12 noon: Practical Instruction in Bee-Keeping by the Devon Bee-Keepers' Association, and at intervals during the day.

1.30 p.m.: Parade of Horses and Ponies in the large Ring (weather permitting).

2 p.m.: Mr. C. E. Stalworthy, Devon County Council Lecturer, will give Demonstrations of the Cramming, Killing, Plucking, etc., of Poultry.

3 p.m.: Competitions in the large Ring, viz.:—Class 5 (Driving), Class 33 (Jumping), Class 26 (Driving), Class 34 (Jumping).

WORKING DAIRY PROGRAMME.

9 a.m. to 9.30 a.m.: Dairy will be open for Inspection of Appliances.

10 a.m.: Hand Cream Separator will be shown at work.

10 a.m.: Testing for Churnability of Sweet Cream from various breeds of Cattle.

10.30 a.m.: The best method of Butter-making will be shown.

11 a.m.: The making of Clotted Cream will be shown.

11.30 a.m.: Local Butter-making Competition (Class 202).

12 noon: Power Cream Separator will be shown at work.

2.30 p.m.: Milking Competition (Class 207).

3 p.m.: Butter-making Competition (Class 198).

THURSDAY.

GENERAL PROGRAMME.

9 a.m. to 7 p.m.: Exhibition of Horses, Cattle, Sheep, Pigs, Poultry, Cheese, Butter, Cider, etc.; Exhibition of Implements, Machinery, Art Manufactures, Science and Art Collections, etc.

10 a.m. to 7 p.m.: Horticultural Exhibition.

10 a.m.: Shoeing Competition (Class 210).

11 a.m.: Performances by the Band of the Royal Marines, and also at intervals during the day.

11.30 a.m.: Parade of Cattle in the large Ring (weather permitting).

12 noon: Practical Instruction in Bee-Keeping by the Devon Bee-Keepers' Association, and at intervals during the day.

12 noon: Annual Meeting of Members in the Council Pavilion.

1.30 p.m.: Parade of Horses and Ponies in the large Ring (weather permitting).

2 p.m.: Mr. C. E. Stalworthy, Devon County Council Lecturer, will give Demonstrations of the Cramming, Killing, Plucking, etc., of Poultry.

3 p.m.: Competitions in the large Ring, viz.:—Class 27 (Driving), Class 35 (Jumping), Class 28 (Driving), Class 36 (Jumping).

WORKING DAIRY PROGRAMME.

9 a.m. to 9.30 a.m.: Dairy will be open for Inspection of Appliances.

10 a.m.: Hand Cream Separator will be shown at work.

10 a.m.: Testing for Churnability of Ripened Cream from various breeds of cattle.

10.30 a.m.: The best method of Butter-making will be shown.

11 a.m.: The making of Clotted Cream will be shown.

11.30 a.m.: Local Butter-making Competition (Class 203).

12 noon: Power Cream Separator will be shown at work.

2.30 p.m.: Milking competition (Class 208).

3 p.m.: Butter-making Competition (Class 199).

FRIDAY.

GENERAL PROGRAMME.

9 a.m. to 7 p.m.: Exhibition of Horses, Cattle, Sheep, Pigs, Poultry, Cheese, Butter, Cider, etc.; Exhibition of Implements, Machinery, Art Manufactures, Science and Art Collections, etc.

10 a.m. to 7 p.m.: Horticultural Exhibition.

10 a.m.: Shoeing Competition (Class 211).

10 a.m.: Sheep Shearing Competitions.

11 a.m.: Performances by the Band of the Royal Marines, and also at intervals during the day.

11.30 a.m.: Parade of Cattle in the large Ring (weather permitting).

12 noon: Practical Instruction in Bee-Keeping by the Devon Bee-Keepers' Association, and at intervals during the day.

1.30 p.m.: Parade of Horses and Ponies in the large Ring (weather permitting).

2 p.m.: Mr. C. E. Stalworthy, Devon County Council Lecturer, will give Demonstrations of the Cramming, Killing, Plucking, etc., of Poultry.

3 p.m.: Competitions in the large Ring, viz.:—Class 29 (Driving), Class 37 (Jumping), Class 30 (Driving), Class 38 (Jumping).

WORKING DAIRY PROGRAMME.

9 a.m. to 9.30 a.m.: Dairy will be open for Inspection of Appliances.

10 a.m.: Hand Cream Separator will be shown at work.

10.30 a.m.: The best method of Butter-making will be shown.

11 a.m.: The making of Clotted Cream will be shown.

11.30 a.m.: Local Butter-making Competition (Class 204).

12 noon: Power Cream Separator will be shown at work.

2.30 p.m.: Milking Competition (Class 209).

3 p.m.: Butter-making Competition (Class 200).

SATURDAY.

GENERAL PROGRAMME.

9 a.m. to 6 p.m.: Exhibition of Horses, Cattle, Sheep, Pigs, Poultry, Cheese, Butter, Cider, etc.; Exhibition of Implements, Machinery, Art Manufactures, Science and Art Collections, etc.

10 a.m. to 6 p.m.: Horticultural Exhibition.

10 a.m.: Shoeing Competition (Class 212).

11 a.m.: Performances by the Band of the Royal Marines, and also at intervals during the day.

11.30 a.m.: Parade of Cattle in the large Ring (weather permitting).

12 noon: Practical Instruction in Bee-Keeping by the Devon Bee-Keepers' Association, and at intervals during the day.

1.30 p.m.: Parade of Horses and Ponies in the large Ring (weather permitting).

2 p.m.: Mr. C. E. Stalworthy, Devon County Council Lecturer, will give Demonstrations of the Cramming, Killing, Plucking, etc., of Poultry.

2 p.m.: Shoeing Competition (Class 213).

3 p.m.: Competitions in the large Ring, viz.:—Class 31 (Driving), Class 39 (Jumping), Class 32 (Trotting), Class 40 (Jumping).

6 p.m.: Show closes.

Rearing Turkeys.

Grit

(*Continued from page* 637.)

The young birds should not be allowed to go into the houses occupied by older birds, as they must be brought up hardy if they are to escape roup and colds. Every attention is required up to the time they "shoot the red," but after that time they should not be coddled.

Turkeys do better sleeping in covered sheds with wire fronts than when more warmly housed, and if some roup-powder is added to their soft food when the weather is damp, or inclined to be cold, roup will be avoided. Turkeys, either young or old, do not require a warm house, as fowls do. Some young birds prefer roosting out of doors all the time.

Young turkeys are profitable birds, provided that one has time to give them care and attention when they are quite small, and they are not delicate after they are seven weeks old, and if provided with nourishing food and plenty of sharp flint-grit, they thrive and grow well. Broods are frequently reared in towns by those who have time to attend to young birds, and they grow into fine turkeys for table, and yield a good profit.

When turkeys are hatched early in the season they usually grow quite as heavy when reared on gravel or where there is no grass, as when they have a large grass field to run over.

This can easily be accounted for. In the first place, where a person has only a limited space of ground in towns it is an impossibility to rear many turkeys, and as a rule the owner only attempts to hatch one brood. If there are from four to seven young ones, that is quite as many as can be expected out of an early brood, and, of course, there is not such a large number running together while they are young, and as they are close to the house they can be fed several times in the day and attended to properly with but little trouble.

Those who understand this business well as regards rearing turkeys in such small places, always have a covered run for them, so that, should it come on to rain, and the little things are running about in the open, they can be placed under shelter at once. It is quite different on a farm. One often has to go a quarter-of-a-mile before he can get to them, and when he does, they are wet to the skin, which often causes death when they are very young. Young turkeys cannot stand the wet.

Then again, when there are only a few, they get looked after better, and they come in for many bits from the table; that is another advantage the townsman gets. This is not all, however; there is still another advantage which people do not often think of, that is, when the little things are 'et out to have a run in a small place there is no wet grass. As soon as it has done raining, and the sun comes out, they can run about.

A good turkey is expensive at Christmas, and that is the time when English people want them. It is found that they do not cost much for feeding; it is the labour that has to be taken into account, and where one attends to the birds themselves, and gives the time, which could not be more profitably employed, that the trouble taken in rearing a brood is well repaid.

Care should be taken to provide them with a substitute for the insects which the young birds reared on a farm get, and this can be well done by the use of granulated meat, which is soaked and then mixed with the meal.

Those who have time to prepare cooked meat, viz., a sheep's paunch, or any offal in the way of outside cuts from the butcher's shop, which can usually be had for 1½d. and 2d. per lb., will do well to give this to their young turkeys. The meat should be boiled and chopped up fine.

Where a person gets a number of good table scraps, it is not necessary to look after such sweet morsels of meat for the young turkeys. We wish our readers to distinctly understand that when turkeys are reared in confinement, unless they are given flesh food as well as corn, they will not grow anything like so fast, besides looking very rough in their plumage. It is also very important that greenstuff should be chopped up for them.

Some people imagine they have a difficulty in getting green-stuff in towns, especially during the winter, but we find it is much easier, as a rule, than in the country, as greengrocers always have a lot of refuse leaves. Those who are unable to get these should cut some grass off the bank every day and some dandelions, which should be laid on a board and cut up into pieces of a quarter-of-an-inch in length. Lettuce leaves are another splendid food, but it must be remembered when turkeys are reared it is usually summer, and though greenstuff can be easily obtained it soon withers, while in cold weather it last for days.

Green food can be grown by sowing mustard in shallow boxes with four or five inches of soil in them. By keeping seven boxes going there is a constant supply of fresh green food for the young birds. This plan is a good one to adopt also for chickens reared in confinement, as the green mustard grows very quickly, and is not much trouble if watered each evening.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended May 17, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living.	1901.	1902.		1901.	1902.

Portable or Stationary.

Contractors to His Majesty's Government.

THE CHEAPEST POWER FOR MILLERS AND AGRICULTURISTS.

WHAT USERS THINK AND SAY:—

"I cannot speak too highly of your Oil Engines, and consider them far the best Engines for Farmers' use."

"You will be pleased to hear that the Oil Engine you supplied me with last May is giving every satisfaction, both as regards work done and cost of running, which latter bears no comparison to the cost of the steam engine which it replaced."

"I do think this is the cheapest and far the best Oil Engine in the market. I fixed on the 'Cundall,' not only as the steadiest running Engine, but also in having more control over it in altering speed and power."

"The 20 B.H.P. Oil Engine we bought from you about a year ago is working satisfactorily. We were fortunate in our decision in selecting your Engine."

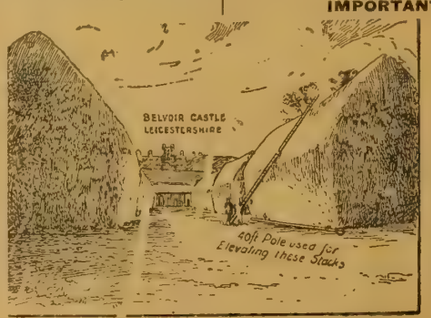
LIVERPOOL VESTA CAKE CO.

Blackstock Street, LIVERPOOL.

By his Majesty's Royal Letters Patent.

POGSON'S PATENT HORSE PITCH FORK OR ELEVATOR,



For Stacking Hay or Loose Corn.

This illustration, taken from a photograph, shows five large 60-ton stacks, pulled and finished off ready for thatching.

it may be safely said that Pogson's Patent Pitch Fork is the best and cheapest labour-saving machine in the market.

IMPORTANT.

Each stack was elevated by one of Pogson's Patent Forks. During the last two years over 800 have been sold, and as each fork was sent on approval, and customers could have returned them unless they were perfectly satisfied—from this fact alone

Pogsons' Patent Pitch Fork is sent on approval, so that any intending customer can give it a fair trial before purchasing.

Should, on trial, it not prove satisfactory, it can be returned, and carriage each way will be paid by vendor.

SCORES OF UNSOLICITED TESTIMONIALS.

For Illustrated Catalogues, with recent Testimonials and all particulars, apply to the Patentee—

MR. E. F. POGSON, FARMER, etc.,

REDMILE, NOTTINGHAM.

THE SUCCESS OF THE YEAR.

SUTTON'S MAGNUM BONUM SWEDE.

With this Swede His Grace the DUKE OF RICHMOND AND GORDON, K.G., Gordon Castle, Fochabers, N.B., gained FIRST PRIZE last Autumn (1901) against 47 Competitors in the Sulphate of Ammonia Committee's Competition in the Central Banffshire Farmers' Club (the largest Club in the North), the Official Weight of the Crop being 43 tons 17 cwt. 16 lb. per acre—the heaviest Crop recorded throughout Scotland in 1901.

PROVED SEED,
Per lb., 1s.; per bushel, 45s.

THE BATH AND WEST AT PLYMOUTH.

The successful nature of the show which closed at Plymouth on Saturday will no doubt be highly appreciated by officials and members of the Bath and West and Southern Counties Society. The district chosen for the 1902 show was a different one to that in which last year's exhibition was held, but the society have a large district to cater for, and it is only right that they should give each section its due turn. Plymouth is undoubtedly a long way for northern exhibitors to send their stock, and this fact in all probability fully accounted for the shorter entry in the stock section as compared with the Croydon show of last year. The entry, however, was satisfactory generally speaking, although some of the sections were lamentably weak. It is rather interesting to note the great growth in the society's work and scope that has taken place since last the annual show was held in the neighbourhood of "the three towns." In 1873 the total number of horses exhibited only amounted to 73, and although it is not claimed that the horse section of the Bath and West is an exceptionally strong one, on the present occasion, the entry amounted to 276. It is in the cattle section, however, that the greatest changes are apparent. At the earlier show, 29 years ago, breeds which now are prominently before the public then had no place in the society's schedule—these including Kerries and Dexters, Red Polled, and Aberdeen Angus; but turning to the reverse side of the question we find that the Devons were forward in larger numbers than on the present occasion, the entry being 82 twenty-nine years ago, as compared with 32 now. South Devons, on the other hand, only show a difference of one between the twenty-nine years, this breed having at all events held their own during the interval—a fact that cannot be said of the Devon breed.

The site of the showyard, which, although designated Plymouth, was actually, as a matter of fact, in Devonport, was fairly convenient and easy of access, but there was some little difficulty in arranging and laying out the ground. The showyard was on both sides of a hill, so it will be easily understood that there were numerous expressions of fatigue from those whose business led them to make excursions into different portions of the showyard. The evil was an unavoidable one, however, and the hills were cheerfully tackled by all the visitors, the view from the highest point of the yard being one which repaid the fatigue involved, for it included a panorama over a greater portion of "the three towns" and their picturesque surroundings. At all events, the Plymouth Show is one that must be added to the long list of successful exhibitions held by the Bath and West, comparing, as it does, most satisfactorily with the two previous meetings at Croydon and Southampton respectively.

SHEEP-WORRYING BY DOGS.

The fact that this subject is to be discussed at the meeting of the Centrl and Associated Chambers of Agriculture, to be held this week, recalls the serious loss which is often sustained by farmers through the ravages of dogs afflicted with this dangerous propensity. Drastic measures will probably be advocated to suppress the evil, although the main obstacle to redress lies more often in the difficulty of detecting the offender, than in condemning the owner in damages when guilt can be established.

It is well known that before the owner can be held responsible for injury by his dog to human beings it is necessary to prove a previous knowledge by the owner of the mischievous propensity of the dog. The gist of the acting is the keeping of the animal after such knowledge has been attained. So it is often loosely said that every dog is entitled to one bite free. This preliminary immunity from liability in the case of human beings formerly also extended in England (although not in Scotland) to injuries to sheep and cattle. In 1865, however, an Act was passed providing that the owner of every dog shall be liable in damages for injury done to any cattle or sheep by his dog; and it is no longer necessary to show a previous mischievous propensity in such dog, or the owner's knowledge of such propensity, or that the injury was attributable to neglect on the part of the owner of the dog. The damages are recoverable in any court of competent jurisdiction, and where the sum claimed does not exceed £5, proceedings for its recovery may be taken before the justices in Petty Sessions. The County Court has concurrent jurisdiction up to £5, and it is also the appropriate Court where the claim exceeds £5, and does not exceed £50. It has been held that the word "cattle" in the Act extends to and includes horses.

The Act also makes it risky to harbour a sheep-worrying dog. To avoid any quibble as to which particular member of the family owns an offending dog, it is provided that the occupier of any house or premises where any dog was kept or permitted to live or remain at the time of the injury shall be deemed to be the owner of such dog, and shall be liable as such, unless he can prove that he was not the owner and that it was kept in his house or premises without his sanction or knowledge. But where separate apartments in a house are let off the dog is to be deemed to belong to the occupier of the particular part of the premises in which it shall have been kept or permitted to remain.

The Act does not extend to Scotland, for the simple reason that its enactments are common law there, and its object is to assimilate the law of England to that of Scotland in this respect.

Such is the existing law. Let us see in what direction it can be strengthened.

At intermittent periods the Government introduce into Parliament a Bill to Regulate the Conduct of Dogs; at least, we presume that is its object, as it is called The Dogs Regulation Bill. Its very introduction, however, seems to accomplish its object, for year by year it is quietly dropped, and our canine friends are left to evolve their regulation from their own inner consciousness.

The Dogs Bill of 1898 proposed to enable county and borough councils to make bye-laws prescribing and regulating the wearing of collars by dogs, with means of indentification inscribed, and for the protection of cattle and sheep from injury by stray dogs. The Bill of 1900, however, sought to avoid the confusion which would arise through different byelaws being adopted in different towns, by providing that if in any borough or urban district a dog were found in a highway or place of public resort not wearing a collar, inscribed with the name and address of the owner of the dog, the owner or person in charge should be liable to a fine of £1; and if the dog were not in charge of any person it might be seized and dealt with as a stray dog. It was also provided that the provisions of the section might be extended by a county council to any other part of their district, but it was not to apply to packs of hounds, or to any dog whilst being used for sporting purposes, or for the cpture or destruction of vermin. But the proposal with which we are at the moment more immediately concerned was one for enabling county councils and borough councils, with a view to the prevention of worrying of sheep, to make byelaws for preventing all or any class of dogs from straying during all or any of the hours between sunset and sunrise.

Thus the sheep-worrying byelaw would be based on the principle of keeping out of temptation, and would take the form of a regulation requiring all dogs to be in bed at a certain hour, rather than that of an injunction that no dog should engage in sheep-worrying between sunset and sunrise. We wonder what the opponents of the Muzzling Order will have to say to the institution of a Dogs Curfew!

The Corn Tax.

A Trades Union Conference.

A conference, under the auspices of the Trades Union Congress Parliamentary Committee, was held in the Holborn Restaurant on Tuesday morning to discuss the corn tax. Mr. W. C. Steadman, L.C.C., presided, and said the delegates repreists, and the object of the conference was to enter sented 70 societies, and over a million trades union-a protest against the tax. Mr. E. Cowey, of the Miners' Federation, proposed a resolution, "That this conference expresses its strongest protest against the taxation of the people's food, as is proposed by the Government Budget." Mr. A. Wilkie, of the Shipwrights' Society, seconded, and many of the delegates subsequently vehemently entered their protest against what they characterised as an iniquitous tax and a war tax, and which they attributed entirely to a war forced upon them against their will. After further discussion the resolution was carried.

On Wednesday a deputation of trades unionists waited on the Chancellor of the Exchequer to present the resolution condemning the Corn Duty, which was unanimously passed at the conference on Tuesday. The Chancellor of the Exchequer listened to their statement, and, in reply, said he was pleased to meet so representative a deputation. He assured them that any representations coming from such a body would have due weight, and would be treated with respect by himself and his colleagues in the Government, but beyond that he could not go, nor could he make them any promise.

Speech by Lord Rosebery.

In the course of a speech delivered at a political meeting held in the Coloseum, Leeds, on Friday, Lord Rosebery said: The corn tax is one of the most remarkable taxes that has ever been presented to the notice of Parliament, because it was introduced with nothing but a string of negatives. It was not Protection, that was certain. (Laughter.) Not another acre of wheat, we were told by one Minister, would be planted in consequence of this tax, which removed, to my mind, the sole inducement to vote for it, for if more of our country could be placed under wheat it would solve some of the difficulties connected with the land. It was not to be paid by the consumer; it was to be paid by somebody else. Then it was said it was nothing more than a registration duty, and the illustrious names of Peel and Gladstone were cited to support this view. But, after all, the test as to whether this tax is a registration tax or not, or whether it is Protection, and the test as to whether it is a tax that Sir Robert Peel imposed and Mr. Gladstone continued, depends, as it seems to me, entirely on the conditions of the case.

In 1847, the year after the repeal of the Corn Law, when this registration duty remained, the price of British wheat per quarter was 69s. 9d. In 1868, the year before the repeal of the duty by Mr. Lowe, under Mr. Gladstone, it was 63s. 9d. In 1901 it was 26s. 9d. The 1s. duty, therefore, represented not quite 1½ per cent. on the price in 1847, when it was imposed, and a little more than 1½ per cent. on the price of 1868, when it was going to be repealed, and exactly 3¾ per cent. on the present prices of corn, when it is proposed to reimpose it. Three and three-quarter per cent. may not be a great measure of Protection; but I strongly suspect there are many trades in this city that would not be sorry if 3¾ per cent. duty were placed on the imposts that compete with them. Of course, it may be that the percentage does not really raise the price of the loaf. But, at any rate, what is certain is this—that the imposition of this tax gives an excuse to the bakers, of which they have not always been slow to avail themselves, of raising the price of the loaf, and, therefore, whether it does, in fact, only raise it in appearance, it is very much the same to the consumer.

But there is a much graver issue connected with this Corn Tax—an issue which has in reality only recently been imported into the discussion. It is, I think, quite clear from the last speech of the Colonial Secretary that it is intended as a prelude to a sort of Zollverein or Customs Union throughout the British Empire. Now, speaking for myself, I cannot summarily dismiss any proposal for the closer union of the British Empire, because it has been the ideal of more than the last twenty years of my life. I do not say that Free Trade is a fetish, a religious dogma, which must be accepted and applied on all occasions, without consideration or reservation. I can imagine a country which had shrunk and crumbled under Free Trade being willing to divorce itself from its principles, and embark on a new career; but I confess that is not the case with us—(cheers)—and I confess I should be cautious in exchanging a system under which our prosperity has grown by leaps and bounds, for the attraction of any possible advantage to be derived from any other contingent principle. It is, in effect, to ask us to exchange the rule of commercial peace, under which we have prospered, for commercial war all over the world; and the war, the commercial war, will be formidable even to those who consider our expenditure of £230,000,000 a fleabite.

But I have one further objection to this, which I should like to mention. We have handed over to all our Colonies the control of their fiscal system. Well, I confess it seems to me a great demand at this period of our history that, for some unknown advantages, we should be called upon to give up the control of ours; for, depend upon it, that is what it would amount to. What counterbalancing advantages are there to be gained by adopting this course? I do not know; my mind is open, and I shall wait to hear. Until I hear, and am convinced by the detail of those advantages, I shall be satisfied to accept and to follow the wise and weighty words of Lord Salisbury in his last speech, where he urged the people of this country not to be in a hurry to compromise their great and inevitable destiny by entering into protective arrangements for the closer union of the Empire on a basis which had not been examined.

Chancellor of the Exchequer receives a Deputation.

On Saturday the Chancellor of the Exchequer received a deputation from London and provincial horse owners—representing an ownership of over half a million horses—who desired to point out

Captain Jessel, in introducing the deputation, pointed out that oats and maize formed the staple food of horses, and there was no known substitute. The horse owners were not in a position to bear the new tax. The prices of horses had very much increased, owing to the war, and it was calculated that the price would not fall for some three years, owing to army requirements. Electric traction already made it difficult for them to make a living. The London General Omnibus Company last year, with its million of capital, only earned £2,000. The new tax would cost from 16s. to £1 per horse per annum, or about £12,000 a year.

Mr. James Scott, on behalf of the cab trade, said the new tax would cost the London cab trade at least £21,000 per annum, or 15s. per horse, and it was a direct tax on an already overtaxed industry. It would be equal to 2s. 6d. income tax on their profits. Other representatives having spoken,

The Chancellor of the Exchequer replied. He said the deputation appeared to think that those employed in the businesses represented consumed a very large proportion of the corn on which the tax would fall. He thought that had been exaggerated very much, but, however that might be, he thought they must see that it would be impossible for him to agree to the views they had put before him to give up the tax, or to give up the tax on the two principal articles consumed, which were oats and maize. There was no reason why oats and maize should be exempt from the duty of corn than that wheat or articles consumed as human food should be exempt. He could hold out no hope that he could take any course of that kind. Just a year ago he was obliged to impose a duty on sugar, when consumers using sugar as an article of manufacture came to him and said they would be ruined, as they would not be able to raise the price. He was obliged to reply that they could pass it on to the consumer, and also that he thought lower prices for raw material would prevail i nthe future. Both those things had happened, and he thought the horse owners would be able to pass the registration duty on to the consumers as they ought to, and he also thought the present prices were exceptional, and they might look forward to lower prices in the future. He would consider the question of the cab proprietors, because they appeared to be limited in their charges by Act of Parliament, and could not pass the tax to the consumer. He did not think that could be met by altering the tax; but in another way he might have to communicate with the Home Office, and would communicate with the deputation further on the subject.

SAMPLES.

By a Man of Mark Lane.

The receipts on account of revenue from the 1st April, 1902, when there was a balance of £8,566,947, to May 24th, 1902, were £22,627,067, as against £19,051,925 in the corresponding period of the preceding financial year, which commenced with a balance of £5,596,918. The net expenditure was £30,628,482, as against £31,723,231 to the corresponding date in the previous year. The Treasury balances on May 24th, 1902, amounted to £6,358,367, and at the corresponding date of 1901 to £5,803,493.

The Technical Instruction Committee of the East Suffolk County Council have made arrangements to conduct a party of Suffolk farmers in Ireland during July to visit co-operative creameries and butter factories, and otherwise see the working of farmers' co-operative societies. I need hardly mention that during the past eleven years there has been a great revival in the dairy and farming industries in Ireland, due to the establishment of co-operative societies, of which there are now 446 in operation, and to the spread of technical instruction. It is thought that if the Suffolk farmers were to combine for the sale of their produce and for the purchase of fertilisers and feeding stuffs, as the Danes and Irish have done with so much benefit to themselves, the Suffolk farmer would be in a more flourishing condition, and the main object of the excursion to Ireland is to study the methods and principles of farming co-operation.

On the question of the Education Bill, the Hampshire County Council unanimously, on Monday, passed a resolution expressing the opinion that the additional expenditure on education rendered necessary by the Bill should not be raised out of the rates. The Earl of Northbrook remarked that real property was already too highly charged, and said that a deputation from the County Councils' Association would probably wait on the Government with regard to the subject. The representations that would be made appeared to him to be based on equity, and, so far as he could see, they would be very difficult to answer. Mr. A. F. Jeffreys, M.P., thought it would be reasonable if the Imperial Exchequer bore half the charge, and the other half was paid out of the rates. He observed that those who paid School Board rates ought to hail the Bill with acclamation, because it would relieve them of a portion of the rate by spreading it over the whole country. Mr. Evelyn Ashley urged that the whole of compulsory education should be supported by the Government, and only the cost of secondary and technical education borne by the rates.

Mr. Mansfield has given notice that he will ask the President of the Board of Trade to-morrow (Tuesday) whether he will arrange an inquiry into railway rates for agricultural produce, with a view to the rates for home produce being reduced to those charged for similar traffic from abroad.

By a Lobbyist.

I have never accepted the assurance put forward by quidnuncs who, professing to know the secrets of the Cabinet, have never been allowed to go farther than the back-door of Downing Street, that the Government intend to abandon the corn and flour duties. Of course, the hypothesis on which this assumption was based was that the War would soon be over, and that the money which would be raised by the duties would not be needed. If the Government followed the policy of abandonment they would create a grievous sense of disappointment in all but a very small section of their followers. It is true that there are a small body of Conservatives who oppose the duties, but they represent Northern constituencies, and are moved entirely by the fear that the traditional hate of Protection among the masses may operate to their electoral disadvantage. The party as a party are in favour of the duties, and whole-heartedly in favour of them. Their appreciation has been secured by two facts —the first is that the duties are another deliberate attempt to enlarge the basis of taxation, and the second is that the duties are another expression of sympathy with agriculture. I have no hesitation in saying that the abandonment of this purpose—and it must not be forgoten that it is only Radicals who prophecy it—would be sternly and even bitterly resented.

There is one interesting point which should convey a lesson to the observant politician. The original venom which was showered upon what is rather fallaciously called the bread tax has practically disappeared. The Radicals have allowed it to be supplanted by hate of the Education Bill, which means, in this instance, hate of Church and Voluntary Education. You have mass meetings arranged here, there, and everywhere against the Education Bill, at which the parsons are denounced with dervish-like fanaticism. You have no multitudinous mass meetings against the bread tax—the agitation simmered at first, but then it sank down to the spasmodic and splenetic feebleness of the National Democratic League. This organisation is a body which seeks to supplant the orthodox forces in Liberalism. It seeks to capture the Liberal machinery to its own semi-socialistic, Quixotic ends. In allying its fortunes to this bread tax business, it has been guilty of harnessing itself to a dead body. The most elementary of all physical laws teaches us that it is not the dead body which becomes inspired; the contagion of death will affect the live body. At all events, this much is certain—that the agitation is played out. No cheers can be evoked by it, the orators are uninspiring and flabby, their periods have no true ring, and their appeal to a fanciful misery which they declare battened on our past is only picturesque. To abandon the tax would, therefore please none but a few manœuvering schismatics. To persist with it—to enlarge the basis of taxation, and to hold out another friendly hand to agriculture—would mean the satisfaction and the gratification of practically the entire Tory body.

"We should be in revolt if the tax were abandoned," said a popular Southern Tory M.P. to me. And I really believe that this sentence aptly describes the present temper of Conservatism.

Surely Lord Rosebery, in his distaste of the Education Bill, allows himself to too readily accept the assurance of the Radical Nonconformists? Because some person or other at Kettering—a man who is unknown to fame, and who may have as much pretension to authority as the ordinary man in the street —says that the rate under the Education Bill will amount in rural districts to sixpence in the pound, his lordship accepts the calculation unquestioningly. Would he not have been wiser to have demanded the bases on which the calculation is reared? At all events, every authority whom I have been able to consult in reference to the matter discounts the assertion. If, however, it be justified, then it should lend a new force to the agitation to which Major Rasch has given his popular personality—the agitation whose purpose is to make Education an Imperial rather than a local charge. Lord Rosebery himself perceives that it is only by making it an Imperial charge that we can as a nation secure an effective and progressive educational system. The mere fact is — and Major Rasch and his friends have admirably emphasised this—that while Education is a local charge, you place in the hands of the needy, the penurious, and the ill-paid rate-payer a distinct inducement to use his electoral privileges only for the purpose of stunting Education. If Major Rasch and his friends are wise, they will associate themselves with Lord Rosebery over this business. Once make Education an Imperial charge, and you will remove the sting of the attacks upon the religious education of the villages.

The budget-intention of the Government to extend a more sympathetic hand towards agriculture has been followed by a quickened and more intelligent interest on the part of the general body of Members. The subject was unenthusing as compared with the lurid issues that have occupied the political firmament, but it must be confessed that the debate on the salaries and expenses of the Board of Agriculture was practically intelligent and valuable. The questions of unadulterated milk, of margarine that masquerades as butter, of the anomaly of muzzling sheep-dogs, while allowing sporting dogs to be exempt, of the purity of feeding stuffs, of agricultural education, of railway rates, of the importation of foreign cattle—all these were pertinent to the hour, and they had associated with them a debating force and ability that, I believe, has not been associated with what I may describe as purely agricultural advocacy for many a year. But how is it that all these grievances, all these excellent points, were left for just a formal hour or two in the session? Surely the welfare of agriculture—and there was scarcely one of these points that was not apposite to the debate and the subject—might have been the subject of one or two interrogations? I agree that the practice of accumulating questions upon questions has grown into somewhat of a nuisance. That is no reason why, however, agriculture should be given the go-by by the interrogators. It is the great national interest of the country, but if Parliamentary experience be accepted as an evidence, there is not an anomaly, a grievance which has demanded an explanation from the Minister for Agriculture. Apposite as was the debate on Tuesday some of the points had lost their immediacy.

The most significant point in this debate was not the re-enunciation of Mr. Hanbury's purpose—not the revived declaration that he is desirous of making the cavalry a source of profit to the farmers, not even the declaration that the Board is desirous of placing English farmers under the same favourable conditions as the Irish farmers, not even the evidence of his desire (a little less stalwart, methinks, than it once was) to deal with the railway rates' tyranny, not even the announcement that he intends to introduce a Bill dealing with sheep-worrying, and not even his refusal to open the English ports to Argentine cattle while there can be any doubt as to the non-existence of disease in that country. The most significant point was Mr. Hanbury's open and frank appeal to the Chancellor of the Exchequer to be more generous in his grant to the Board, and thus to enable it to complete and practicalise its machinery. I hold that the first necessity in connection with the Board of Agriculture is not legislative enthusiasm. The first necessity is its re-organisation and its development. The Board will never realise the hopes of the best men in agriculture unless it has something of the character of the Canadian or the Irish organisations. I wonder if Sir Michael Hicks-Beach was impressed by Mr. Hanbury's hardihood.

British Farmers in Hungary.

Can any practical good be secured by a mixed party of nearly fifty farmers, and others, visiting a highly cultivated district in Central Europe? The experiment is being made, and although we must await the results, we can watch the progress of the party with some interest and present profit. A good deal depends upon the individuals forming the group of visitors, but still more upon their hosts and guides.

The bulk of the visitors are Essex farmers, joined by others from Hertford, Lancashire, etc. The remainder are representatives of the Irish Board of Agriculture, the Highland Society, the chairman of the Barley, Judges, Brewers' Exhibition, the Cambridge Technical School, and the ardent and indefatigable head of the Essex Technical School, Mr. T. S. Dymond, upon whom the chief onus of forming and conducting the party has fallen. A number of the Instruction Committee and the chairman are with him, so with their united efforts matters work very smoothly.

The total number of the specially conducted party in Hungary is nearly fifty, including the three Hungarian leaders who give up their whole time to the safe guidance of their guests through the great number of arrangements made for the benefit of their English friends. Mr. Gyargy Endre is well known in all parts of Britain as the Agricultural Commissioner of the Royal Hungarian Government. He is ably assisted by Mr. Goger, Secretary to the Minister for Agriculture, and by Mr. Szilassy, Secretary of the National Agricultural Society. All these gentlemen spare no effort to add to the interest and comfort of everyone. The State has offered the most lavish hospitality, and is aided by the Municipality of Buda Pesth, by Count Karolyi, Count Erdödy, and many others who entertain in Royal fashion. The estates and farms they so freely show are perfectly managed and present numberless object lessons, some of which may be fruitfully remembered.

The task undertaken is a very serious and arduous one. Hungarian management of nearly all matters agricultural has been of a high order for more than a century. The successive Ministers for Agriculture have realised their duties and nobly striven to perform them for the greatest good of their country. Not one has been more vigilant and efficient than the present holder of the office, His Excellency Dr. Ignacius Darányi, to whose great courtesy and interest in the visit of English farmers the undoubted success of the visit may be attributed. Every chief point in agriculture has already been presented to them, and, without exception, in an admirable manner. State farms and institutions, some of which have been under absolute State control for very many years, in cases exceeding a century, private estates, belonging to noblemen of great wealth, enterprise, and patriotism, and wide stretches of country, owned and worked by peasants, have all alike, with utter impartiality and fairness, been submitted to scrutiny, keen inspection, and impartial criticism. In every instance there has been a strong feeling of approval of the methods adopted, but, as might easily be expected, the cultivation by peasant proprietors of small patches of ground, not equalling half a rood in area, cannot possibly be satisfactory from any point of view. Yet the visitors were impressed with the diligence, skill, and economy shown. Weeds were practically invisible, and not an inch of space between plots or separate proprietorship could be detected over wide areas of often many square miles in extent.

Peasants working with insufficient capital and with little or no machinery cannot be expected to secure the best results. Yet no intelligent man could see the actual produce of their labour with-

out feeling impressed, not only with its goodness, but with the large amount of guidance they must have had in their work.

Examination of the State farms speedily revealed the cause. Schools and other State institutions for every item only indirectly relating to farmers' duties, have been steadily working on exceedingly practical and economical lines for generations, and in no single instance can the State be accused of acting in any other way than in the best interests of agriculture and for the good of the State. Already the British farmers have seen, under complete State control, vast estates and farms managed in admirable fashion, for exceedingly diverse purposes. But in no single instance have they detected a solitary case of neglect, mismanagement, or lavish outlay. In the first week of their visit they have closely inspected many widely diverse branches of agriculture, including horse, cattle, and all other stock breeding, poultry farming bee-keeping, arboriculture, and horticulture, dairy work, wine making, and the necessary experimental stations to successfully conduct the same.

In carrying out all this a number of special experimental stations have been established, and they are all, without exception, conducted most successfully on admirable lines. In every instance the fullest care had been given to the minutest detail, but in no case can lavish outlay be detected. In the stud farms the huge stables could not be more substantially built at less cost. Two, three, and, in some cases, four sides of a square with buildings over a hundred yards long and twenty to thirty yards wide, seem gigantic, yet they are admirably adapted to their purpose, and the perfect condition and health of every type of horse shows the wisdom of the arrangement. Huge cow sheds, each allowing ample space, and the fullest accommodation for from 240 to 300 cows, sheltered superb herds it would be difficult to match in Britain.

Out in the open, fields die-square, many of them over 100 acres in area, and in most cases perfectly level, were carrying superb crops of rye, reaching in some cases to 7 and 8 feet high. Very promising fields of wheat and sundry diverse forms of fodder were growing, but the oats and barley were not quite up to the other standards, Necessarily, the advanced position Hungary has taken with regard to co-operation stood well to the front, and quite deservedly so. It seems as if the whole aim of the State and of every State official is to do all things in reason to improve any and every industry, directly or indirectly, connected with agriculture. They give themselves up accordingly quite cheerfully to the collection of eggs by co-operative methods, and have established a great trade in this fragile product in Hungary and with other countries, notably Britain. Cream, butter, pork, honey, and many such things are all taken with equal seriousness and zeal. The result is as astonishing as it is satisfactory. No State could possibly spend money more effectively and to better purpose than Hungary is doing in its agricultural stations. Some of these embrace the oldest technical instruction schools in Europe. Yet they are admirably fitted up and are replete with much that cannot fail to impress every intelligent mind with the admirable skill and judgment shown in the disposal of space, and in the purchase of stock-in-trade and apparatus.

In every department subject to State control is to be found, as a leading principle, economy, and alongside of it, with even more striking results, is efficiency. In addition, throughout every one of the State departments is to be found complete domination of all stock by kindness and love. Some of the most impressive sights to English eyes were the utter docility and quietness of every class of stock. Thoroughbreds of priceless value, such as Bona Vista, were as amenable to the influences of a lump of sugar as any domestic pet in any farmsteading in Britain.

All types of stock seem to live happily and to thrive. Some of them have in time become endued with a keen sense of sport. Probably no sight will have an equal lasting and good result in the minds of the farmers who saw it, than the natural race between 170 highly bred two and three year olds. Led round a large, wide course by four horsemen, with the long, loud whips so much used in Hungary, young stock tried to break through and have a race amongst themselves. At the proper time they were allowed to do so, and the zest with which they raced and thundered round the course was a very impressive spectacle.

It was one which is illustrative of so many of the things new to English farmers' eyes. For generations every effort has been made to encourage and help breeders to improve their stock. Very costly and perfect English and Arab sires have been acquired and placed at farmers' service at such prices and terms as to bring them within the reach of small farmers. As a consequence, the country is full of high-blooded stock of great beauty and usefulness.

All the institutions have been thrown open to the visitors in the fullest manner. Competent guides who could speak English fluently were found everywhere, and in some cases the trouble had been taken to have labels printed in English. In the experimental stations for determining the character of soils, value of manures, and diseases of plants, with their causes and cures, these labels were of great advantage. These stations for the seed testing academy at Buda Pesth made every one feel the difference in the methods of work in Britain, and proved the utility and advantages of a central station for such purposes.

In many instances these farms are worked at little or no cost. In some cases they are said to produce a profit. From the skill and care shown this is quite credible.

(To be continued.)

IN PARLIAMENT.

HOUSE OF COMMONS.

The Board of Agriculture.

On Tuesday the vote of £25,716 for the Board of Agriculture came up for passing, and some remarks were then made on the work of the Board by various speakers. Sir Edward Strachey moved the reduction of the vote b y£100. He asked it Mr. Hanbury was satisfied with the working of the Food and Drugs Act of 1899, under which instructions were given to local authorities to have samples of the butter, cheese, and milk sold within their districts analysed from time to time. He had heard serious complaints from the great cities, especially from London, lately to the effect that the local authorities were not doing their duty in the matter. He thought that the Board of Agriculture should send around their inspectors occasionally to see whether the local inspectors under the Food and Drugs Act were doing their duty properly, as there was a very strong feeling indeed, that the Act was not carried out as it should be. A large quantity of butter with which margarine was mixed was still sold, and he believed that this practice would not be stopped until it was forbidden to colour margarine to represent butter. The question of milk-blended butter was also one which urgently required attention, but the President of the Board of Agriculture had already informed them that it was necessary to deal with the matter by legislation.

Other matters were commented upon by Mr. Lambert, Mr. Lloyd-Morgan, Mr. J. Hutton, Dr. Farquharson, Colonel Lockwood, Mr. Crombie, Mr. Macdona, Mr. Mansfield, Sir James Rankin, Mr. H. Lewis, Mr. Humphreys-Owen, Mr. Wharton, Mr. Eugene Wason, Mr. C. H. Seely, Mr. J. A. Dewar, Mr. H. Johnstone, and Sir J. Kinloch.

Mr. Hanbury replied to the various criticisms. With regard to the operations of the new Act dealing with the sale of food and drugs, he observed that in some of the towns of the kingdom the Act was not sufficiently carried out. The local authorities must be given time to use their powers, but if it was found that they did not use them he had a reserve force to back him up which would enable him to take the matter into his own hands. He would not hesitate to act if necessary. He had not evidence in his possession to justify the allegation which had been made that margarine was still sold as butter. As to the use of preservatives, personally, he had no wish to encourage their use in agricultural products, as he thought we ought to have these articles as pure as we could get them. (Hear, hear.) With reference to the improved breeding of horses, he regretted that the funds available for the purpose were not in the hands of his department. He might at some future time be able to induce the Chancellor of the Exchequer to aid farmers in this could do much more than they did at present to direction. But after all he thought the farmers help themselves. As to education, he agreed that the teaching in rural schools should be of that nature best suited to the needs of the children, and in regard to agricultural training colleges he mentioned that grants were given to these institutions by the Government. There was no need that the opportunities afforded by these colleges should be embraced exclusively by sons of farmers. It seemed to him that land and estate agents and others engaged in occupations in touch with agriculture might take advantage of the training given in these colleges. The question of remounts was one which had engaged his attention, and he had suggested to the War Office that they should say exactly the kind and number of horses they required for remounts, and that this information should be placed in the hands of farmers. He also thought that the army buyer should be placed in close touch with the farmers of the country. He gave his adherence to the effectiveness of the muzzling order, and said that if there was any sign of rabies breaking out he would have no hesitation in again enforcing the order.

With regard to dogs taken out of the country and brought home again, he did not think any precautions he had taken to prevent the spread of disease too severe. Hitherto a person bringing a dog from abroad was compelled to keep it in his house for three months before it was allowed to go free. That regulation was repeatedly broken, and he was compelled to make a new regulation. After all, he had to consider the public interest and the public health, and not the convenience of a small body of people, and he did not think they had any right to complain that, instead of keeping their pet dogs in their own houses for three months, observation. He was glad to say that swine fever during the first three months of this year had decreased in a very marked degree, there having been fewer cases than in any of the last six or seven years. He was exceedingly sorry, however, that anthrax, instead of decreasing, was gaining ground. He regretted that there was an almost incomprehensible amount of ignorance on this subject, and he wished the newspapers and the agricultural societies would assist the Board in disseminating information on the subject. He was doing his best, in consultation with the President of the Board of Trade, in regard to railway rates. The milk standard had, upon the whole, worked well, although it was a low one. If he had put it any higher, however, he might have done great injustice to the smaller men; and there was no possibility of raising it at present.

He felt that the Argentine in the future was going to become such a very important source of supply to this country that its cattle trade with us ought to be put upon a really steady footing, especially if the supply from the United States fell off, as he thought it gradually would. He wanted to be specially cautious before opening our ports to Argentine cattle, because it would be fatal if, after they had been opened, they had to be closed on account of an outbreak of foot-and-mouth disease. He had, therefore, represented to the Argentine Republic that we were practically their sole customers, and that they ought to take the most stringent precautions against any possible introduction of disease into their own country. He thought we had every right to expect that the Argentine Government should take precautions similar to our own, because any outbreak of disease might have the effect of again stopping the importation of cattle, which would be bad, both for Argentina and the consumers of meat in this country. He hoped to be able to introduce a Bill dealing with sheep worrying in Scotland, but he had received many representations upon the same subject from England, and he desired that his legislation should extend to the whole of Great Britain. Although he might introduce a Bill, he did not hope to pass it this session. It, however, might be fruitful of suggestions.

The amendment was, by leave, withdrawn, and the vote agreed to.

Carlisle Hirings.—At the second hirings at Carlisle, on the 24th ult., there was a good attendance of servants, and high wages were asked. Best men received £17 for the half-year, and a large number found places at £13 to £15; boys, £5 or £6. Women were scarce, and obtained up to £13.

On Monday last at West Newton, on the Sandringham estate, Sir Dighton Probyn represented the King at the funeral of Mr. Edward Thomas Sheringham, his Majesty's oldest tenant. Mr. Sheringham was 72 years of age, and took over his farm seven years before his Majesty purchased the estate in 1861. Canon Hervey, domestic chaplain to the King, officiated at the funeral, which was attended by the other tenants on the estate.

Mr. Hanbury on Milk-Blended Butter.

On Tuesday Mr. Hanbury, the President of the Board of Agriculture, received at the House of Commons a deputation representing the provision trade, organised by the Home and Foreign Produce Exchange and the Butter Association, who urged upon the right hon. gentleman the necessity of fresh legislation with a view to prohibiting the sale of butter substitutes, and so-called butter which contained more than 16 per cent. of water.

In introducing the deputation, Mr. A. K. Lloyd, K.C., M.P., said that mixing milk with butter was a practice resorted to to increase the weight, and it was unfair to the consumer and producer. The term "butter" ought to be restricted to produce answering the description laid down by the Board of Agriculture, and the deputation asked for legislation to that effect.

Mr. Reeves, Agent-General for New Zealand, said that for several years the colony had been trying to produce a first-class butter. Exportation of inferior goods of this kind was prohibited; but a good deal was done to their butter by middlemen in London before it reached the hands of the consumer. In many instances it was mixed with an inferior quality; milk was added and the whole churned up, and then sold as "best milk-blended butter." If this practice went on the character of New Zealand produce would be ruined. The Colonies would be more severely affected by the malpractice than the home producer, who, being nearer the market, could look after himself. He was glad to see present Mr. H. Allerdale Grainger, Agent-General for South Australia; Mr. Alfred Dobson, Agent-General for Tasmania, and acting for Victoria; and the Hon. Henry Copeland, Agent-General for New South Wales, who would, he was sure, agree with what he had said.

In reply, Mr. Hanbury said he thought this was an instance in which one of our great industries was being attacked. It was a subject which affected the Mother Country and the Colonies alike; but the Colonies, probably, would suffer most severely. It was hard on them, after they had worked up and developed a trade, and had produced a good sound butter, that it should be meddled with. It had been said that by means of blending an inferior butter could be made good in quality. The production of any inferior article would in no way be encouraged by the Board of Agriculture. Some people claimed that this was a proper form of competition, but with such a view he could not agree. Adulteration was once legitimate, but that was some time ago. It was necessary that they should protect the consumer. As a matter of theory, it was very pretty to put up a notice saying that the butter contained such an amount of moisture, but the public could not, as a whole, understand what was meant. These notices were not sufficient. Regret had been expressed that the Board of Agriculture had not done something with regard to these notices before; but they could not, as the law allowed the sale of blended butter so long as the amount of excess moisture was stated. He thought the intention of Parliament was that nothing that contained an excess of moisture had a right to be called butter. He could see no object for introducing the milk but to increase the weight, and, if that were the case, legislation was necessary. The right hon. gentleman suggested that the matter should be left in his hands, and he would place it before his colleagues.

The deputation thanked Mr. Hanbury for his courteous reception and then withdrew.

British Dairy Conference.

The annual conference arranged by the British Dairy Farmers' Association, which commences on Tuesday next and extends until the following Friday, promises to be of great interest. It is the first occasion on which the association has visited the home counties, and a much larger attendance of members than usual is expected. The President of the Association (the Earl of Warwick) will preside at the opening gathering at Reading College, at which the Right Hon. R. W. Hanbury, M.P., the President of the Board of Agriculture, has promised to be present. The chairman of the conference is Mr. George Barham, J.P., who occupied a similar position on the occasion of the very successful conferences in Denmark and Sweden and the Channel Islands. Twenty members of the Council have signified their intention of being present.

The proceedings on the opening day will commence with a visit to the British Dairy Institute, the work of which is carried on in connection with the Reading College, under the auspices of the British Dairy Farmers' Association.

Papers will be read on three days, viz.: on "Practical and theoretical instruction in dairying," by Mr. Mills Benson (chief instructor at the institute), and Prof. Douglas Gilchrist (director of the Agricultural Department of Reading College), respectively, at Reading; by the Countess of Warwick, at Oxford, on "The marketing of dairy produce"; and by Prof. Long, at Buckingham, on "Some facts in relation to modern dairying."

Interesting visits will be paid to the dairy and poultry farm of Mr. Walter Palmer, M.P., at Winkfield; to Dr. Watney's farm and herd of Jerseys at Buckhold, Pangbourne; to Blenheim Park, by kind invitation of the Duke of Marlborough; to Mr. N. Coates's farms and stock at Hillesden; and to Lord Rothschild's herds and farm at Tring Park.

The conference at Reading will commence at 10 a.m. in the hall of Reading College. At Oxford, the place of meeting will be the Assembly Room, Municipal Buildings, and the hour 10.30; and at Buckingham the conference will be held in the Town Hall, at 11 a.m., when Lord Addington will welcome the members on behalf of the Bucks Dairy Farmers' Association.

All dairy farmers, whether members of the Association or not, are invited to take part in the several discussions.

Lancaster Hirings.—The second Whitsun hiring was held at Lancaster on the 24th ult., when there was a much larger number of male and female servants than the previous week. First-class men obtained £17 to £20; second-class, £10 to £15; and females £7 to £20.

Market Rasen Hirings.—There was not quite such a large attendance at the Market Rasen second hiring, held on Tuesday, and the high prices of the previous week were with difficulty maintained. Lads obtained £7 to £9, and those with experience up to £14; second waggoners, £16 and £17; and first waggoners, £18 to £22. General servants obtained £11 to £16.

A Leith Grain Warehouse Gutted.—A destructive fire raged on Sunday morning at the grain warehouse of Messrs Berry, Barclay, and Co., Salamander Road, Leith. Between 4,000 and 5,000 quarters of grain in bulk and in sacks, and about 40,000 empty sacks, were consumed, and the building was destroyed. The loss, which is believed to be covered by insurance, is estimated at about £10,000, independently of the building.

LITERARY NOTICES.

His Majesty the King has been graciously pleased to accept from Mr. Charles W. Smith a copy of his latest work, "The South African War and the 'Bear' Operator."

In our notice of Mr. C. W. Smith's last book entitled "The South African War and the 'Bear' Operator," we unfortunately stated the price at which it was published to have been 4s. This is not the case, as the book is published at 2s.

The current number of the "Nature-Study Journal," published by the South-Eastern College, Wye, Kent, contains articles on "An Hour with the Balance," by A. E. Chandler; "The Metamorphosis of Frogs," by F. Gee; "A Glance at a Bee Hive," by J. Banter; and "Flower Shapes." A letter is printed from Professor Miall, of the Yorkshire College, on collecting leaves and flowers, while reviews, editorial notes, etc., complete the contents of a very interesting number of this instructive and useful little magazine.

"The Suffolk Horse: What He Is, and Where to Find Him," is the title of a booklet issued by the Suffolk Horse Society from their Woodbridge Office. In the introduction it is stated that the booklet is issued for the convenience of those not familiar with the Eastern Counties. Inquiries are repeatedly addressed to breeders and exhibitors for information as to character and description of the breed of horses for so many years associated with the county of Suffolk; and where, with limited time at their disposal, intending purchasers residing at a distance can most readily meet with what they are in search of.

The Great Eastern Railway Company have reissued their guide, entitled "Holidays in Eastern Counties," by Mr. Percy Lindley. The same beautiful illustrations are retained, and, as before, prominence has been given to some less known districts in East Anglia.

Messrs. John Thornton and Co., of 7, Princes Street, Hanover Square, London, W., have issued a Coronation year edition of their list of shows, races, and sales from May to October. The list is very complete, being intended mainly for the use of Colonial and foreign visitors.

A defence of free trade is attempted by Lord Avebury in "Free Trade and British Commerce," a booklet which has just been issued by the Cobden Club. Plentiful statistics are given to show the increase in our commerce and imports since 1850, while towards the end of the brochure the lack of commercial education and the general backwardness of British boys are deplored.

Messrs. J. T. Hobson and Co. have issued a new catalogue for 1902, in which will be found description and prices of every sort of poultry and pigeons' houses, duck houses, coops, etc., bicycle house, dog kennels, portable wood buildings, coach houses, and stables, cricket pavilions, greenhouses, bullock bins, gates, etc. As an instance of the public appreciation of the goods manufactured by Messrs. Hobson a large number of testimonials have been printed and issued in a booklet by the firm.

Fuel.

The consumption of fuel for sweating and drying has long been a matter of much moment to maltsters. The question of cost is serious, but the quality and effectiveness of the work done is much more important. Recently another aspect has been added to the whole question, as it seems we must admit that some classes of fuel can make the unpleasant addition to malt of arsenic.

As this last phase of the question is only very recent and is being subject to a very searching inquiry, we must wait till the Royal Commission favours us with its views and conclusions, if it arrives at any of a type that may interfere with the conduct of the malting trade, or the construction of the buildings used, and machinery employed. Much evidence has been given already, but it is understood more will follow. It is premature, and may be idle, or worse, to attempt to anticipate the result.

Two-floor Kilns

thus far have proved of advantage, where defective fuel has been burned, and it is surprising their use has not become more general, owing to the other advantages they possess. Doubtless economy is of value in its way, but soundness in drying should always be considered first. It seems obvious that malt cannot ever be heated uniformly on a single floor in any ordinary open kiln. The bottom inch must inevitably vary widely from the top one, and no ordinary amount of turning can rectify the matter.

Yet the right temperature for sound drying does not admit of wide variation. It is true some maltsters hold that malt is thoroughly dried and cured at 185 degrees, whilst others prefer to reach 230 degrees, when possible, but even these wide extremes do not equal the actual differences sometimes found in large single kilns of defective build.

Air Outlets

ten times the size of all the combined inlets will allow down draughts and cross currents of curious types that lead to the heat at one point on a floor, rising far in access of that to be found in other positions, sometimes only a few feet away.

Inadequate outlets will often lead to even more serious influences in the earlier stages of drying when the grain is still soaked with wet. As measured by degrees Fahrenheit, there may seem to be fair uniformity, but at this stage a variation, if only ten degrees, can do harm. Colour is very easily given, so long as much moisture remains, and if the work that air ought to do, has to be thrown upon the fuel, it is unsafe and costly.

Moisture is best carried away by a free current of air, and this can only be done where outlets and inlets are of

Proper Proportions.

Too small inlets are quite as frequent a source of mischief as too large outlets. Some sort of rough gauge can be applied by determining the actual amount of work done. When one kiln burns double the quantity of coal to dry off a hundred quarters that another takes to do the same work, it will pay any maltster to find out the reason. Yet there are many kilns in which the differences are greater than two to one.

The kiln should be employed which gives a result of 30 or 35 quarters malt dried to the ton of coal burned. No great amount of trouble is involved in determining this matter. As a matter of business detail, the actual efficiency of every kiln should be determined for every

Season's Work.

The quantity of malt dried, or barley steeped, is generally known, and very little care is needed to determine the amount of coal used. Probably no other item of account pays so well to check. Certainly few other calculations are so useful and valuable, and in all cases where uncertainty exists it ought not to be allowed to continue. In other cases where no attempt is made to keep an account, the sooner the practice is altered the better. If it is impracticable for a whole season there is no difficulty in trying it for a limited time, but as the state of the air has a good deal to do with drying, the results for any short period are apt to prove delusive. In that case all kilns should be tested at the same time, not one after another.

Damage by Rabbits.

A case of much interest to tenant farmers was heard by his Honour Judge Austin at Axbridge County Court, on Wednesday. Messrs. William Ed. Collings and John James Collings, tenants of the Cross Brewery Farm at Compton Bishop, claimed £20 from Mr. William Yatman, as damages caused by the last-named by overstocking the common land at Compton Bishop Manor, and thereby injuring the pasturage. The claim was made up as follows:—£3 15s. paid by the plaintiffs for grazing elsewhere than on his own land 60 sheep, which would otherwise have been pastured on the Common; and £16 5s., the estimated loss for keep of sheep on their own land, in consequence of being unable to prepare it for mowing. It was alleged that the defendant had failed to keep down the rabbits on the Common within reasonable limits from March, 1901, whereby the pasturage had been destroyed to an unreasonable amount, and the land had been seriously damaged that there was no longer sufficient keep, and the sheep would not stay upon it. Mr. Parfitt appeared for the plaintiffs, and Mr. H. R. Wansbrough for the defendant.

Mr. Parfitt said that the respondent was the lessee of some shooting rights over the Manor of Compton Bishop. The action was not brought to assert any rights, but merely against the lessee of the shooting rights to recover damages on the ground that he had allowed the common land to be overrun to an unreasonable extent by rabbits. The plaintiffs claimed the common pasturage in respect of their holdings. He thought he would be able to satisfy his Honour that, whereas up to 1900, the rabbits were kept down, since Mr. Yatman became lessee he had allowed them to increase to an unreasonable extent on the waste, and the result was that the tnants were unable to pasture their sheep there. This was an interference by Mr. Yatman to the common rights of the plaintiffs, to have their sheep pasturage upon this waste. The plaintiffs would say that up to 1900 there was sufficient pasturage left to pasture the sheep, but that now practically there was none at all. The plaintiffs did not deny Mr. Yatman's rights to the shooting, but they thought he had no right to take the privileges without the responsibilities.

William Edward Collings said that he and his brother were joint tenants of the Cross Brewery Farm. Until Mr. Yatman came the number of rabbits was always kept down. He then had the privilege of keeping down the number of rabbits himself. Up to that time he had often hunted half a day and not found one rabbit, but now there were hundreds. Up to May, 1900, he kept about 200 sheep on the waste land, but since the rabbits had increased so he had had to allow the sheep to go into one of his fields adjoining the waste, so that he had been prevented from using the field for other purposes. He considered that he was the loser of between £50 and £100 through this increase of rabbits.

Mr. Kippler, agent to the estate, stated that the number of rabbits had increased to an unreasonable extent since Mr. Yatman came.

Mr. Parfitt said the whole case was a point of law whether there was any obligation on the Lord of the Manor to take active measures to prevent an increase to an unreasonable extent of the rabbits.

Mr. Wansbrough submitted that there was no case. A person might sit still and fold his hands and say, "Well, I object to the rabbtis being killed. I do not like killing animal life," and he had a perfect right to do it.

His Honour: He certainly may, on his own land, allow them to increase, even though they may go on to his neighbour's land.

His Honour said that the cause of action was a curious one. It was one the like of which he had never seen in his experience, either at the bar or on the bench. He should find, as a fact, that there had been since the 12th May, 1900, when Mr. Yatman first had the lease, an unreasonable increase in the number of rabbits on this waste of the Manor. But that increase had been brought about, not by any active step taken by Mr. Yatman, but by simply his holding his hand. Mr. Yatman, of course, had not held his hand entirely. He had killed such rabbits as he had desired to kill, but not in such a way as to make them at all comparable in numbers with the period before he took the lease. Did that "passive action" on the part of Mr. Yatman give rise to anything in the nature of a cause of action against him? In his Honour's opinion it did not. He thought that, if a man simply sat on his land and did nothing to it, even though the effect of that passive conduct might be to injure his neighbours, and brought nothing on to the land, he was not liable for action. He knew of no case in which a grantor had been compelled to step aside from a purely "passive action," and to do something definite, because, apart from any active step taken by him, the subject matter of the grant had become of less value. For three reasons he was of opinion that no case, as a matter of law, was made out here, though, as a point of fact, he considered that there had been an unreasonable increase to the prejudice of the commoners. There would be, therefore, judgment for the defendant, and, inasmuch as it might be that the plaintiffs would carry the matter to a higher Court, he would assess the damages at £5. He would also certify that the case was one of interest to the tenants of the estate.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended May 24, 1902, together with the quantities imported in the corresponding week of the previous year:—

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son, and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

6,163.—John Fairburn Crowley and William Watson, of Sheffield, for "Improvements in the construction of implements for digging and gathering potatoes and the like."

5,013.—Henzel Matouch, of Acton, for "Improvements relating to harrows, weeding machines, and like implements."

Patent Sealed.

1,061.—W. T. Vicary, of Fulham, for "Shears."

22,221.—W. F. Johnston, F. D. Mercer, and J. Stephenson, of Ontario, Canada, for "Mowing machines."

A satisfactory report was presented at the annual meeting of the Dorset Horn Sheep-breeders' Association. The profit on the year's working was £4 18s. 10d., and the total balance now amounts to £236 15s. 4d. There was a fair increase in the membership of the association during the year. At the meeting some discussion took place as to where the meetings of the association should be held, and it was agreed that the interests of the Isle of Wight members, both as to the dates and place of meeting, and also as to their representation on the council, should be considered at the next meeting of the council.

Home Notes.

The Borough.

With a regular, though not extensive, demand for hops of all grades, prices remain firm, with some tendency in favour of the sellers. Especially is this the case with respect to any choice qualities that may be available. I hear that a parcel of East Kent goldings has changed hands this week at £5, the early purchaser making a handsome profit. Another lot that had been fortunately held by the grower realised 90s. These transactions indicate the strength that prevails throughout the market, affecting in due proportion the medium and lower grades, both of which have been also handled during the past week. We may congratulate ourselves upon the fact that practically the whole of the great crop of last year has been taken over. Factors state that they hardly ever knew a season, in which, at this period, the unsold stocks were so small as they are at present. If the actual value of English hops were estimated by the bareness of the market and the absence of foreign competition, the selling prices should be considerably advanced. A substantial upward movement appeared imminent last week, when reports were coming in from all districts of the suspension of growth under the influence of the then prevailing cold weather, but the improved conditions we are now conscious of, have rather checked this tendency, and although values are solid at recent rates, there is no actual improvement perceptible, except, as I have already remarked, for choice selections. Nevertheless, holders are wisely asking more money, and I have little doubt, if they maintain this position, they will eventually be successful in obtaining what they legitimately require.

American Hops

are conspicuous by their absence from our market. Only a few lots are on offer, and these are firmly held at £5 or thereabouts. Merchants who are under contract to deliver have much difficulty in providing supplies to meet their engagements, especially as the current values on the other side of the Atlantic are now far in excess of the rates at which sales were made on this side. Continentals being also deficient, there is further good reason to anticipate a stronger market for the unsold portion of our crop, as the season advances.

Concerning the Coming Crop.

I hear that, although the warmer weather has assisted the growth, the bine is still very backward and generally looks unkindly. Many complaints are heard about the severe attack of flea, by which much damage has been done. The present conditions are certainly very favourable to renewal of progress, and yet there is plenty of time for recovery from the hindrances from which the bine has hitherto suffered. Indeed, in such grounds as are sheltered from the effects of frost, and where the plant has been fairly treated, vigorous movement is already evident, but in colder situations and in gardens whose cultivation has been neglected, but little improvement is yet noticeable. In any case, I trust that no exceptional measures will be taken to promote the growth beyond what natural influences will provide. Should Nature give us a full yield, we can only abide by the consequences, but I am still convinced that a large crop cannot possibly be otherwise than unremunerative, and if any means are available by which the production can be limited, growers will be well advised to adopt them. Their interests are this year coincident with the smallest possible harvest. Quality should be the first consideration, and quantity the second. The position we have to face can only be effectively dealt with in the manner I have previously urged, and again emphasise.

Foreign Notes.

Nuremberg.

In consequence of the diminished consumption of beer caused by the continued low temperature, brewers have purchased hops recently to a small extent only. The demand for export has also fallen off; therefore the market has been exeremely quiet, and values have somewhat receded, except for the choice qualities, the scarcity of which enables holders to keep up their quotations. Although general stocks in the hands of dealers are very small, and the country supplies are practically exhausted, the immediate tendency of the trade seems to be in favour of buyers, and future business will be largely influenced by the weather of the coming summer, as, unless the output of the breweries is considerably increased during the next three months, it appears probable that brewers will be able to abstain from buying to any extent until the new crop is gathered. Further development of more seasonable climate will, however, create activity in the production of beer, and upon this expectation is based the hope that the hop market will ultimately recover its strength. The small sales that are being made at present are effected at prices not exceeding 60s. to 80s., but the best Hallertaus still realize 90s. to 105s.

The New Growth

is not making much progress. Cold rains, with occasional frosts, have hindered the plant from advancement; but, apart from this abnormal suspense, the plantations are in a sound, healthy condition, the roots having generally wintered satisfactorily. It is therefore anticipated that, with favourable climatic conditions, a full average crop will be grown, and that, throughout Germany, the increased area will assist in producing a much heavier yield than last season.

Belgium.

A rather firmer tone has replaced the lowering tendency to which I referred in my last report. Quotations have not actually advanced, as business is limited to the consumptive demand of brewers, who are buying cautiously. But sufficient business has been passing to check the downward movement of prices, which are now fairly steady. Some contracts have been concluded for hops of the new growth, at rather higher figures than were recently named. The business is, however, so entirely speculative that it can hardly be accepted as an indication of the probable course of the market.

Belgian Plantations

have suffered from the unseasonable weather. In parts of the Papernighe district, where the young shoots started vigorously, the subsequent growth has become yellow and weakly; and until the improvement in temperature which has been developed this week, the outlook was making growers very dubious as to the ultimate issue. At the moment they are in better heart, as they have confidence in the rapid restorative effect of the sunshine by which their land and its products are now being visited.

The cultivation of hops in Belgium is localised in certain districts in the privinces of Brabant and East Flanders, included in a triangle formed by the towns of Brussels, Alost, and Ninove, and also in the cantons of Papernighe, Rousbrugge, and Ypres, in West Flanders. In the first-named division, the plantations are much scattered, and are generally very small. The area in 1880 reached its highest point, being then a little under 5,500 acres, but it has since been reduced to about 5,200 acres. In the Popernighe quarter, the hop farms are larger, but here, again, the total area has fallen from about 4,100 acres to about 3,700 acres. It is estimated that the cultivation of hops in the whole country has been reduced in 15 years by 500 hectares, or about 1,200 acres. Various reasons are given for this reduction, but doubtless the most important is the loss of profit to growers, caused by the advanced cost of labour, and the displacement of Belgian hops by the growths of other countries. Efforts are now being made to restore the industry to its former remunerative condition, and to this end a movement is being organised to protect the planters from foreign competition by the enactment of a substantial import duty. The proposal is strongly resisted by the brewers, and, considering the weight of their influence in the representative body, I fear the poor hop-growers have little prospect of prevailing against it.

America.

The New York market gains in strength every week, the quotation for choice State hops having now reached 22 cents, or 11d. per lb. This figure surpasses that of the corresponding date of last year. There are numerous contracts for late spring and summer delivery still uncovered, and sellers are in much difficulty concerning the fulfilment of their engagements. The pressure may be gauged by the fact that in the week ending May 9 372 bales of American hops arrived in New York from England. The shortage of last year's crop becomes more pronounced as the comparative weekly statistics are published, and the upward movement of values is supported by intelligence from the New York State yards, which have been damaged by cold weather. As late as the first week in May heavy frosts occurred by which the young shoots, when high enough to tie, were cut off the ground. Some yards will start again, but the vine in old or partly exhausted plantations is hardly likely to recover. The trade outlook is decidedly in favour of still higher prices.

An Agricultural Letter.

Sir,—Travelling from King's Cross at Whitsuntide, I passed through the counties of Hertford, Cambridge, Bedford, Huntingdon, Northampton, Nottingham and Essex, and was pleased to see the crops of wheat, barley, and oats look so well, much better than they ought to look, considering the wretched weather we have had during the whole of May. The sharp frosty nights one would think ought to have given the cereal crops a yellow sickly look, but in only one or two cases did I notice this, and one case I afterwards discovered was the effect of wireworm; when these are present cold frosty weather is often fatal, but in a good growing time the crop often succeeds in getting out of their reach, and is sometimes all the better for a little thinning.

Grass is hardly so good as three weeks ago, in many pastures a mouse may be seen by those who have good eyesight; however, in the low meadows there is more, and a nice rain with a good shift of wind would soon bring plenty of feed.

What an opportunity there is now for the breeders of cattle in these isles of ours to make a big effort to breed all, or nearly all, we require, especially in Ireland. If only a few thousand heifer calves were kept back for a couple of years we could snap our fingers at the beef trust, and all that may result from it. Why should the comparatively small quantity of American beef (compared with our home-grown) enable Cousin Jonathan to almost rule Smithfield? Our cattle men must look to it and "wake up."

'Tis a pity that Sir William Harcourt and others of his party are trying to make a popular cry of a bread tax simply because a registration fee for grain has again bee nput on, and which never ought to have been taken o; it does not in itself raise the price of a loaf one-eighth of a penny. The reason of a rise, wherever it has occurred, is on account of the shortage of last year's crop, especially maize. Maize being generally much cheaper than wheat, there is a capital chance for the growers of that grain to use it in conjunction with wheat, and kindly send it over to us as best American flour. I hope the Chancellor of the Exchequer will next year keep the registration fee for grain and double the charge on foreign flour

Another: Sir W. H. and some of his party still harp on "Doles to the Landlord." Everyone who knows anything about rating is perfectly well aware that the farmers are unfairly rated compared with tradesmen and professional men, and that the reduction made in the case of rateable land is not a dole to the landlords, as some most unjustly try to prove, but a very small measure of justice tardily given to the farmer.

OLD SUBSCRIBER.

Compare the conditions of railway travelling twenty years ago with those of to-day and what a vast improvement you find! Holiday makers are no longer faced with the difficulty of choosing a suitable place for a holiday or of mapping out an interesting tour, nor is the railway journey of to-day fraught with the least trouble. The Great Northern Railway, for instance, makes quite a speciality of catering for holiday makers, and they leave nothing undone, not only to make travelling as easy, as comfortable, and as economical as possible, but also to be of assistance to the public in the various matters which have to be considered when holidays are in contemplation. The company's guide to seaside, farmhouse, and country lodgings and hotels on their system is a most valuable publication, for, besides making the selection of holiday apartments quite a simple matter, it contains notes on places of interest. A special feature of this year's publication is a capital article on various attractive resorts, entitled "Looking for Lodgings," which includes descriptive references to places of interest on the Great Northern system. The usefulness of this publication cannot fail to be apparent to all who consult its pages, and an especial recommendation is that it can be obtained free on application to the Superintendent of the Line, King's Cross, N. When you write for this ask also for the Tourist Programme of the Great Northern, North Eastern, and other railways in connection, and a little booklet, entitled "How About Our Luggage?" You will find them a most valuable help when you come to make your holiday arrangements.

MONDAY (May 26th).—The weather continued fine over Great Britain, although there was rather more cloud than on the preceding day or two, while in Ireland the weather had again become unsettled, and rain fell. The temperature remained high over the central and Eastern portions of England, although the thermometer in most places stood several degrees lower than on Saturday or Sunday, and over the western portion of the Kingdom the readings were below the average. The winds were generally from between South-west and North-west, and they continued light.

TUESDAY (May 27th).—Fine weather prevailed yesterday in England, but the conditions had become unsettled in Scotland and Ireland. The winds were south-westerly over the entire country, and they were strong in places on our West coasts. Rain was measured in the morning in the North and West, as the result of the fall in the preceding twenty-four hours, but the weather remained fine and dry in most parts of England. Over the Northern and Western portions of the kingdom the day was cool, the thermometer failing to touch sixty degrees.

WEDNESDAY (May 28th).—Rainy and unsettled weather prevailed in most parts of our islands, and the sky was generally very cloudy. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, in the Northern and Western districts, and in some places the fall was heavy. A cyclonic disturbance was travelling eastwards to the North of Scotland, and under its influence the wind was westerly over the entire country. Temperature was generally lower than on the previous day, and over a large portion of the kingdom the highest readings were only about sixty degrees.

THURSDAY (May 29th).—The weather was fine in most parts of England, but rain fell at several places in Scotland and Ireland. Rain was measured in the morning in the Northern and Western districts as the result of the fall since Wednesday, but the amounts were small. The wind was from between West and North-west over the United Kingdom. Temperature was generally high, except in the North, where readings were rather below the average.

FRIDAY (May 30th).—Dull and rainy weather prevailed in most parts of the British Islands, and the temperature was generally below the average. The wind had shifted to the north-east and north over the entire kingdom, and the barometer was rising in most places in the rear of the storm area. Rain was measured in the morning nearly everywhere as the result of the fall in the preceding twenty-four hours, and the amounts were large in places. Thursday night was warm, except in the north, and in the Shetlands the sheltered thermometer fell to the freezing point. The midday temperature was mostly below the average.

SATURDAY and SUNDAY (May 31st and June 1st).—The weather continued rainy and unsettled over our islands during these two days, and thunderstorms occurred in the east and south-east of England. Rain was measured over nearly the entire kingdom on both days, and in many places the fall was heavy. The barometer was relatively higher in the north than in the south, and the winds, in consequence, were easterly and north-easterly. The weather was warm over the southern portions of the kingdom, and in the Midland districts of England the mid-day temperatures touched seventy degrees. Rain fell at times in London, but there were bright intervals, and on both days the shade temperature in the suburbs registered seventy-four degrees.

Harvest Weather Forecasts.

During the harvest season the Meteorological Council will, as before, supply forecasts of weather by telegraph to persons desirous of receiving them, upon payment of the cost of the telegrams. The forecasts will be so worded that the cost of each message will be 6d. for any one district, including an address of three words. If the address to which the forecasts are to be sent exceed three words, an addition of an halfpenny for each additional word must be made to the cost of the daily telegram.

The special harvest forecasts are prepared at 3.30 p.m. daily, from June 1 to September 30 (except Sundays), and are applicable to the 24 hours from midnight following the time of issue.

In view of the importance of checking the accuracy of the harvest forecasts, the Council will be glad to supply, to those recipients who signify their willingness to co-operate in the matter, forms on which records of the weather experienced may be entered for the purpose of enabling the Council to compare the forecasts with the subsequent weather.

The service of harvest forecasts is arranged for consecutive telegrams only, and is, in addition to the ordinary service of daily forecasts, prepared at the office at 11 a.m. and 8 p.m. Within these hours the latest forecasts for any particular day can be obtained by telegraph upon payment at any post office of a fee of 6d., in addition to the cost of the inquiry and reply telegrams.

Applications for the forecasts should be made to the Secretary of the Meteorological Council, Mr. W. N. Shaw, 63, Victoria Street, S.W.

GARDEN.

The hot weather has come in with a rush. A rise—and one which, so far, appears to be permanent—of something like 25 degs. in the temperature within about as many hours is no joke, and just at first neither ourselves nor the occupants of our gardens and greenhouses quite know what to make of it. Fortunately for the latter, the change was preceded by a considerable fall of soft and genial rain, since when the amount of progress made in nearly all departments of the garden is quite surprising, and still more gratifying.

Amongst many others, potatoes are coming on very rapidly, and doing their best to make up a lot of lee-way. Where the haulin has already been cut down by frost the new or second growths, which are usually much more numerous than the first, should be thinned out to some extent, if possible, as the size and quality of the tubers will be increased thereby. But the later plantings, only just through the soil, will give the best results this season, and in many cases will be fit for digging almost as soon as those planted a month or more earlier. Continue to mould the rows up lightly as the plants appear, and keep the intervening spaces free from weeds, and in a nice friable condition on the surface. If the soil is at all heavy or close, fork between the rows once or twice, but not after the runners or strings on which the tubers are formed have commenced to run.

Peas, too, of the latter kinds are climbing the sticks fast, and the early-sown dwarf well in bloom. The gathering of the first pods may be hastened by a week or more by pinching out the points of the plants when nicely in flower. There is still time to sow a few rows of any of the fine, late marrow peas, for gathering in September, and perhaps later.

Now is the time to get in kidney beans of both the tall and dwarf kinds in quantity. If the soil is deep and rich—as it should be—do not crowd the seeds in any way, but allow quite 6in. between those of the French varieties, and 9in. to 12in. between the runners. The new climbing French beans are very productive and useful commencing to pod early, and affording a much longer succession than the dwarf. Haricot beans should be sown as soon as possible.

Lose no time in planting out strong and well-hardened tomatoes, as far as possible against sunny walls and close fences, or in any sheltered spot, and the rest in the open. These last ought to be placed quite 2ft. apart in the rows, with spaces of 2½ft. or 3ft. between these. Where large numbers of plants are put out it is a good plan to plant two or three rows at 2ft. or so, and then allow a 3ft. space to walk along and attend to the plants. Always plant quite firmly, pinching out all side-shoots, and placing a stout stick to each, quite 4ft. out of the ground.

Plant out vegetable marrows, ridge cucumbers, gourds, etc., at once. Forward celery ought to go out also—some of the market-growers have already got thousands of plants in and growing now, and some celeriac, if the plants are ready. Sow endive, and more lettuce, and put out plenty of plants of the latter.

Make a last sowing of cauliflowers for late autumn use, and at the same time sow a small bed of the rosette coleworts. Plant out winter greens in variety, and finish thinning root crops, etc.

In some places, at any rate, there is a much better promise of fruit, and of pears and plums in particular, than would seem possible considering the terrible ordeal the trees have been through. Strawberries appear to have suffered most, and in some localities the crop will probably prove a failure. How apples will have fared remains to be seen yet, but as there was plenty of bloom, there should be some fruit, at any rate where there is a little shelter of some kind. The late varieties will probably come off best.

Durham (North-East).

From the commencement of May until the 22nd inst. we had remarkably cold and dry weather, with east winds, and, very often, frost at night, and, during that time, grass and corn made very little progress. On the 22nd we had a good deal of rain, and since then the weather has been milder, and now both grain crops and grass look more promising. It is, however, now so late in the season that a heavy hay crop is not likely to be obtained this year. The land has worked very easily, and turnips, potatoes, and mangels have been got in in capital order. Lambs have thriven well in spite of the cold, and should, in sympathy with the present high price of beef, realise good prices. Potateos have been quite a drug in the market in this district, and they have been difficult to cash at almost any price. Straw and fodder of all kinds are both scarce and dear.—R. B. (May 30th.)

Gloucester.

The sudden change from cold wintry weather to summer temperatures on the 23rd was heartily welcomed by all; the genial rain of the preceding days had so moistened the surface that the sun's genial rays caused vegetation in a few days to assume quite a verdant garb.

On the early pasture land the change, I fear, came too late for even an average crop; the same remarks apply to clovers and seeds generally. On the later lands, should we get more rains shortly with warm temperature, the crop may be an average one.

Cereals generally have improved during the past ten days. Beans show great improvement. Mangolds are somewhat disappointing when sown early, this plant being very deficient. Much cannot yet be said of the field potato crop, as generally they are not through the soil. Early varieties have suffered badly from the unusually sharp frosts during the early days, or rather nights, of the month.

Unless we get a continuation of genial rains and warm temperatures, with empty hay and straw yards, this prospect is none too encouraging.—B. R. (May 28th.)

Hampshire (East).

The recent seasonable rain has much improved the growth and appearance of all crops, and the warmer weather we are now enjoying has rendered probable a good plant of early turnips, rape, and the late mangels.

The growing wheat is the most promising of the cereals. Oats are very variable, but are improving rapidly under the present genial circumstances.

The quotation for wheat keeps up, but the milling demand seems to be only moderate.

Shearing is now proceeding, but I fear we cannot look for better prices for wool than those prevailing last year.

The value of fat stock continues to be satisfactory, and the money obtained for dry cows in good condition is remarkable.

The prices of store stock are adversely affected by the scarcity of keep.—G. S. M. (May 30th.)

Herts. (East.)

From May 1st until the 22nd weather has been cold; hail storms, frost at night, cold winds, which has kept everything in a backward state. In spite of this wheats on most lands are looking well, the exception is on clover lays that were ploughed up late in Autumn and sown on a fresh furrow; here it is weak and thin. Barley and oats look very well, that is where sown early; but barley sown late after turnips has laid in ground longer than I have ever known. In coming up clover and seeds are very backward, thin and weak, and pieces of sheep-feed had to be ploughed up and re-sown with tares.

Keep at the present time is scarce; all stock too close upon it. If it could be only kept away from it for about 9 or 10 days it would alter matters for the best. This cannot be.

On the evening of the 22nd we had a splendid rain, the best in this district for over twelve months, and with warmer weather will soon put a different face on all vegetation, and improve the prospect greatly. So much needed, stock-yards are empty, very little hay or straw left in this district, both of which (where there has been

any to sell) have been selling well. Unfortunately most of the wheat was sold before the recent rise, and what a noise has been made about this in places, fearing, I suppose, that the farmer will get an extra shilling or two per quarter. It will not make 35s. per quarter now in this neighbourhood. Mangels are showing well in the rows, and have stood the frosty nights much better than expected. Turnip or swede not yet sown, but hope to get in a good breadth next week; also maize. Much more of this crop is sown this year, where there is silos it is fine stuff to cut into chaff to put in. I do not think any crop will grow so much weight per acre in a short time. Last year a piece was 2ft. high on July 23rd, sown on June 1st; on or about the middle of September it was 10ft. high, and have often had it 11ft. to 12ft. high on highly-farmed land. When put into silos, cut into chaff, it has this advantage, it does not give off such a strong smell as rank grass, very objectionable when near a village or a gentleman's home farm; and I have had it when it could be smelt miles off, and had to be carted on the land, on account of the strong smell, a matter which the sanitary authorities are very keen about, but perhaps are not so keen about the rates a farmer has to pay. These have been much increased, in spite of the supposed advantages that councils of every description were going to bring.—A. B. (May 26th.)

Hunts (South).

A lovely warm rain is falling, which will do much to repair the serious damage caused by the severe frosts, hail and snow storms, cold, drying, northerly winds, etc., which played sad havoc with the grass, spring-sown corn and roots since I trespassed upon your space about a month since. At that time farming affairs might fairly be said to have assumed a somewhat roseate hue. Alas! for poor farmers, ere my farm notes had reached the editorial sanctum, a very severe frost had quite changed the appearance of things agricultural. We were going from bad to worse for two or three weeks, until Thursday last, when we were blessed with a gentle, warm rain, which continued for several hours. This has repaired some of the damage caused by the unseasonable weather, but the barley on the heavier lands will never entirely recover from the serious setback which they have received. The wheat plant did not suffer so much, except that it almost ceased to make any progress during three weeks, and is now very backward. Grass has grown well, and we may yet mow a good crop of grass on the later lands and meadows. Altogether, farmers are very hopeful, as is their wont.—Sanders Spencer (May 29th).

Munster.

The month of May, now concluding, was considered one of the worst months in farming records for the last thirty years. North winds and frost every night were the order.

Cereal crops doing well, especially wheat. Potatoes coming very slowly, the bulk of maincrop not up yet. Mangolds, where up, suffered severely from the frost.

Great scarcity of grass yet, and meadows will not make an average.

Beef very scarce and dear. Fat sheep fair, but store sheep a drug.

Young cattle selling badly, owing to shortage of grass. Pigs, old and young, dear.

Considering all prospects, I think it will make a better farmers' year than 1901.—P. F. (May 30th.)

Somerset (North-East).

The little rain we have had certainly has freshened things a little; it has at last brought out the ash leaf. I never remember so late a season; it is much too late to expect an average hay crop. The land is covered with flowers, and no sign of under-grass. I never knew a crop of hay after a flowery spring. All corn will be short in straw. The spring has been so very cold that cattle have not made the progress they generally do this time of the year. I fear there will not be much fat cattle ready for the Coronation; it will take three animals to weigh about what two would do in an average season by this time. I wish I could give a more cheering report of future prospects.—G. F. K. (May 30th.)

Westmoreland.

It will be difficult to recall, or even conceive, anything more disappointing to the farming community than the month of May just closing has been, for, with the exception of a few days which succeeded the refreshing rain which fell on Thursday, the 22nd inst., it has been an extremely cold, ungenial month, and the progress of vegetation has been extremely slow, and today the wind has gone round to the east, and the cold has increased the anxiety among farmers, for genial weather this season, almost equals, if not quite, that of the general public for peaceful news from South Africa, and well it may, as we are at present threatened with a late, if not deficient, hay and corn crop. The hay crop is almost bound to be light, as nearly all meadows have been eaten up to date, and in the vales are still stocked. A stronger proof of the backwardness of the season could not be produced than the backwardness of all forest trees; there is not an ash leaf to be seen, and the oaks are only just bursting, and there is not a single instance of hawthorn bloom, and it will require several warm, genial days to produce a single flower, and it is scarcely possible for the ash to be in full leaf, even if the weather should change immediately, before midsummer. The consequence is that spring corn of all descriptions is looking starved and short; in fact, in high-lying districts it is most unpromising. Taken as a whole, the outlook for farming is unsatisfactory, for although beef, mutton, and pork, now the staples of agriculture, are making good prices, the threatened shortage of keep, and the slow improvement of stock turned out to grass, coupled with their poorer condition when turned out, will undoubtedly keep marketable stock much longer out of the consuming market. The bitter hostility displayed by urban population, and especially the office-seeking portion of politicians, to the small registration fees proposed to be put upon corn and flour, shows how very little we can expect from Parliament, and especially if the "outs" should get in, for they undoubtedly are determined to ride into power, regardless of national interests, provided they only secure office.—T. B. (May 30th.)

Worcester.

May, the proverbial fickle month, has this year fully borne out the truth, as nearly the whole month has been as cold and ungenial as many of us can remember, the frost of the 13th being specially severe, all vegetation received a severe check, young oak leaves being scrumped up, mangolds killed, pea blossom destroyed; although at present enough pear, plum, and gooseberries seem to have escaped.

The apple blossom being later, not much affected at present. All corn crops in this district, on well-farmed land, look well, also artificial grasses, and the fresh pastures, when unstocked early; now with the present genial weather of the last few days, look h— growing a crop of hay.

Hops are now making rapid progress, but late-root land generally is in a forward state.

Stock of all kinds selling fairly well, especially beef. Where all the latter is to come from to celebrate the Coronation and peace festivities will puzzle the butchers.

It is to be hoped the Government will stand firm with regard to the Registration Tax on corn. They wisely gave way on the Cheque Tax. Also, we trust our County Members will vote that the expenses of education shall be put on the Imperial Exchequer. It is for the good of the whole nation, consequently the nation should pay for it—not for one class only to pay for it.—T.R.H. (May 28th.)

Ulster (East).

A late, cold spring is the universal verdict of Ulster farmers upon the present season, and, following as it does upon a more than ordinarily severe winter, there is not much room for hopefulness. Nevertheless, labour has been pushed on with determined persistence.

Cereals.

Oats, barley, and wheat are fairly well forward, considering the season, and, generally, have a healthy appearance.

Potatoes.

In light soils, especially in the lower parts of the country and in warm valleys, the potato crop was got into the ground in good time, and the early kinds are now well above the soil, and look healthy; but in higher ground and stiff clays all are late, and some fields intended for potatoes are not planted even yet.

Fruit.

In fruit-growing districts there is only a poor prospect for berries and stone fruit. The cold and frequent showers of hail have caused a good deal of injury. But apples are showing a rich and abundant bloom; in fact, I never saw anything of its kind more beautiful than the present bloom of orchards. They add such a pleasing variety to the landscape, as makes one almost forget the hard struggle for life which their owners have to make in other directions.

Meadows and Pastures.

Owing to the scarcity of winter fodder, many farmers were compelled to allow their cattle to run over the whole grass land and pick up every green mouthful during the winter and early spring. This and the cold season have kept the pastures and meadows bare, but just now grass lands are beginning to assume the rich green which is characteristic of our beautiful island.

Live Stock.

Store cattle are in rather low condition, generally, but healthy. Milk cattle have been better cared for during the winter, and are not so low in flesh, but markets are dull and prices low.—W. W. D. (May 28th).

Foreign Prospects.

France.—Apprehensions respecting the well-being of the wheat crop appear to be dispelled by the grateful change in the weather; reports are increasingly satisfactory, and hopes of a good harvest have revived.

Germany.—Crop prospects on the whole are considered to show a good average condition, and now that warmer weather has come rapid progress is expected.

Belgium.—Crop prospects are normal, but higher temperature is desirable.

Holland.—There is an improvement in crop conditions, consequent upon the changed weather.

Hungary.—Crop prospects in the aggregate are regarded as being fairly satisfactory, but there is no expectation of a bounteous harvest.

Russia.—Warm and wet weather in the Southern Governments has restored the appearance of the autumn, as well as of the spring-sown crops, and around Odessa the outlook is said to leave little to be desired.

Roumania.—Advices from Bucharest tell of continuous rain, which has injured the rapeseed crop, now about ready for cutting. Wheat and barley also are reported to have suffered from the excessive moisture.

Spain.—Although harvest will be two or three weeks later than usual, in consequence of cold and rain, the wheat crop promises an abundant yield.

Asia Minor.—Around Smyrna the crops look well, but rain is wanted on the upper plateaux.

United States.—Wheat prospects are fully maintained, or even a little better than before. Maize is starting finely, but there are some drawbacks from weeds and cut-worms. Oats show most improvement. In California crop prospects are good in the principal wheat-growing valleys, but not up to the mark in other districts. Rainfall to date, 18¾in., against 21in. same time last year.

Peace in South Africa.

The war in South Africa has at last come to an end. On Saturday afternoon news reached Pretoria from Vereeniging that the delegates of the Boer Conference were empowered and prepared to subscrib to our terms. No time was lost in acting upon this decision. By 10.30 the same evening the burghers' representatives and Lord Milner had reached the Transvaal capital, and three-quarters of an hour later Lord Kitchener telegraphed to the Secretary of State for War as follows:—

"The document containing terms of surrender was signed here this evening at half-past ten p.m. by all Boer representatives, as well as by Lord Milner and myself."

The fact that peace had been agreed to was communicated to the King yesterday (Sunday) afternoon by Mr. Brodrick, and all the other members of the Royal family were informed. Late last night his Majesty issued an address to his people, expressing his satisfaction at the conclusion of peace, and his hope that it would be speedily followed by the restoration of prosperity in his new dominions. Public announcement of the welcome intelligence was first made by the posting of a notice outside the War Office at five o'clock yesterday (Sunday) afternoon. The news naturally spread with great rapidity, and was received with great rejoicings everywhere.

At the last council meeting of the Southdown Sheep Society the officers for the ensuing year were elected as follows:—President, Sir Nigel Kingscote, K.C.B.; president-elect, Mr. Allan Cooper; hon. treasurer, Mr. Ernest Mathews; secretary, Mr. W. J. Wickison. The General Purposes Committee was elected to consist of the president, the hon. treasurer, and Messrs. Clayton, Cooper, Jennings, Padwick, Penfold, and F. N. Webb. A letter was received from the National Sheep-breeders' Association stating that the Executive Committee did not consider that the subject of sheep scab was a desirable one for discussion at the conference of sheep-breeders to be held at Carlisle. The council decided to express their regret at the decision of the committee and to inform the association that the Southdown delegates had been requested to bring the matter before the conference in accordance with Mr. Allan Cooper's resolution approved by the council at their last meeting, viz., "That as the prevalence of sheep scab in this country is a great hindrance to foreign trade, this council urgently recommends that compulsory dipping be insisted on by the Board of Agriculture."

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt—The rather better demand noticed in our last has been maintained. Barley dull. Wheat slow at barely late rates. Oats—In some cases 3d per qr. less money was taken. Maize rather easier. Flour 3d per sack cheaper.—NIXON, GOWER AND Co.

Mark Lane, Wednesday.—At Mark Lane the attendance was small, and the market for wheat and flour ruled dull and neglected. Maize steady, but very quiet at late rates. Oats held unchanged and quiet. Barley steady, but slow. Beans and peas slow.

Mark Lane, Friday.—An undecided tendency prevailed soon after business commenced at noon on the Corn Exchange, and as the day progressed a general scarcity of orders was felt, although sellers were rather more willing to meet buyers at a shade less here and there, while the attendance was small. New York markets closed, this being Decoration-day in America. There is nothing fresh to report concerning English wheat, which remains entirely nominal for milling purposes, and scarce at local resorts. Whites, 33s to 35s; reds, 32s 6d to 34s delivered. Free on rail in country, good 63lb, reds, 33s to 33s 6d per qr. American reds unchanged to-day, and 3d easier since Friday last, with more on hand. No. 1 Northern Duluth inspection quoted at 31s ex ship and 31s 6d ex granary; No. 1. Northern Manitoba, about 30s 9d. White wheats remain scarce. Australian, 32s 6d ex ship; and Californian, 32s 6d. Flour well maintained for patents on continued scarcity, while bakers' grades of American brands are still in exceptionally small compass, and command a premium. First patents range at 25s 6d to 26s; and second at 23s to 24s. Of bakers' Iron Duke, ordinary quality, held for 21s 6d ex store; and 21s asked for Princess Royal. English unaltered. Grinding barley barely up to last week, with the market now fairly supplied. Odessa 20s ex ship to come up, and 20s 6d ex quay. Danubian in the former position, 20s. Heavy oats remain firm, light being in sufficient supply for requirements and in buyers' favour. Common Libau about 20s 6d to 20s 9d ex quay 38lb; 40lb Libau, etc., bold, 23s 6d to 24s; Riga, 20s 6d 38lb ex ship, 21s ex quay; and black Libau, none offering; fine Konigsberg, 23s to 23s 6d ex quay 40lb. English oats command enhanced rates without effort in the country. Grey winters, 42lb, 24s 6d to 25s. Maize generally unchanged on the week, and not by any means excessive at present. Odessa, 22s 3d to 22s 6d ex ship, to come up, 23s ex quay (Surrey side, 23s 6d). Mixed American remains out of order. Holders of imported beans and peas made no alteration, the latter being firmly held. Egyptian splits, 23s 6d; Mazagans, 22s 9d ex mill, 320lb; and Konigsberg, 35s 6d, 504lb. Of peas, fair to good white Indian, 35s to 36s ex store, 504lb. Canadian white continues exhausted, with nothing coming forward for some time.

COUNTRY.

Ashford, Tuesday.—Trade in wheat was slower, and demand very weak, but quotations were not materially altered, whites making up to 35s, and reds 34s. No change in other descriptions of corn, but oats very firm.

Ashford, Tuesday.—Wheat, small supply; business quiet, but owing to scarcity prices were supported. Grinding barleys unaltered. Oats maintain late quotations. Beans and peas scarce and dear. White wheat, 33s to 35s 6d; brown ditto, 32s to 35s. Malting barley, none; grinding ditto, 22s to 25s; black oats, 20s to 24s; white ditto, 22s to 26s; old beans, 33s to 38s; grey peas, 35s to 37s.

Banbury, Thursday.—Wheat, red, 31s to 33s per qr. Beans, new, 36s to 37s per qr. Oats, black, 24s to 26s per qr. Small show and slow trade to 6d easier.

Birmingham, Thursday.—Quiet market. English wheat a shade easier, realising 36s to 36s 6d per qr. Foreign wheats, 6d to 9d per qr cheaper. Grinding barley, 3d dearer, commanding £1 to £1 6d per qr sharpness. Maize 3d cheaper. Plate making 23s sharpness, and round 22s 6d per qr Liverpool. English white oats 6d higher.

Bristol, Thursday.—Again very little English wheat offering to-day, and made late rates. Red foreign 3d to 6d lower. White unaltered. Grinding barley, turn in sellers' favour. Other feeding stuffs unchanged. English wheat, 31s to 31s 6d; American, 31s 9d to 33s 6d. Grinding barley, 19s 9d to 20s 3d. Oats: Irish black, 21s 3d to 21s 6d. Maize, round, 22s 9d to 23s.

Bristol, Thursday.—A very quiet trade since our last, still very little English wheat offering, it therefore makes late prices. Foreign red, 3d to 6d lower; white unaltered. Grinding barley very firm, with turn in sellers' favour. Maize and oats unaltered. Flour, bakers just for the present are working from hand to mouth, consequently the demand is very limited.—GRACE BROTHERS.

Cambridge, Saturday.—During the week, with forcing weather and a very dull trade, sellers have found prices very difficult to maintain. At this market to-day there was a moderate supply of wheat for the time of year, and, millers being very indifferent buyers, prices gave way a further 6d per quarter from last Saturday's rates. Prices:—Wheat, 31s to 32s; white up to 32s per 504lb. Scarcely any spring corn offering.

Canterbury, Saturday.—Wheat scarcely so firm; English corn generally very scarce. Ruling prices:—White wheat, 33s to 35s; red, 32s to 34s 6d; grinding barley, 22s to 24s; white oats, 24s to 26s; black, 22s to 24s; grey peas, 35s to 36s; tick beans, 38s to 40s; Mazagans, 34s to 35s per quarter.

Carlisle, Saturday.—Very small supply of oats in our market to-day, fair demand at late rates, 24s to 25s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—English grain in small supply. Wheat and oats firmly held, and occasionally 1d per bushel dearer. Beans and barley steady. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 60lb; grinding barley, 3s 6d to 3s 8d per 64lb; beans, 5s 10d to 6s per 80lbs; oats, new, 3s 2d to 3s 4d; old, 3s 4d to 3s 6d per 46lb; Indian corn, new, 12s 6d to 14s 3d; old, 13s to 14s 9d per 240lb.

Colchester, Saturday.—Small supply wheat; slow trade, at 6d per qr reduction from last week. Beans and oats scarce and fully as dear.—FRANCIS AND Co.

Croydon, Wednesday.—White wheat, 33s to 35s; red ditto, 32s to 34s; malting barley, none; grinding, 24s to 26s; oats, 21s to 24s; beans, 33s to 35s; peas, 32s to 34s. Trade for wheat remains unaltered at last week's prices; oats firm; beans and peas remain the same.

Glasgow, Wednesday.—There was the usual attendance at our market to-day. Wheat and flour very quiet, with prices tending in favour of buyers. Round corn 1½d per 280lb cheaper. Home and foreign oats firm. Canadian pease 1½d to 3d per 280lb easier. Grinding beans steady. Barley quiet. Bran and thirds unchanged, with quiet trade. Oatmeal firm.—GIBSON AND CLARK.

Hereford, Wednesday.—Small attendance. Very little English wheat offering; values about 1d to 1½d per bushel under last week, in consequence of the drop in American wheats. Oats firm. Barley no business done. Maize quiet. Quotations: Wheat, white 3s 10d to 4s 1d per bushel, red 3s 10d to 4s; barley, 3s to 4s; oats, 2s 9d to 3s 6d; beans, 4s 3d to 4s 6d; maize, 3s to 3s 3d; vetches, 6s 6d to 7s 6d.

Leeds, Tuesday.—With more genial weather and heavy shipments, the wheat trade wears a quiet aspect, but there is no giving way in prices, consumers being compelled to pay late rates for both English and foreign. Feeding stuffs in poor demand, and about unchanged in value.—DUNNS AND Co.

Leeds, Friday.—With lower prices for wheat from America, Tuesday's rates are barely maintained. English firmly held. Beans and Indian corn the turn easier. No change in flour, oats, peas, or barley, all of which have a dragging sale.

Leicester, Saturday.—Good average attendance, with very small supplies of home-grown wheats. Trade quiet and prices easier, quotations being 31s to 34s 6d per 35 stones. Fine oats very firm.

Lewes, Tuesday.—New white wheat, 33s to 35s; new brown ditto, 33s to 34s; malting barley, 32s to 36s; grinding ditto, 21s to 24s; oats, 22s to 26s; beans, 36s to 40s; peas, 36s to 39s per quarter.

Lincoln, Friday.—The trade in English wheats was very flat, and prices were somewhat easier. Reds, 32s to 33s; whites, 33s to 34s. Foreign wheats dull. Oats, maize, and beans also dull at barely late rates.

Liverpool, Friday.—The market has had a very fair attendance, but the demand for wheat is slow, the market being still under the influence of a possible abandonment of the tax. Prices for all descriptions are generally 1d lower than last Tuesday. Flour is in very quiet demand, and for foreign brands the tendency is on the easy side. Local millers make no change in their quotations. Maize.—Mixed is firm, owing to decreasing stocks, and the turn dearer, but quiet. European experiences a moderate inquiry, and prices are ¼d to 1d lower. Plate, the demand has for the moment caught up to immediate supplies, and a fair business is doing at ¼d advance from Tuesday. Barley—Only small lots of malting are changing hands, and prices favour buyers. Feeding is slow but steady, at unchanged prices. Beans have more inquiry, and prices show no alteration from Tuesday for Saidis, but Odessa is 6d lower. Peas in slow demand, but not pressed for sale, and no further change is made in prices. Oats do not move freely, but all qualities of foreign are steadily held at late rates. English in moderate demand at full prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—The attendance was poor, and consequently a quiet trade at unaltered prices, except that cotton cake was a trifle lower. Quotations:—White wheat, 34s to 36s; red ditto, 34s to 35s; grinding barley, 21s to 23s; oats, 23s to 28s; peas, 36s to 37s; white ditto, 39s to 40s; maize, 24s to 26s; beans, 36s to 40s; English linseed cake, £8 to £8 10s; foreign ditto, £7 10s. to £8; cotton cakes, £4 15s to £5.

Maidstone, Thursday.—There is a very slight disposition for business to-day. What small quantity of wheat to-day realised about the late prices, but the opinion seems to be that the apex has been reached, at least for a while. This applies to other grain generally, and in miscellaneous articles, seeds, etc. No change to note of any importance.

Manchester, Thursday.—Wheat has continued quiet throughout the week, though steady rates of quotation are maintained by salesmen. On the whole, here and there, however, the tendency is on the easy side. Flour continues dull and neglected, prices 6d per sack easier. Oats, peas, beans, and barley quiet, without new feature. Indian corn firm, with hardening tendency; demand quiet.

Newcastle-on-Tyne, Saturday.—A slow demand for wheat here to-day, and when sales took place the prices favoured buyers. Maize firm at last week's prices; oats, barley, peas, and beans unaltered in values, the demand being of a retail character. Flour 6d per 280lb easier.—JOSEPH POLLARD AND Co.

Newport, Wednesday.—The market was dull for all kinds of grain, prices being unchanged. Flour: Fines, 23s 6d per sack.

Northampton, Saturday.—The aspect of our market was in every way similar to last week. Buyers were very cautious, and sellers very independent. Prices for farm produce and flour same as last week. White wheat, 32s to 34s; red ditto, 31s to 33s; grinding barley, 22s to 25s; oats, 20s to 24s; old fine, 27s; beans, 34s to 40s; flour, 22s to 24s; fine 27s.

Norwich, Saturday.—Wheat was in small supply at our market to-day, with a languid trade, at 6d to 1s per qr. less money. Warmer weather has prevailed during the past week, with occasional showers. Wheat, red, 32s to 33s per qr., weight 63lbs per bushel Imperial. Corn Inspector's return for the week ending 26th May, 1902:—Wheat, 2,098, 32s.—J. A. MILLS.

Norwich, Saturday.—The wheat trade showed weakness here to-day. Business could only be done at lower terms, and a reduction of 6d to 1s per quarter upon the fortnight was conceded. There was nothing doing in barley. Averages:—Wheat, 2,098 qr, 32s 1d. The weather has undergone a great change in Norfolk during the last day or two, the temperature having risen. There has also been an ample rainfall, and vegetation has made good progress.

Nottingham, Saturday.—Wheat in rather better supply, and values declined 6d per qr. Grinding barley pppsteady. Oats but few offering, and advanced a further 6d per qr. Beans firm.—ROBERT HUBBLE.

Peterborough, Saturday. — To-day's market was fairly well supplied with wheat for the time of year, for which the trade was slow at 3d to 6d per qr less money. Oats and other feeding stuffs firm and fully as dear.—THOMAS HILL AND SON.

Reading, Saturday.—The attendance on the Exchange to-day was good. The quantity of wheat on offer proved to be rather smaller than usual, and a fair number of sales were effected at figures which varied but little from those of the previous market. Grinding barley only on offer, and oats a dragging trade, at unaltered quotations. Wheat made from 33s to 36s per quarter.

Ripon, Thursday.—Poor show of samples, and a small attendance. Foreign wheat shows a downward tendency. Wheat: English, new, 31s 6d to 32s 6d; ditto, foreign, 31s to 34s 6d; barley, grinding, 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s 6d to 26s 6d per qr; beans, 1s per stone; bran, £5 15s to £6 5s per ton.

Romford, Wednesday.—Wheat trade slow at barely last week's prices. Only a small supply on offer. Red wheat, 32s 6d to 33sc 6d; white wheat, 33s to 34s per qr.

Spalding, Tuesday.—Wheat and other grain in small supply. For wheat there was a slow trade at 32s per qr, which was 6d lower on the week. Oats firm at late rates.

Stamford, Friday.—Very few samples of wheat showing, exchanges being made slightly under last week's prices. Oats, 26s to 27s. Beans about unchanged. No malting barley; foreign made about 25s. Attendance very small.

Stockton, Wednesday.—There was a little English wheat showing, which made 32s to 33s per qr. Foreign wheat trade quiet, and red wheats, which were pressed for sale, were 3d to 6d per qr lower. White wheats were scarce and unaltered in price. Oats and maize firm at unchanged rates.

Sunderland, Saturday.—Grain in short supply. Wheat quiet at late rates. Barley dull. Oats firm. Arrivals coastwise:—Wheat, 1,305 qrs.; oats, 150 qrs.; foreign, nil.—E. F. RICHARDSON.

Wakefield, Friday.—There is a very small business passing in wheats on to-day's market, and foreign is rather in buyers' favour, while English is steady at late rates, owing to scarcity. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—Weather cold and wet. America's weakness is naturally reflected in the European exchanges, the trade ruling decidedly slow, American and Indian wheat favouring buyers. Californian and Australian is, however, no cheaper, and Russian shippers scarcely attempt to meet the market. English, too, keeps steady. Maize, beans, and oats in small demand.—DUNNS AND Co.

Winchester, Saturday.—English wheat short supply, very small demand; 34s 64lb per bushel; foreign, 6d lower. Barley, oats, and maize quiet trade, prices unchanged.—FEAR, COLEBROOK, AND Co., LTD

Wisbech, Saturday.—A small supply of grain. Wheat met a slow trade at some reduction; prices 31s to 32s. Spring corn unchanged.—JAMES FLETCHER.

Wolverhampton, Wednesday.—A fair attendance, with prices unchanged. Quotations: Wheat, new 12s 6d to 13s per 216lb; oats, 16s to 17s; beans, old 16s to 17s 6d, new 15s. to 16s 6d per 196lb; barley, 35s to 40s per 448lb; maize, new 27s to 28s, old 29s to 30s 6d per 480lb.

Worcester, Saturday.—A small attendance, and trade very inactive. English wheat scarce and selling slowly at unchanged rates. Foreign quotations come lower. Barley firm.

York, Saturday.—A fair attendance. Very small show of wheats, which command last week's prices. The supply of oats is very limited, and farmers are asking rather more money. Wheats, 32s to 32s 6d; white oats, 24s 6d to 25s 6d; black oats, 24s. Maize about the same as last week; bran and other feeding stuffs show no alteration.

FOREIGN.

Hamburg, Saturday.—Market quiet, with prices of wheat and rye tending slightly in buyers' favour, while feeding stuffs remain firm. American hard winter wheat No. 2 near at hand is selling at 28s 6d; Northern spring Duluth and Manitoba No. 1 is offering at 28s 3d; No. 2 at 27s 9d; red winter No. 2, August shipment, at 28s 9d; 60ko. Bahia Blanca Russo at 28s 9d per 480lb; Walla Walla or 29s 9d to 30s per 5001b. 9 15-20 South Russian Rye, June shipment, is held at 23s 9d; 9 15-20, August-September shipment, has been sold at 21s 9d; American No. 2 Western is held at 24s 3d to 24s 6d per 480lb. Malting barley quiet. The remnants of Mecklenburg and Prussian still held in the country are offering at 25s 6d to 27s 6d per 448lb. There is a good demand for feeding barley, and 60-61 ko. South Russian May shipment has been sold at 19s; June shipment is held at 18s 9d; August-September, 16s 9d per 400lb. Maize in demand. River Plate May-June shipment is selling at 21s; Odessa and Danubian near at hand at 20s 6d to 21s; mixed American December-March shipments meet some attention at 21s 3d per 480lb c.i.f. Hamburg.—JOHN TATLOCK.

Paris, Wednesday.—Favoured by splendid weather, the weekly native wheat market had attracted the usual contingent of millers and grain merchants, but fewer farmers than ordinarily, as the latter are retained on their farms for the cutting of the artificial grass lands, which promise a good yield. The return of more normal weather did not fail to exercise its influence on the provincial exchanges, where farmers' offers as of late were most restricted, but as on the other hand millers exhibit the utmost reserve; prices were appreciably unchanged, though generally denoting some firmness. On the contrary, sellers were more numerous, and it was easy for millers to find lots of good wheat at last week's rates, with even a slight concession for the average sorts. In short, prices may be quoted unaltered, with a rather quiet tendency, as follows:—Choice red wheat, 37s 10d to 38s 3d; average, 36s 6d to 36s 11d, and white wheat, 38s 3d to 38s 7d per 480lb. Term wheat opened with a more regular trade at fully supported prices, and closed firm at the following rates:—May, 37s 5d. to 37s 10d; June, 38s 3d to 38s 9d; July-August, 37s 5d to 37s 10d, and September-December, 35s 3d to 35s 8d per 480lbs. Flour.—Fleur-de-Paris.—The market opened quiet, but closed firm at 5c. to 10c. advance at the following prices:—May, 26s 10½d to 27s 1½d; May, 27s 1½d to 27s 5d; July-August, 27s 5d to 27s 8d, and September-December, 26s 7½d to 26s 10½d per 280lbs. Consumption Marks Flour.—Transactions are still slow, as dealers and bakers continue to purchase only for their immediate requirements. Quotations are as follows:—Choice Marks, 31f. to 32f. (31s 5d to 32s 5d; First Marks, 30f.50 to 31f. (30s 11d to 31s 5d; Good Marks, 29f.75 to 30f.50 (30s 2d to 30s 11d); Ordinary Marks, 28f.50 to 29f.75 per 100 kilos (28s 11d to 30s 2d per 280lb). Rye.—The return of fine, warm weather will doubtless improve the crop situation, which is not so unfavourable as at first supposed, so that much uneasiness is dispelled, and prices have given way 6d per qr. on the week. There are sellers of good corn at 28s 8d, with buyers at 28s 3d per 480lb. Oats have much improved since the setting in of fine weather. The tendency keeps firm in the provincial exchanges, owing to the scarcity of offers during the late unsettled weather, but with the return of more seasonable conditions, a quieter tone will ensue. Here the quotations remain unchanged. Grey Beauce, 25s 2d to 25s 6d; white, 22s 7d to 22s 4d; red, 22s 11d to 23s 2d; black, from the Central Provinces, 24s 1d. White Libau is quoted 22s 7d to 22s 11d; black, 22s 11d to 23s 2d, and Swedish, 24s 4d to 24s 8d per 320lb. Barley.—The campaign has almost drawn to a close, and trade, in fact, is confined to lots of very trifling importance. Quotations are merely nominal:—Malting, 17f.50 to 17f.75 (25s 4d to 25s 9d); grinding, 17f. to 17f.25 (24s 8d to 25s); and feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lb). Buckwheat.—This article continues supported at late rates, viz., 28s 9d per 480lbs.

CORN STATISTICS.

IMPERIAL AVERAGES.

Statement showing the Quantities sold and average price of British Corn, Imperial Measure, as received from the Inspectors and Officers of Excise in the week ended May 31, 1902, conformably with the Act of the 45th and 46th Victoria, cap. 37.

Wheat	32,728⅔ qrs.	31s.	6d.
Barley	864⅔ qrs.	25s.	1d.
Oats	5,177½ qrs.	22s.	10d.

THE BALTIC.

The London Corn Trade Association have just made up standards of Bahia Blanca wheat, and of Ruso wheat. Both are high-class varieties of Argentine, from the Southern or less tropical provinces.

Wheat cargoes are 6d. lower on the week. Sales have included Californian at 30s., Walla Walla at 29s. 3d., Australian at 29s. 9d., Bahia Blanca at 29s. 6d., No. 1 Northern at 27s. 6d., Northern Manitoba at 28s. 3d., red Kurrachee at 29s., soft red Calcutta at 30s., and No. 1 Bombay at 30s. 9d. per qr.

Barley cargoes are firmer than the ordinary market off stands. Azoff for October shipment is quoted at 17s. 3d., for July shipment at 19s. per qr. There are offers of Californian new crop at 23s. 6d. per qr., August shipment, or 23s. 9d. if cleared before July 31st from port of shipment.

Oats are 3d. lower for all cargoes. Sales include Libau white at 19s., and black at 19s. 3d.; kinl dried Riga at 19s., Petersburg at 18s. 6d., Roumanian at 17s. 9d., black Swedish at 23s., white Konigsberg at 21s., and American at 20s. per qr.

Other cargo sales are:—Roumanian Rye at 23s. 9d., Saida beans at 29s. 6d., and white calcutta peas at 30s. 9d.—all per qr.

The arrivals of grain and seed laden vessels at ports of call for the week were 14 wheat (1 Adelaide, 5 Melbourne, 3 Portland (O.), 1 Seattle, 1 Sydney, 3 Tacoma); total, 14.

The sailings of grain and seed laden vessels from ports of call for the week were 6 wheat (1 Antwerp, 2 Cardiff, 1 Havre, 1 Hull, 1 Silloth), 1 flour (Dublin); total 7.

Since January 1st, 1902, the total arrivals have been 151 wheat, 4 flour, 20 barley and wheat, 3 maize, 8 barley, 2 beans, 2 linseed, 4 canary-seed; total, 194.

Last year, during the same time, the arrivals were 141 wheat, 4 flour, 7 barley and wheat, 14 barley, 3 beans, 4 pease, 1 pease and beans, 2 locust beans, 3 canary-seed, 3 Valonea; total, 182.

WOOL.

London, Saturday. — English—per pk. of 240lb:—Fleeces. S. Dn Hggs., £7 to £8 10s; half-bred hoggs, £6 to £7; ditto wethers, £5 to £6 5s; Kent fleeces, £5 to £6; South Down ewes and wethers, £7 to £8 10s; Leicester ditto, £5 to £5 10s; Colonial—per lb:—Vic., fleece super., 1s 8d to 1s 11d; scoured good, 1s 9d to 1s 10d; scoured average, 1s 8d to 1s 8½d; greasy avr. to fair, 11½d to 1s 0½d; N.S.W., scd. avr., 1s 5½d to 1s 6½d; greasy average, 9d to 10d; S. Aus., greasy avr., 7½d to 8d; N.Z., scoured avr., 1s 6½d to 1s 7½d; grease average, 9½d to 10½d; Cape, Scred. sup., 1s 6d to 1s 7d; fleece average, 7½d to 8½d; greasy average, 6¾d to 7½d; Natal, scoured, 1s 1½d to 1s 2½d; greasy average, 7½d to 8d; crossbreds—Grs—Vic. good to supr., 11½d to 1s 0½d; New Zealand fine, 9½d to 10½d; ditto medium, 6½d to 7d; ditto coarse, 4½d to 5½d.

London, Saturday.—The third series of London sales of Colonial wool, which commenced on the 6th inst., closed to-day. The net total available amounted to 243,000 bales. Of these, 225,000 bales have been sold, 115,000 bales for home consumption, 107,000 bales to the Continent, and 3,000 bales to America, leaving 18,000 bales to be carried forward to next series. The sales opened with a rise of 7½ per cent. on merino wools and of 10 per cent. on crossbreds. The former further improved their position under the influence of very strong and general demand, and during the best portion of the series the advance on March rates for fine wools ranged from 10 to 15 per cent., good Riverina and New England grease, shafty broken and pieces, and all good scoureds showing the improvement most. Inferior and faulty wools fully participated in the rise at first, but became somewhat easier later on. Crossbreds of the finer grades retained the opening advance steadily, but coarse sorts fluctuated to some extent. They gave way a little in the middle of the series, to become, however, stronger again during the last week. The advance on Cape wools was ¼d to ¾d on grease and 1½d on scoured. Taking the market as a whole, the series may be said to have advanced the value of the article by 10 per cent. all round. The sales were largely attended, the competition was general, and the tone very strong throughout.—HELMUTH SCHWARTZE AND CO.

London, Saturday (Colonial Wool Sales).—The third series of Colonial wool auctions was brought to a close to-day by Messrs. Charles Balme and Co., Jacomb, Son, and Co., and Buxton, Ronald, and Co., who jointly offered 7,961 bales, including a good show of merino grease and low crossbreds. The competition right up to the close was most animated, and the sales finish with a strong undertone at the full recent level of values, which is often against the buyers. During the series 231,000 bales have been catalogued out of the net available total of 239,000 bales. The home trade have purchased 115,000, the Continent 107,000, and America only 3,000 bales. About 18,500 bales will be carried forward to the next Capes have appreciated to the extent of 10 to 15 per for best qualities, and 7½ to 10 per cent. for faulty sorts. Fine crossbreds are 10 to 15 per cent. up, and coarse grades, after a slight reaction from the best point touched, close firm and 7½ per cent. dearer. Scoured Capes have appreciated to the extent o f10 to 15 per cent., while those in the grease show an improvement of about 10 per cent.

Canterbury, Saturday.—The market is rather more buoyant, and the sale of a three-years' growth at 6d per lb is reported. There is very little anticipatory trade in respect of the new clip.

HOPS.

Canterbury, Saturday.—A healthy trade has been done during the week, and prices have again advanced, £5 per cwt being paid for a large lot of choice East Kents. The tendency of the market is decidedly upward, but medium descriptions have not risen in proportion. There are fly in the gardens, but the plant is now making growth.

Worcester, Saturday.—Our market continues quiet, though prices are well maintained. The few inquiries we have are generally for bright sound lots, which are now in an exceedingly narrow compass.—PIERCY AND CO.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The mild and very showery weather of the past five days has caused a rapid growth of the wheat and spring corn, and we may expect the colour also to improve. Rye, which is the hardiest of the cereals, has come through the bitter six weeks from Easter to Whitsuntide singularly well; wheat is irregular and backward, but little permanent injury seems to have been done. The barley plant is none to promising, but oats have stood the untoward May uncommonly well. On the other hand, beans have suffered, the winter sown was just coming into blossom in the southern counties when the cold "snap" at Whitsuntide cut the growth back. Early potatoes have also suffered severely.

The average temperature of May was 50 degrees or just three degrees below the mean. This on 31 days amounts to a total deficiency of 93 degrees, and the balance of scientific opinion appears more and more to favour the idea that these excesses or deficiencies of solar heat do accumulate in the soil and affect plant life. The matter, as we have more than once indicated, is deserving of close attention from meteorologists.

The agricultural outlook in France is not at all brilliant and value is very stiffly supported, both for wheat and rye. Hungary expects fair, but not large crops. Roumania has suffered from flooding rains.

American advices give forth an uncertain sound with respect to wheat, but oats are said to be coming on very well, and the maize has been sown under favourable conditions over a large area. The American markets are weak, New York has given way 1s. per quarter for wheat, and there is a pressure of American breadstuffs on the European markets. The extremely moderate visible supply makes this weakness hard to explain, especially in a season when the growing wheat is admittedly behindhand, even in the states where a good yield is otherwise to be hoped for.

A decline of a penny per cental has occurred on the London and Liverpool Term Markets, and 6d. per quarter fall is quoted at many country exchanges. In London there has been less regularity, the price of American red declining 1s. per quarter, while white has not been obtainable at a reduction.

There are now on passage to the United Kingdom 3,876,000 quarters of wheat, against 2,350,000 quarters on January 1st.

NOMP A

	Qrs.
Californian	2,045.000
American	550,000
Argentine	341,000
Russian	55,000
Indian	180,000
Australasian	700,000
Various	5,000
Total	3,876,000

Of the above total only about a million quarters are red wheat, all the rest is white. Of flour there are 302,000 sacks on passage, against 400,000 a year ago. Of barley there are the following quantities on passage:—

	Qrs.
Californian	148,000
Russian	155,000
Roumanian	44,000
Turkish	10,000
Chilian	5,000
Total	362,000
A year ago	280,000

Of oats there are no official returns, but about 75,000 quarters are known to be on passage to the United Kingdom, against an average expectation of about 200,000 quarters. Even light oats are scarce this season.

Other supplies on passage thus compare with a year ago:—

	1902.	1901.
Maize, qrs.	850,000	930,000
Beans, qrs.	20,000	16,000
Linseed, qrs.	195,000	245,000
Rapeseed, qrs.	16,000	10,000
Poppyseed, qrs.	6,000	2,000
Cottonseed, qrs.	42,000	56,000

The maize is about two-thirds round and one-third yellow corn. Flat is unrepresented. The linseed includes 120,000qrs. of India, 65,000qrs. of Argentine, and 10,000qrs. of Russian. America is not a shipper this season. The rapeseed is Indian, and the cottonseed is Egyptian. There are 1,500qrs. of peas on passage from America, and 1,200qrs. of rye, while about 5,000qrs. of millet are coming from Burma, India, La Plata, and Asia Minor.

Average prices on the oilseed market for May thus compare for this and the previous year:—

May.	1902. £ s. d	1901. £ s. d.
Calcutta Linseed, per ton	13 10 6	13 8 9
Linseed oil, per ton	32 5 3	32 7 3
Linseed cake, per ton	7 15 6	7 13 9
Rapeseed oil, per ton	25 15 9	29 4 6
Cottonseed cake, per ton	4 13 6	4 15 3
Egyptian Cottonseed, per ton	7 16 3	6 12 0
Cottonseed oil, per ton	25 8 0	20 3 6

Evidently it is a time for prudent farmers to buy and store cottonseed cake, for it is cheaper than a year ago, despite a rise in both the seed and the oil. Rapeseed oil is cheap. Other articles in this trade appear to be dear.

Sales of bread stuffs last week were larger than requirements, so that stocks are augmented.

	Qrs.
British Wheat	95,000
Foreign Wheat	427,000
Foreign Flour	121,000
Sales: Total	643,000
Wants: Estimated	567,000
Surplus	76,000
Stocks, 24 May	2,517,000
Stocks, 31 May	2,593,000

Imports of other staples last week included 72,450qrs. of barley, 126,130qrs. of oats, 2,810qrs. of beans, 11,700qrs. of peas, and 288,450qrs. of maize, as compared with 120,764qrs. of barley, 149,000qrs. of oats, 3,030qrs. of beans, 13,500qrs. of peas, and 239,000qrs. of maize in the last week of May, 1901.

American usable supplies are cabled as follows for the leading depots east of the Rocky Mountains:—

	31 May, 1902.	31 May, 1901.
Wheat, qrs.	3,900.000	5.100.000
Maize, qrs.	540.000	1,916.000
Oats, qrs.	290,000	1,305.000
Rye, qrs.	122.000	88.000
Barley, qrs.	70,000	133,000

These figures give a general support to holders of American produce in British ports, but the large shipments of last week in the case of the American bread stuffs has completely counteracted the effect.

The average price of wheat in America for the past twelve months seems to have been just £1 per qr. on the farm. As the average price in the United Kingdom has been about 30s. per qr., we get a very useful estimate of how much of the money paid in this country actually goes to the American farmer. Maize in the United States is seldom saleable on the farm for more than 15s. per qr., but the great deficiency in the 1901 yield has caused the average for the last few months to be over a sovereign, and the average for the last twelve months comes out at 19s. 6d. per qr. Rye also averages 19s. 6d. on the American farm; but 92,101,000qrs. of oats only realised £58,731,000, 13,741,000qrs. of barley only £9,941,000, and 1,891,000qrs. of buckwheat only £1,704,000 to the actual growers.

The shipping countries were fairly active last week. The Argentine Republic sent off 39,000qrs. of wheat, 143,000qrs. of maize, and 38,000qrs. of linseed. The United States exports were 181,000 sacks of flour, 460,000qrs. of wheat, and 7,000qrs. of oats. The breadstuffs' exports will be seen to have been considerable, while of feeding-stuffs scarcely anything was shipped. Russia sent off 165,000qrs. of wheat, 55,000qrs. of barley, 94,000qrs. of oats, and 55,000qrs. of maize, while Roumanian exports comprised 100,000qrs. of wheat, 60,000qrs. of barley, and 280,000qrs. of maize. The Roumanian exports include Bulgarian and Roumelian items. India shipped 86,000qrs. of wheat and 60,000qrs. of linseed, while an export of 4,470 tons of cottonseed from Egypt completed the list of principal shipments.

FEEDING STUFFS.

London, Monday.—Linseed cake, very little spot trade, and tendency is easier. Cotton cake—No change in decorticated or London made, but Egyptian is easier. Linseed is down 6d.

ROBERT AND JOHN HEWITSON.

THIS DAY'S MARKETS.

MARK LANE, MONDAY

[FIRST REPORT.]

The scarcity of English wheat has now become very marked, and even chicken-corn makes over thirty shillings per quarter. Foreign wheat today was steady for white sorts, but red were decidedly pressed on sale, and the decline on the week was nearer a shilling than sixpence. English oats were extremely scarce, and a shilling advance on previous quotations must be recorded. Foreign oats, on the other hand, were a little cheaper for the lighter sorts. English peas were rather dearer for the dun and maple kinds, and tares likewise were dearer. Of imported staples dari, through scarcity, advanced a florin, and cottonseed also improved in position, but against these staples, which favour holders, linseed was offered at a slight decline, common millet was 1s. down, and Californian brewery barley was inclined to take the same direction. Russian barley was dull, but not cheaper. Trade was firm, but slow in rye, beans, buckwheat, and malt.

CLOSE OF THE MARKET.

THE MARKET CLOSED IN BUYERS' FAVOUR FOR ALMOST ALL ARTICLES, BUT LONDON BUSINESS, TAKING THE PEACE NEWS AS INDICATING A GENUINE SETTLEMENT, THIS TEMPORARY WEAKNESS WAS ALMOST INEVITABLE. THERE IS NO FEAR OF ANY SERIOUS REACTION IN PRICES.

THE FLOUR TRADE.

MARK LANE, MONDAY.

Flour to-day was a dull market, while most sorts of meal gave way about half-a-crown on the ton. London makes of flour were hard to place at currencies, but the latter cannot be quoted differently from a week ago. Country flour was firm, but inquiry was not so good as in May. American flour was offered at comparatively low prices, say, 25s. 6d. for Mayblossom, 25s. for Golden Lily, 23s. 9d. for Guinea gold, 24s. for Grant's Gold and for Kenilworth. These are Minnesota types. From Kansas come Royal Lily at 23s. 9d., and Success at 24s. 3d. per sack. The finest flour of the Corbeil mills (French) was offered at 23s. 9d. per sack. Hungarian was quoted 33s. 3d. for Victoria Empress, and 33s. 9d. for Six Anchors. Maize germ meal was a little cheaper on the week, but rice meal, despite the large supplies of rice on passage, showed something of a rally. Middlings, bran, pollard, and barley meal were all somewhat cheaper to buy from a week ago.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
May 26 11 a.m.	5 11 ... 6	1 ... 6	4
4 p.m.	5 11 ... 6	0 ... 6	4
May 27 11 a.m.	5 11 ... 6	0 ... 6	4
4 p.m.	5 11 ... 6	0 ... 6	4
May 28 11 a.m.	5 11 ... 6	0 ... 6	4
4 p.m.	5 11 ... 6	0 ... 6	4
May 29 11 a.m.	5 11 ... 6	0 ... 6	3
4 p.m.	5 11 ... 6	0 ... 6	3
May 30 11 a.m.	5 11 ... 6	0 ... 6	3
4 p.m.	5 11 ... 6	0 ... 6	3
May 31 noon	5 11 ... 6	0 ... 6	3
To-day, noon	5 11 ... 6	0 ... 6	3

Maize is firm at 4s. 6d. for June and 4s. 9d. for October delivery. Medium dates would come at 4s. 7d. July and August, and 4s. 8d. September.

Sales of wheat during May were 668,000qr.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the Finance Bill being passed, the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement, however, the Acts of 1876 and 1901 throw the burden on the buyer, a fact which those who operate on these prices without being members of the Term Market would do well to note.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100lb. Maize, when quoted, is fair average quality from the United States.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—The market has been dull during the week, and buyers are holding off in anticipation of a change in the duty. **Grain.**—Maize steady and unchanged. Pease 3d. per boll lower. Beans and barley quiet. Oats continue in demand, and are 3d. per boll dearer. Oatmeal likewise in sellers' favour. **Mill Stuffs.**—Bran and thirds are more plentiful, and 2s. 6d. per ton cheaper.—McKINNON AND McDONALD (Glasgow).

Flour.—There is not much activity at present in the flour trade; buyers are more disposed to hold aloof from purchasing. Values on spot are as follows:—1st spring patents, 25s. 3d. to 26s. 3d.; 2nd spring patents, 24s. 6d. to 25s. 6d.; American winter patents, 24s. 9d. to 25s 3d.; extra fancies, 23s. 3d. to 23s. 9d. Offals.—The demand for bran is declining and further reductions in prices are being accepted. Buyers for delivery over the next three months are endeavouring to purchase at a reduction of 10s. per ton.—GREENHILL BROS.

Only a limited business in wheat has passed to-day, millers being disposed to hold off, although factors would make a slight concession from last week's values. Maize is firm, late prices being fully maintained, and occasionally slightly exceeded.—WOOD AND CO.

Wheat and flour in liberal supply. A slow trade; wheat 6d. and flour 3d. per sack lower. Maize dull, prices unchanged. Barley 3d. per quarter lower. Oats quiet trade, prices unchanged.

Milling Offals.—The demand for middlings has fallen off a bit, and occasionally 2s. 6d. per ton less is taken, but mills continue to keep fairly clear. Bran and pollard are very dull, and have dropped another 2s. 6d. per ton on the week.—JOHN BAWCOMB AND CO.

HOPS.

London, Monday.—The enquiry for good to choice English hops continues, and the few remaining parcels are being cleared from the market for consumption; prices are very firm.

HAY AND STRAW.

Lincoln, Friday.—Hay 80s to 100s, clover 90s to 100s, and straw about 50s per ton, at the stack.

Manchester, Wednesday.—Hay, 7d to 7¾d; clover, 7d to 7¾d; clover (Lincoln), 8d; wheat straw, 6½d; oat straw, 5d to 5½d per stone.

Manchester, Friday.—Hay, 7d to 7¼d; clover, 6¾d to 7¼d; straw, wheat, 6½d; ditto, oat, 5d to 5½d per stone.

Whitechapel, Saturday.—Good supplies, but the demand proved quiet, prices, however, being unaltered. Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 110s; inferior ditto, 80s to 95s; mixture and sainfoin, 95s to 105s; and straw, 30s to 45s per load.

MANURES.

Liverpool, Friday.—Nitrate of soda further declined, and there were sellers in the early part of the week under £9, but to-day £9 to £9 2s 6d is generally asked on the spot; demand only moderate. Other fertilisers rather quiet, and also feeding stuffs; values as annexed:—Nitrate of soda, best quality, i.e., guaranteed 95 per cent, pure, in bags, £9 to £9 2s 6d per ton; East India bone meal, fair to prime, in bags, £4 10s to £4 15s per ton; Kainit, prime, 23 per cent. in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, £5 15s per ton; linseed cake, American thin oblong, prime, in bags, £7 to £7 5s per ton; ditto, English, prime, in bulk, £8 to £8 7s 6d per ton; ditto, foreign round, prime, rich in oil, in bags, £8 per ton; cotton seed cake, N.A. decorticated, prime, in bags, £7 5s to £7 7s 6d per ton; ditto, English decorticated, prime, soft, in bags, £7 5s to £7 10s per ton; ditto, English, undecorticated, prime, in bulk, £4 10s to £4 15s; ditto, crushed, 20 to 25 per cent. oil, prime, in bags, £7 5s per ton; maize germ meal, prime, in bags, £5 17s 6d per ton; corn oil cake, 10 to 13 per cent. oil, prime, in bags, £6 5s per ton; rice meal, Rangoon, as imported, in bags, £5 per ton; Indian meal, coarse to fine grinding, prime, in bulk, 13s to 13s 6d per 240lb; linseed, fine bold feeding, in bags, £3 1s 3d to £3s 3s per qr (416lb); D.N.S. brand superphosphate of lime, guaranteed, 25 to 27 sol, in bags, £2 5s to £2 7s per ton at depot; ditto, ditto, 30 to 31 sol, in bags, £2 10s to £2 12s per ton at depot; ditto, ditto, 35 to 36 sol, in bags, £3 to £3 2s per ton at depot; basic slag, prime quality, guaranteed 30 to 35 per cent. phos, in bags, nominal; ditto, ditto, guaranteed 35 to 40 per cent. phos, in bags, nominal; ditto, finest quality, guaranteed 38 to 45 per cent. phos, in bags, nominal.—H. JONES LANGAR AND CO.

CATTLE.

Mtropolitan Market, Islington.

Monday, June 2nd, 1902.

	British.	Total. June 3rd, 1901.
Beasts	1,090	1,090 — 1,090
Sheep and lambs	9,590	9,590 — 8,480
Calves	10	10 — 10
Pigs	20	20 — —
Milch cows	50	50 — 30

Quotations per 8lb. (sinking the offal).

ENGLISH.	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	3 6	4 8	5 4
Sheep	3 10	5 2	6 0
Lambs	5 2	5 10	6 6

Milch cows, per head, £16 to £22 10s.

British arrivals include as follows:—Scotland, 8; Eastern Counties, 639; Midland, Home, and West Counties, 261; Devon, 20; Ireland, 162.

We note to-day a rather larger supply of fat beasts, but fewer fat sheep, cows, and bulls, both these latter meeting with a firm trade at an advance of 2d per 8lb. an early clearance being made. Fat beasts, of which the supply consisted principally of Norfolks, were rather slower of sale, but fully maintained last week's currencies. The Irish arrivals included 107 stores, which were quoted at from £12 to £16 per head.

The following are top quotations, per 8lb. (sinking the offal):—

	To-day.	Monday, June 3, 1901.
Scotch	5d 3d to 5s	4d .. 4s 6d to 4s 7d
Devons	5s 2d to 5s	4d .. 4s 5d to 4s 6d
Norfolks	5s 3d to 5s	4d .. 4s 4d to 4s 6d
Runts	5s 2d to 5s	4d .. — —
Lincolns	5s 0d to 5s	3d .. 4s 2d to 4s 3d
Irish	5s 2d to 5s	3d .. — —
Fat cows	4s 6d to 4s	8d .. 3s 8d to 3s 10d

The supply in the sheep market showed an increase of 1,100, and consisted chiefly of Downs and half-breds, the supply also including 420 Scotch, 180 Yorkshires, and 3,030 from the Eastern Counties. Wether sheep sold slowly but steadily at last week's advance; but, ewes, nothwithstanding the short supply, favoured the buyer. Choice small lambs were in good request, but were bought on easier terms, rates for heavy sorts very low and irregular. Undermentioned quotations are at per 8lbs. (sinking the offal), and are for the best of each class penned.

	To-day.	Monday, June 3, 1901.
7½ to 8 stone Downs	6s 0d. to 6s	2d .. 5s 4d to 5s 6d
9 stone Downs	5s 8d to 5s	10d .. 5s 2d to 5s 4d
10 stone halfbreds	5s 4d to 5s	6d .. 4s 10d to 5s 0d
10 stone Yorkshires	5s 0d to 5s	2d .. 4s 8d to 4s 10d
12 stone Lincolns	5s 0d to 5s	2d .. 4s 6d to 4s 8d
10 stone Down ewes	4s 0d to 4s	2d .. 4s 8d to 4s 10d
11 st halfbred ditto	3s 8d to 3s	10d .. 4s 6d to 4s 8d
5 stone Down lambs	6s 4d to 6s	6d .. 6s 6d to 6s 8d
6 stone halfbred do	5s 8d to 5s	10d .. 5s 10d to 6s 0d

Calf and pig quotations not worth noting.

London (Central), Monday.—Moderate supplies; fair trade. Beef carcases, 4s 4d to 4s 6d; hind-quarters, 4s 8d to 5s; roastings, 5s 8d to 6s. Sheep—Ewe, 3s 6d to 3s 10d; wether, 4s 8d to 5s; hind-quarters, ewe, 4s 6d to 4s 10d; wether, 5s 8d to 6s. Pigs, large, 3s to 3s 8d; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 824; sheep and lambs, 743; pigs, 424; horses, 4. Beef, 8s. 6d. to 9s. 6d.; mutton, 8s. 2d. to 9s. 11d.; lamb, 10d.; pork, 6s. 6d. to 7s. 6d. Fat cattle, good demand; stores fair. Fat sheep, good demand; stores fair. Fat and store pig, good demand. Milch cows, prices £15 to £23.

FOREIGN CATTLE.

Deptford, Monday.—Beasts, 1,636. To-day's supply, compared with Monday last, showed an increase of 1,487, and consisted of 1,267 from the United States and 369 from Canada, trade for which was of a slower, but somewhat steadier, nature, at a slight advance on Saturday's quotations: The best States beasts on offer, to dress about 720lb, made from 4s. 11d. to 5s. per 8lb (offal given in); Canadians were quoted at from 4s. 8d. to 4s. 10d. No sheep in the market. On Saturday the supply consisted of 808 States beasts, and 1,435 from Canada, trade for which was dull and heavy. The best of the former were quoted at 4s 11d per 8lb, and the latter at 4s 9d. Sheep numbered 800 from the States, and were quoted at 4s 10d per 8lb, with a slow trade.

Liverpool, Monday.—Demand good for cattle, and prices unchanged. Good grass cattle easily made top quotation. Sheep met good trade at prices in sellers' favour; only really fat lambs made late rates. Beef 6d to 8d; mutton, 6½d to 9d; lambs, 8½d to 9½d per lb; dairy cows, £14 10s to £24 each. At market: 529 cattle and 9258 sheep.

THE BALTIC, 1 p.m.

STATE OF TRADE.

There is not much doing to-day, and wheat prices are sometimes 3d. lower from Saturday. Maize is steady. Barley is not in much request. Oats, beans, and millet are the turn in buyers' favour. Cottonseed keeps up in price for June shipment.

BUSINESS DONE.

WHEAT.—No. 1 Manitoba, 27s 6d, prompt shipment; No. 2 Manitoba, 27s, prompt shipment; No. 1 Northern spring, 28s, prompt shipment; No. 1 Californian, 30s 3d, on passage; Australian (Victorian), 30s 3d, on passage; Argentine, 29s 6d, on passage.

MAIZE.—Argentine, 21s, June shipment; Turkish, 21s 9d, June shipment; Caucasian, 22s, June shipment; Roumanian, 21s, on passage.

BARLEY.—Odessa, 19s 3d, on passage.

OATS.—Roumanian, 15s 3d, October shipment; Konigsberg, 21s, June shipment; Canadian, 20s 3d, on passage.

LINSEED.—Argentine, 51s 9d, on passage.

MILLET.—Roumanian, 18s 9d, prompt shipment; Smyrna, 22s, prompt shipment.

PROVISIONS.

London, Monday.—Bacon: The arrivals from Ireland last week were 2,052 bales of bacon, and from foreign ports 9,483 bales of bacon. The bacon market was rather steadier last week, and Danish showed from 1s to 3s improvement in prices from the rates current the previous week. The market finally closed steady with Irish, 56s to 62s up to 69s; Danish, 54s to 61s up to 65s; Canadian, 55s to 56s up to 60s. Butter: The butter market was quiet, with Danish, 104s to 106s; Irish, 90s to 100s; French, 90s to 98s; Russian, 88s to 96s. Lard: The lard market was steady: Irish, 56s to 64s; Danish, 57s to 58s; American, 50s to 53s.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

On the chief market day of the week (Monday) trade at Islington was of a rather slower nature, owing to the higher rates demanded, and eventually obtained. The advance in value must be written at fully 2d. per 8lb., in many cases 4d., this remark applying to both prime and second quality, consignments of which were rather smaller. On Thursday but few sales were recorded, rates ruling in favour of the buyer. Fat butchering cows and bulls also met with a firmer trade, both as regards tone and value. At the foreign cattle market there was a much larger supply, with a marked downward tendency in value, markets being held on Monday, Wednesday, and Saturday, the latter being the largest, especially with regard to consignments from Canada. The total number of beasts offered for sale on both markets was 4,385, as against 3,322 during the previous week. The supply consisted of 1,035 British (decrease, 105) and 3,350 foreign (increase, 1,168). These latter comprised 1,719 from the United States and 1,631 from Canada. The following were the top rates obtained per 8lb. sinking the offal:—20-stone polled Aberdeens, 5s. 4d.; 90-stone polled Norfolks, 5s. 2d.; 100-stone Shorthorn ditto, 5s. to 5s. 2d.; 100-stone Lincolns, 4s. 10d. to 5s.; 90-stone Dublins, 5s.; 80-stone Devons, 5s. 2d.; 90-stone fat cows, 4s. 6d.; 100-stone fat bulls, 4s. to 4s. 2d. The sheep trade was confined to the Islington market, and was of a firm, steady nature, even at an advance of 2d. per 8lbs., an early clearance of best quality being made. Best Down lambs met with a ready sale on Monday, but trade for this article on Thursday proved dull and heavy, with a downward tendency in value. The total number penned was 11,320 (previous week, 9,960). Best pens made, per 8lb. as follows, sinking the offal:—7½ to 8-stone Southdowns, 6s. 2d.; 9-stone Downs, 5s. 10d.; 10-stone ditto, 5s. 8d.; 10-stone half-breds, 5s. 6d.; 10-stone Yorkshires, 5s.; 12-stone Lincolns, 5s. 2d.; 10-stone Down ewes in the wool, 4s. 10d.; 11-stone half-bred ditto, 4s. 6d. to 4s. 8d.; 4½ to 5-stone Down lambs, 6s. 8d. to 6s. 10d. on Monday, 6s. 4d. on Thursday. The calf trade, with a supply of 105, was decidedly slower, even at a decline of 2d. per 8lb.; the best were quoted at from 5s. 4d. to 5s. 6d.

Trade in the West.

So far the change in the weather has not brought about a corresponding improvement in values, but hardly sufficient time for this has as yet elapsed. We are looking forward hopefully to seeing better prices both for dairy beasts and barreners, in both of which there has undoubtedly been a slight reaction, whilst the wintry weather of the past fortnight prevailed, and which put a complete check on the growth of all kinds of vegetation, the frost, almost nightly, being attended with serious consequences to the young grasses. Only the very best grades of dairy beasts at present touch the prices which were general a fortnight or three weeks back, £20 being an outside value for a really good beefer (though £23 was reached in one instance at Dorchester since our last report), whilst three weeks or a month back £21 and £22 was paid for animals of a like stamp, and prices for the more ordinary runs now range from about £12 to £15 or £16, which is a much lower rate than was the case a short time since. The same may be said of barreners. Just now from £20 to £30 is the best price for useful bullocks against £32 to £38 in March and the early part of April. Fat bullocks met a fairly firm demand, though many consider the trade scarcely as strong as it was, except in the case of beefers of very choice weights and well-finished steers, which still make 11s. to 12s. per score, though a more average run for beefers and fat cows during the past week is from 10s. 6d. to 11s., and 9s. 6d. to 10s. 6d. for contract bullocks. Calves sell well; in fact, prices are as strong now as at any period of the season:—Best calves, 8½d. to 9d. per lb.; seconds, 7½d. to 8d. and the ordinary runs, 6d. to 7d. Fat sheep, though in fair demand, scarcely market as well as could be wished. Plenty of ewes of a poor stamp only make 6½d. per lb., and in some cases 7d., and wethers about 7½d., except for very well finished animals of nice weights and quality, which make 8d. Lamb has, with the advent of more genial weather, found a little more sale, though values have scarcely improved to any appreciable extent, except in special cases. In these, 10d. to 11d. is paid, and occasionally, for very well-finished Downs and cross-breds, another ½d., but the great bulk of the lamb now coming out sells from 8½d. to 9½d. Store sheep are keeping fairly firm, and for these particular classes mostly in demand a fairly good price is made, good flock ewes being very dear, as are forward condition hoggets and tegs; but some classes of lambs, from lack of demand, make a very unremunerative price. Pigs sell well, especially good-class porkers, and baconers of medium weights, which now bring 10s. to 11s. per score. Useful stores also market well.

Trade in Scotland.

The number of fat cattle on offer this week has been under an average, but the general quality good. A very active demand has been experienced throughout, and much the highest quotations of the season realised. Fat cows have also made exceptionally high prices. There was a fair supply of fat sheep, and these have met a trade nearly equal to the previous week, but in some cases 1s. a head less money had to be taken. Ewes were also the turn cheaper. Fat lambs were shown in large numbers. Owing to the continued cold, barren weather many of those on offer are very short of quality, the best selling fairly well at from 34s. to 39s., but inferior lambs making disappointing prices, some down as low as 22s. There was a very large supply of calves and a fair supply of pigs. The former met a worse trade at less money, while pigs just made about previous rates. There was a smaller supply of store sheep. Anything of a good class got easily sold at fully previous rates, but no improvement can be quoted on secondary descriptions, although a good clearance has been effected. Store cattle a small supply, owing to the high prices asked. Trade has been quiet throughout, and a portion of the secondary descriptions left over. Milch cows in much smaller numbers, and about £1 a head dearer. Quotations: Top price of cattle per live cwt., from 44s. to 47s.; current, from 41s. to 43s.; mutton, to 8½d. per lb.

Trade in Ireland.

Trade opened rather slow on Thursday morning in Dublin Market, the extreme rates which have been prevailing of late frightening off exporters. As the supply of cattle was shorter than the previous market, and really choice beasts were scarce, there was no change of price to quote in best-class beef, but for unfinished and half-meated cattle there was a very sluggish inquiry, and a large number were left over unsold. Good grass beef is beginning to come in freely, and those who bought in cattle in October and November last are realising a nice profit, in many cases as much as from £10 to £12 a head. Best ox and heifer beef made from 64s. to 66s. per cwt., and for extra choice up to 70s.; good second quality, from 56s. to 62s.; inferior, from 47s. 6d. to 52s. 6d. There was in immense market of sheep and lambs —10,423, or close on 3,000 over the previous week. With such a glut it was no wonder that a large number of inferior sheep and lambs had to be held over; but good sheep continued to sell very well, but ordinary classes were done fully 2s. per head all round. Choice lambs were scarce, and met with a fair inquiry for local trade, but thin and small lambs were practically unsaleable. Prime wether mutton was worth from 7½d. to 7⅝d. per lb.; ewe, 6½d. to 7d.; and rough sheep from 5½d. to 6d. per lb. Large heavy hoggets made from 41s. to 54s. each, and small to medium 28s. to 38s. Choice lambs sold at from 38s. up to 40s., but other qualities could be got from 15s. up. Coarse, thin sheep might be written down 3s. to 4s. on the week. Prime veal scarce, and met with fair inquiry at late rates, viz., 8d. to 9d. per lb.; coarse calves, from 4½d. per lb. Store cattle still quiet, as there will be no brisk buying till we have regular, settled, growing weather. Rather a short supply of milch cattle, and very few of the right sort, which buyers were on the look-out for. Prime, heavy springers made from £18 up to £23 per head. Inferior cows hard to part with at from £8 upwards.

The pig market was largely supplied, and with shippers in a very inactive mood prices receded fully 3s. per cwt. on the ordinary class of pigs and nice light weight pigs sold at from 47s. to 50s. per cwt., coarse from 34s. up.

LONDON.

London Central, Wednesday.—Supplies were fair, but met a dull demand, business again being slow. Beef arrivals included a few tons Scotch, 750 Liverpool sides, 1,600 hind-quarters and 700 fore-quarters American killed. Quotations:—Beef, English, 4s 4d to 4s 6d; American, Deptford killed, 4s 2d to 4s 4d; Liverpool, 4s 2d to 4s 4d; American refrigerated hind-quarters, 3s 8d to 4s 2d; fore-quarters, 2s 8d to 3s. Mutton—Scotch, 5s to 5s 2d; English wethers, 4s 8d to 5s; ewes, 3s 6d to 3s 10d. English lamb, 5s to 5s 6d. Veal—English and Dutch, 3s 8d to 4s 8d. Pork—English, 4s to 4s 4d; and Dutch, 3s 10d to 4s 2d per 8lb.

Islington, Thursday.—There was only a small number of beasts on offer this morning, mainly consisting of fat bulls and rough cattle, for which a rather quiet demand prevailed, prices, however, being about unchanged. Fat bulls, 3s 6d to 3s 10d. Sheep, in fair supply, met with quiet support at generally late prices: 7½ to 8-stone Down wethers (clipped), 5s 6d to 5s 8d; 9-stone ditto, 5s 4d; 10-stone half-breds, 5s 2d; 10-stone Down ewes (unclipped), 4s 6d to 4s 8d; 11-stone half breds ditto, 4s 2d to 4s 4d. Lamb trade quiet: 4½ to 5-stone Downs, 6s 6d to 6s 8d; 9-stone ditto, 6s to 6s 4d. Calves slow, and prices weak, the best on offer making 5s 2d per 8lb, to sink the offal. No pigs were brought forward. Total supplies—65 beasts, 2,830 sheep, 95 calves, and 5 cows.

London (Central), Friday.—Supplies were of good extent, and met a better demand at generally firm prices. Arrivals of beef comprised a fair amount of English, moderate of Deptford-killed American, 100 tons Scotch, 350 Liverpool sides, 3,600 hindquarters and 2,200 forequarters American. Beef, Scotch short sides, 5s; long, 4s 8d to 4s 10d; English, 4s 4d to 4s 6d; American, Deptford-killed, 4s 2d to 4s 4d; Liverpool, 4s 2d to 4s 4d; American refrigerated hindquarters, 4s to 4s 2d; forequarters, 2s 9d to 2s 11d. Mutton:—Scotch, 5s to 5s 4d; English wethers, 4s 8d to 5s; ewes, 3s 6d to 3s 8d; Canterbury, 2s 9d to 2s 11d; Wellington, 2s 8d to 2s 10d; Sydney and River Plate, 2s 4d to 2s 6d. English lamb, 4s 8d to 5s 4d. Veal:—English and Dutch, 2s 8d to 4s 8d. Pork:—English, 4s to 4s 2d; and Dutch, 3s 10d to 4s per 8lb.

COUNTRY.

Ashford, Tuesday.—Pork was 1s per score cheaper. Mutton, in the wool, was about 2d per 8lb dearer, and some shorn sheep made almost as much as the unshorn, owing to the low value of the fleece. Beef made 12s to 13s per score.

Basingstoke, Wednesday. — At Raynbord and Sons' sale yard there was a large attendance of buyers to meet a supply of 41 fat beasts, 65 calves, 736 fat sheep and lambs, 307 pigs, and 82 head of dairy and store cattle, for which the following prices were realised:—Prime shorthorn steers, up to £22 15s; heifers, up to £19 15s; and cows, £18. Devon steers made £18 15s; heifers, £19 10s; polled steers, £20 to £23. Prime fat Down wethers and young ewes made from 49s to 58s in the wool, and shorn up to 54s 6d; old Down ewes, 32s to 38s; Dorsets, 37s to 38s; choice three months' old sucking lambs, Downs, 28s to 42s; Southdowns, up to 30s 6d; Dorsets, 28s 6d; Exmoors, 24s to 25s, etc. Fat calves, 75s to 105s; small, 15s to 55s. Fat porkers, 40s to 59s; small, 29s to 38s; store pigs, 14s to 28s. Dairy cows, £8 to £23 15s. A clearance made of the supply of fat beasts, and late rates realised, but with less briskness in the biddings. An excellent show of fat sheep and fat lambs, both as regards numbers and quality, met a brisk inquiry and a good clearance. Milch cows were shown in large numbers, and met a good trade, a clearance being made. Store cattle met with more inquiry, and were cleared at satisfactory prices. Fat calves meet a ready sale at late high prices. Fat pigs of all descriptions are wanted, and meet a good trade. Store pigs made exceptionally high prices, and were easily cleared. Ruling values—Best quality fat beasts, 7¾d to 8¼d; 2nd ditto, 7d to 7½d; bulls, cows, and inferior, 6d to 6¼d; best quality fat sheep, 8d to 8½d; 2nd ditto, 7d to 7¾d; choice fat sucking lambs, 9d to 10d per lb; fat calves, 7d to 9½d per lb; fat porkers, up to 11s per score.

Bristol, Thursday.—Beef—Short supply to-day. Trade firm. Best qualities, 66s to 70s per cwt; secondary animals, 63s. Fair supply of mutton, steady business, best light wethers making 8d per lb; heavy wethers, 7½d; ewes, 6½d. Moderate supply of pigs, baconers making 10s per score; porkers, 10s 6d to 11s. Trade slow for store cattle.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	10 0
Under 10 sc.	Not exceeding 2½ in. ...	9 6
Under 11 sc. 10 lb. ...	Not exceeding 2¾ in....	9 0
Under 12 sc.	Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ltd.

Canterbury, Saturday.—The rain has put a little more life into the teg trade, but prices remain about the same. Ewes and lambs, 34s to 37s; yearling beasts are quoted at from £7 to £10 per head.

Carlisle, Saturday.—A large number of Irish store cattle were shown considering the extraordinary cold spell of weather which has set in, about 500 being offered. The attendance, however, was very small, and trade was dull. Small heifers realised £6 10s to £9; best specimens, £12 10s to £16 10s.

Cambridge, Monday.—Beasts, 292; beef, 8s to 9s 3d. Sheep, 851; mutton, 4s 4d to 5s 8d. Pigs, 445; pork, 6s to 7s 3d. Horses, 13. Only a few lots of store beasts shown. Fat beasts a fair show, and trade brisk. Fat sheep—A good number shown, and trade better. Stores—Some fair lots to hand, and nearly all cleared. Fat pigs—A better trade all round. Stores—A better trade than last week. Hay and straw—Short supplies.—J. WINSHIP.

Dorchester, Wednesday.—Business, after the holiday interregnum, has once again settled down into the ordinary grooves, and stocks having generally become reduced to a narrow compass, considerable scarcity was evinced on the part of buyers yesterday both at Messrs. Ensor's and also at Mr. Sampson's sales in replenishing their depleted stores, not only of fat stock, but also of dairy produce. As a consequence, sales to-day were characterised by a good deal of firmness at extreme values, this being especially the case with beef, veal, and the choicer grades of lamb, which sold very freely all round. A general range for fat bullocks may be given as from £17 10s to £22 5s (or from 11s to 11s 6d per score), cows selling at about 10s to 10s 6d. Best calves made £4 10s up to £6 5s each (or 8d to 8½d per lb); ordinary runs, 60s to 82s each (or 7d to 7½d). Fat sheep still meet a quiet sale at from 6½d to 7d for ewes, and 7½d for best wethers. Choice, well-finished cross-bred and Down lamb, 10d to 10½d; seconds, 8d to 9d.

Dublin, Thursday.—Marketed—1,120 beasts, 10,423 sheep, etc. Trade strong, for good cattle, 38s and 40s live paid to weigh; middling irregular. Sheep and lambs numerous, and 2s to 4s cheaper. Pigs 2s to 3s down. Beef, 48s to 70s; mutton, 6d to 7½d.

Dublin. Thursday.—Numbers in market—Beasts 1,129, decrease 36; sheep 10,423, increase 2,006; calves 55, increase 5. A fair market of grass beef in favour, of which stall-feds were rather neglected. Choice cattle in good demand at late rates; interior sorts and fat cows more difficult to negotiate. Sheep and lambs met a much quieter trade, with prices more in favour of buyers. Cattle—Live weight: Best, 37s to 41s per cwt; other sorts, 30s to 36s per cwt. Mutton—Dead weight, 6¾d to 8¼d per lb. GANLY, SONS, AND CO.

Hereford, Wednesday.—Beef trade scarcely so firm, but prices still dear. A three-year-old bullock sold for £30 5s; several made £27 apiece. Two bullocks purchased last week turned out to have cost 8¼d and 8⅔d per lb respectively. Yesterday fat bullocks made 6¾d to 7½d; some up to nearly 8d; secondary sorts, 6d to 7d; mutton, wether, 7½d to 8d; ewes, 6½d to 7d; lambs easier, 8d to 10d; veal also slightly cheaper, 7d to 8d; pork, for which there was a good demand, 5d to 6d.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report a good supply of fat cattle of excellent quality. The numbers required for distant purchasers were con-

siderable, and, combined with a strong local demand, caused a sharp trade at higher prices for all the well-finished animals. Fat lambs were in fair request. Fat sheep were penned in good numbers, and sold well at advanced prices. The more genial weather caused a considerable improvement in the demand for ewes and lambs. Weaning calves were not so numerous, and sold dear. Fat swine sold freely, prices being slightly easier for all descriptions. Well-bred stores maintained recent values. The number of grazing cattle was short, but the prices advanced from 10s to £1 per head on previous weeks. Cows were in request, and realised more money. Cattle, 813; calves, 38; sheep, 2,432; swine, 1,491; horses, 81.

Leicester, Wednesday.—The deliveries of Norfolk and Lincolnshire fed bullocks were well up to the average. Trade ruled rather dragging, holders demanding 10s to 20s advance in prices. Choice bullocks, 7¾d to 8d; secondary, 7¼d to 7½d; cows, 6½d to 7d; heifers, 7¼d to 8d per lb. Sheep were in good supply, and sold freely at 8d to 8½d for choice; large sheep, 7¼d to 7¾d; ewes, 6½d to 6¾d; lambs, 9d to 10d; calves, 8d to 8½d per lb.

Newport, Wednesday.—A good attendance and large supply of mutton, beef being scarce. Business brisk all round. Best beef, 7½d to 7¾d; seconds, 7d; cows, 6½d; best wether mutton, 8d; lambs, 9½d to 10d; ewes, 7d; veal, 8d.

Norwich, Saturday.—Supply of store beasts small. Trade showed little improvement, and no change was noted in prices. Fat beasts dull at 8s 6d to 9s per 14lb. Sheep were offered to a fair extent. Trade was rather more active. Keeping hoggets, 32s to 44s per head; and lambs, 14s to 24s. Fat sheep were in steady demand at 8s 6d to 9s and 9s 6d per 14lb.

Romford, Wednesday.—Large supply of fat beasts; trade a little better. Best animals, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. Calves in average supply; trade about the same, at 5s 4d to 5s 6d per stone. Sheep in average supply; trade dear. Best sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. Lambs in large supply; trade slow, at 6s to 6s 4d per stone. A very slow demand for the few store beasts offered. Pigs in small supply; slow demand.

Salford, Tuesday.—The supply of cattle was smaller than last Tuesday, and trade ruled firm and dear. There was a large increase in the number of sheep and lambs penned. Trade for sheep was worse, and buyers obtained a concession from the prices of last market day. Lambs met with a good demand, and better prices were obtained. About the same number of calves on offer at unchanged prices. Cattle, 5d to 8d; sheep, 6½d to 8¾d; lambs, 8½d to 10d; calves, 5d to 8d per lb. At market: Cattle, 1,326; sheep and lambs, 13,564; calves, 217.

Sheffield, Tuesday.—The show of milch beasts was moderate. Buyers were scarce, and only a small number of beasts changed hands. Best lots made £18 to £21, and secondary sorts £15 to £17 each. A few young stirks made £9 to £11 10s.

Spalding, Tuesday.—A fair number of fat beasts. Late rates well maintained; best quality, 8s 6d to 9s per stone. For store beasts there was an improved demand. Sheep trade brisk; mutton, 8d to 9d per lb; lambs, to 35s each.

Stockton, Wednesday.—There were on offer 143 cattle, 10 calves, 384 sheep, 107 lambs, and 252 pigs. A small show of best cattle, with a firm trade at 9s per stone, and in a few cases 3d more was asked and obtained: rougher kinds, 6s 6d to 7s 6d; calves, 5d to 8d; young sheep, 9d; wools, 9½d; ewes, 7d; tups, 6d per lb; lambs, 25s to 35s.

Thame, Tuesday.—There was a large entry of all kinds of stock. Trade was not quite so brisk as former weeks, but for good quality mutton prices ruled firm. Beef continues in great demand, with a ready clearance at late prices. At Messrs. Bond and Burrows' sale a very large company was present throughout to meet a supply of 60 fat beasts, 450 fat and store sheep and lambs, 51 fat and weaning calves, 260 fat and store pigs, and several horses. Fat bullocks made from £22 to £26 2s 6d: fat heifers, from £21 to £25 10s; fat ewes, 45s to 55s; fat wethers, 50s to 58s 6d; fat lambs, 30s to 45s; couples, up to 60s; fat calves, £3 to £4 18s; weaning cow calves, 20s to 60s; bull calves, 14s to 55s; bacon hogs, 9s 6d per score. Stores in demand.

Wakefield, Wednesday.—Fair supply and attendance, and beef trade a little slower. Best quality beef made 7¼d to 7½d per lb, and secondary sorts 6¾d to 7d per lb. Choice young sheep made 7¾d to 8¼d per lb, and secondary sorts 6¾d to 7¾d per lb. Numbers at market—Beasts, 1,569; sheep, 4,325.

Wolverhampton, Wednesday.—Beasts a small supply: fair demand for best; sheep and lambs good supply; moderate trade; calves small supply; moderate sale. Beef, 6½d to 8¼d per lb; mutton, 6½d to 8¾d per lb; lamb, 9d to 10d per lb; veal, 6½d to 8d per lb.

Worcester, Saturday.—Good attendance, and trade fairly brisk. Best quality beef scarce, and prices very firm. Large supply of sheep and lambs. Mutton steady; lambs easier.

FOREIGN.

Deptford, Wednesday.—Beast entries to-day totalled 788 head, which is a decrease of 178 as against last Wednesday's figures, and comprised 562 United States and 196 Canadian. Trade ruled dull and easier at 4s 8d to 4s 10d and 4s 6d to 4s 8d per 8lb, sinking the offal, respectively.

Yorkhill, Monday.—The usual weekly sale of Canadian cattle was held to-day, when there were in the lairages 237 cattle landed by the Marina (s.), from Montreal. The values received showed a slight increase. Small, neat, well-fed beasts secured the best inquiry, and sold very dear. Bulls met a dear trade. The dead-weight quotations may be given as follows:—Bullocks, best quality, medium weight, to 70s per cwt; secondary and heavier, 63s to 67s; bulls, best class, handy sorts, 58s to 60s, and down to 56s per cwt.

Yorkhill, Tuesday.—A sale of American cattle was held to-day, at which 127 animals, landed by the Livonian, from Montreal, were offered. They were above the average as regards quality, and were all in good condition. Small, neat, well-fed bullocks secured the best inquiry, and sold dear. The number of bulls on offer were not sufficient for the requirements of the trade, and in consequence they realised very high prices. The dead weight quotations may be given as follows:—Best bullocks, medium weights, 67s per cwt, and for really choice up to 70s; secondary and heavier, down to 65s; best bulls, 58s to 60s; secondary and heavier, down to 56s.

POULTRY AND GAME.

Smithfield, Saturday.—Smaller supplies experienced good support at firm prices. Quotations:—Fowls: Yorkshire, 2s 9d to 3s 6d; Essex, 3s to 3s 3d; Boston, 2s 6d to 3s 3d; Surrey, 3s 9d to 4s 9d; Sussex, 3s 3d to 4s; Welsh, 2s 9d to 3s 3d; Irish, 2s 6d to 3s; turkeys, cocks, 6s to 8s; hens, 3s 6d to 4s; goslings, 3s 3d to 3s 9d; Aylesbury ducklings, 3s 6d to 4s 6d; country ditto, 3s to 3s 9d; pigeons, 7d to 11d; wild rabbits, 6d to 8d; tame, 9d to 1s each; Australian, 8s to 11s per dozen. Russian game: Partridges, 1s to 1s 2d; ptarmigan, 11d to 1s; black game, 1s to 1s 3d each.

EGGS.

Tuesday.—Bedale: 14 for 1s. Gainsborough: 16 for 1s. Settle: 16 or 17 for 1s. Spalding: 15 or 16 for 1s.

Wednesday.—Barnsley: 13 and 14 for 1s. Colne: 1s 4d per score. Keighley: 13 or 14 for 1s. Kirbymoorside: 17 or 18 for 1s. Knaresborough: 13 or 14 for 1s. Louth: 18 for 1s. Market Weighton: 18 for 1s. Masham: 16 and 17 for 1s. Northallerton: 14 to 15 for 1s. Stockton 13 or 14 for 1s. Hereford: 15 to 18 for 1s. Market Drayton: 15 to 16 for 1s. Uttoxeter: 1s 3d to 1s 4d per score.

Thursday.—Brigg: 16 or 17 for 1s. Penistone: 15 for 1s. Ripon: 13 or 14 for 1s. Scarborough: 14 for 1s. Wetherby: 13 or 14 for 1s.

Friday.—Easingwold: 18 to 20 for 1s. Helmsley: 17 or 18 for 1s. Leyburn: 16 for 1s. Lincoln: 14 or 15 ford 1s. Leeds: Yorkshire, 8s 6d to 9s per 120; Irish, 6s 10d to 8s 6d; Danish, 7s to 8s; Austrian blues, 5s 6d to 5s 9d; ditto reds, 4s 11d to 5s 4d. Grimsby: Austrian, 5s 2d to 5s 10d per 120; Russian, 5s 1d to 6s 2d; Danish, 6s 9d to 7s 10d.

Saturday.—Appleby: 14 to 15 for 1s. Berwick: 10d per dozen. Carlisle: 12 to 13 for 1s. Doncaster: 15 and 16 for 1s. Grantham: 14 or 15 for 1s. Howden: 17 or 18 for 1s. Lancaster: 11 to 13 for 1s. Malton: 16 for 1s. Pontefract: 15 for 1s. Retford: 1s 3d to 1s 4d per score. Richmond: 14 or 15 for 1s. Stokesley: 16 or 17 for 1s. Whitby: 14 and 15 for 1s. York: 14 for 1s.

BUTTER.

Tuesday.—Bedale: 1s 2d to 1s 3d per 24oz roll. Gainsborough: 1s per lb. Settle: 1s to 1s 0½d per lb. Spalding: 9d per lb.

Wednesday.—Barnsley: 1s 1d per lb. Colne: 1s 1½d per lb. Keighley: 1s and 1s 1d per lb. Kirbymoorside: 8d to 9d per lb. Knaresborough: 1s 2d to 1s 4d per 24oz. roll. Louth: 7d to 8d per lb. Market: Weighton: 9d per lb. Masham: 1s 2d to 1s 3d per 24oz roll. Northallerton: 1s 2d to 1s 4d per 24oz roll. Stockton: 10d to 1s 1d per lb. Hereford: 1s to 1s 2d per lb. Market Drayton: 10d to 1s per lb. Uttoxeter: 11d and 1s per lb.

Thursday.—Brigg: 9d to 10d per lb. Penistone: 1s 2d per lb. Ripon: 1s 4d to 1s 5d per 24oz. roll. Scarborough: 1s per lb. Wetherby: 10d to 1s 1d per lb.

Friday.—Easingwold: 9d to 10d per lb. Grimsby: Danish, 108s to 112s per 112lb; Dutch, 99s to 101s; Finland, 103s. Helmsley: 8d to 11d per lb. Leeds: Danish, 102s to 110s per 112lb; Irish creameries, 98s to 106s; Colonial, 102s to 108s; York lump, 12s 6d to 13s 6d per stone; ditto long rolls, 1s 1lb, 1s 4d to 1s 6d; fresh butter, in 1lb prints, 1s to 1s 1d per lb. Leyburn: 1s 1d to 1s 3d per roll of 24oz. Lincoln: 11d to 1s per lb. Otley: 1s 3d to 1s 5d per roll of 24oz.

Saturday.—Appleby: 9d to 10d per lb. Berwick: 10d per lb. Carlisle: 9d to 10d per lb. Doncaster: 10d to 1s per lb. Grantham: 9d to 1s per lb. Howden: 9d to 10d per lb. Lancaster: 11d to 1s per lb. Malton: 9d to 11d per lb. Pontefract: 10d to 1s per lb. Retford: 1s per lb. Richmond: 10d to 11d per lb. Stokesley: 10d to 11d per lb. Whitby: 9d to 10d per lb. York: 10d to 11d per lb.

CHEESE.

Glasgow, Wednesday.—Cheese arrived more liberally in the Glasgow market this week. The quality is improving. A moderate demand was experienced. Cheddars and Dunlops were quoted from 52s to 54s per cwt. There was a fair trade passing in Canadians and New Zealands at late figures. The impression is that as cheese from home farmers begins to reach the market in larger numbers values will ease.

Newport, Wednesday.—There was a big supply of cheese on hand, and a brisk trade was done. Prices were as follows:—Caerphillies, 35s to 40s; fancy dairies, 43s to 45s; Cheddars, 60s to 65s; Derbies, 61s.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—A good supply of greenstuffs was available this morning, and experienced a fair sale. Potato trade quiet. Arrivals of fruit were on a good scale, and evidenced a steady demand. Greenstuffs: Cabbages, 3s 6d to 4s; cauliflowers, 5s to 7s per tally; spinach, 2s to 2s 6d; beetroots, 3s to 4s per bushel; carrots, 4s to 6s; turnips, 5s to 6s; mint, 3s to 4s; radishes, 8d to 9d per dozen bunches; horseradish, 1s 6d to 2s per bundle; rhubarb, 2s to 2s 6d per dozen bundles; Egyptian onions, 10s per bag; spring ditto, 2s to 2s 6d per dozen bunches. Potatoes: Maincrops, 80s to 90s; Reading Giants, 35s to 40s; Blackland Up-to-Dates, 40s per ton; New Jersey, 10s to 10s 6d; Canary, 7s to 9s; Teneriffe, 8s; St. Malo, 9s per cwt; Lisbons, 3s 6d to 4s per case. Fruit: English grapes, 2s 6d to 6s 6d; Belgian, 1s 6d to 2s 6d per lb; oranges, 8s to 25s; lemons, 8s to 18s per case; English tomatoes, 6d to 10d per lb; Canary, 3s to 4s per case; pineapples, 1s 6d to 4s 6d each; Canary bananas, 7s 6d to 12s 6d per bunch; Australian and Tasmanian apples, 8s to 12s per case.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, Seed Merchants, of Great Maze Pond, Borough, London, S.E., write that the seed market, as might be expected at this dull time of the year, is now thinly attended, and presents no feature of interest. Some few transactions are reported in Chilian red clover seed, but the high prices now asked do not encourage business. For mustard and rapeseed former prices are asked meantime, notwithstanding the advanced season, a few orders continue to drop in for tares. Both canary and hemp seed must be quoted dearer—the latter substantially so, and there are indications of the advance continuing. Other kinds of bird seeds, however, show no alteration in value. For blue peas and haricot beans the market remains firm.

COLONIAL DAIRY PRODUCE

London, Friday.—Butter: The last week's import of Canadian butter was over 2,000 cwts, and the season may, therefore, be fairly said to have begun. It is 500 cwts in excess of the corresponding week last year. Prices for choicest salt Canadian in spot are 98s to 100s, and finest 94s to 96s; saltless makes about 2s per cwt more. The end of the New Zealand season is at hand, and the quantity left in holders' hands is not sufficient to make a market quotation. Danish butter still maintains its price, although the Copenhagen market is reported quiet, and it will not, therefore, be surprising if next week it falls 2 kroner, which would place it on a par with last year. Cheese: There has been a sentimental fall of value in old Canadian and New Zealand cheese of about 2s per cwt, the former of which now stands at 58s to 60s, and the latter at 56s to 58s, while during the week. New Canadian on the spot is making in new Canadian the c.i.f. prices have fallen considerably 54s to 55s, so that the relative values of old and new season's Canadian are ridiculous, and the old must reassert its value shortly.—W. WEDDEL AND CO.

FEEDING STUFFS.

London, Thursday.—Linseed.—Owing to restricted demand, and a quieter oil market, prices have declined, but closed with an advance. Calcutta, spot London, 54s; passage, 54s; June-July, 54s 6d. La Plata, on passage, 53s. Hull easier. Calcutta, May-June, 54s 6d; La Plata spot, 51s 6d; to the Continent, Bombay, May-June, 57s 6d; June-uly, 57s 6d; Calcutta, June-July, 54s 9d; La Plata, June-July, 52s 6d. Linseed oil has experienced a considerable decline. We quote spot in pipes £32; barrels, £32; June-August, £31 15s; September-December, £31. Hull naked spot, £31 10s; June-August, £31 5s; September-December, £30. Linseed cakes are firm. We to-day quote London-made £7 17s 6d to £8 ex mill; American Western £7 7s 6d to £7 10s; Russian, £7 12s 6d to £7 17s 6d; cotton cakes steady; London made £4 12s 6d to £4 17s 6d. Rapeseed easier. Brown Cawnpore, May-June, 36s 9d; Brown Calcutta, May-June, 36s. To the Continent we quote Yellow Guzerat 41s 6d; Yellow Cawnpore, June-July, 39s 9d; Brown Cawnpore, May-June, 36s 9d; Brown Calcutta, May-June, 35s 6d; Ferozepore, May-June, 36s 9d; Jamba, June-July, to Hull, 31s 9d sellers. Cottonseed quieter, tendency lower. Spot London, £7 17s 6d; June, £7 18s 9d; November-January, £6 13s 9d; Hull spot, £8; May-June, £7 17s 6d sellers; November-January, £6 11s 3d. Cargoes, November, £6 15s; December-January, £6 13s 9d; Bombay to Hull, June-July, £5 1s 3d.—THE PRODUCE BROKERS COMPANY, LIMITED.

Hull, Tuesday.—Linseed—There are no arrivals in linseed. The market since our last has been steady, but quiet, and closes dull; prices practically unchanged. Calcutta, April-June, 55s wanted. River Plate: There are sellers of spot seed in warehouse at 52s; May-June, 53s. Cottonseed—Value further improved for old crop, with business done on spot at £8; passage and May loading made £7 17s 6d to £7 18s 9d, and June sold at £7 17s 6d. New crop, first half October done at £7 2s 6d, and all the month £6 18s 9d, whilst November-January again sold at £6 13s 9d. To-day the market is quiet, with a tendency to lower prices in all positions, and £6 12s 6d accepted latter months, with further sellers. Linseed oil: 31s 6d spot; 31s 6d June-August; 30s September-December. Cotton oil: 25s spot; 25s June-August; 22s 4½d November-April. Crude: 24s spot; 24s June-August; 21s November-April. Rape oil: Jamba naked, 24s 3d spot; 1st quality, 25s spot. Linseed cakes: A firm market, with good trade for time of year. Cotton cakes are dearer; best makes, £5 5s; seconds, £4 10s.—KEIGHLEY MAXSTED AND CO.

Mark Lane, Monday.—The trade continues quiet and inactive, with occasional lower prices being accepted for parcels afloat. Russians are in good supply, and are 1s 3d per ton less money in mats, and 2s 6d to 5s per ton less in bags. Americans have come to hand rather more freely and with some fairly heavy arrivals; values are momentarily depressed, and to-day's quotations are 2s 6d per ton under last week's. Calcutta made in bags are unchanged in price. London made are the turn lower at 2s 6d per ton less money. Cotton cakes: The market is well supplied, while the demand is of the smallest possible character. English meet a slow sale, and prices favour buyers at 2s 6d per ton under last Monday's prices, and Egyptian slightly easier. Decorticated are not much inquired after, but holders remain firm at unchanged prices, and meal is also unchanged. Rape cakes: Quiet; East Indian unchanged. Maize germ meal: The quantity on offer is not large, but with only a retail demand, values remain steady at last week's prices for American, and 2s 6d to 5s per ton less money for English. Rice meal: Parcels of Rangoon afloat have been sold at £4 6s 3d to £4 7s 6d ex ship, but for autumn shipments £4 12s 6d to £4 15s is the price asked.—PINNOCK BROS., 30, Mark Lane, E.C.

POTATOES.

Southwark, Monday.—During the past week the arrivals of old potatoes have been light, the demand steady, and prices firm. The following are this day's quotations:—Lincoln Up-to-Dates, 55s to 60s per ton; Blackland Up-to-Dates, 50s to 55s per ton; Forfar and Fife Up-to-Dates, 50s to 60s per ton; ditto Bruce, 50s to 60s per ton.

Borough, Saturday.—Only small arrivals, and although the demand was quiet, prices ruled firm. Scottish maincrops, 90s; Blacklands, Up-to-Dates, 50s; Lincoln ditto, 65s per ton; New Jersey, 9s 6d; Teneriffe, 8s to 10s; St. Malo, 8s 6d to 9s per cwt; and Lisbons, 3s 9d per box.

Spitalfields, Saturday.—Supplies light, but the demand ruled quieter. Quotations: Best Lincoln Up-to-Dates, 60s to 70s; Blackland ditto, 45s to 50s; Wisbech ditto, 60s to 65s; Scotch ditto, 65s; Scotch maincrops (grey soil), 70s; Lincoln maincrops, £5s to 75s; Reading Giants, 50s; Blackland Garlons, 40s per ton. New St. Malos, 9s to 9s 6d; Jersey, 10s; Teneriffe and Canary, No. 2, 10s; No. 3, 9s; Maltese rounds, 8s per cwt; and Lisbons, 3s 9d per box.

London (Great Northern), Saturday.—A fair supply was available this morning, but the attendance of buyers was small, and the demand was of a poor character. Blacklands, 45s to 50s; Lincoln maincrops, 60s to 70s; and Up-to-Dates, 55s to 60s per ton.

STOCK AND SHOW NOTES.

By Herdsman.

On Thursday and Friday next, at Ipswich, will take place the annual show of the Suffolk Agricultural Association. Ipswich has always heartily welcomed the association, and on the present occasion the Mayor and Corporation, together with the inhabitants, have done everything possible to make the show a complete success. Thanks to the liberality of local gentlemen, the association were able to offer a sum of £1,500 in prizes, and I hear that the result has been a record entry of live stock and implements. There are nearly twice as many standholders, constituting a record in this respect also, and the competition for the prizes for dairy produce, butter-making, sheep-shearing, and horse-shoeing promises to be excellent. The model co-operative dairy, exhibited in working upon the Danish principle, will be one of the most instructive and interesting exhibits of the entire show, leading up, it is hoped, to practical results, in combination amongst dairy farmers and those interested in Suffolk co-operation to reduce expenses and increase returns. The Suffolk horses have always been a grand feature at the Suffolk show, and this year Sir Cuthbert Quilter, Bart., M.P., the president of the Suffolk Horse Society, has introduced an attractive feature by offering prizes for teams of four, to be shown in harness with waggon. These will be judged and paraded in the large exhibition ring at 1 p.m. on the first day, and the director of the show (Mr. S. R. Sherwood) has decided upon a grand parade, opposite the grand stand, of the teams, and all the Suffolk horse prize-winners at 3.45 p.m., on June 5th, which should prove a most impressive and interesting sight.

I have received a copy of a private catalogue of the Aberdeen Angus herd belonging to Mr. J. H. Bridges, Langshott, Horley, Surrey. It consists of fifty cows, heifers and heifer calves, ten bull calves, and four stock bulls, the latter being: Equerry of Ballendalloch, calved in March last year, and, as its name indicates, was bred by Sir George Macpherson Grant, Bart.; Breckan, calved January 25th, 1898, bred by Mr. Alexander Geddes; Parthian, calved December 20th, 1900, bred by owner; and Prince Edward of South Ella, calved January 17th, 1901, bred by Mr. Arthur Egginton. All the animals of the herd are by first-class stock, and some have won prizes at various agricultural shows. Langshott Home Farm is half-a-mile from Horley Station (midway between London and Brighton, on the main line of the L.B. and S.C.R.). The herd can be seen by appointment with Mr. Albert Pulling, Beddington, near Croydon.

The cattle disease in South Africa, to which I referred in a previous issue, is still prevalent, and there has been considerable mortality in the districts of Salisbury and Umtali, but the loss in Matabeleland has been comparatively little, and it is anticipated that the disease will die out with the frosts during the approaching winter. The British South Africa Company states experts from Cape Colony who had been consulted in regard to the disease concurred with the chief veterinary surgeon of Rhodesia, that the disease is the ordinary redwater, which is known to have existed in South Africa for many years, although the type during the present outbreak has been severe. It is stated that the only succesful means of dealing with this disease is by protective innoculation, for which preparations are being carried out.

The Argentine Minister of Agriculture, in the course of a communication to the Minister of Foreign Affairs, states, says a news agency, that foot and mouth disease has been non-existent in Argentina for many months. In the course of the last six months 630,000 cattle and one million sheep have been brought into Buenos Ayres for the consumption of the population without a single case of disease having been detected. During the same period Argentina exported to South Africa and Brazil more than 120,000 cattle and 28,000 sheep without the occurrence of any epizootic disease. The refrigerating establishments prepared in the same six months about 500,000 cattle and 2,500,000 sheep, which were all minutely inspected and found to be healthy. The Government declares that in the event of foot and mouth disease breaking out it would be the first to notify the fact by prohibiting the exportation of live-stock, being anxious to uphold the reputation of the principal source of Argentina's wealth. It is calculated that the farmers have more than five million young cattle ready for exportation.

The Board of Agriculture are informed by the High Commissioner for Canada that the Canadian Government have sent Mr. A. G. Hopkins, Veterinary Quarantine Officer for Canada, to this country to apply the tuberculin test to all cattle over six months old intended for export, for breeding purposes, from the United Kingdom to Canada. All communications regarding the testing of animals should be addressed to Mr. Hopkins at the Canadian Government Agency, 52, St. Enoch Square, Glasgow.

Shropshire breeders will doubtless be greatly encouraged by the following paragraph taken from a Buenos Ayres paper of recent date:—"A well-known exporter, who has hitherto imported solely Lincolns, talks this season of sending out an equal number of Lincoln and Shropshires. We hear that the Shropshires are steadily coming more into favour for crossing with the Lincoln 'mestizas.' Not only in the South, but also in Cordoba, the Shropshires and other 'dirty-faced' breeds are receiving more attention."

The growth of the East Surrey Agricultural Association and local chamber of agriculture is fully shown by the additions made to the schedule of the show, to be held in the Addiscombe Road, Croydon, on Wednesday, July 9th. The horse section, as usual, takes the lead with nineteen classes, sheep have six classes, pigs three classes, bulls four, and cows and heifers nine classes. Prizes are also offered in a milking competition, and for ponies, jumping, tradesmen's turnouts, and for shepherds. All entries close on July 21st. Applications for schedules and entry forms to be made to the Secretary, Mr. H. Clark, 83, High Street, Croydon.

The entry forms for the next volume of the Hunter Stud Book have now been circulated by the Hunters' Improvement Society. I would remind those breeders who have not received the forms that when applying for same they should state what the entry will be, for there are three forms, viz., one for the entry in the Supplement of mares and fillies (winners of medals and prizes at Associated shows and inspected mares), another for the registration in the Stud Book of mares and fillies, and the other for the registration in the Stud Book of colts from such registered dams. The conditions of entry are fully set forth on each form, and they indicate the prominence given to the principle of registration by pedigree, while the Supplement offers every inducement for entry to owners of prize-winners at Associated shows. Any information required on this matter can be had of the Secretary, Mr. A. B. Charlton, 12, Hanover Square, London, W.

A most cheering report is given by that veteran breeder of Yorkshire pigs, Mr. Sanders Spencer, of the demand for his large and middle white pigs. He despatched from his large herd at Holywell Manor, near St. Ives, Hunts, over forty boars, sows, and yelts during the last week. Of these six were shipped to Holland, twenty went to Scotland, seven to Notts, one on to Norths, two to Beds, three on to Somersetshire, one to Pembrokeshire, and one to Warwickshire. His sales of boars, sows, and yelts total over two hundred since the new year, whilst the average price realised is said to exceed that of any previous year during the nearly forty years' existence of the large herd. The whole of the pigs sold, save one, were bred by Mr. Spencer.

Messrs. Alfred Mansell and Co. recently shipped to Riga, per SS. "Como," of the Wilson line, from Hull, on behalf of a Russian landed proprietor, two high-class Shorthorn bulls, two Shorthorn in-calf heifers, and three Berkshire pigs. The bulls were a short-legged massive roan Waterloo bull, Lord Newport 2nd 79285, by Premier Statesman 79589 from Lady Sherlowe by Dictator 63890; and Scottish Star, a good red sire by Star of Scotland 77964 from Duchess of Marathon by Count Marathon 54135. The heifers consisted of a beautiful two-year-old roan by Lucifer 77138 from Thurslarton Fawsley 6th by Barrington Duke, and Dewdrop, a good four-year-old by Midas from Snowdrop by Byron 5th 7007. Two in-pig Berkshire sows hailed from Mr. R. W. Hudson's well-known herd, and were of exceptional merit, viz., Danesfield Signet by Manor Favourite 7831, and Danesfield Daffodil by Jack of All Trades 6500. The boar, a well-grown good animal, nicely marked, was selected from Mr. Jefferson's celebrated prize-winning stock, and owned as his sire that very successful getter Peel Swansea 6231 from Patience 6243 by Cricketer 5887.

THE SUSSEX BULL illustrated above is "Bewbush Marquis" 1720, sire Bewbush King 1575, dam Galatea 5th 6931, by What's Wanted 1329. He was bred by, and is the property of Mr. P. F. R. Saillard, Buchan Hill, Crawley, Sussex. At the Bath and West Society's Show at Plymouth, last week, "Bewbush Marquise" was exhibited in the class for Sussex bulls calved in 1898 or 1899 (he was born on March 14, 1899), and he won the First Prize.

The Brookfield Stud Sale.

The ninth annual sale of horses belonging to Mr. Burdett-Coutts, M.P., took place on Friday at the Brookfield Stud, Highgate. Unfortunately, the weather in the morning was very threatening, and throughout the afternoon rain fell, so that the attendance of buyers, etc., was nothing like so large as usual. The Brookfield Stud is famed throughout the land, and details of Mr. Burdett-Coutts' remarkable successes would be superfluous here. Suffice it to say, that all the animals offered on Friday were of the usual high quality, and some high prices were realised. Some of the choicest lots, however, were bought in, amongst these being a pair of superbly matched brown mares, Her Grace and Worcester Juliet, a bonafide bid of 700 guineas being considered insufficient. Mr. Burdett-Coutts, M.P., wisely declined to separate them. Prior to the sale a large number of guests were entertained at luncheon, at which Mr. Burdett-Coutts presided, and, in response to the toast of "Success to the Brookfield Stud," proposed by Colonel Saunderson, the hon. gentleman referred to the introduction to our country districts of the motor car. He had, he said, frequently asked himself during the past twelve months whether or not what he might term the minor agricultural industry of horse-breeding was to be destroyed and whittled away, owing to the advent of the pest named. On serious reflection, he thought not, for horses had withstood quite as great a shock—to wit, introduction of railways. He could not, as a matter of fact, bring himself to believe that English people would be willing to resign the pleasure and the delight of handling a pair of well-matched harness horses for the fleeting enjoyment to be derived from hanging on to a wheel. In this connection it may be mentioned that the following humorous notice appeared in the catalogue:—"A motor car of more than usually hideous proportions, colour, noise, and smell will be going in the stud grounds up to the time of the sale in order to thoroughly accustom the horses to the conditions under which they have to meet these machines on country roads, which is a very different thing from meeting them in the town traffic."

At the conclusion of the luncheon the company adjourned to the sale ring, the auctioneers being Messrs. Warner, Sheppard, and Wade, Ltd., of Leicester. Competition on the whole was fairly brisk, but no sensational prices were realised. The largest bid was 700 guineas for an altogether exceptional pair of brown mares, standing just over 16 hands—a perfectly matched couple, superb in action and irreproachable in character. Large though the figure was, however, it did not as previously mentioned, result in a sale. Mr. J. H. Smith, of New York, who was a considerable buyer, paid 450 guineas, for Soapsuds and Bubbles, a chestnut pair with bold and lofty action, and also gave 250 guineas for Royal Norfolk, a perfect model of a brown mare, which has been accustomed to single harness. Mr. P. J. Marais gave 240 guineas for Qui Vive and Qui Va La, a well-matched pair of dark brown victoria or phaeton horses, standing just over fifteen hands, whilst at 330 guineas Mr. A. Mackinlay, of Glasgow, secured Sceptre and Rod, a pair of brown geldings. The Duchess of Newcastle gave 130 guineas for Amalgam, a sixteen hands five-year-old brown gelding, which has been driven about town, and is an excellent example of the value of a cross between the hackney and the coach-horse. The total realised by the sale was 4,249 guineas. Appended is a list of the chief prices:—

	Gs.
Last Cloud ..... Mr. Cory Wright	105
May Bloom ..... Mr. H. Drucker	135
Mr. President and Mrs. President .. Mr. J. H. Smith	180
Qui Vive and Qui Va La ..... Mr. Marais	240
Fortification and Rampart ..... Mr. T. E. Watson	320
Spectre and Rod ..... Mr. A. M'Kinley	330
Destiny ..... Mr Marais	135
Ariel and Prospero ..... Mr. A. Wynne Corrie	195
Royal Norfolk ..... Mr. J. H. Smith	250
Compromise ..... Mr. Stimpson	82
Fosterling ..... Mr. F. F. Greenhill	66
Miss Silverstick and The Wren .... Mr. Humphreys	360
Lady Lynwood ..... Mr. G. A. Cooper	75
Amalgam ..... Duchess of Newcastle	130
Soapsuds and Bubbles ..... Mr. J. H. Smith	450
Armiger and Armourer ..... Mr. Hollins	440
Robespierre ..... Dr. Barrow	70
Crozier and Cruciform ..... Mr. J. W. Pyman	360
Co-Heviers ..... Mr. A. W. Davies	170
I.O.U. ..... Mr. Pritchard	71

Sale of Bluntisham Hackneys.

The stud of pedigree hackney and harness horses belonging to the late Mr. John Beldham, of Bluntisham, a village near St. Ives, Hunts, has for many years enjoyed a considerable celebrity throughout the Eastern Counties, and the few sales that have taken place there have been most successful. After a lapse of seven years, another sale of animals from this stud took place on the premises on Wednesday, and it was very largely attended, some Continental and Colonial buyers being present. We may mention here that Mr. Beldam only died recently, after having made arrangements for the sale, and his demise is a distinct loss to the world of hackney breeders. It is satisfactory to know, however, that the stud is to be kept going under the management of the deceased's two sons. The animals submitted for sale last week fully maintained the reputation of the stud, and realised some capital prices, a total of 3,500gs. being obtained for fifty-four lots. Bidding was pretty brisk throughout, and not a single animal went at under 30gs. The top figure of the sale was 210gs., paid by Mr. W. J. Smith, of Cadogan Place, for Wood Vanity, a four-year-old chestnut mare, by Copalder Cadet. A five-year-old chestnut harness gelding, by the same sire realised 200gs., Dr. Meacock being the purchaser. A five-year-old roan harness gelding, by Agility, was bought by Mr. Lowenstein, for Belgium, at 160gs. Mr. Lindsay Hogg, M.P., had to bid 140gs. before he could secure the three-year-old filly, Wood Caprice, sire Copalder Cadet, and a similar sum was paid by Mr. F. Beldam for the stallion Wood Gabriel, and a brown foal in 1898, Sir S. W. W. Gabriel; whilst at 105gs. the brood mare, Wood Elegance, a bay foaled in 1894, sire Danegelt, was knocked down to Mr. J. W. Benson. No other three-figure prices were realised, the other animals going at prices ranging from 30gs. to 90gs. Below we give a list of the principal animals sold, together with purchasers' names, etc.:—

HARNESS MARES AND GELDINGS.

	Gs.
Wood Melody, roan mare, 7 years, s. Lord Bardolph ... Mr. Cole Ambrose	80
Bay gelding, 5 years, s. May Royal .... Mr. Alderson	£0
Wood Marvel, ch. mare, 6 years, s. Agility ... Mr. F. Beldam	56
Ch. gelding, 5 years, s. May Royal ... Mr. J. Gould, Brighton	82
Ch. gelding, 4 years, s. Broughton Ganymede ... Mr. J. Shuttleworth	74
Roan gelding, 5 years, s. Agility .... Mr. Lowenstein	160
Ch. gelding, 5 years, s. Copalder Cadet .. Dr. Meacock	200
Blacktoft Maid, ch. mare, 6 years, s. North Star ... Mr. Higgs	53

FOUR-YEAR-OLD MARES.

	Gs.
Wood Vanity, ch., s. Copalder Cadet ... Mr. W. J. Smith	210
Wood Delight, bay, s. Agility ..... Mr. W. J. Smith	90
Wood Charm, ch., s. Bonfire ..... Mr. Pauling	67
Wood Expectation, br., s. Goldfinder VI.. Mr. Gould	£0

FILLIES.

	Gs.
Wood Caprice, ch., f. 1899, s. Copalder Cadet ... Mr. Lindsay Hogg, M.P.	140
Wood Begonia, ch., f. 1900, Wyngelt ... Mr. Lindsay Hogg, M.P.	52

STALLIONS.

	Gs.
Wood Caxton, br., f. 1899, s. Caxton .. Mr. Mumford	62
Wood Sirdar, br., f. 1899, s. Sundial ..... Mr. Abbott	80
Wood Topper, bay, f. 1899, s. Goldfinder VI. ... Mr. Pauling	54
Wood Gabriel, br., f. 1898, s. Stow Gabriel ... Mr. F. Beldam	140

BROOD MARES AND FOALS.

	Gs.
Wood Elegance, bay, f. 1894, s. Danegelt ... Mr. J. W. Benson, London	105
Bay filly foal, s. Rosellan ..... Mr. Benson	53
Wood Pride, bay, f. 1894, s. Denmark Fireaway ... Mr. Cowley	47
Wood Romance, bl., f. 1896, s. Model II. ... Mr. E. Rowell	54

Sale of Clydesdales at Garguston, N.B.

There was a good attendance of buyers at the deplenishing sale held last week at the farm so long occupied by the late Mr. Trotter, at Garguston, N.B. The Clydesdales bred by Mr. Trotter received most attention, good prices being realised for them. Following is a list of the principal prices and purchasers:—

	Gs.
Duff 2nd of Garguston, bay, f. May, 1894 ... Mr. Bailie Taylor	43
Darling, light bay, f. May, 1894 ..... Mr. Macdonald	34
Myrtle, 13305, light bay, f. May, 1891.... Mr. Colville	47
Rose 4th of Braco, 14080, chestnut, f May, 1894 ... Mr. Robertson	48
Cinderella, dark brown, f. June, 1893 ... Messrs. Mundell	38
Maggie 2nd of Garguston, black, f. May, 1898 ... Mr. Gill	59
Isabel, bay, f. May, 1897..... Mr. Bradley Martin	54
Dandy of Bellfield, bay, f. May, 1897 ... Mr. Bailie Taylor	34
Five-year-old bay mare, s. Gold Mine ... Messrs. Mundell	58
Three-year-old filly, Rosalea of Garguston ... Messrs. Fraser Brothers	64
Two-year-old filly ..... Mr. Robertson	48
One-year-old colt A..... Mr. Bailie Taylor	36

Good prices were also made for the Shorthorns, the bulk of which went to Mr. Bailie Taylor, of Dundee, who gave 34 guineas for Ruth 8th, a red and white of 1895, bred by Mr. Cameron, Balnakyle; 32 guineas for Ruth 9th, a two-year-old heifer; and 30 guineas for Lady Rosie 2nd, an eight-year-old red cow. Mr. Macdonald, Charleston, gave 22 guineas for Lady Rosie 3rd, a red of 1898. The stock bull, Don, a white of 1898, also bred by Mr. Cameron, Balnakyle, made 30 guineas from Mr. M'Caull, Dunblane. Some fat cattle made up to £23 10s., and cross cows up to £25.

Good Prices for Hunters.

A large number of hunters were offered at Messrs. Tattersall's Monday sale at Albert Gate, Hyde Park, amongst the hunts represented being the Vine, V.W.H., Mr. Peter Ormrod's, and Cottesmore; whilst Sir Robert Wilmot, Bart., and Mr. P. Burke sent up several hunters. The best price obtained during the sale was 250 guineas, and this was paid for the bay gelding Sportsman, which had been ridden by Mr. E. Boyce Podmore, Master of the Vine Hunt. Solomon, also ridden by Mr. Podmore, made 125 guineas, but none of the other animals from the Vine Hunt reached three-figure prices. Mr. Burke obtained 220 guineas for Rockmount, a bay gelding by Speculation, and three-figure price for four others, viz.: Waterford, a bay gelding by Snaplock, 165 guineas; Maurice, another bay gelding, by Tacitus, 150 guineas; Mayboy, a brown gelding, by Mayboy, 130 guineas; and Coalbrook, a bay gelding, by reliable, 110 guineas. School Green made the highest price for Sir Wilmot's lot, namely, 150 guineas, Huntsman going at 130 guineas, and Bradfield at 122; whilst the others realised from 48 to 95 guineas. Mr. Peter Ormrod sold six of his stag hunters, at prices ranging from 50 to 70 guineas; whilst three horses, regularly hunted with the V.W.H., and the property of Mr. W. F. Felton, sold at 125 guineas, 60 guineas, and 48 guineas, the first price being obtained for Jessica, a black mare by Moses. Six Cottesmore Hunt horses, the property of Mr. Evan Hanbury, made from 40 to 75 guineas.

At Thursday's sale hunters again realised good prices, there being a large attendance of buyers. The catalogue included the entire stud of Mr. Henry Wickham, and it was one of these animals which made the top figure of the day, viz., 210 guineas. This sum was obtained for an Irish black gelding, named Negro, a very smart animal. Another of Mr. Wickham's lot sold at 150 guineas, namely, Grey Mist, a grey gelding, by Grey Friars, whilst the prices obtained for three others were 87, 67, and 50 guineas. Mr. Harold Brassey, Royal Horse Guards, sent up some nice animals, and four of them went at three-figure prices. Malden, a chestnut gelding, realised 190 guineas, Black Knight 155 guineas, whilst Allright and Holderness, two bay geldings, fetched 120 guineas each. Major Lord Charles Bentinck secured 180 guineas for Bushman, a chestnut gelding by Kirkham, and 115 guineas for Topper, a bay by Torpedo; three other hunters sold at 90, 88, and 65 guineas; whilst for his polo ponies, Lord Charles got some handsome prices. The highest was 300 guineas, and this sum was realised by a splendid bay named Carlos. Peter, a brown gelding, went at 250 guineas; Hope, also a brown, at 165 guineas; and Even May at 115 guineas. Amongst other good prices obtained for hunters were the following:—The property of Captain Boyd Cunninghame, Redburn, Irvine, N.B.: Lord Edward, bay gelding, by Master Ned, 125 guineas; Flash, bay gelding, by Harvester, 165 guineas; Hasketon, bay mare, 115 guineas. The property of Mr. J. L. Reid: Florimel, bay mare, by Radius, 185 guineas. The property of Mr. Dennis F. Boles: Nimrod, bay gelding, 120 guineas; Dorothy, bay mare, 97 guineas.

Crewe Horse Sales.

Messrs. Lloyd and Nuttall held their quarterly horse sales at Crewe last week. On Wednesday the chief feature of the catalogue was 20 match pairs suitable for broughams, and these met with keen competition, the purchasers doubtless having in mind their suitability for Coronation purposes. The highest price paid was for a pair of brown geldings, which made 190 guineas. Several others made from 120 guineas, three pairs going to London, five to Manchester and district, and others to Birmingham, Liverpool, and Leeds. Hunters and small harness horses met only a slow trade, the prices being from 30 guineas to 40 guineas. Young blood horses sold from 20 guineas to 45 guineas.

On Thursday about 140 small harness horses, stylish hacks, and cobs over 14 hands, and 100 pedigree hackneys, show cobs, and high-stepping ponies were sold. The highest price of the day was made for a six-year-old bay pony mare, Bletchton Fashion, by Confident. This pony, which has won many prizes, realised 87 guineas. Another five-year-old grey gelding sold for 74 guineas, and many others made 60 to 70 guineas. The demand for small harness horses was sluggish, and only moderate prices were obtained. Stylish hacks made from 30 guineas to 50 guineas, and useful cobs of 14 hands 25 guineas to forty guineas. Pedigree hackney brood mares met a ready sale, several being purchased for

exportation at prices ranging from 40 guineas to 70 guineas. Show cobs for the most part were purchased by Lancashire and Yorkshire exhibitors, and realised from 60 guineas to 80 guineas. Some buyers present from Paris and Berlin purchased several hackneys.

Sales at York.

Messrs. Walker and Sons' annual May race sales of horses took place at their repository, York, on Tuesday, Wednesday, and Thursday, a catalogue of nearly 100 horses being presented each day. Each sale was largely attended, and bidding was at times brisk. A feature of the first day's sale was the disposal of several studs of polo ponies, and a large number of players were in attendance. Messrs. Slocock, of Carlow, who sell annually, sent up a stud of 15 ponies, all of which were sold at prices ranging up to 74 guineas, the average being £50. Sir William Cooke, Bart., also sold three ponies—Sarah Jane, a brown mare, making 50 guineas; Peanut, a brown mare, 60 guineas; and Kruger, a chestnut gelding, 52 guineas. A pair of dark brown harness geldings, the property of Mr. G. A. Nelson, realised 160 guineas. Other sold at prices ranging from 55 guineas downwards.

On Wednesday 85 animals were offered, all of which were first-class animals. The chief feature of the sale was the disposal of Badsworth Hunt horses, the property of Mr. J. S. H. Fullerton. Out of 23 horses offered from this stud 21 were sold at an average of over 60 guineas. The highest price realised was for Gypsum, a bay mare, 7 years, which made 210 guineas. Patch, a bay mare, 7 years, realised 120 guineas. Amongst other sales, Surprise, a bay mare, 8 years, the property of Miss M. Egerton, realised 120 guineas; and Ben, a bay gelding, 6 years, the property of Captain Dougall, of the Carabiniers, realised 170 guineas. The general range of prices got for the other animals offered was from 40 to 80 guineas. On the concluding day harness horses and cobs were in chief evidence, and these met a good demand, changing hands readily at prices ranging up to 70 guineas, the average price being about 45 guineas.

Horses and Zebras

A lecture on horses and zebras was recently given at a meeting of the Zoological Society by Professor Cossar Ewart, F.R.S., who, as is well known, has done excellent work, not only in experiments in hybridisation, but in investigating the ancestors of the domestic horse. Professor Cossar Ewart said that though he might have preferred to confine himself entirely to zebras, the wider title was rendered necessary by the arrival in England of living specimens of Prejevalsky's wild horse. A question that met them at the outset was the ancestry of the domestic horse. It had been the custom of many naturalists to ascribe the origin of this form to a single stock, but he thought it not improbable that our horses came from more than one species. Then, by the aid of a map thrown on the screen, the home of Prejevalsky's wild horse was traced out, and the story told from the point when the famous Russian traveller brought to St. Petersburg the remains obtained from the camel hunters, which Poliakof describe as a new species of horse, and to which he gave Prejevalsky's name as a specific distinction. Then followed the journey of the brothers Grijimailo in the Western portion of the Gobi Desert, and they were able to obtain further remains—skins and skeletons—which bore out the views of Poliakof.

In this country, however, the late Sir William Flower expressed dissent, and suggested—what rarely occurs between equine animals under natural conditions—hybridisation, to account for the new form, the supposititious parents being, of course, the Asiatic wild ass, or kiang, and the domesticated horses of the desert tribes. In this area there were three forms of this wild horse, differing in coloration, the Western herds being of a rufous tinge, while yellow prevailed in the herds that extended their range farthest to the East. There was, it must be admitted, something in the appearance of these animals which gave colour to the view that they might be hybrids. They were, however, capable of reproducing their kind, as was proved by the fact of the capture of the foals by the Mongolians engaged by Mr. Hagenbeck for that purpose, while mules were invariably sterile. Moreover, hybrids varied greatly, whereas there was a great similarity between the individuals constituting a herd, though herds might differ in coloration according to their geographical range. So that till somebody, by crossing the kiang and the domestic horse, produced hybrids which not only resembled those wild horses in appearance, but were also capable of perpetuating the race, these animals must be regarded as constituting a distinct species, and as being the only living wild horses.

Coming to the ancestry of the domestic horse, the lecturer referred to two principal living types, the powerful cart-horses, and the small, hardy horses, once common in England, and still abundant in some isolated areas, of which Iceland might be cited as a characteristic example. Both types seemed to have sprung from horses that must have been known to Palæolithic man, since etchings of both types, easily recognisable, were found on tools and implements that had been discovered in Western Europe. Professor Ewart then dealt with the zebras, taking first the mountain zebra of Cape Colony, a form easily recognisable by its small size, the "gridiron mark" on the posterior part of the back, and the heavy striping of the legs, right down to the hoofs, which are narrow and well fitted for rocky country. In one respect this species differs not only from other zebras, but from all other members of the family in that the direction of the hair is reversed along the spine, between the rump and the withers. Somaliland had two zebras—the magnificent large form, named by Milne-Edwards in honour of President Grevy, and characterised by narrow body stripes, and large head and ears, the latter tipped with white; and the smaller Grant's zebra, of the Burchell type, but without shadow stripes. The true Burchell's zebra had broad body stripes, between which were fainter markings, to which the name of "shadow stripes" had been given, and there were no markings. The last form dealt with was the extinct quagga, in which the striping was practically confined to the withers, having been lost when the need for protective colouration ceased.

Newchurch Show.

The Newchurch and District Agricultural Society is an old established one, and its annual show is very popular in the Manchester district. It has improved every year, and that held on Monday last, was undoubtedly the best of the long series. Seven silver cups, some gold medals, and £400 in cash prizes were offered, and drew an entry of 1,086, spread over 178 classes, whereas but a half-a-dozen years since, the entries numbered 672, and the classes under one hundred. There were numerous open classes, and these filled well, but it was even more satisfactory to find the tenant farmers of the district so well support the classes provided for them. In this connection it may be mentioned that in 1896 only 39 tenant farmers of the district took sufficient interest in the matter to lead them to be exhibitors, whilst this year the number reached exactly 100, and the improved quality of the stock showed the advantage they had derived from the exhibition. It may be mentioned that the weather was fairly favourable to Monday's show, and the attendance of visitors was very good.

The handsome cups and special prizes offered by the society attracted some of the best horses in the east of the county. There was a steady improvement noticeable in all the local classes of the heavy horses, the farmers apparently being determined to go in more for size and quality. Mr. H. W. Kearns, of Blackburn, was first in the brood mares class with a very massive mare, Duchess of Bridgwater II., which has taken several honours this year. In the filly classes there was not much competition, but the winner had a good deal of quality. Probably the light horse section was the strongest and most attractive of the day, and included a very high percentage of highly-bred animals, some of the best horses in the kingdom being in competition, including Mr. T. H. Jones' Zaverda, by Polonius, a chestnut mare which has won a large number of prizes; Mr. T. B. Sykes' Zaizan, the winner of at least a hundred principal awards; Messrs. T. and H. Ward's brown hunter, which was second at the Notts County Show; and many other notable animals. The hackneys shown in hand were fairly strong in number and also in quality, whilst the hunters formed a very strong class. The saddle classes, too, were very strong. The shorthorns were of the usual rent-paying sort to be found in Rossendale, as far as the local farmers' entries were concerned, but there were one or two of the pedigree type in the open heifer classes, which have won a big series of cards. Amongst these were Messrs. R. and T. Harrison's heifer, which has already won championships and cups wherever she has been shown. In the dairy classes Mr. Duckworth, of Bury, was conspicuously successful with a big framed beast of the milch type. The local classes showed conclusively that the show had done much to stimulate the farmers in the direction of general improvement. Pigs and sheep were not numerous.

Accrington Show.

The annual show of the Accrington Agricultural Society took place on the 24th ult., in fine weather. There was a good attendance of visitors, the jumping classes in particular proving a great attraction. It is no exaggeration to say that the show of horses was the best the society has ever had on view since it was founded, in 1896. The heavy mares and geldings were good, especially the latter. They included some of the best-known animals in East Lancashire, and, of course, were of Shire type. Mr. T. Edwards's winner in the class for best mare or gelding for draught purposes is a very heavy and tall animal, that stands on good sound legs and feet. E. Whittaker's brood mare, with foal at foot, was second, and it is also well known. It also won in the brood class. J. Whittaker and Sons, of Rishton, were very successful, and Mr. H. W. Kearns had some well-bred shires in young classes, which classes, however, were not very well filled.

The light horse classes saw some good contests. In the over 15 hands class for road or field, Mr. T. B. Sykes's winner, Zaizan, is a big winner, her sire being Astonishment. She is a very fine type of Hackney mare, and was well shown indeed. There were half-a-dozen in the class, and all well bred, but Mr. R. Smith's second could not move like Zaizan. Mr. J. H. Jones's Zaverda, by Polonius, is well known in East Lancashire. She was in her best mood, and was well ridden. She subsequently took the cup given by Sir George Bullough for the best saddle horse. In the not over 14 hands class, Mr. McKibbens' Model Queen, by Berkley Model, had the most quality, and the same remark applies to Mr. A. D. Oates's Ryburn Violetta, which, although only three years old, has already won several first prizes this year. The two-year-olds, yearlings, and foals were not perhaps so good as the older classes in the section. Mr. Lees Knowles, M.P., had twice to put up with second prizes, but he won easily with the foal by Dane Canute.

The Hunter's class was a good one of half-a-dozen, and the judges were a long time deciding as to the second and third. Mr. E. Hoyle's Bonaparte was first, and can go finely. He was the best of good ones in this particular class, but it was a near thing between Messrs. Grainger's brown and Mr. A. Sowler's tall chestnut. In action there was nothing to choose, and the latter seemed to give a nice ride. The judges could not decide, and called in Mr. E. Hoyle, the owner of the first. He awarded the second to the brown.

The cattle were few, the cows being just good farmers' milkers. The exhibitors in the tenant farmers' section were, for the most part, the winners in the open. Mr. E. Newhouse showed a compact, level bull of good Shorthorn type. It was only second to Mr. Barnes's in the tenant farmers' section, however, and this fact goes to show that the latter were a meritorious lot of animals, if few in numbers. The eleven sheep shown in the five classes were good, being big and full of quality.

Pigs were only six, in three classes, and were of the Large White type—big, useful, well-fleshed animals. In the miscellaneous section there was a capital show of bread.

The judges were as follow: Cattle and sheep, Mr. J. Howard (Gargrave) and Mr. R. Carr (Skipton); horses and turnouts, Mr. R. Whitworth (Halifax) and Mr. R. Thornton (Winmarleigh).

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending May 17, 1902:—

NOTE.—The figures for the current Year are approximate only.

BATH AND WEST SHOW.

Success at Plymouth.

The Bath and West Show, which opened at Plymouth on Tuesday, can hardly have been said to have had most favourable weather; the show, however, turned out a most successful one. The show ground was easy of access, and the excellent arrangements made by the railway companies resulted in the attendance of large numbers of the general public. Especially noticeable was the proportion of Cornish visitors. The ground was well laid out, but regular attendants at different meetings found the hilly nature of the site somewhat trying. As mentioned above, the numbers who paid for admission was considerably in excess of those achieved in the past few years, and compares most favourably with the numbers at the Croydon and Bath Shows. The annexed table will convey some idea as to how the figures have varied during the past four years, but it should be borne in mind that in no case do the figures include the entrance of season-ticket holders, but only the paying admissions up to seven o'clock on each day:—

	Plymouth. 1902.	Croydon. 1901.	Bath. 1900.	Exeter. 1899.
Tuesday	477	768	565	1586
Wednesday	4603	4795	5982	7289
Thursday	8012	4480	5423	6930
Friday	26750	11827	12077	27120
Saturday	26750	11827	12077	27120

On Tuesday, when the weather was of a favourable character, the show was declared open by the Mayor of Devonport, who was accompanied by the Mayors of Plymouth and Stonehouse. Although the show will be known as Plymouth, as a matter of fact the ground is not in that borough at all, but in the neighbouring one of Devonport. From the success which has attended the show, the society will have cause to remember their visit to "the three towns" with feelings of pleasure. On Thursday the show was visited by Mr. Hanbury, the Minister of Agriculture, who was accompanied by Mr. T. H. Elliott, the Secretary of the Department. Mr. Hanbury's remarks at the annual meeting of members will be found in another column.

Turning to the stock section, we find that the numbers were rather below those registered at Croydon last year, but this was no doubt to a great extent due to the fact that Plymouth was rather out of the way for northern exhibitors. The following statement shows the entries in the various sections:—

	Plymouth, 1902.		Croydon, 1901.	
Horses—				
Agricultural	53		67	
Hunters, hacks, ponies, harness and jumping	223		243	
	—	276	—	310

Total		1934		2096

Horses.

The equine classes at this show have for many years been but very badly supported, and the Plymouth meeting this year forms no exception to its predecessors, but rather in a measure emphasises the shortcomings of past years. The place of meeting this year is very far west, entailing a long and expensive journey down from the Midlands and certain counties where the majority of the best horses of all classes are to be found. This may be assumed as one reason for the more than usually short supply, and to this may also be added the fact that the Western farmers and breeders turn their attention much more to the breeding of cattle and sheep than to horses, and so the local entries amounted to a very small reinforcement to the outside and long-distance exhibits. Another probable reason to be added for this shortage is the fact of the show continuing over so many days, thus entailing extra expense and risk of accident or sickness coming upon the animals. Whatever may be the cause or causes, there is no gainsaying the fact that it is not a good show of horses at Plymouth. In some of the classes the exhibits are doubtless of first-rate quality, and in one or two of the hunter classes a fairly good muster came into the ring, for the rest about three or four in a class was about the average.

Agricultural Horses.

These classes take precedence in the catalogue, and were the first to be judged, Mr. Crossland, who holds the reins of government at the famous Buscot Park Stud, officiating single-handed as judge, and very carefully and expeditiously he got through his work, with very few exceptions placing the animals according to ringsiders' views.

Shires are the first to be talked about, as they ought to be, both on account of their importance as draught horses, and also on account of their great value both for this work and for breeding purposes. Stallions foaled prior to 1900 were the first class in the section, and with the service season just in full swing it could not be expected that competition would be very keen in these; very few stallion owners could spare their useful horses in May for a week at a time. Four animals were entered, and all came into their places. A fairly outstanding winner turned up in these, in the shape of Mr. F. Jeffery's Duncan III., bred near Burton-on-Trent, and sired by Albert Edward, a horse that has proved himself a sire of some of the most valuable Shires in the country, and though getting into years, he came before the judge with a freshness quite his own; his joints are beautifully preserved and his quality generally and beautiful feather are very striking, whilst he also possesses good build and movement, with size and weight. The Directors of the Convict Prison at Princetown were the exhibitors of the second best horse, Royal Sovereign IV., bred in Nottinghamshire, and sired by Markeaton Royal Harold; he is only a three-year-old, and on this account has not so thoroughly filled up as some of the others, but he is a fairly correct and promising colt, and with his breeding should help in improving the heavy horses of the South-West. A second entry of Mr. Jeffery's Holcombe Conquerer obtained the reserve; he was bred in Somersetshire by Mr. Bucknell and got by Gurth 2nd; a deep-bodied, short-legged horse, and good in his quality, with a good set of fore legs, and walking well. The other stallion was perhaps all round the weightiest of the four, and he stood on some good legs and feet, as well as a real cart-horse in appearance, and he was the get of the famous sire Caitiff Lad, but for some reason or other the judge in close quarters did not approve of him, and so he was out of the luck.

There was a big entry of two-year-olds colts, but a good lot of them were absent, so that only five came in for judgment. These were very useful colts, and the first honour pretty readily fell to a well-shaped, good-quality colt, with the right kind of legs and joints, from the Tring Park herd, sired by Old Warden Royal Harold and from a Merry Lad mare; next to him was placed a rattling good Prince Harold colt of Lord Llangattock's, called Hendre Heirloom, a rough Shire stallion, with weight, make, and movement, and standing upon very good legs and feet. Sir W. H. Wills was placed third with Conqueror of Waresby, a son of that good stallion of Captain Duncombe's, Waresly Triumph; he displays a good deal of the correct character and quality of his sire, and is altogether a very useful colt, though many would have preferred the reserve one, a rattling big, well-built, broad-boned bay of Sir J. B. Maple's called Childwick Harold, by Markeaton Royal Harold out of the Bury Victor Chief mare Pratts Buttercup; this colt walks and moves like a cart horse, and has plenty of masculine appearance about him. Yearling entire colts brought out but four representatives, and again the post of honour was accorded to an entry from Lord Rothschild's stud, a grey of very promising appearance and with very classy limbs and joints, he is a grower, too, and his breeding gives assurance that he will continue to grow on; he is sired by Hertfordshire Lad, a very weighty and good sire at Tring Park, and out of Kendal Merry Lass by Prince Harold. The second colt belonged to Mr. Oakley, near Chepstow, and was sired by Sir J. B. Maple's horse Pioneer 7th, his dam by Astern Harold; his quality and formation are alike good, and he may be expected to come out a good stallion later on. Next to him was Mr. R. W. Hudson's Ware Masterman, a colt with good flat bone and generally promising, and Messrs. Marshall secured the reserve card with a distinctly useful colt of their own breeding at Plympton.

Brood mares were confined to a single entry from Mr. Hudson's stud at Danesfield, Nateby Aurea, by Parkside, a great mare in size and substance, carty in her appearance, and correct in her limbs and feet; she obtained first prize, which she well deserved. Three-year-old mares had but what may be termed a couple of entries. There were Mr. Hudson's Wern Blossom, bred in Montgomeryshire, and just about as good as a Shire filly can be expected to be; she was got by Moors Phenomenon, and besides getting first prize was also awarded the Shire horse gold medal. Lord Llangattock followed with Birdsall Buttercup, a high-priced purchase at Tring Park sale, a grand filly all over, and sired by Lord Middleton's coveted stallion Menestrel. The class was open to both sexes, and the reserve card was given to a useful colt or gelding of Mr. Cundy's, a local exhibit.

Two extremely good fillies turned up in the two-year-old class, Lord Llangattock's Hendre Marguerite, a beautiful style and breed class of filly

THE DEVON BULL "MUSA," the subject of the above illustration, won the Champion Prize of ten guineas for the best animal in the Devon Cattle classes (excluding South Devons) at the Bath and West Society's Show at Plymouth last week. "Musa," whose sire was Pretty Middling 2859, and dam Mirabel 3rd 15510, by After Thought 3375, is the property of and was bred by Mr J. C. Williams, Caerbays, St. Asutell. "Musa" was born on January 27th, 1900, and was therefore, shown in the class for Devon bulls calved in 1900, and he secured the first prize in addition to the champion award above mentioned.

got by Prince Harold, reserved for the gold medal as well as first, and Earl Egerton's Active Girl, a successful purchase at the last Tring Park sale, and a daughter of that splendid mare Saxon Girl; she has grown wonderfully, but she came out second. A very useful filly of Mr. Stokes's (local) was second. Yearlings brought out three very good fillies, the first of which, quite a new comer, and in the hands of a new exhibitor, as compared with the others, was a capital stamp of filly, well built, a cart mare all over, and with famous legs and feet; she was sired by Prince Harold and shown by her breeder, Mr. Oakby, near Chepstow. Lord Llangattock's Madrigal and Mr. R. W. Hudson's Danesfield Resound, both of them very good fillies and winners in the best company, followed.

Horses of any other agricultural breed were mostly largely of Shire blood, and do not call for any especial mention beyond that they were of a big, good, and weighty class, with activity.

Hunters.

These classes, as we have already intimated, made a more respectable muster than any of the others, as many as ten entries coming forward in some of these. The West Country, however, has some very good hunting grounds, both for "Reynard" and the more useful stags, and so with this sport so near their doors, many breeders and farmers have been induced to mate their nag mares with some of the K.P. show-bred stallions of the past several years, the result being some about as nice hunters or high-class carriage horses as could be desired.

The first class of the was for mares with foal at foot or in foal; of these there was a good entry, but for some reason only a few of them turned up. The best was Messrs. Downes's Rustic Gem, quite a quality mare, with style and substance enough to breed something choice; she also later on added the gold medal of the Hunters' Improvement Society to her first prize. The other two winning mares, Mr. Adams's Call Duck and Mr. Francis's Clonsilla, were both by thoroughbred sires, and fine class of mares, either to breed a hunter from or a carriage horse with size and style; the class that are to-day both scarce and valuable. Four-year-olds were a large and very useful class; some eleven of them came into the ring, five or six of which were very even in merit, and a valuable and useful class of horses. Mr. J. H. Stokes had sent down his beautiful gelding Haddon, by Herculean Chief, who both in quality and character was fit for anything, and as a ride in the ring is very hard to beat; he well repaid his owner for sending him such a long journey, securing first prize. Other prize-winners, and very good horses, were Mr. Pride-Jones's Tommy Atkins and Mr. Pethick's Port, both by thoroughbred sires, and a pair of capital horses. We at first thought Mr. Cory's bay would have pulled off the honour; he carried the judge in very good form, and having been a winner in strong classes previously, he must be good in hand; however, the reserve card was all that fell to his share at Plymouth.

Amongst the three-year-olds Mr. Calmody had a beautiful chestnut gelding called Mutineer, by Yard Arm, a gelding with a famous loin and capital limbs, as well as substance generally and quality; he was awarded first, and eventually a special prize as best colt likely to get up to a 15-stone rider. Major-General Jago-Trelawney's Salome, by the premium stallion Springold, and Mr. Hore's Jupiter by King Chor, both of capital class and size, were the next best. Two-year-olds were not by any means a bad collection, and Messrs. Madge and Sons and Major-General Jago-Trelawney turned out first raters for the two first horses. Proportionately, perhaps, the yearlings were quite as good as either of the preceding classes. There are some good colts and fillies on show, the best of them being Major-General Jago-Trelawney's Sosostris and a colt of Mr. Finch's by Maxwell, both animals like getting up to weight, as well as having quality. Messrs. Madge and Sons and Mr. Wakely were also close up with a couple of admirable entries.

Hackneys.

These classes, had it not been for a few entries of really good ones from the Eastern Counties, whose owners had been tempted to send them such a long distance because they were enabled to compete in several classes, such as Hackneys in hand, in saddle, and in single or double harness, and thus recoup all expenses and leave a little to the good. The local, or nearer home, exhibits were mostly of mixed breeding, though perhaps all round quite as useful practically as the more showy trained pure-bred ones from the East.

Brood mares had not a single entry, and when it came to mares or geldings foaled prior to 1898 only four came into the ring. These were shown under saddle, for which two or three of them were not at all adapted, and so it could not be said that they made a very good show. Mr. Tatem's Astonisment made first place, rather a harnessy horse and good stepper, as well as put together well. Mr. E. Jones's Lady Athol, by Athol Lad, seemed to move more easily as a saddle mare, and goes evenly, too; she was placed second; and Mr. Mortimer's Miss Cadet, another nice style of mare, was third. Mrs. Thornton's Duke of Cranbrook was the only entry foaled in 1898 or 1899, and was deservedly given first prize. Two-year-olds, though only three were entered, were perhaps the class of the section. Mr. Oppenheime's Knowle Belinda won in this class, probably about as good a two-year-old of any light breed as has ever been seen, either for size, symmetry, or action; later in the day she added the Hackney Society's gold medal to her first prize. Mr. Johnson's Inventress, another Eastern Counties entry, and Mr. Oppenheimer's Old Girl, from the same district, were both showy, good movers, and were placed as named. Next came the yearlings, of which Mrs. Thornton's Middleton Rosa, by Rosaden, a filly with style and substance, came first, and was reserved for the medal. Mr. Johnson's Let 'Em All Come and Mr. Mortimer's Stroudleigh were also both of them very promising yearlings. A very useful mixed-breed class of dual-purpose horses folowed, the property of local tenant farmers. Some of them were well bred, as well as possessing size and action.

Ponies.

In the pony classes some of the smartest animals in the light section were entered, these being eligible for some of the various classes of the later days of the show. Amongst them may be mentioned Mr. Edgar Baxter's Musk, placed third, one of the most stylish Hackneys of the year; Mr. Thornton's Hutton Mimosa, placed first, another of the high-class movers, and Mr. Baxter's Wee Jean.

Mr. C. Jones had also sent up from his stud at Manoravon Megarnia, and Mr. Baxter had sent Black and White; these, as well as Mr. Tatem's Little Eva, were all competing in the under 15 hands class. The single class for ponies likely for polo had but four entries, the ponies of this district apparently not being quite of the right class

CATTLE.

A good all-round display of the bovine breeds must be the conclusion to be drawn from the Plymouth exhibition of the Bath and West, the special feature being the large good muster of the South Devon breed, a variety not often appearing outside the South Home County and Cornwall.

Devons.

The Devon Rubies have their leading herds in North Devon and West Somerset, and they did not come to Plymouth in larger numbers than they appeared at Wiveliscombe, but the prize-winners were superior, those of Mr. J. C. Williams which did not appear at the Somerset Show contributing an improved element so far as symmetry and quality is concerned. Mr. J. F. M. Morris also brought some good animals, which were out at Wiveliscombe. Woodman, the first winner in the series old bull class, and Wheir Jack, the second winner, were both of high merit, containing an affluent mixture ofthe Flitton blue blood. Mr. Williams won both prizes in the two-year-old bull class, his bull, Foxglove, being an excellent second to Musa. Mr. Boscawen's Crab-apple, from Cornwall, was like the bulls from Caeshays, superb in quality. In the class for yearling bulls Mr. Williams again won both prizes, but his second bull, Kerble, was much preferred by outsiders to his first prize, Musa. Mr. Tribble's Fern of Holsdon, in the cow class, had large and indications of usefulness, as well as carrying good form, the second winner, owne by Mr. Morrish being also a good specimen of the breed. The Somerset breeders had hitherto been ill-matched with their more Western competitors, but in the class for heifers in milk, calved in 1899, Mr. Portman's Captive Belle repeated her Wiveliscombe victory, although it is true she had only a competitor from her own herd. Mr. Portman also won a first with his yearling heifer Hestorcome Myrtle, Mr. Morgan's first-prize two-year-old heifer being also bred by Mr. Stanley in Somerset, and Mr. Everard's second-prize two-year-old heifer was from a Somerset herd. The Champion Prize went to Mr. Williams' very shapely heifer, Musa.

South Devons.

South Devons came out admirably with eight old bulls generally deemed a fine collection, and Mr. Skerry's first winner, Cromer, was generally admired. The other bull classes had six entries in one and eleven in the other, but they were not deemed quite so high in merit as the old class. There were some deep-milking fine cows, which displayed their useful character admirably. South Devon farmers term this their rent-paying sort, and they will have to do with no others. Mr. Lus combe's first prize, Beauty 2nd, combined admirably a depth, fulness, and evenness of form to satisfaetory grazing and dairy property. Her superiority is probably due to the grand impress of her illustrious sire, Doncaster, which for several years did such good work in the herd of Mr. G. S. Wroth, and Mr. Wroth's very perfect second-prize yearling bull, The Czar, which almost everybody stated ought to have had the first premium was hed very valuable impress.

Shorthorns.

Shorthorns made an excellent display. There was some difference of opinion as to the correctness of the awards in the senior bull class, which reversed the decision at Witney in Mr. J. D. Wallis's Granite Chip, which was only third, these being selected for first prize here, while Messrs. Little and Sons' Vain Lord, which was first there, now being placed second. The bull that came between them at the Oxfordshire was Mr. J. T. Hobbs' New Year's Gift, which was not entered for this show. In the two-year-old bull class there was another reversal, which satisfied popular opinion better, as at Witney those people preferred Mr. J. D. Willis's C.I.V. to Lord Rothschild's Silver Mist. It will be seen that the latter did not take either of the three prizes here, and that C.I.V. was first, second to which came Mr. G. F. King's Lord Bruce, the Royal Dublin Champion. Mr. J. D. Willis's Bapton Florist, the first winner in the yearling class, repeated his victory at Witney, and the second yearling, Mr. Henderson's Baron Buscat, was first winner at the Notts County Show. The Shorthorn cows were several of them grand in their outlines, and there were deep milkers among them, Mr. J. D. Willis's White Heather gaining premier position everywhere. Lord Calthorpe's Warrior Queen, with which Captain Duncome won a great many prizes, was here second to her, Mr. Henderson's Ringdale Favourite 2nd, the reserve for champion at the Royal last year, having to be content with third prize. Other notable animals, which triumphed either in the Shorthorn Society's dairy class or that for three-year-old heifers in milk, were Lord Rothschild's Sunshade 2nd, Mr. Hoskin's Wild Duchess 20th, Mr. T. Coleman's Hawthorn Green 3rd, and Mr. Henderson's Moss Rose 2nd. The heifers of Mr. J. D. Willis, Mr. R. Stratton, Mr. Hoskin, and the Earl of Cawdor, which won prizes, are beautiful specimens, and all of these will no doubt be heard of again.

Herefords.

Herefords made a fair muster, many more animals appearing than could have been expected, considering the great distance of Plymouth from the counties where the Whitefaces are chiefly bred. Five old bulls had been entered, and made a good appearance in the ring. Mr. Barneby's Gambler, which was selected for premier place, is very level in conformation, of nice quality, and was placed third last year at the Herefordshire and Worcestershire Show. The Earl of Coventry's Vishnu which he now conquers was then above him. Royal Rupert, belonging to Messrs. Judge and Ferriss, was younger than those placed above him, but in rich flesh and character seemed attractive. He was second to Vishnu at Witney. Two-year-old bulls should have been nine, according to catalogue, but two were absent. Mr. Turner's firrst-prize Magnate was h.c. in the strong class at Ivesham last year. Mr. Faber's Lord Roberts was then honoured also, and received first prize at Witney. Mr. A. E. Hughes always has a good yearling bull to be first in show-rings, and his Glendower 2nd now came to the front, lengthy, straight and uniform, with four others taking honours behind him, all of considerable merit. There were only four cows and three-year-old heifers in milk—two for either class. Mr. J. Tudge's first-prize cow, Bracelet, was honoured at Croydon last year. She appeared now with a good calf at foot. In the other class Mr. Faber's Saucebox, which secured the prize, was also accompanied by a grand calf. She was bred at Leinthall, and Mr. Faber bought her at the sale of Mr. W. Judge last autumn. Mr. J. Tudge's Princess Royal, now placed reserve to her, won first prizes at the Bath and West and Royal Counties Shows last year. Royal Gem, the first-prize two-year-old heifer, was first at the Royal Counties and third at the Herefordshire last year. The yearling heifers made an exceedingly good class, Mr. R. Green's Ivy Lass, which headed them, is well-nigh faultless in form and of nice character. Lord Llangattock's Hendre Bountiful, of lengthy, straight form, is also very uniform. Daisy belonging to Messrs. Firkins, also carried a lengthy, even, outline, and the two heifers of Sir J. Cotterell, which were h.c., were remarkably pleasing in style, with even, well-shaped forms.

Sussex.

Sussex cattle made a short muster; still, a good, representative one. The three old bulls were of large size, Mr. Braby's a veritable giant. Mr. Sailland's more level one, of very rich flesh and good quality, was, however, the one for the front. Lord Derby's Grazier also possessed considerable merit. Mr. Saillard's younger bull, Marquis 2nd, with the exception of being a trifle narrow behind, was of exceeding good form. Lord Derby won first prize in the cow class with Fussy, of large stature and considerable substance. The five two-year-old heifers formed a remarkably good collection. Lord Derby's Fisk Valentine, which was placed at their head, had length and good proportion, and Mr. Montifiore came

second with a well-shaped heifer, which ran her conqueror close. All the others were honoured, which, indeed, was the good fortune of the Sussex animals generally that came to Plymouth. Earl Winterton was first in the yearling class with a very nice well-shaped one.

Jerseys.

Jersey cows were truly a grand lot, many of them showing very full udders. As many as fourteen were noticed, including the three prize-takers and the Marquis of Winchester's winner of the Blythwood Bowl. Lord Rothschild's Beresford Trick was at their head, uniting large scale to beautiful character, and carrying a very full udder. The three-year-old heifers also presented to view a number of deep-milkers, and an equally large proportion received notice. Mrs. Macintosh's Vivienne, full of quality, was first winner, but in the two-year-old class Lord Rothschild again had the ascendancy. The yearling heifers formed the largest class, there being twenty-six entries. They were, as a whole, so beautiful in character that twenty obtained notice, and Mr. Miller-Hallett might well be proud of being at the head of so splendid a class.

There have been larger musters of the Jersey breed, but seldom better ones, scarcely an inferior animal meeting the eye in this display. The old bull class was the only one with a short entry. But Lord Rothschild's Tudor Boy, the first winner at the Oxfordshire Show, was one of the two well known to be symmetrical and of beautiful character; and the first-prize bull by the Bishop of Norwich, in the milker class. Carnation's Gem, bred by Mrs. Macintosh was not only elegant in style, but rich in his markings, the second bull of Mr. Brutton being also of good conformation and character. He beats here the second winner of the Royal last year. Both two-year and yearling bulls were tolerably large classes. Admiral brought a handsome one to conquer in the yearling section, and besides three prizes several honorary distinctions were bestowed.

Guernseys.

Guernseys made an admirable display also. The old bull class had, it is true, only three, but they were first-class ones. Mr. W. A. Glynn's, which was first winner in the two-year-old class at Croydon last year. There were seven entries of two-year-old bulls, which were headed by Lady Tichborne's Rival, third to his her-companion, Master, last year. He carries now a lot of substance, but is very uniform. Mrs. Montefiore's King Edward has a good head and nice form, with excellent quality, and several of the others seemed very deserving. There were eleven entries of yearling bulls. Mr. Glynn's Sunshine, which was at their head, possessed nice quality. Lady Tichborne's Merry Anton, with his stylish head and uniform proportions, appears making magnificent development, and several of the others are likely to come out well next year.

The cows had, most of them, noticeably dairy properties. Lady Tichborne's first winner is of that quality. Mr. Hambro's two had very capacious bags, and so had Mrs. Fownes' Princess Rhea, and Mrs. Montefiore's Zaza. A large proportion of the three-year-old heifers also gave good indications of dairy usefulness. The two-year-old heifers were so generally noticeable for good forms and beautiful character that only a few could be passed over. The yearling heifers were also remarkably chaste and richly marked, the three spotted by the judge for the prizes being gems of sweet character.

Satisfactory was it to find so large a muster of the Kerry and Dexter breeds. In the bull class of the former there were six entries. The first winner, belonging to Messrs. Robertson, carried grand form and a nice skin. Mr. Thorley's Nap was of chaste, nice character, the third winner and the one which received reserve, not being quite a match for the two set above them. The cows and three-year-old heifers numbered seven, and the class was commended entirely. Several carried nice udders. Messrs. Robertson's Vista was one, and with her full-shaped form she seemed very deserving. Mr. J. Thorley's first-prize heifer had also good form and nice quality, and was placed at the head of an attractive collection.

Red Polls.

Very surprising was it to find so many Red Polls so far away from their native pastures, and the exhibits were of considerable merit. Defiance, Lord Amherst's first-prize old bull, is very rotund and uniform, with a broad, level back, Mr. Cooper's Felix being also an excellent specimen. In the younger bull class Lord Amherst could only obtain the second prize, and Mr. Corbet's Albert, which was preferred to Royal Standard, certainly had most style and quality, but the latter was better shaped. In the class for cows or heifers in milk, Mr. Cooper's Ruthless 2nd, of shapely, nice form, also carried a full udder. Earl Radnor's Necklace, bred by the late Mr. J. J. Colman, was remarkably chaste and uniform with a full udder. An evidently deep milker, Mr. Hammond's first-prize two-year-old heifer, was exceedingly attractive and very perfect in conformation. The second and reserve heifers of Lord Amherst and Sir T. V. S. Gooch were also uniform. Every heifer exhibited received notice, together with most of the bulls and older females, so that the judge had a high estimate of the character of the display. Some of the heifers were, however, light in their hindquarters, and an indifferent hindquarter is a common fault of the Red Polls.

THE DEVON LONGWOOLLED SHEARLING RAM shown above is the animal with which Mr. A. White, of Torweston, Williton, secured a First Prize at the Bath and West Society's Show at Plymouth last week. This ram was born in February last year, and was bred by Mr. White.

Aberdeen Angus.

Although the Aberdeen-Angus classes were short in numbers, the animals that appeared were very high in merit. Mr. Cridlan's old bull, Elate, had a walk-over, being the only one in the class. There were two younger bulls, Mr. J. H. Bridges and Mr. R. W. Hudson sending one each, and both were shapely and of excellent character. The first cow—Joyful—belonging to the latter, was full-shaped, carrying a lot of substance, and had a fine calf with her. Manrur, the first-prize three-year-old heifer of Mr. Bridges, seemed well-proportioned and full of quality. Mr. Hudson's two heifers, Star and Alice, were also of very faultless forms. The junior heifers were six in number. Milady, which had front place, seemed well-nigh faultless, and his herd companion, which secured third prize, was very shapely. Barbarina 2nd, belonging to Mr. Bridges, with straight outline, seemed likewise very deserving.

Dexters.

Dexters were still more numerous, and a splendid collection. The Duchess of Devonshire's Compton Darky, of a fine form and substance, had the champion premium, and is a bull of great excellence. The bulls generally were also bonny specimens. Six of the cows received notice, the Duchess of Devonshire again coming to the front, as likewise she did in the yearling heifer class, which, having eight entries, was commended entire. Seldom, if ever, has a more beautiful display of the breed come under the public eye.

SHEEP.

The sheep section at this show is always one of great interest for, generally speaking, there is always included in their schedule a larger variety of breeds than at any other show, save the Royal. This year's collection was fully typical of this, for we had the advantage to see, side by side the Devon Longwool and the South Hams, also a notable exhibit of Dartmoors and a very capital lot of Exmoors, in addition to excellent specimens of the more widely known breeds. The entries in the aggregate numbered 170, as against 188 last year at Croydon, this slight falling off was to be regretted, but reference to the catalogue for the last meeting held by this society at Plymouth shows that the total entries in this section then numbered 211, so that it will be seen that in respect to numbers the present show was considerably smaller than its predecessors. This fact is to be regretted, but it is satisfactory to know from one who was present at both shows that average of merit upon the present occasion was fully as good. The classification throughout was uniform, except for Dorset Horns, who had an extra class for ewes and lambs, in addition to those for yearling rams, pair of ram lambs, and pen of three yearling ewes.

Cotswolds, with an aggregate entry of seven in the three classes, were a good and typical entry, Mr. W. Houlton's flock being represented by a grand yearling ram of high merit, who was first, and also by a very capital lot of ewes first and r.n. Mr. Swanwick's ram lambs, which had no opposition, have developed well, and are of nice character, with capital heads.

The entry of Devon Longwools (eighteen) was hardly so large as might have been expected, seeing the breed were practically at home. Mr. F. White, with three rams, was first, r.n., and h.c. The leading ram had capital scale and character, but he lacked that firmness of handle which was so notable a feature in the best of Mr. H. E. Thorne's three, who came in for second honours. This ram might have gone to the top; he was a grand one; his flock-mates secured third and c. Whatever doubt may have existed in respect to the allocation of the leading award in the preceding class certainly did not exist in that for ram lambs; here, without question or doubt, Mr. F. White was top. He took all three honours with some beautifully selected, and well-grown lambs of fine type. Mr. W. Bunt's two entries, r.n. and c., were also worthy of notice, as they displayed careful breeding and selection. Mr. F. White met with no opposition in the yearling ewe class, which, had there been, would hardly have affected the result, for his two leading pens of them were grandly-fed, good-fleshed ewes of their breed.

The South Hems or Devons made a fine display, with twenty-one entries, the utility of which was, however, almost entirely, if not quite, spoilt by the insane manner in which they were smothered with colour, the actual result of which was to effectually prevent anyone critically examining them, except at the risk of being smothered with red ochre. Surely the example of other breeds should be enough to show these exhibitors the uselessness of this practice. Mr. J. H. Fairweather led in the yearling ram class with a finely-developed, good-top ram, whilst the same remarks, with the exception that he was a bit weak in the scrag and twist, are applicable to Mr. W. F. Sobey's second winner, but, barring its head, the better ram of the class was the third winner, from Mr. J. S. Hullett's, who however, with the defect named, could not have gone any higher. Another capital ram was also noticed, Mr. J. P. Matthews's, who was r.n., and ran the third ram very close indeed for his place. First, second, and r.n. for three pens of ram lambs is expressive enough to show the appreciation secured, and we say most worthily deserved by those excellent pens that represented Mr. J. S. Hallett's flock. In this class the third winners came from Mr. W. F. Sobey's flock; these were well matched, but were hardly so forward or as masculine in character as the leading pens. Mr. H. Fairweather's fine lot of yearling ewes, first and second, were well brought

out and handled with fine touch, being evenly drawn and with nice type, whilst the r.n. pen, from Mr. T. S. Walters, were of good merit and conformation, but lacked that uniformity of fleece that is an essential element in all flocks. The Southdown, who were, of course, far away from their district, made, however, a most typical entry with nineteen pens. A grand, symmetrical, good-fleshed ram, with typical legs and loin, secured first and male championship for Mr. W. C. Adeane, who also penned the second prize winner, a ram whose touch denoted wealth of flesh and whose conformation was of high merit. Third honours went to a very good-fleshed sheep from Colonel A. F. Walters's flock, who also had another entry commended; whilst that well-known flock, Mr. C. Ellis's, of Summersbury, secured r.n., with a ram of high merit and quality. As was the case last year, Colonel McCalmont secured easily the leading place in the ram lamb class, with a grand pair, evenly matched, with nice heads, his second string being third, with a deep-fleshed pen, from Mr. C. Adean's, who were wonderfully good in the leg and twist, second, leaving the barren honour of r.n. to a pen of most promising lambs from Colonel A. F. Walters's flock. Oxford awards in the yearling class were not maintained, Mr. J. Colman's pen of most typical ewes, with fine fleeces and heads, being put second to Colonel McCalmont's pen of deep-fleshed, wide, and well-developed ewes, which also won the Champion Medal, whose handle was better than the first-named pair; third honours and r.n. went to Colonel A. F. Walters, whose pen is one that will improve, and was well brought out; whilst a capital pen of more than ordinary merit from Mr. G. Ellis secured h.c.

The entry of Hampshire Downs (sixteen) was of a satisfactory description, and in the winning shearling ram Mr. Carey Coles owns a ram of high merit, with fine masculine type and carriage, having the size and strength needful in this description of sheep. His closest competitor was Mr. J. Flower's ram, a different type, wider, lower, and closer to the ground, with grand flesh, and good both in front and behind, a ram of high quality. Third honours also went to the Chilmark flock, for a very typical sheep. The r.n. went to a capital ram from Mr. J. Joyce's flock. In the ram lambs the Chilmark flock was well to the fore, as its two pens of fine and well-grown lambs were placed first and third, awards in which we think justice was done, though there can be no question but that Mr. Carey Coles' second-prize pen, with masculine heads and good flesh, were a very excellent pen. Both Mr. J. Joyce and Lord Rothschild secured h.c., and the latter, with his second pen, a commendation. These three pens were of nice type, particularly the foremost pen from Tring, which were lengthy, well-grown lambs, with capital backs and shoulders. Mr. J. Flower was first and second in the yearling ewe class with two pens of grand ewes, the second pen being the better of the two.

The Shropshire entry was eminently satisfactory, namely, twenty-two, and Mr. R. P. Cooper's yearling ram, who went to the top of this class of a dozen entries, was one of excellent merit and high character, with most typical head and skin; the third award also went to this flock's second entry. Mr. W. F. Lupe's better ram went into the second place, a grand type of a ram, with good masculine character and substance, with real good flesh. A pair from Mr. E. Nock were r.n. and c. The former ram, we think, had hard luck in not getting into the money, as we preferred his flesh and general character to Mr. R. P. Cooper's third sheep. Mr. T. Fenn's entries, h.c. and c., had good merit. The ram lamb awards went to Mr. R. P. Cooper and E. Nock, in the order named. The latter's did not match so well, but were of grand-flesh type. The contest for ewes was keen, but Mr. W. F. Inge maintained his place at the top, a very capital pen of ewes, good in their flesh and fleece. Second honours went to Mr. R. P. Cooper's deep and wide pen of ewes, whose quality of flesh and type was, as they say, "real good." Third honours went to Mr. T. Fenn, and r.n. to Mr. E. Nock, pens neither yet at their best, but well worthy of the awards they received.

The Oxford Down entry and competition was thoroughly good all through, there being twenty-one pens entered. The Oxford awards, namely, Mr. J. T. Hobbs first and R. W. Hobbs second, were again repeated, and, in fact, it could not really be otherwise, for both these are grand rams, the former particularly so. Mr. A. Brassey's third entry was ready a month too soon. He has been better than he is respect to flesh and touch, whilst he is hardly of sufficiently masculine type and substance for so large a sheep. Mr. J. T. Hobbs came in for r.n. with an improving ram of merit. In ram lambs, Mr. Brassey held his place with a pair of well-grown lambs, Mr. J. T. Hobbs being second and r.n. with two pens of wide and good-backed lambs, and Mr. R. W. Hobbs came in third, a very nice, useful pen. Once again here, without question, Mr. A. Brassey led in the ewe class, with a grand pen of evenly-matched ewes, a pen that, go where they will, they are bound to be of great advantage, both to their breed and breeder, on account of their high merit and quality. Mr. T. P. Hobbs was second and Mr. R. W. Hobbs third, leaving but barren honours to reward Mr. W. A. Trewake's work in the two well-brought-out pens that represented his well-known flock.

Exmoors were small in number, but high in merit, Mr. C. N. Skinner's noted flock leading in each class; in fact, all the cash awards, save second in the ewe class, went to his entries, which we need hardly say were most typical of their breed. Mr. J. Howard owned the second-prize pen of ewes, a well-matched, even pen.

As before mentioned, the Dartmoors made a grand display, and were, in fact, one of the best, if not the best, representative displays of any breed. The entry was twenty-one, eight of which were yearling rams, in which class Mr. E. P. Northey, with a grand trio, took second and r.n. The leading ram was a grand type of its breed, with a very excellent and even fleece, Mr. J. R. T. Kingwell, who was third, had also a very fine masculine ram, with even symmetry and type, merits which were seen to great advantage in the following class for ram lambs, where this exhibitor came in for first, second, and r.n., the lambs throughout being well matched and typical of their breed. Mr. W. Rouse, who was third, were hardly so good under hand, nor quite as uniform in type. Again, in the ewe class, Mr. J. R. T. Kingwell led the way with a couple of finely-brought-out pens, well done, and evenly matched, which were first and third. Mr. W. Rouse's pen, that ran the winners very close, was a good second.

The Dorset Horns had an entry of thirteen, and it is most satisfactory to record that these were not, as often has been the case, all from one exhibitor, for upon this occasion there were three competitors, a fact we are pleased to note. Mr. E. J. Merson led in the yearling ram class with a fine, typical specimen of its breed; he also came second with a promising pen of ewes, and r.n. for ram lambs and ewes and ewe lambs. Mr. W. R. Flower's well-known flock led in each class it entered, namely, ram lambs, yearling ewes, and ewes and ewe lambs, being first and second in the former and last class, and first and r.n. in the middle one, with specimens which those who are acquainted with the breed will hardly need reminding of merit and quality unsurpassed in all the essential characteristics of the breed.

Pigs.

Mr. E. Burbidge made the awards in the Berkshire classes, which were the best that have been seen out for a long time at the Bath and West. In the old boar class there were half-a-dozen entries, and here Mr. R. W. Hudson took first with Danesfield Weuria, a very fine young pig that has not as yet attained its full merit; he was second, with Danesfield Common, a year older, but not quite showing the same promise. The Earl of Carnarvon's Half Mark needed a trifle more training, as it did not hold itself in the most favourable position for the judge's inspection. The young boar class was a very good one indeed as regards quality, but not sufficient in numbers, there being only an entry of four. Here a growing, stocky pig of Mr. R. W. Hudson's was placed first, whilst Mr. J. A. Fricker pushed him very close, but had to be content with second, the reserve going to Mr. A. Hiscock's boar, that needed a bit more finish. In the breeding sow class there was a very keen competition, and rarely has such a splendid sow as the Hon. Claud B. Portman's Ethel been brought out. She has length, depth, quality, but is a trifle heavy in the jowl, and she subsequently took the championship. Mr. R. W. Hudson's Danesfield Mistress lacked the age to put on the more mature charms of the other, and had, therefore, to be content with second place, Mr. J. A. Fricker's Flawless Form not exactly fulfilling her nomenclature. The young Berkshire class (sows) was represented by an entry of five, and here again Mr. R. W. Hudson topped the class with a very fine pair, that should stand high later on. Mr. Arthur Hiscock was second, with a very compact, level pair that scarcely showed their full merit.

The exponents of the Large Blacks, after the meagre classes of last year and the general deficiency, both in numbers and quality, have evidently seen the error of their ways, and have therefore brought out a far stronger team than has been seen for years past. In the old boar class, Mr. James Trayner was placed first, with Lord Roberts the Second, which showed length, depth, and quality. He was somewhat closely run for this position by Mr. John Frayn's Black King, a pig that did not make the most of itself whilst out before the judges. Mr. J. H. Glover was third with Cornwood Squire, a downright hard, serviceable sire. In the young boar class for pairs, there was an entry of half-a-dozen, and there was no gainsaying the decision, placing Mr. E. Gimblett's pair first; they had nice typical heads, drooping ears, and well-packed loins, and nicely-turned hams. Mr. J. Wakeman's second-prize lot scarcely came up to this standard of merit, and apparently his third-prize pair came from the same litter. The breeding sow class only brought out the meagre entry of four. Here again Mr. E. Gimblett's careful breeding was recognised in Sussy 1st, a nice, well-developed sow, showing a lot of firm flesh, despite show condition. Mr. J. H. Glover was second with Cornwood Lass 1st, that showed produce progeny beloved by bacon-curers, and with rather nice loins. The young female class only produced one entry, and this one did not turn up.

The Large Whites are evidently fast assuming the position that they should take as the chief of the bacon breeds. Sir Gilbert Greenall, as usual, was placed first, with Walton What's Wanted 3rd, in the old boar class, second going to Mr. Sanders Spencer's Holywell Hugh. In the younger class for pair of boars, the competition, though smaller in number, was keener in quality. Here Mr. Sanders Spencer was first with a wonderful, growing, long-backed, strong-backed pair. Second was given to Sir Gilbert Greenall, a fine pair, but scarcely so well brought out as the others. In the breeding sow class, Sir Gilbert Greenall had a most easy victory with that superb specimen, Walton Topsy 5th, showing length and strength, and which was placed reserve for the championship. Second prize went to Mr. Manuell, of Cornwall, with Treverna Lady 7th, a rather nice sow; third going to Mr. A. Hiscock, Molecombe, Dorset, with Croydon Duchess. The young sow class was also extremely good, though only containing four entries. Sir G. Greenall again took first, with a fine, nice, deep, heavy pair, Mr. Sanders Spencer scarcely showing the requisite weight.

The Middle Whites were scarcely so representative as they might have been. Sir Gilbert Greenall took first, with Walton John, a deep, heavy pig, that will do well later, and second with another good one. In the young boar class, Mr. Arthur Hiscock was an easy first with a well-furnished pair that showed great weight, Mr. Sanders Spencer being a close second with one showing quality, but hardly size, enough.

The breeding sow class was a very strong one indeed, Mr. A. C. Twentyman being an easy first with Castlecroft Primula, as straight and even as anyone could desire, Mr. Sanders Spencer's Rosadora being a very close deep second. The young class for pair of breeding sows was not over strong either in numbers or quality. Mr. A. Hiscock was first with an even lengthy pair, which showed plenty of lean meat, Mr. Sanders Spencer's pair being smaller.

In the small white, or small black, class the contests ran between the Hon. D. P. Bouverie and Sir Gilbert Greenall, and they both sent some excellent specimens of the breed.

Tamworths, though so far from home, made a really excellent display in the old boar class. Mr E. Hamel was first with a straight even fleshed one, Middleton Mainspring, Mr. D. W. Philip being second with Whitacre Unionist. In the young boar class Mr. H. Stephens's Cholderton Salisbury was first with a very lengthy growing pair, though Mr. Philips's second-prize lot showed more quality. There were four entries in the breeding sow class; here first prize was awarded to Mr. H. C. Stephens's Whitacre Beauty, which was bred by Mr. D. W. Philip, and won numerous successes. This sow was subsequently awarded the National Pig Breeders' Association's medal. Mr. Philip took second with Whitacre Countess 9th. There were only a couple of entries in the young sow class, Mr. D. W. Philip winning easily with a long growing pair showing considerable quality.

Produce.

The cider classes this year were somewhat disappointing as far as Devon classes were concerned, the local makers evidently fighting shy. Had it not been for the four exhibits of Mr. C. Haydon the classes might have been left out of consideration, and even his exhibits varied very much in quality, though his under 4 per cent. bottled was the best of the lot, being very clean.

The Hereford makers scarcely did any better than the Devon men. In the over 4 per cent. classes there was not a prize awarded, though there were only two entries. In the under 4 per cent. of alcohol classes Mr. J. Bazley sent a very good exhibit in the cask class; in the bottle class he was placed second to Messrs. Yeoman's, they making two entries each, there being only seven entries in all the Herefordshire classes.

Somerset came well to the fore with, and made big entries in, each class. Messrs. Crofts were the leaders, and they sent some excellent cider indeed, clean, well made, and of nice flavour, and therefore he won the champion gold medal for his splendid cider in the over 4 per cent. bottle class. Messrs. Davis were very successful in the under 4 per cent. classes, and obtained the reserve

for the championship with a clean, fruity-flavoured cider, having a nice aroma. Messrs. Tilley who have won so often before, were very highly commended and placed second reserve for the championship, but their ciders were much too sweet. In the classes for cider made in counties other than Devon, Hereford, or Somerset, Messrs. Rout made the only entries in the over 4 per cent. classes, whilst Mr. Knight made three entries and Mr. H. Thomson one in the under 4 per cent. classes.

Cheese.

It was the best lot of cheese that has been seen for years at the Bath and West, the old Cheddar class being especially good. Mr. H. Travers Wills took first with a beautiful-flavoured cheese, Mr. A. Osborne, Dorset, was second with a rare old Cheddar, whilst Mr. H. White, from the same county, was placed third with a trifle teart curd. The new Cheddar class revealed some well-made specimens, Mr. J. Sage taking first with three cheeses weighing about 140lb. each, Mr. H. Cannon being second with a nice, clean-flavoured, rich cheese. The students' classes were the weakest in the show, both as regards quantity and quality. The truckle class was a very fine one, and here Mr. H. Travers had another hardly-contested victory. Mrs. Candy's well-made exhibit running him very close. The Caerphilly class contained many varieties of this make of cheese, which is becoming very popular in the West of England. The cream cheese, as usual, were weak in numbers as well as quality.

Butter.

There was a capital display of butter, and it was made additionally attractive by being shown on white tiles reposing on a bed of grass. The majority of the makes were made from scalded cream, and this had been overheated in many instances, thus rendering the butter hard and gritty to the taste. Mr. J. H. Philips, of Bideford, was a very successful competitor, as was also Mrs. S. R. Milden, Mr. A. F. Somerville, and C. Hayes. There was a great deal of uniformity about these makers' exhibits. The class for butter made without salt proved to be very insipid. The salted butter class was not a bit better than usual, containing several exhibits not of the highest quality. It was rather singular that an Irishman should be selected to make the awards in the Devonshire scalded cream class, but he got through his task remarkably well. The cream as a whole was of nice golden colour, of good consistency and capital flavour, and was well shown in suitable crocks. As a whole the produce was the best as regards quality seen at the Bath and West for years past; evidently technical education has done much to improve the old hand and tub methods out of existence.

Working Dairy.

Butter-making competitions were carried on during the week in a spacious thatched building, and attracted large crowds of spectators, who followed the process with great interest. The entries are far more numerous than is usually the case at the shows of the Bath and West Society, but that perhaps is no more than could be expected in a district that is so famed for butter and cream. In addition to the competitions in butter-making, a number of dairymaids were engaged testing for churnability of ripened cream, from various breeds of cattle, with a view to ascertaining where a certain amount of wastage takes place. Another attractive feature of this department were the hand and power separators which were shown at work daily.

Horse-Shoeing

Horse-shoeing competitions were on the programme for several days, and they took place yesterday, exciting a good deal of interest, the farriery in which they were held at the far end of the yard being well patronised by spectators, who evinced a keen interest in the work. Competitors came from all parts of the West of England, and from places even as distant as Wales.

Bee-Keeping.

Demonstrations were given at frequent intervals during the week under the auspices of the Devon Beekeepers' Association. The association aims at securing to members the highest degree of profit that can arise from successful bee culture, and to extend and encourage a public demand for honey, mead, honey vinegar, and other bee products. Further, the association offers opportunities to members in the profitable disposal of their produce, and does its best to prevent the introduction of the large quantity of foreign honey and bee produce—generally of inferior quality, if not adulterated—that passes for genuine British.

Killing and Plucking Poultry.

Mr. C. E. Stallworthy, Devon County Council lecturer, gave a number of interesting demonstrations in the cramming, killing, and plucking of poultry. In a most interesting manner the lecturer described the Sussex method of fattening, and showed the simple appliance necessary for the purpose. By the method the dead poultry are taken to the market in a perfectly fattened state instead of the ordinary store condition in which the majority of Devonshire farmers sent the dead stock to the nearest market town. The Sussex process for fattening is cheap and simple. There were special pens to be purchased at a small cost for feeding, with a trough in front, and after the birds were kept there for a week they were subjected to the cramming process. The latter is simplicity itself, and Mr. Stallworthy was able to demonstrate that he could cram with the best meal 200 poultry in an hour. The lecturer impressed upon the large audiences who attended his lectures the great benefits to be derived from the system he taught. He was certain that if Devonshire farmers gave more attention to the fattening of poultry they would get considerably enhanced prices in the market.

The Annual Meeting.

On Thursday the annual meeting of the Society was held in the Council Pavilion, the Earl of Morley (president) in the chair. Among those also present were the Right Hon. R. W. Hanbury (President of the Board of Agriculture), and Mr. T. H. Elliott (Secretary of the Board of Agriculture).

The President moved the adoption of the annual report which was presented to the meeting, thought they might congratulate themselves on having a very good show from all he heard from the reports of experts.

Lord Heytesbury seconded the motion.

Mr. Eldred Walker said the report referred to cider making. As a tenant farmer, and having made some cider, he did not think the Society went far enough in this work, either in the competitions or in other ways. It was of no use to go on with the work unless they had a means of identifying apples. Twenty out of twenty-four farmers did not know what the various apples were. The Society had a splendid collection there, but the means of identifying them did not go far enough. At French shows apples were shown in the spring with the analysis and records. That Society could not do this a few years ago, but there was now a means by cold storage.

Mr. Farwell hoped that if they could get a small grant from the Society they would be able to show pictures of the apples in the yard. They had forty or fifty specimens in the yard, but very few from Somerset.

Mr. Hanbury on Various Topics.

Mr. Hanbury, cordially received, said: I am very much obliged to you for giving me the opportunity a second time of attending one of these annual meetings, because I feel the extreme importance of the Board of Agriculture and societies of this kind working together. Pulling side by side we can do a great deal, but pulling in opposite directions we may do more harm than good. There is one thing in which we must have sympathy for one another, because I am afraid that with these societies, as with the Board of Agriculture, the great defect is want of money. (Laughter.) We all feel it. I feel it especially. Whether I shall be able to get that remedied when we have money to spend for other purposes than the war I cannot say, but I shall at any rate do my best with my colleagues to put the English Board of Agriculture a little more in that respect on a footing with the Irish, of which, I confess, I am somewhat jealous. I have always maintained that the English farmer is just as much entitled to State support as the Irish is. (Hear, hear.) At the same time, I am most careful in anything I say on this subject to try and impress on everybody that, after all, self-help is of more importance than any possible State help. Help by the State can only be given in the directions indicated by Lord Morley—in experiments and in helping technical education. One of the gentlemen who spoke on the resolution mentioned the question of the distribution of pamphlets. There, again, I am quite sure societies of this kind can help us very much. All the pamphlets of the Board of Agriculture are very good, but it is no good printing and issuing pamphlets unless we can get them to reach the men we want. And I feel that is a defect at the present time. A good deal of this information does not go to the home of the farmer as it ought to do, especially the smaller and more isolated farmer, who perhaps wants assistance of that kind more than do those who farm on a larger scale, and come more in contact with the world. If societies of this kind can help us in that direction we shall be greatly obliged to them, because that is one of our difficulties. Any suggestions that can be made to us we shall be only too happy to receive, because, after all, we have to recognise the fact that there is a great deal to be done in the way of technical education and in bringing home, especially to the small farmer, what is being done by farmers who have, perhaps, better information and greater experience. We ought to borrow even from the experience of foreign countries. We know what the Boards of Agriculture are doing in our colonies and in the United States, and it will be a thousand pities if we cannot pick their brains, adopt their experience, and adapt it to our own purposes, especially in regard to dairying, which is becoming a very prominent industry. We know by the experiments that are taking place at this show what a great deal is to be learnt, and I know, coming as I do from a dairy country, that there is a great willingness on the part of farmers to take a new interest as it were in this subject. In dairying more than anything else, they are beginning to realise that they have got a great deal to learn. Perhaps it is more difficult to get that idea diffused with regard to some of the older industries that have not developed to so great an extent as dairying has, and induce them to start in a new direction. But I am quite sure that with reference to dairying there is a keen desire on the part of nearly all our farmers to be up to date and to learn the very latest results of scientific work. (Hear, hear.) And I feel that a great many of the dairying experiments which have been made have been really of a practical nature. I know there has been a great deal of feeling that many of the experiments have been too theoretical and scientific, and savoured too much of the laboratory, and were not of use for practical work. But that cannot be said of most of these dairying experiments. They are of a really practical nature, and the more they can be driven into the heads of those engaged in dairying the better it will be for that industry. (Hear, hear.) There is another matter connected with dairying which is of special interest to you at the present moment. It is the question of our butter standard. I hope you will agree with me that if butter is sold containing more water than we have agreed ought to be the limit by our standard, then it ought to be sold under some other name than butter. (Applause.) I do not want to hit any particular firm, or any butter in particular. But I want to deal with all butters which are not up to the standard, because I am quite sure that the real road to success is not only growing the best crops and feeding the best animals, but also in making the best butter and the best cheese, and producing the best milk. It is only by doing everything in the best way that we can really hope for success; and I am not going by any act of mine to encourage the production of poor or inferior butter. (Applause.) It is said the new process helps the poorer kinds of butter. There ought to be no poorer kinds of butter. (Hear, hear.) We want to work up to a better standard. That is the true hope for the farmer, and it is for that reason that I hope, with the agreement of my colleagues, to introduce legislation which will have that effect. (Applause.) The farmer is entitled to a trade description of butter, and it ought not to be possible for anybody who sells an adulterated or impoverished article to call it butter. We must call it by some other name. (Applause.) I will say nothing further. I do not know, indeed, that in Plymouth I ought to speak at all, because the Muzzling Order is in force now, and I ought to apply it to myself. (Laughter.)

The report was then adopted.

Mr. T. Dyke said next year they were going to their best place, the city of Bristol, where in 1884 they had over 100,000 visitors to the show, which was a very successful one, and he hoped that next year's show would be equally good. It was his privilege to propose that the Duke of Beaufort be elected president for the ensuing year.

Mr. Farwell, seconding, said all would admit that the Duke of Beaufort would be the right man in the right place as president when they met at Bristol.

The motion was carried unanimously.

Mr. Conway Warne moved that the following, who had been nominated by the council, be elected members of the council for the years 1902-4:—Western Division, Rev. F. F. Buckingham, Mr. C. R. Collins, Mr. R. Marker, Sir J. Shelley, Bart., Sir W. R. Williams, Bart., and Colonel A. Wyatt-Edgell; Central Division, Mr. J. D. Allen, Colonel G. Best, Messrs. E. T. D. Foxroft, J. T. Gibson, A. J. Goodford, H. Hobhouse, M.P., Colonel E. H. Llewellyn, M.P., Mr. M. St. J. Maule, Mr. H. B. Napier, Colonel U. P. Okeden, Major C. D. Sherston, and Colonel H. M. Skrine; Southern Division, Messrs. A. F. M. Druce, C. Goring, C. R. Knollys, J. A. Rutherford, A. Stanford, and C. Whitehead, F.L.S.; North-Western Division, Colonel T. W. Chester-Master, Dr. Rutherfoord-Harris, and Messrs. G. E. Martin, C. D. Phillips, and R. Stratton; without reference to district division, Captain T. G. Best, and Messrs. F. H. T. Jervoise, T. Latham, and J. E. Ransome.

Mr. E. Lewis seconded, and the motion was carried.

Colonel E. H. Llewellyn moved, "That the thanks of the Society be presented to the Local Committee representing the three towns and district for the cordiality with which they have received the Society, and for their efforts to promote the success of the meeting."

Mr. G. E. Martin, seconding, and the motion having been carried,

Mr. J. Walling suitably replied, in the absence of Mr. Soltau-Symons.

Votes of thanks to the judges and to the Earl of Morley brought the proceedings to a close.

Judges.

HORSES.—Agricultural: W. Crosland, Estate Office, Buscot Park, Faringdon. Hunters: M. Angas, Manor House, Whissendine, Oakham. Hackneys and Ponies: J. Griggs, South Creake, Norfolk. Harness Horses and Jumping: G. Gordon, Wincombe Park, Shaftesbury, and C. N. P. Phipps, Chalcot, Westbury, Wilts.

CATTLE.—Devon: W. S. Perry, Crelake, Tavistock. South Devon: B. W. Coaker, Old Newnham, Plympton St. Mary. Shorthorn: R. L. Angas, Blenheim, Woodstock, and J. Peter, Berkeley Castle Estate Office, Berkeley, Glos. Hereford: C. Williams, Glenthorne, Holmer, Hereford. Sussex: A. Heasman, Court Wick, Littlehampton, Sussex. Red Polled: A. D. Bruce, Estate Office, Elvetham Park, Winchfield, Hants. Aberdeen Angus: Rev. C. Bolden Preston Bissett, Buckingham. Jersey: J. H. Shore, Whatley House, Frome, and E. Mathews, Chequer's Mead, Potters' Bar. Guernsey: H. J. Gibbs, Milford, Salisbury. Kerry and Dexter: F. N. Webb, Babraham, Cambridge.

SHEEP.—Cotswold: W. T. Garne, Aldsworth, Northleach. Devon Long-Woolled: W. Greenway, Manor Farm, Halse, Taunton. South Devon: B. Butland, Leigham, Plympton. Southdown: H. Senior, Tarrant Rushton, Blandford. Hampshire Down: E. Lyne, Hillus, Compton, Winchester. Shropshire: T. S. Minton, Montford, Shrewsbury. Oxford Down: C. Bryan, Southleigh, Witney. Exmoor: R. J. Stranger, Court House, North Molton. Dartmoor: R. S. Luscombe, Wisdone, Cornwood, Ivybridge. Somerset and Dorset Horned: J. Kidner, Nynehead, Wellington, Somerset.

PIGS.—Berkshire: E. Burbidge, South Wraxall, Bradford-on-Avon. Large Black: W. Orchard, Trethorne, St. Thomas, Launceston. Large, Middle, and Small White or Black, and Tamworth: J. Barron, Elvaston House, Borrowash, Derby.

PRODUCE.—Cider: J. H. Hill, New Take, Staverton, Totnes. Cheese: Francis Meade, Langport. Butter and Cream: Professor Carroll, Royal Albert Farm, Glasnevin, Dublin.

MISCELLANEOUS.—Butter-Making: Professor Carroll, Royal Albert Farm, Glasnevin, Dublin, and D. A. Gilchrist, B.Sc., University Extension College, Reading. Shoeing: A. Wheatley, F.R.C.V.S., Reading. Shearing: C. Norman, Thurloxton, Taunton. Milking: R. J. Hoskins, Hill View, Beard Hill, Shepton Mallet.

Champion and Special Prizes.

HORSES.

Shire Horse Society's gold medal, value £10, for the best mare or filly in Classes 4, 5, 6, or 7: Mr. R. W. Hudson (Wern Blossom); r., Lord Llangattock (Hendre Marguerite).

Hunters Improvement Society's gold medal, or £5 and a bronze medal, for the best Hunter Brood Mare in Class 10: Messrs. T. C. and L. H. Downes (Rustic Gem).

Special prize of £5 5s., for the best exhibit in Class 11 or 12: Mrs. Calmady (Mutineer).

Hunters Improvement Society's silver medal for the best Hunter Mare or Gelding of any age, bred by a thorough-bred or registered hunter sire: Mr. J. H. Stokes (Haddon); r., Messrs. W. Madge and Sons (Golfboy).

Prize List.

HORSES

SHIRE.

Stallion, foaled before 1900: 1, F. Jeffery (Duncan III.); 2, The Directors of Convict Prisons, Princetown (Royal Sovereign IV.); r., F. Jeffery (Holcombe Conqueror).

Stallion, foaled in 1900: 1, Lord Rothschild; 2, Lord Llangattock (Hendre Heirloom); 3, Sir W. H. Wills (Conqueror of Waresley).

Colt, foaled in 1901: 1, Lord Rothschild (The Lad); 2, H. Oakley (Dewstow Pioneer); 3, R. W. Hudson (Ware Masterman).

Mare and Foal, or in-Foal: 1, R. W. Hudson (Nateby Ace

Filly or Gelding, foaled in 1899: 1, R. W. Hudson (Wern Blosson); 2, Lord Llangattock (Birdsall Buttercup); r., T. R. C. Cundy (Harold).

Filly or Gelding, foaled in 1900: 1, Lord Llangattock (Hendre Marguerite); 2, Earl Egerton of Tatton (Active Girl); 3, J. Stooke (Queen).

Filly or Gelding, foaled in 1901: 1, H. Oakley (Dewstow Matchmaker); 2, Lord Llangattock (Hendre Madrigal); r., R. W. Hudson (Danesfield Resound).

ANY OTHER AGRICULTURAL BREED.

Mare and Foal, or in-Foal: 1, J. Mann (Damsel); 2, C. Marshall; 3, G. W. Horswell (Madam); r., J. Cleave (Magpie).

ANY AGRICULTURAL BREED.

Mare and Foal, or in-Foal, the property of a tenant farmer residing in Devon or Cornwall, best suited for breeding horses for agricultural purposes: 1, J. Mann; 2, C. Marshall; r., G. W. Horswell.

HUNTERS.

Hunter Mare and Foal, or in-Foal: 1, T. C. and L. H. Downes (Rustic Gem); 2, S. W. Adams (Call Duck) 3, C. W. Francis (Clonsilla); r., J. Ford (Court Royal).

Mare or Gelding, foaled in 1898: 1, J. H. Stokes (Haddon); 2, W. Pride-Jones (Tommy Atkins); 3, J. Pethick (Port); r., H. B. Cory.

Filly or Gelding, foaled in 1899: 1, Mrs. Calmady (Mutineer); 2, Major-General J. Jago-Trelawny (Salome); 3, T. Hore (Jupiter).

Filly or Gelding, foaled in 1900: 1, W. Madge and Sons (Gay Boy); 2, Major-General J. Jago-Trelawny (Spartacus); 3, C. M. C. Wakely (Hero); r., J. M. Woodley (Empress).

Filly, Colt, or Gelding, foaled in 1901: 1, Major-General J. Jago-Trelawny (Sesostris); 2, G. P. Finch; 3, W. Madge and Sons (Blagdon Gem); r., C. M. C. Wakely (Ballet Girl).

HACKNEYS.

Mare or Gelding, foaled before 1898: 1, W. J. Tatem (Astonishment); 2, E. Jones (Lady Athol); r., W. Mortimore (Miss Cadet).

Mare or Gelding, foaled in 1898 or 1899: 1, Mrs. R. T. Thornton (Duke of Cranbrook).

Filly or Gelding, foaled in 1900: 1, W. Oppenheimer (Knowle Belinda); 2, A. Johnson (Inventress); r., Mrs. W. Oppenheimer (Ala Girl).

Filly, Colt, or Gelding, foaled in 1901: 1, R. T. Thornton (Middleton Rose); 2, A. Johnson (Let 'em All Come); r., W. Mortimore (Stroudleigh).

Mare or Gelding, under 15·3 hands, the property of a bonâ fide tenant farmer, residing in Devon or Cornwall: 1, T. Tozer (Primrose Lady); 2, W. E. Luscombe (Gladys); 3, W. Mutton, jun. (Rodney); r., A. H. Retallick.

PONIES.

Mare, over 13·2 and not over 14·2 hands, with Foal at foot or to Foal in 1902: 1, J. O. Muntz (Lily of Laguna); r., W. Mortimore (Lady Gay).

Mare or Gelding, 4 years old or over, exceeding 13 and not exceeding 14.2 hands: 1, Mrs. R. T. Thornton (Hutton Mimosa); 2, W. J. Tatem; 3, E. Baxter (Musk); r., E. Baxter (Wee Jean).

Mare or Gelding, 4 years old or over, not exceeding 13 hands: 1, E. Jones (Megania); 2, E. Baxter (Black and White); 3, W. J. Tatem (Little Eva); r., W. Mutton, jun. (Dandy Dick).

CATTLE.

DEVON.

Bull, calved in 1898 or 1899: 1, J. A. Williams (Woodman); 2, F. R. J. Morris (Union Jack); r., Hon. E. W. B. Portman (Hestercombt General).

Bull, calved in 1900: 1 and 2, J. C. Williams (Musa and Foxglove); r., Hon. J. R. de C. Boscawen (Crabapple).

Bull, calved in 1901: 1 and 2, J. C. Williams (Woodbine and Kemble); 3, Hon. J. R. de C. Boscawen (Pip); r., T. S. Morgan (Pound Mormon).

Cow, in-Milk, calved before 1899: 1, W. R. and A. Trible (Fern of Halsdon); 2, E. C. Norrish (Gay Honesty); r., Hon. E. W. B. Portman (Lowton).

Heifer, in-Milk, calved in 1899: 1, Hon. C. B. Portman (Capton Belle); r., Hon. E. W. B. Portman (Moss Rose 3rd).

Heifer, calved in 1900: 1, T. S. Morgan (Quantock Lady Curzypool No. 15); 2, R. W. Evered (Princess 4th); r., Hon. E. W. B. Portman (Hestercombe Daisy).

Heifer, calved in 1901: 1, Hon. E. W. B. Portman (Hestercombe Myrtle); 2, J. F. R. Morris (Fancy 27th); 3, W. H. Bond (Treasure); r., Bovine, Limited (Bovine Princess 2nd).

SOUTH DEVON.

Bull, calved in 1898 or 1899: 1, W. Merry (Cromer); 2, T. B. Bolitho (Nonpareil); 3, J. Wakeham (Good Gift); r., R. E. Paige, J.P. (Buller); c., T. S. Walters (Langston Lad).

Bull, calved in 1900: 1, T. R. Bolitho (Silver Prince); 2, W. Merry (Cromer); 3, Earl of Mount Edgcumbe Langford 1st); r., H. B Mildmay (The King).

Bull, calved in 1901: 1, B. Butland (Famous); 2, J. S. Wroth (The Czar); 3, E. and J. Stooke (Duke); r., T. S. Walters (Coleridge Lad).

Cow, in-Milk, calved before 1899: 1, J. Luscombe (Beauty 3rd); 2, F. T. Glovn and Sons (Crocus); 3, W. Merry (Lovely); r., F. T. Glovn and Sons (Gentle).

Heifer, calved in 1900: 1, H. Brabridge (Dolly 3rd); 2, B. Luscombe (Queenie 2nd); 3 and r., B. Butland (Rosebud and Dairymaid 2nd).

Heifer, calved in 1901: 1, B. Butland (Beauty 4th); 2, J. G. D. Moore (Lady Jane); 3, B. Butland (Princess 1st); r., B. H. Hannaford (May Flower).

SHORTHORN.

Bull, calved in 1898 or 1899: 1, J. D. Willis (Granite Chip); 2, J. Little and Sons (Vain Lord); 3, J. Coad (Rufus); r., Lord Tredegar (Prince Alko).

Bull, calved in 1900: 1, J. D. Willis (C.I.V.); 2, G. F. King (Lord Bruce); 3, L. de Rothschild (Silver Mist); r., T. F. Roskruge (Lord Norman); v.h.c., Lord Tredegar (Jester).

Bull, calved in 1901: 1, J. D. Willis (Baston Florist); 2, A. Henderson, M.P. (Baron Buscot); 3, Lord Calthorpe (Elvetham Victor); r., A. F. Bassett (Royal Duke).

Cow, in-Milk, calved before 1899: 1, J. D. Willis (White Heather); 2, Lord Calthorpe (Warrior Queen); 3, A. Henderson, M.P. (Ringdale Favourite 2nd); r., A. Hiscock, jun. (Patient Happy); v.h.c., A. Henderson, M.P. (Grace Darling).

Pure-Bred Pedigree Shorthorn Dairy Cow, in-Milk, of any age, eligible to rand entered in Coates's Herd Book (or pedigree sent for such entry before the Show), that has not previously won a first prize offered by the Shorthorn Society in a corresponding Class: 1, Lord Rothschild (Sunshade 2nd); 2, W. J. Hosken (Wild Duchess 20th); r., A. Henderson; v.h.c., G. F. King (Countess 56th).

Heifer, in-Milk, calved in 1899: 1, W. J. Hosken; 2, J. Colman; 3, A. Henderson, M.P. (Moss Rose 2nd); r., G. F. King; v.h.c., A. F. Bassett (Carnation 26th).

Heifer, calved in 1900: 1, R. Stratton (Calico Belle); 2, J. D. Willis (Baston Jewel); 3, W. J. Hosken (Lady Plithfield 12th); r., W. Nicholson (Princess 66th); v.h.c., Lord Calthorpe (Elvetham Harebell).

Heifer, calved in 1901: 1, J. D. Willis (Malmaison); 2, the Earl of Cawdor (Golden Grove Seraphina); 3, R Stratton (Daisy Chain); r., J. Colman (Corona).

HEREFORD.

Bull, calved in 1898 or 1899: 1, W. T. Barneby (Gambler); 2, Earl of Coventry (Vishnu); r., W. H. B Cave (Victor); r.c., Tudge and Fenn (Royal Rupert).

Bull, calved in 1900: 1, A. P. Turner (Magnate); 2, G. D. Faber, M.P. (Lord Roberts); 3, W. T. Barneby (Obelisk); r., Earl of Coventry (Methodist); h.c., J. Edwards (Evolution).

Bull, calved in 1901: 1, A. E. Hughes (Gleadower 2nd), 2, P. Coats (Holmer); 3, R. Green (Matterhorn); r., J. Tudge (Lionel); h.c., Earl of Coventry (Huntsman).

Cow in-Milk, calved before 1899: 1, J. Tudge (Bracelet); r., W. T. Barneby (Ringtail).

Heifer, in-Milk, calved in 1899: 1, G. D. Faber, M.P. Saucebox 5th); r., J. Tudge (Princess Royal).

Heifer, calved in 1900: 1, J. Tudge (Royal Gem); 2, W. T. Barneby (Mistletoe); r., A. E. Hughes (Bartonia).

Heifer, calved in 1901: 1, R. Green (Ivy Lass); 2, Lord Llangattock (Hendre Bountiful); 3, Firkins Bros (Daisy); r. and h.c., Sir J. Cotterell, Bart. (Rosa and Julia).

SUSSEX.

Bull, calved in 1898 or 1899: 1, P. F. R. Saillard (Bewbush Marquis); 2, Earl of Derby (Grazer); r., E. E. Braby (Drungewick Prebble).

Bull, calved in 1900 or 1901: 1, P. F. R. Saillard (Bewbush Marquis 2nd); 2, Mrs. Montefiore (Brantridge Ensign 4th); r., Earl of Derby (Grenadier).

Cow or Heifer, in Milk, calved in or before 1899: 1, Earl of Derby (Fussy); r., P. F. R. Saillard (Miss Quality).

Gibbs (Barrow Nest Egg); r. and h.c., the Duchess of Devonshire (Compton Dimple); h.c., B. de Bertodano (La Mancha Gem) and Robertson and Sons (La Mancha Goody Two Shoes); c., W. Stallard (Malvern Style).

SOUTH DEVON.

Shearling Ram: 1, H. Fairweather; 2, W. F. Sobey; 3, r., and h.c., J. S. Hallett; c., W. F. Sobey.

Pair of South Devon Ram Lambs, dropped in 1902: 1 and 2, J. S. Hallett; 3, W. F. Sobey; r., J. S. Hallett.

Pen of Three South Devon Shearling Ewes: 1 and 2, H. Fairweather; r., T. S. Walters.

SOUTH DOWN.

Southdown Shearling Ram: 1 and 2, C. Adeane; 3, Colonel A. F. Walker; r., E. Ellis; c., Colonel H. McCalmont and Colonel A. F. Walter.

Pair of Southdown Ram Lambs, dropped in 1902: 1, Colonel H. McCalmont, C.B., M.P.; 2, C. Adeane; 3, Colonel H. McCalmont, C.B., M.P.; r., Col. A. F. Walker; c., E. Ellis.

Pen of Three Southdown Shearling Ewes: 1, Colonel H. McCalmont, C.B., M.P.; 2, J. Colman; r., Colonel A. F. Walker; h.c., E. Ellis.

HAMPSHIRE DOWN.

Hampshire Down Shearling Ram: 1, C. Coles; 2 and 3, J. Flower; h.c., J. Joyce; c., Lord Rothschild.

Pair of Hampshire Down Ram Lambs, dropped in 1902: 1, J. Flower; 2, C. Coles; 3, J. Flower; h.c., J. Joyce and Lord Rothschild; c., Lord Rothschild.

Pen of Three Hampshire Down Shearling Ewes: 1 and 2, J. Flower.

SHROPSHIRE.

Shropshire Shearling Ram: 1, R. P. Cooper; 2, W. F. Inge; 3, R. P. Cooper; r., E. Nock; h.c., T. Fenn and W. F. Inge; c., T. Fenn and E. Nock.

Pair of Shropshire Ram Lambs, dropped in 1902: 1, R. P. Cooper; 2, E. Nock.

Pen of Three Shropshire Shearling Ewes: 1, W. F. Inge; 2, R. P. Cooper; 3, T. Fenn; r., E. Nock; h.c., R. P. Cooper.

OXFORD DOWN.

Shearling Ram: 1, J. T. Hobbs; 2, R. W. Hobbs; 3, A. Brassey, M.P.; r. and h.c., J. T. Hobbs.

Pair of Ram Lambs, dropped in 1902: 1, A. Brassey, M.P.; 2, J. T. Hobbs; 3, R. W. Hobbs; r. and h.c., J. T. Hobbs; c., W. A. Treweeke.

Pen of Three Shearling Ewes: 1, A. Brassey, M.P.; 2, J. T. Hobbs; 3, R. W. Hobbs; r. and h.c., W. A. Treweeke.

EXMOOR.

Shearling Ram: 1, 2, and r., C. N. Skinner.

Pair of Ram Lambs, dropped in 1902: 1, 2, and r., C. N. Skinner; h.c., J. Howard.

Pen of Three Shearling Ewes: 1, C. N. Skinner; 2, J. Howard; r. and h.c., C. N. Skinner.

DARTMOOR.

Shearling Ram: 1 and 2, E. P. Northey; 3, J. R. T. Kingwell, J.P.; r., E. P. Northey.

Pair of Ram Lambs, dropped in 1902: 1 and 2, J. R. T. Kingwell, J.P.; 3, W. Rowse; r., J. R. T. Kingwell, J.P.

Pen of Three Shearling Ewes: 1, J. R. T. Kingwell, J.P.; 2, W. Rowse; 3, J. R. T. Kingwell, J.P.; r., Ward and Chowen.

SOMERSET AND DORSET HORNED.

Shearling Ram: 1, F. J. Merson; r., W. J. Culverwell.

Pair of Ram Lambs, dropped after November 1st, 1901: 1 and 2, W. R. Flower; r., F. J. Merson.

Pen of Three Shearling Ewes: 1, W. R. Flower; 2, F. J. Merson; r., W. R. Flower; h.c., W. J. Culverwell.

Pen of Three Ewe Lambs: 1 and 2, W. R. Flower; r., F. J. Merson.

PIGS.

BERKSHIRE.

Boar, farrowed in 1899, 1900, or 1901: 1 and 2, R. W. Hudson (Danesfield Warrior and Danesfield Commons); 3, the Earl of Carnarvon (Hall Mark G.); r. and h.c., J. Lawrence (Llangibby Sultan); h.c., J. A. Fricker.

Pair of Boars, farrowed in 1902: 1, R. W. Hudson; 2, J. A. Fricker; r., A. Hiscock, jun.; h.c., the Earl of Carnarvon.

Breeding Sow, farrowed before 1902: 1, Hon. Claud P. Portman (Ethel); 2, R. W. Hudson (Danesfield Mistress); 3, J. A. Fricker (Flawless Form F.); r. and h.c., A. Hiscock, jun. (Manor Molly); c., R. W. Hudson (Danesfield Huntress) and F. J. Morgit (Lady Somerset).

Pair of Breeding Sows, farrowed in 1902: 1, R. W. Hudson; 2, A. Hiscock, jun.; r. and v.h.c., J. A. Fricker; h.c., the Earl of Carnarvon.

LARGE BLACK.

Boar, farrowed in 1899, 1900, or 1901: 1, J. Frayne (Lord Roberts 2nd); 2, John Frayn (Black King); 3, J. H. Glover (Cornwood Squire); r., W. Wills (Lustleigh Boy).

Pair of Boars, farrowed in 1902: 1, E. Gimblett; 2 and 3, J. Wakeham; r., T. Marshall.

Breeding Sow, farrowed before 1902: 1, E. Gimblett (Susy I.); 2, J. H. Glover (Cornwood Lass 1st); r., F. Allin (Halvill Duchess); h.c., W. Wills (Susannah 3rd).

LARGE WHITE.

Boar, farrowed in 1899, 1900, or 1901: 1, Sir G. Greenall, Bart. (Walton What's Wanted); 2, S. Spencer (Holywell Hugh); r., Sir G. Greenall, Bart. (Walton Turk 3rd).

Pair of Boars, farrowed in 1902: 1, S. Spencer; 2, Sir G. Greenall, Bart.; r., T. Manuell.

Breeding Sow, farrowed before 1902: 1, Sir G. Greenall, Bart. (Walton Topsy 5th); 2, T. Manuell (Trevorva Lady 7th); 3, A. Hancock, jun. (Croydon Duchess); r., S. Spencer (Holywell Czarina); h.c., Sir G. Greenall, Bart. (Walton Topsy 6th) and S. Spencer (Holywell Czarina 2nd).

Pair of Breeding Sows, farrowed in 1902: 1, Sir G. Greenall, Bart.; 2 and r., S. Spencer.

MIDDLE WHITE.

Boar, farrowed in 1899, 1900, or 1901: 1 and 2, Sir G. Greenall, Bart. (Walton John); r., A. C. Twentyman (Castlecroft Long Tom).

Pair of Boars, farrowed in 1902: 1, A. Hiscock, jun.; 2, S. Spencer; r., Sir G. Greenall, Bart.; c., S. Spencer.

Breeding Sow, farrowed before 1902: 1, A. C. Twentyman (Castlecroft Primula); 2, S. Spencer (Holywell Rosadora); 3 and r., Sir G. Greenall, Bart. (Walton Rose 11th and Rufford Snowdrop); v.h.c., A. C. Twentyman (Castlecroft Ladysmith).

Pair of Breeding Sows, farrowed in 1902: 1, A. Hiscock, jun.; 2, S. Spencer.

SMALL WHITE OR SMALL BLACK.

Boar, farrowed in 1899, 1900, or 1901: 1, Sir R. Greenall, Bart. (Walton Emperor); 2, Earl of Carnarvon (Highclere Lion); r., Sir G. Greenall, Bart. (Walton Champion); h.c., Hon. D. P. Bouverie (Coleshill Marquis).

Pair of Boars, farrowed in 1902: 1 and 2, Hon. D. P. Bouverie.

Breeding Sow, farrowed before 1902: 1, Hon. D. P. Bouverie (Coleshill Sunbeam 3rd); 2, Sir G. Greenall, Bart. (Walton Jewel 6th); r., Earl of Carnarvon.

Pair of Breeding Sows, farrowed in 1902: 1 and 2, Hon. D. P. Bouverie.

TAMWORTH.

Boar, farrowed in 1899, 1900, or 1901: 1, E. de Hamel (Middleton Mainspring); 2, D. W. Philip (Whitacre Unionist); r., H. C. Stephens.

Pair of Boars, farrowed in 1902: 1, H. C. Stephens; 2, D. W. Philip; r., E. de Hamel.

Breeding Sow, farrowed before 1902: 1, H. C. Stephens (Whitacre Beauty); 2, D. W. Philip (Whitacre Countess 9th); r., E. de Hamel (Middleton Martenella); h.c., D. W. Philip (Whitacre Beauty 3rd).

Pair of Breeding Sows, farrowed in 1902: 1, D. W. Philip; r., H. C. Stephens.

PRODUCE CLASSES

CIDER.

Cider made in Devon.—Cask of Cider, containing not less than 4 per cent. of Alcohol: 1, C. Haydon. Twelve Bottles of Cider, containing not less than 4 per cent. of Alcohol: 1, C. Haydon. Cask of Cider, containing less than 4 per cent. of Alcohol: 1, C. Haydon. Twelve Bottles of Cider, containing less than 4 per cent. of alcohol: 1, C. Haydon; 2, J. M. Came and Sons; r. and v.h.c., Bowden and Coombe.

Cider made in Herefordshire.—Cask of Cider, containing less than 4 per cent. of Alcohol: 1, J. Bazley. Twelve Bottles of Cider, containing less than 4 per cent. of Alcohol: 1, Yeomans Brothers; 2, J. Bazley.

Cider made in Somerset.—Cask of Cider, containing not less than 4 per cent. of Alcohol: 1 and 2, D. J. Crofts and Son; r. and v.h.c., H. Tucker; h.c., W. T. S. Tilley. Twelve Bottles of Cider, containing not less than 4 per cent. of Alcohol: 1, D. J. Crofts and Son; 2, W. T. S. Tilley; r. and v.h.c., D. J. Crofts and Son; h.c., C. Osborn and Son and W. T. S. Tilley; c., W. T. Allen and H. J. Davis. Cask of Cider, containing less than 4 per cent. of Alcohol: 1, D. J. Crofts and Son; 2, H. J. Davis. Twelve Bottles of Cider, containing less than 4 per cent. of Alcohol: 1 and 2, H. J. Davis; h.c., D. J. Crofts and Son.

Cider made in Counties other than Devon, Hereford, or Somerset.—Cask of Cider, containing not less than 4 per cent. of Alcohol: 2, R. Rout and Son. Twelve Bottles of Cider, containing not less than 4 per cent. of Alcohol: 1 and r., Rout and Son. Cask of Cider, containing less than 4 per cent. of Alcohol: 2, A. Knight. Twelve Bottles of Cider, containing less than 4 per cent. of Alcohol: 1, H. Thomson; 2, A. Knight.

CHEESE.

Three Cheeses, not less than 56lbs. each, made in 1901: 1, H. Travers; 2, A. Osborne; 3, H. White; r., H. Cannon; v.h.c., J. Ashby and J. Sage.

Three Cheddar Cheeses, not less than 28lbs. each, made in 1901, by a Student who has received not less than a week's instruction in one of the Society's Cheese Schools held since 1898: 1, Mrs. W. T. S. Tilley; 2, Mrs. W. W. Keel; r., Miss S. A. Steeds.

Three Cheeses, not less than 28lbs. each, made in 1902: 1, J. Sage; 2, H. Cannon; 3, N. J. Sims; r., H. White; h.c., H. Travers; c., E. T. Green.

Three Cheddar Cheeses, not less than 28lbs. each, made in 1902 by a Student who has received not less than a week's instruction in one of the Society's Cheese Schools held since 1898: 1, Miss Sage; r., Mrs. W. T. S. Tilley.

Eight Loaf or other Truckle Cheeses, made in 1902: 1, H. Travers; 2, Mrs. C. Candy; 3, F. W. J. Crocker; r., H. Cannon; c., N. J. Sims.

Three Caerphilly Cheeses, made in 1902: 1, Mrs. W. T. S. Tilley; 2, Miss Spratt; 3, W. Champion; r., Mrs. W. T. S. Tilley; h.c., H. G. Hill; c., E. Dibble.

Three Cream or other Soft Cheeses: 1, Mrs. McIntosh; 2, A. J. Kingsley; r., Miss M. G. Prideaux.

BUTTER AND CREAM.

3lbs. of Fresh (or very slightly salted) Butter, made of Cream from Cows other than Channel Island Breeds: 1, Mrs. J. H. Phillips; 2, Lord Poltimore; 3, Mrs. L. R. Mildon; 4, C. Hayes; r., Mrs. F. Ward; h.c., J. Channon and A. Gibbs; c., Llanover Trustees and W. S. Wroth.

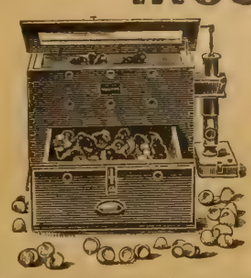
3lbs. of Fresh (or very slightly salted) Butter, made of Cream of Cows of Channel Island Breeds only: 1, Mrs. L. R. Mildon; 2, Mrs. J. H. Phillips; 3, C. W. Armitage; 4, A. F. Somerville; r., C. E. Keyser; h.c., Lord Poltimore and Mrs. F. Ward; c., A. Gibbs.

3lbs. of Fresh (or very slightly salted) Butter, made from Scalded Cream: 1, Mrs. F. Ward; 2, Mrs. L. R. Mildon; 3, Mrs. G. Priest; 4, C. Hayes; r., Miss A. Oldrieve; v.h.c., Lord Rothschild; h.c., Mrs. J. H. Phillips, Mrs. J. H. Pyle, Mrs. Smith Neill, and A. F. Somerville; c., J. Channon, A. Gibbs, Mrs. McIntosh, Mrs. E. Dickson Park, and Lord Poltimore.

3lbs. of Butter, to which no salt whatever has been added: 1, Lord Poltimore; 2, Mrs. J. H. Phillips; 3, Lord Rothschild; 4, A. F. Somerville; r., Mrs. L. R. Mildon; h.c., A. Gibbs, C. Hayes, C. E. Keyser, Llanover Trustees, Mrs. McIntosh, and W. S. Wroth; c., Mrs. Smith Neill.

Four Half-Pounds of Clotted or Devonshire Cream: 1, Mrs. L. R. Mildon; 2, Mrs. F. Ward; 3, A. Gibbs; 4, J. and W. D. McCreath; r., W. Leverton; h.c., Lord Poltimore; c., W. Beer and T. R. C. Cundy.

Four Half-Pounds of Scalded Milk Cream, produced in Devon or Cornwall: 1, J. and W. D. McCreath; r., Mrs. L. R. Mildon; h.c., J. Dolbear.



AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW 1898, 1900, 1901.

SEVEN OTHER GOLD AND SILVER MEDALS IN ENGLAND AND CONTINENT, 1901

Patent No. 20,182.

Which automatically supplies itself with oil the whole time of hatching. 4s. extra. Testimonials. Hatching 100 per cent. Over 1,000 Letters of Thanks received for Results. Write for our Catalogue, post free.

N. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY

The Largest Manufacturer of Incubators in the World.

National Poultry Organisation Society.

A meeting of the above society was held at 12, Hanover Square, London, on Thursday, Lord Burghclere presiding. The object of the organisation is to bring small poultry farmers and cottagers, who have from six to two or three dozen eggs per day to dispose of, into direct communication with retail dealers, and dispense with the middleman.

As an example of their work, it was pointed out that recently the price of eggs ruling in certain Devonshire markets was 1s. for twenty-six, while in Somerset, where the society have brought producers into touch with retail dealers, the eggs were sixteen a shilling. At the present time sufficient scope is not given to people in a small way to keep poultry in the neighbourhood of London, or, indeed, in any of the Southern counties and the Midlands. In parts of Lancashire and the West Riding of Yorkshire, farmers allow poultry-keepers to place roosts in their fields, at a charge of 10s. per annum per house accommodating twenty-five hens, the only condition being that shelters are frequently shifted, the owners having access to the fields at any time of the day. The hens have a free run of the ground, and they pick up so much natural food that they do not cost more than a penny per week to feed. The net profit amounts to between 4s. and 5s. per year for each hen.

Many of the poultry-keepers who avail themselves of this arrangement are operatives in the numerous factories of these two counties, who find a ready market for their eggs, for which the price varies, according to the season of the year, from 1s. to 1s. 6d. per dozen.

The Chairman said the members of the society might be fairly congratulated on the progress it had made in the past year, and even more so on the fact that the value of the objects the society had in view was at the present day universally recognised. They were extremely indebted to Lord Cranborne (president) and the active members of the Council for the immense amount of care and labour which they devoted to the prosecution of a work which was in close relation with the welfare of agriculture in this country.

Mr. Edward Brown (secretary) read the report, which stated the Committee viewed with gratification the increasing interest now being taken in poultry-keeping as a branch of farming by reason of the better outlet afforded for produce. Since

the establishment of the society poultry-keeping as an additional means of income to the rural population had made remarkable progress, and not the least important part of the work was the discouraging of those who, by lack of experience, unfavourable conditions, or want of capital, desired to embark in poultry-farming, so called, in the expectation that it was an easy mode of making a living. The society's main object was to encourage aviculture as a branch of agriculture, and to an increasing extent the officials were called on to afford advice in this direction. There was now a grand total of 1,861 members, and the expenditure last year was £1,044, which, in view of the wider propaganda, the Committee hoped to see increased.

On the motion of Sir James Blyth, and seconded by Mr. Walter Palmer, M.P., the report was adopted.

Mr. Hatch, the treasurer, stated that the expenditure considerably exceeded the income.

Lord Eustace Cecil recommended the establishment of branch committees in every provincial town, with the view of making the society and its aims more widely known; whilst the Hon. Mrs. Wilmot and other ladies urged the necessity for having the farmers and others practically acquainted with agriculture well represented on the Committee.

The officers and Committee were re-elected, the name of the Hon. Mrs. Wilmot being added to the latter, the proceedings closing with a vote of thanks to Lord Burghclere for having presided.

At the last meeting of the Cheshire Chamber the secretary presented the report of the committee appointed to consider the proposals of the Surveyors' Institution on a scale of compensation for feeding stuffs. The committee recommended the Chamber to approve the principle suggested by the Surveyors' Institution, that compensation representing the value to an incoming tenant should be based on the manurial value and not on the cost price of the feeding stuffs consumed, and that Messrs. Lawes and Gilbert's table 10, as published in the journal of the Royal Agricultural Society of England, December 31st, 1897, be accepted as a guide. That the Chamber, having in 1896 practically adopted No. 1 clause of the Surveyors' Institution proposals, the committee recommended the more general practice of free sale of produce and of market value being allowed for unconsumed produce, and for farmyard manure left on holdings, in which cases claims for feeding stuffs consumed be not made. The committee would, nevertheless, allow some elasticity in a valuer's practice to meet the exigencies of special cases and for solely grass land farms. The value of farmyard manure should be based on the quality of the feeding stuffs consumed and the description of the stock fed, and also on the care with which the manure had been preserved. The committee specially recommended that the condition and previous management of the holding be in every case kept in view in arriving at a valuation for unexhausted improvements. They also recommended that the Chamber invite a conference with the Surveyors' Institution with a view to a mutual arrangement. The report was adopted, including the suggestion a sto a conference with the Surveyors' Institution.

Up-to-Date FIRST PRIZE

DEERING BINDERS

(£10 at least cheaper in the end than any other make, besides saving in horse-flesh all the time).

Highest Grade FIRST PRIZE

DEERING MOWERS, REAPERS, & RAKES

(The First to be fitted with Roller and Ball Bearing), and

DEERING "GOAT BRAND" BINDER TWINE.

Purchasers of Deering "Ideal" Binders will during the life of the machine SAVE MORE THAN £10 IN BINDER TWINE ALONE as compared with the less economical binding mechanism of other machines; and it is well known that owing to the greater proportion of forged steel used in their construction as compared with other makes (instead of cast iron and other inferior material), combined with the perfection and simplicity of the design and construction in all the important parts, THE COST OF REPAIRS IS, DURING THE LIFE OF A DEERING BINDER, MANY POUNDS LESS THAN THAT OF ANY OTHER KIND.

As the Deering Binder is sold for no more than the leading competing machines, there should be no question that at whatever price any other make is offered,

The Deering is the Cheapest.

At the official field trials at Lodi, Italy, July, 1901, lasting several days, the Deering Machines received the very Highest Awards, as follows:—

DEERING IDEAL BINDER ... ... First Prize, Gold Medal.
DEERING IDEAL REAPER ... ... First Prize, Silver Medal.
MANUAL DELIVERY ON DEERING MOWER First Prize, Silver Medal.
(The Deering Ideal Mower could not compete.)

Machines by Messrs. Massey-Harris, Osborne, Plano, and Harrison-McGregor & Co. also competed.

At the field trial at Appingedam, Holland, July, 1901, the Deering Machines were again granted:—

THE HIGHEST AWARD ... ... GREAT GOLD MEDAL.

in competition with Machines by Messrs. McCormick, Aultman-Miller, Osborne and Wood.

Thirty Honours received by Deering at, and in connection with, the Exposition at Paris in 1900, many more than conferred upon any competitor.

The Great DEERING WORKS are easily FIRST IN THE WHOLE WORLD in Magnitude, Output and Equipment.

FOR FINE HEALTHY CALVES USE

VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a ***perfect milk substitute.***

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal I consider it excellent in every way"

IMPROVED CROP PROSPECTS.

According to a very old, time-honoured proverb, "a lippy June brings everything into tune," and we appear to be realising the fact that sometimes, at least, such is the case. May proved an abnormal cold month, until towards its close. The spring opened hopefully in March, but afterwards there were six or seven weeks in which vegetation made little progress. The general opinion at the end of the third week of May was that we should have to put up with another short hay crop; and the bites of grass that had been in pastures when the cattle were turned out were diminished to such a degree that the fields bore an untoward bare appearance. Stock markets naturally reflected the evil nature of the situation, and at the big Wilton May Sheep Fair prices were down 4s. per head. The growing corn, too, not only remained stagnant in growth, but a great deal of it contracted an uncanny yellow hue.

All this has now undergone a marvellous change, as if by magic. The Goddess of Spring has wielded her wand to some purpose during the past fortnight, and in response to her benign influences the face of Nature has undergone a rapid and complete transformation. The wealth of leafage and the beauteous verdure of the entire face of the country are in very truth calculated to render the supremest gratifications to the inner senses. But what is still more gratifying is the well-founded hope that this luxuriant garb of verdure bears with it the promise of bountiful realisations to reward the farmer's toil. Anyone can just now give joyful expression to the old distich, "I went to my fields in May, And turned in sorrow away. But returning to them in June, I whistled a merry tune."

The outlook is indeed cheering, for if vegetation continues to make the same rapid progress it has been doing of late the meadow hay crop, although late, may prove anything but scanty. Very difficult is it to define the legitimate season for haying now-a-days, many farmers being accustomed to carry it out at any time in the summer, when they happen to have most grass. Not that it is at all judicious to allow the spring first yield, because scanty, to remain standing to await undergrowth. Experienced farmers will agree in opinion that it would be better to have two cuttings rather than do this, to effect which mowing machines afford every facility. Probably the greater ease with which haymaking can be effected since this valuable implement came so generally into use, and the greater fertility of meadows, owing to manurial applications, have led to the change that there is so much haying in August. Many grass fields will yield two crops of hay without the land at all suffering, if sufficiently manured. But it is a more general practice in dealing with such meadows to feed them in spring, and mow late in summer. Those who have fed bare lands intended to be mown this spring have certainly done the right thing. And if this bountiful June season of growth could have been foreseen, it would no doubt have been done in poor meadows no less than highly fertile ones.

There will now be a plenitude of feed in the grass parks, and very much is it to be hoped that both grazing and dairying are destined to yield far better returns than they have done for several years. The price of meat is high, and so far as appears likely to continue so throughout the summer. There is tolerably sure to be considerable appreciation in the sheep trade, now that all green crops are prospering so satisfactorily, and the present outlook is favourable for roots. There appears to be a full, strong mangel plant in most districts, and although it is too early to sow swedes yet in a great many parts of England, the fallows prepared for them will be so thoroughly saturated by recent rainfall that their condition must be favourable for a plant to be secured should the seeding be effected not too late. The corn harvest depends for a bountiful yield more on the nature of the kernel and ripening conditions than on anything else, but present circumstances render it to be exceedingly probable that there will be a heavy burden of straw, and where soils are in good condition the plant is appearing so strong and luxuriant that only a wet, cold, sunless summer can seemingly dash the anticipated full cup from the lip. Beans and peas, potatoes—indeed, almost everything possible to be named—look promising at present, so that the outlook is certainly much brighter than usual at the present period.

A council meeting of the Large Black Pig Society was held in the Council Pavilion on the show ground of the Bath and West Society at Plymouth, at which it was reported that the society had now the highly satisfactory total of 160 members. A report from the South Western Counties District Committee was presented, which stated that there had been an excellent demand for Large Blacks during the last six months, and it was proposed to establish an annual sale for the breed at a convenient centre in the district. The secretary presented a report from the Eastern Counties' District Committee, recommending the adoption of combined stud and ribbon ear-marks for the identification of registered animals. Experiments in marking pigs had been carried out during the last two years, and the committee were satisfied that the proposed form of ear-mark would be found effective. The stud and ribbon would each bear the society's registered trade mark, and the registered number of the animal. The recommendation of the committee was unanimously adopted. The secretary submitted a sketch of the proposed trade mark, and was directed to make the necessary application to the Board of Trade for registration of the same.

The matters at present occupying the attention of agriculturists were discussed at a meeting of the members of Staffordshire Chamber of Agriculture, held at Stafford, on the 31st ult. The chairman said that, while greatly in favour of education, he objected to any extra charge for it being thrown upon the local rates. In the course of a discussion an opinion was expressed that it would be a mistake to tax imported corn, but that a tax should be placed upon the manufactured article, corn than they grew, consequently they had to pay flour, inasmuch as many farmers had to buy more more for it; whereas, if the manufactured article were taxed it would have the effect of providing more labour in this country for people employed in the milling industry. One member said he thought he was expressing the opinions of a majority of Staffordshire farmers in saying they would be pleased to see the corn tax dropped. It was resolved that the Chamber adhere to the resolution previously passed in favour of a tax being placed upon all imported manufactured articles, and that it was desirable the present duty on flour should be retained. A discussion on the sale of milk-blended butter resulted in a resolution being passed that the law would not be satisfactory if it allowed milk-blended butter to be sold as butter, and that no milk-blended butter should be allowed to be sold with a higher percentage than 16 per cent. of the mixture.

By a Man of Mark Lane.

The receipts on account of Revenue from April 1st, 1902, when there was a balance of £8,566,947, to May 31st, 1902, were £24,195,354, against £20,431,149 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918 The net expenditure was £33,708,119, against £34,432,701 to the same date in the previous year. The Treasury balances on May 31st, 1902, amounted to £5,147,017, and at the same date in 1901 to £3,885,247.

Mr. Channing has given notice to bring in a Bill to-morrow (Tuesday) to amend the Fertilisers and Feeding Stuffs Act, 1893, and for other purposes relating thereto.

The Bombay Department of Land Records and Agriculture has issued its final memorandum on the wheat crop of the Bombay Presidency for the season 1901-1902, which gives the corrected figures of area and estimated out-turn for the different British districts and native states of the Presidency. The latest reports show the area sown at 18.3 lakhs acres or 4 per cent. below last year's area, and 20 and 31 per cent. respectively below the average of the preceding five and ten years. The decrease is general, except in Sindh, and is due to the deficiency of late rains in the Presidency. The variations from last year's area are all unimportant. Owing chiefly to the unfavourable character of the season, and partly to the decrease in area, the total out-turn is very unsatisfactory, being only 40 per cent. of the average of the preceding 10 years. The total estimated out-turn for the entire Presidency is 271,103 tons, as compared with 421,639 tons.

The above-mentioned Department has also issued its final memorandum on the linseed and rape seeds crops in the Presidency. In round figures the total out-turn of linseed is 600 tons, or 20 per cent. in excess of the out-turn of last year, but is only one-sixth and one-seventh respectively of the averages of the preceding five and ten years. Of rape seed the total out-turn is in round figures 6,200 tons, or 30 per cent. less than the out-turn of the last year, and is 40 per cent. less than the out-turn of the preceding five years.

The total normal area under wheat in the Bengal provinces is estimated at 1,490,100 acres, while the area planted in 1900-1901 was returned at 1,498,700 acres. This year, according to the final report on the crop, issued by the Bengal Department of Land Records and Agriculture, the returns show 1,338,200 acres only, the contraction in area being due to the drought at the sowing season in Bihar. Out of the twelve chief wheat-growing districts in the Province, only Malda reports an average out-turn; in three districts the out-turn varies between 85 and 91 per cent.; in five it varies between 60 and 69 per cent.; while in the remaining three it is estimated at from 35 to 45 per cent. of an average crop. The crop for the whole of the Province may be estimated at 70 per cent. of a normal crop, and the gross out-turn at 391,000 tons, as compared with 472,600 tons of the past year.

Ripon June Cattle Fair.—At this fair, held on Thursday, there was a large show of calving and milking cows and grazing beasts. Owing to recent rains prices of stock have gone up £1 per head in some cases. Inquiries were made after useful animals, but business was only slow. Good calving cows made £15 to £20; grazing heifers, £11 to £13; two-year-old bullocks, £9 to £12; yearlings, £5 to £7. No fat stock was shown.

By a Lobbyist.

Those Radicals who anticipated, now that the war is at an end, that the Corn Tax would be abandoned, have discovered that they relied upon a misappreciation of the character of Sir Michael Hicks-Beach. They had limned delightful pictures of the Chancellor of the Exchequer being forced into financial heterodoxy at the autocratic dictation of the recreant Mr. Chamberlain, who had in this business received the inspiration at the feet of Mr. James Lowther and Sir Howard Vincent. They were convinced that he would gladly abandon the scheme, if an opportunity were provided him. They assured you that they knew that his innermost soul had been repelled by the vision which he had received of the possible effect of the impost, and that, were it dignified, he would array himself in sackcloth and ashes, and do penance at the statue of Mr. Gladstone. Well, we know now that Sir Michael intends nothing of the kind. He is sticking to the corn and flour duties as though he loved them. True, he avers that they are not Protective in character, and that they are in no way dissonant to the policy of Bright and Gladstone. This, however, is but a sentiment. The potent fact is that the duties are to be imposed. We can derive more consolation from this than from a flood of explanatory apologetics. The basis of taxation is to be enlarged—and that, let it never be forgotten, with a view to the benefit of agriculture.

Mr. Hanbury is quite wise in appreciating to the full extent the strength of the feeling which is behind the milk-blended butter agitation. Sir Edward Strachey is aware that in the protest which he made against water-loaded butter and in the demand which he uttered for the protection of the honest farmer, he has behind him a very strong body of legislative opinion. Sir Edward is himself a Liberal; but there is a tendency to regard this agitation as inherently Conservative. As a fact, a passion against all adulteration now animates the Liberal ranks. This must not be assumed to be directly due to any active sympathy with the farmer. It is rather due to an active sympathy with the general consumer. Its inspiration is to be traced to the activity of the London County Council, and particularly to the purpose of men like Mr. John Burns. Sir Edward and his friends comprehend the existence of this passion, and they will do well to take advantage of it. When Mr. Hanbury introduces his Bill dealing stringently with all butter which contains over sixteen per cent. of water—and, of course, that he has such an intention can be directly inferred from his speech to the deputation from the Central Chambers—he will be able to rely upon an effective Radical support. Of course, he will meet with antagonism; but it will not prevail. Mr. Hanbury, it is only fair to add, has always been in sympathy with the agitation against adulteration.

It is certain that a very strenuous feeling has developed within the last week in favour of making the cost of education an Imperial charge. This is not due to any special act of pertinacity on the part of Major Rasch. It has been born of a comprehension that unless this policy is adopted there must be in active operation in every parish in England, and more particularly in the rural parishes, a direct incentive to impoverish our educational machinery. The agricultural labourer, with his twelve or fourteen shillings a week, can scarcely be expected to be enthusiastic over a policy which will really fine himself. It is not in human nature to be enamoured of an affliction. The advocates of the new policy must be aware of the wisdom of not attaching any partisan character to the agitation. The principle has as warm sympathisers on the Radical, as on the Tory, benches. In this fact is the prospect of its eventually securing Parliamentary sanction.

Mr. Gerald Balfour lives in an academic atmosphere—I had almost written "a false atmosphere." Men of his philosophical temperament deliberately divorce themselves from the world and everyday facts. I should have thought that everybody knew that certain railway companies differentiate in their charges for the carrying of foreign and home produce, greatly to the advantage of the foreigner. But the matter has not penetrated the environment with which Mr. Balfour has surrounded himself. The fact has not officially and formally declared itself under his very nose. It has not called aloud to him as President of the Board of Trade, for redress. Moreover, such differentiation—the imposition of higher charges for the carriage of home produce—would be an offence against Section 27 of the Railway and Canal Traffic Act, and, after his trustful manner, Mr. Balfour cannot bring himself to believe that railway directors would be guilty of so heinous a wickedness. Why then should he grant an inquiry into the accusation? Now, this attitude on the part of Mr. Balfour imposes on all farmers and all farmers' organisations a distinct and emphatic duty. They must present every fact in their possession to either Mr. Hanbury or Mr. Balfour, or to both. Mr. Hanbury has himself strongly advised agriculturists to do this. He himself has not the same Quixotic faith as Mr. Balfour. He has no ineradicable predisposition in favour of railway directors.

In this connection we have reason to congratulate ourselves on having had revealed the existence of an interesting and friendly political personality. This is Mr. Mansfield, M.P. Both on the remount question and on this question of the unjust differentiation of rates Mr. Mansfield has shown an admirable vigour and a wise discretion. He is not the kind of man, unless I greatly mistake him, to be misled by Mr. Gerald Balfour's touching faith, or to be snubbed by that gentleman's air of pedantic aloofness. We want a man with a mission over this business. The railway rates again constitute a grave scandal. Why should not Mr. Mansfield devote himself wholly to securing a redress? He has a manner which would commend him to the House—he himself looks the agriculturist—he has the gift of capable expression, he could not be discourteous, and no one esteems him a faddist. He is the man designed by Nature for the *rôle*.

Berwick Fair.—This ancient Border market was held on the 30th ult., in dull, cold weather. For several years the number of grazing cattle exposed for sale at this fair has been about 1,000, and often considerably over that number, but owing to the peculiarity of the present season, the long-continued coldness of which has seriously checked vegetation and caused considerable scarcity of food for live stock, the number of cattle offered for sale on the present occasion was greatly below the average, as it was only 590. All the dealers reported a slow, dull sale for all classes of stock, and at the close of the market several lots of cattle were left unsold.

Tuberculous Pork: Fine £120.—At Clerkenwell Police Court on Thursday Alfred Spence, of Chapel Street, Clerkenwell, was summoned by the Finsbury Borough Council for depositing for sale unsound pork. The meat was seized by Inspector Billing and condemned by the medical officer, Dr. Newman. It was found to be portions of two pigs which had suffered from tuberculosis. For the defence it was stated that Spence himself was ignorant of the matter, and in the hands of his servants. He was not morally responsible. Mr. Baggallay imposed a fine of £120 or three months' imprisonment, and informed the defendant that he was responsible for the gross negligence that there was in the conduct of his business.

British Farmers in Hungary.

II.—*(Continued from page 680.)*

It would be futile to attempt to give any detailed description of the many objects of interest shown, or, of the immense number and diversity of the entertainments given to the English visitors to Hungary, during the fortnight they were within the boundaries of the Kingdom. Formal breakfasts, luncheons, dinners, and varied receptions were given by the King of Hungary (the revered Emperor Francis Joseph), Archdukes, Lords, the Municipal Authorities of several cities, Heads of Colleges, and Co-operative Societies, and, in any particular occasion, failing any such invitation, the gap was filled up by the munificently hospitable Minister for Agriculture. Of the warmth and cordiality of the hospitality offered by Hungarians of every rank and station there can be no doubt. The same spirit moved the humblest and poorest in the streets, who showed their feeling by cordial greetings at every point.

But it would take far too much space merely to mention briefly the names, styles, and titles of the hosts and the nature of the hospitality given in every instance with the most generous and lavish profusion. Never can any member of the party forget the cordiality and goodness shown (and, it is to be feared, the lavish outlay incurred) in the successful effort to entertain right royally.

It is singular how curiously alike in many important details the histories of the two countries, Hungary and England, have been. Both secured a free constitution within a very few years of each other—Hungary in 1222, and our own Magna Charter was forced from John in 1215. Later on the struggles for religious liberty were carried on with the same fierceness in both countries, whilst England gave large subsidies to the side of Protestantism during the 30 years' war, the more recent active sympathy shown by us during the struggles that drove so many Hungarians to our shores (of whom, perhaps, Kossuth is best remembered) has left a permanent impression on the minds of the people, to which they are never tired of referring.

But to put this sympathy, which is deep-rooted and universal, to practical use, it would be of great advantage to both nations to foster commercial relations. Hungary is a rich, fertile country over the greater part of its entire area, notably in the great and lesser plains, and it produces wheat, barley, maize, rye, wine, and many other products of very high quality.

Some of these are scarcely known in Britain, whilst others are largely used by us, but are known by other names than Hungarian. All this ought to be amended, and the first and most necessary step is that exporters should study English requirements. We could buy freely, and, with a little judicious care, a large trade in several staples could rapidly be built up.

Turning to the objects of special interest, nothing was kept back, and every effort seemed to be continually made to fully exhibit every feature. The party was shown all that could be seen of the majority of the State farms. This entirely precludes the supposition that only the show places were available. In fact, should any cynic in the party have held such views at the beginning, he would not have been in Hungary two days before dismissing the idea. On all these farms, again, nothing was concealed, and no information was withheld. Some of the guides cheerfully answered the same question put by almost every individual member of the party, and on successive days other guides in other places showed equal amiability when the same questions were reiterated.

The State farms proved conclusively the benefit of large proprietorship. The large holding secured advantages over small ones in every direction, so far as a visitor could judge. The State studs were completely inspected from end to end. As we went along, each one seemed to be better than its predecessor. The only thing that was not shown was a Hungarian regiment of cavalry mounted, but the question of remounts is just now a sore one with our kind hosts. They feel they have been victimised worse than the British were in the matter, and it is quite certain the country literally teems with splendid horses of very high quality. This is where the advantages of their system of breeding, with the aid of the State studs, are best seen. Small breeders can secure the services of first-class sires at absurdly small

fees, with the result that the whole country is full of splendid horses. Farm waggons are drawn along country roads by teams that would be looked at if they were in Rotten Row. Judicious use of the best blood from Arabia and England, lavishly renewed and crossed with their own best and hardiest strains, has given a breed of hardy, strong, but light animals of great use and beauty. Drove after drove were shown, each containing 600 to 800 horses, whilst tens of thousands were actually seen, and amongst them all could scarcely one be picked out as a useless or ugly beast. It was pleasant to see the high position taken by Bona Vista, the most expensive horse they possessed, and to hear the praises of Orme, and many other of our best horses, of which they had sons, or, in some cases, the actual sires.

The careful way in which the stud books are kept and every horse numbered was instructive, and the general conduct of the concerns, looked at merely as a breeding business, led to the conclusion that the State had been wisely led to a proper and profitable policy. And it must be remembered this is not a mere matter of yesterday, a mushroom growth that cannot stand the test of time. Generation after generation have come and gone whilst this policy has been unflaggingly pursued, and it is more firmly fixed and assured to-day than it has ever been. Farmers to breed good horses can gain much from judicious State aid, which, to be effective, should help the getting of the stock, and its disposal. On these points England can profit much by Hungarian experience.

With cattle, matters were pretty much on all fours with horses, with the exception that there seems more conservatism in breeding certain classes. It is singular that the old English bull, which has now so nearly become extinct with us, the few survivors being known as the Chillingham old English herd, is one of the most important and highly favoured classes. These so-called Simmenthal cattle are splendid creatures, but they are chiefly favoured as good strong workers. A few years at the yoke does not improve the quality of the beef when the animal is finally stalled up to fatten. Nor does there seem the care given to milking quality that one might expect, but this will soon come, as the idea of creameries and dairy co-operation is being now freely followed, and in the immediate vicinity of Budapesth alone 100 farms now send their whole produce to the central creamery in the city.

The sheep and pigs of Hungary are poor. They do not apparently receive the same careful consideration given to so many other things, or, if so, they do not respond to cultivation in the same degree. When wool was dear the Merino breeds were in high favour. Now it is cheap they are in poor repute, for, as mutton, they do not take a high position. Some crossing with Shropshire and one or two other English breeds has been done, but the results thus far have not been very encouraging. The Hungarian pig is a strange-looking animal, as it has long curly wool, but, as far as one can judge pork in June, the quality of its flesh is good.

The cultivation of the land as a rule is very good, especially on large estates. Freedom from waste and absence of weeds, are the more noticeable features. Very little draining is attempted, and the huge, square, perfectly flat fields lend themselves admirably to steam cultivation, of which, however, few signs were visible, excepting on the State farms. The chief and best crop grown is wheat. It was growing into full flag, and looked well. What it is when ripened and milled is now known to all the world, for everyone has heard of Hungarian flour, justly renowned for its fine quality and excellence. Admitting that soil and climate favour the growth of good wheat, after all, Hungary would not take the place it does had it not been for the care and skill shown by generations of professors in its technical schools and colleges. These men have studied intelligently the needs of the miller and what constitutes the right composition of fine flour.

The position Hungary takes to-day in the flour production of the world is more directly attributable to its botany professors than to any advantages of soil or climate, or of any special breeds of wheat. For whatever advantages the last named confer, and they are the greatest, all credit is due to the schoolmen who reared them.

Essex should be our premier wheat county, and could grow fine wheat. It is to be hoped the Essex men learnt their lesson. It was worth going to Hungary to see what was so generously shown and explained to them.

The next most important crop to wheat is maize. This just now is only a tiny plant, with blades two to three inches long. But after it has started the growth is rapid, and although the season is late (for it has been as cold and unfavourable a spring in Hungary as with us) it is hoped the crop this year will be a good one. The quality of the corn is good, and the yield is generally fair. As the area is over 5,000,000 acres, the crop is one of much importance. A good deal of it is used as forage, and some of last year's silos which remain were remarkably fragrant and good.

Barley is the next most important crop. The area cultivated exceeds 2,500,000 acres, and the average yield is nearly 26 bushels. This spring the crop is exceptionally backward, and only a very few fields were in ear. Generally by the time the ear has grown out the heat of summer has commenced, so that full development of the grain is rarely secured. Hence the bulk has a thin and poor appearance. Much of it is of good quality; colour and fineness of skin go with good condition in many cases.

An interesting exhibit of 56 samples had been hastily gathered together at Szerencs, at the request of one of the visitors, who had intended pointing out some variations in treatment which might be of use. These barleys had more than special value, as they showed the character of grain left in the country after it had been swept for its malting grades. After proper cleaning, many of these samples could make very fine quality malt, and as the weight per bushel is now quite immaterial, it may be hoped that proper steps will be taken to put such useful grain upon the English market. They would speedily make a name for themselves and command good prices. Most of the finest grain goes to the best brewing centres of Germany and to Holland. Some is malted prior to export, but none of the malt reaches this country. Very much improvement has been steadily taking place in the growth and cultivation of barley, and attention is now being directed to the wishes of the users, and the right sorting, cleaning, and grading of the grain. But whatever advice one may venture to suggest to the Hungarians, it is quite certain that it is as much needed by their Essex visitors.

The cultivation of sugar-beet has been carried to a state of almost perfection. One of the most interesting buildings open for inspection during the visit was the huge sugar factory and distillery, also at Szerencs. This immense structure is one of the largest in Europe, and is filled with elaborate and beautiful machinery. Although not working, as it is idle half the year, it was examined with more comfort, and perhaps was better understood. When at work the output is 220 tons of sugar per day, and the quantity of beets consumed is about 1,700 tons. What the effects of the decision of the Sugar Convention upon this industry will be is not yet settled, but it is feared it will not be a help to it. Much of the sugar made in this factory goes to India.

Many other crops of interest to English farmers are grown, and a number which we cannot and do not grow. Of the latter, wine is the most important. Much very fine wine is grown in the country, and it is greatly to be deplored that it does not reach us in the pure state and of the quality so freely and cheaply obtained in all parts of Hungary. The ravages of the Phylloxera almost shattered the industry a few years ago, but already wine-making is going on over a great part of the area formerly given to vineyards. Here again another valuable object lesson of the direct utility of technical colleges is furnished. The best steps to take to prevent spread of the evil and how to proceed with the restocking of the new vines was promptly shown to all the farmers, and they were assisted to get new wood on American stocks. But for the prompt aid so readily furnished by the State, and the fact that it was forthwith available, the vineyards of Hungary would look very different to-day, and the cellars would not be so full of choice and delicate wines, the produce of the new growths. By permission of His Majesty the King of Hungary, the party were allowed to inspect the royal cellars, containing the celebrated Tokay, and he also graciously gave them lunch. The new Tokay is a fulsomely sweet wine, quite undrinkable to anyone not accustomed to it, but it matures into a very high-class delicious wine of great potency.

Great care is given to the cultivation of tobacco. Hungary grows more than enough for home consumption, and exports a large quantity. Silk is another industry which is rapidly growing under the fostering care of the State.

When the State has been referred to above, it means in reality the Ministry for Agriculture. His Excellency Dr. Darányi has wide powers, and he exercises them freely and wisely. He does not say much, but when he speaks it is to the purpose, and in all he does, the first care is the benefit of the country and of the farmer. In his royal treatment of his British visitors, the chief thought was to further and strengthen the bonds of sympathy between the two countries and it would have been of use had the British Board of Agriculture and the Royal Agricultural Society been adequately represented. Scotland and Ireland had able men present. Among the grave errors in the conduct of the party was the absurd way in which at times it was claimed to represent the farmers of Great Britain, and on others to the loss and disadvantage of all concerned, it was isolated with narrow-minded prejudice, to the sole county of Essex. Notwithstanding this, a direct affirmative answer can be given to the question with which these articles open: "Can any practical good be secured?" Great good will, and must, follow, especially if the Essex Technical Committee will keep in mind that Great Britain is more than Essex.

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan.

British Dairy Farmers' Conference.

The seventeenth conference held under the auspices of the British Dairy Farmers' Association opened at Reading, on Monday last, under the presidency of the Earl of Warwick. It is some time since the members of the conference have met with such a hearty official welcome as that extended to them by the town of Reading. On Monday evening, the mayor and mayoress gave a reception in the large Town Hall, which was most sumptuously furnished for the occasion. Next morning the conference began its true work by inspecting the British Dairy Institute, which is shortly to be transferred to another site, and on assembling in the hall of Reading College they were very agreeably surprised to find present the Right Hon. R. W. Hanbury, M.P., President of the Board of Agriculture, and Mr. T. H. Elliot, C.B., Secretary of the Board, come to hear what the dairy farmers had to chat about. The Earl of Warwick, in his opening address, said they all recognised agriculture was the greatest industry of the country, and, whether in town or country, they ought to unite to promote the interest of agriculture. Farmers were proceeding, he trusted, on more scientific lines than formerly, and they were getting other farmers to see that if agriculture was to be carried on with success in the face of very severe foreign competition it could only be by bringing scientific instruction most effectively to bear upon their trade. Mr. Miles Benson, chief instructor of the British Dairy Institute, read a paper on Practical Dairy Education and the Work of the British Dairy Institute, whilst Mr. Douglas A. Gilchrist, B.Sc., director of the Agricultural Department, Reading College, contributed another interesting paper on Technical Instruction in Dairying. Professor Carroll, in moving a vote of thanks to the readers of the papers, referred to the enormous importance of the question of packing butter and cheese, and the great probability of fraud, caused by the colouring of milk. Professor Wrightson stated that the great desideratum in dairying was cleanliness. Mr. F. J. Lloyd contended that they wanted further knowledge of dairying, and this should be supplied by studying Nature. Mr. Hanbury then gave a downright practical and encouraging speech. He stated that farmers should more and

more turn their attention to the production of perishable goods that could be readily placed on their own markets. If they favoured preservatives, well, they could not prevent the foreigner from using preservatives also. As regards the question of transit. After the discussion was ended the members of the conference and other invited guests were entertaind to a most recherche luncheon by Messrs. Sutton and Sons in the Abbey Hall. Mr. Martin Sutton gave the loyal toasts, and these having been honoured he gave that of the Minister of Agriculture. In doing so, he stated that he had an acquaintance with each of Mr. Hanbury's predecessors in office, and he believed that they had had more help from Mr. Chaplin since he left the Board than when he was there. Mr. Hanbury, in reply, said that they were prepared and willing to face the world under fair conditions, but they must see that these conditions were fair. He also thought that the honest trader should be entitled to the full benefit of his trade description, and that the man who dealt in an honest article should alone be entitled to that of that article. After a very hurried inspection of some of the chief features of Messrs. Sutton's establishment, the conference members were soon en route for Royal Ascot, to visit the dairy and poultry farms of Mr. Alfred Palmer, M.P., and they were very much pleased by the President and the Secretary of the Board of Agriculture accompanying them. The system of management is excellent, and has been so recently given in Mr. Palmer's widely-read book that to describe such would be mere repetition. But one thing I did note, and that was the manner in which the guardian watchdogs were given tethered freedom., A piece of strong wire, some 60ft. in length, was securely pegged down at each end, and on this the dog's chain was fixed by means of a running ring. Thus, in the dark, the dog, though secure, has all the semblance of being loose. Mr. Palmer's South Devon cattle also came in for a great deal of attention. In the evening the members of the conference were invited to dine at the Town Hall by Mr. Alderman Monck, Mr. Hanbury being again present, thus making three agricultural speeches in the course of one day.

Wednesday was a day of inspection and sight-seeing rather than talk. The boat trip up the Thames would have been much enjoyed had it not been for the rain, which somewhat mistified the landscape from Caversham Lock to Goring. From thence the members were conveyed by means of brakes to Dr. Watney's Farm at Buckhold. The cowshed is constructed on the circular American principle of wood lined with brickwork. Dr. Watney informed me that his Jersey cows always make better records in the show-yard than when at home, and that the great mistake in feeding for milk-production is that of feeding too much at the same time. A little and very often is Dr. Watney's idea. After luncheon at Buckfield we returned to Pangbourne, and from thence went by rail through an exceptionally well-farmed district to Abingdon, where a valuable hour was lost in waiting for the boat. However, at last it arrived, and this delay made our inspection of Nuneham Park a very hurried one. Next day, on the Thursday, the conference was continued in the Assembly Room of the Municipal Buildings, Oxford. Lady Warwick's paper, which it was announced would be read, however, did not turn up, and therefore Miss La Mothe gave a very practical address on the Marketing of Dairy Produce. The speaker held with the introduction of preservatives into cream to keep the trade, and also stated that nearly all British dairy produce is badly packed. Mr. F. J. Lloyd, in the discussion, supported the use of preservatives in cream, and this caused another speaker to put the test question. As to why Mr. Lloyd would not permit preservatives in cider, and yet allow them in cream. The afternoon was devoted to a drive to Blenheim, the purchase of guide-books at the entrance, and a stroll around the gardens. As there was no inn near at hand, it was a case of no refreshment until Oxford was again reached. Whilst at Oxford many members availed themselves of the opportunity of inspecting one of the most neat and compact refrigerating and cold-storage plants that I have yet seen. It was especially erected for Mr. Wigmore, to meet the contingencies of summer heat.

The final day of the conference was not promising, as rain greeted us at breakfast-time. By means of rail and brake we reached Mr. N. Coates' farm at Hillesden, who extended to one and all a right good farmer's welcome. Had not the rain by this time turned to a downpour, a large amount of knowledge would have been obtained from this practical farmer's methods. The drive was continued to Buckingham, where a paper was read by Professor Long, in the Town Hall, on "Some Facts in Relation to Modern Dairying." The discussion was somewhat curtailed by the desire to reach Tring. But the rain was pitiless. Down it came, and this made the princely reception at Tring all the more enjoyable. Mr. Richardson Carr had the very best of the live-stock. Shire horses, Shorthorn, Red Poll, and Jersey cattle paraded for our benefit. The model dairy was also thrown open and its marble floor and shelves bore ample evidence of the skill of the dairymaid, Miss Frances Coles. The members will not for a long time forget the contrasts and scenes of the tour and the final break-up at that Home Farm of hospitality at Tring, back into the rain again; and soon what had been a fraternising community were speeding away from a common centre to all points of the compass.

Milk-Blended Butter—Deputation to Mr. Hanbury.

On Monday the President of the Board of Agriculture received a deputation from the Central and Associated Chambers of Agriculture, the Grocers' Federation, and other associations of agriculture and trade, who protested against so-called milk-blended butter being sold as butter, and asking for legislation to protect the trader, farmer, and consumer. The deputation was accompanied by the Earl of Lichfield, Lord Cottesloe, Sir Edward Strachey, M.P.; Mr. James Lowther, M.P.; Mr. Laurence Hardy, M.P.; Sir J. Kennaway, M.P.; Mr. John Burns, M.P.; Mr. Jasper Moore, M.P., and many other members of Parliament.

Sir Edward Strachey, M.P., chairman of the Central Chamber of Agriculture, introduced the deputation, which, he said, represented a large number of associations and organisations connected with agriculture and also with trading interests. The vice-chairman of the Chamber of Agriculture, Lord Warwick, was unable to be present. Thirty-four members of Parliament had written expressing their sympathy with the opinions of the deputation, and there were twenty-nine chambers of Agriculture represented. The deputation wished to protest against the substance which was being sold as butter, but had been correctly described by Mr. Hanbury as "water-loaded butter." They knew the strong line Mr. Hanbury took on the question, and they had come to ask whether his colleagues in the Cabinet were in agreement with him in the legislation that he proposed to introduce to prevent milk-blended butter from being sold as butter, and whether he would give them the satisfaction of stating that the legislation was to be enacted this season.

Mr. Henry Hobhouse, M.P., president of the Bath and West of England Society, said all agricultural societies in the country were agreed in protesting against the fraud which was now being perpetrated.

Mr. J. J. Holder, president of the Grocers' Federation, Brighton, said the whole retail trade was against this milk-blended butter. The grocery trade had been already harassed enough by the differences between butter and margarine, and certainly did not want this third article introduced. Butter and margarine would certainly meet the requirements of every class in the community. Milk-blended butter, consisting of a larger proportion of water than was permitted by the standard recently set up, was a fraud upon the consumer, in that it did not give value for money.

The Earl of Lichfield said the maximum percentage of water in butter as fixed by Mr Hanbury was 16 per cent., and was considered a fair one, and the deputation asked that it be made illegal to offer as butter anything containing more than this percentage of water.

Dr. Bernard Dyer, analyist, London, and Professor Long also spoke. The latter pointed out that the term "milk-blended" was illusory and incorrect.

Mr. J. Kellitt, of the Grocers' Federation, Liverpool, said that merely labelling the article would not be sufficient to check the sale of it. He asked Mr. Hanbury to prohibit the sale of it altogether.

Mr. Hanbury replied that he had already received one deputation on the subject. The fixing of the standard of butter was the first step. It was now required to protect the producer, the trader, and the consumer from being imposed upon by labels or notices which would convey very little to the consumer's mind. The Margarine Act supplied a very good precedent. Butter was specially protected by it, and if this precedent were followed of forbidding fat to be added to butter, in the same way water might be forbidden. The Government ought to deal stringently with all butter containing above 16 per cent. of water. But he would make an exception for a certain time, say eighteen months or two years, in the case of the Irish brine salt butter trade, which had been carried on in the South of Ireland for many years. But unless this water-loaded butter trade was knocked on the head at once, it would develop a serious difficulty. There was not only the interests of England, Scotland, and Ireland to be considered, but of our colonies as well. The colonies' grievance was even severer than it was at home, in so far as their butter contained only 9 per cent. or 10 per cent. of water, and consequently lent itself to this particular kind of adulteration. In this case notices would not protect the consumer, who had generally no knowledge of what proportion of water there should be in butter. The consumer must be protected against getting water when he paid for butter. The farmer had a right to his trade description. It was part of his stock-in-trade. As to legislation, a Bill, which he was submitting to his colleagues, was on its way at that moment to them. He would press this bill very strongly on them. The matter was of great importance to the producer, the middleman, and the consumer, and it admitted of no delay. He hoped to get legislation through this session. He could not go so far as one speaker suggested, and prohibit the sale of the article, but it should not be sold as butter. It must be sold under a special name, and it should not be open to the vendor to counteract the effect of this special name by a pretence that the article was something better than butter. He was inclined to think that it shuld be clearly stated that the butter was impoverished butter. They could depend upon him to do all he could to get the legislation carried this session.

Is Irregular Milking the Cause of Poor Milk?

The adjourned cases of several milk dealers charged with having sold milk that was deficient in fat were settled by the Sunderland magistrates on Thursday. At the former hearing, which was fully reported in our issue of May 12, the prosecution contended that the poor quality of the local milk could most probably be traced to the irregular hours of milking, and suggested that a more regular system should be adopted. The case was accordingly adjourned in order for tests to be made.

At the resumed hearing, Mr. W. H. Bell, who represented the Northumberland and Durham Dairy Farmers' and Milk Producer's Association, stated that it was utterly impossible to carry out the suggestions with regard to even hours of milking. He read the results of a series of tests that had been carried out on the farms of one of the defendants, Mr. James McLaren, President of the Farmers' Association. The averages worked out as follows:—Three milkings per day, 2.95 per cent. of fat, 3.5, and 3.15 respectively. Two equal milkings, 2.46 and 4.04; two unequal milkings, 4.38 and 4.21. Mr. Bell added that the figures went to prove that the whole thing was very uncertain, the fact of the matter being that they were dealing in a natural product.

After hearing evidence, the magistrates retired, and on their return, the Chairman said that having regard to the whole of the evidence, the Court could not convict on the facts as stated. They therefore dismissed the case of Mr. McLaren, as well as four others, which rested upon it.

Nantwich Cheese Fair.

At the Cheese Fair held at Nantwich on Thursday there was a pitch of about 50 tons, and buyers were present from all the principal centres. Business commenced with a good inquiry for best lots, which sold readily at prices from 50s. to 55s., and medium down to 48s. The tone of the market was good, nearly all lots being cleared within an hour. Prices, compared with last year's corresponding fair, were a shade better.

Home Notes.

The Borough.

"Peace, the offspring is of Power," an aphorism of one of our American cousins, whose truth has been abundantly demonstrated in our recent happy experience. Displayed in large "caps," this gladsome word, so full of precious significance, is now the concentrating point of our attention, and, realising its far reaching consequences, our hearts naturally expand in desire for the time, "When all men's good shall be each man's rule, and universal peace shall lie like a shaft of light across the land." With all loyal Britishers, I offer my humble tribute of praise to our soldiers for their enduring bravery, and to our administrators for their tactful skill in winning for our Empire "peace with honour, peace with pride." I would willingly indulge my pen, and give it further liberty to enlarge upon this inspiring theme, but am reminded that I must recall it to the record of the prosaic facts of daily life, and must try to find it something to write about the affairs, with which it is my own especial duty to deal.

Difficulty at once confronts me, inasmuch as one week in the Borough so closely resembles its predecessor, that the record of our proceedings is too monotonous to be either agreeable or instructive. The business of the past few days presents no new feature. Choice hops are still sought after, and cannot be discovered, and in their absence the medium samples, of which there is still a fair supply, are rather neglected. Nevertheless, it may be said, as we consider the time of year, that the general demand is sufficiently healthy to warrant expectation that the present firmness of prices will be maintained, and probably enhanced, as the interval of nearly four months between this and the new crop passes by. The position of holders is strengthened by the somewhat unfavourable reports from the plantations, and it appears probable that further reserve will be ultimately rewarded by higher prices.

Foreign Hops

are at present almost entirely absent from our market. I was told this morning that a buyer of even 100 bales of Californians would not be able to get them, and the same may almost be said of Continental growths, especially if attractive qualities were desired. Coupled with this state of affairs, there is the obvious fact that the unsold balance of English hops is now exceedingly small. Under these circumstances, my views as to the future course of the trade may safely be confirmed.

The Crop Prospects

have not improved much this week, on the whole, although I hear from some growers that they are satisfied with the progress made by the bine. Hops now need hot-house weather, and they are not getting it. A few days of partial sunshine have been alternated with lowered day temperature, and chilly nights, with too much rain. Consequently there is a large proportion of weak, spindly bine, and the attack of flea, is being followed by the threatening of aphis blight, which is bound to develop unless the weather improves. It may appear ungracious to say that I am not much concerned by the retardation of the growth, nor by the prospect of but a limited yield; for, feeling so strongly as I do, that the foundation of future prosperity can only be laid by a very moderate crop this year, I trust that no exceptional measures will be adopted to increase the natural production. Planters should abstain from expenditure, and devote all their attention to the perfecting of quality. I am sure they will secure more satisfactory remuneration by so doing.

Foreign Notes.

Nuremberg.

Mainly as the result of the slow development of seasonable weather, business on the hop market has fallen to a very low point, the transactions of the past few days being less than have been recorded during any week since September. The average low quality of the stocks in hands of dealers also operates against trade, brewers finding no inducement to buy, even though they are able to obtain important concessions in prices. The market is also practically destitute of export orders, and unless the consumption of beer should materially and speedily increase, it appears probable that a considerable balance of the present holdings will be left unsold when the new crop arrives. It is a singular fact, very difficult to account for, that beer seems to be losing ground as a European beverage. It may possibly be explained by the weakness of general trade, especially in manufacturing centres. If this be the cause, the diminution of consumption will not be permanent. With an improved circulation of money, the demand for beer will again become active, and the hop market will certainly feel its effects. Holders are supported by the expectation of such a revival, and are therefore not pressing for orders, but are generally content to abide the issue of events.

Concerning the New Crop,

it is much too early to form any decided opinion, although it is nearly everywhere evident that the plantations are in a most promising condition. The growth of the bine has rapidly advanced throughout Germany and Bavaria during the past fortnight, being assisted by the cessation of frosts and cold rains, their place being taken by higher temperature and sunshine. Planters are now very confident that, apart from unforseen drawbacks, a fruitful season is in front of them. Whether it will me remunerative depends upon other conditions entirely outside their control, but at present their hopes are sufficiently buoyant.

Belgium.

With only a moderate amount of business, prices for available hops remain fairly firm at recent currencies, but owing to the more favourable aspect of the plantations, quotations for forward delivery of new growths are rather lower. Both in Alost and Poperinghe districts the young plant is making good progress, under the influences of better weather and warmer nights.

Imports into Belgium during the four months ending April 30th last amounted in round figures to 9,900 cwts., hardly differing from the quantity recorded in the corresponding period of last year. American hops have not appeared in the return since 1900, but from England about 900 cwts. were received. About the same quantity was sent to England during the period named, the total Belgian exports being 6,500 cwts.

America.

But little change has taken place on the New York market. Though brewers are buying very cautiously, dealers are very firm, and will not concede a fraction from their quotations. With the extreme lowness of stocks, and the demand that must arise in the course of the next two months, there is much probability that values will advance considerably before the new crop arrives.

Further reports are to hand concerning the damage done by severe frosts in the New York State grounds. In many places the bine was cut off to the level of the soil, and but few plantations are found where the most forward shoots have not been so badly bitten that they turned black, and are since withered. In Montgomery County it is said that though the hops started well, they now look very sick, and it is questionable whether they will be liable to recover. From Oregon I hear that hops are making a rank strong growth, being low in Yamhill County four to eight feet high. In this locality the outlook is in favour of a crop half as heavy again as the yield of last year.

At a special meeting of the Lincolnshire Chamber, a resolution in favour of the compulsory dipping of sheep twice a year was adopted, and it was agreed to recommend that County Councils should have greater powers of dealing with diseases of animals, and that cases should not be made public until confirmed by the authority. On the subject of the corn tax, a member said that, as the Radicals were making a great deal of stir about the registration duty on corn and flour, and were trying to force the hands of the Government, it was an opportune time to pass a resolution urging the Government not to make any alteration in the tax, which was just and equitable, and it would naturally be construed by their opponents into great weakness on the part of the Government. The motion was carried.

A resolution was adopted, to the effect that, to prevent sheep worrying by dogs, the dog tax should be doubled, and better looked after, and that dogs found worrying sheep should be followed, identified, and destroyed by the police, no compensation being paid to the owner. The meeting also approved of dogs having to wear a metal label bearing a registration number, this to include dogs now exempt from taxation; and that the police should have power to take proceedings against owners of dogs found straying between the hours of 10 p.m. and 6 a.m. It was also resolved that the education of the country should be a national matter, and should not come out of the local rates.

By Hordeum.

Fuel.

By a curious accident last week's article was made to say the opposite of what was intended. In the last paragraph but one from the bottom of the column, page 682, "The kiln" should read "No kiln should be employed which gives a result of 30 to 35 quarters malt dried to the ton of coal burned."

Where such kilns are used, there is always a great effort made to get cheap fuel. It was the owners of such shanties who were tempted to buy gas coke when it fell to 6s. to 8s. per ton, and a pretty penny it has cost some of them before they got through.

The real lesson taught is the need to have suitable kilns, because it should be obvious that the consumption of fuel in a kiln is very largely affected by the building itself. The stoker or fireman has something to do with it, but the actual prime factors are the way the coal is burned as regulated by the construction of furnace, the relation of air inlets to outlets, and the total height of the kiln.

Right Construction

of the building is the controlling agent. The problem is a complex one, for it involves right combustion of the fuel and its best disposal over the whole of the air used in performing the work of drying.

When malt is dried there are invariably two stages, and overlapping of them must mean mischief, however it may be dealt with.

In the first stage there must be only a mean sufficiency of heat, but a full flow of air. After these means have secured sufficient dryness there need be only a sufficient flow of air, but there must be adequate heat. All through the process there must be (or ought to be) the right temperatures maintained. What these are depends upon the style of malt to be produced, and practice varies widely.

One thing should be certain, and that is, whatever temperature is determined to be the point to be maintained, the whole of the malt-drying should be kept to it.

Defective Kilns

should be tested in the dual form as to how they really do their work and the cost of doing it. Many kilns exhibit wide variations of heat on the different parts and levels of the drying-floor. However economically they work they should not be trusted. Other kilns, extravagant with fuel, maintain perfect uniformity of heat on the floor. Means should be taken to make both types of kiln do the same thing. A given quantity or fuel should do the same work in any properly constructed house of any pattern. A ton of good coal ought to dry off 40 quarters of malt, and under good conditions it can do much more.

The largest kiln in this country, which regularly dries off 400 quarters, does very much better than this.

A good two-floor or double kiln can give singular uniformity of heat to the drying floor, and a sufficiency of heat and air to the upper floor.

The Economy

is readily understood as soon as it is realised that whilst the top floor is acting as a retaining blanket to the lower one and keeping the top and bottom surfaces nearly uniform, yet all that is being done to the top floor is effected by what would in a single kiln be waste heat. All this heat would pass through the cowl, and not merely be non-productive, but the facility with which it would get away would be prejudicial to the malt it was intended to dry.

It is not possible to keep the top surface of the malt in a single-floor kiln at the same heat as the bottom, for if the attempt be made to block the outlet it has a bad effect always.

Complaints are often made about double-floor kilns that the damp of the lower floor makes the top floor wet.

Damp Air

is better for green malt than thoroughly dry air, as it is not good to dry malt too quickly. All sorts of kilns have been invented to dry malt in any period from two to twenty hours, but not one of them has ever succeeded in drying malt properly, and none of them are in use. Drying is a cooking process, and it must take time. The relation of heat to dryness is the essential point to be watched in the process, and there should be proper means of knowing the amount of air flowing through it: 1,000ft. of dry air at 150deg. has a very different influence upon a drying-floor to 400 at 160deg., although 400ft. of dry air at 160deg. can dry more than 1,000ft. if wet. In the consideration of the subject the dryness, volume, and temperature of the air used cannot be overlooked.

Cider at the Brewers' Exhibition.

The schedule has now been issued of the new cider section of the London Brewers' Exhibition. The section is to be provided for in a liberal manner, and the competition will assume an international aspect by reason of the classes which have been set aside for foreign and Colonial producers. At the show in October, for the first time the producers of cider, the merchants and the retailing and consuming public will come into touch with each other, and there is little doubt that a great impetus will be given to the industry thereby. As is right and proper, in the appropriation of classes and awards, the farmers have received preferential treatment. For bona-fide farmers, tenants, or owners farming their own land, eight classes are provided, with one silver and one champion gold medal. In each class there are three prizes of £2, £1, and 10s., respectively, with a diploma attached to each award. The admirable stipulation is made, that the cider in these classes must be made from apples grown on exhibitors' farms only. It must not be a blend of either purchased apples or purchased cider. Two classes are open to firms and cider merchants only, the exhibits to consist of either home-grown or purchased fruit, or the blend of either home-made or purchased ciders, or of ciders purchased for trade purposes. Six classes are provided for farmers or merchants in competition, while two classes are set aside for ciders made outside the United Kingdom, with a champion gold medal for the best foreign exhibit.

In the class for farmers only, the competitors are ranged according to county, an arrangement that will have much to do with the value of the competition to farmers. In the farmers' or merchants' classes, two are set aside for perry, one in bottles and one in cask.

We would remind intending exhibitors that the entries for this year's show close on October 2nd. Entries received after that date are charged at double fees. Conditions and forms of entry can be had of the managing directors, Messrs. Dale and Reynolds, 46, Cannon Street, E.C.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended May 31, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living.	1901.	1902.		1901.	1902.

* Not shown in 1901.

MONDAY (June 2nd).—There was an improvement in the weather over the Southern portion of our islands, but rain again fell in other parts, and in the East of England it was accompanied by thunder and lightning. Rain was measured in the morning over nearly the entire Kingdom, as the result of the fall since Sunday, and at several places in the West the fall was heavy. The winds were easterly in Scotland, and generally from between south-east and east in England and Ireland, and they were for the most part light. The mid-day temperatures were above the average in the Midlands, but rather low in other districts.

TUESDAY (June 3rd).—The weather was fine over a large part of our islands, but fog or mist was very prevalent on the East coast of England. Rain had fallen in many places since Monday, and some of the amounts measured in the morning were large. An area of low barometer readings was still situate near our South-West coasts, and under its influence the winds continued easterly over the entire kingdom. Temperature was high, except in the North, and over a large part of the country the thermometer during Monday night did not fall below fifty degrees. The mid-day temperatures varied considerably in different parts of the kingdom, the highest temperatures ranging from nearly eighty degrees in the Southern Midlands to fifty degrees in the North-East of England.

WEDNESDAY (June 4th).—Rainy and unsettled weather prevailed over a large part of our islands. Rain was measured at most places in the morning, as the result of the fall since Tuesday; but the amounts were not generally large. The type of weather was very complex. In Ireland and in the West of England the winds were chiefly south-easterly, under the influence of an area of low barometer readings, which was situated near to our West coasts. A shallow cyclonic disturbance was situated over the South-East of England, and it occasioned a good deal of rain during the early part of the day. Thunderstorms occurred in different parts of the country.

THURSDAY (June 5th).—The weather was changeable over the British Islands, and a mild south-west wind was blowing from the Atlantic over England and Ireland, while in Scotland the wind was chiefly south-easterly. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, except in parts of Ireland and in the West of England, and the fall was rather heavy at places in the North. The mid-day temperatures were low in the north and west, but were not very different from the average in the South of England.

FRIDAY, June 6th.—Rain prevailed in many parts of the British Islands, and the whole character of the weather was extremely unsettled. Rain was measured in most places in the morning, and the result of the fall in the preceding twenty-four hours, over the Northern and Western portions of the country, and the amounts were rather large in Ireland. An area of low barometer readings was situated over the South of Norway, and under its influence the wind was westerly in England and Ireland, but the direction was chiefly Easterly in Scotland. Temperature was again high during Thursday night, the thermometer not generally falling below fifty degrees. The midday temperatures were below the average, owing to the great prevalence of cloud.

SATURDAY AND SUNDAY (June 7th and 8th).—The weather has continued very unsettled over our islands during these days, and rain again fell over the entire kingdom. The night temperatures were rather colder than of late, and the mid-day readings were everywhere very low for the time of year, the thermometer scarcely anywhere touching sixty degrees. On Saturday a thunderstorm occurred over the Southern Midlands. In London the weather was cold and showery, and on Sunday the highest temperature was fifty-seven degrees, which is twelve degrees below the average. The wind was northerly over the entire country on Sunday.

The Corn Tax.

Not to be Abandoned.

In the House of Commons on Wednesday Sir Michael Hicks-Beach announced that the corn-tax and the income-tax increase would not be taken off.

Questions in Parliament.

In the House of Commons on Tuesday Mr. Nannetti asked the Chancellor of the Exchequer whether he had received a copy of a resolution passed at the Irish Trades Congress, held at Cork recently, protesting against the proposed tax on corn, and stating that it fell exclusively on the working classes; and whether, in view of similar resolutions from the workers generally, he would consider the advisability of substituting some other article which would not have such an effect on the circumstances of the poor of the whole country?

The Chancellor of the Exchequer, in reply, said: I have received this resolution. I do not think the description of the duty as falling exclusively on the working classes is at all correct, and I am not prepared to take the course suggested in the question.

Speech by Mr. Chaplin.

Addressing a large meeting in the Session House at Sleaford on Monday, Mr. Chaplin, Member for the division, remarked that the conclusion of peace brought him to a question of much domestic interest—the tax on corn, which he hoped would be retained. If he thought for a moment the question of a big loaf or a little loaf was concerned, he should be the last to support it. This registration duty was first imposed by Robert Peel, and he preferred to call it the Peel shilling duty on corn. With regard to the Education Bill, which threw additional cost on the rates, many Unionist members were completely opposed to it. The relief which was given them under the Agricultural Rating Act was apparently all to be changed, and it was just at this moment when they needed all the aid and encouragement which could be given. Education, including elementary, secondary, and technical, should be regarded as national services.

The Tax a Test of British Political Intelligence.

In a letter addressed to the Ipswich Trades Council, who protested against what they called the new bread tax, Mr. Pretyman, M.P., expresses himself strongly in favour of the proposed duty. He contends that as the necessity for indirect taxation arises, it may properly be laid on articles of common use in the order of tobacco, tea, sugar, and corn. The first three are already taxed, and the proposed duty on corn will cause no distress or inconvenience. Personally, Mr. Pretyman says he is a firm believer in free trade, not as a sentiment or fetish, but as the soundest method of conducting international commerce. He is not, however, so blinded by prejudice as not to see that our trade is being filched from us by foreigners, who make use of Government subsidies and other such means to compete unfairly with us in our own market, whilst they are careful to exclude us from their own. They believe we are blind devotees to free trade, who will on no account forsake the worship of the image we have set up. Foreigners will regard this tax as a test of the political intelligence of the British people.

Bakers and the Tax.

The National Association of Master Bakers and Confectioners, at the annual conference at Bristol on Tuesday, passed, by a large majority, a resolution declaring that the tax on wheat and flour was a source of considerable loss to them, and expressing the opinion that in practice it would result for the most part in the trade paying the tax. They therefore requested the council of the association to use every effort to obtain the removable of the objectionable impost.

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son, and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

11,602.—Lauritz Hansen, of Chancery Lane, London, for "Improvements in and connected with thrashing machines."

11,608.—Tenison Deane, of Chancery Lane, London, for "An improved food product."

11,779.—Austin Eikin Hower, of Fleet Street, London, for "Improved process for the production of a fertilizing material or top-dressing for crops, applicable also as an insecticide."

Patent Sealed.

2,128.—W. H. Havenhead, of Sheffield, for "Hoes, hand."

2,502.—J. E. Ransome and F. W. Gerrard, of Ipswich, for "Cultivators; ploughs; hoes, horse."

Pembrokeshire.

Taken as a whole, the outlook for farming is very unsatisfactory, for, although beef, mutton, and pork are making good prices. We trust our members of Parliament will vote that the expenses of education shall be put on the Imperial Exchequer. It is for the good of the whole nation, consequently the nation should pay for it, not one class only to pay for it.—(June 5th.)

Cumberland.

It is June, but our cuckoo has not yet changed tune. It sings like in May, which blew cold like March, and gave us such weather as passes Cumbrian memory. But with peace on the 1st, warmth came also, and, the ground being already moist, grass is now growing visibly about an inch per day. All is green and gives good promise of a plentiful harvest. Everything is ready for the Royal at Carlisle; the entries are complete, the last being the dairy competitors, of whom Cumberland suplies not a few. In this respect our technical classes have been a success, and consequently Cumberland butter should henceforth hold its own in any market. Just now we are fighting the fight of schools, and, however else we differ, we all agree in this, that the main cost, if not the whole, of education, should be met by Imperial taxation, just as in the case of the Army and Navy. Many, including me, say, further, that the old scholastic endowments of this country (grammar schools, Eton, etc., etc., with Oxford and Cambridge Universities) should be drawn upon for teaching teachers for all public schools.—H. M. K. (June 6th).

Somerset.

The rain and warm weather of late has greatly improved farm prospects in this district. A fortnight ago the pastures were bare and keep very short, and the hay crop promised to be a very poor one. Now we have an abundance of keep, and the hay crop, though late, promises to be a fair one; in fact, I do not hink I ever saw so great an alteration for the better in the time in my life. There is scarcely any old hay left in this neighbourhood, so we shall need to make a good crop. Cattle and sheep are improving and doing well now that they have keep. Oats and barley came up well, and promise to be a good crop. Mangolds are a good plant, but rather backward. Swedes are going on well, and what few are up are a good plant. Beef is selling well; so, also, are newly-calved cows and good store cattle. Mutton has been a dragging trade all through the spring, not selling at all well in comparison with beef. Store sheep has also been a very slow trade, but I should think must improve now, with plenty of keep. Fat pigs are selling well, and stores dear. Cheese is selling well now, through scarcity, but I suppose as soon as the new make comes out there will be a big drop in prices.—E. D. (June 6th).

Foreign Prospects.

France.—On the basis of latest reports from reliable sources, it may be stated that, taken as a whole, the wheat crop looks well; the earing, which is backward, is now being effected under good conditions; and, given fine weather during the blooming period, the yield should be excellent.

Belgium.—Recent weather has improved the condition of the cereal crops.

Holland.—The cereal crops' outlook is mainly satisfactory.

Germany.—With fine and hot weather all over the Empire, crop prospects have greatly improved, and similar reports come from nearly all other countries.

Hungary.—Weather being favourable to the crops, hopes of a fair harvest are strengthened.

Russia.—Mild and wet weather has improved to a marked extent the cereal crop outlook in Central, South-Western, and Southern Governments. Odessa reports splendid harvest prospects for both winter and spring-sown grain.

Roumania.—It was feared that recent copious rains had injured the crops, but reports from all directions are reassuring. Wheat, rye, and oats have a satisfactory appearance, and with warm weather the harvest should be one of the best of late years.

Spain.—Apparently the expectations of a large wheat crop will have to be modified, as recent reports say that cold weather in some provinces and locusts in others have done much damage to all crops.

Servia.—A report from Belgrade says cereal crops look well all over the country.

Asia Minor.—From Smyrna it is reported that weather continues favourable to the crops. Barley cutting has become general in the province.

United States.—There has been a good week for growth, and the winter wheat is filling out satisfactorily, and spring wheat progressing favourably. The condition of maize is very good, but the fields are a little weedy where the weather has been rainy. Oats promise a large yield in the chief States, but the crop is light in some of the minor Southern States. In California the rainfall to date is 19in. against 21in. same time last year.

Australia.—Owing to the protracted drought, it is proposed to suspend grain and fodder import duties in all the Australian States.

Drought in Australia.

A well-informed correspondent writes that the pastoral situation in Australia is rapidly becoming desperate. Drought upon drought during the past eight years has spelt ruin to thousands upon thousands of able and energetic men engaged in the sheep and cattle industry. The number of sheep during the last decade has dwindled to the extent of one-third—viz., from over 120,000,000 to under 80,000,000. The losses of cattle are quite as great in proportion (says the "Speaker"). There are many stations in Queensland where the number of cattle depastured has fallen from 30,000 head or more to less than 1,000. Droughts have been felt before, but the present is the widest-spread ever known. Not to mention West Australia, which at the best is always in a state of semi-drought, the whole of the country from the western boundary of South Australia, right across the northern portion of Victoria, together with most of New South Wales and Queensland, is in a pitiable condition. Over scores of thousands of square miles the lambing must be a failure, and enormous further losses of grown sheep are now certain. Owing to these continuous droughts the present clip of wool is the worst on record, but the next will be much worse.

Reappearance of the Colorado Beetle.

In spite of the stringent measures carried out by the Board of Agriculture last September, when the Colorado beetle made its appearance at Tilbury, it seems that the pest was by no means stamped out, for specimens have again been found in the same district. Potato growers are, therefore, requested to carefully examine their plants, and to send to the Board of Agriculture for identification any insects suspected to be the Colorado beetle. The pest is not an indigenous one, for the natural home of the beetle is in the Western States of America, but from Nebraska and Iowa it travelled eastward, until, in 1876, it reached the eastern shores of America, and in the autumn of 1877 specimens were found at Liverpool in a cattle-boat from Texas. From what we now know of its life-history, as well as from the fact that, though nearly twenty-five years have passed since it was first certainly known to have reached the seaports in this country, it has yet made no settlement, we may reasonably believe that we are not likely to suffer from its ravages. "With regard to remedy," the late Miss Ormerod said, "probably there is no other injurious insect attack which is so certainly known. The widespread practice of the United States and Canada has long shown the cure for attacks of the Colorado beetle to be Paris green, and if ever we should have the misfortune to be visited by this pest, immediate and certain measures of destruction could be applied within a couple of days. Paris or Emerald green is applied by spraying a solution of 2oz. to 4oz. in forty gallons of water. It is highly poisonous, and requires careful handling."

The Colorado beetle is from one-third to half an inch long, of a yellow colour, with ten longitudinal black lines down the wing cases, and with reddish yellow and black legs. The larva, when mature, is very thick in the middle, and of an orange or reddish brown hue, with black spots on the lower portions. Long, oval, yellow eggs in clusters are laid by the female beetle on the under surface of the leaves of the potato, and these may appear also in certain weeds in the vicinity. Both larvæ and beetles feed voraciously on the potato haulm, but they are also known to feed on other plants, such as tomatoes and poppies, while, failing more congenial food, they may possibly be found on rough grasses and other weeds.

Preserving Eggs.

Sir,—Having seen "water glass" mentioned in The Mark Lane Express as a good and easy preservative for eggs, I beg you to answer the following questions respecting it:—

(1) How long will eggs so preserved keep good?

(2) Should the eggs be immersed, or merely washed over with it?

(3) Should the eggs be carefully washed in water first, if dirty, and washed again when taken out of the mixture for market?

(4) Can the "water glass" be used over and over again, and what is the best proportion to use?

(5) Does it kill the germ in the egg?

(6) Is the mixture a corrosive? I have some old brewing tubs and copper coppers. Would they be suitable for storing large quantities of eggs in?

(7) Does temperature have any detrimental effect on it?

I should be glad if you could give me the most satisfactory way of preserving eggs in lime—the quantity of lime to use per gallon of water.—Yours truly,

G. Nicol.

P.S.—I should be glad with an early reply, as I am anxious to try the process while eggs are cheap.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending May 31, 1902:—

NOTE.—The figures for the current Year are approximate only.

A Combination of Sheep Worryers.—At Carlisle County Court on Wednesday, Mr. Watson, farmer, High Burnthwaite, claimed £13 for lambs worried by dogs, the property of Mr. J. Miller, Oaklands, Upperby, and Mr. R. Norman, his servant. Evidence was given that several lambs were killed by a lurcher, retriever, and a boarhound, and the flocks were much damaged and the animals lamed and marked. The judge said it was an extraordinary thing that dogs associated themselves for the purpose of sheep worrying. One dog would chase the sheep into a corner, and another would worry, while the first stood outside. In this case the retriever and lurcher hunted together, and afterwards the lurcher led the boarhound into mischief. He found for plaintiff for £8.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: We have no change to notice in the trade since our last. Barley was 3d per qr cheaper. Wheat: 6d per qr less money was taken. Oats firm. Maize steady. Flour declined 3d to 6d per sack.—NIXON, GOWER, AND CO.

Mark Lane, Wednesday.—At Mark Lane the attendance was very limited, and the market for wheat and flour ruled dull, and nothing doing, values favour buyers. Maize quiet and lower to sell. Barley unchanged, nothing doing. Oats dull and easier. Beans and peas quiet.

Mark Lane, Friday.—The attendance was somewhat meagre at to-day's markets, and matters were again disappointing to sellers, while an uneventful week closes with occasional narrowing of prices evinced. English wheat was again nominal, with apparently nothing on hand worth naming in London, while a little more is being sent to local resorts, without tempting millers, as of late, at extreme currencies. American reds in sufficient supply, and 3d easier since last Monday. Whites maintained. Australian, held for 33s ex granary, and Californian, 32s 3d landed. Flour generally unaltered, although more in harmony with consumers' views, in face of fairly liberal supplies coming forward. American first patents (Pillsbury, Golden Lily, Ceresota), 25s. Bakers' grades are still in small compass. Iron Duke, ordinary quality, held for 21s 6d ex store. Australian patents, 23s to 23s 6d ex store, 280lb. English steady. Top price Town-made, 30s net, and No. 1 households 22s 9d to 23s per sack delivered at the mill door. Cascadians, 23s ex store. The London Millers' Association name households at 24s 6d, and whites 3s per sack more delivered to the baker. Grinding barley, 3d easier since Monday last, and more now on hand than for some little time past. Odessa, 20s ex ship; 20s 6d ex quay. Danubians, ship to come up, 19s 9d to 19s 10½d. Oats, 3d to 6d lower on the week, and more so for the lighter sorts, which are plentiful. Common Libau, 20s ex quay, 38lb; and better qualities, 20s 6d. Black Libau, 21s ex quay, 38lb; Riga, 20s ex ship, 40lb; Libau, etc., of very inferior quality, 21s 6d up to 23s 6d for bold, ex quay; fine Konigsberg, 23s ex quay, 40lb. New Zealand, ordinary bluff, 27s to 28s; ex store, 38s. Maize unchanged, but holders of round corn were inclined to a little less. Odessa, 22s 3d ex ship, 22s 9d ex quay. Danubian, 22s 6d, and Turkish, 23s 6d ex quay. Mixed American nominal, being, as of late, exhausted. Imported beans and peas unaltered. Egyptian splits, 23s 3d; and Mazagans, 22s 9d ex mill, 320lb; New Zealands, 38s to 39s, 504lb, ex store. Of peas, white Indian, 35s to 36s, according to sample. Canadian white remains out of the market. Very little American maize germ meal offers, and quotations are steady at £5 11s 3d to £5 12s 6d. English is in fair request at £5 7s 6d to £5 12s 6d per ton.

COUNTRY.

Ashford, Tuesday.—Very little English wheat, and demand small. There was a reduction of 1s per qr in the quotations, white making 33s to 34s; and red, 32s to 33s. Feeding corn generally firm. Hay and straw weaker.

Banbury, Thursday.—Wheat (white), 32s to 33s per qr.; ditto (red), 30s to 32s per qr.; barley, 28s to 30s per qr.; beans (new), 36s to 38s per qr.; ditto (old), 38s to 40s per qr.; oats (black), 24s to 28s per qr.; peas, 36s per qr.

Birmingham, Thursday.—Business at to-day's market was quiet, but feeding stuffs were in improved demand. English wheat unchanged at 32s 6d to 33s per qr. Foreign wheats, 6d lower. Grinding barley, £1 to £1 6s. per qr. Sharpness. Maize 6d cheaper, round commanding 22s 6d to 23s per qr., and Plate same price both at Sharpness.

Boston, Wednesday.—Wheat, 32s; oats, 24s to 25s; beans, 36s to 37s; maize, 24s.

Braintree, Wednesday.—Quiet trade; prices firm. Red wheat ,from 31s 6d to 33s per quarter; white 32s 6d to 33s 6d.

Bristol, Thursday.—There has been a small trade since our last, the declaration of peace having diverted everyone's attention. English wheat scantily offered, holders asking too much to find ready purchasers. Foreign 6d. lower. Maize and oats unaltered. Grinding barley the turn dearer. Flour not in very big demand at present. Bakers are apparently working down their stocks.—GRACE BROTHERS.

Bury St. Edmunds, Wednesday.—We had a small attendance, and a dull market, with business generally of a retail character. Wheat: Demand very quiet, at 6d. per qr. less money; reds selling at 31s to 32s per 504lbs. Other feeding corns quiet, excepting oats, which are a very firm trade, at fully last week's prices, owng to scarcity, 25s to 27s per qr. being made readily. Linseed cakes the turn lower, at £8 to £8 12s 6d per ton, and cotton at £5 5s to £5 7s 6d per ton.

Cambridge, Saturday.—During the week trade has been lifeless. Supplies are small, but equal to requirements, and millers are able to supply their wants at slightly reduced rates. At this market to-day there was only a moderate supply of wheat. Trade very quiet, and prices favoured buyers. Red wheat, 31s to 32s, and white up to 32s per 504lb. Very little Spring offering, for which trade was dull without alteration in prices.

Canterbury, Saturday.—Wheat rather cheaper; feeding corn easier. Ruling prices:White wheat, 33s to 35s; red, 32s to 33s 6d; grinding barley, 22s to 24s; white oats, 24s to 26s; black, 22s to 24s per qr.

Carlisle, Saturday.—Larger supply of oats in our market to-day; slow sale at last week's prices, 24s to 25s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—There was very little English grain offering, and there is no change to note in prices. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 60lb; grinding barley, 3s 6d to 3s 8d per 64lb; beans, 6s 10d to 6s per 19lb; oats, new, 3s 2d to 3s 4d; old, 3s 4d to 3s 6d per 45lb. Indian corn, new, 12s 6d to 14s 3d; old, 13s to 14s 9d per 240lb.

Croydon, Wednesday.—White wheat, 33s to 35s; red ditto, 33s to 34s; malting barley, none; grinding, 23s to 25s; oats, 21s to 24s; beans, 33s to 35s; peas, 31s to 33s. Trade for wheat quiet at last week's prices; oats firm; beans and peas remain the same.

Colchester, Saturday.—Small supply wheat; slow trade, at 6d per qr reduction from last week. Beans and peas easier.—FRANCIS AND CO.

Glasgow, Wednesday.—There was a fair attendance at our market to-day. Wheat and flour are very dull, with prices in buyers' favour. Round maize steady, but quiet. Home and foreign oats firm, with small sale. Canadian pease and grinding beans quiet at about late rates. Barley quiet. Bran and thirds rather easier. Oatmeal firm, but small sale.—GIBSON AND CLARK.

Leeds, Wednesday.—Owing to the conclusion of peace and the absence of many millers at the convention, the market to-day partakes of a holiday character, and business is extremely limited. Foreign wheat must be quoted 3d and English 6d per quarter lower on the week. Beans 6d dearer; maize and oats rather cheaper.—DUNNS AND CO.

Leicester, Saturday.—Fair attendance with small supplies of home grown wheats. Trade slow at 31s to 34s per 36 stones. Barley steady. Fine oats firm.

Lewes, Tuesday.—New white wheat, 33s to 34s; new brown ditto, 32s to 33s; malting barley, 32s to 35s; grinding ditto, 21s to 24s; oats, 23s to 26s; beans, 35s to 40s; peas, 35s to 40s per qr.

Liverpool, Friday.—The market has a fair attendance, but the trade passing in wheat is very small, and prices for all American grades are ½d lower. White wheats are very quiet, but held at last market day's rates. Flour in very quiet demand, and American Springs are quoted rather easier, but winter wheat flour is unchanged. Hungarian millers have advanced their limit owing to the scarcity of milling wheat there; this quality is consequently advanced 1s to 2s per sack on the spot. English milled flour shows no further change. Maize: Mixed is steady, but quiet, at quotations. European is very slow, and prices show a loss of about ½d from last market day's rates. Plate, owing to pressure and free arrivals, is a full 1d lower, but has resulted in a moderate business. Barley very dull for malting, and 6d to 1s lower. Feeding is quiet, unchanged. Beans are steadier, owing to less pressure on quay, but quiet. Peas in very moderate demand, and generally rather easier, but more particularly so for Indian, which are ½d to 1d per cental lower. Oats move slowly, but no change is quoted in the price of English. Canadian, being more freely offered, are the turn easier, other foreign sorts, however, hold steady at full prices. Oatmeal continues to be firmly held at extreme prices, owing to scarcity, but the demand is of the most retail character. Oilcake is still in good request for cotton cakes, but otherwise dull; no change is, however, quoted in prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—There was a good attendance, but trade quiet, with a slight advance in prices. Wheat was fully 1s dearer on the week. Quotations:—White wheat, 34s to 36s; red ditto, 33s to 34s; grinding barley, 23s; oats, 22s to 28s; peas, 38s; white ditto, 33s; maize, 24s to 26s; beans, 35s to 40s; English linseed cake, £8 to £8 10s; foreign ditto, £7 10s to £8; cotton cake, £5 to £5 5s.

Maidstone, Thursday.—Stock of English wheat in this district is running low, so the reason for non-appearance of samples to any extent not difficult to tell. The result was a very firm tone, and 6d per quarter over last market obtained; indeed, some owners preferred to hold on for more later in the season. In other grain a steady business and previous cost of most material realised to the full.

Manchester, Thursday.—The market has a tendency towards the buyer in wheat compared with seven days ago. Flour is reduced 6d per sack from last week. Indian corn 1s. in quiet demand at steady rates. Oats and barley are steady and unchanged. Peas tend on the easy when definite offers are made. Beans without new feature.

Newcastle-on-Tyne, Saturday.—At our to-day's market the demand for wheat was quiet, and where business was done the buyers had the advantage of 6d per qr. Maize scarce and dearer on spot; easier to arrive. Beans, peas, and barley steady at late rates. Oats favouring buyers. Flour unaltered.—JOSEPH POLLARD AND CO.

Northampton, Saturday.—The usual attendance, with a limited quantity of samples of wheat. Holders were unable to do business without making a small reduction from last week, which caused a very limited business. Upon the whole, it was a poor market—dull and inactive all round. White wheat, 33s to 34s; red ditto, 32s to 33s; grinding barley, 22s to 25s; oats, 20s to 24s; old fine, 27s; beans, 34s to 38s; flour, 23s to 24s; fine, 27s.

Norwich, Saturday.—To-day's market was rather thinly attended, and the supply of wheat offering was somewhat restricted. Millers delined to do business except at some reduction; this holders were reluctant, of course, to admit, but upon the whole prices were 6d to 1s per quarter lower upon the week. There was nothing doing in barley. Averages:—Wheat, 2,768 qrs. 31s 8d; oats, 23s 4d. The weather has greatly improved in Norfolk during the week, although yesterday and to-day were cool and rather wet.

Norwich, Saturday.—Only a small supply of wheat on offer to-day, at a further reduction of 6d to 1s per qr on the week. The weather of the past week has been showery, with much lower temperature. Wheat, red, 31s to 32s per qr; weight, 63lb per bushel imperial. Corn inspector's return for the week ending 7th June, 1902:—Wheat, 2,768, 31s 8d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Very little English wheat offering; trade ruled slow, but values maintained. Grinding barley held for 6d advance. Oats and beans scarce, and prices in sellers' favour.—ROBT. HUBBLE.

Peterborough, Saturday.—There has been a poor demand for wheat to-day; prices 6d, and in some cases 1s lower than last week. Spring corn slow, without any quotable change in value.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a very poor attendance at our market here to-day, and business very quiet. Maize and oats unaltered. Wheat rather easier. Barley, dearer tendency.—ORLANDO DAVIS AND CO.

Reading, Saturday.—The persistent but nevertheless welcome rainfall, which has prevailed during the past two days, had its effect upon the attendance to-day, which was below the usual average. Business as a result proved quiet. With a limited quantity of corn on offer, very few sales were transacted, and it is difficult to quote rates. Generally, however, they were against the seller, being rather below those of recent markets.

Ripon, Thursday.—Not much doing. Everything has a downward tendency. Wheat, English, new, 31s to 32s; ditto, foreign, 30s 6d to 34s; barley, grinding, 23s 6d to 24s. 6d; oats, 24s to 26s; round maize, 24s to 26s per qr.; beans, 1s per stone.

Rye, Wednesday.—White wheat, 33s to 35s; red ditto, 33s to 35s; white oats, 21s 6d to 25s; black ditto, 22s 6d to 25s; tick beans, 35s to 38s; barley, 22s 6d to 28s; grey peas, 33s to 35s.

Sheffield, Tuesday.—There was a small attendance, and trade was quiet and slow. Last week's rates ruled. There were no English oats on offer. Quotations: Wheat, white, 32s 6d to 34s; ditto, red, 32s 6d to 34s per 504lb; barley, grinding, 23s 6d to 24s; ditto, malting, 30s to 32s per 448lb; oats, new white, 26s to 27s; ditto, new black, 23s to 24s per 336lb; peas, grinding, 35s to 37s; ditto, blue, 53s to 60s; beans, Egyptian, 33s 6d to 34s per 504lb; ditto, English, new, 37s 6d to 38s per 532lb; Indian corn, small, 24s to 24s 6d; ditto, American mixed, 28s 6d to 29s per 480lb.

Spalding, Tuesday.—The market was of a holiday character. Grain was in small supply, and quotations practically the same as last week. Wheat showed a downward tendency.

Stamford, Friday.—Holiday market. Although there were a few farmers and dealers present, not a single sample of any grain was shown.

Stockton, Wednesday.—The English wheat trade seems to be exhausted, and no samples were showing. Owing to continued weakness in America and large supplies, the price for foreign wheat showed a decline of 3d to 6d on the week, with only a moderate inquiry. Oats and maize firm and unchanged.

Sunderland, Saturday.—Limited show of grain. Wheat rather easier. Spring corn unaltered. Arrivals:—Coastwise: Oats, 150 qrs. Foreign: Nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—Wheat has been dull and neglected during the past week, the arrivals being liberal and the weather more favourable. Still, all crops are late, and European want this side harvest considerable, which lends a certain strength to the trade, so that prices, except for American descriptions, show barely 3d decline. Beans 6d dearer. Maize steady. Oats rather lower, and in small demand. DUNNS AND CO.

Wakefield, Friday.—Wheat is a dragging trade on to-day's market; in English, 6d per qr less is accepted, and foreign wheats are easier in price,, with the exception of American, which maintains late rates, and but little business doing. Beans are 6d per qr dearer, and other feeding stuffs unaltered.—MICHAEL SANDERSON AND SON, LTD.

Wisbech, Saturday.—A short supply of grain. Wheat easier to buy. Prices, 31s to 31s 6d. Oats firm at full prices. Beans, 36s to 38s.—JAMES FLETCHER.

Wolverhampton, Wednesday.—The market was quiet, and there were no alterations in prices. Quotations: Wheat, new, 12s 6d to 13s per 216lb; oats, 16s to 17s; beans, old, 16s to 17s; new, 15s to 16s 6d per 196lb; barley, 35s to 40s per 448lb; maize, new, 27s; old, 29s 6d to 30s 6d per 480lb.

Worksop, Wednesday.—Poor attendance, and very little grain on offer, with prices practically unaltered. White wheat, 31s to 32s 6d; red wheat, 31s to 32s; grinding barley, 27s to 28s; white oats, 26s to 28s; black oats, 25s to 26s; round maize, 25s to 26s per qr.

Worcester, Saturday.—A very quiet market. Wheat was again scarce, but demand small, prices favouring buyers. Feeding stuffs steady at late rates. Wheat, white, 29s to 31s 6d; red, 27s 6d to 29s per qr.

York, Saturday.—Not much wheat offering. Last week's prices prevailed, the quotations being about 31s to 32s all round per qr of 36 stones. Feeding barley made about 24s to 26s per qr of 24 stones. Oats were scarce and firm at last week's prices; white Tartary, 22s to 23s; black, 23s to 25s; white Garton, 24s to 25s per qr of 24 stones; rye, about 8½d to 9d stone; beans, 1s ditto.

FOREIGN.

Hamburg, Saturday.—Barley market rules quiet here, and the malting season being finished, there are no transactions to report, but stocks seem also to be very small, and there will hardly be any surplus when the new barley is ready. Prospects of the new crop are in every way promising. The rather cold weather during May was followed by fine sunny days, and everything in the fields looks promising now.—FRANCIS M. TH. DUHNE.

Hamburg, Saturday.—We had several days of forcing hot weather, with intermittent rain, which worked wonders with the growing crops, and, with a continuance of fine weather, there are now prospects for a good harvest. Market quiet, but maize and feeding barley near at hand remain firm in value. Autumn shipments easier. The imports during the week amounted to 9,257 tons wheat, 3,182 tons rye, 5,135 tons barley, 6,488 tons maize. American red winter No. 2 wheat, July-August shipment, is offering at 27s 9d; hard winter 2, prompt shipment, 28s, Manitoba No. 1, June, at 28s; River Plate, Russia, at 28s 9d per 480lb; Walla Walla at 29s 3d to 29s 6d per 500lb. Rye is offered more freely from South Russia; 23s 6d per 480.lb is asked for 9 15-20 Nikolajef, June shipments; 21s 6d for August-September shipment. American Western No. 2 is selling at 24s 3d to 24s 6d per 480lb. Malting barley—According to reports from the Saale, Bohemia, and Hungary, the favourable change of weather has improved the young crops, and complaints are now less frequent. Russian and Danubian feeding barley is held at 18s 9d; July-August shipments at 17s 6d; August-September at 16s 7½d per 400lb c.i.f. Maize quiet. Odessa, prompt shipment, is held at 20s 3d; Danubian, July-August, at 20s 9d; River Plate, floating, at 20s 9d. Mixed American, December-March, was sold at 20s to 20s 3d per 480lb c.i.f.—JOHN TATLOCK.

Paris, Wednesday.—Native wheat.—There was but a small attendance at to-day's reunion, with a very poor muster of farmers, who are busy haymaking. The wheat situation remains the same as last week, offers are very limited with buyers reserved and transactions almost nil. We are entering into a period of complete quietude which will probably continue until the appearance of the new crop, and prices may be quoted the same as last week. Choice Red Wheat, 37s 10d to 38s 3d; average, 33s 6d to 36s 11d; and White Wheat, 38s 3d to 38s 9d per 480lb. Term Wheat opened with a more regular trade at fully supported prices, but closed easier at the following rates:—June, 38s 3d to 38s 9d; July, 38s 9d to 39s 2d; July-August, 37s 10d to 38s 3d; and Sept.-Dec., 35s 3d to 35s 8d per 480lbs. Flour.—Fleur-de-Paris.—The market opened, supported at 5c. to 10c. advance, but closed quieter at the following prices:—June, 27s 1½d to 27s 5d; July, 27s 5d to 27s 8d; July-Aug., 27s 5d to 27s 8d; and Sept.-Dec., 26s 7½d to 26s 10½d per 280lbs. Consumption Marks Flour.—Trade is quiet, the increased temperature restricts consumption, and there is a slight decrease in the consumptive demand. Quotations are as follows:—Choice Marks 31f. to 32f (31s 5d to 32s 5d); First Marks, 30f.50 to 31f. (30s 11d to 31s 5d); Good Marks, 29f.75 to 30f.50 (30s 2d to 30s 11d); Ordinary Marks, 28f.50 to 29f.75 per 100 kilos (28s 11d to 30s 2d per 280lb). Rye.—As might have been foreseen, with the return of fine weather, crop advices are better, and the damage by last month's unseasonable weather is not so considerable as at first thought. The caring, favoured by a northerly wind, is being accomplished in excellent conditions. Here, the tendency was firm, although trade ruled quiet—good corn is quoted at 26s 1d per 480lb. Oats.—Offers are still unimportant, but amply sufficient for the demand. Here the supply was most circumscribed, and consequently business was wanting in animation, and rates may be quoted appreciably unchanged. Grey Beauce, 23s 6d to 23s 9d; White, 22s 11d to 23s 7d; Red, 23s 2d; Black from Central Provinces, 24s 1d; White Libau is quoted 22s 7d to 22s 11d; Black, 22s 11d to 23s 2d; and Swedish, 24s 8d per 320lb. Barley.—Like the other cereals, reports of this crop have improved, but the same cannot be said of the trade, which leaves much to be desired, as both brewers and maltsters have suspended operations for the season. Dealings in grinding corn are also limited, purchases being made in proportion to actual requirements. Quotations are merely nominal:—Malting, 17f.50 to 17f.75 (25s 4d to 26s 9d); Grinding, 17f. to 17f.25 (24s 8d to 25s); and Feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lb.). Buckwheat.—This article, being scarce, continues supported at late rates—viz., 28s 9d per 480lbs.—*Dornbusch.*

CORN STATISTICS.

IMPERIAL AVERAGES.

Statement showing the Quantities sold and average price of British Corn, Imperial Measure, as received from the Inspectors and Officers of Excise in the week ended June 7, 1902, conformably with the Act of the 45th and 46th Victoria, cap. 37.

THE BALTIC.

Wheat cargoes are irregularly lower on the week. White sorts resist the declining tendency better than the red kinds. The present weakness has little to do with the peace in South Africa, but is caused by the large spot arrivals of grain on passage in May. Sales include: South Australian at 29s., Victorian at 29s 6d., Walla Walla at 29s., No. 1 Northern at 27s. 6d., Manitoba at 28s., hard Manitoba at 28s. 9d., No. 2 Manitoba at 26s. 3d., and Argentine at 29s. per quarter.

Maize is 3d. cheaper for Odessa and Galatz, 6d. for Danubian. Sales have been: Argentine at 20s; Danubian at 20s. 9d.; Odessa at 21s. 6d.; Galatz at 21s. 6d.; Turkish at 22s. 6d., and flat American at 27s. per quarter.

Barley cargoes are dull, but 18s. 9d. has been paid for two from South Russia, and 19s. 3d. for one from the Danube. Roumania offers to ship new crop in October at 17s. 3d. per quarter. Oats have fetched 19s. for Odessa. Linseed has realised 48s. for La Plata, and cottonseed has made £7 17s. 6d. for Egyptian.

The arrivals of grain and seed-laden vessels at ports of call for the week were: 37 wheat (3 Geelong, 3 Melbourne, 1 Monte Video, 14 Portland (O.), 1 Port Pirie, 5 San Francisco, 1 Seattle, 5 Sydney, 3 Tacoma, 1 Wallaroo); 1 flour (San Francisco); 1 linseed (Buenos Ayres); total, 39.

The sailings of grain and seed-laden vessels from ports of call for the week were: 32 wheat (6 Antwerp, 1 Barrow-in-Furness, 1 Belfast, 3 Birkenhead, 1 Bristol, 1 Cardiff, 1 Cork, 2 Dublin, 9 Hamburg, 2 Limerick, 1 Liverpool, 1 London, 1 Malmo, 1 Shields, 1 Tyne Dock); total 32.

Since 1st January, 1902, the total arrivals have been: 188 wheat, 5 flour, 20 barley and wheat, 3 maize, 8 barley, 2 beans, 3 linseed, 4 canaryseed; total, 235.

Last year during the same time the arrivals were: 157 wheat, 4 flour, 7 barley and wheat, 14 barley, 3 beans, 4 pease, 1 pease and beans, 2 locust beans, 3 canaryseed, 3 valonea; total, 199.

HOPS.

Canterbury, Saturday.—Plants now making good growth, but complaints of vermin very general. Business slow, at the improved rates.

The Farleighs, Saturday.—The bine has grown very fast during the warm weather a few days since, but has received a check lately. There is a large quantity of fly, and have already begun to deposit; some small leaves are positively black with fly.

Worcester, Saturday.—Our market is firmer to-day, and growers are asking more money for the hops they hold, owing to the backward state of the bine, and the serious attack of blight which has appeared during the past fortnight. There has been little trade doing this week, holders not being disposed to sell their hops except at full prices.—PIERCY AND CO.

POTATOES

Borough, Saturday.—Supplies moderate, and with a fair demand, trade ruled steady. Quotations:—Scotch maincrops, 90s; Blackland. Up-to-dates, 50s; Lincoln ditto, 60s to 65s per ton; New Jersey, 8s 6d; Teneriffe, 6s to 8s; St. Malo, 8s 6d per cwt; and Lisbons, 3s 9d per box.

Southwark, Monday.—During the past week the arrivals of old potatoes have been light, and prices for best samples have improved. The following are this day's quotations:—Lincoln Up-to-Dates, 60s to 65s per ton; Blackland ditto, 55s to 60s per ton; Forfar and Fife ditto, 60s per ton; ditto Bruce, 60s per ton.—R. G. BROWN.

Spitalfields, Saturday.—Notwithstanding light arrivals, trade ruled very dull. Quotations:—Best Lincoln p-to-dates, 60s to 65s; Blackland ditto, 50s; Wisbech ditto, 60s; Scotch ditto, 60s; Scotch maincrops (greysoil), 65s; Lincoln maincrops, 60s to 70s; Reading giants, 50s; Blackland Gartons, 45s per ton. New St. Malos, 8s to 9s 6d; Jersey, 8s to 9s; Teneriffe and Canary No. 2, 9s; No. 3, 8s 6d per cwt; and Lisbons, 3s 9d to 4s per box.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6¾d to 7½d; clover, 6½d to 7¾d; clover (Lincoln), 8½d; straw (wheat), 6d to 6½d; straw (oat), 4¾d to 5½d per stone.

Whitechapel, Saturday.—Heavy supplies received, but business was quiet at late rates. Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially picked hay, 117s 6d; good ditto, 110s; inferior ditto, 80s to 95s; mixture and sainfoin, 85s to 105s; and straw, 30s to 45s per load.

FRUIT AND VEGETABLES.

Covent-Garden, Saturday.—Arrivals of vegetables and fruit this morning were on a good scale, and a fair demand was experienced. Greenstuffs:—Cabbages, 3s 6d to 4s; cauliflowers, 6s to 8s per tally; spinach, 1s 6d to 2s per bushel; French carrots, 5s; turnips, 4s to 5s; parsley, 3s to 4s; mint, 2s 6d to 3s; leeks, 2s to 2s 6d per dozen bunches; horseradish, 1s 6d to 2s per bundle; rhubarb, 2s to 3s per dozen bundles; Egyptian onions, 10s per bag; spring ditto, 2s 6d per dozen bunches. Potatoes—Maincrops, 70s to 85s; Reading Giants, 35s to 50s; Up-to-Dates, 50s to 60s per ton; new, Jersey, 9s; St. Malo, 8s 6d per cwt; Lisbon, 4s per box. Tasmanian apples, 8s to 12s per case; English grapes, 2s to 4s; Belgian, 1s 3d to 1s 9d per lb; Valencia oranges, 8s to 16s; Denia, 12s to 14s; Murcia, 8s to 10s per case; English tomatoes, 6d to 8d per lb; Canary, 3s to 4s per case; pineapples, 1s 6d to 4s each; lemons, 8s to 18s per case; bananas, 7s 6d to 12s 6d per bunch; gooseberries, 4s to 5s 6d per half-sieve.

POULTRY AND GAME.

Smithfield, Saturday.—Supplies fair; an improved den and at steady rates. Quotations:—Fowls: Yorkshire, 3s to 3s 6d; Essex, 2s 9d to 3s 3d; Boston, 2s 6d to 3s; Surrey, 3s 6d to 4s 6d; Sussex, 3s 6d to 4s; Welsh, 2s 6d to 3s; Irish, 2s to 2s 6d; Turkeys (cock), 6s to 7s; (hen), 4s to 4s 9d; goslings, 4s to 5s; Aylesbury ducklings, 3s 6d to 4s; country ditto, 2s 9d to 3s 3d; pigeons, 7d to 1s;

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The weather has retrograded to the gloomy skies and cold rains of May, but the night temperature is ten degrees better than it was in that month. Wheat is now growing rapidly in height, but no fields are as yet in ear, and the grain when formed will require very different weather conditions before it hardens into a crop. The year's record thus far is as follows:—

1902.	Rainfall. Inches.	Sunshine. Hours.	Temperature.
Jan.	1.00	17	42.5
Feb.	0.90	21	39.5
March	1.62	40	44.5
April	0.50	135	48.0
May	2.52	144	50.0

The average rainfall of May is two inches, the sunshine 180 hours, the warmth 53.1 degrees. The under-average sunshine will, it is feared, tell on the health and stamina of vegetation.

The wheat in France is coming into ear, but very wet weather prevails, and crop prospects are considered to have deteriorated since June came in. Hot, dry, and fine weather now prevails in Central Europe from the Baltic to the Adriatic. In Russia, as in France and England, it is very wet, but the temperature is high. Spain reports a great abundance of locusts, but these pests will injure the spring-sown crops, which are still tender, rather than the wheat, which has alreay begun to be cut in Andalusia.

American weather reports since June 1st are very good, and the spring-sown wheat and oats have made a capital start, the former on a reduced, the latter on an augmented acreage. Maize was being sown over some eighty million acres during the last fortnight of May, and has been now got into the soil under satisfactory conditions. Australia cables that the drought there is the worst for some years, and all grain shipments have ceased.

The supply of wheat on passage to the United Kingdom showed a great diminution on the 7th inst., as compared with the last day of May. Present expectations are:—

	Qrs.
Californian	1,860,000
American	540,000
Argentine	221,000
Russian	60,000
Australasian	535,000
Indian	250,000
Various	10,000
Total	3,476,000
A week ago	3,876,000
A year ago	2,965,000

The imports of the United Kingdom last week were as follows, of the five leading staples:—

Wheat, 501,000 qrs.; a very heavy supply.
Flour, 141,000 sacks; a moderate supply.
Barley, 89,000 qrs.; much less than usual.
Oats, 119,000 qrs.; rather less than usual.
Maize, 219,000 qrs.; a full average.

Adding to these arrivals, we get the following totals for the cereal year to date:—

Wheat, 12,106,000 qrs.; about an average.
Flour, 5,815,200 sacks; less than usual.
Barley, 5,649,000 qrs.; more than usual.
Oats, 4,820,000 qrs.; much less than usual.
Maize, 7,933,000 qrs.; much less than usual.

The average prices of staples for May thus compare with the four preceding months:—

1902.	Household Flour. Per sack.	English Wheat. Per qr.	English Barley. Per qr.	English Oats. Per qr.
January	21s 9d	27s 8d	26s 8d	20s 1d
February	22s 0d	27s 1d	26s 8d	20s 3d
March	21s 9d	27s 1d	26s 8d	20s 6d
April	23s 0d	28s 0d	26s 5d	21s 1d
May	23s 6d	30s 10d	26s 0d	22s 5d

The May rise in household flour has now been lost, but the value of English corn is maintained. The markets for American flour are 6d. lower on the week, and there is a like decline on foreign wheat (except Californian), and on foreign oats except New Zealand). The decline on foreign feeding barley is 3d. per quarter, and that is about the measure of the decline on round and yellow maize. There are no changes in flat maize, beans, peas, or dari.

Stocks of wheat on 7th inst. were thus returned:—

	Qrs.
In Farmers' hands	982,000
In Merchants' hands	2,724,000
Total	3,706,000

Sales of British wheat during May are estimated as follows for the last seven years:—

May.	Qrs.
1902	482,000
1901	452,000
1900	691,000
1899	855,000
1898	575,000
1897	758,000
1896	305,000

Recent trade has, therefore, been of about an average extent, but the rise in prices has not brought out such large deliveries as some had expected. It is not likely that the present reserves of British wheat will be parted with at all readily, for the harvest is bound to be late, and the situation, from holders' point of view, should improve by the middle of July.

Supplies on passage of other articles than wheat are thus returned for the 7th inst.:—

	1902. Qrs.	1901. Qrs.
Maize	875,000	1,025,000
Barley	300,000	295,000
Oats	75,000	200,000
Beans	24,000	18,000
Linseed	245,000	250,000

The chief shipping countries sent off the following quantities of grain in May:—

	Russia.	Roumania.	America.	Argentina.
Wheat	1,124,000 qrs	446,000 qrs	2,094,000	441,000
Flour	—— sks	——	886,000	——
Maize	331,000 qrs	1,006,000	20,000	526,000
Barley	474,000 qrs	115,000	3,000	——
Oats	502,000 qrs	17,000	69,000	——

The Roumanian shipments of maize are extremely heavy, as are the American shipments of wheat. The other items do not exceed expectation, while American shipments of maize, barley, and oats are much below the average of recent seasons.

Last week's shipments included 230,000 quarters of wheat from Russia, with 82,000 quarters of barley, 126,000 quarters of oats, and 101,000 quarters of maize. Roumania shipped 70,000 quarters of wheat, 9,000 quarters of barley, 2,000 quarters of oats, and 1,006,000 quarters of maize. These figures include Bulgarian and Roumelian shipments. India shipped 80,000 quarters of wheat, and 70,000 quarters of linseed.

The New World's exports were 412,000 quarters of wheat, 260,000 sacks of flour, 2,000 quarters of barley, 3,000 quarters of maize, and 34,000 quarters of oats, from North America, and 39,000 quarters of wheat, 143,000 quarters of maize, and 7,000 quarters of linseed from Argentina. Chile shipped 6,000 quarters of wheat and 5,000 quarters of barley.

BUTTER.

Tuesday.—Bedale: 1s 1d to 1s 3d per 24 oz roll. Gainsborough: 1s per lb. Settle: 11½d to 1s per lb. Spalding: 9d per lb. Stone: 10d to 1s per lb.

Wednesday.—Dorchester: 9d to 1s per lb. Barnsley: 11d and 1s per lb. Boston: 6d to 8d per lb. Colne: 1s 1d per lb. Goole: 10d and 11d per lb. Keighley: 1s and 1s 1d per lb. Kirbymoorside: 9d per lb. Knaresborough: 1s 2d and 1s 3d per 24 oz. roll. Louth: 8d per lb. Market Weighton: 9d per lb. Masham: 1s to 1s 3d per 24 oz. roll. Northallerton: 1s 2d to 1s 4d per lb. Stockton: 10d to 1s per lb. Worksop: 1s 1d to 1s 3d per lb. Hereford: 1s to 1s 2d per lb. Uttoxeter: 10d to 1s 1d per lb.

Thursday.—9d to 10d per lb. Driffield: 9d per lb. Penistone: 1s 2d per lb. Ripon: 1s 2d to 1s 4d per roll of 24 oz. Scarborough: 11d to 1s per lb. Witheiby: 9d to 1s per lb.

Friday.—Easingwold: 9d to 10d per lb. Helmsley: 8d to 9d per lb. Leyburn: 1s to 1s 3d per 24oz. roll. Lincoln: 10d to 1s per lb. Otley: 1s 1d to 1s 3d per 24oz. roll.

Saturday.—Appleby: 8½d to 10d per lb. Berwick: 6d to 1s per lb. Doncaster: 11d per lb. Grantham: 8d to 1s per lb. Howden: 10d per lb. Lancaster: 11½d to 1s per lb. Malton: 9d to 10d per lb. Pontefract: 11d per lb. Retford: 11d per lb. Richmond: 11d to 1s per lb. Skipton: 11½d to 1s per lb. Stokesley: 10d to 11d per lb. Whitby: 8d to 9d per lb. York: 1s to 1s 2d per lb.

EGGS.

Wednesday.—Dorchester: 8½d to 9½d per doz. Barnsley: 12 or 13 for 1s. Boston: 16 for 1s. Colne: 1s 4d per score. Goole: 14 and 15 for 1s. Keighley: 13 and 14 for 1s. Kirbymoorside: 16 or 17 for 1s. Knaresborough: 13 or 14 for 1s. Louth: 18 for 1s. Market Weighton: 17 for 1s. Masham: 15 and 16 for 1s. Northallerton: 14 or 15 for 1s. Stockton: 12 or 14 for 1s. Worksop: 1s 4d to 1s 6d per score. Hereford: 14 to 16 for 1s. Uttoxeter: 1s 3d to 1s 5d per score.

Thursday.—Brigg: 15 or 16 for 1s. Driffield: 17 or 18 for 1s. Penistone: 14 for 1s. Ripon: 14 or 16 for 1s. Scarborough: 14 for 1s. Wetheiby: 13 or 14 for 1s.

Friday.—Easingwold: 15 or 16 for 1s. Helmsley: 16 for 1s. Leyburn: 15 or 16 for 1s. Lincoln: 14 to 15 for 1s. Otley: 14 to 15 for 1s.

Saturday.—Appleby: 14 to 15 for 1s. Berwick: 8d to 9d per doz. Doncaster: 14 for 1s. Grantham: 13 to 15 for 1s. Howden: 17 or 18 for 1s. Lancaster: 10 to 13 for 1s. Malton: 16 or 17 for 1s. Pontefract: 14 to 15 for 1s. Retford: 1s 3d to 1s 4d per score. Richmond: 14 or 15 for 1s. Skipton: 13 and 14 for 1s. Stokesley: 13 or 14 for 1s. Whitby: 14 for 1s. York: 14 for 1s.

CHEESE.

Glasgow, Wednesday.—The arrivals of home cheese were liberal, and stocks are now beginning to accumulate, and the quality is improving. There was a fair inquiry for Cheddars and Dunlops, values varying from 52s to 54s per cwt. Old Canadians are now exhausted. New States and Canadians are arriving in small quantities. The inquiry is limited, and the trade is disposed to hold off, as they expect values to go cheaper.

Newport, Wednesday.—A good pitch, which was all sold to a good attendance of buyers. Caerphillies, 36s to 42s; fancy dairies, 44s to 46s; Derbies, 60s to 61s.; doubles, 56s to 57s; Cheddars, 60s to 65s.

THIS DAY'S MARKETS.

MARK LANE, MONDAY

[FIRST REPORT.]

There has been an excellent demand for heavy and seasoned oats fit for thoroughbreds and good hunters. Up to 28s. has been made for selected English, 30s. for Scotch, and 32s. for New Zealand. With this exception the whole of to-day's market was reactionary. English wheat did not fall, but millers will no longer pay the prices demanded. Foreign wheat was quite 6d. cheaper, both yellow and round maize were again 3d. down, and feeding barley seemed quite out of request. Beans and peas were a featureless trade. Haricots were quiet at 44s. to 48s. for hand-picked Danubian. Dari, being scarce, kept up in price, and, with buckwheat, sems to gain in favour with poultry-keepers. Argentine Sorghum was rather cheaper on the week, and oilseeds were also in buyers' favour.

CLOSE OF THE MARKET.

THE MARKET WAS DULL AND DEPRESSED AT THE CLOSE, DESPITE THE WEATHER BEING ADVERSE TO THE GROWING CROPS.

THE FLOUR TRADE.

MARK LANE, MONDAY.

The market for London Flour to-day was very dull, town whites falling 6d. and household sorts being hard to place at 23s. per sack. For country flour, all-English straight, 23s. was asked, but 22s. 9d. was about the best made. For French flour there was only a poor inquiry; 23s. commanded the best in the market. For American flour prices were in buyers' favour. Some choice Minneapolis patents were offered at 24s., while 21s. 6d. commanded some very satisfactory Milwaukee. Fancy bakers' grades of Minneapolis were had for a guinea. Milling offals were a most unsatisfactory market, so much so that we deem it better to quote prices 5s. per ton lower on the week, a basis on which business can be done, than to write the fall at only 2s. 6d., and have to state that stuff was not saleable even then. The following list of prices therefore gives the chief milling offals as reduced by 5s. selling value from our last quotations:—

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

Wheat.—Calls.	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
June 2 11 a.m.	5 11 ... 6 0	... 6 3	
4 p.m.	5 11 ... 6 0	... 6 3	
June 3 11 a.m.	5 11 ... 6 0	... 6 3	
4 p.m.	5 11 ... 6 0	.. 6 3	
June 4 11 a.m.	5 11 ... 6 0	... 6 3	
4 p.m.	nominal		
June 5 11 a.m.	5 11 ... 6 0	... 6 2	
4 p.m.	5 11 ... 6 0	... 6 2	
June 6 11 a.m.	5 11 ... 6 0	... 6 2	
4 p.m.	5 11 ... 5 11	... 6 2	
June 7 noon	5 10 ... 5 11	... 6 2	
To-day, noon	5 10 ... 5 11	... 6 3	

Maize for future delivery is obtainable at 4s. 5d. per cental duty unpaid, or 4s. 8d. per cental duty already discovered.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the Finance Bill being passed, the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement, however, the Acts of 1876 and 1901 throw the burden on the buyer, a fact which those who operate on these prices without being members of the Term Market would do well to note.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100lb. Maize, when quoted, is fair average quality from the United States.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—There is no material change to report in prices; there is, however, not much inquiry, and the market continues languid.—GREENHILL, BROTHERS (Belfast).

Offals.—There is a perceptible falling off in the demand for bran, and for most qualities prices have further declined 2s. 6d. to 5s. per ton.—GREENHILL, BROTHERS (Belfast).

Flour.—Owing to improved crop prospects, the American markets have been weak, and flour prices here have been reduced 6d. per sack without much business resulting. Grain.—Maize steady. Pease and beans dull. Oats very firm. Oatmeal is in good demand. Barley unchanged. Mill stuffs.—Grass being now plentiful, bran is difficult to sell, and 5s. per ton lower. Thirds, however, especially fine, remain pretty firm.—MCKINNON AND MCDONALD (Glasgow).

Flour.—Trade to-day has been firm at late rates, with rather more inquiry both on spot and forward.—T. S. MEDILL AND SONS.

The arrivals of wheat and flour the past week have been larger. At to-days market the trade was firmer, prices being 3d. to 6d. per sack lower for wheat, and 3d. to 6d. per sack for flour. Prices of maize, barley, and oats are unchanged.

Milling Offals.—A steady trade passing for middlings at last Monday's prices. Bran and

FEEDING STUFFS.

London, Monday.—Linseed cake: Trade very dull and prices rather weaker. Decorticated cake and meal unchange. Undecorticated as before. Linseed rather lower on week.

English Linseed Cake	ex mill	7 15 0 to 7 17 6
American Calcutta Linseed Cake	ex quay	7 12 6

ROBERT AND JOHN HEWTSON.

SEEDS.

London, Monday.—The business now doing in our market is quite insignificant. The consumptive demand is over, and so far there is nothing to tempt speculative purchasers. There is a retail demand for rape and mustard seeds for present sowing. Canaryseed is dull. —JOHN PICARD.

HOPS.

London, Monday.—W. H. and H. Le May report:—The trade continues for all classes of good hops, prices for which are very firm. Reports from the plantations speak of vermin and mould having appeared.

Irish Live Weight Quotations.

(Department of Agriculture and General Instruction for Ireland.)

The following returns are those of actual sales made in Robson's Cattle Mart, Belfast, the stock being weighed either before or after sale, for the week ending June 5th. 1902.

* Indicates that the lot so marked was sold by live weigh at the price quoted.

CATTLE.

Mtropolitan Market, Islington.

Monday, June 9th, 1902.

	British.	Total.	June 10, 1901.
Beasts	1,280	1,280	1,100
Sheep and lambs	7,710	7,710	9,850
Calves	10	10	—
Pigs	—	—	50
Milch Cows	40	40	55

Quotations per 8lb (sinking the offal).

	Inferior.	Second.	First.
Beasts	3s 6d	4s 8d	5s 6d
Sheep	4s 0d	5s 6d	6s 4d
Lambs	5s 6d	6s 0d	6s 8d

Milch cows, per head, £16 to £22.

British arrivals include as follows:—Scotland, 11; Eastern Counties, 588; Midland, Home and Western Counties, 423; Devon, 20; Ireland, 238.

To-day's supply, compared with Monday last, showed an increase of 190 head, owing to larger arrivals from Ireland, as also of fat butchering cows; these latter met with a dull trade at less money. Fat beasts of both prime and second quality met a slower sale, higher rates being demanded, but only in exceptional cases obtained. Fat bulls sold readily at an advance of 2d per 8lb. The Irish arrivals included 168 stores, which met a dull trade at following prices per head: Yearlings, £6 5s; 2½ years old, £11 10s to £12; and 3 years old, £13 to £15.

The following are top quotations per 8lb (sinking the offal):—

	To-day.	June 10, 1901.
Scotch	5s 4d to 5s 6d ..	4s 4d to 4s 6d
Devons	5s 3d to 5s 4d ..	4s 3d to 4s 4d
Norfolks	5s 2d to 5s 4d ..	4s 4d to 4s 5d
Lincolns	4s 10d to 5s 0d ..	3s 10d to 4s 0d
Irish	5s 0d to 5s 4d ..	
Fat cows	4s 4d to 4s 6d ..	3s 8d to 3s 10d

The supply in the sheep market showed a decrease of 1,880. Trade for wethers was void of life owing to a rise of 2d per 8lb in value. Ewes sold readily at a still further advance, the supply being so short. For lambs there was less demand. Rates in consequence ruled in favour of the buyer. The total supply included 2,930 from the Eastern counties, 40 from Yorkshire, and 330 Scotch.

Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned:—

	To-day.	June 10, 1901.
7½ to 8-st. South Downs	6s 2d to 6s 4d ..	5s 3d to 5s 4d
9-st. Downs	5s 8d to 5s 10d ..	5s 0d to 5s 2d
10-st. half-breds	5s 7d to 5s 10d ..	4s 8d to 4s 10d
10-st. Yorkshires	5s 2d to 5s 4d ..	4s 6d to 4s 8d
12-st. Lincolns	5s 4d to 5s 6d ..	4s 6d to 4s 8d
10-st. Down ewes	4s 6d to 4s 8d ..	4s 0d to 4s 2d
11-st. half-bred do.	4s 2d to 4s 4d ..	3s 10d to 4s 0d
5-st. Down lambs	6s 6d to 6s 8d ..	6s 8d to 6s 10d
6-st. half-bred do.	5s 10d to 6s 0d ..	6s 2d to 6s 4d

Calves not worth quoting. No pigs.

London (Central), Monday.—Moderate supplies; fair trade. Beef carcasses, 4s 8d to 4s 10d; hind-quarters, 5s to 5s 4d; roastings, 5s 6d to 6s 2d. Sheep, ewe, 3s 6d to 3s 10d; wether, 4s 8d to 5s; hind-quarters, ewe, 4s 8d to 5s; wether, 5s 8d to 6s. Pigs, large, 3s 4d to 3s 8d; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 652; sheep and lambs, 825; pigs, 544. Beef, 9s to 9s 8d; mutton, 8s 9d to 9s 11d; lamb 10s; pork, 6s 3d to 7s 3d; sows, 5s 9d to 6s 9d. Fat beasts very sharp trade, dearer. Stores good demand. Fat and store sheep and pigs good demand. Milch cows better trade; £14 to £23.

FOREIGN CATTLE.

Deptford Monday.—Beasts, 1,303. To-day's supply, compared with Monday last, showed a decrease of 333 head, and consisted of 460 from the United States and 843 from Canada, trade for which was of a brisk nature, even at an advance of from 2d to 4d per 8lbs, an early clearance being made at following quotations per 8lbs, offal given in:—85 to 90 stone States, 5s 4d; 90 stone Canadians, 5s to 5s 2d. No sheep on the market, and none due for several days. On Saturday the beast supply consisted of 1,281 from the United States, quoted from 4s 10d to 4s 11d, and occasionally 5s, and 75 Canadians at from 4s 7d to 4s 8d, with a sharp demand, and consequently a firm trade.

Liverpool, Monday.—Demand good for cattle, and prices about the same as last week. Trade good for sheep, and prices general for all classes. Lambs also a fair trade, but prices were no higher. Beef, 8d to 6d per lb; mutton, 9d to 6½d per lb; lambs, 9½d to 8½d per lb. At market—733 cattle and 10,934 sheep.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are 3d. lower for prompt shipment. Maize is 3d. lower for Argentine. Oats are 3d. lower for all light sorts. Cargoes of barley for October shipment are offered by Russian and Roumanian houses at very low and tempting prices.

BUSINESS DONE.

WHEAT.—Walla Walla, 29s, on passage; Californian, 29s 6d, prompt shipment No. 1 Northern, 26s 6d, prompt shipment; Argentine, 28s 6d, prompt shipment; Bombay, 30s 3d, prompt shipment; white Kurrachee, 28s 9d, prompt shipment; red ditto, 28s 3d, July shipment; Russian winter, 28s 6d, July shipment.

BARLEY.—Russian new crop, 17s, October shipment; Roumanian ditto, 17s, October shipment.

OATS.—Viatka, 17s 9d, July shipment; Roumanian new crop, 14s 9d, November shipment.

MAIZE.—Turkish, 21s 3d, on passage; Odessa, 21s 3d, prompt shipment Roumanian, 21s, prompt shipment; Argentine, 20s 3d, prompt shipment.

LINSEED.—Calcutta, 53s 6d, prompt shipment.

RAPE SEED.—Yellow Calcutta, 40s 6d, prompt shipment brown ditto, 37s 6d, prompt shipment.

COTTON SEED.—Egyptian, £7 17s 6d, arrived; ditto, £7 13s 9d, on passage; ditto, £7 11s 3d, July shipment; ditto, £6 11s 3d, November shipment.

PROVISIONS.

London, Monday.—Bacon: The arrivals from Ireland last week were 1,788, and from foreign ports 11,879 bales of bacon. With continued heavy supplies of Danish bacon and a disappointing demand, prices were generally some 1s to 2s easier, and in favour of buyers last week. Irish ranged from 56s to 61s up to 68s; Danish ranged from 50s to 60s up to 65s; Canadian from 54s to 55s up to 58s. Butter: The butter market was quiet. Danish, 104s to 106s; Irish, 90s to 100s; French, 86s to 98s; Russian, 86s to 92s. Lard: The lard market was steady, with no change in prices.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington market there was a slight increase in the supply of fat beasts the majority of which consisted of consignments from Norfolk, Irish arrivals totalling 162, but 107 of these were stores. For both prime and second-quality beasts trade was of a rather slower nature, with a slight downward tendency in value, which, however, was not sufficiently marked to warrant lower rates being quoted. A practical clearance was made. Fat butchering cows and bulls on Monday met a firm trade at an advance of 2d. per 8lb., but on Thursday were most difficult to cash, so much so that only about half the arrivals were shown. At the foreign cattle Market, Deptford, sales were held on Monday, Wednesday, and Saturday. On all days there was a good demand, higher rates by from 1d. to 2d. per 8lb. being both asked and obtained. The total number of beasts offered for sale was 5,077, as against 4,385 during the previous week. The supply consisted of 1,155 British—increase 120—and 3,922 imported—increase 572. These latter comprised 3,178 from the United States, and 744 from Canada. The following were the top rates obtained per 8lb. (sinking the offal): 90-stone polled Aberdeens, 5s. 4d., occasionally 5s. 6d.; 90-stone polled Norfolks, 5s. 4d.; 80-stone Devons, 5s. 2d. to 5s. 4d.; 90-stone Runts, 5s. 2d. to 5s. 4d.; 100-stone Lincolns, 5s. 2d. to 5s. 3d.; 90-stone Irish, 5s. 3d.; 85-stone States, 4s. 11d. to 5s.; 90-stone Canadians, 4s. 10d.; 100-stone fat cows, 4s. 6d. to 4s. 8d.; 100-stone fat bulls, 4s. 2d. The sheep trade was entirely confined to the Islington market, and, so far as wethers are concerned, was firm and steady, last week's advanced rates being well maintained. On the other hand, ewes were bought on easier terms. Choice quality lambs were in good request, but on Monday were a shade lower in price; but on Thursday, owing to a light supply, were dearer. The total number penned was 11,440, all being British. Best pens made, per 8lb., as follows (sinking the offal): 7½ to 8-stone Southdowns, 6s. 2d.; 9-stone Downs, 5s. 10d.; 10-stone ditto, 5s. 8d.; 10-stone half-breds, 5s. 6d.; 10-stone Yorkshires, 5s. 2d.; 12-stone Lincolns, 5s. 2d.; 10-stone Down ewes, 6s. 2d.; 11-stone half-bred ditto, 3s. 10d.; 4½ to 5-stone Devon lambs, 6s. 6d. to 6s. 10d. Calves numbered 125, and met a slow trade, especially for second quality. The best ewes were quoted at 5s. 8d. per 8lb. Only 20 pigs on the market.

Trade in the West.

Despite the unfavourable climatic conditions prevailing, the stock markets keep even more buoyant than might be expected. Up to the present grazing bullocks continue to find a good steady sale at satisfactory rates, ranging from £20 to £30 per pair for ordinary runs of fresh condition beasts, and from £30 to £36 for animals very fresh and that require but little in the way of "finishing." Low-condition bullocks, though saleable, are not so much in favour relatively as those of a better stamp, though with the advent of bright, growing weather we shall expect to see the prices of these advanced materially with the increase of keep which is bound to result from improved weather. The inquiry for milch beasts also continues very active, especially for reliable milchers suitable for town dairies, of which there is none too many about, and when these come into the market they are readily caught up at prices ranging from £18 up to £21 or £22 apiece. A more general run for heifers and cows with calves of an ordinary stamp is from £15 to £17 or £18, whilst aged cows sell at widely-varying prices, ranging from £14 down to as low at £11 or £12 apiece. But then these are animals almost played out, and likely to produce but little profit in the future. Taken all round, there is not much to complain of, however, in the price now being made either for barreners or for milk purposes, and vendors are, as a rule, satisfied with what they get, though in some cases they want, like many other people now-a-days, "a little bit more." Young stock, too, continue to meet a fair demand at fair prices. Store sheep fluctuate but little in price, a good many waiting with some anxiety to see "how things are going to turn out"—how the season shapes, and what is to be the ultimate result of the corn crop. Fat bullocks make a very satisfactory price, the best steers and heifers—of which there is by no means a big supply offering—realising 11s. 6d. to 12s. per score, with a fair demand, and fat cows of a decent stamp make 10s. 6d. and over in some cases, and rough contract bullocks 9s. 6d. to 10s., and nearly everything brought out finds buyers. Mutton keeps a sluggish business, though prices are considered generally as a shade higher. Good wethers again touch 8d., and best ewes 7d. to 7½d., but inferior runs can still be had at 5½d. to 6d. Lamb is moving off a little better, though the absence of bright, sunshiny weather is not without its effect on the demand, and the price, too, 10d. to 10½d., being now about the best price as a general run, though 11d. is made for animals of exceptional quality and weight for high-class trade, which it is not in the power of every purveyor to give. Some poor, out-of-condition lambs make less—3½d. to 9½d. Calves keep exceptionally firm, and prices very dear, the best making 8½d. to 9d., and the more ordinary runs 7d. to 8d.; but the veal trade is one of the best things on the market now, even surpassing porkers, some of which at markets within the last week have made 11s. per score and over, a more general run for nice quality porkers and medium size baconers being 10s. to 10s. 6d. Whatever the outlook may be, very few markets are held at which a clearance is not reported.

Trade in Scotland.

The number of fat cattle on offer this week has been considerably larger, and the quality quite up to an average, with a very large attendance of town and country buyers, trade has been still very sharp, and prices quite up to the extreme rates of last week, any change being in favour of the seller, more particularly for the best class of bullocks. Fat cows and bulls have also been exceedingly dear. The show of fat sheep and lambs was rather smaller. There was a good demand, an easy clearance being effected at an advance of 2s. a head over those of last week. Lambs have also got well sold if of good quality. A small show of calves met a rather dearer trade, and pigs, which were forward in good numbers, sold well. In the store market there have been smaller supplies of store sheep, which have met a fair trade, with rather more inquiry for the best description. Store cattle have been offered in considerably larger numbers, with an improvement in the weather, there has been a better demand than has been experienced for some weeks, especially for the better class of bullocks, which have got nearly all cleared out at rather better prices, only a few stirks being left unsold. A smaller show of milch cows met a fair trade. Quotations: Extreme top price of cattle per live cwt., 45s. to 48s.; current, 42s. to 45s.; mutton, to 9½d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

There was a good attendance of buyers, both local and shippers, at Thursday's Dublin market, and though there was an increase of over 200 head of cattle, the business was the best that has been for weeks; in fact, some of the salesmasters expressed that trade has not been so good since the "seventies." This may be going a bit too far, but there is no doubt but that things have taken a very satisfactory change, however long it may last. It was not alone the prime cattle that sold well, but the secondary and rough grades were also in much better demand, and practically nothing in the line of beef was left over, the thinner cattle being bought to finish off, as the late rains have greatly improved the pastures. Some London buyers were present—a very unusual thing—and they purchased very freely. Prime ox and heifer beef made from 68s. to 70s., and a few extra choice lots went up to 73s. per cwt.; good second class, 60s to 66s.; and other classes from 52s. 6d. upwards. Though there was a shrinkage of nearly 1,500 sheep and lambs, as compared with previous week, there was no improvement to be noted in prices, as the supply was in excess of requirements. The buying for aged wethers was slow, but there was no alteration in price. The trade in hoggets for exportation was sluggish. Prime wether mutton sold at from 7½ to 7⅞d. per lb., ewes 6½d to 7d., inferior sheep from 5½d per lb. Lambs, where not of good size and quality, are rather a drug, but for the right sort from 35s. to 40s. per head was given, but small to medium might be bought from 15s. upwards. Prime veal continues very scarce, and the few really well-fed calves on market sold freely at from 8d. to 9d. per lb., but rough sorts hard to move at from 4½d up to 6½d per lb. There were 1,335 cattle and 8,931 sheep and lambs offered for sale. A fair supply of milch cows, but these were chiefly of second quality. For prime springers and new milchers from £17 to £20 was given, but others might be were of the rubbishy order, which were hard to clear. Late rates were difficult to maintain, best light weight selling at from 48s. to 50s. per cwt., coarse from 34s. to 42s. per cwt.

LONDON.

London (Central), Wednesday.—Supplies fair; quiet demand, prices ruling steady. Arrivals of beef included 350 Liverpool sides, 1,500 hindquarters, and 550 forequarters American refrigerated. Beef: Scotch short sides, 5s, long 4s 8d; English, 4s 4d to 4s 8d; American (Deptford killed), 4s 4d to 4s 6d; Liverpool, 4s 4d to 4s 6d; American refrigerated hindquarters, 3s 10d to 4s 2d; forequarters, 2s 7d to 2s 9d. Mutton: Scotch, 5s to 5s 4d; English wethers, 4s 6d to 5s; ewes, 3s 8d to 4s 8d; English lamb, 5s to 5s 4d. Pork: English, 4s to 4s 4d; and Dutch, 3s 10d to 4s 2d per 8lb.

London (Central), Friday.—Good supplies were on offer, and met a sustained demand at fair prices. A fair quantity of English, small of Deptford killed American, 100 tons Scotch, 270 Liverpool sides, 4,500 hindquarters, and 2,400 forequarters American killed constituted the arrivals. Beef, Scotch short sides, 5s 4d to 5s 8d; long, 4s 10d to 5s 2d; English, 4s 6d to 4s 8d; American, Deptford killed, 4s 4d to 4s 6d; Liverpool, 4s 4d to 4s 6d; American refrigerated hindquarters, 4s 4d to 4s 8d; forequarters, 3s to 3s 2d. Mutton: Scotch, 5s 2d to 5s 6d; English wethers, 4s 10d to 5s 2d; ewes, 3s 8d to 4s; Canterbury, 2s 11d to 3s 1d; Wellington, 2s 8d to 2s 11d; Sydney and River Plate, 2s 5d to 2s 7d. English lamb, 5s 8d. Veal: English and Dutch, 4s to 4s 8d. Pork: English, 4s 4d to 4s 8d; and Dutch, 4s to 4s 4d per 8lb.

Islington, Thursday.—Only a small supply offered, mainly consisting of fat bulls and rough cattle. The demand was of a steady character, prices being firm. Fat bulls, 3s 10d to 4s. Sheep, in moderate supply, met with fair request for both wethers and ewes, the former being steady, and the latter 2d per stone dearer. 7½ to 8-stone Down wethers, 5s 10d to 6s; extreme, 6s 2d; 9-stone ditto, 5s 8d to 5s 10d; 10-stone half-breds, 6s 4d to 5s 6d; 10-stone Down ewes (unclipped), 4s 8d; 11-stone half-breds ditto, 4s 2d to 4s 4d. Lamb trade firm: 4½ to 5-stone Downs, 6s 6d to 6s 8d; 6-stone half-bred ditto, 5s 10d to 6s. Calves dearer, the best on offer making 5s 4d to 5s 6d per 8lb, to sink the offal. No pigs were offered. Total supplies:—65 beasts, 1,850 sheep, 5 cows, and 115 calves.

COUNTRY.

Ashford, Tuesday.—Beef trade fairly good, best bullocks making 12s to 13s per score; medium, 11s to 12s. Mutton a slow trade at late rates. Veal and lamb slow. The pork trade was disorganised by the warmth of the weather.

Ashford, Tuesday.—Beef trade fairly good, best bullocks making 12s to 13s per score; medium, 11s to 12s. Mutton, a slow trade at late rates. Veal and lamb slow. The pork trade was disorganised by the warmth of the weather.

Basingstoke, Wednesday.—At Rainbird and Sons' sale yard there was a large attendance of buyers to meet a supply of 37 fat beasts, 91 calves, 520 fat sheep and lambs 443 pigs, and 104 head of dairy and store cattle, for which the following prices were realised:—Prime young Devon steers, up to £24 5s. Polled Angus cows made up to £21 5s. Shorthorn steers, £22; others up to £23. Prime shorthorn heifers reached up to £24 10s. Prime wethers and young ewes made from 45s. to 57s; old ewes, 32s to 38s; Exmoors, 34s 6d to 38s; three months' old sucking lambs, 30s to 36s; a few fancy lots, 40s; rams, 46s to 52s; fat calves, 75s to £5 10s; small, 20s to 55s; fat porkers, 48s to 63s; small, 30s to 45s; store pigs, 16s 6d to 32s 6d; dairy cows, £7 to £19 10s. A good demand for all descriptions of fat beasts. A clearance made and prices well kept up. The show of fat sheep, rather shorter in numbers, met a good demand, the best lots of young sheep and shorn lambs making an advance. Old ewes were lower. Milch cows shown in shorter numbers, and nearly all sold, with a good inquiry. Most inquiry for store cattle, and all cleared at satisfactory prices. Fat calves and sucklers meet a ready sale, and all sold at the late high prices. A good inquiry for all sorts of fat pigs, which were all sold at about last week's prices. A large number of store pigs on offer, for which the demand keeps up. Ruling prices:—Prime Devon fat beasts, 7¾d to 8¼d; ditto shorthorns, ditto, 7d to 7¼d; bulls, cows, and inferior, 6d to 6¾; best quality fat sheep, 8¼d to 8¾d; second ditto, 7d to 7¾d; old ewes, rams, and inferior, 6d to 6¼d; three months' old sucking lambs, 9d to 10d per lb; fat calves, 7d to 9¼d per lb.; fat porkers, up to 11s per score.

Boston, Wednesday.—Strong store beasts, £14 to £16; in-calf cows, £20 to £22; heifers, £17 to £19; calves, 55s to 60s; best beef, 7s 6d to 8s; cow beef, 7s to 7s 6d; ewes and lambs, 46s to 54s; best wethers, 7½d to 8d; ewes, 6½d to 7d; fat lambs, 28s to 34s.

Braintree, Wednesday.—A good supply, but trade not very brisk. Pigs found the best sale.

Bury St. Edmunds, Wednesday.—At Messrs. Simpson and Sons' Auction Mart there was a good show of fat beasts, all of very prime quality. Good trade for all descriptions, but hardly up to last week's extreme rates, all the ripest cattle meeting with the best inquiry, and prices reached up to £26. Smaller supply of store cattle, which met a good trade. Short supply of fat sheep, and trade was at about late rates; clipped sheep making up to 66s. Fat ewes were hardly so dear on the week. Small show of fat lambs, which sold at late rates. The store sheep pens were well filled, and there was rather better inquiry for all descriptions. Mr. Taylor's Suffolk ewe hoggets went up to 48s per head; half-bred hoggets up to 44s. Several lots of poor hoggets made from 33s to 41s per head. A few lots of lambs off their mothers met a rather better trade. A few lots of couples went up to 63s. Shorter supply of fat pigs, which fetched about late rates. A brisk trade prevailed for Mr. Manners' pedigree large and middle white Yorkshire boars, sows, and yelts. Young sows made up to £5 5s per head, as did also boars.

Cambridge, Monday.—Beasts, 457; sheep, 718; pigs, 483; horses, 33. Beef, 8s to 9s 3d; mutton, 4s 4d to 5s 8d; pork, 6s to 7s 3d. A few lots of store beasts, but trade slow. Fat beasts a good brisk trade all round. Fat sheep a fair number to hand, and trade quite up to last week. Stores a few lots shown, and trade brisk Fat pigs a good trade all round. Stores trade brisk at more money. Hay and straw short supplies.

Canterbury, Saturday.—Prices a trifle higher and a good demand prevails. The best working tegs are making 35s, and ewes and lambs from 34s to 37s. Rather more inquiry for young horned stock.

Carlisle, Saturday.—The supply of Irish store cattle was smaller than last week's, and consisted of about 300 head of heifers. Fair attendance and better trade owing to the improvement in the weather and the high price of beef. Small beasts from £7 10s to £10 10s; and better sorts from £12 10s to £16 10s.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
8 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	10 0
Under 10 sc.	Not exceeding 2¼ in. ...	9 6
Under 11 sc. 10 lb.	... Not exceeding 2¾ in....	9 0
Under 12 sc.	Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ltd.

Dorchester, Wednesday.—Good supplies came to hand in all departments of to-day's market, at which sales were held by Messrs. Duke and Son and Mr. Sampson, and, with a brisk inquiry for most things, prices were, except in a few instances, pretty well maintained, poultry, if anything, rather favouring buyers. Fat bullocks maintain their firmness, and all the best grades make a good price—11s to 12s 6d per score; seconds, 10s to 10s 6d. Mutton meets a fairly steady trade—wethers, 45s to 52s (or 8d per lb); ewes, 38s to 46s (or 7d to 7½d per lb); lambs, 30s to 38s (or 9d to 9½d). Calves continue in good demand at pretty nearly full prices—best, £4 to £6 7s 6d (or 8d to 8½d per lb and over); seconds, 60s to 78s (or 7d to 7½d). Pigs in good demand at 46s to 56s for

porkers, and 65s to 94s baconers (or 10s to 11s per score); stores, 25s to 44s each.

Dublin, Thursday. — Numbers in market: Beasts, 1,335; increase, 215; sheep, 8,981; decrease, 1,442; calves, 47; decrease, 8. Brisk demand for all finished cattle at prices in advance of last week's quotations. Secondary qualities easier to dispose of. Demand quieter for sheep and lambs, but no alteration in prices. Cattle, live weight (best), 39s to 41s per cwt. Secondary and inferior descriptions, 30s to 38s per cwt. Mutton, dead weight, 6½d to 8¼d per lb.—GANLY, SONS, AND Co.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report an excellent supply of fat cattle, which met a sharp trade, both distant and local buyers being well represented, well-finished animals making 9s 3d per stone. Fat sheep were not quite so numerous, and sold freely, prices being firmer. Grazing sheep and couples, owing to the altered conditions of feed, were in much better demand at improved prices. Fat and store swine in good supply, all descriptions being slightly easier in price. Calves sold well. This being the fourth spring sale of grazing cattle, 228 steers and heifers were penned; buyers were well represented, and prices were fully £1 per head more than the early part of last month. Cows were short, and realised higher prices. Numbers at sales and market—Cattle, 916; sheep, 2,057; swine, 1,748.

Leicester, Wednesday.—The consignments of Lincolnshire and Norfolk fat bullocks were fully equal to the demand. Trade ruled rather sluggish on account of the extreme rates demanded. Choice bullocks, 7¾d to 8d; secondary, 7½d; cows, 6¾d to 7d; heifers, 7¾d to 8d per lb. Sheep, choice, 8d to 8¼d; large sheep, 7d to 7½d; ewes, 6½d to 6¾d; lambs firm, 9d to 10d; calves, 8d to 8¼d per lb.

Newport, Wednesday.—There was a short supply of cattle, but sheep and lambs were plentiful. Trade brisk all round. Best beef, 7½d to 7¾d; seconds, 7d to 7¼d; cows, 6½d to 6¾d; wether mutton, 8¼d; shorn wethers, 8d to 8¼d; lambs, 9d to 9½d; veal, 7d to 8d; porker pigs, 10s 6d to 10s 9d per score.

Norwich, Saturday.—There was a fair supply of store beasts, and as keep prospects have improved in Norfolk, while fat beasts have been selling well of late, an advance of 5s to 10s per head was established to-day for stores. Fat beasts, which were in short supply, ruled firm at 8s 6d to 9s and 9s 6d per 14lb. Store sheep were in about average supply; trade was quiet at late rates, keeping hoggets making 34s to 44s, and lambs 15s to 25s per head. Fat sheep moved off readily at 9s to 9s 6d and 10s per 14lb. It will be observed that both fat beasts and sheep are now making better prices than they have realised for a long time past.

Rye, Wednesday. — Number of entries:—Sheep and lambs 790, store beasts 19, pigs 29. Best beef, 5s 6d; maids and wethers, 5s 6d; large wethers, 4s 8d to 5s; barrens, 4s. Lambs, 6s to 6s 4d. Calves, 4s 8d to 5s. Pigs, 3s to 3s 6d.

Salford, Tuesday.—The supply of cattle was about the same as last Tuesday. A fair trade was experienced at late rates. There was very little difference in the number of sheep and lambs penned when compared with last week. Trade for both was better, especially for sheep, choice quality of which made more money, lambs changing hands at late rates. Calf trade quiet, but last week's prices maintained. Quotations:—Cattle, 6d to 8d; sheep, 6½d to 9d; lambs, 8½d to 10d; calves, 5d to 8d per lb. At market—Cattle, 1,293; sheep and lambs, 13,594; calves, 183; pigs, 68.

Sheffield, Tuesday.—Only a small number of beasts changed hands, though quite an average quality was offered. Best qualities, £22 10s.; secondary, £15 to £19; young stirks, £6 to £8.

Shrewsbury, Tuesday.—Fat cattle, pork pigs, and sheep in good demand at high prices. Store pigs slightly easier, and store cattle a slower trade. Quotations—Lamb, 10d to 11d; beef, 7d to 8d; mutton, 7½d to 8¾d; and veal, 8d to 8¾d per lb. Porket pigs 10s to 11s, and bacons 8s 6d to 9s 6d per score. Cows, with calves, up to £20 15s. Hay up to £3 5s per ton. Number offered—574 lambs, 538 cattle, 95 cows with calves, 697 sheep, 205 calves, 29 fat, 106 porket, and 643 store pigs.

Spalding, Tuesday.—The meat trade was a little easier. Beef made 8s 6d per stone, against 9s the previous week. Stores were a trifle dearer. Mutton, 7d to 8d per lb.; brisk demand for lambs.

Stockton, Wednesday. — The scarcity of cattle throughout the country was reflected at this market, where the supply was very small, whilst prices showed a steady improved tendency. Numbers—100 cattle, 4 calves, 321 sheep, 88 lambs, and 184 pigs. A firm demand for best cattle, which made up to 9s and 9s 6d; rougher kinds, 7s to 8s per stone. Sheep were dearer; clips, 9d; wools, 10d; ewes, 6d and 7d; tups, about 5l per lb; and lambs, 25s to 35s each.

Thame, Tuesday.—A large supply of all kinds of stock, with a good attendance of buyers. There was a fair demand, and prices were same as previous weeks. Beef very dear, and a ready clearance made. Messrs. Bond and Burrows' sale comprised 61 fat beasts, 341 fat and store sheep and lambs, 46 fat and weaning calves, 196 fat and store pigs. Fat heifers made £20 to £25; fat bullocks, £21 to £23 15s; fat shorn wethers, 48s to 54s 6d; fat ewes, 42s to 57s; fat lambs, 30s to 39s; fat calves, £3 10s to £5 7s 6d; weaning cow calves, 20s to 60s; bull calves, 18s to 58s; bacon hogs, 9s per score. Pork in demand and stores wanted.

Wakefield, Wednesday.—Trade better on the whole, but rather less show all round. Prime quality beef made up to 8d per lb; secondary quality, 6¾d to 7¾d per lb; choice quality sheep made ½d per lb more money up to 8d per lb; secondary sorts, 6¾d to 7¾d per lb. Numbers at market—Beasts, 1,359; sheep, 4,326.

Wolverhampton, Wednesday.—Beasts a fair supply, moderate trade. Sheep and lambs moderate supply; fair trade. Calves small supply; slow trade. Beef, 6d to 8d per lb; mutton, 6½d to 8¼d per lb; lamb, 9d to 10d per lb; veal, 6½d to 8d per lb. Very few pigs on offer.

Worcester, Saturday.—Trade brisk all round at full prices. Beef, 8d; inferior, 7d; wether mutton, 8¼d to 9d; ewes, 6d to 7d; and veal, 8¼d per lb. Pork pigs, 10s 6d; bacons, 10s to 10s 3d per score.

Worksop, Wednesday.—Small supply of beef, but large supply of sheep, mostly stores. Lambs were not plentiful. Beef, best, 7s 9d to 8s 6d per stone; secondary, 7s to 7s 9d per stone; best wethers, 7½d to 8¼d per lb; store sheep, 27s 6d to 30s each; lamb, 10d to 11d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies fair, amounting to 930 head, an increase of 172 as against last Wednesday's figures, and consisted of 206 United States and 724 Canadian. Trade ruled steady at 4s 9d to 4s 11d, exceptionally 5s, and 4s 8d to 4s 10d per 8lb, to sink the offal, respectively.

Yorkhill, Monday.—The usual weekly sale of United States and Canadian cattle was held this afternoon. There were penned in the sheds 86 cattle landed by the Lakonia (s.), from Montreal, 209 by the Corean (s.), from Philadelphia, and 198 cattle by the Austrian (s.), from Boston. As usual, bullocks formed the majority of the consignments. There was the usual large attendance of buyers, and trade if anything was a little sharper than that ruling last week, and prices slightly better. The dead-weight quotations for United States and Canadian cattle were similar, and may be given as follow:—Best bullocks, 68s to 70s per cwt; secondary, 65s to 67s; best heifers, to 70s; heavier, down to 68s; best bulls, 60s to 62s; and secondary and heavier, 56s to 58s.

MANURES.

Liverpool, Friday.—The season for the application of nitrate of soda has practically terminated, consequently the demand on agricultural account is trivial, and, with ample supplies, values again favour buyers. £8 17s 6d to £9 per ton is the spot value of best quality, according to quantity. Other fertilisers are quiet, and values unchanged. The demand for feeding stuffs all round continues inactive; yet in some instances the tendency is to advance prices. At auction 285 bags Peruvian cotton cake sold ex quay at £6 15s per ton. Current rates are as per subscribed:—Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £8 17s 6d to £9 per ton; East India Bone Meal, fair to prime, in bags, £4 10s to £4 15s per ton; Kainit, prime 23 per cent., or Meal, in bags, £2 7s 6d to £2 8s 9d per ton; Palm Nut Cake, prime, in bags, £5 15s to £7 3s 9d per ton; Linseed Cake, American thin oblong, prime, in bags, £7 1s 3d per ton; Linseed Cake, English, prime, in bulk, £8 3s 9d to £8 7s 6d per ton; Linseed Cake, foreign round, prime, rich in oil, in bags, £8 to £8 2s 6d per ton; Cottonseed Cake, N.A. decorticated, prime, in bags, £7 2s 6d to £7 7s 6d per ton; Cottonseed Cake, English, decorticated, prime, soft, in bags, £7 5s to £7 10s per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 10s to £4 15s per ton; Cottonseed Cake (crushed), 20/25 per cent. oil, prime, in bags, £7 10s to £7 12s 6d per ton; Maize Germ Meal, prime, in bags, £5 17s 6d per ton; Corn Oil Cake, 10/13 per cent. oil, prime, in bags, £6 5s to £6 7s 6d per ton; Rice Meal, Rangoon, as imported, in bags, £5 to £5 5s per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 12s to 12s 6d per 240lb; Linseed, fine bold feeding, in bags, £3 1s to £3 4s per qr, 416lb; D.N.S. Brand Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton at depot; D.N.S. Brand Superphosphate of Lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s per ton at depot; Superphosphate of Lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton at depot; Basic Slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, nominal; Basic Slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, nominal; Basic Slag, finest quality, guaranteed, 38 to 45 per cent. phos., in bags, nominal.—H. JONES LANGAR AND Co.

WOOL.

London, Saturday.—English—per pk of 240lb: Fleeces, S. Dn. hoggs, £7 to £8 10s; half-bred hoggs, £6 15s; ditto wethers, £6; Kent fleeces, £5 15s; South Down ewes and wethers, £7 to £8 10s; Leicester ditto, £5 to £5 10s. Colonial—per lb: Vic. fleece super., 1s 8d to 1s 11d; scoured good, 1s 9d to 1s 10d; scoured average, 1s 8d to 1s 8¼d; greasy average to fair, 11½d to 1s 0½d; N.S.W. scoured average, 1s 5¼d to 1s 6½d; S. Aus. greasy average, 7½d to 8d; N.Z. scourged average, 1s 6½d to 1s 7½d; greasy average, 9½d to 10½d; Cape scoured sup., 1s 6d to 1s 7d; fleece average, 7½d to 8¼d; greasy average, 6¾d to 7½d; Natal scoured, 1s 1½d to 1s 2½d; greasy average, 7½d to 8d; crossbreds—Grs.—Vic. good to super., 11½d to 1s 0½d; New Zealand fine, 9½ to 10½d; ditto medium, 6½d to 7d; ditto coarse, 4½d to 5½d.

Canterbury, Saturday.—Very little old wool remaining, and new clip not yet on the market. Prices for Kent fleeces stand nominally at from 5d to 5½d per lb.

Glasgow and Leith.—The aspect of the Scotch wool market has been more cheerful during the last month. At the public sales in Leith on 6th, and Glasgow on 7th, there was a moderate attendance of buyers, and considering the advanced period of the season and the consequent smaller show of wool, a fair business was done at and after the auctions. Whitefaced wools, especially of the finest grades, are well cleared out, while medium Cheviots have also been dealt in to some extent. Blackfaced, which was already in moderate compass, has been almost entirely cleared out, partly for the home trade, but the demand has been mostly for the American market. Not for very many years will the new Blackfaced clip come on the market, with less stock of old wool on hand. It must be borne in mind that present prices are much below the average of many years past.—J. AND W. GREIG.

Liverpool, Wednesday.—The fourth and fifth public sales of River Plate wool for the season were held on April 25 and to-day. At the former 3,424 bales were brought forward, and 3,000 bales sold, at prices showing an advance on February rates of fully ¼d. per lb. on Merino and fine Crossbred, ¼d to ½d per lb. on other Crossbred fleece, and ½d to ¾d per lb. on lambs, etc. To-day 2,035 bales were offered, and 1,500 bales sold, with a fresh improvement in value of ¼d to ½d per lb. on Merino and fine crossbreds, and quite ½d per lb. on coarse crossbred fleece, while lambs, pieces, etc., went a little irregularly. The third series of periodical auctions for this year began on the 27th ultimo, East India Wool occupying three sittings, and sundry descriptions yesterday and to-day. The new arrivals of East India reached 12,850 bales, and importers still held 1,850 bales of the 2,689 bales withdrawn in March, the total offering amounting to 14 841 bales, and 13,000 bales were disposed of, the home trade taking 7,500 bales, the Continent 2,000 bales, and America 3,500 bales. There was a fair muster of buyers, and free orders for low duty qualities came from the United States, so that in spite of a hardly average choice, steady competition was secured throughout. Little change can be noticed in prices, which ruled firm at March level for all clean useful whites, while the ample supply of medium to good yellows allowed buyers to get a slight advantage sometimes, all the common sorts of whites, yellows and greys selling at full figures. A good clearance was made of everything except where shippers had set high limits, and it may be mentioned that of the 1,792 bales left in importers' hands about 400 bales are poor-coloured hair, etc.—RONALD AND RODGER.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, Seed Merchants, of Great Maze Pond, Borough, London, write that quite a holiday spirit now characterises the trade for field seeds, and transactions are few and unimportant. Meantime, some little attention is being given to red clover seed now arriving from Chili, but buyers will only operate at moderate prices. New French Trifolium for shipment next July is offering at reasonable rates. A few sales are reported of white mustard seed at last week's currencies, but rape seed is neglected. Hemp seed, on account of its extreme scarcity, continues to favour sellers; canary seed, however, shows for the moment no further improvement in value. There is now less inquiry for blue peas and haricot beans.

FEEDING STUFFS.

London, Thursday.—Linseed.—The market has been quiet; after a slight improvement prices have again declined. Calcutta, spot, London, 53s 9d; passage, 53s 9d to 54s; June-July, 54s. La Plata on passage, 52s 6d. Hull is also a little easier. Calcutta May-June, 54s 6d. La Plata spot, 51s 6d. To the Continent, Bombay May-June, 57s 6d; June-July, 57s 6d; Calcutta June-July, 54s 3d; La Plata June July, 52s 6d. Linseed oil inactive, and prices easier. We quote spot in pipes £32; barrels, £32 5s; July-August, £32; September-December, £31. Hull naked spot, £31 5s. June-August, £31. September-December, £30. Linseed cakes are firm: We to-day quote London-made £7 17s 6d to £8 ex mill; American Western, £7 7s 6d to £7 10s; Russian, £7 12s 6d to £7 17s 6d. Cotton cakes steady; Londonmade, £4 12s 6d to £4 17s 6d. Rapeseed has met with a good demand, and prices are dearer. Brown Cawnpore, May-June, 37s 6d; Brown Calcutta, May-June, 36s 6d. To the Continent we quote Yellow Guzerat 42s; Yellow Cawnpore, June-July, 40s 9d; Brown Cawnpore, 37s 6d; Brown Calcutta, May-June and June-July, 37s; Ferozepore, June-July, 37s 9d; Jamba, June-July, to Hull, 32s. Cottonseed has declined, and closes weak. Spot London, £7 13s 9d; June, £7 12s 6d; November-January, £6 11s 3d; Hull, spot, £8 2s 6d nominally; passage, £7 15s; June, £7 11s 3d; November-January, £6 10s buyers; cargoes, November, £6 13s 9d; December-January, £6 12s 6d; Bombay to Hull, June-July, £5.—THE PRODUCE BROKERS' COMPANY, LIMITED.

Hull, Tuesday.—Linseed.—The arrivals are 1,320 qrs. Bombay; 2,026 qrs. Buenos Ayres; 40 qrs. Harlingen; total, 3,386 qrs. Linseed since our last has been a dull and lifeless market, but prices have not given way to any extent, and the close is quietly steady. Calcutta, 54s 9d is wanted for April-June; River Plate, 51s 6d sellers spot, and for June-July 52s 6d is asked. Cottonseed.—The market has not shown much change in the past week, and only a moderate business passing; spot sellers scarce, and £8 2s 6d the value. A few sales on passage and May B-L transpired at £7 17s 6d; June changed hands at £7 17s 6d and £7 16s 3d, at which latter still sellers. New Crop firmer for October, and £7 asked, but November-January done at £6 12s 6d. At the close the market is weaker, and 1s 3d per ton down in all positions, excepting spot. Oils—Exports for the week ending 27th May, 1902:—Linseed oil: 14 Belgium, 4 Germany, 26 India, 29 Norway, 20 Russia; total, 93 tons. Cotton oil: 81 Belgium, 10 Denmark, 5 France, 85 Germany, 98 Holland, 5 Sweden; total, 284 tons. The market is firm. Linseed oil: 31s 3d spot; 31s 1½d June-August; 30s September-December. Cotton oil: 24s 10½d spot; 24s 10½d June-August; 22s November-April. Crude: 23s 9d spot; 23s 9d June-August; 20s 9d November-April. Rape oil: Jamba naked, 24s 3d spot; 1st quality, 25s spot.—KEIGHLEY MAXSTED AND Co.

Mark Lane, Monday.—The actual consumptive demand is extremely small, but country dealers are still inclined to go into stocks at present prices, and there are free buyers in forward positions at anything near spot values. Russians move off slowly, the price in mats being 1s 3d per ton less money, but in bags unchanged. Americans continue relatively the best value on the market at last Monday's prices. Calcutta made in bags are quoted at 2s 6d to 5s per ton less money. London made remain dull and without change. Cotton cakes—There has been a slightly improved demand during the past week, but, with a considerable quantity offering in second hands, quotations remain steady at 1s 3d per ton lower for Egyptians, with quotations for English unchanged, while some Bombay seed cakes offer at £3 15s. Decorticated are firmly held at £6 5s to £6 12s 6d; as to quality and meal unchanged. Rape cakes—Quiet and unchanged in price. Maize germ meal—A limited quantity of American may be bought at last week's quotations, while English is 2s 6d per ton lower on the week. Rice meal—Some near at hand parcels of Rangoon are available at £4 6s 3d to £4 7s 6d ex ship, but for autumn shipment £4 12s 6d has been freely paid.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: The only Colonial butter on the market at the present time is Canadian, but the arrivals last week totalled only 2,905 cwts., while the total imports of all kinds of butter were 74,927 cwts., so that the Colonial supply has comparatively no effect on the market. Prices for Canadian choicest on the spot are 98s to 100s for salt, with 100s to 102s for saltless. The Copenhagen official quotation remains unchanged, with a firmer market in Denmark. The period for tinning butter is now commencing, and it, therefore, looks as if the lowest prices for Danish have been now reached. In Ireland the tinning of butter has commenced, and is causing an increased demand. Russian continues to come forward in about 13,000 cwts. per week, of which nearly 10,000 are Siberian, and is selling from 88s to 94s. Cheese: The demand for Canadian new season's cheese continues good, and shipments are cleared as fast as they arrive at about 53s to 54s for choicest goods. The demand for strictly choicest lots of last season's Canadian has improved, and prices remain at 58s to 60s, but last season's cheese of a flavoury character is selling at 52s to 54s per cwt. New Zealand cheese is selling at prices ranging from 55s to 56s for choicest first Government grade.—W. WEDDEL AND Co.

STOCK AND SHOW NOTES.

By Herdsman.

The fitting up of the Sauceries and Willow Holme—the two large holms a passenger on the Scottish railways passes on the left as he enters Carlisle—for the annual show of the Royal Agricultural Society, in the second week in July, is rapidly approaching completion. The ground has been entirely enclosed with a substantial hoarding, and a skeleton town of over 24,000 feet of shedding reared on it. The Sauceries, immediately beneath the Castle, will be given up to the exhibition of machinery, for which 11,093 feet of shedding, in 339 stands, has been provided, as against 11,651 feet at the Cardiff Show last year, 14,722 feet at York in 1900, 12,200 feet at Maidstone, and 9,781 feet at the previous show in Carlisle in 1880. The stock will be exhibited in the Willow Holme, which will be reached by two bridges across the river Caldew. Over 13,000 feet of shedding has had to be erected for the accommodation of the stock, the entries of which are as follows:—Horses, 521; cattle, 667; sheep, 545; and pigs, 178—a total of 1,911. The entries at the Cardiff Show were 1,575, at the York Show 1,997, and at the previous Carlisle Show 1,501. In addition, there are 653 entries of poultry and 461 of produce.

In reply to a question put to him in the House of Commons on Monday, Mr. Brodrick stated that the number of horses purchased for army purposes during April was 13,557, of which 2,038 were bought in the United Kingdom, 763 in Canada, 4,365 in the United States, and 6,391 in Austro-Hungary.

The schedule of prizes of the Tring Agricultural Society is now issued to members. The entries close on Friday, July 4th, and the show is to be held on August 7th, in Tring Park. Where the Society will stop is a difficult question to settle. A further £100 has been added to the prize list, making the total £1,200, about a record for a one-day's show. The classes are well distributed, 22 being devoted to Shires and farm horses, besides cups and medals, 25 for hunters, polo, and harness, with cups and medals, in addition 15 for Shorthorns and Jerseys. £200 is again liberally offered for the milk and butter tests, and sheep, pigs, poultry, honey, etc., all come in for their share. The sheep-dog trials, a great feature of the show, have liberal prizes allotted, and the Society has added prizes for sporting dogs to residents within fifteen miles radius of Tring. Polo pony breeders might well support the show, as the Society give £50, and get three silver medals from the parent Society. As a whole, it is undoubtedly one of the Societies that should be supported, as it keeps up to date, and has a good President to back it.

The Groombridge Fat Stock, Hop, and Root Show has been fixed for Thursday, December 11th, entries for hops closing on October 18th, and all other sections on November 28th. The Hon. Sec. and Treasurer is Mr. Charles Hobson, Jerningham Villa, Tunbridge Wells.

The annual two-day show of the Mallow (County Cork) Agricultural and Show Society will be held at Mallow, on July 9th and 10th. A liberal prize schedule has been drawn up, numerous prizes (confined to residents in County Cork) being provided jointly by the County Cork Committee of Agriculture and the Department of Agriculture and Technical Instruction for Ireland. There is a large number of specials, and they are spread over all the classes, which include horses, cattle, sheep, pigs, dairy produce, flowers and vegetables, dogs, poultry, and honey. Entries close in all departments, except jumping competitions, on June 24th, with the Hon. Secretary, Mr. C. J. Wilkie, Mallow, Co. Cork.

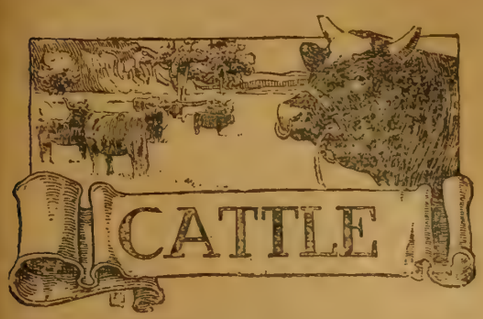
September 3rd is the date chosen for this year's show of the Clarborough (Retford) Farming and Gardening Society, at Clarborough. The entries will close on August 23rd, with the Secretary, Mr. Joshua Walker, F.S.I., Market Place, Retford.

Tuesday, September 2nd, has been chosen as the date of this year's show of the Hawkshead Agricultural Society, the entries to close on Saturday, August 23rd. The Secretary is Mr. W. A. Rushforth, Esthwaite Hall, Hawkshead, Lancs.

It is stated that Professor Hamilton, of Aberdeen University, has, after lengthened investigation, discovered the bacilli of loupin'-ill in sheep, a disease which derives its name from the fact that it causes sheep to spring up in walking. The Professor announced to his class the other day that he had at last found and identified the germ which causes the disease. Professor Hamilton is chairman of the committee which is engaged in the investigation of braxy in sheep, and he is also conducting important experiments with regard to bovine tuberculosis and anthrax.

A successful dispersal sale of Shorthorns was held at Kansas City, U.S.A., on the 14th ult. There were offered for sale the entire herd bred by Mr. W. T. Clay, and a draft from the H. R. Clay herd. No extreme prices were realised, but the average was well sustained all through. The sale was topped by Mr. E. S. Donahey, Newton, Iowa, who gave £160 for Butterfly 2nd of Wildwood and her cow calf. The total amount obtained for the seventy head was £3,118, an average of £44 10s. Good results were also obtained at a composite sale of Herefords and Shorthorns at Indianapolis, Indiana, on May 13th and 14th. Sixty-two Herefords were consigned, and these realised an average price of £78 10s., while the number of Shorthorns consigned was sixty-four, the average price obtained for these being £84 8s.

It is now officially announced that the cattle disease prevailing in Rhodesia is texas fever, which is spread by ticks, and it is recommended to burn the veldt as a precaution until some form of protective inoculation has been discovered.



The whole of the Hon. Mrs. Tremayne's, Sydenham, herd of pure-bred North Devon cattle, together with a few Jerseys, etc., will be sold by auction at Sydenham, Marystowe, Devon, on Wednesday, the 18th inst., by Messrs. Ward and Chowen, of Burnville, Tavistock. The late Mr. John Tremayne was particular to breed only animals of clean North Devon pedigree, without the Somerset cross, and it is believed that this herd is the only one at present existing in its original purity. Animals from this herd were seldom exhibited, as Mr. Tremayne considered getting them unnaturally fat militated against their breeding, but when he was advised to, and did enter any for the shows, he generally stood in the front rank. Mr. Tremayne started the herd by two purchases, viz., Flora, from Mr. Davey's Flower, and Treasure (calved in 1836) from Dr. Rodd, Trebartha. The Flora tribe have died out, but the Treasure blood is still in the herd. From time to time other purchases have been made from the herds of the late Mr. Davey, Mrs. Langdon, Mr. Quartly, Mr. Perry, and Lord Falmouth, but in all cases only those of the purest blood found a home at Sydenham, and as the whole herd will be offered it gives purchasers an opportunity of securing North Devon blood seldom met with. There will also be sold a few pure-bred Jerseys, reserved from the sale of the Hon. Mrs. Tremayne's herd at Heligan. There will be a luncheon at one o'clock, and the sale will commence at two o'clock. Sydenham is one mile from Coryton Station (G.W.R.), and seven miles from Tavistock and Launceston.

THE HEREFORD BULL shown above is "Magnate," 21571, sire Clarence, 15944, dam, Margery 3rd by Statesman, 14938, the property of and bred by Mr. A. P. Turner, The Leen, Pembridge, Herefordshire. "Magnate" was exhibited at the Bath and West Society's recent show at Plymouth, and won the First Prize in the class for Hereford Bulls calved in 1900.

The Prince and Princess of Wales have signified their intention of being present on the opening day of the Richmond Royal Horse Show, at the Old Deer Park, Richmond, on Friday next.

The Darlington Chamber of Agriculture have passed a resolution similar to that of the Southdown Sheep Society, the former's being as follows: "That compulsory dipping with a certified dip should be required." This was carried by 14 votes to eight. Some members called attention to sheep-worrying by dogs, and a resolution to require dogs to wear collars bearing a number was, after discussion, carried unanimously. The Chamber also decided that a number should be conspicuously shown on motor cars. The Education Bill was discussed, and a resolution moved: "That in the opinion of this Chamber the cost of education should be borne by the Imperial Exchequer, and not by local rates"; but an amendment to the effect that the matter be left over until the Education Bill is in a more advanced stage was carried by a majority of four.

Sale of South Devons at Plympton.

On Monday the surplus heifers, young cows, and bulls from the herd of Mr. William J. Crossing, of Woodford, were disposed of by auction, at Plympton, by Mr. J. Pearse, of Plymouth. The attendance of buyers was fairly satisfactory, and a good average of prices was obtained. The bull Famous, owned by Mr. Butland, was also put up, but the bidding only reaching 29½ guineas, the auctioneer made a bid of 33 guineas for the owner. This animal obtained first in his class at the recent Bath and West Show, and also won at Tavistock. Following is a list of the animals sold:—Cow, Rose, calved January 1st, 1895, 22½ guineas; heifer, Violet, calved April 17th, 1898, 19; heifer, Buttercup, calved November 12th, 1898, 19½; heifer, Topsy, calved February 26th, 1899, 26½; heifer, Duchess, October 20th, 1899, 26; heifer, Daphne, calved October 29th, 1899, 26½; heifer, Dorcas, calved January 3rd, 1900, 20; heifer, Una, calved March 4th, 1900, 19; heifer, Princess, calved March 31st, 1900, sire Cromer, 20½; heifer, Trixie, calved April 17th, 1900, sire Cromer, 17½; heifer, Gipsy, calved April 25th, 1900, sire Cromer, 16½; heifer, Nora, calved June 21st, 1900, sire Cromer, 25½; heifer, Iris, calved August 3rd, 1900, sire Cromer, 24; heifer, Queen, calved September 23rd, 1900, sire Cromer, 20; heifer, Dorothy, calved November 3rd, 1900, sire Cromer, 16½; heifer, Nesta, calved February 14th, 1901, 12½; heifer, Lily, calved March 26th, 1901, 13½; heifer, Primrose, calved May 18th, 1901, 11; heifer, Dewdrop, calved June 20th, 1901, 8½; heifer, Hyacinth, calved August 20th, 1901, 7½; heifer, Beauty, calved August 21st, 1901, 15; heifer calf, eligible for entry in the Herd-Book, calved January 2nd, 1902, 8; ditto, calved January 20th, 1902, 7; bull, Victor, calved September 23rd, 1901, 16½; bull, eligible for entry in the Herd-Book, calved January 2nd, 1902, 11½

HORSES.

Sale of Hackneys at St. Fagan's.

There was a good attendance of prominent breeders and buyers at the annual sale of hackneys bred by Mr. James Howell at Llanmaes Farm, St. Fagan's, on Tuesday. Bidding was brisk, and good average prices were obtained. A fine pair, Lady Primrose and Hywel's Lady Sarah, sire and dam in both cases being Lord Primrose II., and Lady Elsmere went for 140 guineas to Mr. James Hurman, jun. Bismarck, a bay gelding, also sired by Lord Primrose II., and with Loberts as his dam, went to Mr. Harris Lebus, London, for 135 guineas. A son of Goldfinder VI., with Lady Rosebery as his female progenitor, was put up. Hywel's Lord Rosebery had, however, met with an accident to one of his fetlocks, and there was no bid for it. A dark brown mare, Mariota, with fine action and an exceptionally good pedigree, her sire being Gentleman John and d. Village Belle, took the fancy of several purchasers. Eventually the lot went to Dr. Francis, Brecon, for 86 guineas.

Following is a list of the principal prices and purchasers:—

		Gs.
Lady Muriel III.	Mr Sharhiel	42
Merrylegs	Mr. A. Thackeray	82
Merry Lad	Mr. A. Thackeray	48
Hywel's Lady Prim	Mr. J. White	60
Happy Boy	Sir T. Morrell	95
Lady Tenby	Mr. J. White	60
Hywel's Sweet Jessie	Sir Gilbert Greenall	85
Hywel's Lady Candite	Mr. Blindell	77
Bismarck	Mr. Harris Lebus	135
Bay g.	Sir Gilbert Greenall	77
Hywel's Lady Spriggs	Mr. H. Thomas	58
Tommy	Mr. W. S. Carr	66
Lady Primrose and Hywel's Lady Sarah	Mr. J. Hermon, jun.	140
Captain	Mr. Malcolm	65
Woodcock	Mr. England	72
Dr. Jim	Mr. Crocker	60
Lady Skipsea	Mr. Peacock	46
Mariota	Dr. Francis	86

At a recent meeting of the directors of the Ayrshire Agricultural Association, the secretary (Mr. John Howie) submitted the financial statement relative to the show held at Ayr at the end of April, from which it appeared that the total receipts were £2,045, and the expenditure £1,913, leaving a balance of £132.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Newtownstewart, Co. Tyrone, on Monday, there was a large fair, composed chiefly of one and two year old cattle, for which demand was slow, and a number remained unsold. Springers, however, met a fair demand. Prices:—Yearlings, 2nd class, £5 5s. to £6 7s. 6d.; 3rd class, £3 to £4 15s.; two-year-olds, 2nd class, £7 10s. to £9; 3rd class, £5 12s. 6d. to £6 17s. 6d.; springers, 1st class, £15 10s. to £16 10s.; 2nd class, £11 10s. to £14; 3rd class, £7 15s. to £9. Young pigs, 8 to 10 weeks old, sold at from 22s. 6d. to 27s. 6d. each.

At Cahir Fair, Co. Tipperary, held on Monday, there was a rather small supply of cattle, chiefly in poor condition, for which the demand was fairly active, and a fair clearance was effected. The small supply of springers met a moderate demand. There was a small supply of sheep, composed of hoggets, for which there was only moderate demand. Prices:—Yearlings, 1st class, £7 to £8; 2nd class, £5 6s. 8d. to £6 16s. 8d.; 3rd class, £3 5s. to £4 10s.; two-year-olds, 1st class, £10 17s. 6d. to £13; 2nd class, £8 6s. 8d. to £10 15s.; 3rd class, £5 10s. to £7; three-year-olds, 1st class, £13 15s.; 2nd class, £11 to £13 5s.; springers, 1st class, £15 to £16 10s.; 2nd class, £11 10s. to £14 10s.; 3rd class, £9 to £10. Sheep, and under 24 months old, 2nd class, £1 3s. to to £1 12s. 6d.; 3rd class, 17s. to £1. Young pigs, 8 to 10 weeks old, averaged about 22s. each.

The sheep fair at Loughrea, Co. Galway, on Monday was an average-sized one. An improved demand prevailed for first and second class hoggets and two-year-old wethers, but ewes with lambs at foot sold slowly, at prices which showed little improvement over recent fairs. Prices:—over 12 and under 24 months old, 2nd class, £1 3s. to £1 17s. 8d.; 2nd class, £1 3s. to £1 7s. 6d; 3rd class, £1 to £1 2s.; two years old and upwards, 1st class, £2 2s. to £2 4s.; 2nd class, £1 12s. 6d. to £1 18s. 6d.; 3rd class, £1 5s. to £1 8s. Young pigs, 8 to 10 weeks old, sold at from 22s. 6d. to 26s. each.

Downpatrick Fair (Co. Down) held on Tuesday, was a small one, at which demand was slow, except for animals in good condition. Prices: Calves, 1st class, £5 15s.; 2nd class, £3 15s. to £4 5s.; yearlings, 1st class, £7 10s. to £8 5s.; 2nd class, £5 5s. to £6 13s. 9d.; 3rd class, £3 10s.; two-year-olds, 1st class, £10 10s. to £13; 2nd class, £7 17s. 6d. to £9 10s.; 3rd class, £5 10s. to £6 15s.; springers, 1st class, £15 to £16 5s.; 2nd class, £11 10s. to £13.

At Clonmel, Co. Tipperary, on Wednesday, there was a moderate-sized fair, composed chiefly of young stock in backward condition, for which there was fair demand, the greater protion being sold. A small supply of springers met a moderate demand. Prices: Yearlings, 1st class, £7 10s. to £9 5s.; 2nd class, £5 5s. to £7 5s.; 3rd class, £3 to £3 13s. 4d.; two-year-olds, 1st class, £11 to £13; 2nd class, £8 to £10 10s.; 3rd class, £5 15s. to £7 15s.; three-year-olds, 1st class, £15 15s.; 2nd class, £10 to £12; springers, 1st class, £15 to £17; 2nd class, £11 to £14; 3rd class, £10 to £10 15s.

"Mark Lane Express" Diary.

June.
10. Huntingdonshire Agricultural Society's Show, at St. Neots.

19 and 20. Essex Agricultural Society's Show at Romford.
20. Waltham Cross Horse Show.
20. Sale of Mr. Cornwallis' Sussex Cattle at Frittenden, near Staplehurst.
21. Kidderminster Horse Show.

The Carriage of Live Stock by Rail.

At Carlisle County Court, on Wednesday, before Judge Stevenson, Robert Nicholson, cattle dealer, Bolton Fell, sued the North British Railway Company and Christopher Noble, farmer, Beyond the Wood, Penton, for £15 damages.

The plaintiff, it was stated, bought 30 hoggs from Mr. Telford, of Thorneylands, who had to deliver them. They were trucked with ten other sheep at Penton Station, and sent to Carlisle. Before the train left, Noble came up with a heavy sow, which he put in with the sheep, and on the arrival of the train at Carlisle one of the sheep was dead, two were much injured and bitten about the neck, and damage was also claimed in respect of the others. The sow was put in the truck after Telford signed the consignment note, in which the stationmaster made an alteration to meet the case, such alteration, the judge held, having the effect of invalidating the contract. It was contended that it was an improper thing to put a sow in among a load of sheep, but evidence for the defence was given to show that it was a common practice. Telford disclaimed all liability after signing the note.

The Judge held him to be right, and said he would advise farmers not to interfere with the loading or unloading of their stock while the latter were under the charge of the railway company. He found for plaintiff, awarding him 43s. 6d., of which 32s. 6d. was against the company and Noble, and 11s. against the company alone.

IN PARLIAMENT.

HOUSE OF COMMONS.

Railway Rates for Agricultural Produce.

On Tuesday Mr. Mansfield asked the President of the Board of Trade whether he would arrange an inquiry into the question of railway rates for agricultural produce, with a view to the rates for home produce being reduced to those charged for similar traffic from abroad.

Mr. Gerald Balfour said he could not undertake to arrange for such an inquiry until he had evidence of the existence of the grievance suggested. At present he had no evidence that higher charges for the same or similar services were made by railway companies for home produce as compared with imported produce. Such charges would be in direct contravention of the provisions of Section 27 of the Railway and Canal Traffic Act, 1888. Any evidence as to specific cases that might be produced to him, either directly or through the President of the Board of Agriculture, would, of course, receive careful consideration.

Cancer in Animals.

Sir James Joicey asked the Home Secretary whether his attention has been called to a recent case at the Leicester County Court, before his Honour Judge Wightman, when a statement was made by one of the meat inspectors of the Leicester Corporation that in cases where cancer occurred in an animal (presumably local) he only condemned the part of the animal affected as being unfit for human food, but passed the remaining part of the carcase; if so, whether, considering the increase of cancer in the United Kingdom, he will make regulations, or ask the local authorities to do so, to ensure in such cases the condemnation of the whole carcases of animals in any way affected by cancer.

The Home Secretary intimated in reply that he had seen a short newspaper report of the case referred to. He was advised that the course adopted would appear to have been sufficient, and it did not seem to him that there is any need to ask the local authorities to take action of the kind suggested. He had no power to make regulations on the subject.

Suffolk at Ipswich.

The show of the Suffolk Agricultural Association, held at Ipswich on Thursday and Friday last, proved a record one in every respect. To begin with, the entries reached a record total of 2,313 as compared with 1,646 at Beccles last year, and 1,567 at Ipswich in 1897; then the quality all round was somewhat above the average, and, to crown all, the total receipts at the gates were much in excess of any previous show, the total being no less than £1,362 6s. 6d. The nearest approach to this amount was taken at Bury St. Edmunds in 1899, when the total was £912, so that it will probably be hard to break the record in this respect set up by last week's show. On the first day no less than £885 14s. 6d. was taken at the gates, this being more than double the total receipts of the best first days even known in the history of the society. As we have previously mentioned, the Mayor and Corporation, together with the inhabitants of Ipswich, did everything possible to make the show a complete success, and the result must be very satisfactory to them. The last time the show was held in Ipswich was in the year of the Diamond Jubilee. Then a most hearty welcome was given the association, and the reception, combined with the unsurpassed excellence of Christchurch Park as an exhibition site, made it certain that a long interval would not elapse ere another visit was paid. In taking upon himself the responsibility of extending another invitation, the Mayor (Mr. A. C. Churchman) anticipated the wishes of the inhabitants, and the necessary sum of £500 required by the association was easily forthcoming. The beauties of Christchurch Park are now well known, and the Park being in the height of its glory, more comfortable and pleasant surroundings it would have been impossible to provide. Notes on the various sections and classes are given below.

The gentlemen who officiated as judges were as follows:—Horses—Suffolks: Mr. W. R. Hustler, Cockfield, and Mr. C. S. Wolton, Ixworth. Shires: Mr. F. W. Griffin, Borough Fen, and Mr. W. Horrell, Thorney Fen, Peterborough. Hunters: Right Hon. Lord Stradbroke, Henham Hall, and Mr. Lionel Digby, Woodcroft Castle, Market Deeping. Hackneys: Mr. C. E. E. Cooke, Hinxton Grange, Saffron Walden, and Sir R. Green Price, Bart., Presteigne, Radnorshire. Cattle—Red Poll and Shorthorns: Mr. R. Edgar, Cockfield, Bury St. Edmunds, and Mr. J. P. Terry, Aylesbury. Jerseys: Mr. W. E. Budgett, Henbury, Bristol. Sheep—Suffolks: Mr. P. Eagle, Risby, Bury St. Edmunds, and Mr. J. C. Dawson, Nacton, Ipswich. Southdowns: Mr. H. Penfold, Selsey, Chichester. Swine—Large Black Breed: Mr. E. R. Berry-Torr, Instow, Devon. White Breed: Mr. H. Cross, Great Barton, Bury St. Edmunds. Other Breeds and Cross-breeds: Messrs. E. R. Berry-Torr and H. Cross. Dairy Produce—Miss Martin, Hemingstone Hall, and Mr. E. Matthews, Chequer's Mead, Potters Bar. Butter-making—Mr. E. Matthews, Chequer's Mead, Potters Bar. Sheep-shearing—Mr. S. R. Sherwood, Playford, Ipswich, and Mr. Fred Smith, Woodbridge. Horse-shoeing—Mr. P. M. Browne, Fornham All Saints, Bury St. Edmunds.

Speech by Mr Hanbury.

On the first day a public luncheon was held in a huge marquee in the show ground, and about 400 ladies and gentlemen were present, including Mr. Hanbury, President of the Board of Agriculture; Mr. E. G. Pretyman, M.P. (Civil Lord of the Admiralty); Mr. F. S. Stevenson, M.P.; Sir W. Cuthbert Quilter, Bart., M.P.; Mr. D. Ford Goddard, M.P.; Sir Charles Dalrymple, Bart., M.P.; Colonel F. A. Lucas, M.P.; the Marquis of Bristol, Lord Rendlesham, the Mayor of Ipswich (Mr. A. C. Churchman), etc.

The toast of "The King" having been enthusiastically honoured, Sir W. Cuthbert Quilter proposed "Success to Agriculture," coupling with it the name of the Right Hon. R. W. Hanbury. He remarked that Mr. Hanbury was a Minister who could hold his own. He was a man of untiring industry, and spared no pains to acquire information as to those subjects upon which he had to adjudicate. He (Sir Cuthbert) hoped he would use his influence in the Cabinet to prevent the new Education Bill or Education Department from placing any extra burden upon the rates—(hear, hear)—and he also ventured to suggest that when restrictions upon the movement of cattle were imposed the right hon. gentleman's subordinates would carry out his orders with as much common-sense as possible. (Laughter and cheers.)

In responding, Mr. Hanbury at the outset expressed satisfaction at the termination of the war. Coming to agriculture, the President of the Board of Agriculture said he felt it his duty to come amongst those whose interests were to a certain extent committed to his hands, and whose needs and wants it was his duty everywhere to study. (Cheers.) He contended that it was for the rich markets and for the best articles that the English agriculturist had to cater, and it was by an appeal to quality rather than quantity that his success would be assured. The Board of Agriculture fought two battles on behalf of producers of the best stock, the battles against adulteration and disease, and he hoped agriculturists would support him in the measures he was about to take in regard to dairying interests. In respect to disease the Board of Agriculture was bound to fight the battle for the farmers as rigorously as it possibly could. He had at the present moment rather a difficult question to decide in regard to the importing of Argentine cattle. He had to look after the interests of the farmer and the consumer alike, for it was to their joint interest that the market should be steady and free from fluctuation. He intended to take such precautions in regard to Argentine cattle as were necessary in the interests of the British farmer and consumer. The supply of cattle from America was falling off, and he looked forward to the day when the Argentine would be the great source of England's meat supply. Therefore, every precaution must be taken to prevent disease being imported, either into this country or the Argentine. Respecting the Education Bill, the right hon. gentleman expressed the opinion that a great deal of the education given in the villages of the country was altogether unfitted to rural life, and had been in some measure responsible for the immigration to towns. The Board of Education and his own department had been working together to devise a more sensible system for rural districts, and he hoped in the result the old non-sensical system would be discontinued. (Loud cheers.) Let the country people be taught subjects which would interest them in country life and their own surroundings, not grammar and all the rest of it. He regarded the cost of education as an Imperial, not local, concern, more especially in the case of villages, and hoped that in future it would fall more upon the national exchequer than the local purse. (Loud cheers.)

Suffolk Horses.

The county breed naturally occupied the first place in the catalogue. The various classes were exceedingly well filled, and the choicest animals, representing the most prominent studs of the county, put in an appearance. The aged stallions included some grand animals, horses that have carried trophies not a few to their respective studs. Mr. Alfred J. Smith's grand horse Saturn, by Wedgewood, once more came to the front, and carried off the champion of £20, given by the president, as the best Suffolk entire horse in the show. Mr. Edward A. Cook's famous Ironside, by Border Minstrel, also the winner of numerous prizes, was second and reserved for the championship, but he secured the £10 champion presented by the Hon. W. Lowther for the best entire horse in the show, the property of a tenant farmer. There was some particularly choice three-year-old entire colts. Mr. A. H. E. Wood's Sudbourn Count, a nice, square, typical Suffolk, scored again, being also reserved for one of the champions offered for the best entire. The second prize went to Mr. Alfred Smith's Rendlesham Prince Royal, a handsome son of Queen's Diadem, the Rev. Henry Taylor's Court Fop, by Byford's Court Dandy, which has taken prizes at the local shows, being third. The two-year-olds were equally well represented. Mr. A. T. Pratt's Big Ben, by Golden Grain, went into the first place, Mr. A. H. E. Wood's Sudbourn Sheriff taking second. Of the ten yearlings the best was Harold, a very promising youngster, by the noted Border Minstrel, shown by Mr. J. Rose, Laxfield, while Mr. C. H. Berners' Sunbeam was second.

The mares and foals numbered something like a score. Sir Cuthbert Quilter, Bart., M.P., had the honour of taking both prizes, no insignificant achievement, having regard to the number and excellence of the collection, the first going to Court Pride, by Heywood's Sudbourn Duke, and the second to Courage, by Smith's Prince Albert. Mr. Alfred J. Smith sent a nice foal by Prince Albert, which was first in the colt class, the second going to Sir Cuthbert Quilter for a fine fellow by Prince Wedgewood. About half-a-score filly foals put in an appearance, the chief honour being assigned to Mr. John Symond's exhibit, a very handsome filly by Golden Grain, Mr. A. Gerald Smith taking second with a daughter of Prince Albert. The gast mares four years old and upwards were not in very strong force, but they formed an uncommonly good lot. There was no getting away from the beautiful Eclipse mare, Mr. A. H. E. Wood's Sudbourn Trinket, the winner of several prizes, and she took precedence of Mr. Edward Quilter's Bentley Duchess, by Border Minstrel, the winner of a first and special at Beccles. Mr. A. H. E. Wood's Sudbourn Arabella, a grand filly, who has been winning from the time she was a filly foal, came into the first rank on this occasion in the class for three-year-olds, Mr. W. H. Hewitt taking second in a strong class with Gippeswick Lass, by Prince Wedgewood. The two-year-old fillies looked uncommonly well in the ring. An exhibit from the Bawdsey Manor stud, Bawdsey Sweet Marjorie, a very handsome daughter of the noted Prince Wedgewood, was placed first. Mr. R. Eaton White's Boulge Maid, of nice character, standing well, was second, while her stable companion, Boulge Hebe, had to be content with third honours. Of yearlings there was only a small muster, but they were of the right sort. Mr. John Symonds, Thistleton Hall, Burgh, secured chief honour with Dorcas, a promising youngster by the noted Saturn, who has brought so many honours to the Rendlesham stud of late. It was a close fit with Bentley Dina, a choice yearling sent by Mr. Edward R. Quilter, and a worthy daughter of Border Minstrel, hailing from the Saxted country. The Hon. W. F. D. Smith, M.P., was third with Edith, by Firefly, while Mr. Robert Edgar's Princess F. added another to the honours she has won of late. There were but few Suffolk geldings, and Sir Cuthbert Quilter took both prizes. The teams of four Suffolks in competition for special prizes presented by Sir Cuthbert Quilter, M.P., and Mr. A. H. E. Wood, attracted a good deal of attention, the teams being splendidly matched. Mr. Wood won the first prize.

Shires.

The task that devolved upon the judges in the classes for Shire horses was not a very severe one, though they had to pass the eye over some uncommonly good animals, the result of the introduction of some of the most noted sires by the enterprising Suffolk and Essex Syndicate. The stallions, three-year-olds and upwards, numbered four. Mr. Trenham J. Cresswell's Blythwood Ray was first, and he also carried off the championship as the best Shire entire horse, presented by the Right Hon. Lord Iveagh. The second prize went to Lord Iveagh, for Moulton Bridegroom. Mr. Trenham J. Cresswell was first also in the class for two-year-olds, with Redlynch Blue Blood, a very stylish horse, and reserved for the championship, but was awarded the champion prize presented by the Earl Cadogan for the best Shire entire horse, the property of a tenant farmer. Mr. R. W. Hudson was second with Celtic. This gentleman was, however, first for yearlings, Captain W. H. C. Duncombe being second. The Shire mares with foal at foot made a fine appearance in the ring. Mr. Hudson took first with Markeaton Wild Ware; she had by her side a grand foal, which won the prize in the foal class. Lord Iveagh was second with a charming mare, her foal being second in the foal class. Mr. Frank Baldwin was first in the Shire gast mare collection with his well-known Suffolk Lass, the winner of many prizes, whilst Mr. Arthur Ransom won in the three-year-olds with Bank Waitress, a wonderfully good mare; which eventually proved the champion, taking the prize presented by the town of Ipswich for the best Shire mare or filly. Mr. R. W. Hudson's Danesfield Negress, a big black mare, made a good second. As to the two-year-olds, Mr. J. J. Mitchell won with Northall Rosie, a nice classy mare, which carried off the gold medal presented by the Shire Horse Society for the best mare or filly in the Shire class in the possession of a resident or occupier of agricultural land in the county, Mr. Frank Baldwin's Suffolk Lass being reserved. Mr. John R. Keeble was second in the class with his handsome bay Brantham Heroine, by Hitchin Conqueror. Amongst the yearlings was an exceedingly well bred filly by Prince Harold, which was placed first, and was an easy winner, Lord Iveagh being second with a nice bay by Lord Holt, which will doubtless be heard of again.

Hunters.

There was an excellent exhibition of light horses, one upon which the association may be congratulated. The hunter classes, as usual, came first in the catalogue, and there was an entry of three thoroughbred stallions adapted for breeding hunters. The first and second prizes were won by Mr. Eustace Barlow, with Privado, the winner of 14 races, and Deeside respectively, the latter also having won several prizes. There was a small entry of light-weight hunter brood mares and foals, and the winner was Mr. Kelway-Bamber's well-known Homely Lass, a mare of very nice quality; the judges also awarded her the special prize, presented by the Hunters' Improvement Society for the best hunter brood mare with foal at foot, in the show. In class 28 Mr. J. R. Keeble, of Brantham Hall, took first prize with a very good foal by Earwig, a son of Hampton.

Weight-carrying hunters, mares, or geldings numbered eight, and included horses of substance and quality. The winner, a good mover, belonged to Mr. J. H. Stokes, of Market Harborough, Mr. R. E. Walford taking second prize with Dorset, which was shown in rather poor condition. The largest class in the whole show was that for medium-weight hunting mares or geldings, not less than five years old, equal to

carrying 12 stone and under 15 stone. Twenty-one horses were entered, and many were of exceptional merit. The winner was Blackthorn, which has been owned by Mr. T. H. Ward, of Great Ayton, Yorkshire, since it was two years old, and which has had an almost unbroken career of success since then. He thoroughly deserved the first prize in this class, and also the championship, given by Lord Cadogan for the best hunter in the yard. The second prize winner belonged to Mr. J. H. Stokes, of Market Harborough, whilst Messrs. W. and J. H. Cheney took the third prize with a nice bay horse. The winning light-weight hunter, not less than five years old, was Mr. D. W. Taylor's Tippler, which is a fine galloper, the second going to Mr. Edward Gwilt, of the Angel Hotel, Bury St. Edmund's. The four-year-olds were a neat lot, the first prize-taker being found in Mr. J. H. Stokes's Frieston, which has had a successful career this year, while the second was Mr. Abraham Smith's Ascot, an upstanding horse with quality and bone. The three-year-olds were worthily represented, the first prize going to Mr. William Harvey, of Timworth, for Thetford. Mr. Leonard Smith, of Hasketon, was a close second with Student, which is by Galopian, one of the Hasketon sires, and a Queen's Premium winner. A couple of nice two-year-olds won in their class, belonging respectively to Mr. D. W. Taylor and Mr. George Orbell. The yearlings were a very good lot indeed, the winner being found in Magic, belonging to Mr. W. N. Fonnereau, which is by Mr. Pratt's well-known Sunstroke. The second prize taker, shown by Mr. W. Harvey, was fully as much appreciated by some judges, and a very promising filly, shown by Mr. Leonard Smith, was third and reserve. A great deal of interest was taken in the award of the championship, in which the two horses belonging to Mr. Stokes were brought out with Blackthorn, but, as has been already stated, the verdict was in favour of Mr. Ward, and this decision was generally endorsed by lookers-on.

Hackneys.

There were but two hackney stallions, and first place was given to Mr. E. C. Chapman's well-known Manifred, which had also the special for the best stallion suitable for breeding high-stepping cobs. Pirate King, a good goer, shown by Mr. Wm. Miles, was the second animal. Mr. Geo. F. Johnson, of the Braiswick Stud, Colchester, took the first prize for hackney mares with foal at foot, with the famous Cornflower, which formerly belonged to the Marquis of Winchester, and was such a great prize-taker. The mare, now 10 years old, has a foal by Forest King, but it was only a week old, and considered too young to show. There were but three hackney foals, shown by Mr. S. T. Traylen, Honington; Mr. W. Woodgate, of Burgh, and Mr. C. K. Norman, of Chelmondiston, and these were placed in the order named. Nearly all the hackneys shown "with saddle" were much more of the character of harness horses. Mrs. Hartley Batt, of Elgin Avenue, London, won first in two classes, her hackney under 15 hands, and Mr. Edgar Baxter, of the well-known Hutton Stud, Brentwood, took a second prize. In the harness class for mares or geldings 15 hands high and upwards, the first prize was won by Mr. W. S. Cunard, of Bracknell, Berks, with Silver King, the second prize going to Mr. G. F. Johnson, for Daylesford King, an animal of beautiful quality, which has won a good many prizes. Twelve harness hacks under 15h.h. entered the ring, and the red rosette went to Mr. Edgar Baxter for Miss Howard, though she was run very close by Mr. W. S. Cunard's Hawthorn Marvel, another horse which came from Mr. Johnson's stables at Woodbridge. The hackneys in the younger classes, and the cobs and ponies, made a very good show. The special presented by Mr. Harry Showell was won by Mr. W. J. Catchpole's Piety. Mr. W. H. Higginson, of Springfield, Ipswich, deservedly carried off two prizes with his fine and sharp goer, Gentle Annie, though he was beaten for first place in one class by Mr. J. H. King, of the Gull Farm, Hasketon. Out of seven pairs of carriage horses that were entered and driven in double harness, only two put in an appearance, and those well-known horses, Searchlight and Brilliance (once belonging to Mr. Johnson, but now to Mrs Dale-Lace, of Lancaster Lodge, Lancaster Gate), once more stepped rather easily into first position, while Mr. William Miles was second with another excellent pair. The first prize for pairs under 15h.h. went to Mrs. Hartley Batt, and the second to Mr. Edgar Baxter. A class for tandem teams is one which it is a long time since the Association provided, although much desired, and it was only to be expected that it would on this occasion form a most interesting feature. Five teams entered the ring, and their appearances were greeted with considerable applause. Mrs. Hartley Batt's beautiful team commanded great attention, and the way in which they were driven was an object lesson in "hands." Mr. Baxter's team and Mrs. Dale-Lace's redoubtable Brilliance and Searchlight, driven by Mr. George Johnson, were also greatly admired. The judges awarded the red ribbon to Mr. Baxter's team, in preference to Mrs. Batt's. It was certainly no hasty decision, and Brilliance and Searchlight were so close up that both they and Mrs. Batt's team were given second prizes. Mr. W. J. Catchpole, with Piety, gained the special prize offered by the Hackney Horse Society, and Mr G. F. Johnson scored another victory with Golden King, a horse of beautiful quality. The jumping afforded plenty of amusement, as usual, but was not in any way remarkable.

Cattle.

There was a more varied show of cattle than on many previous occasions, the Shorthorn classes being enriched with numerous entries of the highest quality, while the Channel Islands cattle made quite a large display. The Red Polls were fairly numerous, but certainly stronger classes of the native East Anglian cattle have been seen in the past; this was most notable among the younger cattle, and was the more striking perhaps by reason of the presence of a moderate proportion of really good animals. Lord Amherst was the most successful exhibitor of Red Poll bulls, taking the champion prize and winning first in two classes and second in another. He won in the old bull class with Defiance, a three and a-half-years old animal, bred by Mr. Harvey Mason, and in the younger bull classes with Recruit, just under a year old, of his own breeding; in the class for bulls calved in 1900, his exhibit, Royal Standard, was placed second to a very good bull, a few months younger, shown by Sir William Corbet, of Acton Reynold, Shrewsbury, which was reserved for the championship. In the strong class of cows, the first award went to the Exors. of Mr. P. K. Blofield, of Quidenham, for a high-bred cow by Ruby Prince. Mr. F. H. Baxendale took both prizes in the class for heifers calved in 1899, while Mr. J. B. Dimmock secured the leading honour in the 1900 heifers, with a heifer by Bismarck, bred by the Duchess of Hamilton. The 1901 heifers made a large class, and several new exhibitors entered the lists; the first and second prizes went to the Hon. Ailwyn Fellowes and Mr. Horace Packard, the latter exhibiting a heifer bred by the trustees of the late Duke of Hamilton. The prize for collection was awarded to Lord Amherst, who, however, did not exhibit in the cow and heifer classes, so that there was something in the nature of anomoly about the "collection" award.

The most successful exhibitor of Shorthorns was Mr. Leopold de Rothschild, who secured four first prizes; but the competition against him could hardly be described as keen. Sir Thomas Gooch, of Benacre Hall, was the solitary exhibitor of heifers calved in 1899, and was awarded the first prize. Mr. D. Abbott Green, of Fingringhoe Hall, was second to Lord Rothschild in the class for bulls calved in 1901-2, with a promising exhibit. The special presented by the Shorthorn Society, and limited to Norfolk and Suffolk, was awarded to a year-old exhibit by Mr. J. B. Dimmock, and reserved in its class. The classes for the Channel Islands breed were not only numerically strong, but the quality reached a high standard, and the competition was very keen. In the bull class, in which there were fifteen entries, Earl Cadogan took the lead with Topsy's Fox, a young bull of beautiful type, bred in Jersey. In the large class of cows (sixteen entries), Colonel McCalmont, M.P., of Cheveley, was first with Harmony, a Monmouth-bred animal, while nearly all the entries received notice from the judge. The Blythwood Bowl went to the same exhibit. The judge deemed the class so good that an extra prize was given. The heifer class was again very strong, and the judge was quite prolific in his commendations. The first prize went to Mr. E. Murray Ind, of Great Warley, for an island bred heifer of beautiful quality—a broken colour with a perfect bag—while Col. McCalmont was second with a heifer of his own breeding. Sir Thomas Gooch had numerous entries, and obtained reserve and highly-commended cards.

Sheep.

The display of sheep was, both in quantity and quality, one of the best seen at this Society's show. The Black-faced, of course, predominated as being the county breed, and in this section Mr. Herbert Smith, The Grange, Walton, took first prize with a sheep of excellent character, which carried off the gold medal offered by the Suffolk Sheep Society. Mr. S. R. Sherwood, Playford, was second. The class for shearling Suffolk rams was a large and good one, and the judges had no little difficulty in selecting the winner. It was thought that the chief honours should have gone to an entry of Mr. Thomas Goodchild's. However, the judges fixed their choice upon Mr. R. Barclay's exhibit, Mr. Goodchild was second, and Mr. S. R. Sherwood third. As usual, there was a strong muster of Suffolk ram lambs. Mr. Herbert Smith was first and third, and Mr. S. R. Sherwood second, the winners being of excellent type and character, the first winners also securing the challenge cup offered by Messrs. Robt. Bond and Sons for the best ram lamb. Suffolk shearling ewes were well represented, and here Mr. R. Barclay, Higham, was first, with Mr. Thomas Goodchild second. Suffolk ewe lambs were not quite so strong as last year, but the quality was of the very best. Mr. Herbert Smith was once again to the front, his pen being awarded the silver medal given by the Suffolk Sheep Society for the best pen of ewe lambs, and also the special given by Messrs. R. and W. Paul, Limited, for the best ewe lambs. On the other hand, there were more Suffolk ewe lambs uncoloured and untrimmed, and here again Mr. Herbert Smith was the winner, Mr. Sherwood being second, but the latter gentleman once more was first in the class for ten Suffolk shearling ewes, naturally grazed in the open fields. The animals were wonderfully even and matched in their wool. Mr. Herbert Smith was first and also second in a strong class of Suffolk lamb tups, while Mr. R. Eaton White was third. There were in all 21 entries, and as might be expected, in a collection of this magnitude, several good animals escaped notice. The special for the best collection of Suffolk sheep was taken by Mr. Herbert E. Smith.

There was but a small show of Southdowns, but these were, taken as a whole, a nice lot. Mr. Charles Adeane was first in the class for two-shear ram, which carried off the Southdown Sheep

THE TAMWORTH SOW shown above is "Whitacre Beauty" 8526, winner of First Prize and Silver Medal at the Bath and West Society's recent Show at Plymouth. She was bred by Mr. D. W. Philip, The Ashes, Whitacre, her sire being Warwickshire Monarch 4597, and her dam Whitacre Countess 2nd, but is the property of Mr. H. C. Stephens, Cholderton, Salisbury. At the show mentioned "Whitacre Beauty" was shown in the class for Tamworth breeding sows farrowed before 1902 (she was born July 10th, 1897), and won the First Prize, subsequently being awarded the National Pig Breeders' Association's Silver Medal for the best sow of the Large White, Middle White, Small White, or Tamworth breed.

Society's medal, as the best male. Mr. W. Nocton, Langham Hall, was second in this class. In the class for shearlings Colonel H. McCalmont, M.P., was first, and Mr. C. Adeane second; while the Earl of Ellesmere took the lead in lamb rams, the second going to Colonel McCalmont. There were only two entries of shearling ewes, and the best of these were those shown by the Earl Cadogan. Five pens competed in the class for ewe lambs, Colonel McCalmont being first, and taking the special for the best pen of females.

Pigs.

The show of pigs was undoubtedly the best ever seen at Ipswich, but naturally Large Blacks predominated, and the display was decidedly the best of the breed ever seen. Large black boars of any age made a very fine show, but Mr. C. F. Marriner won both prizes—the first with Royal Bodmin, of beautiful quality with good back and great depth, while the second prize animal is a boar of great length. Mr. G. P. Watkins was commended for the youngest boar in the class, a very promising one of nice quality and character. The class for sow and pigs was better filled than usual, but Mr. A. H. Cobbald was invincible, taking both prizes with exceptionally good exhibits. In the class for pair of breeding sows, farrowed in 1902, Mr. John Goddard got first, second, and reserve, a trio it would be hard to beat. The breeding sow class was a very good one throughout; all the animals were of excellent type, the prize-winners, shown by Mr. Marriner, being especially good; there were numerous h.c. and c. cards. In the Large White classes, Mr. Sanders Spencer took very nearly all the prizes with exhibits of the type familiar to all frequenters of show yards. The classes for cross-breds had numerous exhibits.

Miscellaneous.

The butter-making competitions at the working dairy established by the Eastern Counties' Dairy Institute again attracted a large amount of attention, and througout the day throngs of interested spectators watched the various processes employed. The competitions were carried out under favourable conditions, the temperature being moderate, and, as a whole, the work was exceedingly satisfactory — indeed, the judge (Mr. Matthews) experienced considerable difficulty in making his award, and, in the course of a general pronouncement on the competition, he expressed the opinion that the work was uncommonly well done.

A spacious and up-to-date forge was erected for the horse-shoeing competitions, and the work which was witnessed by a large crowd, was carried out in a thoroughly practical manner, but the judges found a lack of scientific training. Suffolk has been considerably behindhand in the matter of horse-shoeing, and the judges were very pleased to note a decided improvement, but it was said that the improvement would be more marked if the Technical Instruction Committee of the County Council followed other counties in giving instruction in this branch of work. Three sheep shearing competitions took place, and the work was so well done that the judges had some difficulty in making their awards, and in one class three men were placed equal firsts and another prize added.

Shropshire and West Midland.

The annual show of the Shropshire and West Midland Argicultural Society was held on Thursday and Friday, at Shrewsbury, on the usual site at Gravel Hill. At one time the society used to visit the various towns in the West Midlands, and though they generally received a cordial welcome, their shows did not always pay their way, and it was at last deemed advisable to have a fixed showyard at Shrewsbury. Since possessing this the matters financial have improved wonderfully, as have also the entries; in fact, the show itself has all round improved since it became a permanent fixture at Shrewsbury. The entries last week numbered 2,132, as compared with 2,178 last year, when a record was established, so that the numerical high-water mark has been well maintained. It may be mentioned that in 1899 the total was only 1,667, and in 1900 1.875, so that rapid progress has been made in this direction during the last few years. Live stock entries last week were as follows:—Horses 260, as compared with 250 last year; cattle 220, or seven more than in 1901; sheep 150, as against 155; and pigs 45, against 30. In addition, the samples of butter and cheese numbered 105, an increase of 17; there were 795 entries of dogs, 460 pens of poultry, and 68 stands of agricultural implements and machinery. It will thus be seen that the exhibition contained much that was attractive, not only to farmers, but to the general visitors.

First in the catalogue came the Shire horses, which were perhaps the best collection ever seen at this show. The class for yearling fillies or geldings (open) was a very strong one, and here first prize was secured by Lord Llangattock with Poole Duchess, Mr. P. A. Muntz coming second with Dunsmore Mistress. Lord Llangattock also took the first prize for mares or geldings foaled in 1900, and that for mares or geldings foaled in 1899. Mr. Muntz being second in the former, and Mr. E. Green, the Moors, Welshpool, second in the latter. The open class for mare and foal was exceptionally strong, and Mr. Lewis was an easy winner with Countess, a well-known animal, which just now is looking in excellent feather. She is a mare of good size, with limbs of the best quality, and had with her a very fine foal. She was subsequently awarded the Shire Horse Society's medal. The county class for mare and foal was also a strong one, and above the standard of merit of county classes. The Duke of Sutherland scored a good win with Fancy, Mr. G. Cambridge, Shifnal, coming second with Mayflower. The latter animal was later on awarded the Lythwood Challenge Cup, value £25, for the best mare or filly in the Shire classes bred in the county, and owned by a resident in the county. Mr. Lewis scored with a Shire filly foal by Buscot Harold, with stylish outline, good shoulders, and fine straight limbs. The classes for stallions were not so strong as the others. In that for stallions foaled in 1901 Messrs. W. and J. Thompson, Desford, won with Girton Magician, a very good mover, with plenty of feather. The second, Dunsmore Masterpiece, a well-known prize-winner, had perhaps a little more size, plenty of bone, and excellent feet, and though he had not quite so much feather as the first prize winner, it was the opinion of some that the positions ought to have been reversed. In the class for animals foaled in 1900 and 1899 were put into competition together, which was rather against the younger animals. The winner, shown by Mr. E. Green, Welshpool, was a weighty horse, with good shoulders and feet, but he did not appear to use himself very well. The second, the property of Messrs. Thompson, though lacking slightly in size, was well planted on the ground and a capital mover.

The hunter classes were rather disappointing as far as entries were concerned, but the quality was all that could be desired. Bilbrook Lad, which carried off the first prize in the open class for yearlings, is a very fine colt indeed; and a chestnut filly exhibited by the Hon. Alexandra Parke, of Wrexham, was a good second. The class for mare, colt, or gelding foaled in 1900, was so excellent that each animal in the class received the commended award. The winner, Captain Haywood Lonsdale's Wexford, is a clinking two-year-old colt, and should make a most valuable sire. Mr. W. Butler's Sybil, the winner of the second prize, is a beautiful animal, but a little bit on the small side. In the open class for brood mare and foal Mr. P. Everall, of Dorrington, was successful in securing first honours with Beauty, a splendid mare with a promising colt at her heels. Mr. W. Tell's (Ross) second prize winner, Aroma, is full of quality, but she had a very young foal with her, which told slightly against her. In the open class for mare or gelding up to not less than 15st. Mr. J. H. Stokes scored a meritorious win with a very well-known horse, Tennis Ball; whilst in the county class Eaton, the property of Mr. Thomas Lloyd, of Baschurch, took the first prize. It is an animal full of quality, while the second prize was taken by Mr. T. Jones with a useful horse with good galloping powers and nice manners. The open class for mare or gelding foaled in 1898 was well above the average, and Mr. Stokes's Haddon, which beat Mr. B. Cory's bay mare, was an animal of fine development and of excellent style. In the Hackney classes there was a particularly good show of quality, and, as a consequence, competition was keen. This was particularly so in what was, perhaps, the most important class of the show, that devoted to mares in the county likely to breed animals suitable for military purposes. In this class the judges were unable to decide to whom should be given the palm, and they awarded the following equal firsts, viz., Darby, a dark brown mare, shown by Mr. J. Cadman; a bay mare, five years old, exhibited by Mr. T. S. Minton; Dysney, a chestnut weight-carrying cob mare, the property of Mr. Scott-Belton Strange; and a bay mare, six years and one month, bred by Mr. H. S. Wyke. There were only four entries in the class for polo ponies, or ponies likely to make useful animals for the purposes of the game, and Nondescript, shown by the Keynsham Stud Company, was an easy winner. The three classes devoted to Welsh and mountain ponies did not produce many entries, but the quality of the diminutive animals left little to be desired. Mr. J. Marshall Dugdale, of Llanfyllin, carried off the first honours in each class, and Mr. E. Jones, of Llandilo, secured two seconds.

The cattle made a capital display, both Shorthorns and Herefords being of excellent quality. In the Shorthorn section Mr. H. K. Colville showed the best of the old bulls in Royal Seal, a red five-year-old, which was bred in Cumberland, and has won many prizes. In addition to the class award Royal Seal also won the champion prize offered for the best local Shorthorn bull of any age. The second prize in the class went to Break of Day, the two-year-old roan belonging to Mr. C. W. Kellock, which was so successful at the Staffordshire show last year. The class for bulls calved in 1900 was well represented, Mr. J. Handley's roan, Pearl King, nearly two years old, a Lancashire bred bull, being easily first. The next honours went to Stoneytown Archer, a Scotch Shorthorn, the property of Mr. R. P. Cooper, which was second at the Nottingham Show. The competition in the old bull class open to county exhibitors was only moderate, but in the next local class for yearlings the opposition was much keener. Still Mr. T. S. Minton won somewhat easily with his well-bred red Duke of Hoylecote 110th, which also carried off the Shorthorn Society's special prize for the best local yearling bull. The same useful animal was a very fair second in the open class to Mr. J. Handley's Ingram's Style, a good-looking animal which promises to develop into a capital farmer's bull. In the Shorthorn dairy cow class several valuable milkers were shown, Mr. H. K. Colville taking first prize with Melody 21st, a roan eight-year-old, and Mr. A. Green second with Lady Susan, the same age, and a capital dairy cow. Mr. Cartwright was a successful exhibitor of heifers calved in 1900, and of those a year younger Messrs. Evans were represented by a smart animal. The best local yearling was Montford May, belonging to Mr. T. S. Minton.

There were just over 50 Herefords, and they were a wonderfully good lot. Here, as in the Shorthorn section, Mr. T. S. Minton was a successful exhibitor, his Montford Kale, a lengthy, straight, compact bull, taking first place in the open bull class, and also the championship for Hereford bulls. In that class he beat, after a close fight, the well-known Gambler, the property of Mr. W. T. Barneby, which led in a very strong class at the Bath and West Show at Plymouth. In the two-year-old class Mr. A. P. Turner's Plymouth winner, the choice Magnate, was again placed first, beating a well-bred red-and-white, Long Tom, shown by Mr. E. Farr. In yearlings Mr. A. E. Hughes took first prize with his Bath and West winner, Glendower II., a bull of great promise, and he had little difficulty in beating Mr. Turner's Marcellus, a bull on the small side. Mr. Minton won the prizes in the two local classes; whilst in the cow class Mr. A. E. Hill showed a very good milker, Promise II., which only just beat Mr. J. Tudge's Princess Royal. In the two-year-old heifer class there was a reversal of form compared with the Plymouth show. Mr. Barneby's Mistletoe, a Hereford of full shape and nice character, second at Cardiff last year, was placed behind Royal Gem at the Bath and West exhibition, but now the positions were changed, Mr. Tudge's representative having to take second place. Mr. J. Rawlings won in the two-year-old local class, and Messrs. Firkins Brothers beat Lord Llangattock in the open yearling class, their exhibits being well fleshed and of excellent character; while in the local class Sir C. H. R. Boughton was at the head with a useful youngster.

There were not many Jerseys, but they made a much better show than usual. In the open cow class Mr. L. G. Gisborne and the Marquis of Winchester secured the awards with a couple of deep milking animals, Mr. Gisborne being also successful in the restricted class. The Marquis of Winchester led in the two-year-old heifer open class, and also in the yearling heifer class, his representatives being of very choice quality and good milkers. Colonel Shaw Hellier showed the best old bull, and the Marquis of Winchester won in the yearling bull class. The dairy cattle look well, and the prizes went to deep milking animals.

The Shropshire breed of sheep was not quite so well represented as in former years, owing to the fact that several well-known breeders have during the past year given up their flocks; but still there was a very good show, and in some cases competition was keen. The most attractive feature of the judging was the exciting competition for the Mansell Memorial challenge cup, offered for the best Shropshire ram. Not only did the winners of the shearling and older ram classes face the judges, but several of the best sheep in the pens of five were brought out, and a long time was occupied in arriving at a decision. Eventually the cup was awarded to the Oxford winner, a magnificent specimen owned by Mr. R. P. Cooper, and taken from a pen of five which received a third prize. The reserve honour for the trophy was given to Mrs. M. Barr's shearling, a very fine sheep, well grown, and of splendid quality. This ram, which won at Nottingham, also received the first prize in a strong class of shearling rams, beating Mr. B. Wall's typical sheep, which has made considerable improvement since the Nottingham Show. Mr. R. J. Cooper's third prize taker was a useful animal, and so is Mr. W. F. Inge's sheep, which was awarded the fourth prize. The rams of any other age were not quite so good a class, but a capital fight resulted, the prizes respectively going to representatives of Messrs. Evans and Mr. R. P. Cooper. As indicated in the references to the competition for the challenge cup, many exhibitors showed their best sheep in the class for pens of five shearling rams, and it was only after much hesitation that the prize-takers were selected. The first prize goes to a well-grown pen, perfectly matched, and brought out in splendid condition by Mrs. Barrs; but Mr. W. F. Inge's pen which received second honours was almost as good. Mr. Cooper's third-prize pen was not so evenly

matched, the winner of the challenge cup standing out from the others in an unmistakable way. The biggest sheep were found in Mr. P. A. Muntz's pen, but the quality was not so fine, and they only received the fourth prize. In the class for pens of five shearling ewes, Mr. W. F. Inge was placed first with a pen brought out in the best condition. The lambs in the open classes looked well, and the competition in the restricted classes was also keen. The Welsh mountain sheep made an excellent show, the chief prizes going to Mr. W. E. Williams and Mr. J. M. Dugdale.

The number of pigs entered was not quite as strong as last year, but the quality of the exhibits was well up to the standard. Mr. Jefferson, of Chester, as in former years, was the principal prize winner.

In connection with the exhibition of produce there was a comprehensive show by the Harper Adams Agricultural College, Newport, Salop. Here demonstrations in butter making were given, and there was an interesting exhibit of the apparatus used in the instruction given to the students. The butter and cheese exhibits were well up to the standard of previous years. Of butter there was a particularly good show, and the competition in the open class was exceedingly keen.

Wiltshire.

The Wiltshire Agricultural Association's Show, which opened at Swindon on Tuesday, was favoured with a splendid specimen of June weather, and the meeting, taken all round, proved to be one of the best held by the Association of recent years. It is four years since the Association last visited Swindon, and the townspeople and the inhabitants from the surrounding district turned up in force. The number of entries received this year totalled 636, which shows a substantial increase on the previous years. The following table shows the entries received for the three former shows as compared with those at the present meeting:—

	Salisbury. 1899.	Devizes. 1900.	Chip'ham. 1901.	Swindon. 1902.
Cart Horses	63	64	53	64
Hunters and Nags, etc.	93	93	153	117
Cattle	107	61	88	139
Sheep	52	39	29	31
Pigs	43	28	No show.	No show
Butter	48	43	47	70
Cheese	17	12	17	22

The judges in the different sections were as follows: Cart horses: Mr. James Forshaw, Newark; Mr. Thomas Chapman, Orchard Portman. Hunters: Mr. John Hill, Church Stretton; the Hon. A. E. Parker, Bangor-on-Dee. Sheep: Mr. E. J. Bennett, Chilmark; Mr. W. T. Twidell, Wallingford. Cattle: Mr. J. T. Hobbs, Maiseyhampton; Mr. J. Blackmore, Durston. Jerseys: Mr. W. E. Budgett, Henbury. Guernseys: Mr. H. J. Gibbs, Milford. Butter and cheese: Mr. Alfred Stratton, Melksham; and Mr. W. J. Hall, Swindon. Butter-making: Mr. T. Latham, Dorchester, Oxon.

Horses.

Although in one or two of the classes some weakness was noticeable, the cart horses made a fine show. Mr. G. T. Anstee, Stanton, Chippenham, headed the class for shire stallions, three years old and upwards, with Stanton Albion, a four-year-old. Mr. W. H. Godding, of Marlborough, being second, with Normoor Commander. The entire colts foaled in 1902 only brought out three. Last year's progeny filled up better, Mr. G. Cowing being the winner, and Mr. G. T. Anstee second prize-taker, with a colt by the winner of the old sires. Mr. Cowing was also to the fore in brood mares. This proved an excellent class, the competition being very good for second and third places, which were ultimately allotted respectively to Mr. W. H. Godding and Mr. G. H. Morey, of Britford, Salisbury. For fillies foaled in 1900 Mr. Cowing took both first and second awards, Mr. J. B. Stevens, Ogbourne St. George, Marlborough, being third, and Mr. G. F. King, of Chewton Keynsham, reserve, with a bay by Buscot Harold. There were four entries in the geldings, all of which were mentioned, Mr. G. H. Morey taking first, second, and reserve numbers, Mr. Joseph Stretton, of Broad Hinton, Swindon, being third. The yearling filly classes was one of the best in the exhibition, and so good was it that the judges recommended extra prizes in addition to the three at their disposal. Mr. G. T. Anstee headed the string, which exceeded a dozen, Messrs. Firkins, Bishop Froome, Worcester, being second, and Mr. G. F. King third. There was a first-rate entry for pairs. Mr. J. B. Stevens did well, being first prize-taker and reserve position holder, with Mr. W. H. Godding an excellent second. These exhibitors accounted for all the prizes in the county class, Mr. Stevens taking for his share both first and second awards, leaving the third for Mr. Godding. The special prize of £5 for the best entire was taken by the shire colt (1900) winner, the reserve being Mr. Anstee's Stanton Albion, the winner of the three years and upwards class for sires. A like special prize, for the best two-year-old in the cart classes, fell to Mr. George Cowing's winner of the fillies, whilst the special prize for the best female fell to Mr. Godding's Savernake Victoria, which also carried off the medal offered by the Shire Society.

In the hunting department the brood mares were the first catalogued, and a really first-rate lot, both in numbers and quality, were led out, several having very nice foals at foot. The class was open, and carried two prizes, both of which went out of the county, Mr. J. Hayman Joyce, of Brede, Sussex, being first. Her foal was by King's Beadsman, bred by the late Sir Julian Goldsmid. Mr. C. W. Francis, Templecombe, stood second, showing a fourteen-year-old chestnut, named Cloncilla, with a colt foal by Pantomime. Several local exhibitors shared in the minor honours, including Mr. T. Hooper Deacon. There was a small but very select class for colts or fillies. The leading position lay between Coonel Henry, of Tetbury, and Mr. L. H. Taylor, of Biddestone, Chippenham. The former carried off the leading prize with a chestnut by Mountain Dew, bred by the exhibitor. Mr. Taylor's Ginger, also a chestnut, was second. The latter exhibitor, however, headed the class for two-year-olds with a bay by Yard Arm. He was also second in the three-year-olds, with an entry by Scotch Hazell, the first prize in this class going to Mr. John Clem, with an entry by Totertco. There was fairly good competition for four-year-olds and over (not exceeding seven years old), up to 12 stone. These were ridden in the ring, and all the awards went to Swindon, the winners being Mr. H. Percy Woolcott, Mr. T. H. Deacon, and Mr. E. C. Brown. The up to 14 stone brought out a strong class, which was headed by a powerful, free-striding brown gelding, Freemason, owned by Mr. W. H. Barber, of Henley. Mr. W. E. Selwood, of Newton Abbott, was second, and Mr. H. P. Woolcott third. The best hack was held to be Mr. Selwood's Stylish. In this class Mr. James Farmer, of Cirencester, was third prize-taker and reserve position holder. The Hunters' Improvement Society's silver medals went to Mr. Frederick Corp, of Wootton Bassett, for his bay filly by Pleuron, and Mr. J. H. Joyce's chestnut brood mare, Beatrice. In the single harness class Mr. S. R. Selman, of Redland, Bristol, took second prize, with Netpool Swell.

Sheep.

Hampshire Downs practically monopolised the sheep classes, which were well filled, the entries including several Pymouth winners. For two-teeth rams, Mr. James Flower, of Chilmark, headed the class, Mr. Cary Coles, of Winterbourne Stoke, Salisbury, being in close attendance. Mr. Alfred Apperly, of Stroud, was highly commended. Mr. Flower was also to the fore for his pen of five ram lambs. Mr. Cary Coles won the ram lamb class, and for the same entry was awarded the champion prize offered by the Hampshire Down Breeders' Association.

Cattle.

The cattle section was especially a good one, the Shorthorn classes being well up to the mark. In the class for bulls calved in 1898-00 Mr. J. Deane Willis was first with his white C.I.V., by Brave Archer, which later was also adjudged the champion prize, the gift of Viscountess Bolingbroke. For the class competition Mr. G. F. King was second. There was another good entry for 1901 bull calves, and Mr. Willis was again master of the situation, this time with his roan Bapton Florist. Amongst the minor awards, Mr. G. F. King took a h.c. with Chewton Victor 6th. Mr. Arthur Hiscock, jun., took first and second in the dairy cows, and this in face of the fact that the celebrated White Heather, the property of Mr. J. D. Willis, was in the ring. The judges held that, according to the stipulations of the class, the prizes were for the best dairy cow, and not the best shorthorn. Mr. J. Thorley, of Farringdon, was first for heifers, Mr. J. D. Willis second with Cinderella, and Mr. G. F. King third with Countess 56th, by Viceroy. Mr. J. Thorley also won first prize in a novice class. For the 1901 heifers Mr. J. D. Willis added to his list of wins, and in this class Mr. G. F. King stood second with Evelyn 4th.

There was a very strong representation indeed of Jerseys, many of the best English breeders putting in an appearance. Mrs. C. McIntosh's Halburton's Bruce headed the bull class, and amongst the minor honours appeared the names of Mr. Edward Colston, M.P., and Lady Smyth, Ashton Court. Mr. Antony Gibbs led in a very strong competition for bull calves with Perry Farm Clipper. This exhibitor was also highly commended in the cow class. For 1901 heifers Lady Smyth again came in for a h.c. and c., one of the latter cards being also handed to Mr. Antony Gibbs. Amongst the other prize-takers were Lady Rothschild, the Marquess of Winchester, Mr. Arthur Pocock, and Mr. James Joicey. The Guernseys did not show up quite so strongly, chief among the prize-winners coming Messrs. W. Glynn and F. Hargreaves.

Hadleigh.

The Hadleigh Farmers' Club and Agricultural Association held a most successful annual show on Friday, the 22nd ult. A record entry was received, there being about 40 more exhibits this year than there were last. The increase was chiefly due to the Suffolks, while the neat stock showed several additions.

The Suffolks were judged by Mr. E. A. Cook, Dennington Lodge, and Mr. Arthur T. Pratt, Sproughton, the latter gentleman taking the place of Mr. Fred Lewin, who was unable to attend on account of illness. As already stated, there was a good show of Suffolks, Mr. E. F. Quilter showing choice animals from his well-known stud at Bentley. This gentleman was very successful. Several of the classes were exceedingly well filled, the best collection being perhaps that for mare or filly, three years old and upwards. There were four level good exhibits, a pair sent by Mr. E. F. Quilter beating the Rev. H. Taylor's Tiffen 3rd. The special prize for the best stallion or entire colt was also won by Mr. Quilter with Bentley Warrior, while the same gentleman's Bentley Duchess was awarded the special prize for the best mare. The silver medal for the best filly foaled in 1899, or since, also went to Bentley, the reserve being Sir Cuthbert Quilter's Bawdsey Sweet Marjorie.

The judges of the cart horses other than Suffolks were—Mr. Joseph Lankester, Old Newton, and Mr. W. H. Richardson, Doddington. The two-year-olds formed a good collection, Mr. J. Trenham Cresswell carrying off the first prize and special with his Redlynch Blue Blood. Mr. Henry Munson being a good second with his well-known Souldern Albert, by Waresley Albert. A nice Waresley Triumph colt, belonging to Mr. J. R. Keeble, was easily first in the yearling class, and the same gentleman took the same position in the one for mare with foal at foot. Mr. Keeble scored also in a big foal class with a handsome youngster by Moors Regent. Mr. F. Baldwin's handsome mare, Suffolk Lass, added to her many victories, and was reserved for the championship, which honour was awarded to a fine two-year-old sent by Mr. J. R. Keeble. There were some good yearling fillies, Mr. T. Haward, Gedgrave Hall, taking the lead with a particularly handsome filly, Mr. J. Sturley Nunn's Evening Star, by Brisbane, being second. The pairs of horses made a good show in the ring. The judges could not agree, and Mr. J. Sturley Nunn was called in, and Mr. Felix T. Cobbold was awarded first, and Mr. J. F. T. Dipnall second.

The hunters, Hackneys, and ponies came before the Rev. Sir William Hyde Parker, Bart., Long Melford, and Mr. J. C. Dawson, Nacton. Some choice hunters put in an appearance, Mr. George F. Hempson, Ardleigh, being first with his Red Letter in the weight-carrying class, Music, belonging to Mr. H. N. Dunnett, carrying off second, while in the light-weights, Mr. C. H. Westropp's Hardware was to the fore, another entry by Mr. H. N. Dunnett taking second place. The harness classes were well filled. Mr. D. Dyer's Fashion carrying off first in the largest class, which was that for mare or gelding not exceeding 15 hands. The jumping competitions as usual excited much interest on the part of the large company that had assembled on the ground.

The judges of neat stock, sheep, and swine were Mr. Herbert E. Smith (Walton), and Mr. G. P. Watkins (Culpho). As to the neat stock, the number and character of the entries did not suggest that Hadleigh was the centre of a very strong dairy district. In the bull class there were three entries, and as many varieties of bulls, the first honour going to a choice red poll belonging to Sir J. T. Rowley, Bart. There was a particularly good collection of polled cows, the chief honour going to a Suffolk from Semer, shown by Mr. R. J. Thurman.

As to the swine, Mr. C. W. Haward, Wenham, was to the fore in the class for boars of any breed with a nice Large Black, which was good enough to beat an exhibit from Eldo House, Bury St. Edmund's. Mr. A. H. Cobbald, however, was first in the sow class with a Large Black, Mr. C. W. Haward being second, but she was accompanied by her progeny, which precluded her from competing in the next class, that for sow and pigs. This was a specially strong collection, and the judges gave the first honours to a cross-bred sow, belonging to Sir Joshua T. Rowley, which secured the distinction because she had a marvellously well-matched litter of a dozen. The remainder of the exhibits consisted of Large Blacks, the second prize going to Mr. A. H. Cobbald.

With respect to sheep, there was a big entry of tups of any short-wool breed; the premier place was assigned to Mr. M. G. Hale, of Claydon, for a very useful black-faced tup, which, however, was closely run by a Southdown shown by Mr. William Nocton, of Langham. Mr. Hale was also first in long-wools; and as to the competition for pens of three Suffolk ewes, lambed in 1901, the famed Bentley Hall flock carried the sway. There might have been a better exhibition of shearling ewes; evidently the breeders in the district do not put their best foot forward in this matter. In the fat sheep class a nice pen of Southdowns, belonging to Mr. Nocton, took the premier honours. In the class for ten Suffolk ewes with their own lambs, Mr. M. G. Hale was again to the fore with a useful lot of ewes and lambs, showing good breeding. In a corresponding class of any other breed, Mr. Nocton was first with Southdowns.

SOCIETIES.

Royal Agricultural Society of England.

A monthly Council was held at the Society's House, 13, Hanover Square, W., H.R.H. Prince Christian, of Schleswig-Holstein, K.G. (President) in the chair. The minutes of the last monthly meeting of the Council, held on May 7, 1902, were taken as read, and approved.

Letter from H.R.H. the Prince of Wales.

H.R.H. the President, in moving that the letter dated May 7, 1902, from H.R.H. the Prince of Wales, accepting the office as President of the Society, be entered upon the minutes, said he was sure he was expressing the feelings of the Council when he said how much gratified they were that his Royal Highness the Prince of Wales had accepted the office of President of the Society for the ensuing year.

The motion was unanimously agreed to amid cheers.

Election of New Governor and Members.

The election of the following governor and nineteen members was proceeded with:—

GOVERNOR.

Kleinwort, Herman G., Wierton Place, Boughton, Monchelsea Kent.

MEMBERS.

Beardshaw, Edward T., Baltic Steel Works, Sheffield.
Bett, Robert, Court Lodge, Stoke, Rochester.
Bird, Oliver J. L., Belvidere, East Malling, Kent.
Cottard, Alfred, Havre, France.
Crowley, John F., Meadow Hall Iron Works, Sheffield.
Garnett, William, jun., Backwell Hill House, near Bristol.
Hill, Basil Hubert, Buston House, Lesbury, Northumberland.
Kerr, John, Gilmerton, Drem, Haddingtonshire.
Killick, William, Beddingham, Lewes.
Mitchell, Ronald Walter, Manor Farm, Ladingford, Yalding.
Morton, Nathaniel, Ballymena, co. Antrim.
Oswald, Richard Alexander, Auchincruive, Ayr, N.B.
Raingill, Sam. S., The Grange, Ringway, Altrincham, Cheshire.
Rawlinson, Thomas, Park House, Kirkby Lonsdale.
Radmayne, Hugh, Brathay Hall, Ambleside.
Shaw, George Rainger, Beechcroft, Great Missenden, Bucks.
Shield, Edward, 8, Hextoc Terrace, Hexham-on-Tyne.
Stopford, Lieut.-Colonel William, Rathmore, Kinsale, co. Cork.
Tyson, J. H., Cadeby Hall, North Thoresby, S.O., Lincs.

On the motion of Sir Nigel Kingscote, it was unanimously resolved:—

That the secretary be empowered to issue to any duly nominated candidate, on receipt of a remittance for £1 (the amount of the annual subscription of a member), a special ticket admitting the candidate to the same privileges as a member during the Carlisle Meeting; the question of the formal election as member of such candidate to be considered by the Council at their next meeting to be held in London.

The reports of the various standing committees were then presented, and adopted, as below:—

Finance.

Sir Nigel Kingscote (Chairman) reported that the accounts for the month of May, 1902, as certified by the Society's accountants, showed total receipts amounting to £784 17s. 4d., and expenditure to £3,396 5s. 10d. Accounts amounting in all to £7.062 7s. 3d. had been passed, and were recommended for payment.

Journal.

The Earl of Derby reported that further consideration had been given to the question of the contents of the next volume of the Journal, and to a variety of suggestions for articles in the Journal.

Chemical and Woburn.

Mr. Bowen-Jones (Chairman) reported the progress of the experiments at the Society's Woburn experimental farm, and the visit to the farm on May 31st of students of the Agricultural Department of the University of Cambridge. The date for the Committee's annual visit of inspection to the farm was fixed for Thursday, July 24 next.

Mr. Bowen-Jones, in presenting this report, expressed the hope that as many as possible of the members of the Council would accompany the Committee on their visit of inspection to the farm on July 24, and that they would bring their friends with them.

Botanical and Zoological.

Mr. Wheeler (Chairman) reported that the Committee had given further consideration to the arrangements for the proposed Conference with representatives of the Highland and Agricultural Society, as to the testing of farm seeds, which had been fixed for Thursday, the 5th inst. They recommended that the Society's representatives should be Mr. E. V. V. Wheeler, Lord Moreton, Mr. Alfred Ashworth, and Mr. Frederick Reynard.

The Consulting Botanist (Mr. W. Carruthers, F.R.S.) presented his report.

The Zoologist (Mr. Cecil Warburton) had submitted proofs of drawings prepared for the proposed pamphlet on "Orchard and Bush-fruit Pests and How to Combat Them." The Committee recommended that as soon as the illustrations were completed the pamphlet be published by the Society at the price of 6d. per copy.

The Committee also recommended the publication with the proceedings, of the report by the Zoologist on the Oak Tortrix.

The Consulting Chemist had reported the progress of the clover experiments now being conducted at Woburn, and it was arranged that these experiments should be personally visited and kept under observation by the consulting botanist. The committee recommended that the consulting botanist and the consulting chemist be instructed to visit the experimental plots upon which the Society's Grass experiments were carried out from 1895 to 1900, in order to ascertain the present effect of the manures and treatment then applied.

Veterinary.

The Hon. Cecil Parker (Chairman) presented the usual report by Prof. McFadyean.

During the past winter it had been ascertained that, on several farms in different parts of the country, considerable numbers of sheep had died from black quarter (quarter-evil, or "strike"), and it was therefore considered advisable to carry out at the Royal Veterinary College a series of experiments to ascertain whether the method of protective inoculation, which had been largely practised in the case of young cattle, might with safely be applied to sheep. The experiments were not yet completed, but those already carried out had yielded results very favourable to the operation, both in respect to safety and efficiency.

The Committee recommended that two more veterinary inspectors (in addition to the seven already appointed) be engaged for the Carlisle meetnig, there being 521 horses entered, as against 355 at Cardiff last year. The number of entries received for the horse-shoeing competitions at the Carlisle meeting was 29 in Class 1 (Hunters), and 49 in Class 2 (Cart Horses). It had been decided that the competitions in Class 1 should be held on Wednesday, July 9, and in Class 2 on Thursday and Friday, July 10 and 11. The lecture in the show yard on "The Horse's Foot and How to Shoe It," by Mr. John Malcolm, F.R.C.V.S., was fixed for Friday, July 11, at 3 p.m.

Stock Entries at Carlisle.

Mr. Sanday (Chairman) presented a statement showing that the number of entries received in the various classes for live stock, poultry, and produce at the Carlisle meeting compared with previous years as follows:—

Description of Shedding.	Carlisle, 1902.	Cardiff, 1901.	York, 1900.	Maidstone, 1899.	Birm'gh'm, 1898.	Carlisle, 1880.
	Feet.	Feet	Feet.	Feet.	Feet.	Feet.
Ordinary	6,693	7,245	9,454	7,455	9,350	6,662
Machinery	2,079	2,305	2,547	2,192	3,239	2,060
Special (Seeds, Models, &c.)	2,321	2,101	2,771	2,553	2,902	1,059
Total*	11,093	11,651	14,772	12,200	15,491	9,781
No. of Stands	340	358	412	395	502	288

* Exclusive of open ground space

Prizes for Wind Engines.

Mr. Frankish (Chairman) reported that the draft regulations for the trial of wind engines, prepared by the Society's consulting engineer, had been approved, and the Committee recommended that prizes of £50 and £20 be offered in 1903 for wind engines for pumping purposes; the trials to take place in the London show yard in the months of March and April, next year, and the entries to be made by January 1 next.

Implement Shedding at Carlisle.

The following tabular statement of the space taken in the implement department at the forthcoming Carlisle meeting, as compared with previous years, was also submitted:—

SHEDDING IN IMPLEMENT YARD (IN FEET).

Description of Entries.	Carlisle, 1902.	Cardiff, 1901.	York, 1900.	Maidstone, 1899.	Birmingh'm, 1898.	Carlisle, 1880.
Horses	521	355	696	424	709	479
Cattle	667	563	687	683	792	432
Sheep	545	519	614	631	624	429
Pigs	178	148	—	147	198	145
Total	1,911	1,575	1,997	1,885	2,323	1,485
Poultry	653	701	629	669	964	—
Produce	461	521	528	625	635	100

Arrangements at Carlisle.

The Earl of Derby (chairman) reported that the programme for the Carlisle meeting had been settled that morning. The Implement Department and Dairy only would be opened on Saturday, July 5th, at a charge of 1s. each person, and the judging of produce would take place on that day. All departments would open on Monday, July 7th, when the judging of live stock and poultry would take place. The charge for admission on that day would be 5s. On Tuesday, July 8th, Wednesday, July 9th, Thursday, July 10th, and Friday, July 11th, there would be daily parades in the large ring of cattle and heavy horses in the morning, commencing at 11 a.m.; and of light horses, followed by horse jumping competitions, in the afternoon, commencing at 2 p.m. The charge for admission on the Tuesday and Wednesday would be 2s. 6d., and on the Thursday and Friday 1s. Butter-making and horse-shoeing competitions would be held on the Wednesday, Thursday, and Friday. From Tuesday to Thursday three performances of music daily would be given by the full band of the Portsmouth division of the Royal Marines, under the direction of the bandmaster, Lieut. George Miller, M.V.O., Mus. Bac. Cantab. On Friday, the last day of the meetin, selections of music would be played by the band of the Border Depot.

The North-Western Railway Company had intimated their willingness to run a special train from Penrith at 7.30 a.m., arriving at Carlisle at 7.50 a.m., on Monday, July 7th, for the convenience of judges and others who wished to arrive early in the show yard. The North-Eastern Railway had also promised to continue the train leaving Newcastle at 6.20, through from Hexham to Carlisle, arriving at 8.28 a.m.

The following time table had been arranged for the meetings of breed societies in the large tent in the Carlisle show yard:—

MONDAY, JULY 7th, 1902.

Shropshire Sheep-Breeders' Association, 3 p.m.

TUESDAY, JULY 8th, 1902.

Royal Agricultural Society of England, 12.30 p.m.
Shorthorn Society (Upper End), 2.30 to 4 p.m.
Polo Pony Society (Lower End), 2.30 to 4 p.m.
National Pig-Breeders' Association (Upper End), 4 to 5 p.m.

Arrangements for the 1903 London Show.

Sir Nigel Kingscote reported that the Committee of Selection had had under consideration the holding of meetings of the Council after the Carlisle Show, in connection with the question of expediting, as far as possible, the arrangements for the show of 1903 on the society's new permanent show yard in London. The committee were of opinion that the time had arrived for the appointment of a Special Committee to consider the whole of the arrangements to be made for that show, and in considering the composition of such committee it was felt that the Council could not do better than re-appoint, with two additions, the Special Committee of 1899-1900, which reported in detail on the society's show system.

It was proposed that the new Special Committee should begin their sittings as soon as possible after the Carlisle Show was over next month, and the question of whether a special meeting of the Council should be held in October to consider their recommendations could be considered at the next ordinary meeting of the Council to be held in London—viz., on Wednesday, July 30th, prior to which the Special Committee would have held their first meeting. He desired, therefore, formally to move:—

That a Special Committee, to consist of Earl Cawdor, the Earl of Derby, the Hon. Cecil Parker, Sir Walter Gilbey, Sir Nigel Kingscote, Sir Jacob Wilson, Mr. Crutchley, Mr. Dugdale, Mr. Frankish, Mr. Marshall, Mr. Sanday, and Mr. Stanyforth, be appointed to consider the arrangements to be made for the Show of 1903, with more particular reference to the general composition of the prize-sheet, the allocation of space to the several departments, the entry fees to be paid for exhibits of live stock, machinery, etc., and the arrangements for the accommodation of visitors to the Show.

Mr. Percy Crutchley said that in his capacity, both as honorary director and as chairman of the Site Committee, he had recognised for some time that the appointment of a strong committee such as was now proposed would be an essential preliminary to the consideration by the several Standing Committees of the customary detailed arrangements for their show of next year. As the Council would remember, it had been decided at their meeting, held on July 31st, 1901, to delegate all matters connected with the administration and development of the Permanent Show Estate, which the society then formally decided to purchase, to a small Standing Committee of four members resident in or near London, so as to deal promptly and expeditiously with the numerous questions connected with the purchase of the land and its preliminary preparation for the society's purposes. The Site Committee had from time to time reported progress in the preparation of the site; but it was obvious that many questions involving other interests must come before the committee, which could not with advantage be reported for public discussion. He felt that the time had now come for considering the best means of utilising the site for the show of 1903, and he thought that for this purpose it would be best to appoint the committee, mentioned in Sir Nigel Kingscote's resolution, which he now desired to second.

Date of the 1903 Show.

Mr. Stratton asked whether the terms of reference to this Special Committee would include the

fixing of the date of the show. He thought it was unfortunate that their shows were held at a most inconvenient time for the farmers of the country—viz., in the middle of the hay harvest. It was the opinion of many that the show should be held considerably earlier in the year. He understood that it was proposed to hold the show of 1903 the week after Ascot, but his opinion was that it should be held in May. It was a matter of the utmost importance, and he would like to know whether the new committee would have the subject referred to them.

Mr. Crutchley said that there was a regular time for holding the Society's show, namely, the week after Ascot, and this date was only departed from under very exceptional circumstances, such as had occurred this year, in view of the Coronation ceremonies. He had reported from the Site Committee at the April meeting of the council that with the co-operation of the railway and other authorities, there was every reason to hope that the meeting of 1903 would be held on their new site at the usual time of holding the show, namely, the week ofter Ascot; and a paragraph based on this had appeared in the report of the council to the anniversary general meeting held on the 22nd ult. He was afraid that he could not agree with Mr. Stratton that it would be desirable to hold their first show in the month of May, whatever might be done afterwards, for he was confident that they would have quite enough to do to arrange for the show of next year being held at the usual time in June.

Sir Jacob Wilson said he had quite understood that the question with regard to the date when they would hold their show in 1903 had already been settled. The proposal to hold the show in the week after Ascot was reported to the general meeting last month, and the report was then passed. Whatever might happen afterwards, it was generally understood that the show of 1903 should take place in the week after Ascot. They must look to the convenience of other societies as well as their own, in regard to the question of altering the date, and fix a time that would meet the convenience of the country generally.

After some further discussion,

Earl Spencer said he thought the question of the date of the show of 1903 was not a matter to be referred to the Special Committee. It would be very difficult to alter the time of the meeting for this particular show. There were already objections in certain quarters to the alteration of their show system, and if they altered the date of the show, it would only add to their difficulties.

Mr. Muntz, M.P., also reminded the council that they were making a grave change at the present moment in adopting a fixed site for their show. He thought it would be most undesirable to make a further change and alter the date. Let them be satisfied with one great change at the present moment, and at a future time the question of a change of date for the show might be considered.

The subject then dropped, and the motion for the appointment of the committee was carried.

Produce Entries at Carlisle.

Mr. Dugdale (chairman) reported that the following entries of produce had been made for the Carlisle Meeting:—Butter, 159; cheese, 73; cider and perry, 75; hives and honey, 154. For the butter-making competitions at Carlisle, twenty-one entries had been made in Class I., and three entries in Class III. No entries had been made in Class II.

In view of the small number of entries in Class III. it had been decided that demonstrations should take place in the dairy on Tuesday, July 8th, and that on Wednesday, July 9th, those who had entered in Class I. should compete in the morning and in the afternoon (the division of the competitors being decided by lot). On Thursday, July 10th, there would be a demonstration in the morning, and the competition in Class III. in the afternoon. On Friday morning, July 11th, the prize-winners in Classes I. and III. would compete for the prizes offered in Class IV.

Suggestions at Anniversary General Meeting.

The council proceeded to consider the following suggestions made by members at the anniversary general meeting on May 22nd, 1902:—

(1) Sir William Vincent, Bart.: "That information be published as to the conditions under which oak trees are defoliated by caterpillars."

(2) Mr. Clare Sewell Read: "That in connection with the buildings for the society's new permanent show yard, the Council be asked to consider the question of establishing a national seed-testing station open to landowners, farmers, and seedsmen (whether members of the society or not), at stated fees."

(3) Mr. James Edwards: "That provision should be made at the new permanent show yard of ground for the trial of tillage implements."

No. 1 of the above suggestions has already been dealt with by the Botanical and Zoological Committee, and the subjects of No. 2 and No 3 will receive consideration in connection with the future arrangements for the Society's shows.

Colonial Visitors to Carlisle Meeting.

The secretary said that numerous letters had reached him from Agents-General and others, announcing the intention of representatives of their Colonies, who would shortly be arriving in London for the Coronation ceremonies, to inspect the Society's show at Carlisle next month. It would doubtless be the wish of the council that all possible facilities should be given to any distinguished visitors from the Colonies and abroad who might pay the Society a visit at Carlisle.

Date of Next Meeting.

After the transaction of some further business the council adjourned until Wednesday, July 9th, 1902, in the show-yard at Carlisle.

The Central Chamber.

A council meeting of the Central and Associated Chambers of Agriculture was held on Tuesday, at the Society of Arts, London, Sir E. Strachey, M.P., the president, occupying the chair.

At the outset of the proceedings the president congratulated the Chamber upon the definite statement that had been obtained from Mr. Hanbury on the previous day on the question of milk-blended butter.

The Education Bill.

Mr. Kidner (Taunton Farmers' Club) moved:—

That the attention of the Government be directed to the resolution passed by the Council on the 8th April last, viz., that, in the opinion of this Council, the cost of national education should be borne by the Imperial Exchequer, and not out of local rates; and that all members of the House of Commons who are members of the Chambers of Agriculture should be asked to strenuously oppose the addition to local rates which would undoubtedly follow the passing of the Education Bill now before the House in its present form.

He said that the object of the Business Committee in putting this resolution upon the agenda was simply to reiterate the previously expressed opinion of the Council, on account of a large number of resolutions which had been sent up from local Chambers on this subject. Those resolutions showed that public opinion was very strong in regarding education as a matter of entirely national concern, which should be provided for from the Imperial Exchequer, and not from the local rates. Local ratepayers felt that new burdens were being continually thrown on the shoulders of ratepayers who formed a small portion of the community. The reason why the cost of education should not be thrown on the local rates was a very strong one, inasmuch as children who were educated in rural districts went almost immediately into other parts of the country to assist in promoting the welfare of the country at large.

Mr. J. Lloyd Wharton, M.P., seconded the motion. He wished to do so, because he was one of the members of the House of Commons who sat upon the Rating Commission some years ago. There was one fact with regard to that Commission which he wished to impress upon the meeting. It was that it was composed of all sorts and conditions of men as far as their political opinions went. The Royal Commission made a schedule of the different subjects of local taxation, and put them in two different lists, one list containing those subjects which they considered of national interest, and which, consequently ought to be paid for nationally, and the other list containing those subjects which, as they considered, ought to be paid for out of local funds, and the question of education headed the list of national subjects.

Mr. James Lowther, M.P. (Darlington), said that he had given notice of several amendments to the Education Bill, to enable the House of Commons to vote straight as to whether this huge addition to the local rates, which was proposed, should be carried into an Act or not. He would not press his own individual views on this subject. He thought that a vast deal of money had been already wasted in so-called education, which, to a very large extent, did more harm than good.

Mr. Henry Chaplin, M.P., said that he was sorry that he was not present at the commencement of the proceedings, so that he might have heard all that had passed on this subject. The Bill, as at present drawn, imposed the whole addition of the new cost of education on the rates. He knew that many members of the Unionist party in the House of Commons were entirely opposed to that, and, strange to say, they were also in complete accord with some of those members on the other side of the House of Commons with whom his own practice had generally been to be at war to the knife.

The debate was continued by Mr. C. Harris Stratton, Mr. T. Christian, Mr. Gardner, Mr. Lacey Everett, Earl of Lichfield, Colonel Williams, Mr. Jasper More, M.P.

The resolution was unanimously adopted, and it was decided to send copies of the resolution to the Government, and to local Chambers of Agriculture, with a request to their secretaries to bring them before Members of Parliament.

Mr. Jasper More, M.P., suggested that a deputation from the Chamber should join a deputation from Town Councils to wait upon the Government on the subject, and the Business Committee were instructed to arrange the matter.

The Dipping of Sheep.

A resolution was introduced by Mr. Gardner "That the dipping of sheep should be compulsory." After a long discussion it was decided that the dipping of a sheep should be made compulsory with a composition approved of by the Board of Agriculture. In the course of the discussion, Mr. J. Allan urged that it was not desirable that dipping should be made compulsory. There was not a single case of scab in existence in Yorkshire, and there were more sheep in that county now than ever.

Unexhausted Improvements.

On the motion of Mr. H. T. Eve, a committee was appointed to draw up a scale of compensation for unexhausted improvements, to be sent down for consideration by the local Chambers. The following gentlemen were then appointed as members to serve on the committee:—Mr. Ackers, Mr. Clare Sewell Read, Mr. Jeffreys, M.P., Mr. Bowen-Jones, Mr. H. Trustram Eve, Mr. Frankish, Mr. Kidner, Mr. T. Latham, Mr. T. Davies, Mr. Middleton, Mr. C. Harris Stratton, Mr. H. Biddell, Mr. C. B. Davies, Mr. Bernard Dyer, Mr. F. J. Lloyd, and Mr. T. A. Dickson.

Sheep Worrying by Dogs.

Mr. Fitzherbert-Brockholes (Lancashire Farmers' Association) moved:—"That there is urgent need for further legislation for the due protection of sheep owners and others against stray and uncontrolled dogs, and that the Board of Agriculture be pressed to take up the question without delay." The resolution, on being put to the meeting, was carried unanimously.

Speed of Motor Cars.

Mr. Muntz (Warwickshire) moved a resolution that all motor cars or carriages should carry a distinctive number in front and rear; and after several amendments had been disposed of, this was carried.

The Council then adjourned until November 4th.

Royal Commission on Horse Breeding.

A meeting of the Royal Commission on Horse Breeding was held at 13, Hanover Square, on Monday. There were present, the Earl of Coventry (in the chair), Sir Jacob Wilson, Sir John Gilmour, Bart., and Mr. J. Herbert Taylor secretary. The Duke of Portland, K.G. (Master of the Horse), the Right Hon. Henry Chaplin, M.P., and Mr. J. Bowen Jones, wrote expressing regret at being unable to attend the meeting.

The reports of the District Committees were received, including the applications for nominations up to the end of May. It was also reported that two of the King's Premium Stallions had died since the season of service commenced, and their places had been filled by the respective reserve horses. Other business engaged the attention of the Commissioners, who afterwards adjourned until the autumn.

Hackney Horse.

A special meeting of the Show Committee of the Hackney Horse Society was held on Wednesday last, at the Society's offices, 12, Hanover Square, mainly to consider the question of classification at next year's London show. Sir Walter Gilbey presided.

The committee decided to increase the total prize money to £1,300, and made the following alterations in and additions to last year's premium list:—

The class for yearling entire colts will be omitted, as the committee are of opinion that owners now consider it inadvisable to submit their young animals to the necessary preparation for their appearance in the show-ring so early in the year. A fourth prize will be offered for three-year-olds, and the prizes in the classes for all stallions four years old and upwards will be made uniform in the amounts offered, namely, £20, £15, £10, £5.

The classes for yearling fillies will be omitted, but the remaining classes will stand unchanged.

In each of the three classes for hackney mares and geldings in hand a fourth prize will be given.

Four prizes will be given in each class for hackneys in harness, not over six years old, and the following fresh classes have been added:—Mare (barren) or gelding, over six years old, under 15h. 1in., £15, £10, £5. Mare (barren) or gelding, over six years old, 15h. 1in. and over, £15, £10, £5. Pair of mares or geldings (or mare and gelding), not over six years old, under 15h. 1in., £15, £10, £5. Pair of mares or geldings (or mare and gelding), not over six years old, 15h. 1in. and over, £15, £10, £5.

The hackney produce groups will remain unaltered.

An additional prize will be given for pony stallions over four years old, and also for two and three-year-old pony mares.

An entirely fresh class will be opened for pony mares and geldings in hand (which may also be exhibited in harness) as follows:—Mare (barren) or gelding, not over six years old and not exceeding 14 hands, £15, £10, £5.

In addition to the class for ponies not over six

years old in harness there will be a further class for ponies over that age as follows:—Pony mare (barren) or gelding, over six years old, not exceeding 14 hands, £15, £10, £5.

The list of special prizes was increased by the offer of two champion gold medals, one for the best hackney and one for the best pony exhibited in harness. The prize-list, with these additions, will be presented by the committee for ratification at the meeting of the council next November.

The secretary presented the replies received to date from the affiliated societies in response to the circular letter issued on the subject of the measurement of show harness horses and ponies. It was resolved to wait for further replies before presenting any report.

The committee agreed to offer gold medals for hackneys in harness at the Syracuse Show of the New York State Fair and at the Newport Show, Rhode Island, U.S.A. Also to offer a gold medal at the next show at Buenos Ayres.

The committee, after transacting other formal business, adjourned until November.

Suffolk Sheep.

A Council meeting of the Suffolk Sheep Society was held on the 25rd ult., a very small number of members being present. Mr. J. W. Eagle presided.

The secretary announced that the Marquis of Bristol had offered to replace one of the challenge cups that had been won outright. His lordship's offer was accepted, and a vote of thanks passed unanimously. The reports of the district inspectors which were received showed a general increase of interest in the breed, such increase being more noticeable in some districts than in others.

The remaining business related to an alteration in the rules of the society. This evoked much discussion, but is of purely domestic interest.

A larger number of members turned up at the subsequent luncheon. The chair was taken by Lord Rendlesham in the unavoidable absence of Lord Cadogan. In recognition of his services to the society, the Marquis of Bristol (Lord-Lieutenant of the county) was presented with the gold medal of the society, and an illuminated address.

The chairman, in proposing the health of Lord Bristol, said that the only regret he had at being called upon to propose the toast was the feeling that their president, if he had been able to attend, would have done so in far more appropriate words than he was able to command. In one respect, however, he felt that he was not lacking—no one could take greater pleasure than he did in having such an opportunity of bearing testimony to the good work that the Marquis of Bristol had done for the Suffolk Sheep Society. (Applause.) It was difficult to say much in praise of the noble Marquis, when he was sitting so close by, but there were one or two facts that he would venture to mention. The society was formed in 1886—such a comparatively short time ago that the prominent position now reached formed an extraordinary record of progress; Lord Bristol was president from the year of its inception up to and including 1901; and, during that period of 16 years, he was present at 22 out of a total of 23 annual and general meetings, and at no fewer than 38 council meetings. (Applause.) Beyond that, he had been the donor of five challenge cups for the Nor was this all, for it was largely owing to his advocacy of the merits of the breed, and to the trouble and expense he had himself taken with it, that the present high position had been attained by the society and by the Suffolk sheep. Addressing the noble Marquis, the speaker added: I feel sure you will accept with pleasure and satisfaction the beautiful gold medal of the society which I have been asked to present to you, as well as an address which is signed by the principal officials of the society.

The Marquis of Bristol in reply said: It is very difficult for me to find any words which would adequately express my feelings at the present moment. I may in the first place thank the senior vice-president of the society for the very kind terms in which he has proposed my health, and made this presentation to me. It is a matter of great satisfaction to me to feel that the slight services which I have been enabled to render this society are deemed to be thus worthy of recognition. Believe me that I shall ever have in happy recollection this day which is so memorable to me, and that this medal, and the illuminated address which accompanies it, will ever remain amongst my most cherished treasures. I should like to say just a word about the present position of the breed of Suffolk sheep and the society which is its representative. What place does the breed and the society occupy to-day? My noble friend has alluded to it, and that in very truthful language. In the words, I think, of my friend Mr. Goodchild, the position is that we are at the "top of the tree." With holding the premier class at Smithfield: with innumerable tokens of success in many a show yard, both at home and abroad; with roots which stretch out into far-lying climes and countries; with a membership vastly increased since I first remember it; with an overflowing—well, I will not say overflowing—but a fairly full exchequer; with a staff of able and painstaking inspectors of flocks and judges of sheep; with a council wholly devoted to the interests of the society; and, above all, with a secretary of great energy and of great knowledge; with all these evidences of progress, there is no difficulty in declaring the position of the society to-day.

Sir Walter Greene, M.P., subsequently proposed the toast of "Success to the Society," which was replied to by Mr. Pretyman, M.P.

Mr. Edward Packard proposed the health of the chairman, and after Lord Rendlesham's response, the proceedings terminated with the health of the new president, Lord Cadogan, proposed in flattering term sby the Marquis of Bristol.

Shire Horse.

Lord Hothfield (past President) occupied the chair at a meeting of the Council of this Society, held at 12, Hanover Square, on Tuesday, when forty-five new members were elected.

Mr. R. W. Hudson reported that Sir Walter Gilbey had been re-elected Chairman of the Finance Committee for the ensuing year, and that he himself had been elected Vice-Chairman.

The balance on the current account at the bank was £589 19s. 1d., with £750 on deposit, arrears of subscriptions £44 2s., accounts for payment £938 13s. 7d. This report was adopted.

Mr. A. C. Duncombe reported his election as Chairman of the Editing Committee for the ensuing year and the election of Mr. J. W. Kenworthy as Vice-Chairman. Applications for thirty-seven prefixes and four affixes had come before the Committee, all of which they had granted with the exception of two, which they referred back to the respective applicants.

Prefix.	Applicant.
Akeman	Philip Davis.
Barlaston	S. Holdcroft.
Barnstone	George Wallwin.
Beauvale	C. C. Chambers.
Blakesley	F. F. Sheppard.
Bordesley	E. King.
Burton	Charles Drackley.
Byfield	Edwin Ward.
Catterick	T. H. Hutchinson.
Clapgate	Robert Tong.
Dunkirk (and affix, in lieu of Copster)	Noble Richardson.
Ebnal	William Mottram.
Gringley	G. Antcliff.
Harsley	Joseph Breckon.
Hazlet-ng	E. Bramford.
Hempstead (and affix)	A. T. Umfreville.
Honeybourne	B. Ashwin.
Howell	T. R. Hides.
Hurdletree	W. K. Wright.
Hurn	C. C. Harrison.
Irchester	J. C. Eady.
Lockinge (and affix)	Lady Wantage.
Lydham	Arthur Gough.
Newry	Hugh Bennett.
Ogbourne	J. B. Stevens.
Penarth (and affix)	T. R. Thompson.
Peyton	Charles Clayden.
Posenhall	W. Bishop.
Rodens	William Parker.
St. Mary's	George Shelton.
Sennington	A. F. Chillingworth.
Southminster	R. Horner.
Sundon	W. Cooper.
Starborough	R. H. Tatham.
Tetton	W. Wilding.

The Committee had before them several Stud Book entries upon which they presented their recommendations. This report was adopted.

Lord Hothfield stated that Sir Walter Gilbey, Bart., had been re-elected Chairman of the Horse Show Committee for the ensuing year, and reported his own election as Vice-Chairman.

The Judges' Selection Committee had been reconstituted as follows: Sir Walter Gilbey, Mr. J. P. Cross, Lord Hothfield, Mr. J. W. Kenworthy, Lord Llangattock, Mr. Joseph Martin, and Mr. John Rowell. Messrs. Sexton, Grimwade, and Beck had been re-elected auctioneers of the Society for the ensuing year.

In response to an inquiry by a member of the Society, the Committee saw no objection to the auctioneer at the unreserved sale of Shires at Welshpool in October next, conducting the sale under the Society's rules, provided he gave a written guarantee that such sale would be carried out according to the rules, and provided he furnishing the Secretary with a priced catalogue, giving the full names and addresses of purchasers, etc.

The report was adopted.

The Council then adjourned until November 4.

At the last monthly meeting of the Shropshire Chamber of Agriculture it was unanimously decided to ask the President of the Board of Agriculture to attend and address a special meeting of Shropshire farmers and others interested in agriculture early in the autumn. Mr. Hanbury has since replied that if he can possibly manage to visit Shrewsbury during the autumn, and on a Saturday (the most convenient day for the Chamber), he will come. At this same meeting the Education Bill was discussed, and a resolution sent to the Central Chamber that the cost of national education should be borne by the Imperial Exchequer and not out of local rates, whilst a protest was entered against milk-blended butter.

COMING SHOWS.

Royal Counties.

The Royal Counties Agricultural Society's Show at Reading opens to-morrow (Tuesday), and will be extended over the three following days. The show-ground is at Prospect Park, and is the same site as used on the occasion of the Society's last visit in 1897. It has an area of thirty-three acres, the principal entrance being, as before, from the Bath Road, just near the borough boundary; but there are also entrances from the Liebenrood Road, etc. The entrance is an ornate group of gable buildings in the Old English style, with offices and turnstiles. They are permanent buildings, which accompany the show in its peregrinations. The large area has been covered with a framework of sheds and other buildings conveniently distributed so as to economise space and afford the maximum accommodation for the stock and exhibits. The number of trees interspersed amongst the buildings give a picturesque appearance to the show-yard, although in several cases it has been found necessary to considerably cut away the branches of the large oaks and chestnuts. The whole of the ground has been enclosed by a hoarding of stout timber 8ft. high.

On both sides of the main avenue long rows of stands have been erected for the agricultural implements and miscellaneous goods, whilst nearer to Calcot and to the left of the avenue, positions have been allotted for the machinery in motion. On the left of the entrance, about half-way up the slope, is situated the council's and secretary's office, whilst a little further on is the shed for the working dairy. Across the level ground at the top, and around the sides of three parts of the show-yard, are the sheds and horse-boxes, where the live-stock is to be located. The horse-ring, with grand-stand, is on the right of the main entrance, the stand being erected, on this occasion, so as to face the Liebenrood Road, instead of being at the opposite side of the ring facing the main avenue. This, coupled with a

MR. F. SIMMONS (Secretary of the Royal County Agricultural Society).

slightly-different position for the council's office, are the only real alterations to the plan which existed in 1897.

As will be seen from the table given below, the entries are considerably in excess of those of last year, and also on those obtained on the last occasion on which the Society visited Reading in, 1897, but a comparison between the Reading Show of the same Society in 1887 and the present year, shows the total entries to be almost identical. An especial point of congratulation is the increase in the horses department, and this is no doubt largely accounted for by the fact that the Society has made special arrangements so as not to clash with the Richmond Show, which takes place in the same week. The entry of hunters and harness horses is quite an exceptional one.

In consequence of the prevalence of swine fever in the County of Berks, and the fact that the show-yard is in itself an infected area, a case having recently occurred within 200 yards of the entrance, the council have decided to abandon the show of pigs at Reading, which, although unavoidable, is much to be regretted, on account of the excellent entry received. The entries of butter, poultry, etc., are satisfactory, and help to make up what may be regarded as an excellent total.

The following table shows at a glance how the entries for this year's exhibition compare with those of the last few years:—

	1902	1901	1900	1899	1898	1897
Sheep	251	238	227	284	221	242
Horses	242	152	136	269	147	189
Cattle	600	388	501	702	413	557
Pigs	93	78	70	101	72	84
Butter	97	62	85	86	77	111
Horse Shoeing	111	79	103	74	79	85
Butter Making	47	40	31	35	46	72
Poultry	660	430	475	533	513	465
Poultry Trussing	5	—	10	—	—	—
Sheep Shearing	24	49	8	—	—	—
Dairy Herds	13	—	—	—	—	—
	1943	1516	1652	2038	1568	1752

The show-yard will be open to the public at 9.30 a.m. on all days, closing at 6 p.m. on Tuesday, 7 p.m. on Wednesday and Thursday, and at 5 p.m. on Friday. On the first day the charge

for admission will be 2s. 6d.; on the second day the same sum up to 3.30 p.m., afterwards 1s.; and the latter will be the charge for the remaining days of the show. The popular day will undoubtedly be Thursday, for then their Royal Highnesses the Prince and Princess of Wales and H.R.H. Prince Christian of Schleswig-Holstein will visit the show. This visit is being looked forward to with the highest possible interest and enthusiasm, and the whole route from the station to the show-yard will be decorated in honour of the occasion. The mayor is giving a grand banquet at the Town Hall on the first night of the show, in honour of the event, and other festivities will take place on each day of the meeting.

An attractive programme has been arranged for each day. In addition to the parades of prize winners, there will be lectures and demonstrations in butter-making in the working dairy, an exposition of bee management and appliances, with lectures at intervals, under the auspices of the Berks Bee-Keepers' Association, and an exhibition of dairy and other produce in the butter-shed, under the auspices of the British Dairy Institute and Reading College, whilst there will be jumping, harness, and trade turn-out competitions, all of which should be of special interest to the visitors. Altogether there is every prospect of the show being a most successful one.

Bath and West at Bristol, 1903.

A deputation from the society, consisting of the president (the Duke of Beaufort), Lord Heytesbury, Colonel G. Best, Colonel W. D. Naper, and Messrs. C. R. Collins, T. Dyke, F. G. Farwell, G. Gibbons, W. J. Llewellyn, H. B. Napier, and Thos. F. Plowman, secretary and editor, visited Bristol yesterday (Thursday) for the purpose of inspecting the site proposed for the 1903 Exhibition and for signing the agreements in connection therewith.

The deputation was received at the Mansion House by the Lord Mayor, the Town Clerk, and other representatives of the city and neighbourhood, and the various agreements with reference to the holding of the exhibition were submitted and signed. Those present were then entertained to luncheon by the Lord Mayor, after which the site proposed on Durdham Down was inspected and approved. The Lord Mayor assured the deputation that the society would be very heartily welcomed at Bristol, and that every effort would be made to ensure a successful meeting, and one which would beat all previous records. The Duke of Beaufort expressed the thanks of the deputation to his Lordship for his good wishes and hospitality, and assured him that the cordiality with which the invitation to visit Bristol had been given was thoroughly appreciated by the society.

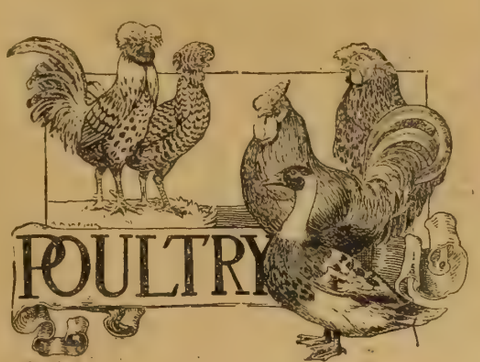
Warwickshire at Warwick.

The following is a list of the gentlemen who will officiate as judges at the Warwickshire Agricultural Society's Show, at Warwick, on August 27th and 28th next:—

HORSES.—Agricultural: Mr. A. H. Clark, Moulton Eaugate, Spalding; Mr. F. W. Griffin, Borough Fen, Peterborough. Hunters, Hacks, Ponies: Mr. C. Barton, Williamstrip Farm, Fairford; Mr. T. H. Hutchinson, Catterick, Yorkshire. Driving: Mr. A. W. Hickling, Adboiton, Nottingham. Cart Horse Parade: Mr. P. S. Danby, Offchurch; Mr. J. W. Lea, Thelsford. Jumping: Mr. T. Carr (N.W.H.), Kennels, Kenilworth; Mr. C. Whitemoor (A. H.), Witherley Kennels, Atherstone.

CATTLE.—Shorthorns, Dairy Cattle, etc.: Mr. T. Parton, Weston Hall, Crewe; Mr. D. Arkell, Butler's Court, Lechlade. Longhorns: Mr. W. W. Swinnerton, Styvechale, Coventry.—Channel Islands Cattle: Mr. G. P. Mead, The Woodlands, Bicton, Shrewsbury.

SHEEP.—Mr. J. Beach, The Hattons, Brewood; Mr. T. B. Eagle, Thrupp Farm, Oxford.



PIGS.—Mr. H. Humfrey, Shippon, Abingdon.

MISCELLANEOUS.—Implements: Mr. J. James, Whitchurch, Stratford-on-Avon. Dairy Produce, etc.: Mrs. Tilley, Walton, Warwick; Miss A. Inglis, W.C.C. Dairy School. Field Competitions: Mr. J. S. Murcott, Offchurch; Mr. P. Shepheard, Hunningham. Cottagers: Rev. Canon Flory, Rodland Lodge, Leamington.

Essex.

At a meeting of the council of the Essex Agricultural Society, held on Monday, the secretary gave some particulars of the entries received for the Society's show, to be held at Romford, on the 19th and 20th inst. Shires number 119; Suffolks, 39; agricultural horses, 18; hunters, 94; hackneys, 19; harness, 73; and turn-outs, 14—a total number of horses of 376, as compared with 415 at Colchester last year, and 257 at Clacton-on-Sea in 1900. The respective totals for cattle are 189, 235, and 186; Shorthorns numbering 53; red polls, 7; polled Angus, 39; Jerseys, 79; and dairy animals, 11. Of sheep there are 19 Southdowns, 35 Suffolks, and 19 Hampshire Downs—a total of 73, as against 108 at Colchester, and 103 at Clacton-on-Sea. Owing to the prevalence of swine fever, the pig classes have been withdrawn. As to the miscellaneous sections, it may be mentioned that dairy entries total 113, against 124 at Colchester, and 62 at Clacton-on-Sea; and implement firms, 64, against 79 at Colchester, and 61 at Clacton-on-Sea. It will have been noticed that in all the principal sections there is a falling off as against last year, but that in some there is an improvement, when compared with those of 1900.

The show will be held in the beautiful grounds of Marshall Park, Romford, which is situated about ten minutes' walk of the station, and as the town is so easy of access a very large attendance of visitors is expected. In this connection it may be mentioned that the Great Eastern Railway Company have arranged to issue return tickets at single fares to Romford on the show days, to run special trains, and to stop several expresses. Col. Lockwood, M.P., the president, will preside at the luncheon on the first day, and it is expected that he will be supported by a number of distinguished guests.

How to Make Hens Pay.

This is a subject that I wish I could thoroughly master; it is one that cannot be mastered in a single lesson or in several seasons. New conditions will be continually arising, and new obstacles will present themselves that must be met and overcome.

The great majority of farmers fail to make poultry a paying investment simply from lack of interest; they allow their hens to roost, winter and summer, in the trees, the barn, or any other place that the fowls may select. They will throw out a few handfuls of grain for forty or fifty fowls, and then if the hungry fowls try to help themselves to something to eat they are ruthlessly stoned. This is a wrong course to pursue, for the hens need as gentle treatment as any stock on the farm, and if they are well fed, they will pay a handsomer premium on the capital invested than any other stock on the farm.

It may be that a few things which I have picked up in my few years' experience with poultry would be of some interest to those who keep poultry. The first thing that should be decided in the fall is how many can be properly cared for; overcrowding should be studiously avoided. It is an invitation to failure and disaster to crowd fifty or a hundred hens into a small room where they barely have space to roost.

In arranging a house for the hens, a feeding-place should be provided. This will give them an opportunity to exercise freely by scratching in the litter, or wallowing in the dust; it should also be built so that it can be easily cleaned out. Cleanliness is essential to success in the poultry business. Vermin and disease always lurk in a foul, ill-smelling, hen-house. In constructing our hen-house we should not imagine that we get them too warm. I have never yet seen one that was too warm. If enough air should not enter the poultry-house during warm weather, some of the windows can be opened. The walls of the house should be doubled, with building paper between the two thicknesses of plank, or better yet, studding may be used, leaving a dead air-space in the walls, making the house cooler in summer and warmer in winter; some people fill this space with sawdust. I believe that this is a good idea, and mean to try it next winter. The roosts should be so arranged that they can be removed when cleaning the house out; it would be well also to have the nests so that they can be frequently taken out and cleaned.

A filthy nest is one of the best harbours for lice.

After you have decided how many you can accommodate, sort out your flock, using great care in the selection of the individual birds that make up your bunch of winter layers. Select the most vigorous and best developed pullets, rejecting undersized and undeveloped ones. The flock of winter layers should, as far as possible, be made up of early-hatched pullets. Next after these I would select yearlings; all over this age I would dispose of, as an old hen, except in rare cases, will not pay for her feed during the winter.

The pullets, if of the Mediterranean stock, should be hatched in April, or early May, to make good winter layers; if a heavier breed is used, they may be hatched in March. These, if properly cared for, will begin to lay in the fall, when the prices of eggs are advancing. It should be the aim of every farmer to have his hens in good shape for laying when the prices paid for eggs are highest.

The moulting process usually occupies about three months, and this period will be prolonged into the winter if the hens are not properly cared for. A hen that does not shed her feathers until November or December will not pay for her feed through the winter. In order to encourage early moulting, the hens should be fed rather heavily of feather-producing food; meat meal and a little sulphur twice a week will be beneficial. Sunflower seed is an excellent feed for moulting hens. Maize should be fed rather sparingly through the warmer months, although a small quantity each day will do no harm, and in the fall it will be of great benefit. A bran mash is greatly enjoyed by the hens at any time of year. All table scraps should go to the hens, while a great many other things that would be otherwise wasted, such as offal at butchering time, wheat screenings, and various other by-products, if given to the hens are quickly converted into a cash-bringing commodity in the shape of eggs.

One of the greatest mistakes made by farmers is in not giving their hens a sufficient quantity of feed; another is in not providing proper shelter, while there is a limited number who recognise the importance of providing grit for the poultry. Without grit the poultry will have poor digestion, and a flock of hens with poor digestion is usually an unprofitable flock. When a flock is confined for a few days during a cold snap the first few feeds of grain that they are given are readily eaten. Then they will eat but very little. Some may imagine that they have been overfed, but this is rarely the case; it is usually because they have not been provided with grit to digest their food, and the poultry are starving, while we are comforting ourselves with the belief that they are well fed.

The incubator, if properly handled, is almost indispensable in making poultry raising a profitable business, especially on a large scale. It should be started going in February, in order to obtain the best prices, which are paid for the first spring broilers which go into market. But in order to raise chicks by artificial means at that early season, or at any time for that matter, it is necessary to have a suitable building in which to brood them.

All chicks hatched at this early season may be prepared for market, as it is not necessary to hatch pullets for the next winter's layers thus early. These early hatches should be made from the eggs of some of the heavy breeds. Either the Plymouth Rock or Wyandotte are excellent for this purpose, as they are rapid growers and soon reach a marketable size. But for layers, the Mediterranean stock should be used. Of these there are none better than the Leghorns. This breed is surely the mortgage-lifter, and to my mind they are the most profitable breed that can be kept on the farm.

In preparing broilers for market, they should be penned up in some clean, healthful quarters and fattened. The heavier breeds will take on fat rapidly if confined and given plenty of fat-producing food; they will fatten readily on ground maize, milk, grit, and a little green stuff.—EDWARD E. HIGGINS, in an American contemporary.

AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW 1898, 1900, 1901.

Canada at Wolverhampton.

A Highly Creditable Display by the Dominion Government.

The Canadian Minister of Agriculture, the Hon. Sydney Fisher, acted with wisdom and prescience when he resolved upon recommending his colleagues in the Cabinet to support a proposal for having a display of Canadian products at the Arts and Industrial Exhibition at Wolverhampton. Recognising the importance of such a display from various standpoints, Mr. Fisher was unanimously supported, and ample provision was made by the Minister of Finance, Hon. W. S. Fielding, to meet the necessary expenses. At the same time it was decided to make a display at the Exhibition now open at Cork. Mr. W. D. Scott's experience at Paris and Glasgow fully justified Mr. Fisher in retaining his services as Commissioner at Wolverhampton and Cork; and immediately after the close of the unique and successful Exhibition at the Royal Exchange—where Canada occupied half of the entire space allotted—he set energetically to work to get ready the Canadian displays at each of the Exhibitions which opened simultaneously on the 1st May. Both at Wolverhampton and Cork special pavilions were erected by the Canadian Government, and it is with reference to that at Wolverhampton and its contents that this article is communicated.

The pavilion is an attractive building, constructed from plans prepared by the firm of Walker and Ramsay, Glasgow. It occupies one of the best positions on the grounds, between the Industrial and Machinery halls. The visitor experiences no difficulty in determining the nature of the building when about to enter, for, in large letters, he sees in a prominent place, over the main entrance, the word "Canada"—a very suggestive word in these days when the "imperial idea" is so much in the foreground. "Canada" suggests a territory of vast extent—about 3,500 "from ocean to ocean" (east to west), and 1,400 from north to south, comprising the whole of the northern half of the North American Continent, with the exceptions of Alaska, in the west, and the Labrador coast line, still under the jurisdiction of the island of Newfoundland. "Canada" further suggests a country with a most interesting history; a country which possesses scenery unparalleled for its magnificence; vast territories rich in varied resources; forest and mineral wealth of inestimable value; a system of government incomparable in the fulness of freedom which it confers upon the people; educational advantages which cannot anywhere be excelled; millions of acres of virgin soil, which await occupation and cultivation, and which can be absolutely secured by settlers upon conditions almost equivalent to a free gift. But Canada's advantages are too numerous to attempt even to name them all in this article.

Immediately upon entering the Canadian Pavilion at Wolverhampton the visitor sees in front of him a most artistically arranged trophy of grains, grasses, and cereals, which was prepared under the direction of Mr. William Hay, of Ottawa, a member of Mr. Scott's staff of capable assistants. This trophy forms the centre-piece of the large circular dome, which rises to a height of forty feet. The trophy is circular at the base, and rises almost to the top of the dome, at the base of which, about 40 feet in circumference, four large arches are sprung to the walls, the whole being so arranged as to form a sort of temple of cereals. The grain and grasses are shown in sheaves and bunches festooned and wreathed in many varied and artistic forms. On the immense stand in the centre are grouped hundreds of bottles of all shapes and sizes, containing specimens of wheat, oats, barley, rye, Indian corn, peas, flax, millet, buckwheat, and in fact all the leading varieties of grains, grasses and fodder plants which grow to such perfection in Canada. These samples are all carefully labelled, giving the name and address of the grower, yield per acre, etc. The collection contains thousands of samples, comprising over 500 different varieties. The exhibit is probably the best of the kind ever seen in this country. It is an object lesson that cannot fail to impress everyone who sees it with the fact that Canada is a country rich in agricultural resources of almost endless variety.

Connected with each section are to be seen shields, which cannot fail to attract the attention of the visitor. On these are painted figures, which illustrate some facts in the matter of Canadian productiveness. Under the heading "Growth of Wheat in Manitoba," we are informed that on particular farms wheat had grown from 21 inches on June 17th to 59 inches on July 20th last year. Some yields of oats in Canada in the season of 1901 yielded from 100 to 110 bushels per acre. Under "Dairying in Canada," we find that the industry of late years has become one of the most important and profitable branches of Agriculture. The value of exports of dairy products has increased by 14,874,415 dollars in the last ten years, as follows:—

	1891.		1900.
Butter	602,175	...	5,122,156
Cheese	9,508,800	...	19,856,234

In the case of fruit production, Canada has developed during the last ten years to a remarkable degree. The possibilities for fruit-growing in most districts in Canada are practically unlimited. In Ontario there are 354,299 acres devoted to orchards and 12,227 acres to vineyards. The production of apples in Nova Scotia alone averages 500,000 barrels annually.

The dimensions of the forests of Canada are so vast that they seem almost incredible. It is estimated that we have no less than 2,590,000 square miles of forest and woodland. No other country offers so good a value for the profitable investment of capital in the manufacture of wood products. Abundant are material, cheap water-power, and an unfailing market. Canada is the land of the spruce-tree, so highly prized for the manufacture of paper and other purposes. It is estimated that there are 450,000,000 acres of pulp-wood forest in Canada.

Mining is one of the principal industries of the country. The value of the mineral production in 1891 was 18,976,526 dollars, and in 1900 it amounted to 63,775,000 dollars, an increase in ten years of 44,798,474 dollars. The mineral display is a very fine one, and is artistically and attractively arranged.

The following figures illustrate the advances in Canada's exports of food products between the years named:—

	1896. Dols.		1901. Dols.
Peas	1,239,491	..	2,674,712
Flour	718,438	..	4,015,266
Oats	273,861	..	2,490,521
Butter	1,052,089	..	3,245,663
Bacon	4,446,884	..	11,823,820
Cheese	13,256,571	..	20,690,951
OTHER EXPORTS.			
Wood pulp	675,777	..	1,937,000
	1896.		1900.
Fisheries	11,0 7,765	..	11,169,083
	1896.		1901.
Mineral exports	8,055,047	..	40,355,000
	1896.		1900.
Animals and their products.	36,507,641	..	56,148,897
Agricultural products ..	14,083,361	..	27,556,609
	1896.		1901.
Manufactures	30,476,932	..	41,045,000

Five Experimental Farms have been established throughout Canada by the Dominion Government—a Central Farm at Ottawa, and four branch farms. One of these branch farms is at Brandon, Manitoba, and another at Indian Head, North-West Territories. At these branch farms the best varieties of cereals and other fodder plants are tested to ascertain their relative value in those districts for stock and market. The Experimental Farms also supply information to settlers whenever needed in connection with all subjects bearing on agriculture.

Many other features of the Canadian exhibit might be touched upon, including views along the route of the Canadian Pacific Railway; arrangements for cold storage, where butter, cheese, eggs, etc., are packed, the mean temperature being about 40deg.; magnificent displays of fruit, natural and preserved; timber, in great variety, with photographs framed in the wood of each. The gold exhibit is a very valuable one, and is much admired by visitors. In every particular the Canadian display at Wolverhampton is one of the best on the ground, while the effective manner in which each section is arranged is creditable alike to the energetic Commissioner and his assistants.

J. J.

Rural Housing and Sanitation. Lord Battersea presided at a meeting held in Sion College on Friday to consider the advisability of forming a rural housing and sanitation association, and, in opening the proceedings, referred to the great necessity which existed for such an organisation. The association which it was proposed to form would be non-political and non-sectarian, and he hoped it would accomplish a large amount of useful and valuable work.

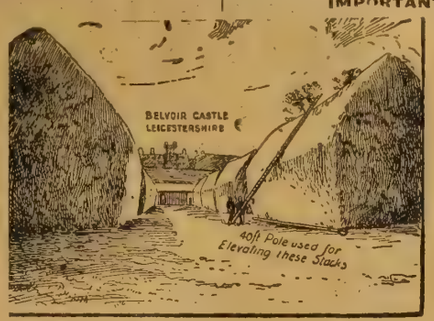
POGSON'S

PATENT HORSE PITCH FORK



OR ELEVATOR,

For Stacking Hay or Loose Corn.

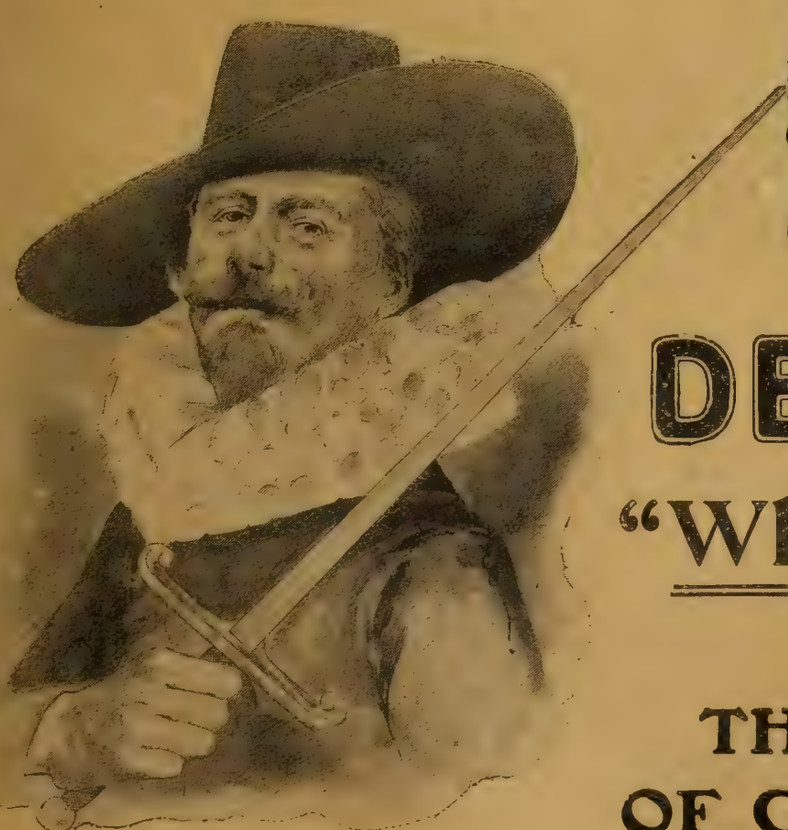
This illustration, taken from a photograph, shows five large 60-ton stacks, pulled and finished off ready for thatching.

Each stack was elevated by one of **Pogson's Patent Forks.** During the last two years over 800 have been sold, and as each fork was sent on approval, and customers could have returned them unless they were perfectly satisfied—from this fact alone it may be safely said that **Pogson's Patent Pitch Fork** is the best and cheapest labour-saving machine in the market.

IMPORTANT.

Pogsons' Patent Pitch Fork is sent on approval, so that any intending customer can give it a fair trial before purchasing.

Should, on trial, it not prove satisfactory, it can be returned, and carriage each way will be paid by vendor.



SCORES OF UNSOLICITED TESTIMONIALS.

For Illustrated Catalogues, with recent Testimonials and all particulars, apply to the Patentee—

MR. E. F. POGSON, FARMER, etc.,
REDMILE, NOTTINGHAM.

Simple in design, easy to erect and to work, at about half the cost of anything hitherto introduced doing the same amount of work.

Price Complete, with Recent Improvements, £6 17s. 0d.,
CARRIAGE PAID.

(PATENTED)

A SANITARY WATER PAINT

Possesses the following great advantages over all other wall coverings:—

It sets hard, Kills Vermin, and Disinfects.

It is washable in three weeks, and does not scale. Made in two qualities, for inside and outside work.

It is made in Dark Rich Shades as well as in Light Tints, contains no lead, and does not Turn Black.

It only requires the addition of Water to make it ready for use, so that anybody can apply it.

It is Cheaper, Cleaner, Healthier, and more Artistic than Wall Paper.

It makes an excellent Shading for Greenhouses, the inside quality lasting about nine months, the outside quality several years.

Sold by leading Chemists, Drysalters, and Ironmongers, and Manufactured by—

SISSONS BROS & CO., LTD.,
HULL,

From whom Samples, Shade Card, and other particulars can be obtained.

Sole Manufacturers of **"Aperfectol Painte,"** the best Paints manufactured, and **"Rustikol,"** for preserving woodwork.

POGSON'S PATENT HORSE PITCH FORK OR ELEVATOR,

For Stacking Hay or Loose Corn.

This illustration, taken from a photograph, shows five large 60-ton stacks, pulled and finished off ready for thatching.

Each stack was elevated by one of **Pogson's Patent Forks.** During the last two years over 800 have been sold, and as each fork was sent on approval, and customers could have returned them unless they were perfectly satisfied--from this fact alone it may be safely said that **Pogson's Patent Pitch Fork** is the best and cheapest labour-saving machine in the market.

IMPORTANT.

Pogsons' Patent Pitch Fork is sent on approval, so that any intending customer can give it a fair trial before purchasing.

Should, on trial, it not prove satisfactory, it can be returned, and carriage each way will be paid by vendor.

SCORES OF UNSOLICITED TESTIMONIALS.

For Illustrated Catalogues, with recent Testimonials and all particulars, apply to the Patentee—

Mark Lane Express Agricultural Journal.

The Only English Journal devoted exclusively to Agriculture.

JUNE 16, 1902.

Correspondents are requested to address all communications for the Editorial Department to THE EDITOR, "Mark Lane Express," 1, Essex Street, Strand, London, W.C.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER, "Mark Lane Express," 1, Essex Street, Strand, London, W.C.

A STANDARD FOR MANURES AND FEEDING STUFFS.

It was with considerable interest that we read the resolutions of the Ripon Agricultural Association advocating the amendment of the Fertilisers and Feeding Stuffs Act in the direction of fixing standards and taking samples of the articles to which it applies. When recently writing upon the Act we pointed out that it was almost a dead letter, and could not compete with the facilities for free analysis offered by many farmers' clubs. We gather, however, that the Ripon Association, in common with other agricultural bodies of a conservative disposition, does not provide free analysis for its members, and therefore is more dependent upon the provisions of the Act. A scale of standard prices and qualities of manures and cakes has for many years been issued annually by the Yorkshire Union of Agricultural Clubs, but as this scale is for the exclusive and confidential use of the associated bodies, its benefits, of course, can only be enjoyed by those associations which accept the maxim that union is strength. Moreover, this scale is not entitled to legal recognition, and would not necessarily be accepted in the laboratory at Somerset House. There is much therefore to be said, even in Yorkshire, for the fixing of an official standard for manures and cakes, as has already been done in the case of butter and milk.

The first resolution favours the fixing of a minimum percentage of oil, albuminoids, and carbo-hydrates, and the maximum percentage of moisture, woody fibre, and husk in linseed, decorticated cotton seed, and cotton-seed cakes and meals, and a statement on the invoice of the percentages of the above matters in the cakes or meals sold. As the law stands at present, if the vendor states on the invoice that the article is prepared from any particular substance or from any two or more particular substances, or is the product of any particular seeds, he is not liable to prosecution, although he may have extracted a large percentage of oil, thus reducing the feeding value of the cake. A recent analysis of decorticated cotton-seed meal disclosed a new and ingenious manner of adulteration, namely, the admixture of about 40 per cent. of finely-ground cotton-seed husk.

The second resolution advocates the fixing of a standard for manures. Disclosure in the invoice of the percentages of nitrogen, phosphates, and potash is already provided for by the Act. It is suggested that there should be fixed the minimum percentage of nitrogen and phosphates as phosphoric acid in bone meal and vitriolised bones, the phosphoric acid in basic slag, the nitrogen in nitrate of soda and sulphate of ammonia, and the potash in kainit, and that the ammonia contained in fertilisers be stated in ammonia, and that it be illegal to give it in sulphate of ammonia unless it is also stated in pure ammonia. Many farmers are deceived by the too common practice of expressing the ammonia in sulphate instead of in pure ammonia, whereby the fertiliser is made to appear four times richer in ammonia than it really is. The same device prevails with potash and sulphate of potash.

The third resolution urges the appointment of inspectors to take samples of manures and feeding stuffs at railway stations for submission to the district analyst. In the event of the result of the analysis being below the guarantee as expressed in the invoice, a prosecution by the Board of Agriculture or county council would follow as a matter of course.

The present procedure connected with the taking of samples is almost impracticable. The buyer has to give the seller three days' notice of his intention to take samples, and then must await the analyst's certificate before using the fertiliser. The inevitable delay is often a fatal objection. It rests with the buyer to start the machinery of the Act by requesting an analysis, and taking samples after due notice to the seller. This places the purchaser in an unpleasant position, as his attitude is often regarded by the vendor as unfriendly, and mutual business advantages may consequently be disturbed. We understand that several of the county councils are themselves desirous that their powers under the Sale of Food and Drugs Acts should be extended to agricultural commodities. A great deal has lately been heard about the necessity of protecting farmers against unfair competition in the shape of adulteration of products; but there are thousands of farmers upon hundreds of thousands of acres who have never known the advantages of effective organisation, whose pockets are cruelly drained by adulteration of certain forms of raw material on which they rely. Is it too much to ask the Government to do for these hapless derelicts what the Yorkshire farmers have to a large extent already done for themselves?

Mons. Jean Dupuy, the French Minister of Agriculture, has been succeeded by Mons. Mougeot. Mons. Dupuy has occupied the above post for the last three years, and he leaves a good record behind him. He carefully studied those matters which have been entrusted to him, and always being open to make improvements. His successor, Mons. Mougeot, has shown great qualities of administration in the postal and telegraphic service.

By a Man of Mark Lane.

An international congress on old-age pensions, sick and benefit workmen's insurance will be held under the patronage of the German Government, in connection with the Dusseldorf Exhibition, from June 17th to 24th. All countries will be represented, and all problems relating to workmen's insurance, old-age pensions, funds for widows and orphans discussed. I may mention that the last international congress on the subject was held in 1897.

The Board of Trade Returns for the month of May are fairly satisfactory, considering the fall in prices which has taken place in certain important commodities. On the import account, returned at the estimated value of £43,353,705, there is, as against the total for May, 1901, an increase of £926,946, but as against May, 1900, a decrease of £522,722. There is a considerable decline in the entries of cattle from the United States and of sheep from that country and Canada, resulting in a decrease of £112,000 under the head of animals. Canada sent only 413 sheep during the course of the month. Fresh beef and mutton and hams, though less in quantity, are more in value, while the imports of bacon, butter, eggs, and fruits of all kinds, except raw apples and lemons, show substantial additions. Spices and fresh vegetables were very quiet. In dutiable articles of food and drink, wheat, barley, Indian corn, rice, currants and raisins, raw sugar, tea, and one or two other items show increases, but under wheatmeal, oats, oatmeal, refined sugar show large decreases. The exports for the month are given at the declared value of £22,831,974, and, as against the corresponding totals in 1901 and 1900, present respective decreases of £504,688 and £1,883,956. This net decrease is due wholly to coal, the shipment of which was 417,628 tons less than the export total of May, 1901, while the money value is £674,237 less.

According to the reports of the French Departmental Professors of Agriculture, the state of the crops is as follows:—Winter wheat: Four departments are very good; 55 departments are good; 24 satisfactory; three passable; and one medium. Rye: Five departments are considered to be very good; 65 good; 13 satisfactory; two passable; and one medium. Spring barley: Five departments are very good; 40 good; 27 satisfactory; four passable; and one medium. Oats: Four departments are very good; 48 good; 24 satisfactory; two passable; and two medium.

A synopsis of his June crop report was issued last week by the Statistician of the United States Department of Agriculture. The preliminary reports regarding the spring wheat acreage indicate a reduction of about 2,511,000 acres, or 12.6 per cent. Of 19 States reporting spring wheat, 13 report reduced acreage, Washington being the only State

having 100,000 acres or upwards that reports an increase. There is a reduction of 745,000 acres in Minnesota, and of 905,000 acres in North Dakota, due largely to unfavourable weather during the sowing time; in the Red River Valley a reduction of 400,000 acres in South Dakota, resulting mainly from an increasing tendency towards greater diversification of crops. There is also a reduction of 340,000 acres in Nebraska.

The average condition of winter wheat on June 1 is 76.1, against 76.4 last month, 87.8 last year, 82.7 two years ago, and 80.3 the mean of the averages of the last ten years. During the month of May there has been a gain of three points in Michigan, Illinois, and Kansas, of one point in Indiana, of two points in Nebraska, and of seven points in Oklahoma. On the other hand, there has been a loss of two points in California, and three points in Pennsylvania, with no measurable able change in Ohio. The total reported acreage sown in oats is about four-tenths of one per cent. in excess of the acreage harvested last year. The general average condition of the crop is 90.6, against 85.3 last year, 91.7 two years ago, and 90.0 ten years average. The acreage under barley this year exceeds the acreage harvested last year by 8.5 per cent. The condition of the crop on June 1 was 93.6, against 91.0 last year, 86.2 two years ago, and 88.6 the average of the last ten years. The acreage under rye this year shows a reduction of five-tenths of one per cent. from the acreage harvested last year. The average condition of the crop is 88.1, against 93.9 last year, 87.6 two years ago, and 89.3 the average of the last ten years.

The final forecast of the wheat crop of 1901-1902 in the United Provinces of Agra and Oudh, issued by the Department of Land Records and Agriculture for those provinces, has come to hand. In former years the forecasts issued by this Department have only shown the area under wheat, but to bring the figures for these provinces into conformity with those returned by other provinces, the present forecast includes both pure and mixed wheat. During the present year the area under wheat grown alone amounts to 5,074,930 acres, as compared with 4,794,451 acres reported for 1899-1900. The area of wheat sown with other crops amounts to 1,404,790 acres; total, 6,479,720 acres. Compared with the average areas of the preceding five and ten years, the total wheat area of the present year shows an increase of 7½ and 3½ lakhs of acres, or over 13 and 5 per cent. respectively. The out-turn of wheat sown alone is this year estimated at 1,953,508 tons, as compared with 1,950,814 tons in 1899-1900; and of wheat sown, in combination with barley and gram, at 448,432 tons; total, 2,401,940 tons, which is 16 and 18 per cent. more than the average yield of the preceding five and ten years respectively.

The total normal area under the various oil seed crops in the Province of Bengal now now stands at 4,043,500 acres, and the area cropped in the current year is estimated at 3,664,400 acres, against 3,777,600 acres of the past year. This decrease is due, it is stated in a report issued by the Bengal Department of Land Records and Agriculture, to the droughts at the sowing season. According to the district estimates, the out-turn for the province as a whole amounts to 81 per cent. of a normal crop. Taking 6 maunds per acre to be the normal rate of out-turn for linseed and rape and mustard, and 4¼ maunds per acre for other oil seeds, the gross yield of all the oil seed crops of these provinces during 1901-1902 amounts to 603,900 tons, against 578,400 tons produced in the preceding year.

The receipts on account of Revenue from April 1st, 1902, when there was a balance of £8,566,947, to June 7th, 1902, were £25,696,756, against £22,434,149 in the corresponding period of the preceding financial year, which began with a balance of £5,596.918. The net expenditure was £37,713,119, against £39,700,394 to the same date in the previous year. The Treasury balances on June 7th, 1902, amounted to £6,943.419, and at the same date in 1901 to £2,060,554.

By a Lobbyist.

Surely the Government is unwise in indulging in the luxury of divergent descriptions both over the corn and flour duties and over the suggested Zollverein. Ministers simply confuse the world when they indulge in rival definitions. For the matter of that, I care not whether they call this policy Protection or Free Trade. All I know is that the inherent spirit of both is protective, and that no subtle sophistry can disguise the fact. I am bound to say that in this business I am more in sympathy with the bold spirit of young Mr. Austen Chamberlain than with the pedantry of Sir Michael Hicks-Beach. Young Mr. Chamberlain—speaking, of course, for his father—refused to be governed or controlled by mere phrases. If the Colonies desire a Zollverein, that desire ought, he flatly affirms, to be respectfully and sympathetically considered. It must be Protective in its character; and it is useless to conceal this. On the other hand, Sir Michael balances himself nicely upon a hair-split oratorical tight-rope. He will only consent to a Free Trade Zollverein—he is a prophet of the gospel of Cobden. He believes only in open markets; but still he would differentiate in favour of ourselves and the Colonies. He will never desert Mr. Micawber, or, if he does desert him, he will only do it for his own benefit. All this is unworthy, perturbing, confusing. Why not frankly say—the altered Colonial conditions demand a revised economic policy We should then know what is ment. English farmers care nothing for these fine-drawn subtleties. They want to know if the Tories are, or are not, Protectionists. A word of frankness, and they would comprehend what to do.

This is a pretty quarrel, stands as it stands, among the more extreme politicians. The Radicals are, of course, devotedly, strenuously, fervently attached to Free Trade. They denounce any projected abandonment of it as recreance, treason, mad-malice against the poor, and what not. From Radicalism to Socialism is only one step; and yet the Socialists, or, rather, the Social Democrats, denounce Free Trade as a bloated and hoary impostor. The leaders of the Social Democratic Federation—the most important body in Socialism—do not hesitate to describe it as a "capitalists' booby trap." I do not quite know what the description means, but at least it is sufficiently forbidding and repellent to be quoted. They even go so far, too, as to say that this agitation against the so-called bread tax is an imposture and a snare, devised purely in the interest of a selfish capitalism. They would not care, indeed, if the tax were twice as much—it would not, they are persuaded, eventually affect the workers. The whole business is, they conclude, a monstrous fraud.

Now, for the moment we will disregard the political piquancy of this position. Let us regard it for a moment only for its economic significance. I have always held, as my readers will remember, that your real Socialist—a man who reflects the economy of Karl Marx—must inevitably be a Protectionist. We have only one Socialist Prime Minister in the whole of the British Empire; and this is the Radical-derided Mr. Seddon. Now, Mr. Seddon's Colony of New Zealand—one is somehow inclined to regard New Zealand as a kind of personal estate of Mr. Seddon's—is determinedly Protectionist. Of course, it will be urged that Australasia is justified in this position because it can produce everything it desires within its own borders, just as America is justified. But this suggests a more important point still. We, the British Empire, can produce everything we desire within our own borders. The fleetness of navigation, the general fact, in a word, that modern methods of communication have annihilated distance, bring the Empire nearly into the same position as America or Australasia. The general argument applying to them will apply to us as an Empire. Economically, we are almost as much justified in a policy of Protection as they are. Will the British agriculturist grasp this fact? Perhaps, however, they will argue that an Imperial Protection would destroy any hope of a recurrence of the advantage which they formerly received under national Protection. Well, at this moment I am not prepared to argue this point.

Why should not agriculturists accept the Socialist position? I know that even to suggest this is to leave myself open to the reception of multitudinous brickbats. But I hold strongly that we ought not to allow ourselves to become the victims and slaves of phraseology. If Socialism adopt a Protectionist policy, why, in the name of Heaven, should not those farmers who believe that only by national Protection can you secure the redemption of the agricultural interest, act in alliance with them—on this one point? True, the Socialists have no weight or influence in rural constituencies, but they can command no less than a dozen seats in urban England. Imagine, for a moment, the indirect advantage which the agitation would derive from possessing a solid phalanx of twelve sympathisers on the Radical benches. Of course, the natural disposition of my readers is to turn up their eyes at the very suggestion. Still, in politics we are compelled at times to be practical.

Are coming political events already casting their shadows ahead of us? In asking this question, I am concerned over the political future of Mr. George Lambert. I have just seen a placard of a meeting in protest against the corn and flour duties, to be held at Midhurst—Cobden's Midhurst. It was announced on this placard that men of the political distinction of Lord Welby, Lord Farrer, and Mr. James Bryce would attend; but it was picturesquely announced that Mr. George Lambert would be the principal speaker. Now, neither Lord Farrer nor Professor Bryce attended, but apparently, when this placard was penned, they were expected; and, though expected, "Our Jarje" was announced as the orator of the occasion. What can this portend? Mr. Seale-Hayne and Devonians generally may well wonder what new dignity awaits "the lad." Of course, this placard has no official importance; but what the rank and file of a party suggests to-day the leaders must think to-morrow.

There was a suggestion at the commencement of the week that Mr. Henry Chaplin would receive a Coronation Peerage. I do not speak with authority on this matter; but I have the best reason for saying that there is no justification in the suggestion. I need not enter into my reasons for asserting this; I am persuaded they are well-founded.

Pea Picker and Workmen's Compensation.—An interesting case under the Workmen's Compensation Act was heard at the Edmonton County Court on Tuesday, the plaintiff being a woman named Jesson, who was employed as a picker by a market gardener. She was directed to gather some peas, and as she was going to fetch a basket she tripped over a mound of earth in the field and fell, breaking her thigh.—For the defendant it was urged that as the plaintiff was not engaged in picking at the time the accident did not arise out of her employment.—Judge Tindal Atkinson, however, gave judgment for plaintiff, and awarded her 4s. 6d. a week from last July up to the end of the year, 3s. a week from Jan 1 to the end of March, and 2s. a week for the present.

Agriculturists and the Education Bill.

Central Chamber Deputation to Mr. Balfour.

On Friday afternoon Mr. Balfour received at the House of Commons a deputation from the Central and Associated Chambers of Agriculture, who desired to press upon him the desirability of the cost of national education being borne by the Imperial exchequer and not by local rates. The committee room in which the proceedings took place was crowded, among those present being the Duke of Northumberland, Mr. Chaplin, M.P., Lord Wenlock, Lord Heneage, Lord Willoughby D'Eresby, Sir E. Strachey, M.P., Mr. A. K. Loyd, M.P., Sir J. Kennaway, M.P., Mr. Griffiths-Boscawen, M.P., Major Rasch, M.P., Colonel Stopford Sackville, M.P., Mr. C. Warner, M.P., Colonel Long, M.P., Mr. Baldwin, M.P., Sir H. Fletcher, M.P., Mr. Ormesby Gore, M.P., Colonel Williams, M.P., Mr. Lloyd Wharton, M.P., and Mr. Clare Sewell Read.

Sir E. Strachey, M.P. (the Chairman of the Chambers), in introducing the deputation, said they desired to represent the views of the agriculturists of the country, who felt that they were already overburdened as regarded local purposes at the present time, and to urge upon the right hon. gentleman the importance of the entire charge for education being borne by the Imperial exchequer. (Hear, hear.) The Rural District Councils Association, representing 200 of those bodies in England and Wales, of which he was also president, had asked to be associated with the deputation.

Mr. Chaplin, M.P., said: I was asked some few days ago, and I readily agreed, to attend this deputation from the Central and Associated Chambers of Agriculture to yourself, and to express to you on their behalf the views they entertain with regard to the mode in which it is proposed under your Education Bill, to defray the additional expenditure which it will involve. That expenditure, I need hardly remind you, as at present proposed, is to fall entirely on the rates. What it will come to, no one, probably, with any accuracy can say, but in many of the poorer districts of the country they are very apprehensive that it will add considerably to their burdens. They urge that if the Bill is passed in its present shape, voluntary contributions to the maintenance of education will almost certainly cease, or be required for the fabrics alone, and that where education is supplied chiefly by voluntary schools, perhaps not of a very high standard of efficiency, that they will be required and called on to level up to the standard of the School Boards, and that that will add greatly to their expenses. In my district it is repeatedly urged upon me that it will mean an addition of 1s.—or nearly 1s.—to their rates. I hope they may be wrong, and I cannot help thinking that in this respect their fears are somewhat exaggerated. At the same time, I am bound to say that they have gone into it most carefully, and when I remember how entirely Mr. Forster's estimates of the cost of education—which was never to exceed the 3d. rate in the £—have been falsified by the result, it cannot be denied that they have some reasons for apprehension in this matter. Be that as it may, the principle which is contained in this Bill of the whole of the additional cost of the education it provides falling entirely on the rates, is a principle to which we are irreconcilably opposed, and for the reasons which I will very shortly state.

Our position in the matter is perfectly simple. We are in no way opposed to the improved education which you seek to provide in the interests of, and for the benefit of the people at large. On the contrary, we agree with those who think that it is a matter of the highest national importance, and in that view we are largely supported by the majority Report of the Royal Commission. Under education they include secondary and technical, as well as elementary education, and although it is true that for certain reasons they consider that it would have to be treated differently from the other national services which they refer to, yet they describe it as preponderantly national, and national in high degree, and they class it is national with poor relief, the police and main roads. But if that is so, if education is rightly to be regarded as a national service, then we contend that as far as possible it should be paid for by national funds, and that is a claim which it seems to me can be urged with great force by every ratepayer in the kingdom, both in town and in the country as well.

To-day, however, I address you on behalf of the Chambers of Agriculture. And representing as they do the various agricultural districts of the country, I have two other reasons in support of our claims to submit to you which are not perhaps equally open to others. One of our great difficulties in agricultural districts at the present time is to keep the people on the land, and it is our misfortune that the better and more highly you educate these people, the more certain it is that most of them will want to leave the land at once. Now that undoubtedly is a very great injury to these agricultural districts, but in spite of this they are willing and ready to bear their fair share as far as they can do of a national burden for what they admit is a great national purpose. But they are not willing, and they would consider it most unfair if they are called upon to bear a large addition to their local burdens for a purpose, which, as far as their particular district is concerned, will be an injury rather than a benefit to their particular district.

The other reason is this. That in many of the poorer districts of the country, especially the great corn-growing districts, some of them have passed, and are passing still, through a period of great difficulty and distress, and their condition is such that they really cannot afford to bear any further addition to their rates at the present time. Now this has been already largely recognised by the Government, and since Lord Salisbury's Government was formed in 1895 it has been their policy to give to them all the relief that was practicable from the rates, witness the Agricultural Rating Act, of which no one is better aware than yourself, and the many weary hours that you and I spent together in passing that Act in 1896, and they naturally complain that to put an additional burden on the rates at the present time is to reverse the policy which has been so recently pursued, and to that extent is calculated to neutralise the benefits of what has been done for them before.

Now these are the reasons why we are entirely opposed to the financial clauses of your Bill, and they induce us to urge on you, as earnestly as we can, that the additional cost of education, which will be entailed by this Bill, should be borne by imperial funds, and that this should also be the case, as far as possible, with regard to education generally. I say as far as possible, because we recognise that as long as education is locally administered there must be some check upon extravagance, and probably the most feasible, for the moment—I do not say the only check. There are others, no doubt, which could be devised by the Government—is to leave some portion of it on the rates. What that portion should be is a matter for consideration. But it should be very small. My own opinion, I confess—and especially in view of the fact that this is a national service—is this: that the national contribution should be the largest, and the rate contribution the smallest, which is consistent with effective and economic administration. (Cheers.)

The Duke of Northumberland said they were not in the least antagonistic to the general purpose of the measure—(hear, hear)—but they felt that whatever expenditure was made on education should certainly in the greatest part, probably in the whole, be borne by the general taxation of the country. (Hear, hear.)

Major Rasch, M.P., the Duke of Northumberland, Mr. Wharton, M.P., and Lord Willoughby D'Eresby, M.P., having spoken,

Mr. Balfour's Reply.

Mr. Balfour said: My lords and gentlemen, I have listened with the greatest interest to the representations made in the speeches to which we have just listened, and which I am sure very adequately and fully represent the views of the great deputation which I now have the honour to address. I came here rather to listen than to speak. It is impossible for me on the present occasion to make any declaration of policy, definite and explicit policy, on the part of the Government, but I am very desirous to hear what you have to lay before me, in order that I, in my turn, might have an opportunity of laying these views before my colleagues. Reference has been made to the report of the Commission on Local Taxation. Education is represented by it as being in the nature of a national duty, and, therefore, a national charge. The main qualification I should be disposed to make to this has been made by Mr. Chaplin, and it is that so long as you leave administration to local bodies, so long those bodies must have financial responsibility. (Hear, hear.) While I am expressing no dissent from the general views laid down by the commissioners on local taxation in this respect, of course, everybody here will understand that this is not the moment at which to attempt to have any reform of local taxation. That is a great question, and one which must inevitably come before us again owing to the fact that the Agricultural Rating Act is a temporary Act. It is not, therefore, a subject upon which a pronouncement can be desired from the Government at present.

Comment has been made upon the effect this Bill will have on education. Much alarm has been expressed with regard to the distribution of the rural population and the migration of labourers from the country districts to the town. I am not qualified to give an authoritative opinion on the latter point, and I should say if that tendency is due merely to the fact that education has improved, it is one we must face, and we must submit to; but if it is due, as I think it may be due, to this, that under our existing system of education, the training given in the country is much more suited for an urban population than a country population, then this Bill is a great reform, or may be proved to be a great reform, in the direction in which the deputation desire—(hear, hear)—because manifestly one of the great results of this Bill will be to make education less centralised all over and more local. The Bill gives to great elective bodies in the country the direct right to deal with the education of their own district in a manner suited to the needs of that district, and suited to the varying needs of the varying portions of that district, which I do not think you can expect to find under the more centralised system which now prevails. My own view is that the Education Department, if this Bill passes, will more and more recede from the position of universal manager of all schools into a great advisory body, which will no doubt have to see that the contribution of the taxpayer, which is far greater than that of the ratepayer, is properly expended. But the department will probably be more usefully occupied in aiding the local authority with expert advice and assistance than in dealing with the minute details of this or that school under the supreme control of the new authorities the Bill proposes to set up.

I hope nobody will leave this room under the impression that this Bill is a Bill injurious to the ratepayers. I am aware that this is the opinion widely spread throughout the country, fostered and fomented by speeches of many eminent persons, but it really is a view which has no foundation in fact. At present, by the law of 1870, there is an actual or contingent liability on the ratepayer for all the elementary education throughout the country. So far as voluntary schools are concerned, the obligation is only contingent, but I think it is a mistake to suppose that the system of voluntary schools, as we know it, whether it be good or bad from an educational point of view, could last indefinitely. It, no doubt, would last in some districts for a very long time, but so long as it lasted unmodified it would probably prevent any national system of education. But the ratepayers have to contemplate the fact that a large number of these voluntary schools are in considerable difficulties, and that where a voluntary school vanishes the charge thrown upon the local ratepayer is, and would be, far greater than the charge thrown upon the local ratepayer by the present Bill. (Hear, hear.) One speaker urged that he had voted against the Bill. Let us suppose that example had been followed partially by the supporters of the Government, and the Bill defeated. One result of that would have been the Bill would have gone, and the Government would have gone. Just consider from the ratepayers' point of view what the result would be. The main opponents of the Bill, the only persons, so far as I am aware, who oppose it on principle are the Nonconformists, and those who speak for them. Their avowed policy is that the voluntary schools should be slowly squeezed out of existence, and this is the only alternative to the educational policy of the Government. You have, at all events, the building of the existing voluntary schools free of charge, and the obligation thrown upon the supporters of the schools to keep them in repair and to make such additions as from time to time may be reasonable and necessary. Imagine what the charge would be upon the ratepayers if the policy of turning these schools forcibly or otherwise into national schools were adopted. You would have the whole of those subscriptions which are now given to the repair of buildings and their alterations thrown upon the ratepayers, and in addition the ratepayers would have to bear the amount, which cannot be calculated, but which we know to be enormous, necessary for the provision of buildings in which to carry on the work of elementary education. It is really necessary that everybody, considering this education scheme from the ratepayers' point of view, should never allow these considerations to escape his mind. I venture to point out to you that the present scheme, even if no additional aid could be got from the Chancellor of the Exchequer to help the ratepayer—even then this would not be an anti-ratepayers' Bill. On the contrary, it is the only feasible solution of the question of which the ratepayer would not have grievous reason to complain.

I need say very little more, except to express my sympathy with the position of the ratepayer, and especialy of the rural ratepayer. (Applause.) I think you will take that expression of sympathy as being genuine when you remember what has been done by the party and the administration to which I have the honour to belong during the last twenty or thirty years. I do not wish to go back to the immense aid given to the local ratepayers by the Unionist Government when Lord Goschen was Chancelor of the Exchequer in 1887-8; but, even since, long subsequent to that time, I think it will be remembered that we have not merely passed, amid great opposition, the Agricultural Rating Bill, but that we have also passed, against opposition hardly less strenuous, an Act which gave assistance to voluntary schools, in effect preventing them falling to the charge of the ratepayers, and the assistance fe gave to the neces-

sitous school Boards. The total amount we have given in aid of the ratepayer and in connection with education alone, leaving out of account altogether what was done by the Agricultural Rating Act to relieve the taxpayer of the charge contingently thrown upon him by the Act of 1870, amounts to no less than £800,000 a year. The fact that we have done that within the last ten years is practically conclusive proof that we have not been deaf to the appeals made to us from time to time by the ratepayers all over the country, and not less in rural districts. Within the limits of our capacity we will yield what we can to all appeals in the same direction. It is impossible to do anything like all you would like to see done in connection with this Bill. Of that I am afraid I can hold out but very little prospect. The Chancellor of the Exchequer is bound, not only to consider the needs of this or that applicant or set of applicants, but the needs of the country as a whole; but I shall certainly represent to him the strong views taken by this very important deputation upon the subject, in which we have already shown sympathetic interest, and I trust it will not be impossible to do something, at all events, in the direction in which you desire. (Applause.)

The deputation thanked the right hon. gentleman and withdrew.

The Corn Tax.

Discussion in Parliament.

During the past week the House of Commons has been considering the Finance Bill, and on Monday and Tuesday a great deal was said about the corn and flour tax, the opposition naturally taking the opportunity offered them of once more airing their views on the tax. The general opinion was that as the war was over, the corn tax and also the new income-tax were not required now. As Mr. Chaplin pertinently remarked, the debate (which, by the way, was brought about on the motion that Clause I. should stand as part of the Bill) was nothing but a storm in a tea cup, and caused by the Opposition's intense dislike and hostility to the corn tax.

Sir H. Campbell-Bannerman said a very strong feeling existed in the country as to the new tax and in opposition to it for it was not a new duty of the ordinary kind, but a duty which they were told would lead to the total subversion of the whole fiscal system of the country. The new tax was to be a permanent tax, and it was sought to impose it under the cover of the war. The changes which it was expected to make in the relations of this country and the colonies and other countries made it all the more necessary that they should look at the matter well before they accepted it.

Mr. Channing moved an amendment which would have the effect of limiting the imposition of the grain tax to one year. He contended that there was no justification for making this tax a permanent item in our financial arrangements.

Sir W. Harcourt asked the Chancellor of the Exchequer to explain the character of the tax, and to inform the House whether the duty was a war tax or a permanent tax. If it was a war tax why should it not cease with the war. He noticed the Colonial Secretary had stated that the duty would enable him to negotiate preferential duties with the colonies. If this was done this country would make commercial enemies of every nation in the world. Even the colonies would fall out over it, because they would not all want the same thing. The matter was one of the deepest possible importance, and they ought to have some official statement from the Chancellor of the Exchequer.

The above two speeches brought forth a long reply by Sir M. Hicks-Beach, who, in the course of his remarks, said that to limit the tax to one year will not increase Parliamentary control over it, and I oppose the limitation because it will make everybody uncertain as to the future. Sir W. Harcourt sees in the tax some extraordinary intention of turning it into a scheme for revolutionising our whole Customs tariff and instituting a Protectionist tariff against foreign countries. The tax was imposed for two purposes—first, to bear its share, together with the increase in the income-tax, of the cost of the war in the present year; and, secondly, to add—I hope permanently—to that part of the revenue of the country which comes from indirect taxation. I believe that such has been the growth of our expenditure during the past few years, and such is likely to be its continued growth, under any Administration that it is absolutely necessary to increase the heads of indirect taxation. . . . To my mind, but a small portion of the ideas which are floating in people's minds at the present time ought to be realised at the expense of the national exchequer. But to realise even that portion certainly involves still further increase in our ordinary expenditure. Where is the money to come from? Is it to come entirely from the income-tax payers? That is really the question which Parliament has to answer. If from indirect taxation, is it to come from piling on more and more upon tobacco or alcohol, articles already taxed over and over again beyond their value? If you want to increase your revenue from indirect taxation you must add new articles, and that is why I have added sugar and coal last year, and propose to add corn in the year before us. What is the alternative? It is to keep up the income-tax, perhaps very nearly at its present limit, in time of peace, with the result that you would raise such a feeling of injustice among a small class as had probably never been seen before. And what would become of your great financial engine in time of war? God forbid that we should in our time ever again enter into a great war, but if that should happen, and you commence a great war with the income-tax at a shilling or fourteen-pence, you will have to raise revenue by indirect taxes of which we do not now dream, and which would inflict infinitely greater injury on the trade and commerce of the country than could be imagined for a moment from such taxes as those on sugar, coal, and corn. That is my view of the financial position—that is why I propose this change in our permanent system of taxation. (Ministerial cheers.) I was never more astonished in my life than when I heard the Leader of the Opposition say that his greatest objection to the corn-tax was that it was to bring about a complete change in our fiscal system as regards our dealings with our Colonies and foreign countries. He described it as the prelude to a customs union of the Empire on a Protectionist basis. I have proposed this duty as a revenue duty, and nothing else. I know that Sir Wilfried Laurier made some observations on the subject in the Dominion House of Commons. I have the greatest respect for Sir Wilfrid Laurier as an able, loyal statesman, but then I must say that I do not think Sir Wilfrid Laurier's opinions with regard to the tendency or effect of any fiscal legislation here are of more value than mine would be with regard to similar matters in Canada. I disclaim altogether the interpretation which Sir Wilfrid Laurier has placed on the corn duty. In a few weeks we hope there will be a conference of representatives of the Colonies upon this question, as well as other questions affecting the interests of the Empire. Supposing it were possible that we should have Free Trade through the British Empire—an imperial zollverein. Do you not think that any such arrangement as that would bind together our Colonies and the Mother Country, and the Colonies themselves more perhaps than anything else that could be done? (Sir W. Harcourt: Does the right hon. gentleman mean Free Trade with all the world?) No. I mean Free Trade with the Colonies. If we should have Free Trade with our Colonies I do not see why that should necessarily involve increased duties on our part against foreign nations, although to secure such an end some sacrifice in that direction might be justified. But it is not possible that there should be Free Trade at the present time between England and her Colonies. But can we not try so to consider the commercial relations between us that we may make trade freer than it is now, and that without necessarily injuring any foreign country? My idea of dealing with this great and most important question is upon a basis of Free Trade, and not upon a basis of Protection. I know that some persons have suggested that we should impose duties as against foreign nations, in order to give an advantage to our Colonies. That is not the policy of His Majesty's Government. It is our policy, while adhering to our own principles, to do what we can to make trade between ourselves and our Colonies freer, in order, as we believe, to promote the best relations within the Empire. I have proposed this tax as revenue solely, and without prejudice to any discussions that may take place between us and the Colonial representatives on the question of commercial relations. I hope these discussions may be fruitful, but it is not with regard to them, but with regard to the necessity of raising revenue for this and future years that I have submitted this duty to the House.

Mr. Flynn moved an amendment to exempt Ireland from the imposition of the corn duty, and appealed to the Chancellor of the Exchequer to grant Ireland some relief in the matter of Indian corn, which was much used by the poorer Irish people as a food.

The Chancellor of the Exchequer could not accept the amendment, because it would involve the establishment of a separate customs house, a system which would be most injurious to Ireland and Great Britain.

In addition to the speeches reported above, numerous others were made by members on both sides of the House, but space does not permit of them being noted here, and those given above will give an idea of the whole debate on Monday. On the following day there was another very long discussion, when all of the old ground was gone over again. Sir Henry Campbell Bannerman, Sir William Harcourt, Mr. A. Chamberlain, Lord Hugh Cecil, and several other prominent members spoke, and Sir Michael Hicks-Beach replied to the criticisms at some length. In the course of his speech he said: It was really extraordinary that hon. members opposite should talk of the terrible burden which the duty had imposed or was about to impose upon the poorest classes. Hon. members opposite had urged that this was only the first step, and that having now put on 3d. per cwt., next year they would impose a duty of 3s. per cwt. When such a duty was proposed it would be time enough to fight it, and if that happened he thought they would find him on their side. This duty must be regarded, not by itself, but as part of the general system of taxation. He had proposed it because he held most strongly that every person in this country who could maintain himself was bound to contribute something to maintain the State. Hon. members opposite would confine the taxation to persons who would pay direct taxation and to those who consumed alcohol and tobacco. That would be a fatal policy, and he declined to be a party to it.

Finally the Chancellor of the Exchequer moved the closure amid loud cries of dissent from the Opposition. It was carried by a majority of 98, 282 voting for and 188 against, whilst on the motion that Clause I. stand part of the Bill 279 voted for the motion and 193 against; majority for, 86.

Protest from Leeds.

A conference of Yorkshire and North Midland trades unionists and co-operators, in opposition to the proposed duty on corn, was held at the People's Hall, Albion Street, Leeds, on the 7th inst., at which a resolution was unanimously passed, which, whilst endorsing the principle that the burden of taxation should be equally borne by all sections of the community, expressed the strong disapproval of the conference of the proposal to place a tax on corn and flour. The resolution concluded by urging upon trades unionists, co-operators, and working men generally in Yorkshire and the Northern Midlands, to express their disapproval of the proposed tax in the strongest possible manner by passing special resolutions on the subject, to be immediately forwarded to the members of Parliament concerned.

FOREIGN AND COLONIAL

Crops in Germany.

The following report concerning the growing crops has been issued by the Imperial Bureau of Statistics. The favourable condition of seedlings reported in April did not continue, owing to unfavourable weather, which set in about the end of the month, with cold, north-east wind and night frosts in Central Germany, and in the East of the Empire, where drought also prevailed; rain, snow, and hail showers were frequent in other parts. The temperature was everywhere below the normal, so that vegetation was greatly checked. Summer crops have suffered most. Spring sowing is not yet quite ended.

Winter wheat has suffered less than winter rye, the note being above an average in all districts, while rye is in some places below an average. In the Rhine Provinces the bloom was cut up by the frost. Wheat is turning brown in parts of Prussia, and rust is feared. In Oldenbury and Bavaria it looks red, and fields are looking rusty in Alsace-Lorraine, Würtemburg, and Baden. Winter seedlings are yellow in Saxony, Hesse, Saxe-Meiningen, Lippe, and Alsace-Lorraine. Fears may not be realised if warm weather sets in soon. Summer sowing is not quite ended, owing to the wet weather Barley has yet to be put in, and seedlings are coming up slowly; the condition is poor on account of night frosts. Wire-worm has appeared in Saxony and Würtemburg on barley and oats.

Potatoes are not all laid yet. Those that are put in have not come up. Earlies are frost-bitten in Prussia, Oldenburg, Hesse, Bavaria, and Würtemburg, Baden, and Alsace-Lorraine. The average note for the Empire could not be given, as reports from many districts are not yet to hand. Clover is generally behind; the condition is not so good as in April, owing to night frosts. The first crop will be a small yield, and fodder famine is feared in many districts. The condition of lucerne is not so good as at the beginning of spring. Cold weather and frosts have done much harm. Large areas had to be ploughed over in Saxe-Coburg-Gotha and Hesse, owing to ravages of mice. Meadows look worse than they did in April. The young grass is thin and has suffered from the frost in many places. The first hay crop will be a small yield.

Home Notes.

The Borough.

Business during the past week has been exceptionally active, considering the period of the season at which we have arrived. The tone of the market is very firm, and in most of the recent transactions the advanced prices demanded have been accepted by buyers. Doubtless the continuance of unfavourable weather has contributed to this result, the holders of the small remainder of last year's crop being very reserved in their offers. They are confirmed in this attitude by the limited stock of yearlings and olds, and by the marked absence of foreign competition. First-class samples are naturally sought for, but cannot be obtained, therefore, the demand is directed towards medium qualities, and some of the lower grades are being taken over at higher rates than have been recently current. The present outlook is strongly in favour of still greater improvement in values, and it seems desirable that holders should wait further developments before operating.

The Board of Trade

reports that the imports of hops from the United States during May have only reached 402 cwt. From the Continent we have received 1,452 cwt., making the small total of 1,854 cwt. This is something like 3,000 cwt. less than the imports of this month in each of the two preceding years. But our exports for May were considerable, being of English hops 833 cwt. and of foreigners 835 cwt., totalling 1,668 cwt. The balance of less than 200 cwt. added to our market is therefore insignificant. The "Standard" in to-day's issue gives, in correction of a previous statement, 50,506 cwt. as the imports of the first five months of this year. The figures of the official returns for this period are 45,698 cwt. from the United States of America and 15,172 cwt. from other countries, furnishing a total of 58,870 cwt. I am at a loss to understand for what reason the "Standard" alters the official figures, which I think we must accept as correct.

Our Growing Crop

is evidently suffering from the recent and present climatic conditions. The cyclonic disturbances affecting our atmosphere have been continuous. As soon as one has passed away another has followed it, with the result that the whole kingdom has experienced cold winds from northerly or easterly points, accompanied by heavy rains. The sensitive hop plant cannot endure such treatment with impunity. It requires sunshine and genial surroundings to promote its vigorous growth, and it is now shrinking from the low temperature, and despondently drooping. I hear from many gardens in the South of the vine looking yellow and sickly, and even where the response to the short spell of warmth of a fortnight ago was shown in improved growth, this has been seriously checked, especially in cases where night frosts have been felt. Consequently the plants are daily becoming more liable to a fly attack, which is more definitely threatened. Unless sunshine and warmth speedily displace clouds and cold, the aphis blight will rapidly develop and the crop prospects will be materially depreciated. I have not yet heard of the hop-washers being brought into operation in Kent or Sussex, but a Herefordshire correspondent tells me that many growers have commenced the process in the Midland districts. I am sorry to know that any efforts are being made to avert the possibility of a small crop, and sincerely trust that growers will generally realise that their true interests are centred this year in a limited yield of good quality. This is not my opinion only, but that of all expert observers who desire to promote the prosperity of our industry.

Foreign Notes.

Nuremberg.

This market has recently shown much variation as regards the volume of business, which has followed the changes of weather in a somewhat remarkable manner. The sales, which on some days twiddled 150 bales or more, fell on succeeding days to only 30 or 40 bales. The greater part of the demand was from local brewers, orders for export being exceedingly small and infrequent. On the whole, the tone of the trade is quiet, although values are fairly well maintained, 60s. to 80s. being paid for medium samples, and up to 105s. for sealed or other special selections. The Continent has generally experienced marked uncertainty of climate, the comparatively low temperature being unfavourable for the gatherings at the public gardens and open-air restaurants in which beer is principally consumed. Thus the output of the breweries is much below the average production of this month, when genial warmth is expected. The immediate future of the hope trade will consequently mainly depend upon the summer development, which is thus far very disappointing.

Reports from the plantations

are, however, favourable, with but few exceptions. The plant grew so rapidly during the latter part of May that additional attention to cultivation was needed and given. The retardation of the growth caused by the earlier cold weather seems to have disappeared, and, according to present information, the prospect is now distinctly favourable to a full yield, assuming that no subsequent hindrances appear. A correspondent of the "Bulletin des Halcas," however, reminds his readers that a critical period of two to three months has yet to be passed through, "et qui bien souvent il y a loin de la coupe aux lèvres," or, as we say in England, that "there is many a slip 'twixt the cup and the lip."

The Continental hop area,

excluding Holland and Belgium, has been recently estimated at close upon 170,000 acres, divided as follows:—

	Acres.
Bavaria	65,750
Wurtemberg	15,000
Baden	6,625
Alsace-Lorraine	10,750
Other parts of Germany	6,875
Bohemia	31,437
Galicia	4,103
Styria	4,065
Other parts of Austria	3,340
Hungary	905
France	8,035
Russia	12,500

It is probable that the acreage of Germany will be increased this year, as the result of the heavier import duty imposed by the German Government, so that the whole European area of this season, outside of England, may be approximately taken at not much less than 200,000 acres.

The average yield

of the Continent is very far short of what we are accustomed to consider as a satisfactory crop. Germany only shows an average of about 5½ cwts. It should be noted that while the Austrian production is lowest in average quantity, the hops grown in Bohemia hold the premier position in the world for quality, and always command the highest prices.

Belgium.

The trade is quiet, but prices remain steady at 49 to 50 francs. Very few of the best qualities remain, and for these holders are firm in their demands.

The crop prospects both in Alost and Poperinghi districts are sufficiently favourable, the growth being normal, and the plant generally healthy. Some lice have made their appearance, but not yet in such quantity as to create any immediate anxiety in the minds of planters.

America.

New York State has been visited by what the "Onconta Herald" describes as "freaky weather." Severe frosts have been followed by heavy rains and hail-storms, which are reported to have seriously damaged many of the hop yards. The vine round about Waterville is slow growing and backward, and though it is supposed that the best and most vigorous yards will outgrow the injury to some extent, the outlook from the weaker yards is not at all favourable for much of a crop. On the whole it is estimated that the crops throughout the State will be light.

Increasing firmness is evident in all the trading centres, the New York market being very strong. Brewers are not buying freely, but dealers, having confidence in early improvement in values, are bidding fall prices for any disposable lots, and find difficulty in getting their offers accepted Current quotations at New York are now considerably above what they have been at this date at any time during the last three years. Farmers on the Pacific coast have contracted for 1902 hops up to 13 cents., and are now refusing to extend business, unless at advanced prices. Crop prospect on the Pacific coats are generally favourable.

A fire of a serious nature broke out at seven o'clock yesterday (Sunday) morning, at Ellershaw's oil mills, Hull. The outbreak was discovered at the top of a five-storeyed warehouse, which extended from Wincolmlee to the edge of the river Hull. It contained a very heavy stock of cake linseed and cottonseed. The warehouse was obviously doomed, and the energies of the brigade were successfully directed towards preventing the fire spreading to the mill proper and the adjoining mill. Two firemen had a narrow escape, only just avoiding a falling wall, whilst playing on a fire from the housetop. The damage is estimated at between £7,000 and £8,000. The mill was practically destroyed by fire nine years ago.

By Hordeum.

Beer Dilution.

The "Brewing Trade Review" takes strong exception to the articles which appeared here concerning the dilution of beer by brewers, and dealing with the facts and figures relating to brewers' returns. The fairness of the criticisms offered can be gauged from the following excerpts, which practically amount, apparently, to all the writer has to say:—

"The writer, a well-known agitator in the 'pure' beer interest, has now discovered that the source of all the trouble to the farmer is the brewer's practice of sending out his beer at a strength often below the standard fixed for the purpose of charging duty." "He (the writer) evidently desires that all beer should be of the strongest character and pay the maximum amount of duty." "All the barley grower apparently demands is that every other interest should give way to that of the agriculturist."

"All he wants is, first, that barley malt alone should be used; and, secondly, as much of it as possible should be put into the beer—that is to say, that, at any rate, the public should never be allowed to have their beer at a less specific gravity than 1.055deg, a figure fixed solely for Revenue purposes. The hopelessness of the argument is apparent to any reasonable person."

No reasonable person endowed with any intelligence and having only a very small knowledge of brewing can possibly read any such "argument" into the articles on pages 572 and 604 ante.

Why does not this official organ of the country brewers deal with the very serious charges made in connection with their general practice of diluting, to the loss of the Revenue and to the defrauding of consumers?

Brewers and Buttermen

will have to be equal in the eyes of the law some day; meanwhile it is a great safeguard to consumers to put them in possession of the actual facts. It is not merely a barley-growers' question. It concerns all beer-drinkers much more closely, and it affects every taxpayer in Britain. Barley-growers do not want to see every other interest made to give way to brewers. By what can be best described as an artifice brewers evade payment of duty of several millions sterling per annum. Were beer brewed now with the same proportions of material as were used twenty years ago, not merely would much more material be used (and it is the extract yielded by the material upon which duty is charged, not the number of barrels made), but consumers would get 50 per cent. more value for their money.

There has always been low-gravity beer made. The very word itself implies this, but an ordinary eightpenny beer of twenty years ago would be as strong or stronger as the ordinary shilling beer of to-day.

Honest brewers could then make a profit on both classes of beer sold at 8d. and 1s. per gallon. Can they be surprised if their honesty is called in question if they now supply

Weaker Shilling Beer

than they formerly sent in at 8d.? It must be borne in mind that brewers have themselves established a sliding-scale of prices very largely ruled by this one question of gravity or the initial strength of the beer prior to fermentation. Solely because one beer contained more malt and hops than another, 50 or even 100 per cent more money was demanded. There was no difference in quality of the material used or age of the beer; the sole difference was quantity or gravity. This quantity has been steadily diminished with no alteration made to the price of beer, and consumers would be kept in the dark were it not esteemed by some to be a stern and very painful duty to expose the facts.

Preserving Eggs.

Sir,—In answer to your correspondent, Mr. S. Nichol, whose letter appears in your issue of the 9th inst., I may say:—

(1) It is claimed by users that by means of water-glass eggs have been kept perfectly fresh for a twelve month. As, however, so much depends on the circumstances prevailing at the time of use, no definite limit can be assigned as to the length of time during which the eggs will remain in a fresh condition.

(2) The eggs must be completely covered by the solution and left thus until required.

(3) It would be better to wash very dirty eggs before placing them in the water-glass; but they do not need to be washed before being sent to market.

(4) By repeated use the water-glass would become useless for the purpose of preserving eggs, and a fresh supply should be obtained. The proportion generally used is one pound of water-glass to ten pounds of water. Ten pounds of water measure one gallon.

(5) The water-glass is not the active cause of the death of the germ of the egg. In a fortnight's time from being laid (at the outside), the germ in an egg dies naturally, unless it has been fostered and commenced development by the application of heat, as given by a hen or an incubator.

(6) It is preferable to use wooden or earthenware vessels for storing the eggs in, but I do not think copper vessels would be unsuitable.

(7) The casks when full should be placed in a fairly cool situation, but the temperature ordinarily observed during an English summer would not have any detrimental effect.—Yours truly,

F. G. P.

GARDEN.

The heat-wave has passed away, and once more we are depressed by cloudy skies, cold northerly winds, and chilly nights, but this state of things, it is to be hoped, will not last long—surely we shall get at least some real summer weather before long!

Cool, showery weather, such as has been experienced lately, at this season, affords an excellent opportunity for getting a good batch of winter greens put out, and it is now high time for at least the more forward plants to be in their places. Brussels sprouts for early or autumn use ought to have been planted out a month or more since, and be now making a rapid and sturdy growth. Keep the ground between the rows well hoed, and if at all "leggy" (as usual with this subject), draw up a little soil on each side, to support them. The last batch of plants, from the March or early April sowing, ought to be put out at once.

Plant out a good breadth of savoys, and plenty of brocoli also. Of these the medium and later kinds should be got to work first, as a rule. There is time enough for kale (borecole) yet, unless this is required in the autumn or early winter, which is very seldom the case. Most of this class of plant are usually put out on ground that has carried a crop of early potatoes previously, merely clearing and levelling it a little, giving just a sprinkling of soot, or some good fertiliser, perhaps, and then dibbling in the plants. But—to use a somewhat contradictory expression—the early potatoes are very late this season, and those who wait for even the most forward to be lifted will be all "behind the fair" with their winter green stuff, so the only alternative is to plant between the rows of the former. There is no great objection to this plan, though the "spuds" must be dug rather more carefully than usual; when this is done it is a very simple matter to earth the plants up to any extent, and, indeed, they must be put in rather shallowey, or they will become unduly buried. It is also advisable, for obvious reasons, to plant in each alternate furrow only.

Cucumbers are extremely plentiful and low in price just now, and in the large metropolitan markets seem to be almost a drug, in spite of the enormous demand. Very fair "cu's" can be obtained now at a shilling or eighteenpence per dozen, although the season is young yet; how the growers can produce them at the price is a mystery, but the competition is now so great in this line that they are really "cutting each other's throats" at

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan."

A Dairy Show at Hamburgh.

After considerable preparation, a committee has been formed at Hamburg for the formation and holding of a general dairy show in 1903, during the first half of the year. The show, for which an adequate sum of money has been guaranteed, will be on the same lines as the great International Dairy Show of 1877. Herr Senator Hachmann has been appointed as president of the executive committee, his deputy being Herr Schröder. A working committee has also been formed under the direction of Herr Senator Helle, who will take charge of the lectures. The programme, which has been drafted by Professor Boysen, will be the especial care of this committee. It will probably be ready for issue some time during the current month.

The Milk-blended Butter Bill.

This Bill, which has been introduced by Mr. Hanbury to amend the Sale of Food and Drugs Act, provides that where butterine (butter to which any substance has been added whereby the amount of water in the butter is increased) is offered for sale, the label or paper wrapper shall contain a legibly printed statement indicating that the article has been adulterated and to what extent water has been added.

Arsenic in Beer.—The Royal Commission appointed to inquire into the presence of arsenic in beer, on Friday resumed its sittings at Westminster, Lord Kelvin presiding. Mr. Otto Hehner, of the Society of Chemical Industries, was recalled. He gave evidence as to inquiries made by the committee of the Society of Public Analysts and the Society of Chemical Industries, and said they were unanimously of the opinion that of the processes for ascertaining the quantity of arsenic in beer the March Berzelius process was the best. The result of his own investigation had been that if the law were to insist upon beer being absolutely free from arsenic they would have to close up all the breweries in England. No beer could possibly be guaranteed as absolutely free from arsenic, but, with careful use of ingredients, what arsenic there was in beer would be quite harmless. Mr. A. C. Chapman, City Analyst, and Dr. S. Delepine, of Manchester, also gave evidence.

Monday (June 9th).—Cold and inclement weather prevailed over our islands, but the conditions were drier than of late, and although showers were experienced in many places, they were not generally heavy. The wind was northerly over the entire country, and was being drawn from the cold Arctic regions. The highest temperatures during the day were considerably below the average, the thermometer nowhere touching sixty degrees.

Tuesday (June 10th).—Owing to the dying away of the Northerly wind, and also to the presence of a little more sunshine, the weather was not quite so cold as on Sunday and Monday. In no part of the United Kingdom, however, did the thermometer reach sixty degrees, and in nearly all the more northern districts it failed even to reach fifty-five degrees. In London, where the day was mostly fair, and at times quite fine and sunny, the maximum shade temperature recorded was fifty-nine degrees, being five degrees higher than on Monday, but as many as eleven degrees below the average for the month of June.

Wednesday (June 11th).—The type of weather had undergone a considerable change, and we were again coming under the influence of cyclonic disturbances, which were arriving over the northern portion of our islands from the Atlantic. The winds were light, and generally from between south-east and south-west. Temperature was low over the northern portion of the country during Tuesday night, but in most parts of England it ranged between forty-five and fifty degrees. The mid-day temperatures were again very low for the time of year, and it was only in the south of England that the thermometer rose to sixty degrees.

Thursday (June 12th).—Rainy and unsettled weather prevailed in most parts of the British Islands, and the wind was strong in the south and east of England. A cyclonic disturbance arrived from the Atlantic during Wednesday night, and its centre yesterday was situated at the entrance to the English Channel. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, over nearly the entire country, but the amounts were mostly small. Wednesday night was generally warm, and at several places in the south of England the temperature did not fall below 50 degrees. The mid-day temperatures were, however, everywhere low.

Friday (June 13th).—The weather continued very unsettled over the entire area of the British Islands, and rain fell again throughout the day in most places. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, everywhere in the United Kingdom, and the amounts were generally rather large. Temperatures were everywhere low, the highest readings nowhere touching sixty degrees, and in many places only slightly exceeding fifty degrees.

Saturday and Sunday (June 14th and 15th).—The weather continued generally unsettled, and further heavy falls of rain occurred over the greater part of our Islands. The winds were, for the most part, North-Westerly, and they were strong on Sunday at places on our West coasts. The nights continued generally warm, but the days remained very cold for the time of year, and the midday temperatures on both days were nearly everywhere below 60deg., while in many places they were scarcely above 50deg.

Strange Sheep Disease in Wales.—A mysterious malady is affecting the flocks in Cardiganshire, which caused the death of hundreds of sheep. It appears that a peculiar kind of parasite enters the nostrils of the animal, and works its way to the brain. A sheep affected soon becomes thin and languid, and its painful snuffling has led farmers to call the disease "snuff." Washing out the nostrils with diluted turpentine has been tried as a remedy without success, and the flockmasters, who have already sustained severe losses, have failed so far to discover a means to check the outbreak.

Bucks (Central),

After some nice showers, more or less cold, we have had a splendid rain, enough to stop hoeing the roots, which have not grown at all well. The fly, on those two or three warm days the week before last, played sad havoc with the young swedes and kale; some have to be re-planted. It has been quite enough rain for the corn, which now wants sunshine. The rains hardly came soon enough for the forward grass, but will now quite set up that on the backward lands. Pastures are getting fairly good, but they want sun, too, now. I think all corn crops are looking fairly well, but late. The scarcity of fat beasts makes the trade quite good for beef, but lamb has been quite a dragging trade, big lambs making no more per lb. than small mutton; but the mutton trade has not generally been very fast. Now wheat makes a bit more money, scarcely anyone has any to sell. The wool trade is reported to be worse than ever. I cannot but think that the Imperial Exchequer should pay the cost of this new Education Bill, for as far as agriculturalists go it is not fair for them to pay for the education of children that, as soon as they have done school, go away into other occupations. —J. T. (June 13th.)

Devon.

If at the early part of May, when March weather was the rule, some anxiety was felt as to the crops, it has now been dispelled, and taking the country generally prospects on this date are decidedly fair. The hay crop from rotation grasses will be a good one, of full average. And from permanent pasture almost an average. Some cutting will soon commence, but in view of the Coronation festivities, farmers will probably delay the cutting of permanent grass, and not have much down during the holiday, as work will be at a standstill, as farmers are His Majesty's most loyal subjects, and the enjoyment in the rural districts, if not so excitable as in the Metropolis, will be kept up with great spirit. Even if farmers are not making money, they give freely a hogshead of cider and subscribe to a band, etc., for their workmen.

Mangolds have come up very well, and have been in many places hoed and thinned; whilst kale, which now seems to be coming into favour, has been rather extensively sown, and looks well. Experiments are tried with drilling and broad cast. Flat poll cabbages, also a valuable fodder crop have been planted under favourable conditions. It is just about the time for sowing swedes now and all work of preparation for the crop is well advanced, the ground being all ready for the drill.

Corn crops are thin in some places, and wire-worm have been plentiful; and all except the very late barley will, from present appearances, be a full crop.

Apples and pears, too, promise good crops generally, but plums vary.

Live stock and beef and mutton sell well, and the lambing season has been good. Is the following a record so far as mortality is concerned? Two hundred ewes produced 260 lambs, now living, and not one ewe was lost in lambing. This, so far as I know, is a record, for I don't look upon it as bad if two or three per cent. die.—G. H. (June 11.)

Dorset (West).

The month of June has brought us better prospects for keep, yet the hay crop must be a light one, as well as a late one; and this means cutting into what should be after-grass. Now and again, one can observe a field of ray grass, or Tripolium, being cut, but there will be no general haymaking before the end of June. Corn crops have certainly progressed amazingly, and the straw crop on well-managed lands is likely to be heavy. It is many years ago the old hay and straw was so closely fed up. Ricks of either are miles apart The swedes are now being put in, and the mangolds are being busily hoed; the plant is generally good.

All kinds of good store and fat cattle are selling well, and the same applies to good fat wether mutton; but ewe mutton sells very badly. Good fat lambs are scarce and dear. Fat calves and bacon pigs are making fair prices, and store pigs still sell quite as dear as of late.

Farming prospects generally are by no means good. It is with great difficulty the best farmers who till the land as it should be done can make both ends meet. The corn tax will take more out of their pockets than they will derive from the bit of wheat they grow, for which, if good enough, they can get 16s. per sack; whilst the very low price of malting barley (the main and staple crop of arable farming) and the very low price of wool, with the expensive clipping, and the rates and taxes heaped more and more on the farmers, can only end in landlords who own arable lands and want them cultivated in a proper manner, and their household maintained in a just and suitable way for reletting, to lower the rents still more, to keep suitable tenants on the soil.—G. S. (June 12th.)

Kent (West).

Grass-cutting was commenced last week, though there has not yet been any haymaking weather; indeed the spring has been even less genial than usual. It is customary to grumble at the springs in this country but this year there has really been some justification for exercising the Englishman's privilege to grumble. The Colonies are rather fond of boasting of the things in which they can beat the Old Country, but I think the Australian cricket team will go home fully convinced that England still holds top position for variableness of climate. Still, the farm crops seem generally to have struggled through the ordeal better than might have been expected, and if we only get some warm, forcing weather during the next week or two a lot of leeway will be made up, though the season must necessarily be a backward one. Hops are specially belated, and there are reports that in some parts of the Weald of Kent and also in Sussex the struggling bine has already been attacked by agilus; but more favourable conditions are looked upon as imminent, and there is yet time for the plantations to put on quite a different appearance.

I never like to make an early forecast of any crop, and for that reason I have not sooner sent you some remarks about the fruit prospects. If I had done so a month ago I should have found myself all wrong now, for the fair promise then existing has since been to a large extent annihilated. The cold winds and frequent frosts experienced in May, and extending even into June, have played sad havoc with the fruit crops. Strawberries, cherries, currants, and gooseberries have all suffered severely. Apple-trees bloomed late, and to this circumstance may be attributed the fact that they escaped the devastation so generally observable in most other kinds of fruit. There are plenty of large cherry-trees that will produce absolutely nothing, the blossom having been completely withered by the frost; and black currants, which did not promise to be very abundant, have suffered in like manner. Unless some parts of the country are more favoured than Kent, the supply of home-grown strawberries will be smaller than it has been for some years. Altogether, the outlook for fruit-growers in this county is unusually gloomy, and should form an object lesson to those enthusiasts who are so fond of recommending English farmers to go in extensively for fruit-growing. If they would only be good enough to change the climate, the advice would perhaps be more acceptable, though even then its wisdom might be doubtful.—(M. J., June 14.)

Leicester.

Any quantity of grass now in pastures, but there does not seem enough cattle in the markets at any price to eat it off. Likely to be a very heavy crop of both seeds and meadow hay, but late. Both corn and root crops look very well, excepting light lands, where barley is getting yellow. We want some warm weather, then farmers will have the best year they have had for a long time. We have had no weight of rain, but a great many days lately on which rain has fallen; about 6½ inches this year.—J. P. (June 12th.)

Lincolnshire (North).

The rain it raineth every day, and night too, but we all know that. Still, it is on everybody's lips, for, alas! it is playing havoc on our farms; I have been South having a look round. Now, on my return, the weeds have grown apace amongst the corn, for we cannot finish; thistles are showing, although we have plenty of labour. Cabbage and mangolds get flat-hoed when it is too wet for the weeders in the corn. We are not sowing more turnips, and we are not working fellows, and we are not earthing up our potatoes, which are wanting it so; so altogether things are not roseate.

The wheat and barley are showing visibly that they do not like the wet, but oats look better for it. They can do with moisture. Some of mine were so gross that I am going to mow them off the flag, or they will be down, and then, the binders work so badly.

Sheep are healthy, but lambs grow badly. Last year I had sold about 100, but I cannot at present get the butcher to think they are fat enough, although the ewes get a pound of cake. Sheep progress better with roast meal than with boiled, a common saying here.

Both mutton and beef are inquired for, and seem permanently dearer. I fancy there is a shortage of meat all the world over, I hope so, at least.

Actinomycosis has been troublesome on my cattle. I wonder if others have suffered this winter. We think we get it on our peety-clayey pastures. I do not use the iodide of potassium cure, but have them dressed with a sheep blister, and they usually go away; still, they are nasty things.

Perhaps before your next week's issue we shall be revelling in a hot season.—North Lindsey (June 12th.)

Westmoreland (South).

The season is an exceedingly backward one. Seldom has May been of so ungenial a nature. Not only was there a complete absence of sun, but frequent night frosts occurred, and snow lay more or less on the high hills through the month. As a consequence, crops of all kinds are at least two weeks late, and even yet sunshine is much to be desired. With favourable weather, the hay crop may yet be a satisfactory one, which is much to be desired, as many farmers have for some time back had to buy hay for their stock. Pastures are for the season good. Oats and barley are well planted, and seem free of wireworm and other pests. Potatoes and root crops very backward, but turnips have all been got in in good order. All sorts of lean stock have sold well this spring, and beef is at a more satisfactory price than for a good many years past.—W. S. (June 13th.)

Foreign Prospects.

FRANCE.—The agricultural situation, although better than it was ten days ago, is still not quite satisfactory, as higher temperature is needed to promote the earing and blooming of the wheat crop, which presents on the whole a fine appearance, but an early harvest is not considered probable.

BELGIUM.—Crops prospects continue favourable.

GERMANY.—Forcing weather, with intermittent rain, is said to have worked wonders on the cereal crops; consequently harvest prospects are regarded with more equanimity.

HOLLAND.—Recent weather has improved the appearance of the crops.

HUNGARY.—Warm and dry weather has almost removed the traces of last month's inclemency, and crops generally have improved.

RUSSIA.—Crop prospects in Azoff regions and around Odessa are reported to be very favourable, with the exception of linseed, which appears to have suffered considerably from frost in May. Wheat generally looks well, and barley and rye promise an abundant harvest.

ROUMANIA.—Our correspondent writes weather continues favourable to the crops. The cutting of rapeseed has begun.

ITALY.—With favourable weather, the wheat crop has improved, and will shortly be in bloom.

SPAIN.—Rain and higher temperature have partially counteracted the cold, dry weather, and the outlook is for a good crop of wheat in the principal provinces, but harvest may be later than usual.

INDIA.—The monsoon has burst.

UNITED STATES.—Excessive rains have been a slight drawback, but all crops are now progressing favourably. The moisture is somewhat prejudicial to the quality of a portion of the wheat crop. Oats indicate large yields in the chief States, and in others moderate. The stand of maize is very good. The interior supplies of maize and oats are light, and of wheat moderate.

AUSTRALIA.—The drought has been relieved by splendid rains all over the country.—*Dornbusch.*

Sun Insurance Office.—The report of the Directors of the Sun Insurance Office for the year ending December 31st, presented at the annual meeting stated that the balance brought forward from last year amounted to £172,026 11s. 7d. There has been carried to pension fund £4,000, paid for dividends in respect of the business of the year 1900 £102,000, leaving a credit balance of £66,026 11s. 7d., which, by the operations of the year, has been increased to £204,731 7s. 1d. Out of this amount an interim dividend at the rate of four shillings per share, absorbing £48,000, was paid in January last, and the directors have declared a further dividend of four shillings and sixpence per share, payable on the 11th July, which will absorb a further sum of £54,000, and leave £102,731 7s. 1d. to be carried forward. The funds of the office will then stand as follows:—Capital paid-up, £120,000; general reserve, £1,200,000; special reserve, £100,000; dividend reserve, £100,000; reserve for risks not yet expired, £466,138 13s; investment reserve, £42,604 1s. 5d.; pension fund, £42,221 18s. 4d.; balance at credit of profit and loss account, after payment of dividends, £102,731 7s. 1d.; total, £2,173,695 19s. 10d

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt; We have had a moderate demand during the past week. Barley dull. Wheat was 6d per qr lower. Oats and maize steady. Flour rather dearer.—NIXON, GOWER, AND CO.

Mark Lane, Wednesday.—The attendance was small, and the market for wheat ruled dull, with an easier tendency. Flour quiet, and rather easier. Maize very little doing, and values rather favour buyers. Oats only a retail trade, and unchanged. Barley slow and without change. Beans and peas quiet.

Mark Lane, Friday.—The attendance was small, while weather conditions were unfavourable all along, without the faintest developing signs in general, and the small movements going on since noon were mostly of a nature against the views of sellers. English wheat remains out of supply, and hence nominal, at 33s 6d per qr for good reds, delivered up. Country millers still turn their attention to American reds, and reluctantly pay the prices asked, good reds being offered at 32s to 32s 6d. Foreign unchanged. Whites maintained. Australian, 32s, ex ship; 33s to 33s 6d, landed. Californian, 31s 6d; and Walla, 31s, ex ship. American brands of flour continue in small stock here, but there is a good deal coming forward, and except for fine and choice grades, consumers are not disposed to entertain rates generally demanded. Pillsbury, Golden Lily, Ceresota, etc., first patents, 24s 6d; and second ditto, 23s 6d to 24s. Bakers' grades remain very scarce, and command full prices. Iron Duke, ordinary quality, held for 21s 6d, ex store. English without improvement. Top price town-made, 30s net; No. 1 households quoted at 22s 6d cash at the mill-door. Cascadias, 23s; Australian patents, 23s to 23s 6d, 280lb, ex store. Grinding barley continues in ample supply an deasy. Odessa, 19s 9d to 20s, ex ship to come up; 20s 6d ex quay. Danubian, in the former position, 19s 9d, and 20s 3d, ex quay. Oats, 3d lower since last Friday, with a little more inquiry at the decline, heavy sorts being in most favour. English oats still command high prices without effort. Grey winters, 42lb, 25s to 25s 6d; and Scotch oats, very fine potato, range at 26s 6d to 28s. New Zealands nominal. Ordinary bluff, 27s to 28s, ex store, 384lb. Maize unchanged. Holders of imported beans and peas made no alteration. Egyptian splits, 23s; Mazagans, 22s 9d, ex mill, 320lb. Indian white peas in continued good supply, the general range being 34s to 34s, ex store.

COUNTRY.

Ashford, Tuesday.—Trade quiet and little doing in English wheat. White, 33s to 34s; and red, 32s to 33s per qr. Flour dull, and 1s per sack cheaper. Feeding corn slow, unaltered.

Boston, Wednesday.—Wheat, 30s 6d to 31s; grinding barley, 23s 9d; oats, 24s to 25s; beans, 36s; maize, 23s.

Braintree, Wednesday.—The price of wheat fell 6d. per quarter on the week, red samples making from 30s to 32s 6d, and whites up to 33s. The supply was limited, and trade quiet.

Bristol, Thursday.—There has been a quiet trade since our last; there was but a short supply of English wheat at our market to-day, which was held for late rates; foreign from 3d to 6d lower. Grinding barley and oats unchanged. Maize 3d to 6d decline. Flour but very little inclination to speculate.—GRACE, BROTHERS.

Bury St. Edmunds, Wednesday.—Market dull, and but poorly attended. Wheat demand very quiet, and prices 6d per quarter lower on the week, at 30s to 31s per 504lbs. for reds. Oats firm at full prices, 25s 6d to 27s per qr.; black, 24s 6d to 25s 6d.; winter, 24s 6d to 25s 6d; Konigsberg, quiet, at 24s 6d to 25s per quarter. Maize unchanged at 24s to 24s 3d per quarter. Other feeding corns and stuffs unaltered.

Cambridge, Saturday.—The downward tendency of the wheat trade has this week been checked, and prices remain unaltered, with short supplies. Much rain has fallen during the last three weeks, and sunshine is now wanted. At this market to-day there was a small supply of corn, and farmers held their wheats very stiffly. The small trade done was at last week's full prices. Red wheat, 31s to 32s; and white up to 32s per 504lb. A few samples of oats and beans offering, for which the demand was dull, without change in values.

Canterbury, Saturday.—Wheat: Prices from 6d to 1s per qr. cheaper. Feeding corn also shows a lower tendency.

Carlisle, Saturday.—Large quantity of oats shown in our market to-day for the time of year. Slow sale at rather easier prices: 24s 9d to 25s 3d per 336lbs. Feeding stuffs easier to buy.—THOMAS ROBINSON.

Chester, Saturday.—Very little English grain offering, and no change on the week. Indian corn in fair supply, and lower grades 6d per sack cheaper. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per60lb; grinding barley, 3s 6d to 3s 8d per 64lb; beans, 5s 10d to 6s per 80lb; oats, new, 3s 2d to 3s 4d; old, 3s 4d to 3s 6d per 46lb; Indian corn, 11s 6d to 14s 6d per 240lb.

Croydon, Wednesday.—White wheat, 33s to 35s; red ditto, 32s to 34s; malting barley, none; grinding, 23s to 25s; oats, 21s to 23s; beans, 33s to 35s; peas, 31s to 32s. Trade for wheat quiet; oats, 6d per quarter cheaper; beans and peas no alteration.

Glasgow, Wednesday.—There was a small attendance at our market to-day. Wheat and flour are slow, with prices in buyers' favour. Home and foreign oats firm, but quiet trade. Grinding beans rather easier, owing to fresh arrivals. Canadian pease quiet, unchanged. Round maize steady. Barley quiet. Bran and Thirds unchanged. Oatmeal steady.—GIBSON AND CLARK.

Leeds, Tuesday.—Notwithstanding the cold, ungenial weather, the trade continues to rule very dull, under the influence of heavy arrivals in the ports and off coast, and a slack consumptive demand. English wheat, though scarce, is 6d per qr lower, and a similar decline must be quoted on most descriptions of foreign. Maize and oats slow at 3d decline. Beans steady.—DUNNS AND CO.

Leeds, Friday.—There is still a limited demand for both English and foreign wheats at Tuesday's prices for the former, with a slight advance for Americans. Maize the turn easier. Oats, beans, peas, maize, and flour steady.

Leicester, Saturday.—Fair attendance, with small supplies of home-grown wheats. Trade quiet, and prices a shade easier. Wheat, 31s to 34s per 36 stones. Barley steady. Fine oats very firm.

Lewes, Tuesday.—New white wheat, 33s to 34s; new brown ditto, 21s to 24s; malting barley, 32s to 36s; grinding ditto, 21s to 24s.; oats, 23s to 26s; beans, 35s to 40s; peas, 35s to 40s per qr.

Lincoln, Friday. — Small supply of English wheat. Scarcely any trade doing, and prices were easier. Reds, 32s to 33s; whites, 33s to 34s; foreign wheats dull. Oats, maize, beans, all firm at late rates.

Liverpool, Friday.—The market has had a good attendance, and wheat experiences a good improvement in demand, prices being generally a 1d dearer than last Tuesday. Flour is steadily held owing to small stocks, with a quiet consumptive trade passing at unchanged quotations. Local millers report a better inquiry, but no change is made in the minimum price of Bakers. Maize—Mixed is quiet, but previous quotations are maintained. European has a very fair inquiry, but prices are the turn in buyers' favour. Plate also meets a fair demand, and prices are about unchanged from Tuesday. Barley is very slow for malting. Feeding quiet, unchanged. Beans are very steady at 3d advance for Sadis. Peas quiet and 1d lower for Canadians. Oats—English are slow and lower to sell. Foreign are very quiet, but unchanged. Oatmeal firm, with a small business at unchanged prices. Oilcake is very steady, and meets a fairly good trade, but values have been slightly shaded in a few instances.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—About the average attendance at the market to-day, but business slack in all departments. Wheat about the same figure as last week. Barley and oats slight decline. Maize rather weak and tends to lower price. The cost of other grain does not display any important variation.

Newport, Wednesday.—The trade for wheat was slow, and rather cheaper. Maize 3d to 6d lower. All other grain without quotable change. Flour, 23s per sack for fines.

Newcastle-on-Tyne, Saturday.—At our to-day's market wheat was held for last week's prices. Demand, however, was of a retail character. Maize firm, in favour of the seller, owing to scarcity. No change in peas, beans, or barley. Oats steady at late rates.—JOSEPH POLLARD AND CO.

Northampton, Saturday.—The unfavourable weather caused a smaller market than usual, with a limited quantity on offer, especially wheat, which had a quiet demand at about the quotation of last week. Flour was an inactive trade, unless a little less was asked. White malting barley, 4s 2d to 4s 4d per 60lb; grinding barley 23s to 26s; oats, 21s to 24s; old fine, 28s; beans, 32s to 38s; flour, 23s to 24s; fine, 27s.

Norwich, Saturday.—Wheat is still in small supply to-day, with a fair trade at late rates. Continued wet weather prevails, with low temperature; warmer atmosphere much needed. Wheat, red, 31s to 32s per qr., weight 63lbs per bushel imperial. Corn Inspector's return for the week ending 9th June, 1902:—Wheat, 1,333, 30s 11d. —J. ARTHUR MILLS.

Norwich, Saturday.—The supply of wheat on offer here to-day was moderate, and the samples brought forward realised fully late rates. There was, at the same time, rather more business passing. There was nothing doing in barley. The weather in Norfolk has been of an extraordinary character during the past week—cold and ungenial, with a large quantity of rain. To-day exhibited scarcely any improvement, and more sunshine is now urgently required.

Nottingham, Saturday.—Scarcely a sample of English wheat on offer, and full rates maintained. Grinding barley firm. Oats and beans scarce, and prices in sellers' favour.—ROBERT HUBBLE.

Peterborough, Saturday.—There has been very little wheat on offer to-day, and a slow trade, with value about the same as last week. Not much doing in spring corn, and no quotable change in prices. Weather wet.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a fairly good attendance at our market here to-day. Oats and maize unaltered. Barley dearer. Wheat slow, unchanged.—ORLANDO DAVIS AND CO.

Reading, Saturday.—The attendance in the Exchange to-day was much smaller than usual, and trade in every department ruled quiet. Wheat again came to hand but sparingly, particularly English grown sorts. Trade ruled firm, and where transactions were effected recent currencies were obtained. Other descriptions of corn were in short supply, and changed hands at unaltered values.

Ripon, Thursday.—A limited show of farmers' wheat. Bran has a downward tendency. Business slow. Wheat, English (new), 31s to 32s; ditto, foreign, 30s 6d to 34s; barley, grinding, 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s to 26s per qr.; beans, 1s per stone.

Romford, Wednesday.—Very slow trade at 1s. per qr. decline Small supply. Red wheat, 31s; white wheat, 32s to 33s per qr.

Spalding, Tuesday.—A remarkably small show of grain, and limited attendance of farmers. Wheat, 31s to 31s 6d per qr. Oats unchanged. Beans and peas maintained late rates.

Sheffield, Tuesday.—There was another poor attendance and an indifferent show at market to-day. Trade was very slow. There was difficulty is securing quoted prices, wheat holders having to accept 6d per qr less. Beans were firm at full prices. Quotations:—Wheat, white, 32s 6d to 34s; ditto red, 32s 6d to 34s per 504lb; oats, new white, 26s to 27s; ditto new black, 23s to 24s per 336lb; barley, grinding, 23s 6d to 24s; ditto malting, 30s to 32s per 448lb; peas, grinding, 36s to 37s; ditto, blue, 53s to 80s; beans, Egyptian, 33s 6d to 34s per 504lb; ditto English, new, 37s 6d to 38s per 532lb; Indian corn, small, 24s to 24s 6d; ditto American mixed, 28s 6d to 29s per 480lb.

Stamford, Friday.—Hardly any corn on the market. A few samples of oats made about 27s. Wheat and beans made about the same as last week.

St. Neots, Thursday.—There was rather more wheat showing to-day, but buyers could only be found by making some concession in price, the fall in most cases being 6d per quarter. Oats very scarce, and rather dearer. Beans firm.—ELGOOD AND SON.

Stockton, Wednesday.—There was very little farmer's wheat, showing, and prices were 6d to 1s lower on the week. The trade keeps very dull in foreign wheat, and millers bought very sparingly at a decline of 3d to 6d on the week. Oats and maize weak, and 3d to 6d lower.

Sunderland, Saturday.—Grain in better supply. Wheat quite at late rates. Barley and oats steady. Arrivals coast wise: Wheat, 1,124qrs; oats, 1,165qrs. Foreign nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—Rather small attendance to-day, and business quiet. English wheat, to sell, made rather less money; foreign wheat steady at last week's prices; feeding stuffs unaltered.

Wakefield, Friday.—We quote both English and foreign wheats 3d to 6d per quarter lower, with a firmer feeling, and but little business doing.—MICHAEL SANDERSON AND SON.

Wakefield, Friday.—The weather continues cold and wet. The publication of the American Bureau report for June has imparted a firmer tone to the wheat trade since Tuesday, but holders have been unable to obtain any advance, as the demand shows as yet no improvement. Feeding stuffs without material change.—DUNNS AND CO.

Winchester, Saturday.—Wheat in short supply, which met a firm trade at fully last week's prices, ranging from 32s to 33s, 64lb. Oats quiet, late rates difficult to maintain. Maize and grinding barley unaltered. Flour steady at 23s to 24s.—FEAR, COLEBROOK AND CO., LTD.

Wisbech, Saturday.—Very little grain offering. Wheat a very slow trade. Reds, 30s to 30s 6d Spring corn unchanged.—JAMES FLETCHER.

Wolverhampton, Wednesday.—There was a very quiet market. Quotations: Wheat, new, 12s 6d to 13s per 216lb.; oats, 16s to 17s; beans, old, 16s to 17s 6d; new, 15s to 16s 6d per 196lb.; barley, 25s to 40s per 448lb; maize, new, 26s to 27s; old, 29s 6d to 30s 6d per 480lb.

Worcester, Saturday.—Wheat trade very quiet, and the few samples on offer appear to be quite equal to all requirements. Sales to-day could only be effected at a reduction. Oats and beans steady. Other feeding stuffs dull and easier.

Worksop, Wednesday.—Very dull market, very little grain on offer, and prices practically unchanged. White wheat, 31s to 32s 6d.; red wheat, 31s to 32s; grinding barley, 27s. to 28s; white oats, 26s to 28s; black oats, 25s to 26s round maize, 25s to 26s 6d per quarter.

York, Saturday.—Wheat is slow, but the very small quantity on offer prevents any less money being taken. Oats quiet.

FOREIGN.

Hamburg, Saturday.—Market quiet for all articles except feeding barley, which is in demand for prompt and later delivery Arrivals of wheat are heavy, but they are not depressing the market, though trade is quiet. Hard winter, No. 2, prompt, is offering at 28s 3½; August shipment at 27s 9d; Northern spring, No. 1, at 27s 6d; Northern Duluth, No. 2, at 27s 3½ per 480lb; Walla Walla, at 29s 3d to 29s 6d per 500lb. There is some demand for rye near at hand for the North. American Western, No. 2, is selling at 24s 3½ to 24s 6d, 9.15-20; Nikolajef floating at 23s 6d, 9.15-20; South Russian, August-September shipment, is offering at 20s 9d per 480lb cif. Malting barley: Latest reports from Bohemia say that the young crop is rather backward in growth and thin on the ground, while it is already shooting into ear, and good weather is now urgently required to improve the prospects. Reports from the Saale district are still satisfactory. The plant is strong in stem, owing to slow development, and will not be in danger of being laid. Russian and Danubian feeding barley near at hand is scarce, and selling at 19s to 19s 3d; August-September shipment is offering at 16s 9d per 400lb cif. Maize quiet. River Plate floating is offering at 20s 6d; June-July shipment is selling at 19s 9d per 480lb cif. Rye terms: Odessa maize, prompt shipment, 20s 3d cif; September-December, 19s 6d; mixed maize, December-March, 20s 9d per 480lb cif.—JOHN TABLOCK.

Paris, Wednesday.—Native wheat.—There is the same apathy in the trade; farmers, before lowering their prices, are naturally awaiting some definite opinion upon the crop outlook, and holders are asking unapproachable prices for their produce, consequently the tendency remained firm during the seance with a little brisker inquiry than of late, if not on millers' part, at least on the side of merchants, who are becoming more sensible to the unfavourable accounts now disseminated respecting the growing wheat. In short, prices were unchanged for the secondary sorts, which were rather freely offered, but fully 6d. per quarter dearer for the finer descriptions. Choice Red Wheat, 37s 10d to 38s 3½; average, 36s 11d to Term wheat opened with a regular trade and a firm 37s 5d; and White Wheat, 38s 9d to 39s 7d per 480lbs. tendency at 5c. to 10c. advance, and closed with a further improvement of 10c. to 15c. at the following rates: June, 39s 2d to 39s 7d; July, 39s 7d to 40s; July-August, 38s 9d to 39s 2d; and Sept.-Dec., 36s 1d to 36s 6d per 480lbs. Flour.—Fleur-de Paris.—The market opened firm at 5c advance, but closed 15c. to 25c. dearer at the following prices:—June, 28s 5d to 28s 8d; July, 28s 8d to 28s 11d; July-August, 28s 3d to 28s 11d; and Sept.-Dec., 27s 8d to 27s 11d per 280lb. Consumption Marks Flour. In spite of the rise in Mark Cobbett, dealers and bakers reckoning upon the return of fine weather, are still disinclined to operate, and only purchase in proportion to their requirements. Quotations are as follows: Choice Marks, 31f. 50 to 32f. (31s 11d to 32s 5d); First Marks, 31f. to 31f. 50 (31s 5d to 31s 11d); Good Marks, 30f.50 to 31f.25 (30s 11d to 31s 8d); Ordinary Marks, 29f.75 to 30f.50 per 100 kilos (30s 2d to 30s 11d per 280lb.). Rye. While last year the crop gave satisfactory results, this year, on the contrary, the cereal has suffered from the inclement weather since May, and whatever happens the yield will be deficient, and the quality will feel the effects of the absence of sunshine and warmth, the earing and blooming being effected in bad conditions. Offers are most limited, and prices firmly held at 26s 1d to 26s 6d per 480lb. Oats. The crop has been greatly benefited by the recent alternations of humidity and warmth, and the fields now look very well. This cereal was rather firm in the provinces, but here, after a few upward movements, the feeling has become very quiet. Quotations are as follows: Grey Beance, 23s 6d to 23s 9d; White, 22s 11d to 22s 7d; Red, 23s 2d; Black from the Central provinces, 24s 1d; White Libau is quoted 22s 7d to 22s 11d; Black, 22s 11d to 23s 2d; and Swedish, 24s 8d per 320lb. Barley.—This cereal looks fairly well, but the return of fine weather would much improve its aspect. Transactions are still wanting in animation and prices remain stationary, and quotations, therefore, are merely nominal, as follow: — Malting, 17f.50 to 17f.75 (25s 4d to 25s 9d); Grinding, 17f. to 17f.25 (24s 8d to 25s); and Feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lb.).

CORN STATISTICS.

IMPERIAL AVERAGES.

Statement showing the Quantities sold and average price of British Corn, Imperial Measure, as received from the Inspectors and Officers of Excise in the week ended June 14, 1902, conformably with the Act of the 45th and 46th Victoria, cap. 37.

MANURES.

Liverpool, Friday.—The weather is exceptionally cold for this period of the year, and warmth and sunshine are much needed by agriculturists. All fertilisers are quiet, and values of nitrate of soda are again lower, £8 10s to £8 12s 6d per ton, according to quality, being the current rates, whilst later on in the year it is not improbable that artificial manures will be sought for in this market for export to a greater extent. The trade in feeding stuffs is quiet, and values are without change, excepting American decorticated cotton cake, the best qualities of which are 2s 6d dearer, owing to scarcity. Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £8 12s 6d per ton; East India Bone Meal, fair to prime, in bags, £4 10s to £4 15s per ton; Kainit, prime 23 per cent., in bags, £2 7s 6d to £2 8s 9d per ton; Palm Nut Cake, prime, in bags, £5 15s per ton; Linseed Cake, American thin oblong, prime, in bags, £7 2s 6d to £7 5s per ton; Linseed Cake, English, prime, in bulk, £8 2s 6d to £8 7s 6d per ton; Linseed Cake, foreign, round, prime, rich in oil, in bags, £8 per ton; Cottonseed Cake, N.A. decorticated, prime, in bags, £7 3s 9d to £7 7s 6d per ton; Cottonseed Cake, English, decorticated, prime, soft, in bags, £7 5s to £7 10s per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 10s to £4 15s per ton; Cottonseed Cake (crushed), 20/25 per cent. oil, prime, in bags, £7 10s to £7 12s 6d per ton; Maize Germ Meal, prime, in bags, £5 15s per ton; Corn Oil Cake, 10/13 per cent. oil, prime, in bags, £6 5s per ton; Rice Meal, Rangoon, as imported, in bags, £5 to £5 2s 6d per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 12s to 12s 6d per 240lb; Linseed, fine bold feeding, in bags, £3 2s per qr, 416lb; D.N.S. Brand Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 8s to £2 7s per ton at depot; D.N.S. Brand Superphosphate of Lime, guaranteed, 30 to 31 sol.; in bags, £2 10s to £2 12s per ton at depot; Superphosphate of Lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton at depot.—H. Jones Langar and Co.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6½d to 7½d; clover, 6½d to 7½d; straw, wheat, 5½d to 6d; ditto oat, 4½d to 5½d per stone.

Whitechapel, Saturday.—Arrivals liberal, but demand very slow, and only small business. Values without alteration. Best clover, 95s to 110s; inferior, 80s to 90s; specially picked hay, 117s 6d; good, 110s; inferior, 80s to 95s; mixture and sainfoin, 95s to 105s; straw, 30s to 45s per load.

THE BALTIC.

Mr. Seth Taylor, the well-known miller and operator on the Term Market, has been elected Chairman of the "Baltic," and in this capacity has had the privilege of formally congratulating the King and Lord Kitchener on the Peace. He has received a gracious reply from His Majesty and a very hearty telegram from the distinguished general.

The London Corn Trade Association notify us that the following standards—Choice White Kurrachee wheat, February shipment; soft White Kurrachee wheat, February shipment; soft Red Kurrachee wheat, February shipment; choice Red Kurrachee wheat, February shipment; Bombay lentils, February shipment; Kurrachee maize, February shipment; Calcutta urhurseed, February shipment; White Calcutta peas, February shipment; Calcutta gram, February shipment, are now available for arbitration purposes, and also for reference. Small standard samples can be obtained at 2, Lime Street Square on payment of a moderate fee per sample. Standards for lentils, gram, and urhurseed are useful additions to trade convenience.

The cargo market was steadier on Friday and Saturday than it had been on the three preceding days. Sales included Californian wheat at 30s., Australian at 29s. 3d., Argentine at 29s., No. 1 Northern at 27s. 3d., No. 2 Hard Winter at 27s. 9d., Hard Manitoba at 28s. 9d., Red Kurrachee at 28s. 3d., and No. 1 Bombay at 30s. 9d. per quarter. Maize fetched 20s. 6d. for a cargo of Danubian, and 20s. for one of La Plata. Barley realised 17s. for October shipment of Russian new crop. Californian brewing (new crop) was offered at 24s. for August shipment. Other cargo sales of the week have embraced White Libau oats for prompt shipment at 19s., Black at 18s., Kiludiced Riga at 18s. 3d., Petersburg at 18s., Danubian for October shipment at 14s. 6d., and American for July shipment at 19s. 9d. As yet American New Crop for autumn shipment is not on offer. Linseed has realised 52s. 9d. for a calcutta cargo, rapeseed 38s. 3d., Brown Cawnpore and Bombay cottonseed £4 18s. 9d. for July shipment.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were—8 wheat (1 Melbourne, 2 Portland (O.), 1 Rosario, 4 San Francisco); total 8.

The sailings of grain and seed-laden vessels from ports-of-call for the week were—17 wheat (2 Birkenhead, 1 Laurvig, 1 Limerick, 1 Havre, 3 Hull, 1 Laurvig, 1 Limerick, 1 Liverpool, 1 London, 2 North Shields, 1 Penzance, 1 Sharpness); 1 flour (Liverpool); 1 linseed (Boston); total 19.

Since January 1st, 1902, the total arrivals have been—196 wheat, 5 flour, 20 barley and wheat, 3 maize, 8 barley, 2 beans, 3 linseed, 4 canarysced; total 241.

Last year during the same time the arrivals were—157 wheat, 4 flour, 7 barley and wheat, 14 barley, 3 beans, 4 peas, 1 peas and beans, 2 locust beans, 3 canaryseed, 3 valonea; total 198.

POULTRY AND GAME.

Smithfield, Saturday.—Fairly good supplies, but dull sale, prices being weak. Fowls: Yorkshire, 2s 9d to 3s 6d; Essex, 3s to 3s 3d; Boston, 2s 6d to 3s; Surrey, 3s 6d to 4s 3d; Sussex, 3s 3d to 3s 9d; Welsh, 2s 6d to 3s; Irish, 2s to 2s 6d; turkeys, cocks, 5s to 6s; hens, 3s to 4s; goslings, 4s to 5s; Aylesbury ducklings, 3s to 4s; country, 2s 3d to 2s 9d; Bordeaux pigeons, 9d to 11d; feathered, 7d to 9d; quail, 10d to 1s 3d; wild rabbits, 7d to 9d; tame, 9d to 1s 3d each; Australian, 8s 6d to 15s 6d per dozen. Russian game: Black game, 1s 2d to 1s 4d; partridges, 1s 3d to 1s 6d; ptarmigan, 1s to 1s 2d each.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, S.E., write that the quietude customary at this season now characterises the trade for farm seeds. Meantime, a little business has been passing in the new Chilian red clover-seed now arriving; the prices realised for same have been moderate, and the quality of the seed proves good. Trefoil, on account of bad crop prospects, is held for more money. Transactions in mustard and rape seed have been small and unimportant. A few sowing orders, late as it is, still drop in for spring tares. French trifolium, for shipment next month, can now be obtained at reasonable figures. Blue peas and haricot beans keep steady. The Board of Trade returns give the imports last month into the United Kingdom of clover and grass seeds as 3,516 cwts., value £7,480, as against 2,633 cwts., value £5,654 for May, 1901.

WOOL.

London, Saturday.—English—per pk. of 240lb.:—Fleeces S. Dn Hggs., £7 to £8 10s; half-bred hoggs, £6 10s to £6 15s; half-bred wethers, £5 10s to £6; Kent fleeces, £5 10s to £5 15s; South Down ewes and wethers, £7 to £8 10s; Leicester ditto, £5 to £5 10s. Colonial, per lb.—Vic.—Fleece super., 1s 8d to 1s 11d; scoured good, 1s 9d to 1s 10d; scoured average, 1s 8d to 1s 8½d; greasy, average to fair, 11½d to 1s 0½d; N.S.W., scoured average, 1s 5½d to 1s 6½d; greasy average, 9d to 10d; S. Aus., greasy average, 7½d to 8d; N.Z.—Scoured average, 1s 6½d to 1s 7½d; grease average, 9½d to 10½d; Cape scred. sup., 1s 6d to 1s 7d; fleece average, 7½d to 8½d; greasy average, 6½d to 7½d; Natal—Scoured, 1s 1½d to 1s 2½d; greasy average, 7½d to 8d; cross-breds—grs.—Vic. good to supr., 11½d to 1s 0½d; New Zealand fine, 9½d to 10½d; New Zealand medium, 6½d to 7d; New Zealand coarse, 4½d to 5½d.

Canterbury, Saturday.—Trade is very slow indeed, sellers, refusing 5d per lb, a few lots have been sold at 5½d per lb, but growers appear to be in no hurry to sell their stock.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The low temperature has been very adverse to the growing wheat, but a liberal rainfall has greatly improved the prospects of the hay, and this has reacted in a depressing manner on the value of spring corn. The news from France is more favourable, but is only official up to the 6th inst., since when eight wet and chilly days must have altered conditions rather seriously. The American Bureau report, issued on the 11th, shows that winter wheat, the cutting of which has commenced, is reckoned at a bigger crop than in 1900, but a much smaller one than in 1901, the following being the figures:—

	Bushels.
1902	340,000,000
1901	423,000,000
1900	330,000,000
1899	296,000,000
1898	382,000,000

These returns and estimates relate to winter wheat only. The spring wheat is reckoned as promising about 4 per cent. above the average on an area 12 per cent. below the mean. Thus, spring wheat is not likely to make up for the deficiency in the winter crop. The weather of April may render a spring wheat sowing in the Dacotas almost impossible, and 1,305,000 acres decline in the area is attributed to this one region.

A non-official estimate puts the American wheat prospects, including spring wheat, at 640,000,000 bushels, but this appears to be as much as 100,000,000 bushels above what the Government reports would indicate. The New York market is stationary, and appears undecided in its views of the year for wheat.

With respect to oats, the situation is different. The preliminary crop as follows:—

	Bushels.
1902	899,700,000
1901	776,000,000

We must therefore be prepared to find America entering the arena with offers for October and subsequent shipment at substantially under present terms. The acreage shows 115,000 acres increase, which is less than anticipated.

The yield of barley is expected to exceed the very short crop of 1901 by fully ten per cent, and there is four per cent. improvement in the anticipations of the rye crop. If these forecasts be accurate, Sir Michael Hicks-Beach will find prices ebbing after harvest, even as he anticipated in mid-April.

At that date the prophecy savoured of the hazardous, but circumstances have since then run in the Chancellor's favour. The poor promise of the home crop is the chief drawback to the existing situation, but a fine July and August might give up nearly average harvests, even if the ingathering is now found to be exceedingly late.

Corrected returns of May imports thus compare with figures for April:—

	May.	April.
Wheat (qrs.)	2,124,000	1,447,000
Flour (sacks	689,000	480,000
Maize (qrs.)	937,000	622,000
Barley (qrs.)	377,000	321,000
Oats (qrs.)	606,000	394,000
Beans (qrs.)	38,000	31,000
Peas (qrs.)	35,000	26,000
Linseed (qrs.)	186,000	279,000
Rapeseed (qrs.)	11,000	29,000
Cottonseed (qrs.)	150,000	305,000

The falling-off in receipts of oilseed has steadied that market, which the time of year might otherwise have caused to favour buyers. The market for the first season staples must be stated to have followed in the main on the returns of arrivals.

The imports of the United Kingdom last week were as follows:—

Wheat: 654,000qrs.; a very heavy supply.
Flour: 169,000qrs.; an average supply.
Barley: 133,800qrs.; a fair supply.
Oats: 165,400qrs.; a trifle over an average.
Maize: 240,016qrs.; a good supply.

The total arrivals from abroad since 1st September are now returned as follows:—

Wheat: 12,751,000qrs.; a full average.
Flour: 5,983,000 sacks; less than usual.
Barley: 5,783,000qrs.; a good supply.
Oats: 4,925,000qrs.; less than usual.
Maize: 8,173,000qrs.; a very short supply.

The good supply of barley by no means makes up for the deficiencies in oats and maize.

The following are the quantities of wheat at present on passage to the United Kingdom. The total, though still very large, is steadily in process of diminution:—

	Qrs.
Californian	1,750,000
American	600,000
Argentine	250,000
Russian	70,000
Australasian	485,000
Indian	260,000
Various	15,000
Total	3,430,000
A week ago	3,475,000
A year ago	3,615,000

Of other staples than wheat the following quantities are on passage now as compared with a year ago:—

	1902.	1901.
Maize, qrs.	920,000	1,080,000
Barley, qrs.	245,000	320,000
Beans, qrs.	21,000	17,000
Linseed, qrs.	265,000	205,000
Rapeseed, qrs.	24,000	11,000
Cottonseed, qrs.	42,000	56,000

There are no returns of oats or peas on passage, but in each case the total is known to be much below the average.

The London wheat average shows 10d. decline on the fortnight, but it is difficult to quote any good samples or types as lower on the period. No barley average has been struck in London since May 28th.

Prices per cental thus compare:—

6s 6d commands good American spring wheat, English chicken wheat, Argentine wheat.
6s 5d commands Calcutta wheat.
6s 1d commands Californian barley.
5s 11d commands American maize.
5s 3d commands Argentine maize, good middlings, Roumanian rye, Egyptian cottonseed.

No English milling wheat, no English oats, are to be obtained at 6s. 6d. or under. The cheapest maize in the market is Russian, at 4s. 8d. per cental. Locust beans (Portuguese) are about as cheap as anything on the present market. These, if reduced to the cental, would work out at about 3s. 9d. Decidedly dear articles are English oats, which make 7s. 6d. to 8s. per cental, and New Zealand oats at 8s. to 8s. 2d. per cental.

The principal shipping centres last week displayed considerable activity. America shipped 374,000qrs. of wheat, 104,000 sacks of flour, and 27,000qrs. of oats, and Argentina sent off 206,000qrs. of maize, 39,000qrs. of wheat, and 37,000qrs. of linseed. There were 11,000qrs. of wheat shipped from Uruguay and 6,000qrs. of barley from Chile.

Russia exported 246,000qrs. of wheat, 137,000qrs. of barley, 25,000qrs. of oats, and 115,000qrs. of maize, while Roumania and Bulgaria shipped 320,000qrs. of maize, 121,000qrs. of wheat, and 11,000qrs. of barley. India shipped 79,000qrs. of wheat and 60,000qrs. of linseed. Australasia shipped no grain, America no barley. The exports of cottonseed from Egypt were 2,242 tons.

POTATOES.

Borough, Saturday.—Supplies light, but trade quiet, values being firm. Scotch maincrops, 90s; Lincoln Up-to-Date, 65s to 70s per ton; New Jersey, 7s 6d to 8s; Teneriffe, 6s to 8s; Cherbourgs, 6s 6d to 7s; St. Malos, 7s 6d to 8s per cwt.

Southwark, Saturday.—During the past week the markets have been well supplied with potatoes; the trade has been steady, and prices of old potatoes of prime quality and samples have improved. The following are this day's quotations:—Lincoln Up-to-Dates, 65s to 75 per ton; Blackhead Up-to-Dates, 60s to 65s per ton; Forfar and Fife maincrops, 70s per ton; Forfar and Fife Bruce, 60s to 70s per ton; Jersey flukes, 155s to 165s per ton; Cherbourg flukes, 135s to 145s per ton.—R. G. BROWN.

Spitalfields, Saturday.—Arrivals again small, and old potatoes experienced better attention, new descriptions being steady. Best Lincoln Up-to-Dates, 65s to 70s; Blackland, 55s; Wisbech, 60s to 65s; Scotch, 65s; Scotch maincrops (grey soil), 60s; Lincoln maincrops, 60s to 70s; Reading Giants, 50s per ton; New Cherbourgs, 7s to 7s 6d; St. Malo, 7s 9d to 8s; Jersey, 8s; Teneriffe and Canary No. 2, 8s 6d; No. 3, 6s 6d per cwt; Lisbons, 3s 9d per box.

Irish Live Weight Quotations.

(Department of Agriculture and General Instruction for Ireland.)

The following returns are those of actual sales made in Robson's Cattle Mart, Belfast, the stock being weighed either before or after sale, for the week ending June 12th, 1902.

THIS DAY'S MARKETS.

MARK LANE, MONDAY

[FIRST REPORT.]

Wheat ears from Sussex, the Isle of Thanet, and from Suffolk were in evidence at Mark Lane to-day. They were well out, but were quite sixteen days behind the average date of first appearance. Farmers speak of wheat as badly lodged on the heavy lands. The demand for English wheat is equal to taking the very modest supply at full prices, but foreign sorts to-day were fully 6d. lower on the week. The actual tone of business, however, was improved from the 11th to the 13th insts. Foreign barley was weak on spot, mainly owing to lower forward prices quoted by "Baltic" operators. English was hardly offered. English oats were as dear as ever, but foreign were 6d. to 1s. cheaper, largely owing to the Government unloading stores bought for South Africa. Maize was 3d. cheaper for round and yellow, but not for flat corn. Beans, peas, and millet favoured buyers, and rice tended in the same direction.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH A LITTLE INCREASED CONFIDENCE ON THE PART OF HOLDERS, THE WEATHER IMPROVING BUT SLOWLY AND THE EFFECT OF LARGE ARRIVALS DIMINISHING WITH THE SALE, EVEN IF AT SOME SACRIFICE, OF THE EXCESSIVE IMPORTS.

THE FLOUR TRADE.

MARK LANE, MONDAY.

American flour to-day was in fair request at 25s. for May Blossom, 23s. 9d. for Security, 23s. 3d. for Guinea Gold, 23s. 6d. for Kenilworth, and 22s. 9d. for Uniform, all Minnesota types. Kansas flour commanded 23s. 6d. for Royal Lily, and 24s. 3d. for Success. Best Oregon made 23s. English flour was 6d. down for country sorts, and London descriptions, though not quotably cheaper, were very hard to place at currencies. The London Flour Millers' Association, which has not modified its prices since the Budget rise of 1s. 6d. per sack, is now grotesquely out in its quotations, the early modification of which is therefore a tolerably safe prediction. A few samples of fine Russian flour made the good price of 28s. per sack to-day.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
June 9 11 a.m.	5 10	5 11	6 3
4 p.m.	5 10	5 11	6 2
June 10 11 a.m.	5 10	5 11	6 2
4 p.m.	5 10	5 11	6 2
June 11 11 a.m.	5 10	5 11	6 2

June 13 11 a.m.	5 10	6 0	6 2
4 p.m.	5 10	6 0	6 2
June 14 noon	5 10	6 0	6 3
To-day, noon	5 11	6 1	6 3

The forward market for maize was steady at 4s. 5d. per cental for July delivery.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the Finance Bill being passed, the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement, however, the Acts of 1876 and 1901 throw the burden on the buyer, a fact which those who operate on these prices without being members of the Term Market would do well to note.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100lb. Maize, when quoted, is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—The tendency of prices is again easier, and spot flour is being offered, especially by re-sellers, at a further reduction of 6d. per sack. Offals.—The demand for bran is now languid as usual at this season of the year, and prices for most qualities have further declined about 2s. 6d. per ton.—GREENHILL BROTHERS (Belfast).

Flour.—The market has improved this week, and American millers are not such anxious sellers for new crop shipment. Prices have consequently improved somewhat, but buyers here are still afraid to operate. Spot flour is a slow sale on account of the premium asked over new crop quotations. Grain.—Maize is 3d. to 4½d. per boll lower to arrive. Pease and beans slow. Oats and oatmeal very firm. Millstuffs.—Bran, 2s. 6d. per ton lower. Thirds unchanged.—MCKINNON AND MCDONALD (Glasgow).

Flour.—Flour has met a very quick demand to-day, at about last Monday's prices.—T. S. MEDILL AND SONS (Mark Lane).

Milling Offals.—Bran and pollard are again 2s. 6d. per ton cheaper. Middlings are slow, but unchanged.—JOHN BAWCOMB AND CO. (Mark Lane).

Wheat and flour arrivals are large. Trade is firmer, and prices are 3d. per quarter higher for wheat. Flour unchanged. Maize and barley sell slowly at late prices. Oats are dull; fine qualities are 1s lower. Common qualities, being in small supply, are 3d. lower.—COVENTRY, (Mark Lane).

In spite of the continued unsettled weather, factors fail to establish a rise in arrived wheats, of which imports are heavy. Maize quiet and unchanged.—W. WOODS AND CO. (Mark Lane).

FEEDING STUFFS.

London, Monday.—Linseed cake: Trade on spot so slow that lower prices must be taken to induce sales; forward positions steady. Decorticated cottoncake and meal strong from scarcity; undecorticated firmer. Linseed: Calcutta is 1s down on the week; very little trade.

ROBERT AND JOHN HEWTSON.

HOPS.

Canterbury, Saturday.—The rain of the past week has helped on the growth considerably, and the plant is making fair progress. Warm weather though is greatly needed, because the present conditions have a great tendency in favour of the fly and lice, which are exceedingly plentiful in the plantations.

Worcester, Saturday.—Our market is firmer to-day for all classes of hops, owing to the very unsatisfactory reports to hand from the plantations. The growing plant is very backward, and in most places covered with blight, and unless we get a change to hot, sunny weather there is every prospect of a very short crop indeed.—PIERCY AND CO.

London, Monday.—W. H. and H. Le May report:—There has been a considerable clearance of all descriptions of hops during the past week. Stocks are now smaller than they have been for very many years. The plantations are in a very unsatisfactory state; the temperature is far too low, and there is a general attack of Aphis blight.

PROVISIONS.

London, Monday.—Bacon: The arrivals from Ireland last week were 2,225, and from foreign ports 11,524 bales of bacon. The bacon market became steadier last week on a slightly improved demand, and prices showed but little alteration from the previous week. Butter: The butter market was steady, and prices inclined to be stronger, but otherwise showed little alteration. Lard: Lard steady and unchanged.

CORK BUTTER.

	Ordinary. Firsts.	Seconds.	Thirds.	Fourths.	Mild Cured Firkins. Superfine.	Fine.	Mild.	Firkins in Market

CATTLE.

Metropolitan Market, Islington.

Monday, June 16th, 1902.

	British.	Total.	June 17, 1901.
Beasts	1,680	1,680	1,260
Sheep and lambs	10,610	10,610	10,160
Calves	10	10	10
Milch cows	50	50	70

Quotations per 8lb. (sinking the offal).

	Inferior.	Second.	First.
Beasts	3s 6d	4s 8d	5s 6d
Sheep	3s 10d	5s 4d	6s 2d
Lambs	5s 4d	5s 8d	6s 4d

Milch cows, per head, £15 to £22.

British arrivals include as follows:—Scotland, 5; Eastern counties, 584; Midland, Home, and Western counties, 667; Devon, 30; Ireland, 374.

In the beast market to-day the supply numbered 400 more than on Monday last, that included a few more from Midland Counties, Norfolks numbering much about the same. Trade for fat beasts proved dull and dragging, rates somewhat favouring the buyer. The finish proved extremely heavy, a few being left unsold. The Irish arrivals included 204 stores, three-year-olds being quoted at £16 10s to £17 per head, and yearlings, £6 10s to £7. There being less demand by country buyers for butchering cows, lower rates had to be accepted; the few fat bulls found buyers at late rates.

The following are top quotations per 8lb (sinking the offal)—:

	To-day.	June 17, 1901.
Devons	5s 4d to 5s 6d	4s 5d to 4s 6d
Herefords	5s 4d to 5s 6d	4s 4d to 4s 6d
Norfolks	5s 3d to 5s 4d	4s 4d to 4s 6d
Lincolns	4s 10d to 5s 2d	4s 2d to 4s 4d
Irish	5s 2d to 5s 4d	
Fat cows	4s 4d to 4s 6d	3s 8d to 3s 10d

There was an increase of 2,900 in the number penned in the sheep market. Trade for both wethers and ewes was dull and dragging, the former at 2d and the latter at 4d per 8lbs less money, a difficulty being experienced in effecting a clearance. The weather being unfavourable for lambs, lower rates had to be accepted, even for the very choicest.

Undermentioned quotations are at per 8lbs (sinking the offal), and are for the best of each class penned:—

	To-day.	June 17, 1901.
8st Downs	6s 0d to 6s 2d	5s 2d to 5s 4d
9st Downs	5s 8d to 5s 10d	5s 0d to 5s 2d
10st Half-breds	5s 4d to 5s 6d	4s 7d to 4s 8d
10st Yorkshires	5s 2d to 5s 4d	4s 4d to 4s 6d
12st Lincolns	5s 0d to 5s 2d	4s 4d to 4s 6d
10st Irish	5s 2d to 5s 4d	— —
10st Down ewes	4s 4d to 4s 6d	3s 10d to 4s 0d
11st Half-bred do	4s 0d to 4s 2d	3s 8d to 3s 10d
5st Down lambs	6s 2d to 6s 4d	5s 2d to 5s 4d
6st Half-bred do	5s 6d to 5s 8d	5s 8d to 5s 10d

Calves not worth quoting.

London (Central), Monday.—Good supplies; trade slow. Beef carcasses, 4s 8d to 4s 10d; hindquarters, 5s to 5s 4d; roastings, 6s to 6s 4d. Sheep—Ewe, 3s 8d to 4s; wether, 4s 8d to 5s; hindquarters, ewe, 5s to 5s 4d; wether, 6s to 6s 4d. Pigs, large, 3s 4d to 3s 8d; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 955; sheep and lambs, 859; pigs, 590; horses 34. Beef, 8s 9d to 9s 9d; mutton, 7s 7d to 9s 11d; lamb, 10s; pork, 6s 6d to 7s; fat and store cattle, sheep and pigs good demand. Milch cows fair show, good demand. Prices, £14 to £24.

FOREIGN CATTLE.

Deptford, Monday.—Beasts, 1,306. To-day's supply, compared with Monday last, numbered almost exactly the same, and consisted of 814 from the United States and 492 from Canada. Trade, owing to the unsteady state of the dead meat market, was of a slower nature, carcass butchers wanting to buy on easier terms. Late rates were, however, upheld, a practical clearance being made at following quotations per 8lb—offal given in:—Best States, to dress from 680 to 720 lb, 5s 4d, and occasionally 5s 5d; Canadians were quoted at from 5s 2d to 5s 4d. Sheep numbered 655 from the United States, which met with a dull and heavy trade at from 4s 4d to 4s 6d per 8lb. On Saturday the supply consisted of 1,180 beasts from the United States, which, with a slow trade, were quoted at from 5s 2d to 5s 4d, and occasionally 5s 5d per 8lb—offal given in.

Liverpool, Monday.—Demand slow, and prices, except for very well-finished cattle, rather lower. Sheep trade slow, and prices easier; middling kinds in particular meeting a worse trade. Lambs also in favour of buyers. Beef, 6d to 8d per lb; mutton, 6½d to 9d per lb; lambs, 8d to 9½d per lb. At market, 1,007 cattle and 13,479 sheep.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are selling rather well at the lower prices accepted last week. Maize is steady, with a fair inquiry. Barley and oats are steady for near, but weak for autumn dates. Oilseeds are slow, but steady.

BUSINESS DONE.

WHEAT.—No. 1 Northern Manitoba, 27s 6d, on passage; No. 2 Northern Manitoba, 26s, on passage; No. 2 Club Calcutta, 29s 9d, on passage; Californian, 29s, on passage; Australian, 28s, on passage; South Australian, 29s, on passage; Argentine, 29s, on passage; Russian Azima, 30s, prompt shipment.

BARLEY.—Azoff, 17s, October shipment; Odessa, 17s 9d, August shipment.

OATS.—White Konigsberg, 21s 3d, June shipment; white Canadian, 19s 9d, June shipment.

MAIZE.—Danubian, 21s, on passage; Turkish, 20s 9d, on passage; Argentine, 19s 6d, on passage; Argentine, 19s 3d, prompt shipment.

LENTILS.—Egyptian, 31s, July shipment.

CANARYSEED.—Turkish, 36s, prompt shipment.

MILLET.—Smyrna, 31s, prompt shipment; Italian, 33s, prompt shipment.

BUCKWHEAT.—French, 26s, prompt shipment.

LINSEED.—Morocco, 58s, prompt shipment; Dutch, 58s, prompt shipment.

SEEDS

London, Monday.—We have absolutely nothing to report about the seed trade. Business is almost at a stand, and prices quite unchanged.—JOHN PICKARD AND CO.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

We note this week, so far as the British supply of beasts, chiefly due to heavier arrivals of fat butchering cows and stores from Ireland, a few Runts and Herefords were on Monday also on sale, Norfolks being shorter in number, as is expected to be the case as the weeks progress. For fat beasts of both prime and second quality trade was of a slower nature owing to the higher rates both asked and obtained; this remark applies to both market days at Islington. Of butchering cows and bulls the supply was larger, and there being less demand for the former, less money by fully 2d. per 8lb. had to be accepted. At Deptford markets were held on Monday, Wednesday, and Saturday, the supply being a fair average one both in regard to number and quality, more than half being States cattle. Trade ruled very firm and steady, even at an advance of from 2d. to 4d. per 8lb. The total number of beasts offered for sale on both markets was 4,844, as against 5,077 during the previous week. The supply consisted of 1,410 British (increase 255) and 3,434 foreign (decrease 488); these latter comprised 2,371 from the United States and 1,063 from Canada. The following were the top rates paid per 8lb. (sinking the offal):—85-stone Polled Aberdeens, 5s. 6d.; 90-stone Polled Norfolks, 5s. 4d.; 100-stone Shorthorn ditto, 5s. 2d.; 100-stone Lincolns, 5s. 2d.; 90-stone Dublins, 5s. 4d.; 90-stone Waterfords, 5s.; 85-stone States, 5s. 4d: to 5s. 5d.; 90-stone Canadians, 5s. 2d. to 5s. 4d.; 100-stone fat cows, 4s. 6d.; 100-stone fat bulls, 4s. 2d.

The sheep trade was entirely confined to the Islington, the number penned, including lambs, being 11,180, as against 11,440 during the previous week. Both heifers and ewes met firm, steady trades at an advance of 2d. for the former, and from 2d. to 4d. for the latter. The lamb trade, owing to the cold weather, was extremely slow, with a slight downward tendency in value. Best pens made, per 8lb., as follows:—8-stone South Downs, 6s. 2d.; 9-stone Downs, 6s.; 10-stone ditto, 5s. 10d.; 10-stone halfbreds, 5s. 8d.; 10-stone Yorkshires, 5s. 4d.; 12-stone Lincolns, 5s. 4d.; 10-stone Down ewes, 4s. 8d.; 11-stone halfbred ditto, 4s. 4d.; 5-stone fat Down lambs, 6s. 6d. to 6s. 8d. The calf trade was dull, but late rates governed all transactions; best on offer made 5s. 8d. per 8lb.

Trade in the West.

The late rains have had a very stimulating effect on the pastures. With the improved keep, prospects, as far as immediate wants are concerned, the demand for stores has increased very materially. In spite of the by no means too encouraging outlook, prices have not appreciably suffered so far; on the contrary, with a quick demand for stores, sales generally rule in the sellers' favour. Grazing bullocks, as is well known, are very scarce throughout the country, and this, coupled with plentifulness of keep in almost every district, has imparted an exceptionally buoyant tone to the trade, not only for graziers, but equally so for milch beasts, from £18 10s. up to £23 15s. being frequently made now for really good dairy bullocks suitable for town purposes, young heifers of a good stamp, and even for cows with reliable udders. This refers, of course, to the very best types; the more ordinary runs commanding an equally ready market at £16 to £17 15s., and the older bullocks at from £11 10s. to £15 10s. Young, fresh-condition barreners soon coming into beef are quickly bought up at from £24 to £32 per pair, and older bullocks from £17 5s. to £22 or £23, and this is matter for little surprise, seeing the steady way in which beef is creeping up in value, good steers and heifers selling now at 13s. per score and over, as they stand in their pens, whilst cows and anything at all like quality in beef sell from 11s. to 12s., only very rough contract bullocks or old cows being obtainable now on lower terms than we have quoted; in fact, the beef trade is better just now than we recollect for a long time past. And the price by no means affects the sale, the demand being as brisk as ever, with a promise, whilst foreign supplies continue so limited, of a brisk trade till larger offers come to hand. Mutton, too, as a consequence, has evinced greater firmness than for some time past, good wethers of nice weights selling at 8½d. per lb., and more ordinary runs of wethers and ewes from 7d. to 8d., only very poor-class ewes being obtainable in this district at a lower figure than we have quoted. Lamb, though the cold weather is no doubt against business, has hardened in price very materially during the past week, best Downs and cross-breds of nice finish selling up to 10d. per lb. and over; and we expect, with the extra demand in connection with the Coronation festivities, to see prices even higher, that is if the weather settles down at all to anything like favourable conditions. Calves have not been marketing scarcely as well during the past week; still, in view of the prices at present ruling, trade cannot by any means be considered bad, with best calves still making 7½d. up to 8½d. per lb., and seconds 6½d. to 7d. Pigs continue to maintain their value, especially the lighter weights in porkers, which make 11s. per score and over, and baconers 10s. to 10s. 6d.—a very good price indeed for this class of meat. As regards store sheep, buyers are showing less hesitation in speculating than they did recently, when the keep problem was such a serious matter; and, from all we can glean, we think we are justified in quoting wether sheep as well as lamb from 1s. to 2s. dearer than they were; good wethers making up to 48s. each; Down ewes, over 46s.; and lambs, 27s. to 35s. or 36s.—a very satisfactory range, all things considered; for flock purposes, 43s. to 57s. 6d. each, and in one instance 70s. (made by Mr. Keynes at his sale at Chescombe, near Dorchester), 136 four-months producing the excellent average of 57s. 6d.

Trade in Scotland.

The supplies of fat cattle on offer this week have been quite up to the average, and the quality exceedingly good. With a spirited demand on the part of both butchers and dealers, trade has remained very dear, and the extreme prices current for the last two weeks have been easily maintained, any change being in favour of the seller. Fat cows and bulls, which were not forward in such large numbers, have made exceedingly dear prices. The supply of fat sheep has been exceedingly larger. With the improved returns from the south markets and a good attendance of local butchers trade has been better, and a rise of quite 2s. apiece obtained. Fat lambs have been forward in very large numbers, and the quality in a great many cases has been inferior. Trade, except for the very best class, has been stiff, and prices in buyers' favour. Fat calves and pigs a small show, and both met a good market. In the store markets there has been a good number of sheep for the time of year. The best class of hogs met a good inquiry, and were easily sold. Secondary, however, not in much request. Store cattle have been a large and quite the best show that has been offered for many weeks. There was a good demand for bullocks in forward condition of a good class, but the high prices asked by dealers have a tendency to check sales, and a good number have been left unsold. Milch cows rather larger and better show, and the best class met a dearer trade at an advance of 10s. a head. Quotations:—Extreme top price of best cattle per live cwt., 46s. to 49s.; current, from 43s. to 46s.; secondary, from 41s. to 43s.; mutton, from 8½d. to 9½d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

The advance in price of beef and mutton had the effect of creating a very large market last Thursday in Dublin, the number of cattle—2,023—being the biggest June market ever remembered, and showing an increase of nearly 1,000 head on the corresponding weeks of 1901 and 1900. Even with the exceptionally large increase of 638 over the previous week, cattle sold remarkably well, more than maintaining the high figures of previous market. Many stock-owners, realising the fact that it is very unlikely those inflated prices will continue long, are rushing in any cattle at all fit, instead of holding over, as is usual, until autumn. The attendance of English and Scotch buyers was a marked feature of the market, and it is supposed that the approaching Coronation has a good deal to say to the activity. For the best descriptions of heifers and bullocks there was a keen demand, and for other sorts with any pretensions to beef-buying was also brisk. Prime ox and heifer beef sold from 67s. 6d. to 72s. 6d. per cwt., and it was said that some extra choice were sold at 80s. per cwt.; medium made from 60s. to 66s.; and other sorts from 50s. to 57s. per cwt. An early clearance was effected.

Sheep numbered 10,343, an increase of 1,362 over previous week, and, despite the large supply, prices for best sheep might be quoted 1s. per head better in the earlier part of the day; but business slackened off as the day advanced. Home trade wethers were scarce, and one nice lot of two-year-olds made the excellent price of 67s. 6d. each. Coarse ewes plentiful, and rather hard to get rid of. Good lambs met a fair trade; but thin and indifferent difficult to dispose of. Choice wether mutton from 7d. to 7¾d. per lb.; ewe, 6½d. to 7½d.; and inferior from 6d. to 6½d. per lb. Prime large lambs made 38s. to 40s. a head; and small and medium from 16s. to 28s. Best veal was worth from 8d to 9d. per lb., and coarse from 5d. upwards. Milch cows lower in value, and with the exception of choice springers and new milch cows, difficult to sell. A good supply in the pig market, with steady prices and active demand. Best light-weight pigs made from 48s. to 52s. per cwt.; coarse, 42s. to 45s.; and inferior, from 37s. 6d. upwards. An early clearance. The store cattle trade has got a great fillip, especially for cattle in good forward condition.

Mr. Gavin Low held a very large sale, and disposed of some 1,700 or 1,800 beasts. There was a great gathering of English, Scotch, and local graziers, who made liberal investments. Amongst the English buyers was a representative of the Duke of Westminster. Polled cattle sold very well, some lots selling as high as £17 10s. per head. The prices, according to condition, would range from 35s. to 42s. per cwt. on foot.

LONDON.

Islington, Thursday.—A fair supply of beasts for Thursday's market, but consisted largely of fat bulls and rough cattle. The demand proved of a steady nature, prices ruling about unchanged. Fat bulls, 3s 10d to 4s 2d. Fairly good supplies of sheep were penned, and met with fair support at generally late prices. 7¼ to 8-stone Down wethers (clipped), 6s to 6s 3d; 9-stone ditto, 5s 6d to 5s 8d; 10-stone halfbreds, 5s 6d; 10 stone Down ewes, 4s 6d to 4s 8d; 11-stone halfbred ditto, 4s 2d. to 4s 4d. Lambs quiet. 4½ to 5-stone Downs, 6s 6d to 6s 8d; 6-stone halfbreds, 5s 10d to 6s 4d. Calves slow, the best on offer making 5s 4d per 8lb., to sink the offal. No pigs offered. Total supplies—130 beasts, 3,470 sheep, 10 cows, and 110 calves.

London Central, Wednesday.—Supplies fair, and met with steady support at generally firm prices. Arrivals of beef included 35 tons Scotch, 420 Liverpool sides, 1,500 hindquarters, and 600 forequarters American refrigerated. Beef: Scotch short sides, 5s 4d to 5s 6d; long, 4s 10d to 5s; English, 4s 8d to 5s; American, Deptford-killed, 4s 6d to 4s 10d; Liverpool, 4s 6d to 4s 8d; American refrigerated hindquarters, 4s 10d; forequarters, 3s 2d to 3s 4d. Mutton: Scotch, 5s 2d to 5s 6d; English wethers, 4s 8d to 5s; ewes, 3s 8d to 4s; English lamb, 5s to 5s 8d. Veal: English and Dutch, 4s to 5s. Pork: Dutch, 4s to 4s 4d per 8lb.

London (Central). Friday.—Supplies were good, but a subdued demand prevailed, and business made quieter progress. A fair amount of English, moderate of Deptford killed American, 80 tons Scotch, 540 Liverpool sides, 3,500 hind-quarters, and 2,200 fore-quarters American killed constituted the arrivals of beef this morning. Quotations:—Beef, Scotch, short sides, 5s 4d to 5s 6d; long, 5s; English, 4s 8d to 4s 10d; American, Deptford killed, 4s 6d to 4s 9d; Liverpool, 4s 6d to 4s 8d; American refrigerated hind-quarters, 4s 10d to 5s; fore-quarters, 3s to 3s 4d. Mutton: Scotch, 5s 2d to 5s 6d; English wethers, 4s 8d to 5s; ewes, 3s 6d to 3s 8d; Canterbury, 2s 10d to 3s; Wellington: 2s 8d to 2s 10d; Sydney and River Plate, 2s 6d to 2s 7d; English lamb, 5s to 5s 8d. Veal: English and Dutch, 4s to 5s. Pork: English, 4s to 4s 4d; Dutch, 3s 10d to 4s per 8lb.

COUNTRY.

Ashford, Tuesday.—Beef advanced 1s per score, and made 14s in the case of the primest quality. Kent wether mutton made 4s 10d to 5s 4d per stone, and Downs and half-breds up to 5s 10d. Lamb, 6s 8d per 8lb. Pork (roasters) did not exceed 9s per score.

Basingstoke, Wednesday.—At Raynbird and Sons' sale yard there was a fair attendance of buyers to meet a supply consisting of 41 fat beasts, 79 calves, 523 fat sheep and lambs, 213 pigs, and 124 head of dairy and store cattle, for which the following prices were realised: Fat shorthorn steers, up to £25 15s; and heifers to £21 15s; Devon steers reached £24 10s; Kerry heifers up to £20 15s; black polled bull, £20 10s; shorthorn bulls up to £18 15s; prime quality Hampshire Down wethers and young ewes made from 45s to 58s 6d; old ewes, 35s to 40s; rams, 45s to 59s 6d; 3 months old sucking lambs (Downs), 25s to 36s; Cheviots, 23s 6d to 30s 6d; Exmoors, 24s 6d to 29s; Kent ewes, 41s; fat calves, 70s to £5; small, 20s to 45s; fat porkers, 45s to 62s; small, 28s to 42s; store pigs, 12s 6d to 26s 6d; dairy cows up to £21 10s. The show of fat beasts included some excellent Devons and shorthorns, for which there was a brisk trade, and a clearance made at extreme prices. A good show of fat sheep, as regards quality, but short in numbers; an average supply of fat lambs. Fat sheep met a quick clearance at an advance. The trade for fat lambs was slower, but with no material change in values. For the best description of dairy cows there was a good demand; secondary sorts made less money. Store cattle sold readily with a brisk trade. Fat calves met a slower trade. Fat porkers, with a short supply, met a fair trade. Store pigs are wanted, and an easy clearance was made at satisfactory prices. Ruling values:—Prime Devon beasts, 8d to 8½d; ditto shorthorns, 7½d to 8d; bulls, cows, and inferior, 6½d to 7d per lb; best quality fat sheep, 8½d to 9d; second ditto, 7½d to 8d; old ewes, rams, and inferior sheep, 6½d to 7d; three months old sucking lambs, 9d to 10d per lb; fat calves, 7½d to 8½d per lb; fat porkers, up to 11s per score.

Boston, Wednesday.—Store beasts, £12 to £13; strong stores, £14 to £16; in-calf cows, £20 to £22; heifers, £16 to £18; calves, 55s. to 60s each; best beef, 8s 6d to 8s 9d; cow beef, 7s 6d to 8s per stone; best wethers, 7½d to 8d; ewes, 7d to 7½d per lb.; fat lambs, 28s to 34s each.

Braintree, Wednesday.—Trade was brisk at Messrs. Ball's auction mart, and good prices were made, especially in the bullock classes, prime beasts making as much as £27. Fat sheep sold slowly; hogs moderate.

Bury St. Edmunds. Wednesday.—At Messrs. Simpson and Sons' Auction Mart, there was a good show of fat beasts, all of exceptionally prime quality, and a very sharp trade prevailed, at a trifle higher rates, prices reaching up to £28 10s, most of the heavier cattle being bought for the Midland Counties. Short supply of store beasts, which met a decidedly better demand, prices going up to £13 7s 6d for Mr. W. Hervey's polled steers. Very short supply of fat sheep, the supply proving insufficient to satisfy local requirements, and all descriptions were dearer. Rather more fat lambs on offer. These also met a better demand. Good supply of store sheep, for which also trade was brisker than last week. Mr. J. E. Brand's Suffolk ewe hoggets made up to 52s; other lots of hoggets went up to 42s 6d per head. A half-bred flock of ewes reached up to 34s 6d per head. Very good entry of lambs, being the first large entry of the season; they attracted considerable interest, and sold well, considering the early time of year. Messrs. Sturgeon's Suffolk lambs made from 31s 6d to 33s; Mr. J. Fyson's Suffolk lambs averaged 25s; Mr. G. Jillings' consignment made from 26s 6d to 22s per head. Half-bred lambs sent by Mr. F. Fyson made from 27s to 26s 6d per head. Mr. Mayes' lambs fetched 23s per head; Mr. Duncan Parker's lambs, 23s 6d per head. Several other lots made from 24s to 15s 6d per head. Shorter supply of pigs, for which trade was at about late rates.

Calne. Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	10 0
Under 10 sc.	Not exceeding 2½ in. ...	9 6
Under 11 sc. 10 lb. ...	Not exceeding 2¾ in. ...	9 0
Under 12 sc.	Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ld.

Canterbury. Saturday.—The stock of bullocks was small, except in Irish beasts. Demand somewhat larger, and prices were as follows: Yearlings, £5 10s to £8 10s; stronger classes £9 to £10 10s; two-year-old bullocks, £12 to £13 5s. Several lots of ewes and lambs realised 38s to 43s, while some better classes fetched 55s.

Carlisle. Saturday.—The supply of Irish store cattle on Saturday was larger than last week's, and consisted of 500 head of heifers, generally of useful quality. Better attendance and trade maintaining the improvement of last week at about the same prices. Small heifers, £8 to £10 10s; better sorts, £12 10s to £16 10s; and exceptionally good qualities up to £19.

Cambridge. Tuesday.—Beasts, 400; sheep, 381; pigs, 587; horses, 56. Beef, 8s to 9s 6d; mutton, 4s 4d to 5s; pork, 6s 6d to 7s 3d. A few lots small store beasts, and trade slow; fat beasts very short supply, and trade brisk at more money. Fat sheep a smaller show, and prices unchanged. Stores, scarcely any to hand; fat pigs a fair trade at late rates; stores a good brisk trade all round. Hay and straw nil.

Dorchester. Wednesday.—Full average supplies came to hand to-day, especially of calves, lambs, and pigs. Buyers were fully represented, with a quick demand, trade being a shade against buyers. Fat bullocks made a ready sale, at 11s to 12s for good qualities. Mutton a steady, mut by no means a slow sale, at 7½d. to 8d. for best wethers, and ewes, 7d to 7¾d per lb.; lambs, 9d to 10d. Best calves sold at 8d to 8½d, and seconds, 7d to 7¾d, poorer grades, 6½d. Pigs were firm, both in demand and sale, porkers making up to 11s per score, heavier fat pigs, 8s 6d to 9s 6d.

Dublin. Thursday.—Numbers in market: Beasts 2,023, increase 638; sheep 10,343, increase 1,362; calves 75, increase 28. Notwithstanding a large increase in numbers, finished cattle were in good demand at somewhat higher prices. Rough and unfinished sorts were more difficult to sell, and prices moved more in favour of buyers. Some choice Aberdeen Angus heifers, bred and fed by Mr. James Talbot Power, made the extreme quotation of the market. Sheep and lambs met a brisker trade at last week's prices, and a good clearance effected. Cattle, live weight (best), 37s to 41s per cwt.; extreme, 45s per cwt.; secondary descriptions, 32s to 36s per cwt. Mutton, dead weight, 5½d to 7¾d per lb.; lambs, each, 17s to 38s.—CANLY, SONS, AND CO.

Hereford. Wednesday.—Bullocks and cows, 651; calves, 178; sheep and lambs, 2,194; pigs (fat and sows), 24; sucking pigs, 155; pigs (stores, not more than 10), 146; pigs (stores, more than 10), 61; horses, 8. Prices in cattle market: Beef, 6½d to 7½d; mutton, 6½d to 9d; lamb, 8½ to 9d; veal, 9½d; pork, 6½d to 8d; and bacon, 5½ to 6½ per lb.

Leicester. Wednesday.—The supply of home-fed bullocks was rather short, and an active trade was done, prices showing a further advance of 20s per head. Choice bullocks made 8½d per lb; secondary, 7¾d to 8d; cows, 6½d to 7d; and heifers, 7¾d to 8½d per lb. Sheep were a fair delivery, and changed hands freely at 8d to 8½d per lb for choice light weights; large sheep, 7d to 7½d; ewes, 6½d; lambs, 9d to 10½ per lb; calves steady at 8½d per lb.

Newport. Wednesday.—Quotations were: best beef, 8½ per lb.; secondary sorts,, 7½d to 7¾d; cows, 6½d to 7d; best weather mutton, shorn, 8d to 8½d; ewes, 7d to 7½d; lamb, 9d to 10½; veal, 7d to 8d. Porker pigs, 10s 9d to 11s 3d per score. A short supply all round, and an exceptionally brisk trade.

Norwich. Saturday.—The supply of store beasts here to-day showed some increase; business was scarcely so active, and prices were the turn in favour of buyers. The supply of fat beasts was moderate; trade ruled firm at 8s 6d to 9s 6d per 14lb. The supply of store sheep was about an average, and a good business was passing at an advance of 1s per head, hoggets making from 35s to 45s, and keeping shearlings from 33s to 45s per head, while lambs brought 15s to 26s each. The great quantity of rain which has fallen in Norfolk during the past few days has, at any rate, had the effect of improving keep prospects in the county; there is, accordingly, a better demand for store sheep. Fat sheep, which were in moderate supply to-day, sold readily at 9s to 9s 6d and 10s per 14lb.

Romford. Wednesday.—Average supply of fat beasts, trade much better. Best animals, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. Average supply of calves, trade about the same, at 5s 2d to 5s 4d per stone. Sheep in fair supply, trade dear; best sheep, 5s 6d to 5s 8d; middlings, 5s 2d to 5s 4d per stone. Lambs in average supply, trade a little better, at 6s 2d to 6s 4d per stone. Good demand for the few store beasts on offer. Pig trade rather quiet. Small porkers, 4s to 4s 4d; large hogs, 3s 8d to 3s 10d per stone.

Salford. Tuesday.—A few more cattle on show than last week. Trade slow but firm for all kinds; prices slightly advanced over last week. There was a good demand for both sheep and lambs at the full price of last market. Cattle, 6½d to 8½d per lb; sheep, 7d to 9d per lb; lamb, 9d to 10½d per lb; calves, 5d to 8d per lb. At market:—Cattle, 1,427 (increase 100); sheep and lambs, 15,868 (increase 1,000); calves, 168.

Sheffield. Tuesday.—Poor show of milch beasts. Past lots were a moderate trade, at £17 to £20. Secondary sorts stationary, at £10 to £15 per head.

Spalding. Tuesday.—A fair show of fat beasts. Trade good. Primest quality realised high prices. Store beasts sold well. In the sheep market there was a moderate show, and brisk trade at 7d to 8d per lb.

Stockton. Wednesday.—There were on offer 125 cattle, 5 calves, 280 sheep, 23 lambs, and 230 pigs. The supply of best cattle was again short, and recent prices were well maintained. Few customers, and trade firm. Best beef, 9s 6d to 10s; rougher kinds, 8s 6d to 8s per stone; young sheep, 9d; ewes, 7½d; tups, 6d per lb; lambs, 25s to 35s each.

Thame. Tuesday.—The market is now putting on its summer appearance, hotel yards filling with vehicles, and the rail bringing numerous purveyors and dealers from Reading, Henley, High Wycombe, Oxford, and surrounding districts. Grass fed beasts and sheep are freely coming to hand, in first rate condition. Beef still continues dear, an advance on last week's quotations being noticeable. Sheep and lambs were in much greater demand, and were fully 3s per head dearer than the previous week. Veal and bacon are realising top quotations. Messrs. Rond and Burrows' sale comprised 67 fat bullocks and heifers. 312 fat and store sheep, 179 fat and store pigs, and 33 fat and weaning calves. Fat bullocks made £20 to £24; fat heifers, £21 to £26 15s; fat wethers, up to 62s; fat ewes to 59s; fat lambs to 42s; fat calves, £4 to £6 7s 6d; weaning cow calves, 20s to 55s; bull calves, 18s to 50s; bacon hogs, 9s 6d per score.

Wakefield. Wednesday.—In spite of the fact that both beef and mutton was dearer, a clearance was soon effected; particularly for sheep, of which there was a smaller show. Beef of the best quality made 8½d per lb., and other sorts varied from 6½d; small sheep, 9d; heavy animals, 7½d to 8½d; ewes and tups, 6d to 7d. Sheep in market 3,916, beasts 1,334.

Wolverhampton. Wednesday.—Beasts, sheep, and lambs in fair supply, and fair trade; calves in moderate supply, fair demand. Quotations: Beef, 6d to 8½d per lb.; mutton, 6½d to 8½d per lb.; lamb, 9d to 10d per lb.; veal, 6½d to 8d per lb. Very few pigs on offer.

Worcester. Saturday.—Good attendance and a fair all-round supply. Cattle sold freely at late rates. Sheep trade steady. Veal sold well, and pork was inclined to be dearer.

Worksop. Wednesday.—Fair show of stock, with the exception of beef. Best beef, 7s 6d to 8s 6d; secondary, 7s to 7s 6d per stone. Sheep plentiful; best wethers, 7½d to 8½d; ewes, 5½d to 7d per lb; store sheep, 25s to 35s each; lamb, 9d to 10d; veal, 8½d to 9½d per lb.

FOREIGN.

Deptford. Wednesday.—east Bentries amounted to 951 head, being 21 more than on Wednesday last, and comprised 731 United States and 220 Canadian. Trade firm at 5s 3d to 5s 5d, and 5s 2d to 5s 4d per 8lbs., to sink the offal.

Yorkhill. Monday.—At the usual weekly sale of American cattle held to-day there were in the lairages 235 cattle landed by the Kastalia (s.), from Montreal, and 302 by the Pomeranian (s.), also from the same port. Bullocks formed the greater proportion of the total number, but there were also a number of bulls included. The cattle were a very fine lot, and very suitable for the requirements of the trade. There was the usual attendance of buyers, and demand was keen, prices all round showing an increase on those ruling on the previous Monday. The dead weight quotations may be given as follows:—Best bullocks, 74s per cwt, and for really choice up to 76s; best bulls, 62s to 64s; and for secondary and heavier, down to 60s.

BUTTER.

Tuesday.—Bedale: 1s to 1s 2d per 24oz roll. Gainsborough: 1s per lb. Settle: 11d to 11½d per lb. Spalding: 10d per lb.

Wednesday.—Barnsley: 11d and 1s per lb. Boston: 9d to 10d per lb. Colne: 1s 1d per lb. Goole: 10d per lb. Keighley: 1s and 1s 1d per lb. Kirbymoorside: 8d to 9d per lb. Knaresborough: 1s and 1s 2d per 24oz. roll. Louth: 9d per lb. Market Weighton: 10d per lb. Masham: 1s 2d to 1s 3d per 24oz. roll. Northallerton: 1s 3d to 1s 4d per 24oz roll. Stockton: 10d to 1s 1d per lb. Worksop: 1s 1d to 1s 2d per lb. Market Drayton: 10d to 1s per lb. Uttoxeter: 10d to 11d per lb.

Thursday.—Penistone: 1s to 1s 1d per lb. Ripon: 1s 2d to 1s 3d per 24oz. roll. Scarborough: 11d to 1s per lb. Wetherby: 9d to 1s per lb. Brigg: 9d to 10d per lb. Driffield: 1s to 1s 2d per lb. Kidderminster: 1s 2d per lb. Wellington 11d to 1s per lb.

Friday.—Leeds: 1s to 1s 1d per lb. Stockport: 1s 1d to 1s 2d per lb. Congleton: 1s 1d to 1s 2d per lb. Knutsford: 1s 1d to 1s 2d per lb. Chester: 1s 1d to 1s 2d per lb. Altrincham: 1s 2d to 1s 3d per lb. Crewe: 1s per lb. Macclesfield: 1s per lb. Easingwold: 9d to 10d per lb. Helmsley: 8d to 9d per lb. Leyburn: 1s to 1s 2d per roll of 24oz. Lincoln: 10d to 11d per lb. Otley: 1s to 1s 2d per 24oz roll.

Saturday.—Appleby: 8½d to 10½ per lb. Berwick: 8d to 10d per lb. Carlisle: 9d to 10d per lb. Doncaster: 11d to 1s per lb. Grantham: 10d to 11d per lb. Howden: 11d to 1s per lb. Malton: 9d to 10d per lb. Pontefract: 10d to 11d per lb. Retford: 10d to 11d per lb. Richmond: 10d per lb. Skipton: 1s 1d per lb. Stokesley: 9d to 10½ per lb. Whitby: 9d per lb. York: 1s per lb.

EGGS.

Tuesday.—Bedale: 15 to 17 for 1s. Gainsborough: 15 for 1s. Settle: 15 to 16 for 1s. Spalding: 15 for 1s.

Wednesday.—Barnsley: 12 or 13 for 1s. Boston: 15 for 1s. Colne: 1s 5d per score. Goole: 15 for 1s. Keighley: 12 and 13 for 1s. Kirbymoorside: 15 or 17 for 1s. Knaresborough: 13 or 14 for 1s. Louth: 16 for 1s. Market Weighton: 17 for 1s. Masham: 17 and 18 for 1s. Northallerton: 14 to 15 for 1s. Stockton: 13 or 14 for 1s. Worksop: 1s 4d to 1s 5d per score. Market Drayton: 14 to 15 per 1s. Uttoxeter 1s 4d per score.

Thursday.—Brigg: 15 to 16 for 1s. Driffield 17 or 18 for 1s. Penistone: 13 for 1s. Ripon: 14 or 15 for 1s. Scarborough: 14 for 1s. Wetherby: 13 to 14 for 1s. Kidderminster: 17 per 1s. Wellington: 14 to 16 per 1s.

Friday.—Leeds: 9s to 9s 6d per 120. Stockport: 11 or 12 for 1s. Northwich: 13 or 14 for 1s. Nantwich: 14 or 15 for 1s. Easingwold: 14 to 15 for 1s. Helmsley: 16 or 17 for 1s. Leyburn: 16 to 18 for 1s. Lincoln 14 or 15 for 1s. Otley: 14 or 15 for 1s.

Saturday.—Appleby: 14 or 15 for 1s. Berwick: 9d to 10½ per doz. Carlisle: 14 or 15 for 1s. Doncaster: 14 for 1s. Grantham: 14 or 15 for 1s. Howden: 16 for 1s. Lancaster: 10 to 14 for 1s. Malton: 16 to 18 for 1s. Pontefract: 14 for 1s. Retford: 1s 3d to 1s 4d per score. Richmond: 14 or 15 for 1s. Skipton: 14 or 15 for 1s. Stokesley: 14 or 15 for 1s. Whitby: 14 to 15 for 1s. York: 12 or 14 for 1s.

CHEESE.

Glasgow. Wednesday.—Moderate arrivals, and inquiry fair for both Cheddars and Dunlops. Prices continue steady, consumers refusing to concede any advance; quotations, 52s to 56s per cwt. The offering of new Canadians were very small, prices still regarded as too high, and reduction probable. New Zealands practically over for the season.

Newport. Wednesday.—Quotations:—Caerphillies, 36s to 44s; fancy dairies, 45s to 47s; inferior, nil; Derbys, 56s to 58s; truckles, nil; and Cheddars, 60s to 65s. There was a good supply and demand.

FRUIT AND VEGETABLES.

Covent Garden. Saturday.—Supplies of fruit good, and steady sale. Greenstuffs in good supply and demand. Potatoes met moderate inquiry. English grapes, 2s to 4s; Belgian, 1s to 1s 9d per lb; Valencia oranges, 10s to 16s; Denia, 12s to 25s; Murcia, 7s 6d to 10s 6d per case; English tomatoes, 6s to 8s per dozen lbs; Canary, 3s to 4s per case; pineapples, 1s 6d to 4s 6d each; bananas, 7s 6d to 12s per bunch; gooseberries, 4s to 5s per half-sieve; Tasmanian apples, 9s to 14s per case; cabbages, 3s 6d to 4s 6d per tally; spinach, 1s 6d to 2s per bushel; carrots, 3s 6d to 4s 6d; turnips, 4s to 6s; leeks, 3s to 3s 6d; parsley, 2s to 4s; mint, 2s to 3s per dozen bunches; horseradish, 2s to 2s 3d per bundle; mushrooms, 6s to 8s per dozen lbs; spring onions, 3s to 4s per dozen bunches; Egyptian ditto, 11s per bag. Potatoes: Maincrops, 70s to 80s; Reading Giants, 40s to 50s; Up-to-Dates, 60s per ton; New Canary, 7s; Teneriffe, 8s; Jersey, 8s 6d; St. Malo, 8s per cwt; Lisbons, 4s per box.

FEEDING STUFFS.

London. Thursday.—Owing to heavy shipments and decreased demand, prices have declined, and the market closes weak. Calcutta, spot London, 52s 6d; passage, 52s 9d to 53s; July-August, 53s 3d. Hull is also lower. Calcutta May-June 53s. La Plata spot, 50s 6d; June-July, 51s 6d; December-January, 47s 3d; January-February, 46s 3d. To the Continent, Bombay, June-July, 57s; Calcutta, June-July, 53s 6d; La Plata, June-July, 51s 9d; Azoff seed, October-November, 49s 6d c.i.f. Linseed oil still very quiet, and lower rates ruling. We quote spot in pipes, £31; barrels, £31 5s; July August, £30 15s; September-December, £29 15s. Hull naked spot £30; July-August, £30; September-December, £29. Linseed cakes are firm We to-day quote London-made £7 17s 6d to £8 ex mill; American Western £7 7s 6d to £7 10s; Russian, £7 12s 6d to £7 17s 6d. Cotton cakes steady; London-made, £4 12s 6d to £4 17s 6d. Rapeseed slow, and prices have declined somewhat. Brown Cawnpore, May-June, 37s 3d; brown Calcutta, spot 35s, June-July, 35s 3d. To the Continent we quote Yellow Guzerat 41s 6d; Yellow Cawnpore, June-July, 40s 4½d; Brown Cawnpore, 37s 6d; Brown Calcutta, May-June and June-July, 37s, sellers; Ferozepore, June-July, 37s; Jamba, June-July, to Hull, 31s 6d. Cottonseed very dull. Spot London, £7 13s 9d; June, £7 11s 3d sellers; July, £7 11s 3d; November-January £6 11s 3d, sellers; Hull spot, £7 10s; June, £7 7s 6d; November-January, £6 10s buyers; cargoes, November, £6 12s 6d; December-January, £6 11s 3d; Bombay to Hull, June-July, £4 18s 9d, sellers.—THE PRODUCE BROKERS' COMPANY, LIMITED.

Hull. Tuesday.—Linseed: The only arrival is 1,010 qrs from Riga. A dull and lifeless market. Calcutta was quoted early last week at 54s 9d April-June, but has since declined, and closes with 53s 6d accepted for this position. Black Sea quoted 52s 6d Sept.-October. American has shared in the general decline, and Oct.-Nov., which was worth 52s 6d last week, can now be bought at 50s 6d. River Plate: Spot, 51s; June-July, 51s 9d; Dec.-Jan., 47s 3d. Cotton seed: The market has ruled very dull all the week, and spot can now be bought at £7 12s 6d, ex steamer just arrived. A little business was done in passage thereat, and June at £7 10, whereat still sellers. A few hundred tons monthly, Nov.-Jan., changed hands at £6 10s, and £6 16s 3d to £6 17s 6d paid for October, which are to-day's values, but not much inquiry. Oils: Exports for the week ending June 3rd, 1902:—Linseed oil: 1 Germany, 1 Holland, 23 Norway, 2 Turkey; total, 27 tons. Cotton: oil: 126 Belgium, 12 Denmark, 16 France, 98 Germany, 165 Holland, 1 Norway, 25 Sweden; total, 443 tons. The market is quiet. Linseed oil: 30s 4½d spot, 30s 4½d June-Aug., 29s 4½d Sept.-Dec. Cotton oil: 25s 3d spot, 25s 3d June-Aug., 21s 9d Nov.-April. Crude: 24s spot, 24s June-August, 20s 7½d Nov.-April. Rape oil: Jamba naked, 24s 3d spot; first quality, 25s spot. Oil seed cakes: Linseed cakes firm, with good deliveries for time of the year. Cotton cakes are 2s 6d to 5s below the extreme prices of last week, with steady market.—FEIGHLEY MAXTED AND CO.

Mark Lane. Monday.—Linseed cakes: The trade appears to have come suddenly to a standstill, there being practically no consumptive demand whatever. At the same time, values are fully as dear in consequence of the firm attitude on the part of shippers. Russians still offer at last week's prices. Americans are also quoted at unchanged prices. Calcutta-made in bags remain unchanged. London-made meet a poor inquiry, but prices remain as last quoted: Cotton cakes: There is no improvement to note in the demand, but, with only a limited quantity available to come in, values remain steady. Decorticated sell slowly at last Monday's quotations, and meal at £6 10s. Rape cakes: Quiet and unchanged. Maize germ meal: Stocks of American are small, and holders still ask last week's prices for parcels in warehouse, while English is obtainable on slightly easier terms. Rice meal: Arrived parcels of Rangoon have found buyers at £4 6s 3d to £4 7s 6d ex ship, but fully 5s per ton more money is demanded for autumn shipments.

COLONIAL DAIRY PRODUCE.

London. Friday.—The demand for Canadian butter, although far from being brisk, has shown improvement during the last few days, but the amount arriving is more than sufficient for current consumption, and, consequently, a certain quantity is going into cold store, to await a larger demand with an almost certainty of higher prices. The quality of most of the Canadian creamery is good, considering that it is not yet pure grass butter, especially that which is made from "gathered cream"—that is, from cream separated by the farmer at his homestead, and not by the Co-operative Company at the factory or creamery. The price of choicest Canadian creamery is about 96s to 100s per cwt. for salt, with 2s more for saltless. Finest grade ranges from 92s to 94s. The quantity of Canadian butter exported from Montreal for the week ended 31st May was 2,592 cwts., against 7,068 cwts. last year, and 3,166 cwts. for the year before. The total export for the month was 23,806 cwts. this year, 19,238 cwts. last year, and 8,061 cwts. the year before. The demand for new season's Canadian cheese continues good, but increased arrivals have lowered values about 1s per cwt. on the week, both coloured and white bringing the same money. In old cheese prices are very erratic, largely owing to an offer of 10,000 boxes at 53s, which has been circularised amongst the trade. Prices of this class of goods run from 53s to 57s for white, rising to 58s for lots perfect in colour.—W. WEDDEL AND CO.

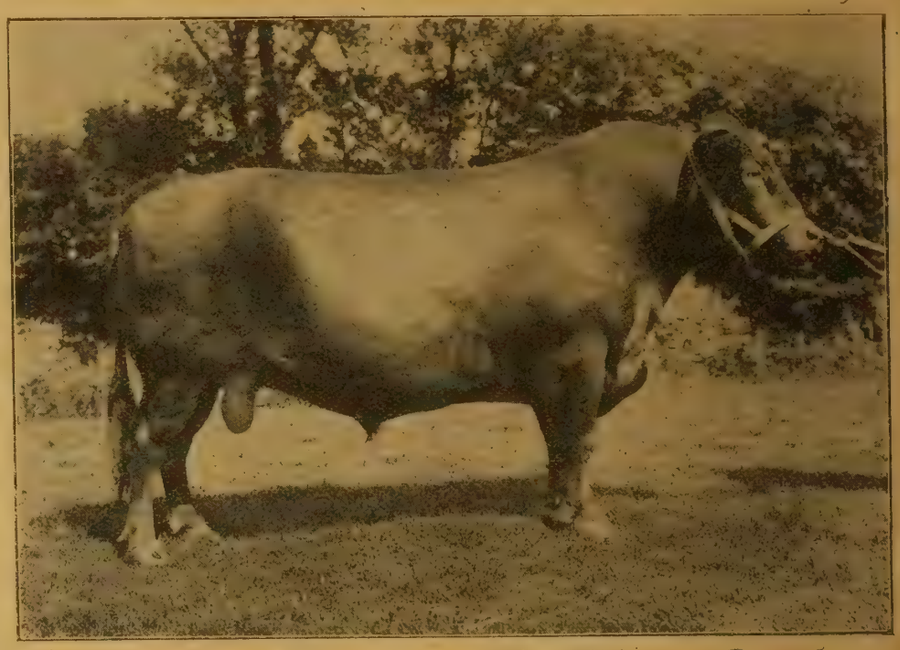
STOCK AND SHOW NOTES.

For the accommodation of exhibitors and others wishing to get from the Royal Show at Carlisle to Peterborough, for the Peterborough Society's Show, on July 8th, 9th, and 10th, arrangements have been made with the Midland Railway Company to stop the express train leaving Carlisle at 3.55 p.m. on Monday, July 7th, at Melton Station, which will enable passengers for Peterborough to arrive at 10.30 p.m.

The Secretary of the Hackney Horse Society has received an official intimation that the pony mare 12453 Berry Hill Sniff, exhibited by Mr. William Hollins, of Pleasley Vale, Mansfield, and winner of the first prize in Class 27 at the last London Hackney Show, has not produced a foal, in accordance with the Society's regulations. Under these circumstances, the award will be cancelled, and Mr. William Foster's 12927 Mel-Valley Custard will take first prize; Mr. Alfred S. Day's 13014 Peggy Sure IV. will take second prize, whilst the reserve number, Mr. David Mitchell's Marsline, becomes entitled to third prize.

The entire herd of pure-bred Shorthorns, belonging to Mr. John Garne, of Filkins, Lechlade, Oxfordshire, is to be sold without reserve, on Wednesday, July 2nd, at Filkins, Messrs. J. Thornton and Co. being the auctioneers. The sale is caused through Mr. J. Garne, who is eighty-three years old, being about to relinquish farming. Mr. John Garne is a brother of the late Mr. Robert Garne, of Aldsworth, and is the last of the old generation of Garnes, famous for their Shorthorns. Mr. John Garne's herd was established in May, 1873, by the purchase of Pink of Fashion at the Broadmoor sale for 80gs.; afterwards Pink 27th and Blooming Pink were bought from his kinsman at Clapton, the entire herd being now descended from these three cows. They are all of one family, the well-known Garne P. or Pye tribe, of the old Mason blood, which was brought down from Earl Spencer's herd at Wiseton by the late Lord Sherborne, about the year 1840, and has since been bred with considerable success in Yorkshire; it is famous both for milk and flesh, and its excellent breeding properties.

The earlier bulls used by the family were mostly brought out of the North from Mr. Wiley, Mr. Fawkes, and Mr. Peel in Yorkshire. Home-bred bulls were frequently used with good results, and followed by the occasional service of bulls owned by Mr. T. Mace, of Eastleach. Mr. J. Houlton's Pedestrian 73186 is now in service, and for sale. He is the son of that well-known sire Now or Never, long used at Aldsworth, where he became the sire of the champion heifer Aldsworth Jewel, and is now in service in Mr. Henderson's herd at Buscot. Lord Lowther, by Lord Lonsdale, also a son of Now or Never, is the sire of a first rate lot of yearling heifers and calves. The herd has been kept hardy without any pampering, the animals running out night and day all the year through, with only the shelter of the Cotswold hovels.



On the day after the above sale, the same auctioneers will dispose of sixty pure-bred Shorthorns, belonging to Mr. Hugh Baker, at Chedglow Manor, Malmesbury. The herd has become too numerous to be carried through the winter, hence the sale, the catalogue of which comprises the younger cows and heifers, about fifty females in all, as well as a choice lot of promising young bulls. Norse Chief 75144, a handsome dark roan bull, bred in the Duke of Northumberland's herd at Alnwick, from one of the best tribes in that well-known herd, is the sire now in service. The animals at Chedglow have always been bred with a view to producing the class of Shorthorns for which this district is famous, viz., cattle which should be able to milk well and carry good natural flesh and hair, showing constitution and breeding qualitites. Prizes have been obtained at the West of England and local shows; the bulls have been in good demand locally, as well as at Birmingham, where they have often won prizes and sold well. Some good and highly-bred young heifers of the wellknown Ruth, Quicksilver, J. Seraphina, and Waterloo families from Mr. L. J. Bakers' herd at Ottershaw, Surrey, will also be offered for unreserved sale.

The members of the Westmorland and Kendal District Agricultural Society have approved of the idea of a combined agricultural show for the North. At a meeting held to consider the matter, it was decided to support the scheme at a conference of agricultural societies, to be held in Carlisle during the week of the Royal Show. The migratory show would be held at Kendal every seventh year, and some of the members feared that this might injuriously affect the subscription list of the Westmorland Society, so that the vote was not entirely unanimous. As previously mentioned in these columns, the combined show is proposed on the ground that now that the Royal Show is to be permanently established near London, North of England agriculturists will be deprived of having any great agricultural exhibition in their locality.

I would remind intending exhibitors at the Yorkshire Agricultural Society's Show, at Leeds on July 30th and two following days, that the entries close on Saturday next, the 21st inst., but entries at double fees will be received up to the following Saturday. A very liberal list of prizes is provided, the total value of which is £2,115. The prizes are offered for horses, cattle, sheep, pigs, jumping, and harness competitions, shoeing competitions, butter, cheese, bee-appliances, and honey. For prize schedules and forms of entry apply Mr. John Maughan, secretary, Blake Street, York.

The Herefordshire and Worcestershire Agricultural Society's Show will be held at Hereford this week, opening to-morrow (Tuesday), and extending over Wednesday and Thursday. The site of the showyard is an admirable one, being on the racecourse. The entries are more numerous than in any year since the show at Worcester, in 1895. The total is 600, as against 509 at Evesham last year, 545 at Leominster in 1900, 460 at Stourbridge in 1899, 593 at Hereford in 1898, 435 at Redditch in 1897, 438 at Monmouth in 1896, 621 at Worcester in 1895, and 567 at Hereford in 1894. The 600 are made up of 235 cattle, 77 sheep, 17 pigs, 158 horses, 88 cider and perry, 2 wool, and 23 butter and cheese. The display of implements will also be a large one.

It will be remembered by my readers that Sir Walter Gilbey recently delivered an address before the Bishop's Stortford Farmers' Club, on the subject with which he is so closely identified, namely, the breeding of army remounts. The address has now been published in pamphlet form. In it Sir Walter urges the formation of ten permanent remount depots, each capable of accommodating 400 horses, with the necessary staff to tend, break, and train them. These should be stationed in different parts of the United Kingdom, and each should be worked as any business house is worked—that is, quarterly and audited accounts should be punctually rendered from each to the War Office, which would have entire control of the depots.

The South Devon Bull "Cromer" 969, which forms the subject of the above illustration, is the property of Mr. W. Merry, Great Woodford, Plympton, St. Mary, and was bred by Mr. J. D. Ellis, Dunston, Yealmpton, its sire being Lo-Ben 625, and its dam Beauty 3rd 2497, by Grand Dam Beauty 193. "Cromer" was exhibited at the Bath and West Society recent show at Plymouth, and won First Prize in the class for South Devon Bulls calved in 1898 or 1899 (he was born January 4th, 1898), and also the Devonport Challenger Cup, value fifty guineas, for the best bullock (bull, cow, or heifer) in the South Devon classes, with which was given a special prize of £20.

He estimates that, for the expenditure of £250,000, ten perfectly equipped depots might be formed, and he claims that by the adoption of his suggestions (1) the Army would obtain all the horses it requires, i.e., 4,000 a year; (2) the horses, being purchased at three years or three years and a half for the same price as is now paid for five-year-olds, would be of a better class; (3) the existence of a constant and profitable market for three-years-olds would give a very real stimulus to the now neglected industry of light horse-breeding; (4) the personnel of the remount depots would provide a corps of trained officers and men for the important work of buying horses in foreign countries in time of emergency; (5) the depots would provide much-needed facilities for teaching recruits to ride, and for teaching the elements of horse mastery; (6) the creation of separate depots would facilitate comparison of each depot with others in buying horses, cost of fodder, and general results.

The proposal recently made at a meeting of the Cumberland Agricultural Society to hold a migratory cattle show in the four northern counties of England and the three southern

counties north of the border, which was reported in this paper at the time, has been submitted to the societies which would be concerned in the amalgamation. It was discussed at a recent meeting of the Dumfries Agricultural Society, but, as it was pointed out, that next year the Highland and Agricultural Society's Show will be held at Dumfries, and in these circumstances it was decided not to take any steps in the matter at present.

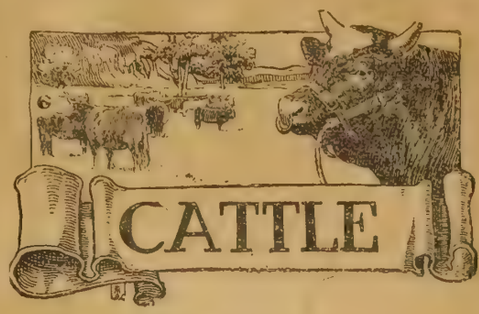
The prize list for the Great Guild Show of the Royal Lancashire Agricultural Society, to be held at Moor Park, Preston, on September 2nd, 3rd, 4th, and 5th next, has been issued. The total amount of prize money offered is £3,256, exclusive of a large number of champion and special prizes, being £1,000 more than was offered last year at St. Helens. The list is a most comprehensive one, and embraces all sections of livestock, and there are exceptional features in connection with the holding of the show during the celebration of the Ancient Guild Festival of Preston, with which the society has been associated for the past eighty years. The Guild occurs once in twenty years, and the esteemed President of the Society (the Right Hon. the Earl of Derby, K.G., G.C.B.) is Guild Mayor. Mr. Edward Bohane, Miller Arcade, Preston, is Secretary to the Society, and intending exhibitors should not delay obtaining the fullest information from him.

Some good results were obtained at a recent series of Shorthorn sales at Ohio. We quote the words of an American contemporary:—"The series of Shorthorn sales held in Ohio last week was perhaps the most noted ever held in that State. Many chapters of very interesting history in the career of the 'red, white, and roans' has been made in the Buckeye State, and now another is added. Beginning on Monday, and continuing for four days, the crowds as well as the interest gradually increased with each day, closing with a better demand and greatly increased prices. That a great work was done along the line of interesting new men in this industry in Ohio there can be no doubt, and some of the good effects were felt even before the week closed." The top price of the entire series was made the last day by the imported cow Proud Fancy and bull calf bred by Mr. Duthie, got by Pride of Morning, and sold by W. I. Wood to W. T. Miller and Sons, Winchester, Indiana, for £410. Great interest centred in the two young bulls Choice of the Ring, a son of the cow just mentioned, and sold by Mr. Wood, and Master of the Ring, out of a Missie cow, and sold at Mr. Gerlaugh's sale. The opinion of those who attended both sales was about equally divided as to which of these bulls was the better, and it seemed a hard matter to settle. However, the Gerlaugh bull came into the ring all right in every way, and made the best price (£341), while his half brother had a hind leg considerably out of shape from a barb wire cut, and made £310. Another imported cow, Missie, which went to Mr. E. S. Kelly, an Ohio breeder, for £305.

The Smithfield Club has now issued the prize schedule for this year's show, which will be held on Monday, December 8th, and four following days, the venue, as usual, being the Royal Agricultural Hall, Islington. From a comparison with last year's prize-list I find that very few alterations have been made. The two classes for small cross-bred cattle have been withdrawn, but otherwise the whole of the cattle, sheep, pigs, and poultry classes are the same as in 1901, the class prizes being of the same value, whilst all the special and champion awards are again offered. Amongst the latter there are, however, two notable additions. His Majesty the King has given a challenge cup, to be called "The King's Challenge Cup," value £150, and H.R.H. the Prince of Wales a cup of the value of £100. The former will be given for the best beast in the show bred by the exhibitor, and will have to be won two years in succession or three years at intervals by the same exhibitor before becoming his absolute property. The Prince of Wales' Challenge Cup is offered for the best pen of three sheep or lambs in the show bred by the exhibitor, and the conditions are the same as those of the King's Cup. There is one other alteration, I notice, and that is that the champion prize in the carcase competition has been raised from £5 to £10, both in the cattle and sheep section.

A new feature has been introduced into the schedule itself, viz., a statement of the breeds and ages of the animals, together with names of breeder and exhibitor, which have won the gold medals, silver cups, and champion plates offered by the club for cattle, sheep, and pigs, at each show up to 1901 inclusive. It is interesting to note that the Society's first show, in 1799 (when its title was the Smithfield Cattle and Sheep Society) a sum of £52 10s. was offered, and there were but two classes for cattle and two for sheep. In 1839 the sum had increased to £300 and the classes to seven for cattle, six for sheep, and one for pigs. The first show held at the Agricultural Hall took place in 1862, and on that occasion the prize-money had increased to £2,072, and was spread over 29 classes for cattle, 17 sheep, and four for pigs. This year cattle classes number 34, sheep 30, pigs 18, carcase competitions seven, and table poultry 25, whilst the prize-money amounts to £3,843 10s. As to the membership it may be stated that when the first show was held in 1799 the number was 113, and it had only increased to 400 in 1862, but in 1898 the number was no less than 1,120, and now the membership stands at 1,053. From the figures given above it will be seen that the club has made great strides within the past thirty or forty years. The prize schedule, entry forms, etc., can be had on application to the secretary, Mr. E. J. Powell, 12, Hanover Square, W.

I would remind my readers that the entries for the July Horse, Cattle, Dog, and Poultry Show of the Mallow (Co. Cork) Agricultural and Show Society close on the 24th inst.



Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending June 10, 1902:—

NOTE.—The figures for the current Year are approximate only.

Poultry Keeping Examinations.—A few weeks' course in poultry-keeping was held at Reading College from March 20th to April 23rd last, and the results of the examination have just been published. Those who passed with distinction were Mrs. Julia Scott and Mr. Edwin L. Harvey. Those who passed were:—Bride Murphy, Annie Shee, Emily Burkitt, Samuel Lesser, Eliza A. Jones, Edith K. Le Lacheur, Charles H. Beauchamp, Mary Graham, Elizabeth L. Henderson, Isabella K. Scott, Kathleen M. O'Donovan, Brigid M. Macmanus, Amelia Haldon, Walter Rowland Turner, Arthur P. Manning. The examiners were:—Mr. Charles E. Brooke, Professor Douglas A. Gilchrist, and Mr. Edward Brown.

The Late Mr. George Ashburner's Shorthorns.

There was a large company of breeders and farmers at Low Hall, Kirkby-in-Furness, on the 6th inst., when the late Mr. George Ashburner's herd of Shorthorns was sold by Messrs. Thornton and Co. Owing to the lamented death of the owner, the cattle had not been prepared for sale, and consequently were in rather poor condition. There was a good demand, several of the best cows and heifers being purchased to go to Ireland, among them being—Cambridge Bright Eyes and her bull calf (67 guineas), and also her yearling heifer Bright Eyes 3rd (38 guineas), sold to Mr. Kirker. A number of dairy cows were also sold up to 15 guineas. We give below a list of the principal lots, with purchasers' names and prices:—

COWS AND HEIFERS.

Sale of the Hunton Court Sussex Cattle.

The whole of Mr. W. W. Hubble's well-known herd of pedigree Sussex cattle was disposed of by auction at Hunton Court, Hunton, Kent, on Wednesday, the auctioneers being Messrs. Winch and Sons. This herd of Sussex cattle was established

some thirty years ago by Mr. William Lee Hubble, and was taken over by his son, Mr. W. W. Hubble, in 1896, when the latter made improvements by the purchase of animals from Mr. G. W. White, Mr. Saillard, Lord Derby, and the late Mr. Agate. From time to time he has been very successful at the Royal, Bath and West, Royal Counties, and local shows, gaining considerable reputation for his stock. It was not surprising, therefore, that the selling off of the herd on Wednesday was largely attended by some of the best breeders in Kent and Sussex, and the prices realised exceeded expectation. There were 50 lots in all, and in each case the owner's reserve price was exceeded, in some instances considerably, and the day's business tends clearly to show that the Sussex breed is still paramount in this part of the country. The total amount realised was £1,360 16s., or an average per head of £27 4s. The highest figure realised was 52gs. for Perrywinkle, sire Oxford Duke, dam Maybloom, dam of Poeony, a winner of many prizes in 1900 and 1901, the buyer being Mr. Speed, of Knowlton Estate, Canterbury, who, as will be seen from the list is given below, made several important purchases. Colonel Borton, of Chevening, Hunton, and Mr. J. D. Large, of Goudhurst, both of whom are just starting new herds, also acquired several lots, but the stock was generally well distributed. The principal prices realised were as follows:—

COWS AND HEIFERS.—Fearless, Mr. T. B. Marchant, Woodchurch, 25 guineas; Faithful, Colonel Borton, 30 guineas; Careful, Colonel Borton, 50 guineas; Careless Lass 5th, Mr. Speed, Knowlton Estate, Canterbury, 26 guineas; Peep-Bo, Mrs. Montefiore, Worth Park, Crawley, 30 guineas; Laura A., Mr. J. D. Large, 26 guineas; Balsam 3rd, Mr. W. Winch, Cranbrook, 32 guineas; Zephyr 2nd, Mr. W. Winch, 30 guineas; Bashful, Mr. D'Arcy Reeve, Brenchley, 39 guineas; Yum-Yum, Mr. Speed, 30 guineas; Minerva, Mrs. Montefiore, 50 guineas; Her Heifer Calf, Colonel Borton, 27 guineas; Perrywinkle, Mr. Speed, 52 guineas; Celia, Mr. Lawrence Hardy, M.P., 27 guineas; Medusa, Mr. T. B. Marchant, 35 guineas; Susan, Mr. Speed, 25 guineas; Bluebell, Mr. Lawrence Hardy, M.P., 25 guineas; Careless Lassie, Lord Ashburnham, Battle, 35 guineas; Mimosa, Mrs. Montefiore, 40 guineas; Petunia, Lord Ashburnham, 36 guineas; Zoe, Colonel Borton, 41 guineas (the highest prize for a heifer.

BULLS.—Buxom Lord, Mr. H. Hubble, 31 guineas; Khartoum, Mr. Henry Amos (East Kent), 33 guineas; Buxom Baron, Mr. G. C. Froud, East Farleigh, 27 guineas.

Sale of Mr. D'Arcy Reeve's Shorthorns.

In very inclement weather, the herd of Shorthorn cattle belonging to Mr. D'Arcy Reeve, together with a selection from Mr. H. Leney, of West Farleigh, was dispersed by Messrs. John Thornton and Co., at The Friars, near Paddock Wood, on Thursday. The herd had only been established about seven years, but some very useful cattle were offered, many of them being bred from the late Mr. Charles Collard's stock at Little Barton, or from Mr. Herbert Leney's, at West Farleigh. The pick of the sale was Farleigh Blanche 2nd (Mr. Herbert Leney's), winner of the first prize at the Maidstone Show, who went to Colonel Barton at 50gs. An average of £23 6s. 4d. was obtained for the 56 lots sold. A sale list is appended:—

COWS AND HEIFERS.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

The fair held at Stranorlar, Co. Donegal, on the 7th inst., was an average-sized one, composed chiefly of one and two-year-old cattle, the majority of which were in poor condition, and met a dull sale. Good demand for cattle in fair condition, whilst springers met a demand at advanced prices. Quotations:—Yearlings, 1st class, £7 2s. 6d.; 2nd class, £5 5s. to £6 2s. 6d.; 3rd class, £3 10s. to £4 17s. 6d.; two-year-olds, 1st class, £10 10s. to £10 15s.; 2nd class, £7 1s. 8d. to £9 17s. 6d.; 3rd class, £5 10s. to £6 17s. 6d.; three-year-olds, 2nd class, £9 to £11 5s.; springers, 2nd class, £11 to £14 10s.; 3rd class, £9 to £10; young pigs, eight to ten weeks old, sold at from 22s. to 28s. 9d. each.

At Letterkenny, Co. Donegal, on Monday, there was a large fair of thin cattle, for which the demand was slow. An average supply of sheep met a slow demand, and very few were sold. Prices:—Cattle: Yearlings, 2nd class, £4 1s. 6d. to £5 13s. 9d.; 3rd class, £2 12s. 6d. to £3 12s. 6d.; two-year-olds, 2nd class, £7 10s. to £8 10s.; 3rd class, £4 10s. to £6 15s.; three-year-olds, 2nd class, £10 5s.; 3rd class, £7 10s.; springers, 2nd class, £11 5s. to £14; 3rd class, £7 10s. to £10. Sheep: Over 12 and under 24 months old, 2nd class, £1 3s. to £1 8s.; 3rd class, 14s. to 15s.; two years old and upwards, 2nd class, £1 10s. to £1 12s.; 3rd class, 19s. to £1 1s. Young pigs, eight to ten weeks old, averaged about 18s. each.

At the fair held at Longford on Tuesday a very good demand was experienced for two and three-year-old cattle in condition, all of which were sold, but yearlings, unless in very forward condition, were unsaleable. A large supply of lambs, the demand for which was only local, and very few were sold. Prices:—Calves, 1st class, £2 5s. to £5 5s.; 2nd class, £1 14s. to £4; yearlings, 1st class, £7 13s. 4d. to £8 10s.; 2nd class, £5 15s to £6; two-year-olds, 1st class, £12 to £13; 2nd class, £8 10s. to £10 10s.; three-year-olds, 1st class, £14 to £16 15s.; 2nd class, £12 to £13 10s.; springers, 1st class, £16 10s. to £18; 2nd class, £13 6s. 8d. to £15. Lambs, 1st class, 18s. to £1 1s.; 2nd class, 15s. to 16s. Young pigs, eight to ten weeks old, sold at from 24s. to 30s. each.

HORSES.

Sale at Ipswich.

A sale of cart-horses, colts, and hackneys was held at the Drill Hall, Ipswich, on Tuesday, by Messrs. Robert Bond and Sons, and it was very largely attended. The catalogue comprised 117 animals, and a good trade was experienced for all the best class animals, but for secondary animals the trade was slow. The top price for cart-horses was 39 guineas, obtained for a six-year-old brown mare named Dapper, sent by Mr. E. Hicks, Ashfield. A chestnut gelding of the same age, forwarded by Mr. J. R. Lilley, Thorpele-Soken, realised 33½ guineas, and at half a guinea less Mr. W. Keeble, Kelsale, disposed of a seven-year-old bay gelding. Others went at prices ranging from 30 guineas downwards. The colts realised up to 25 guineas, whilst the harness horses sold up to 30½ guineas. A number of imported cobs went at from 13 to 18 guineas.

Sale of the Chescombe Flock.

Mr. T. Keynes, Chescombe, flock of Down sheep was disposed of by Messrs. Roberts, Son, and Tory on the 5th inst in the presence of a large and influential company. In his opening remarks Mr. Tory commented on the fact that the flock had been established more than half-a-century; it had been handed down from a previous generation, and Mr Keynes had spared neither time nor money in bringing it up to its present high standard. They were the typical West Country Down, becoming more popular every year, and eagerly sought after at the fairs. It was a great credit to Mr. Tom Keynes to place such a grand lot of sheep before them; he need say no more, for the sheep told their own tale and recommended themselves. The biddings then started with the six-teeths. Mr. John Strange securing the first pen at 43s.; Mr. Henry Spicer was the purchaser of the next at 47s. 6d. Twenty good ewes fell to Mr. Symes at 52s. 6d.; other pens fetching 48s., 46s., and 47s., the age making an average of 47s. 6d. The four-teeth age made from 44s. to 57s. 6d., three good pens being secured by Mr. Candy, one by Mr. Fred Johnson, and two by Mr. Hide, resulting in a 50s. 9d. average. The two-teeths were an unusually good lot, and excited a good deal of competition, the prices ranging from 45s. to 70s., Mr. Candy, Mr. Hambro, and Mr. Vye being the largest purchasers. The 136 six-teeth ewes brought the satisfactory average of 57s. 6d. Offgoing ewes made up to 43s. Several nice pens of ewe lambs made 27s., 28s., 28s. 6d., and 29s. 6d.; whilst the wethers fetched up to 27s.

PIGS.

The Borrowfield Herd of Large Whites.

The following is a list of the sales from Mr. J. Barron's Borrowfield herd of large white pigs since our last report:—

One boar to Mr. R. P. Cooper, Mr. W. H. Palmer, Messrs. Heal Bros., Mr. W. Sutton, and Mr. Godwin; a boar and gilt to Mr. W. B. Wood Roe; five gilts to the Right Hon. Earl of Rosebery, K.G.; one boar to Mr. Jobling, Mr. F. R. Stoneham, Mr. Robt. Wilkinson, Mr. J. Jones, Mr. J. Tibbett, sen., Messrs. C. and T. Harris and Co., Ltd., the Corporation of Nottingham Sewage Farm, and Mr. John Storr; six boars to the Right Hon. Earl of Rosebery, K.G.; one sow to Mr. F. T. Stanley, M.R.C.V.S.; one boar to Mr. A. W. Harrison; two gilts to Mr. G. Ashworth; a boar to Mr. H. G. Barnham and Mr. E. L. Bowen; four gilts to Mr. T. H. Vallis; one boar to Mr. H. D. Squier; two gilts to Mr. A. Reid; one gilt to Mr. G. Lees; three gilts to Sir Theo. Pecl, Bart.; a boar to Mr. A. E. Todd; a gilt to Right Hon. Earl of Rosebery, K.G.; a sow to Mr. Tibbett, sen.; a sow to Sir G. Greenall, Bart.; a gilt to Mr. M. H. Barnard; a boar to Mr. Ramsden; a gilt to Mr. H. Cranidge; a boar and three gilts to Her Grace the Duchess of Hamilton; a boar to Mr. R. Stuart and to Nottingham Sewage Farm; a boar and a gilt to Mr. F. Attrill; two gilts to Mr. J. G. Wilson; a gilt to Mr. J. H. Bradwell; a gilt to Mr. Thos. Burrowes; one gilt to Mr. H. Bullock; a gilt to Mr. A. G. Scorer; a boar and two gilts to Mr. Fleetwood Sandeman for export to Norway; a boar to Mr. E. G. Bowerman, Mr. J. Jephson, and Mr. Ingram; a boar and a gilt to Mr. Thos. Rippon; a sow to the Nottingham Sewage Farm; a sow to Mr. Ramsden; three sows and two boars to Prof. Carroll (Dublin); ten boars and a gilt to the Irish Bacon Curers' Association (Cork); a boar and a gilt to Mr. J. Hill; a boar to Mr. R. Stuart; a boar to Mr. W. Barron; two boars to Messrs. Henry Briggs and Son; a boar to Mr. G. Lewis, Mr. J. Handley, Mr. F. T. L. Howse, and Mr. H. Sutton; a gilt to Mr. W. Aulton, M.R.C.V.S.; a gilt to Mr. J. Atkinson; four gilts to Mr T. C. Greensmith; a boar to Mr. T. Bowler and Mr. D. Clayton; a boar and gilt to Mr. J. H. Powell; a boar to the Rev. T. J. Davies; four boars to the Right Hon. Earl of Rosebery, K.G.; a boar and two gilts to Mr. J. Wight; a boar to Mr. J. B. Ormond, Mr. W. A. Holdsworth, Mr. E. Druce, Mr. R. Lawton, Mr. Thos. Noden, and to Mr. G. Goodwin; a boar and a gilt to the Right Hon. Earl of Ellesmere; a boar to Mr. M. How, Mr. D. M. Barton, and to the Commissioners of Woods and Forests; a gilt to Mr. Hosking; a boar to Mr. T. Hart; a boar to Mr. Stone; a gilt to Mr. E. Bracewell; a boar to Mr. H. Smith; a gilt to Mr. T. J. Jones Williams; a boar to Mr. F. W. Hood and Mr. G. Thompson; a sow to Mr. R. A. Ayre; a boar to Mr. H. S. Cantley; a gilt to the Right Hon. Earl of Rosebery, K.G.; a boar to Mr. S. Gardner; a boar to Mr. S. W. Dawkins, Mr. Baldwin, Mr. L. W. Vallis, and to Sir J. Beard; eight gilts to the Right Hon. Earl of Rosebery, K.G.; a gilt to Mr. G. Lees; a boar to Mr. S. Noyes; a boar and a gilt to Mr. J. Boulton; a boar to Mr. G. Stone; a gilt to Mr. Davis; a boar to Mr. H. G. Attwood; a gilt to Mr. H. F. Derricourt; a boar to Mr. J. C. Smith; two gilts to Mr. D. Thomson; a gilt to the Rev. T. J. Davies; a boar to Mr. J. A. Weldridge; a sow and gilt to Mr. J. H. Kirkby; a gilt to Mr. W. Simon; a boar to Mr. W. Lord, Mr. J. W. Moore, and Mr. C. D. Wise; a gilt to Mr. F. Davis; a boar to Mr. Enoch, Mr. Chas. Pratt, Mr. Geo. Lynn, and to Mr. V. B. Wright; two boars to Mr. E. T. Hooley; a boar to Mr. C. D. White; a boar and a sow to the Right Hon. Earl of Ellesmere; a boar to Mr. J. Fowler.

Royal Counties Show.

Royalties at Reading.

The fortieth annual show of the Royal Counties Agricultural Society opened at Reading on Tuesday last and continued over the three succeeding days. The entry of stock was almost a record one, but the attendance of the general public was not up to what had been registered on many previous occasions. The ground was a most convenient and picturesque one, being the same as was utilised when the society visited Reading a few years ago.

On Thursday Their Royal Highnesses Prince and Princess of Wales, accompanied by Prince Christian, the Maharajah of Idar, and Maraharajah Kumar Dolat Tingh visited the showyard. At Reading the Royal party were received by the President of the Show, the Mayor, and the Town Clerk, and the Princess was presented with a bouquet by the Mayoress. At the Town Hall, an address of welcome was presented to Their Royal Highnesses, and the Prince, in the course of his reply, said:—"I thank you sincerely for the kind words with which you welcomed me on this my first visit to your ancient and loyal borough, and also for the feeling terms in which you allude to the Princess of Wales, whom I am glad to have with me today, when I first come amongst you in the capacity of High Steward of the Borough, which office was conferred on me by our late beloved Sovereign. It gives me pleasure to have this opportunity of visiting the Royal Counties' Agricultural Show, as I fully realise the importance of those exhibitions for the furtherance of the general agricultural interests of the country. I am glad to learn that, thanks to the cordial welcome given to the society by the authorities and the local committee, this is the largest show, with one exception, in the history of the Society." Their Royal Highnesses subsequently proceeded to the showyard, and from the Royal box on the grand-stand witnessed the parade of prize cattle, and afterwards took luncheon in the Mayor's pavilion.

Another important visitor to the showyard was King Lewanika and suite, who visited Reading on Wednesday. After being received by the Mayor of Reading, the Barotse King drove to Messrs. Sutton and Sons' Royal seed establishment, over which he was conducted, and evinced much interest in the packing of the seeds now being sent out, as a Coronation gift, to the British troops in South Africa. At the show ground the African visitor was received by the president of the society, Mr. J. Herbert Benyon, and at once proceeded to the horse ring. Subsequently he lunched with the council.

As mentioned above, visitors to the show were scarcely so numerous as in many previous years. The following table showing the attendance on each of the four days will be of interest, and show how Reading compared with other exhibitions held by the society:—

	Tuesday.	Wednesday.	Thursday.	Friday.
Reading, 1902 ..	1,300	4,191	13,745	1,859
Weymouth, 1901..	1,330	7,979	15,759	2,889
Winchester, 1900.	1,157	6,140	9,450	2,336
Windsor, 1899..	1,804	2,614	19,130	7,660

Sheep.

The sheep exhibit was fully up to the average of previous years, and, taken in the aggregate, we think nearly every breed was satisfactorily represented. The Hampshire Downs numbered eighty-six, as against ninety last year, of which the yearling rams numbered sixteen, at the head of which one from Lord Rothschild's flock was placed, a ram of good length and grand back and loin, but weak in head and neck. Next him came Mr. Carey Coles's B. and W.E. winner, a ram of considerable merit, with better head and good colour, a second entry from this flock being h.c. Mr. James Flower was third with one of that character of flesh and fleece that is fully typical of its breed, whilst the second entry from this flocks, a very capital ram of nice symmetry and conformation, came in h.c. A notable trio of highly-bred rams of even symmetry and fine character, with good merit, secured r.n., h.c., and c. for Mr. F. F. Buxton, Mr. C. A. Scott Murray being v.h.c. for his Somerset winner, but, strange though it be, his Oxford winner, one of the best in the class, was passed without acknowledgment. Two others of very nice quality secured h.c. for Mr. A. Apperly and Sir J. Blundell Maple, and that which represented Earl Carnarvon took a commend. There were seven of rams of any other age to contest for the three awards, the first of which went to a notably good ram from Mr. James Flower, whose back, loin, and legs were of the highest merit. Next came one bred by Mr. R. Coles, who won for his owner, Sir J. Blundell Maple, a thoroughly-deserved second prize. With the exception of a tendency to weakness at his fetlock and a slight weakness outside his thigh, we think this ram one of high merit. The Earl of Carnarvon's lengthy, nice-quality ram was r.n. Five pens made up a real good class of yearling ewes, wherein Mr. J. Flower's two pens romped away with both cash awards. The leading pen were of exceptional merit, as is shown by their winning the champion prize for best Hampshire exhibit. Mr. C. A. Scott-Murray's evenly-matched and well-brought-out pen were r.n., and a couple of level pens with evenness of character and type secured commendations for Sir J. Blundell Maple and Mr. A. Henderson, M.P. The single ram lamb class was a very capital class, with an entry of twenty-one, Mr. Carey Coles here, as at Swindon, last week, headed the class, though not without a keen struggle. His lamb, rather on the effeminate side, has a grand top, back, and loin, and was worthy of his place. A wide, symmetrical lamb, not quite well covered on his loin, but with a good head, won second place for Mr. R. Ovey. A lengthy, good-topped lamb of capital quality secured third honours for Mr. Buxton. These three were chopped and changed about a good deal before they were finally placed. A ram of high merit and very fine quality came in r.n. for the Earl of Carnarvon's flock. Two of splendid type, with grand flesh, took h.c. for Mr. J. Flower. A like honour was given to one from Lord Rothschild's flock, which gave promise of making a sire of value. Two which represented Mr. C. A. Scott-Murray's fine flock came in for commends, and one from Mr. H. C. Stephens was similarly honoured. There were no less than seventeen pens in the class for three ram lambs. In this class, after a keen contest, Mr. T. F. Buxton's grand trio of fine, masculine lambs won without much question, and they also took the special prize as best pen of lambs in the section. Mr. H. C. Stephens's flock came in for second honours, a pen well brought out, with good backs, these in turn being followed by Mr. James Flower's pen, which might have taken precedence on the ground of better flesh and fleece; the second Chilmark pen being h.c., whilst a pen of high quality, hardly strong enough in the head, from the Earl of Carnarvon's flock, r.n.; and a well-grown pen from Mr. C. A. Scott-Murray were commended. The ewe lamb class was, if anything, a stronger one than the ram lambs. There were no less than twenty entries, at the head of which the Earl of Carnarvon's pen again, as at Oxford and Swindon, led the way. This pen is of very capital merit, and well matched. Mr. T. F. Buxton ran them close with a pen of greater scale, but hardly so even or well covered; whilst Mr. H. C. Stephen's pen, remarkably well brought out, secured third honours, the r.n. going to Mr. James Flower, Mr. C. A. Scott-Murray's pen being v.h.c., and Mr. R. Ovey's h.c., with commendations to Lord Rothschild and Messrs. E. Lyne and J. Bonham Carter.

The Southdowns numbered eighty-three entries, against seventy-six last year, and were a capital lot, with many good sheep. Of the aggregate entries twenty-six were found in the yearling ram class, which was one of high merit and quality. In this class the high character and quality of Mr. C. Adeane's flock met with just reward, for he came in for both first and second honours. The leading ram was of fine quality, with an excellent back, good dock, legs, and twist. To him went also the champion prize for best Southdown exhibit and also the gold medal of the Southdown Society. The second ram was not so good a ram as the winner; his fleece was hardly as good, nor did we quite approve of his walk and carriage; in fact, it is more than probable that a better result would have been secured had Mr. McCalmont's third winner been interposed between them. This ram has real merit and good flesh. Colonel A. F. Walter's flock from Bearwood, whose show-yard career began last season, is to be congratulated upon the prominent place it has secured so far as the present season has gone; in this class a ram from it was made r.n., a lucky win when the notable quality of the next one, Mr. J. Colman's, who was h.c., is realised. This latter ram had hard luck in not getting more forward, whilst another h.c. went to the Earl of Cadogan's exhibit, a thick-set, good ram.

THE SOUTHDOWN SHEARLING RAM shown above is the animal which won the Championship of the breed at the Royal Counties Show at Reading last week, and also at the Bath and West Society's recent show at Plymouth. It was born about February 1st last year, and is the property of Mr. C. Adeane, Babraham Hall, Cambridge.

The old ram class, with an entry of thirteen, was a strong and good class. Its winner, Mr. J. Colman's fine ram, only lacked a better head to have been a topper, for his conformation and symmetry was first class. Mr. E. Ellis, whom we are pleased to see once more close up in the award list, was represented by a fine, masculine ram, not quite so well covered in the back as the winner, but a ram of fine quality and flesh. Following these, as r.n., was a typical ram from the Earl of Cadogan, who was not quite so good forward, but handled well along his back, dock, and twist, whilst a well-deserved h.c. fell to the Earl of Ellesmere's three-shear ram, whose masculine carriage and fine flesh fully entitled him thereto. Seven pens of yearling ewes faced the judges, a capital class, with a strong
Colonel Walters's deep-fleshed and wide-spread ewes took first place. One was not so firm as might have been, and we fancy, in the champion contest, it was a close shave in their favour that secured them the champion prize for best pen of females. We much liked the Earl of Cadogan's pen, which, whilst being individually good, were hardly evenly matched. Next, for r.n., came Colonel McCalmont's third winner been interposed some would have even put at the top; this pen handled right well, and were deserving of a better place than bare r.n. No other pen was noticed, though several were of notable merit. Seventeen single ram lambs made another very capital class. The leader was no trouble to get, for it was a grand ram of high quality, with good back and grand flesh, fleece, and head. He came from Lord Ellesmere's flock, and was got by a ram

from the Pagham Harbour Company. Mr. C. Adeane won second honours, with a good lamb but hardly so wide or well developed as his next door neighbour. Colonel McCalmont's good-fleshed ram, of very fine quality and merit, though third, might have made a good second. Mr. C. Adeane also came in for the r.n., whilst two lambs of fine quality and typical character from the Pagham Harbour Company had to be content with a bare commendation, a similar honour going to two pens from Colonel A. F. Walter and also to Colonel McCalmont's second pen. There were nine pens of three ram lambs, and it was a surprise to find the judges only noticed three pens. First, with notable ease, came a fine and typical trio from Colonel McCalmont, a pen of notable merit and good flesh; indeed, so highly were they thought of that they were made the second best pen of their breed, being r.n. for the champion prize and also for the gold medal for the best pen of males. Next came a pen of most promising lambs from Lord Ellesmere's flock, which, though hardly so firm and as sound, were, when examined, found to be of high merit and quality and worthily deserving of their place. Colonel A. F. Walter was r.n. with a capital and even trio of excellent lambs, whose quality of flesh Barwas very good indeed. Eleven pens made up a capital class of ewe lambs, in which the awards went to the same breeders as in the preceding class. Colonel McCalmont's pen were runners-up for the female champion prize, a grand pen of good-fleshed lambs of fine type and quality.

The Shropshire classes were hardly so well filled as we have seen them, the entry being sixteen, as against eighteen last year. Eight of these were in the ram class, in which Mr. P. A. Muntz was fortunate in securing preference over a really typical, good-backed ram from Mr. W. F. Juge, whose better back, head, and skin, with rather finer quality of flesh, should have secured him, at any rate, first place. However, it was not so, and thus the order was as given, Mr. Muntz also coming in for r.n. with another well-bred ram having good scale, but, like the winner, not well covered on the back, Mr. R. P. Cooper's entry, which was of fine merit, being commended. The ram lamb class was a weak one, precedence being taken by Mr. B. H. Mander, whose pen of well-matched lambs showed fine and good quality, but were hardly finished in condition. Next them came Mr. R. P. Cooper's pen, which were not so evenly matched nor quite as good in their character of wool. The yearling ewe class, with five entries, was one in which we found good merit. The winners, Mr. P. A. Muntz's two first at Nottingham, were a typical pen of stud ewes, a bit stronger in character than the second pen, but at the same time a pen of fine quality and good flesh, Mr. W. J Juge's pen. The second-prize pen were out of the five that won at Shrewsbury, last week; then their hight merit and good flesh was favourably commented upon, and though we agree with the present award, they are a very capital and good pen; Mr. R. P. Cooper's pen being a very good third, or r.n.

The entry of the Kent or Romney Marsh was two more than last year, but we cannot say we think them to be of as good merit as upon that occasion. The winning ram, from Mr. F. Neave's flock, was correctly placed. This ram has a very fine and good fleece, with plenty of bone and good flesh, although exception could reasonably be taken to him on the ground of shortness of wool on the purse and points. Next him came another from the same flock, a fortunate ram to get above Mr. W. Millen's h.c., whose capital carcase and good bone we thought was worthy of higher honours than h.c. The r.n. was a most symmetrical, even, and good-fleshed ram from Mr. C. Files, whose want of masculine character and lightness of bone probably accounted for his position. The yearling ewes were headed by Mr. F. Neave's pen, whose quality of flesh, fine wool, and even fleeces secured them precedence over a very meritorious, well-matched pen of typical ewes from Mr. George Furness's flock, a pen whose place would have been more proper at the top, instead of second. Following these came a second pen from Mr. Furness's flock, two which were very good sheep, but one was hardly a match for them. Two pens from Mr. W. Millen secured h.c. and c., out of which we should not be surprised to see come a winning pen at future shows.

The Oxford Downs made a very much larger and better display than we have had at this show during recent years. There were twenty-seven entries as against sixteen last year. As throughout the whole of this season, Mr. J. T. Hobbs led in the yearling ram class, with that notable ram who won at Oxford and Plymouth, but in Mr. A. Brassey's second-prize winner we found a ram who has much improved since Oxford, where he was second. His more successful opponent then, Mr. R. W. Hobbs's yearling ram, was now third, or r.n. This ram has lost touch, and needs rest. Mr. Brassey's third at Plymouth was commended. The three lamb class, with the same number of entries as in the preceding class, nine, was headed by a very much improved pen of lambs from Mr. A. Brassey's flock. These lambs are thickening, and are better under hand than they were. Mr. J. T. Hobbs came in second with a very typical, good-fleshed pen, and Mr. G. Adams, who had two pens, receives r.n. and c., the former pen being recommended for a third prize. We liked these lambs, but they are somewhat wanting in masculine character. Two pens of high merit won h.c. for Mr. R. W. Hobbs, and Mr. James Horlick's pen came in for a commendation. The numbers in the ewe lamb class were also nine, and here, as in the ram lamb class, first and second honours went to Messrs. A. Brassey, M.P., and J. T. Hobbs, both pens being of good merit and nice character. R.n. and commendation were given to Mr. G. Adams's two evenly and well-matched pens, whose flesh and general conformation was most typical, this leading two meritorous and well-brought-out pens from Mr. R. W. Hobbs's flock; simply the barren honours of h.c. and c. for Mr. James Horlick's very typical pen of nice type.

The Somerset or Dorset Horn sheep were not so largely represented as last year, but the entry was, in one way, satisfactory, for there were three competitors, all of whom figured in the award list, Mr. S. Kidner taking the lead in the yearling ram class with a noble specimen of the breed, whose lengthy carcase and grand, typical head made him a very fine specimen of the breed. Mr. Frank J. Munro was second with a ram of nice flesh and good quality, and he also secured second place in the yearling ewe class, with a pen of very excellent ewes, the first and third in the class being won by Mr. W. R. Flowers, with a couple of grandly-matched and most typical pens.

The Suffolks made their appearance at this show for the first time. Their entry in four classes was ten, but only four were present, two in each class, which were for ram and ewe lambs. Mr. H. E. Smith's pen won in both cases. They were very superior lambs, and Mr. S. R. Sherwood's which were the only other entries, came in second. These showed possibly rather more quality, but lacked the wider and greater development of the leading pens.

Horses.

The show of horses was exceptionally good for the Royal Counties, the increased entries being attributable to the special arrangements made by which horses were sent on straight from Reading to the Richmond Show. Shire horses were well represented. Lord Rothschild headed the older shire stallions with Blythwood Kingmaker. Mr. P A. Muntz's Dunsmore Lieutenant was adjudged the best of the 1900 entire colts, one of Lord Rothschild's entries being second. There was an excellent show of last year's colts, the winner being a promising youngster shown by Messrs. Thompson, of Desford, Leicester. This firm also won the premium for brood mares. There was a capital competition for the 1899 fillies, Mr. R. W. Hudson getting home; but Sir W. H. Wills, Bart., was close on the heels of the winner with Rickford Lass. Mr. A. Henderson, M.P., took first prize in a very good class of fillies foaled in 1900, and he repeated the performance in the class for fillies foaled in 1901. There was a good class for mare or gelding foaled previous to 1899, and in this Mr. Henry Oakley was first. The champion plate presented by the King for the best entire fell to Messrs. W. and J. Thompson's Desford Stonewall II., and the same firm won both silver trophies for the best females.

Hunters made a good entry, most of our prominent exhibitors being represented in this section. There was not a numerous entry for hunting sires, only four being entered, and the winner was Sir Walter Gilbey's Merry Matchmaker. There was more like a competition for the prizes for brood mares, the first selection being Beatrice by Truefit, the entry of Mr. J. Hayman Joyce, of Brede, Sussex. Mr. J. L. Nichisson, of Bracknell, Berks, headed the colt geldings or fillies foaled in 1901 with a chestnut filly, Witchcraft, bred by Mr. Owen Holt-Needham, sire Yardarm. For mares or geldings foaled in 1900, Mr. G. H. Digby, of Cattistock, Dorchester, won with a bay named Hazeline, by Scotch Hazel. For mares or geldings foaled in 1898, Mr. J. H. Stokes, of Market Harborough, headed a strong class with Frieston, by Ruddygore. A chestnut gelding shown by Mr. H. B. Cory, of Castleton, Cardiff, was second.

Cattle.

The collection in the bovine classes was a good one, not only numerically, but the quality left little to be desired. Shorthorns came first in the catalogue, and for this breed His Majesty the King offered a champion piece of plate for the best animal, and the Shorthorn Society a special prize of £10, for the best bull belonging to an exhibitor in Berkshire, Wiltshire, and Hampshire. The judging commenced with the bulls calved previous to 1900, and nearly a dozen were brought into the ring. The King's entry was Royal Duke, calved in March, 1898, bred by her late Majesty Queen Victoria. The class was in all respects a good one, but Royal Duke from the first was stamped as leader, and that position was allotted him, Mr. H. Ker Colville being second with Royal Seal.

As good a class as anyone could wish to see was paraded in the bulls calved in 1900. Mr. J. Deane Willis headed this with C.I.V., and Mr. G. F. King was second with Lord Bruce. Last year's bulls were also full of merit, and in this Mr. J. D. Willis came out top with Bapton Florist. In all, seven competitors received recognition in one degree or another by the judges. Cows and heifers made a good show. White Heather, the celebrated cow of Mr. J. Deane Willis, headed the class for cows in milk or in calf, Lord Calthorpe's Warrior Queen being second. Another notable lot were the heifers calved in 1900, the leading premium being well won by His Majesty the King, with Ruby, a beautiful roan. For heifers calved in 1901, the whole of the entries had to make way for Mr. J D. Willis's Malmaison, a roan by Silverplate, His Majesty being second with Rosanna. The winner of His Majesty's special champion plate was Mr. J. D. Willis's grand young bull, C.I.V., the King's own entry, Royal Duke, receiving the reserve card. Mr. J. D. Willis was successful in carrying off the Shorthorn Society's prize for the best bull belonging to an exhibitor in Berkshire, Wiltshire, or Hampshire, doing this with Bapton Florist. The Shorthorn dairy class was regarded with a good deal of interest, the first prize (£10) being offered by the Shorthorn Society. Lord Baring won this with a six-year-old cow, named Louisa III., sire Merry Archer.

Aberdeen-Angus cattle were represented in five classes, and a capital show they made, a better exhibition having rarely been seen in this part of the country. The English Aberdeen-Angus Cattle Association contributed liberally to the prize list, including two silver medals. The old bull class was won by Elate, the property of Mr. J. J. Cridlan, who was a very successful exhibitor, in this section, securing some recognition from the judges in every class he was represented in. Elate won the silver medal for the best male, while Mr. Hudson, in addition to a number of class prizes, took the silver medal for the best cow with Effulgent of Danesfield.

Sussex cattle are usually forward in large force at the Royal Counties Show, but such was not the case this year. The five classes were only moderately well filled, but many of the exhibits were well known in the showyard. Mr. E. Braby captured the first prize in the old bull class with Drungewick Prebble, while Mr. Saillard was very successful in the subsequent classes, taking first for yearling bulls and first in both the heifer classes. The Hon. R. P. Nevill supplied the leading cow—Old Mayflower VIII.—in the senior class.

The Devons were a better lot than those at Plymouth, which was rather surprising considering that they were farther away from their native pastures. Mr. J. F. R. Morris headed the bulls with Union Jack, Colonel Walker being second, and His Majesty the King reserve with Benedictine. For the bull calves, His Majesty was the winner with Pleader, Colonel Walter taking the other distinctions. For cows in milk or in calf, the Hon. Claud B. Portman, of Blandford, was first, Colonel Walter second, the Hon. E. W. B. Portman reserve. This exhibitor also carried off leading positions in the class for heifers calved in 1900-1.

Herefords were rather short in numbers. In the old bull class the King landed an easy winner with Earsfield by Excellence, a bull which was bred by Mr. J. Lawton-Mone, and Mr. W. T. Barnaby was second. Last year's bulls, although not numerous, stood out for the great promise shown. All five brought out figured in the judge's return, the best being pronounced to be Mr. A. E. Hughes' Glendower II. The Earl of Coventry was placed second.

The Jersey classes attracted a tremendous entry, and the competition was very keen in the various classes. Among Jersey bulls calved in 1901 or 1902 Mr. Arthur Pocock won with Golden Summer, bred by Colonel McCalmont, C.B., M.P., Lord Rothschild, the Marquess of Winchester, the Hon. Mrs. Murray Smith, Colonel McCalmont, Mrs. Charlotte McIntosh, and Colonel Shaw-Hellier all appeared as prize-takers. In the class for cows in milk or in calf Lord Rothschild won with Beresford Pride. The Jersey Champion Prize of £10 was swon by Lord Rothschild's Beresford Pride, and the same breeder's Tudor Boy being reserve.

In the Guernsey classes the champion prize fell to Mr. W. A. Glynn, Seaview, Isle of Wight, with his bull Roland, Mr. E. A. Hambro, of Hayes, Kent, being reserve with his cow Express.

Kerries and Dexters made some fair classes. The champion distinction for the former fell to Lord Manchin's Tom Tit, shown by Messrs. Robertson and Sons, of Babraham, Cambs., the winner of the old bull class. In the Dexter-Kerry class, Mr. B. de Bertodano, of Malmesbury, took first prize in the cow class, and with this entry

also won the silver challenge shield offered by the Kerry and Dexter Cattle Society.

Butter and Butter-making Classes.

There were only a couple of classes for butter, but they were both well filled. The first of these was one pound of butter free from salt, and for which there were just fifty competitors. The Earl of Rosebery was first prize-taker, with an excellent exhibit from his dairy at Leighton Buzzard. Lord Rosebery also won first prize in the butter slightly salted, second prize being taken by Mr. A. F. Somerville, of Wells. Lord Rosebery's exhibit also won the champion prize offered for the best butter in the show. There was a fair entry in the butter-making competitions, and, as usual, this portion of the show was keenly appreciated by the public.

Judges.

SHEEP.—Hampshire Down: C. Stanford, Breamore, Salisbury; George Judd, Cocum, Micheldever. South Down: Edward Hobgen, Shripney, Bognor, Sussex; George Jonas, Duxford, Cambs. Shropshire: J. E. Farmer, Felton, Ludlow. Kent: A. Amos, Spring Grove, Wye. Oxford Down: J. Treadwell, Upper Winchenden, Aylesbury. Somerset and Dorset Horn: J. Kidner, Nynehead, Wellington, Somerset. Suffolk: J. W. Eagle, The Hall, Walton-on-Naze.

HORSES.—Agricultural: E. Green, The Moors, Welshpool: H. Smith, Cropwell Butler, Nottingham. Hunters: G. Evans, Merton Grange, Sandy, Beds.; the Earl of Orkney, Wing Lodge, Leighton Buzzard. Harness Horses, Hacks, and Ponies: Sir Robert Wilmot, Bart., Binfield Grove, Bracknell; W. Waterhouse, Starborough Castle, Edenbridge, Kent.

CATTLE.—Shorthorn: J. T. Hobbs, Maisey Hampton, Fairford, Gloucester; W. T. Garne, A'dsworth, Northleach. Aberdeen Angus: Clement Stephenson, Sandyford Villa, Newcastle-on-Tyne. Sussex: D. Swaffer, Mumford, Kingsnorth, Kent. Devon: J. Kidner, Nynehead, Wellington, Somerset. Hereford: W. Price, The Vern, near Leominster. Jersey: Colonel F. Willan, Thornhill Park, Bitterne, Hants.; J. B. Fis[illegible]re, Newport, Isle of Wight. Guernsey: George Long, Ogbourne St. Andrew, Marlborough; C. J. Drewitt, Drayton, Chichester. Kerry and Dexter: F. A. Hordern, Buxted, Sussex. Dairy Class: James Stratton, Chilcombe, Winchester; H. J. Gibbs, Milford, Salisbury.

SPECIAL JUMPING AND HARNESS COMPETITIONS.—Sir R. Wilmot, Bart., Binfield Grove; Seymour De Bourg, M.F.H., South Berks Kennels; Arthur Jervoise, M.F.H., Herriard Grange, Hants.; E. Boyce Podmore, M.F.H., Basingstoke; W. F. Holt-Peever, Mill End, Henley-on-Thames.

BUTTER.—Miles Benson, British Dairy Institute, Reading.

BUTTER-MAKING AND SHEEP-SHEARING COMPETITIONS.—Thomas Latham, Dorchester, Oxon.

HORSE-SHOEING COMPETITION. — F. Wragg, F.R.C.V.S., Whitechapel, London; R. C. Tennant, M.R.C.V.S., Windsor.

Champion and Special Prizes.

SHEEP.

Champion prize of £10 for the best exhibit in the Hampshire Down classes: J. Flower; r., T. F. Buxton.

Hampshire Down Sheep Breeders' Association's special prize of £2 for the best pen of Hampshire Down lambs in the Show: T. F. Buxton; r., Earl of Carnarvon.

Champion prize of £10 for the best exhibit in the Southdown classes: C. Adeane; r., Col. H. McCalmont, C.B., M.P.

Southdown Sheep Society's gold medal, value 10gs., for the best Southdown ram or ram lamb: C. Adeane; r., Col. H. McCalmont.

Southdown Sheep Society's silver medal for the best pen of female Southdowns: Col. A. F. Walker; r., Col. H. B. McCalmont.

HORSES.

Champion piece of plate, given by His Majesty the King, for the best Cart stallion or entire Cart colt: Messrs. W. and J. Thompson (Desford Stonewall II.; r., Lord Rothschild (Blythwood Kingmaker).

Champion prize of £10 for the best mare or filly in the Agricultural classes: Messrs. W. and J. Thompson (Worsley Princess VII.); r., R. W. Hudson (Wern Blossom).

Shire Horse Society's silver medal for the best Shire mare, filly, or filly foal: Messrs. W. and J. Thompson (Worsley Princess VII.); r., Messrs. W. and J. Thompson (Saxon Flower).

Hunters' Improvement Society's silver medal for the best Hunter filly: G. H. Digby (Hazeline); r., J. L. Nichisson (Witchcraft).

Hunters' Improvement Society's silver medal for the best Hunter mare or gelding: W. H. Barber (Freemason).

Hunters' Improvement Society's silver medal for the best Hunter colt: J. L. Nichisson (March Winds); r., J. L. Nichisson (Beech Hill).

Champion prize of £10 for the best Hunter in Classes 37, 38, 39, and 40: J. H. Stokes (Tennis Ball); r., H. B. Cory.

CATTLE.

Champion piece of plate, given by His Majesty the King, for the best animal in the Shorthorn classes: J. Deane Willis (C.I.V.); r., His Majesty the King (Royal Duke).

Shorthorn Society's special price of £10 for the best bull in Class 63, the property of an exhibitor in Berkshire, Wiltshire, or Hampshire: J. Deane Willis (Bapton Florist); r., A. Henderson (Baron Buscot).

The English Aberdeen Angus Cattle Association's silver medal for the best male in the Aberdeen Angus classes: J. J. Cridlan.

English Aberdeen Angus Association's silver medal for the best female in the Aberdeen Angus classes: R. W. Hudson (Effulgent of Danesfield).

Champion prize of £10 for the best animal in the Jersey classes: Lord Rothschild (Beresford Pride); r., Lord Rothschild (Tudor Boy).

Champion prize of £10 for the best animal in the Guernsey classes: W. A. Glynn (Roland of Sea View II.); r., E. A. Hambro (Hayes Rosy).

The animal illustrated above is the Kentish Ram which won the First Prize in the class for Kent or Romney Marsh Shearling Rams at the Royal Counties Show at Reading last week. It is a little over a year and two months old, and is the property of Mr. Frederick Neame, Macknade, Faversham.

Kerry and Dexter Cattle Society's silver challenge shield for the best Kerry animal in the show: Messrs. Robertson and Sons (La Mancha Tom Tit); r., C. J. Cory (Grenagh Laura).

Kerry and Dexter Cattle Society's silver challenge shield for the best Dexter animal in the show: B. de Bertodano (Cowbridge Lovelost).

Prize List.

SHEEP.

HAMPSHIRE DOWN.

Shearling Ram: 1, Lord Rothschild; 2, C. Coles; 3, J. Flower; r. and v.h.c., T. F. Buxton; v.h.c., C. A. Scott-Murray; h.c., J. Flower, T. F. Buxton, C. Coles, and Sir J. B. Maple, Bart.; c., T. F. Buxton, Earl of Carnarvon, and A. Apperly.

Ram of any age: 1, J. Flower; 2, Sir J. B. Maple; r., Earl of Carnarvon.

Pen of Three Shearling Ewes: 1 and 2, J. Flower; r. and v.h.c., C. A. Scott-Murray; c., A. Henderson, M.P., and Sir J. B. Maple, Bart.

Ram Lamb bred by exhibitor: 1, C. Coles; 2, R. Ovey; 3, T. F. Buxton; r. and v.h.c., Earl of Carnarvon; h.c., Lord Rothschild, J. Flower (2), and Sir J. B. Maple, Bart., M.P.

Pen of Three Ram Lambs bred by exhibitor: 1, T. F. Buxton; 2, H. C. Stephens; 3, J. Flower; r. and v.h.c., Earl of Carnarvon; h.c., J. Flower; c., C. A. Scott-Murray.

Pen of Three Ewe Lambs bred by exhibitor: 1, Earl of Carnarvon; 2, T. F. Buxton; 3, H. C. Stephens; r. and v.h.c., J. Flower; v.h.c., C. A. Scott-Murray; h.c., Lord Rothschild, E. Lyne, J. B. Carter, and R. Ovey.

SOUTHDOWN.

Shearling Ram: 1 and 2, C. Adeane; 3, Colonel H. McCalmont, C.B., M.P.; r. and v.h.c., Colonel A. F. Walter; h.c., J. Colman and Earl Cadogan.

Ram of any age: 1, J. Colman; 2, E. Ellis; r. and v.h.c., Earl Cadogan; h.c., Earl of Ellesmere.

Pen of Three Shearling Ewes: 1, Colonel A. F. Walter; 2, Earl Cadogan; r. and v.h.c., Colonel H. McCalmont, C.B., M.P.

Ram Lamb bred by exhibitor: 1, Earl of Ellesmere; 2, C. Adeane; 3, Colonel H. McCalmont, C.B., M.P.; r. and v.h.c., C. Adeane; c., Colonel H. McCalmont, C.B., M.P., Pagham Harbour Co. (2), Earl of Ellesmere, and Colonel A. F. Walter (2).

Pen of Three Ram Lambs bred by exhibitor: 1, Colonel H. McCalmont, C.B., M.P.; 2, Earl of Ellesmere; r. and v.h.c., Colonel A. F. Walter.

Pen of Three Ewe Lambs bred by exhibitor: 1, Colonel H. McCalmont, C.B., M.P.; 2, Earl of Ellesmere; r. and v.h.c., Colonel A. F. Walter.

SHROPSHIRE.

Shearling Ram: 1, P. A. Muntz, M.P.; 2, W. F. Inge; r. and h.c., P. A. Muntz, M.P.; c., R. P. Cooper and W. F. Inge.

Pen of Three Shearling Ewes: 1, P. A. Muntz, M.P.; 2, W. F. Inge; r. and h.c., R. P. Cooper.

Pen of Three Ram Lambs bred by exhibitor: 1, B. H. Mander; r. and h.c., R. P. Cooper.

KENT OR ROMNEY MARSH.

Shearling Ram: 1 and 2, F. Neame; r. and v.h.c., C. File; h.c., W. Millen; c., J. E. Quested.

Pen of Three Shearling Ewes: 1, F. Neame; 2 and r., G. Farmer; h.c. and c., W. Millen.

OXFORD DOWN.

Shearling Ram: 1, J. T. Hobbs; 2, A. Brassey, M.P.; r. and h.c., R. W. Hobbs; c., A. Brassey, M.P.

Pen of Three Ram Lambs bred by exhibitor: 1, A. Brassey, M.P.; 2, J. T. Hobbs; rec. for 3, G. Adams; rec. for r. and h.c., and h.c., R. W. Hobbs; c., G. Adams and J. Horlick.

Pen of Three Ewe Lambs bred by exhibitor: 1, A. Brassey, M.P.; 2, J. T. Hobbs; rec. for 3, G. Adams; rec. for r. and h.c., R. W. Hobbs; c., G. Adams, J. Horlick, and R. W. Hobbs.

SOMERSET OR DORSET HORN.

Shearling Ram: 1, S. Kidner; rec. for 2, F. J. Merson.

Pen of Three Shearling Ewes: 1, W. R. Flower; 2, F. J. Merson; r., W. R. Flower.

SUFFOLK.

Pen of Three Ewe Lambs: 1, H. E. Smith; 2, S. R. Sherwood.

HORSES.

AGRICULTURAL.

Stallion foaled in the year 1898 or 1899: Lord Rothschild (Blythwood Kingmaker); 2, L. Salomons (Norbury Harold); r. and h.c., W. and J. Thompson (Lad II.); c., G. Osenton (Beggarman).

Entire Colt, foaled in 1900: 1, P. A. Muntz, M.P. (Dunsmore Lieutenant); 2, Lord Rothschild; r. and h.c., Sir J. B. Maple, Bart., M.P. (Childwick Cœur de Leon); h.c., G. Osenton (Eden Chief); c., Sir W. H. Wills, Bart. (Conqueror of Waresley) and J. Stopps (Bledlow Hero III.)

Entire Colt foaled in 1901: 1, W. and J. Thompson; 2, Lord Rothschild (Girton Charmer); r. and h.c., A. Henderson, M.P. (Buscot Plutus); h.c., P. A. Muntz, M.P.; c., H. Oakley (Dewstow Pioneer).

Mare of any age with foal at foot: 1, W. and J. Thompson (Saxon Flower); 2, W. Greenwell (Stanney Commotion); 3, Lady Wantage (Blythwood Guelder Rose); r. and h.c., A. Henderson, M.P. (Blythwood Nora Creina); h.c., R. W. Hudson (Nateby Aurea); c., M. Michaelis (Hendre Heiress) and P. A. Muntz, M.P. (Dunsmore Heiress).

Filly foaled in 1899: 1, R. W. Hudson (Wern Blossom); 2, Sir W. H. Wills, Bart. (Rickford Lass); r. and h.c., W. and J. Thompson (Holker Festive); h.c., W. H. Godding (Savernake Favourite).

Filly foaled in 1900: 1, A. Henderson, M.P. (Birdsall Stately); 2, L. Salomons (Norbury Bliss); r. and h.c., Lady Wantage (Childwick Lady Betty); h.c., L. Salomons (Norbury Gem); c., G. Osenton (Eden Marigold).

Filly foaled in 1901: 1, A. Henderson, M.P. (Buscot Chloris); 2, R. W. Hudson (Danesfield Belladonna); r. and h.c., P. A. Muntz, M.P. (Dunsmore Mistress); h.c., H. Oakley (Dewstow Matchmaker); c., G. Osenton (Eden Calmia).

Mare or Gelding foaled previous to 1899: 1, W. and J. Thompson (Worsly Princess VII.); 2, Sir Walter Gilbey, Bart. (Fenland Lady); r. and v.h.c., F. Crisp (Queen of the Shires); h.c., Lady Wantage (Kelvedon Marguerite), Sir J. B. Maple, M.P. (Cowdale Starlight), P. A. Muntz, M.P. (Lady Franklin), and H. Oakley (Blythwood Nora).

HUNTERS.

Stallion for getting Hunters: 1, Sir W. Gilbey, Bart. (Merry Matchmaker); 2, H. Dyson (Boscawen); r., Miss A. W. Edwards (Fool's Paradise).

Brood Mare, suitable for breeding Hunters, with foal at foot: 1, J. Hayman-Joyce (H.I.S.); 2, C. Kelway-Bamber (Homely Lass); r., Miss A. Edwards (Fairylight).

Colt, Gelding, or Filly, foaled in 1901: 1, J. L. Nichisson (Witchcraft); 2, J. A. Mullens (Irish Point); r., Major H. C. Simonds.

Mare or Gelding foaled in 1900: 1, G. H. Digby (Hazeline); 2, J. L. Nichisson (Beech Hill); r., Miss A. Edwards (Bright Star).

Mare or Gelding foaled in 1899: 1, J. L. Nichisson (March Winds); 2, C. Kelway-Bamber (Lord Marmion); r., P. Berridge (Rustic Lass).

Mare or Gelding foaled in 1898: J. H. Stokes (Frieston); 2, H. B. Cory; r., W. McIlroy (Rufus)

Mare or Gelding, to carry 14 stone or upwards: 1, J. H. Stokes (Tennis Ball); 2, H. B. Cory; r., R. R. Talbot (Topthorn).

Mare or Gelding, to carry under 14 stone: 1, H. B. Cory; 2, J. H. Stokes; 3, W. H. Barber.

HACKS.

Hackney Stallion not under 14 hands 2 inches.—1, Sir Walter Gilbey, Bart. (Bonny Danegelt); 2, Harry Livesey (Dissenter); r., Robert Jay (Towthorpe Performer); h. c., Thomas Radmore (Armada)

Brood Mare suitable for breeding Hackneys or Roadsters, with foal at foot.—1, Sir Walter Gilbey, Bart. (Smart Lady Denmark); 2, Harry Livesey (Heresy); r., R. T. Thornton (Princess May); c., R. P. Evans (B.B. Iris).

Mare or Gelding for riding purposes, exceeding 15 hands.—1, W. E. Selwood (Stylish); 2, Targetts, Limited (Lady); r., R. T. Thornton (Duke of Cranbrook).

Mare or Gelding for riding purposes, 15 hands and under.—1, W. S. Cunard (Lady Vanity); 2, R. T. Hermon Hodge, M.P. (Busy Bee); r., W. H. Cave (Fairy).

PONIES.

Mare or Gelding foaled before 1899, 13 hands and not exceeding 14 hands, to be ridden.—1, G. E. Franklin (Queen Gobang); 2, W. Foster (Lady Horace); r., F. B. Blosset-Maule (Browick Coquette); c, W. S Cunard (Lucy Glitters).

Mare or Gelding under 13 hands, to be ridden.—1, A. Wheatley (Nigger).

HARNESS.

Mare or Gelding of any age, 14 hands 2in. and over, to compete in the Show Yard in harness.—1, W. S. Cunard (Hawthorn Marvel); 2, F. J. Batcheler (Wild Agnes); 3, Miss E. K. Cunliffe (Von Harbinger); r., A. Butcher (Bristol Squire); c., R. T. Thornton (Duke of Cranbrook); F. J. Batcheler (Miss Terry).

Mare or Gelding of any age, 13 hands 2 inches, and under 14 hands 2 inches, to compete in the Show Yard in harness.—1, G. E. Franklin (Queen Gobang), 2, R. T. Thornton (Hutton Mimosa); 3, James Mitchell (Norbury Lincoln); r., Major William Duncan (Enchantress); c., F. B. Blossett-Maule (Browick Coquette); S. R. Selman (Netpool Swell).

Mare or Gelding under 13 hands 2 inches, to compete in the Show Yard in harness.—1, Wm. Foster (Lady Horace); 2, W. S. Cunard (Lucy Glitters); 3, Miss E. K.

Cunliffe (Mel Valley Champion); r., R. T. Thornton (Model Rosa); h. c., Miss Clarke (Berkeley Bobs); c., Albert Wheatley (Tit-Bits).

SPECIAL COMPETITIONS.

Mare or Gelding of any age or height, which shall jump in the best form.—1, Mr. W. W. Grundy (Worcester); 2, Mr. Grange, Farndon, Chester; 3, Mr. F. W. J. Firkins, Leigh, Worcester; r., Mr. J. Wheeler, Studley.

Mare or Gelding of any age or height, which shall jump in the best form.—Mr. F. Grange; 2, Mrs. Blackby; 3, Mr. J. Wheeler.

Pair of Horses of any age or height, to be driven in harness.—1, Mr. F. J. Batchelor; 2, Miss Cunliffe; 3, Mr. R. J. Thornton.

Mare or Gelding of any age or height, the proprety of an exhibitor residing in the county of Berks, or within a radius of 15 miles of Reading, which shall jump in the best form.—1, Mr. P. Headington; 2, Messrs Targetts, Limited; 3, Mr. G. Loane.

Tradesmen's Turn-out (4-wheel).—1, The Reading Steam Laundry Co.

Tradesmen's Turn-out (2-wheel).—1, Mr. H. Childs.

BUTTER-MAKING.

Open to Farmers' Wives and Daughters, or to Female Assistants in a dairy (churn makers, vendors, or their assistants, and winners of a champion prize at any show of the Royal Agricultural Society of England, the Bath and West of England, the Royal Counties' Society, or the London Dairy Show excepted).—1, Miss Jane Garbutt; 2, Miss Lillie Walker; 3, Miss H. L. Young; 4, Miss Gertrude Lawrence; h. c., Miss A. A. Pinnock.

HORSE-SHOEING COMPETITIONS.

To the Smith who shall exhibit the greatest skill in shoeing Roadsters (open).—1, W. Rudge; 2, W. D. Lane; 3, J. H. Wright.

Cart Horses.—Open to Smiths who, as residents in Berks, have made satisfactory attendances at the Berks County Council Farriery School.—1, C. Double; 2, G. Westbrook; 3, T. Kerr; 4, C. Gibbs.

Harness Horses.—Open to Smiths who, as residents in Berks, have made satisfactory attendances at the Berks County Council Farriery School.—1, C. Dougle; 2, J. L. Hilldon; 3, T. Kerr.

CATTLE.

SHORTHORNS.

Bull, calved previous to 1900: 1, H.M. the King (Royal Duke); 2, H. K. Colville (Royal Seal); r. and h.c., J. D. Willis (Granite Chip); v.h.c., J. Little and Sons (Vain Lord) and H. Dudding (Ingram's Perfection); h.c., P. L. Mills (Brilliant Star).

Bull, calved in 1900: 1, J. D. Willis (C.I.V.); 2, G. F. King (Lord Bruce); r. and h.c., P. L. Mills (Duke of Hamilton III.); v.h.c., H.M. the King (Majestic), G. F. King (Chewton Braye Archer), and Hon. W. F. D. Smith, M.P. (H.R.H.); c., J. Coleman (Percival).

Bull, calved in 1901: 1, J. D. Willis (Bapton Florist); 2, A. Henderson, M.P. (Baron Buscot); r. and v.h.c., G. Freeman (Pride of the Hills); h.c., H.M. the King (Orlando) and Sir W. H. Wills, Bart. (Royal Scotsman); c., Lord Calthorpe (Elvetham Victor) and A. Hiscock, jun. (Dorset Duke).

Cow in milk or in calf, if in milk having had a calf within six months or the 1st of June, 1902: 1, J. D. Willis (White Heather); 2, Lord Calthorpe (Warrior Queen); r. and h.c, A. Henderson, M.P. (Ringdale Favourite II.); h.c., A. Hiscock, jun. (2) (Honey Dew IV. and Dorset Kirklevington) and H. K. Colville (Strowan Marchioness V.); c., Sir J. B. Maple, Bart. (May Duchess XXV.).

Heifer, calved in 1899, in calf or if in milk, having had a calf within six months of 1st of June, 1902: 1, H. Dudding (Hawthorn Blossom X.); 2, J. Coleman (Hawthorn Gem III.); r. and h.c., J. Horlick (Coquette III.).

Heifer, calved in 1900: 1, H.M. the King (Ruby); 2, W. Greenwell (Acomb Scottish Bride); r. and h.c., J. D. Willis (Bapton Jewel); v.h.c., W. Nicholson (Princess LXVI.); h.c., J. Coleman (Lady Rose); c., P. L. Mills (Dainty Lass' Daughter), Lord Calthorpe (Elvetham Harebell), and A. Henderson, M.P. (Lady Buscot).

Heifer, calved in 1901 1, J. D. Willis (Malmaison); 2, H.M. the King (Rosanna); r. and h.c., Sir W. H. Wills, Bart. (Blagdon Charmer); v.h.c., Earl Cawdor (Golden Grove Seraphina); c., J. Coleman (Hawthorn Flower) and Viscount Baring (Stratton Empress).

SHORTHORN DAIRY CLASS.

Pedigree Shorthorn Dairy Cow, in milk, of any age: 1, Viscount Baring (Louisa III.); 2, Lord Calthorpe (Fanny LIV.); r. and h.c., J. Little and Sons (Rose Blossom).

ABERDEEN ANGUS.

Bull, calved before December 1st, 1900: 1, J. J. Cridlan (Elate); 2, C. W. Schroeter (Mailbag); h.c., Rev. C. Bolden (Bonny Face of Preston) and L. A. Macpherson (Burnatum); c., Sir E. Vincent, M.P. (Primus of Danesfield), G. Hudson (Barber), and G. W. Tyser (Lancelot of Skegby).

Bull, calved on or after December 1st, 1900: 1, J. H. Bridges (Farthaen); 2, R. W. Hudson (Danesfield Jester); r. and v.h.c., F. Crisp (Nelson of Southgate II.); h.c., W. Dannatt (Bonny Ben); c., J. J. Cridlan (Body Guard).

Cow, calved previous to December 1st, 1899, in calf, or if in milk, having had a calf within six months of the 1st of June, 1902: 1, R. W. Hudson (Effulgent of Danesfield); 2, J. H. Bridges (Cumbria V.); h.c, J. J. Cridlan (Pride of Kippendaire XIII.).

Heifer, calved on or after December 1st, 1899: 1, R. W. Hudson (Star of Danesfield II.); 2, J. H. Bridges (Maureen); r and h.c., G. Osenton (Colleen of Mariners); h.c., W. Cattley (Queen Mona V. of Skegby) and R. W. Hudson (Alice of Tedfodl XI.); c., G. Osenton (Pauline of Mariners), Rev. C. Bolden (Verity of Preston), and L. A. Macpherson (Ida VII.).

Heifer, calved on or after December 1st, 1900: 1, C. W. Shroeter (Lady Bare Rae VII. of Skegby); 2, R. W. Hudson (Rhona II. of Danesfield); rec. for 3, r. and v.h.c., R. W. Hudson (Milady of Danesfield); h.c., C. W. Shroeter (Euryale), J. H. Bridges (Barbarina II.), G. Osenton (Princess of Mariners), and G. F. Gush (Milkmaid of Hotepur); c., Colonel Tuinell (Mons. Meg).

SUSSEX.

Bull, calved in or previous to 1900: 1, E. E. Braby (Drungewick Prebble); 2, P. Saillard (Bewbush Marquis); r., Earl of Derby (Grazer); c., Mrs. Montefiore (Brantridge Ensign IV.), P. Saillard (Alfred), and Hon. R. P. Nevill (Lord Comp).

Bull, calved in 1901: 1, P. Saillard (Bewbush Pirate); 2, J. Godman (Prince Napier IV.); r., Earl of Derby (Benedict).

Cow, calved previous to or in 1899, in calf, or if in milk, having had a calf within six months of the 1st of June, 1902: 1, Hon. R. P. Nevill (Old Mayflower VIII.); 2, P. Saillard (Miss Quality); r., F. J. Maitland (Woodmancote).

Heifer, calved in 1900: 1, P. Saillard (Bewbush Wind II.); 2, Earl Winterton (Stephanotis VII.); r. and h.c., Earl of Derby (Firle Valentine); h.c., P. Saillard (Bewbush Ethel); c., Mrs. Montefiore (Dairy Maid IV.) and A. F. Waterhouse (Forest Queen).

Heifer, calved in 1901: 1, P. Saillard (Bewbush Wind III.); 2, Earl of Winterton (Simla II.); r., J. Godman (Royal Weston XXI.); c., Earl of Derby (Docility).

DEVON.

Bull, calved in or previous to 1900: 1, J. F. R. Morris (Union Jack); 2, Colonel A. F. Walter (Bearwood Rival); r. and h.c., H.M. the King Benedictine); c., Hon. E. W. B. Portman (Hestercombe General).

Bull, calved in 1901: 1, H.M. the King (Pleader); 2 and r.,Colonel A. F. Walter (Duke of Raddon and Look-Me-Over).

Cow, calved previous to or in 1899, in calf, or if in milk, having had a calf within six months of the 1st of June: 1, Hon. C. B. Portman (Capton Belle); 2, Colonel A. F. Walter (Belinda V.); r. and h.c., Hon. E. W. B. Portman (Lowton).

Heifer, calved in 1900: 1, Hon. E. W. B. Portman (Hestercombe Roseleaf II.); 2, Colonel A. F. Walter (Bearwood Countess); h. and h.c., R. W. C. Evered (Princess IV.).

Heifer, calved in 1901: 1, Hon. E. W. B. Portman (Hestercombe Myrtle); 2, Colonel A. F. Walter (Bearwood Constance); r. and h.c., H.M. the King (Missel Thrush); c., W. H. Bond (Treasure) and J. F. R. Morris (Fancy XXVII.).

HEREFORD.

Bull, calved in or previous to 1900: 1, H.M. the King (Earlsfield); 2, W. T. Barneby (Gambler); h.c., Earl of Coventry (Methodist) and J. R. West (Whitfield Bage).

Bull, calved in 1901: 1, A. E. Hughes (Glendower II.); 2, Earl of Coventry (Huntsman); r., J. Tudge (Lionel); v.h.c., H.M. the King (Fire King); c., Earl of Coventry (Hero).

Cow, calved previous to or in 1899, in calf, or if in milk, having had a calf within six months of the 1st of June, 1902: 1, W. T. Barneby (Ringtail); 2, G. D. Faber, M.P. (Saucebox V.).

Heifer, calved in 1900: 1, A. E. Hughes (Bartonia), 2, W. T. Barneby (Mistletoe); rec. for 3, r. and v.h.c., J. Tudge (Royal Gem).

Heifer, calved in 1901: 1, Firkins Bros.; 2, H.M. the King (Deodora); r., Earl of Coventry (Relic); h.c., J. Tudge (Shotover) and Firkins Bros.

JERSEY.

Bull, calved previous to 1900: 1, Lord Rothschild (Tudor Boy); 2, R. B. Ward (Silken Lad); 3, C. Combe (Fancier); r. and v.h.c., Mrs. C. McIntosh (Albertons Prince); h.c., E. D. Stern (Perry Farm Reminder) and Captain J. E. P. Spicer (Bismarck's Boy).

Bull, calved in 1900: 1, Mrs. C. McIntosh (Brompton); 2, Bishop of Ipswich (Carnaties Gem); 3, Captain A. B. S. Fraser (Fearnone); r. and v.h.c., Colonel T. B. Shaw-Hellier (Richmond); h.c., C. W. Armitage (Mignonne's Champion II.); c., Colonel H. McCalmont, C.B., M.P. (Chanslor), A. H. Thursby (Lord Fox), and Mrs. A. F. Perkins (Cape Boy).

Bull, calved in 1901 or 1902: 1, A. Pocock (Golden Summer); 2, Captain A. B. S. Fraser (Brook Hill Fox); 3, Mrs. W. Barron (Taplow Rock); r. and v.h.c., Mrs. A. F. Perkins (Confidence); v.h.c., Marquis of Winchester (Doricles), W. D. Tucker (Laddie), and A. Pocock (Hercules); h.c., Earl of Carnarvon, Admiral Hon. T. S. Brand (Doctor), Colonel H. McCalmont, C.B., M.P. (Black Cap), J. R. Corbett (Trinity Prince), H. Howard-Vyse (Duke of Parma), and A. Gibbs (Perry Farm Clipper); c., Admiral Hon. T. S. Brand (Decimus), C. E. Keyser (Dusseldorf's Pride), J. R. Corbett (Mab's Boy II.), J. S. Evans (Mousy's Owl), H. Howard-Vyse (Lord Derby), and Miss Lucy Standish (Viscount).

Cow, in milk or in calf, if in milk, having had a calf within six months of the 1st of June, 1902: 1, Lord Rothschild (Beresford Pride); 2, Marquis of Winchester (Guarantee V.); 3, Hon. Mrs. M. Smith (La Chane Camelia); r. and v.h.c., C. F. Young (Melbourne Blue Bell); v.h.c., Lord Rothschild (Jolly Brown) and W. D. Tucker (Miramme V.); h.c., Colonel H. McCalmont, C.B., M.P. (Harmony), A. Miller-Hallett (Carol), C. W. Armitage (Melvina III.), and A. Gibbs (Lass of Jersey II.); c., Captain J. W. Smith-Neill (Psyche), G. W. Tyser (Starlight), Miss L. Standish (3) (St. Helier's Princess, Electra, and Opal), and W. Buckley (Genteel II.).

Heifer, calved in 1899, in calf, or if in milk, having had a calf within six months of the 1st of June, 1902: 1, J. S. Evans (Bagdad II.); 2, Mrs. W. Barron (Rosette V.); 3, Mrs. C. McIntosh (Forget-Me-Not); r. and v.h.c, Mrs. L. Brown (Deborah); hc., Marquis of Winchester (Lady Belle); c., Mrs. C. McIntosh (Vivienne) and Colonel T. B. Shaw-Hellier (Reminder's Beauty).

Heifer, calved in 1900: 1, Marquis of Winchester (Dusky Jane); 2, Lord Rothschild (Orleans Queen); 3, Captain A. B. S. Fraser (Perry Farm Pansy); r. and v.h.c., C. W. Armitage (Tiger Lily III.); v.h.c., J. R. Corbett (Ella); h.c., Hon. Mrs. M. Smith (Firefly II.), Colonel H. McCalmont, C.B., M.P. (Bravura), and Mrs. W. Barron (Rosette VII.); c., Marquis of Winchester (Red Lilly), Mrs. A. F. Perkins (Guarantee), A. Gibbs (Hope), and W. B. Roderick (Goodig Balm II.).

Heifer, calved in 1901: 1, Lord Rothschild (Glitter); 2, Hon. Mrs. M. Smith (Regina); 3, Colonel H. McCalmont, C.B., M.P. (Winifred); r. and v.h.c., A. M. Hallet (Balance); h.c., Marquis of Winchester (Lady Rotha), A. M Hallet (Godington Alicante), J. R. Corbett (Camilla XXII.), M. G. Megaw (2) (Golfina and Sayda), Viscount Enfield (Evening Star), C. W. Armitage (Pilot Legacy XIII.), Mrs. W. Barron (Rosette VIII.), and Sir W. G. Pearce, Bart. (Golden Drop III.); c., Hon. Mrs. M. Smith (Little Christina), Lord Rothschild (Myra), Captain J. W. Smith-Neill (Countess Kate), E. D. Stern (Dawn), M. G. Megaw (2) (Motion and Maud Gomme), Viscount Enfield (Easter Egg), Mrs. A. F. Perkins (Ida of Oakdene), H. Howard-Vyse, A. Gibbs (2) (Margarite), R. B. Ward (Countess Coral), G. W. Tyser (Lettuce), Captain A. B. S. Fraser (Lady Like), Mrs. W. Barron (Lady Tidy VIII.), Sir W. G. Pearce, Bart. (Pretty Maid IV.), W. B. Roderick (Goodig Violet), H. C. Smith (Drosera), and Colonel T. B. Shaw-Hellier (Dairy-maid); r. c., Earl of Cadogan (Lady Disdain).

GUERNSEY.

Bull, calved previous to 1900: 1, W. A. Glynn (Roland of Sea View II.); 2, H. F. Plumptre (Red Path); 3, H. J. Gibbs (Bendigo); h. and v.h.c., J. C. Forster (Captain Lyons); h.c., F. Hargreaves (Merton Prince); c., J. A. Mullens (Holden of Longcross).

Bull, calved in 1900: 1 and 2, Mrs. Fownes (Freedown Sly and Roland of the West); 3, Lady Tichborne (Rival); r. and v.h.c., Mrs. Montefiore (King Edward); h.c., Earl of Ashburnham (Compact of Ashburnham); c., J. D. T. Parsons (Itchen Masher).

Bull, calved in 1901: 1, Lady Tichborne (Merry Anton); 2, W. A. Glynn (Sunshine); r. and v.h.c., Mrs. Montefiore (Marshal); h.c., Colonel E. A. Fitzroy (The King) and Earl of Ashburnham (Christopher); c., F. Hargreaves (Squire of Merton).

Cow, in milk or in calf, if in milk, having had a calf within six months of the 1st of June, 1902: 2, F. Hargreaves (Sweet Sultan); 3, Lady Tichborne (Itchen Beda); r. and v.h.c., Lady Tichborne (Itchen Daisy of the Preel); c., Mrs. Fownes (Princess Rebecca) and E. A. Hambro (Hayes Rosy).

Heifer, calved in 1899, in calf, or if in milk, having had a calf within six months of the 1st of June, 1902: 1, W. A. Glynn (Phyllis III.); 2, Lady Tichborne (Itchen Primrose); rec. for 3, r. and v.h.c., J. Forster (Ma Charmante II.); h.c., Lady Tichborne (Itchen Claudia); c., Mrs. Fownes (Claremont Ruth IV.).

Heifer, calved in 1900: 1, J. Maidment (Lady Durant); 2, Colonel H. W. Shakerley (Marie des Prevost); 3, W. A. Glynn (Hettie IV.); r. and v.h.c., Mrs. Fownes (Princess Lily); h.c., F. Hargreaves (Merton Lily).

Heifer, calved in 1901: 1, Lady Tichborne (Handsome); 2, H. F. Plumptre (Muriel XII.); 3, E. A. Hambro (Hayes Nellie); r. and v.h.c., F. Hargreaves (Merton Sweet Marjoram); h.c., Earl of Ashburnham (Princess Eva), J. Hull (Mount Lourie), and W. A. Glynn (Island Queen III.); c., T. D. T. Parsons (Ashurst Primrose).

KERRY.

Bull, calved in 1899 or 1900, or 1901: 1, Robertson and Sons (La Mancha Tom-Tit); 2, J. Thorley (Nap); r., Colonel V. W. Bates Van de Weyer (Forest Royer); h.c., C. J. Cory (Llantarnam Lancelot); Colonel V. W. Bates Van de Weyer (Forest Taurns).

Cow, calved previous to or in 1899, in calf, or if in milk, having had a calf within six months of the 1st of June, 1902: 1, C. J. Cory (Grenagh Laura); 2, Robertson and Sons (La Mancha Vesta); r., Colonel V. W. Bates de Weyer (Forest Sloe); v.h.c., Robertson and Sons (La Mancha Sweet Kiss).

Heifer, calved in 1900 or 1901: 1, Robertson and Sons (La Mancha Pearl); 2, J. Thorley (La Mancha Springtime); r., Colonel V. W. Bates de Weyer (Forest Beryl); h.c., C. J. Cory (2) (La Mancha Amy and La Mancha Olive); c., Colonel V. W. Bates de Weyer (Forest Viary).

DEXTER KERRY.

Bull, calved in 1899, 1900, or 1901: 1, Robertson and Sons (La Mancha Boss); 2, Her Grace the Duchess of Devonshire (Compton Darky); r., B. de Bertodano (Cowbridge Little Joe); h.c., Her Grace the Duchess of Devonshire (Compton Dandy); c., Mrs. E. A. Leatham (La Mancha Handyman).

Cow, calved previous to or in 1899, in calf, or if in milk, having had a calf within six months of the 1st June, 1902: 1, B. de Bertodano (Cowbridge Lovelost); 2, Her Grace the Duchess of Devonshire (Compton Dot); rec. for 3, r. and v.h.c., Robertson and Sons (La Mancha Violet Aicme Cuff); v.h.c., Her Grace the Duchess of Devonshire (Compton Darling); h.c., Robertson and Sons (La Mancha Bonny Lass); c., B. de Bertodano (Little Cherry).

Heifer, calved in 1900 or 1901: 1, Robertson and Sons (La Mancha Tess); 2 and r., Duchess of Devonshire (Compton Dimple and Compton Dainty); c., Robertson and Sons (2) (La Mancha Soddy Two Shoes and La Mancha Modest Moll).

BUTTER.

One pound of Butter, free from salt: 1, Earl of Rosebery; 2, A. Palmer; 3, L. M. Mildon; 4, C. Hayes; r., J. W. Phillips; v.h.c., C. Combe, Mrs. F. Ward, J. Hull, Mrs. R. Ashford, and A. F. Somerville; h.c., Mrs. H. W. Cobb, Mrs. C. McIntosh, R. Underwood, Hon. Mrs. Crutchley, and W. H. Palmer; c., C. E. Keyser.

One pound of Butter, slightly salted: 1, Earl of Rosebery; 2, A. F. Somerville; 3, A. Palmer; 4, L. M. Mildon; r., C. Hayes; v.h.c., C. Combe, Mrs. F. Ward, and J. Hull; h.c., T. P. Cobden, Mrs. E. Smith-Neill, H. H. Howard-Vyse, G. W. Palmer, M.P., and Lady Calthorpe; c., T. D. T. Parsons and Mrs. R. Ashford.

Royal Horse Show, Richmond;

The eleventh annual horse show, under the auspices of this society, was held on Friday and Saturday, in the picturesque old Deer Park, within three minutes' walk of the railway station. Year after year the shows that have been held here, almost without exception since the formation of the society, have been favoured with brilliant weather, Queen's weather, as it was called, being almost assured upon such occasions. The present show, however, experienced the reverse of all this, and cold and miserable rainy days heralded and concluded the event. So great, however, is the love even of Londoners for the high-class gee gee, either for riding or driving, that, in spite of these untoward circumstances, a large number of visitors, including a large sprinkling of ladies, graced the scene by their presence, and so one way or other the gloom that the cold and wet might have caused was in a measure minimised and a tone of brightness given to the proceedings that outsiders would have thought quite impossible, seeing the mud and water under foot and the necessity for umbrellas overhead that had to be contended with.

Coming to the great cause for this assembly, the horses themselves, there is no doubt the quality was of a very high order, an improved order from most previous shows, whilst in numbers there was in many of the classes a decrease rather considerably in some of the classes, not more than half the entries having put in an appearance, so that from this view the show would be called scarcely as good as usual.

The catalogue commenced with the hunters, which contained a number of well known animals that have been out and won since the present season commenced, as well as many that have won at this show and other leading shows for the past several years; indeed, the cream of the hunter and carriage horses of the country were to be seen at Richmond on Friday and Saturday last.

The hunter judges given in the catalogue were the Earl of Coventry and Mr. Mamisel Richardson, whose duties in catalogue order commenced with hunters up to not less than 14 stone. There were fifteen entries of these; only seven, however, put in an appearance, so there was not a large field to choose from. Mr. John Drage's Cork, a well-shaped horse for going, which he did in good form, and so full of muscle that he was well up to weight, headed the class. He is all round a good one, and shows quality with it. His breeding is not mentioned. Next to him came Mr. J. H. Stokes's Musket, by Carouse, a horse of charming contour, and with good manners as well as a good ride. He, too, is master of the weight. Such good horses as Mr. Radmore's Courtier (3rd), Mr. Cecil Chaplin's Lyddite (reserve), Mr. Hardie-Jackson's Foxhunter, and Mr. Swinfen-Brown's Bally Hooly, all well known concluded the class.

In the class suitable for weights under 14 stone a good deal of quality was apparent, Mr. J. H.

Stokes taking first honours with Chips, a dark brown, full of quality, and with fine shoulders, giving apparently a very nice seat, but he had not any too much under the saddle for a long day. Messrs. Cheney's John Dory, a well known and good one by Castleknock, bred for Lord Lonsdale, and Mr. John Drage's Waterloo, a strong useful gelding, were the other winners in the order named. There is a good deal of repetition in the classes at Richmond, too many entries rather duplicated, and so several of these horses already mentioned came before the judges in the novice class also. There was a very large entry in this class, and in addition to those selected for the prizes, there were a number of horses of a very highly useful description, either suitable for the saddle or for harness, or even for remounts, should they fail to reach a higher figure for other purposes from any cause, and these are a class of horses that the country can do with, and save so much money going into the hands of the foreigner. The winners amongst these novices were Mr. Sellwood's Huntsman, a capital horse with a good reaching gallop, Mr. Drage's Cork, previously named, and Mr. Tatem's Colonel. One or two others were also highly commended.

The hunters' champion class brought into the ring some extraordinary good horses, foremost amongst them being a well-known old friend, Gendarme, now shown by Mr. H. B. Cory, and who once more easily carried off the first prize of £20. This good horse, if memory serves rightly, commenced his career in the showyard when in the hands of Lord Dysart, and a magnificent colt he was, though upon his début he was beaten by his stable companion of similar colour. This defeat, however, was the first, and very nearly the last, as he has almost invariably since that time held the field, and on Saturday last captured, for the sixth time the first prize at the Richmond Show. As a horse Gendarme is a grand specimen; he is fit to take either a light or heavy weight, and the style in which he carries himself and the ease with which he gallops are a treat, both to those at the ring side,as well as his rider, and there is no doubt, should Fate decree such an end for him, he would make a harness horse second to none. We were delighted to see him take his wonted place once more, and remark that he is a credit to thoroughbred blood, and to Blueblood, his sire. The next best horses in this class were Mr. Drage's Doctor and Mr. J. H. Stokes's beautiful and well-known London winner, Tennis Ball.

Covert hacks any height followed the hunters, the judges of these being Lord Orkney and Mr. Hugh Owen. There were some very handy stuff in these classes, Mr. Harris's Kilmartin, Mr. Gooch's Silverwing, and Mr. Gouldsmith's Hoar Frost won the prizes. Hacks of 15 hands and over were also a very good lot. Mr. J. V. Gooch's Badminton was first in the class, and also carried off the Hack Challenge Cup. He is just about good enough for anything. His stable companion, Connaught Queen, and Mr. Astor's Ringlet were next best, all quality horses. Amongst the hacks under 15 hands and in the novice class that followed, such beautiful horses as Miss Violet Haine's Dolly Gray, Mr. Gooch's Silverwing, Mr. Tresham Gilbey's Reward, and the champion Badminton, were the best and most remarkable animals.

Harness horses are always an important section of this show, both for style and pace, and the display of American horses, trotters and otherwise, that can be seen at this show is not equalled anywhere else in England. The first class in this section was that for single harness horses over 15 hands high. There was a large entry and wonderfully good class of these, but even the best of them, with such heavy ground, could scarcely make their usual good show, except when on the hard portion of the drive. Action, of course, played the most important part in the selections upon this occasion, so that it was not surprising that that great winner, Forest King, shown as an entire in his younger days and now as a gelding, and in the hands of Mr. C. J. Wertheimer, should take the first position. He is a son of His Majesty, and he certainly made a fine show at Richmond, going in parklike style. Mr. J. D. Johns' Heathfield Squire also made a very fine show, and was quick; he came out second, and Mr. Tom Mitchell's well-known horse, Sam Weller, by Ganymede, was next.

In the class from 14 to 15 hands, there was also a large entry, and equally good winners. Mrs. T. D. Johns' Lady Windsor, Messrs. Dennis' Shooting Star, and Mr. Tatem's Astonishment were best in these; whilst in the novice class, Forest King, the cup-winner, again turned up, Mr. Howard's Coronation and Mr. Whitehouse's Silverton, with Mr. Batchelor's Miss Terry, being the best of them—quite what may be termed a small lot.

In the lower standard and pony classes, there was a large entry of cobs and ponies that have been well-known winners upon many occasions, such good goers as Mr. Franklin's Queen Go Bang, Mr. Tatem's Meloally Princess, Mr. W. V. Cunard's Lucy Glitters, Mr. Reginald Heaton's Extravagance, Mr. Ledon's Sensation, and Mr. Gooch's Golden Bells taking the money.

The ladies' single harness class, the horses to be driven by themselves or a member of their family (very useful conditions), brought out some first-raters, a very easy winner, we should say, being Miss Ross's beautiful horse, Rowton Blackthorn, though he does not at present give quite such sensational performances as he could accomplish at the close of last season, probably owing to the heavy ground. Mrs. Batt's Lady Nell followed.

Pace and action horses followed, and certainly the former property was well in evidence on Saturday, for the time some of these occupied in going round the big track at Richmond was scarcely noticeable, it was so brief, and as regards action, a number of them were quite showy enough to satisfy the most fastidious.

This season Mr. W. Winan's Little Tobe carried off the cup. He is a remarkably pretty goer, and quick, too. A very good horse in this performance was Direction Fay, from the same stables. His going, both as regards pace and movement, was simply marvellous, but for reasons unknown to the writer, he disappeared from the course rather early. Other winners were Mr. Harry Sims' good horse, Piloteer, who won the cup last year, and Mrs. Whitehouse's Silverton.

American-bred horses followed, and in these there was a lot of very useful-looking stuff, quite fit to make up a good show. The four-horse team class had but a couple of entries, Mr. Vervaek's and Mr. John Finch's, which was placed as named. The former, a powerful, good, steady team, and the latter a nicely-matched set of greys, with good looks and quality about them.

In single-horses, American-bred, Mr. Winan's Little Tobe, already mentioned, was the winner.

The soft ground was very difficult for the single harness horses, but for the pairs it was infinitely worse, especially when proceeding over the deeply-cut-up portions; and so it did not seem that these classes gave quite their customary display. Mr. Wertheimer's Hopwood Squire and Jubilee King, well known last year, were best in the 15 hands and over class; and under 15 hands, the same exhibitor's Frivolous and Frivolity. Other good pairs were Mr. Edgar Baxter's Musk and Miss Howard, and Mrs. Batt's Sir George and Lady Wills, the latter a very beautiful pair.

In the double harness class, any height, Miss Ross's beautiful pair, we were pleased to see, obtained the cup (Rowton Blackthorn and Rowton Vinca).

Several of the horses already mentioned were the winners in the tandem class, and the challenge cup for four-in-hands, it is pleasing to know, fell to the lot of a team of blue roans shown by Mr. E. D. Stern.

The tradesmen's classes were capitally supported, having a very large entry.

Suffolks.

The show of these handsome and useful East Anglian chestnuts was perhaps rather small numerically, but, like the light horses, their quality was good enough. Stallions foaled in 1899 or previous were the first class, and of these some four were entered, the best of them being Mr. A. J. Smith's fine six-year-old Saturn, by Wedgewood. He is quite a stallion, with capital neck, back, and quarters, and sis limbs good, too. Mr. A. H. E. Wood's Sudbourn Lord, a well-moving horse, well built and with capital feet, also fills the eye well, and came second, with Mr. C. A. Cork's Ironside, by Border Minstrel, third, a horse with great bone and good limbs and feet. Three or four very good colts came out, also, in the two-year-old class, though one or two of them did not seem any too big. Mr. E. F. Quilter's Bently Valentine, by Prince Wedgewood, headed them, a colt with quality and better joints than some of the others. The second, Mr. A. J. Smith's Rendlesham Albert, by Prince Albert, came in second. He stands upon capital feet, with a good set of legs, and nicely put together. Mr. Pratt's third, Sproughton Chief, is also a compact, well-couple colt, with the right kind of hard, blue feet.

Mares foaled in, or previous to, 1899 were a level, beautiful lot, with shape, size, and quality about them, stylish, too, in their general appearance and character. Mr. Quilter's Bently Duchess, Mr. Wood's Sudbourn Trinket, and her companion, Sudbourn Matchet, were the recipients of the prizes, and Mr. A. J. Smith's Rendelsham Matchless was third.

There were seven entries of two-year-old fillies, some of which were exceptionally nice fillies, Sir Cuthbert Quilter's first, Bawdsey Sweet Marjorie, full of quality and good at the ground, it seemed to this reporter had not much in hand over her stable companion, Bently Christine, who was placed second, a beautifully-moulded filly and stylish. Mr. R. Eaton White's Boulge Hebe had certainly a beautiful class of bone, but was shown excessively fat, which gave her rather a heavy appearance.

Geldings of any age were well represented, several capital horses, just fit for town work, being included in the class. The best of these were shown by Mr. C. F. Quilter, Sir Cuthbert Quilter, and Mr. John Symonds.

Northamptonshire.

The show of the Northamptonshire Agricultural Society, which opened at Daventry on Wednesday, was not favoured with very bright weather, although rain fortunately kept off. The entries totalled 938 this year, as compared with 924 last year, when the show was held at Thrapston. The entries of cattle numbered 135, as compared with 124, and those of horses 348, against 259. There were only 61 pens of sheep, as against 92 a year ago, but compensation was found for this reduction in the display of 23 pens of pigs, a gratifying feature when it is remembered that last year, owing to the existence of swine fever in the county, the show of pigs had to be abanabandoned. The quality of the stock, on the whole, was very creditable, particularly in the cattle and horse sections, and the judging and parades were watched with considerable interest, whi'e the jumping competitions were a most attractive feature. Large numbers of people were interested in the dairy department, in which the samples of butter numbered 24, as compared with 26 last year, and there were 15 entries in the butter-making competition, against 16 at Thrapston. There was also an excellent show of implements and machinery, and a very fine exhibition of poultry, the entries numbering 236, as compared with 308 twelve months ago.

The display of cattle was well up to the county average, the Shorthorn classes being particularly well filled. The bulls between two and three years old were a good lot. Mr. Leopold de Rothschild, of Leighton Buzzard, carried off the chief award with his roan, Silver Mint, by Silver Plate, Mr. Cooper, of Berkhamstead, being second with Stoneytown Archer. There was also a capital class of bulls between one and two years, Mr. Preece, of Thrapston, winning with Canvin Lad, and he afterwards secured a special prize as being the best beast belonging to a tenant farmer. A good class of bull calves was headed by Rotherfield Emperor, by Rotherfield Augustus, owned by Colonel Makins, of Henley-on-Thames. There was a splendid class of cows, and here Miss Alice de Rothschild won with Bructer Queen, by Lord Violet. In a smaller class for heifers above two and under three years old Mr. Thorley, of Farringdon, Berks., took premier prize with Fairy Queen, by Joe Munro. In the class for heifers between one and two years old Colonel Makins scored again with Ness Cloudberry 2nd, and Mr. de Rothschild came to the front with a pair of heifer calves.

The Channel Islands cattle were not very numerous, but they made a good show. Mr. Cooper took the first prize for bulls with Leylands Oak, being closely pressed by Mr. Gisborne, with Newcomer. The cow class enabled Charlotte 6th, belonging to Lady de Rothschild, to add to her laurels, the Hon. Mrs. Murray Smith being second with Christina, and in the heifer class Mr. E. Smith, of Bromsgrove, won with White Rosebud, Mrs. Ratcliff's Coralie coming second. The Aberdeen Angus cattle classes also were not very well patronised, but the qua'ity of the animals was excellent. Mr. Greenfield, of Bedford, was represented in the class for bulls with Quinton of Haynes, which managed to defeat Leo of the Hyde, owned by Mr. James, of Broughton, Kettering. Mr. Hudson, of Danesfield Marlow, obtained the chief award for cows with Black Queen 3rd, of Woodland, Mr. James being second, and Mr. Hudson was also first with his heifer, May of Danesfield 3rd, Mr. Greenfield's Darling of Haynes 2nd coming next.

There was a large and interesting show of horses, quality, both in the heavy and light classes, being well up to the mark. In a strong class for cart mares with foals at foot Mr. G. G. Atterbury (West Haddon) took first prize with D'Arcy Fuchsia. A number of splendid cart foals were on view, the best being a daughter of Dunsmore Masterman, shown by Mr. K. H. Wright (Velvertoft). Mr. Atterbury's D'Arcy Fuchsia also headed the tenant farmers' class for mares, beating Sea Poppy, the property of Mr. F. J. Steward (Brigstock), the champion last year. In the foal class for tenant farmers Mr. Lowick's colt easily won chief place, defeating a bay colt of nice quality with plenty of feather, the property of Mr. J. Bromwich (Daventry). The open class for cart colts, foaled in 1900, was small but good. Mr. P. A. Mutz, M.P. (Rugby), took first prize with the bay stallion, Umberslade Victor, which is out for the first time. He is deep-

bodied, has powerful limbs, and a profusion of silky hair. In the next class, for geldings or fillies, foaled in 1900, the leader was a filly, Yatesbury Flower, shown by Mr. J. Parnell (Rugby), which also received the silver medal of the Shire Horse Society for the best mare, filly, or filly foal. Mr. Muntz was successful in the class for colts foaled in 1901, with the stylish black, Dunsmore Masterpiece, which defeated a useful animal belonging to Mr. A. C. Norman, Tar Langton. Mr. J. Bromwich led the class for fillies foaled in 1901 with a well-grown youngster, a smart and improving bay filly belonging to Mr. Muntz running her closely in the contest. The tenant farmers' classes were all well filled, and some admirable Shires were shown.

A good show of hunters is always assured at the Northamptonshire Society's exhibition, and the one at Daventry takes high rank. Not very many yearlings were seen out on Wednesday, but the class for fillies included Mr. Wilkinson's beautiful bay by Havoc, from Edwinstowe, Newark, whilst the same owner's bay gelding, also by Havoc, scored in the class for two-year-olds. There was a capital class of three-year-olds. Captain Elmhirst, of Blisworth, gained the red rosette with the well bred chestnut filly, Gallene, by Gallican. Messrs. W. and J. A. Cheney, of Gidding Grove, Peterborough, were second with the bay roan gelding Conductor, by First Consul. The open class for mares and foals, the latter being by thoroughbred horses, was one of the best in the yard. Mr. Wilkinson was again successful, and his mare afterwards carried off the gold medal of the Hunters' Improvement Society, whilst her colt foal by Havoc divided the honours in his class with Mr. M. B. Bletsoe's bay colt by Old Buck. The hackneys were not of very much account, but there was a very good class for cobs, Mr. Franklin, of Derby, winning with his Empress Alexandra Gobang, which did so well at Nottingham, with Mr. Foster, of Moseley, second with Mel Valleys Flyer. Mr. Foster had matters pretty much his own way in two classes for ponies, taking both the first awards with Mel Valley Bantam and Mel Valley Don.

Although in some instances capital animals were shown, the average of the sheep section was not very high.

Messrs. S. E. Dean and Sons, of Dowsby Hall, Bourne, took all the prizes for Lincoln long-woolled theaves and tups; Mr. Brooks, of Boughton Grange, Northampton; Messrs. J. Brown and Son, of Northampton; and Mr. J. Preece, of Thrapston, also gaining successes with animals of this breed. There were some splendid Hampshire Down sheep shown, and probably for the first time at this show Shropshires were placed in front of Oxford Down sheep in the cross-bred classes, a Shropshire shearling ram beating an Oxford Down ram, and Shropshire shearling ewes being in front of Oxford Down theaves. The special prize of the Oxford Down Sheep Breeders' Association was won by Mr. Eady, of Irchester Grange, Wellingborough, with the ram which was defeated by the Shropshire.

Quality in the pig section was also very uneven, although the average of the exhibition was good. In the class for boars Mr. Spencer, of St. Ives, Hunts., won with one of his well-known Whites, a Berkshire owned by Mr. Woodward, of Towcester, being second. Sir Humphrey de Trafford, of Hill Crest, Market Harborough, however, brought out a Berkshire sow and five Berkshire pigs, which scored in their classes, the first-mentioned overcoming Mr. Henson's large white sow from Peterborough.

There was a good show of poultry, while the butter and butter-making competitions excited a good deal of interest.

Royal Cornwall.

Fine weather favoured the opening of the Royal Cornwall Agricultural Society's Show at Camborne on Wednesday, and the attendance of visitors was consequently good, and something like a record was achieved. In number the entries of stock showed a slight falling off, they being seven less this year than at last year's show at Bodmin. The entries in the different sections were:—Horses, 147; cattle, 128; sheep, 62; pigs, 32.

The collection of horses was well up to the average of recent years. The heavy horse classes formed a strong group of useful animals, and some of them were so evenly matched that the judges had no little difficulty in determining the destination of the awards. In the agricultural stallion class Mr. Jeffery's well-known Duncan III. added to its laurels, beating a younger and well-built brown stallion from the Tehidy Estate. Two-year-old stallions were a very promising lot, the chief award going to a good bay from St. Austell. Only three hackney stallions paraded in the ring, and the red rosette was deservedly bestowed on Mr. Mead's three-year-old chestnut Trelawny, which distinguished itself in the ring by its action and speed. Thoroughbred stallions formed an imposing little group, the chief award going to a massive bay from Lamerton. Numerically the agricultural brood mares were rather weak, but the winners have all good qualities. Three-year-old geldings or fillies were an excellent class, and the judges hesitated a good deal before giving their preference to a brown gelding from St. Kew, which was run very close by a bay filly from Kenwyn.

Two-year-old geldings or fillies produced only four entries, and the chief award went to a well-built bay filly from St. Austell. Colts were exceedingly strong, no less than 13 being paraded in the ring. Of uniformly high quality, they gave the judges a good deal of trouble. For a considerable time the judges hesitated between a good-looking chestnut from Bodmin and a nice bay from Plympton, but eventually preferred the former. Taken as a whole, the hunters were a very high-class lot. Brood mares were comparatively few, but were all of good type for breeding hunters. Three-year-old mares and geldings were of unusual excellence, and in this competition Mrs. Calmady's chestnut gelding Mutineer, which is well known as a winner in the West of England, added another to its laurels.

Though not so uniformly excellent, the two-year-old fillies or geldings formed a decidedly interesting group, the chief prize deservedly going to Maj-Gen. Jago Trelawny for a shapely chestnut filly from the Coldrenick stud farm. Exceedingly choice were the heavy-weight hunters. The red rosette was deservedly bestowed upon Mr. Jackman's chestnut mare Ruby, which showed good speed and action. If anything, the light-weight hunters were even better than the heavy-weights. In this class also Mr. Jackman was successful, winning the first prize with a shapely chestnut, which galloped in good style, second honours going to Mr. Retallack for a younger bay gelding, which was greatly admired for its good manners. Weight-carrying hunters bred by exhibitors were also a very creditable lot, the chief prize going to a useful brown gelding from Penzance. Hack or hunter colts were numerically weak, and, except the first prize winner, scarcely rose above the level of mediocrity. Hacks, however, filled five useful classes. The brood mares were nearly all of a good type, while both the three and two-year-old hacks were decidedly above the average, most of the horses moving with grace and ease. In the class for mares or geldings not exceeding six years, up to 14 stone, premier honours went to a brown gelding from Bodmin of superior pace and style. Several good-looking hacks were paraded with the light-weights, and the chief award was bestowed on a dark bay mare from Stoke, with good action and manners.

There was a good show of cobs in point of quality, although the classes were numerically weak. Jumping attracted a deal of popular interest, but little good work was shown.

The cattle section was a very strong one, both as regards numbers and quality. Devons, however, were few in several cases, but there was some first-class quality. The old Devon bulls were an excellent lot, Mr. J. C. Williams being closely run by the Hon. E. W. B. Portman. The third, entered by Mr. H. E. L. Pearse, was a very useful animal. Mr. J. C. Williams took the lead in the bulls of 1900 and 1901. In Devon cows the second animal failed by reason of narrowness about her hind legs, a defect which nullified her perfection about the rump. Mr. Pearse's 1901 heifer took the first in its class, and won Lord Falmouth's prize offered for Cornish tenant farmers. South Devons were of good quality, and some classes were well filled, and included winners at the Bath and West and other shows.

The yearling bulls were especially strong, and the awards reversed those at the Bath and West Show. Mr. Sparrow Wroth, second at Plymouth, was placed first, beating Mr. Butland. The Czar, of Mr. Wroth, was regarded as more symmetrical and better in his back and quarters than Mr. Butland's exhibit. The yearling and two-year-old heifers were strong, the Devonshire breeders easily defeating their Cornish competitors, notably Messrs. Butland and Luscombe. The shorthorns, as a whole, were the best seen in Cornwall for years. In the old bull class five grand animals competed, including Mr. Coad's, which won at the Bath and West. The young bull class was very strong. The Shorthorn Society's prize was won by Mr. W. James with a splendid young bull, bred from W. Duthie's Aberdeenshire stock. Both Jersey and Guernsey breeds were well represented, the different classes being fully supported, and an excellent type of animal shown.

There was a good exhibition of sheep, many of the Bath and West animals being entered, but in several cases being awarded different places. In the South Ham rams the decisions of the Bath and West and Tavistock shows were reversed. Mr. Sobey, who was the winner on Wednesday, was placed second at the former shows; Mr. Fairweather, who was placed second at Camborne, gained a first at the Bath and West; while Mr. Hallett, third place at Camborne, took the lead at Tavistock. The short wool sheep were a remarkable class, and the long wools attracted a great deal of favourable notice, all the prizes being taken by one breeder, Mr. F. White, of Williton.

In the pig section most notice was attracted by the large black breed, of which there were four well-filled classes. The pairs of sows were of particular merit, the chief award being carried off by Mr. Olver, who also took the lead for boars. There were fewer of the large white breed, the chief honours being taken off by Mr. T. Manwell.

The dairying department attracted the usual amount of interest, as also did the horse-shoeing competitions.

Waltham Cross.

The Waltham Cross and Three Counties (Essex, Herts, and Middlesex) Horse and Foal Society held their annual show at Waltham Cross, on Thursday, when the weather was, unfortunately, cold and showery. Nevertheless, there was a fair attendance of visitors. In numbers the entries were an improvement upon last year, due to the addition of a Yeomanry class, whilst the quality was quite up to the average. The heavy horses showed up remarkably well, the first class being devoted to draught mares, with foal at foot, open to tenant farmers, and the animals formed a very creditable collection. Six were entered in the open class for Shire mares, with foal at foot, and they showed up well in the ring. Mr. C. S. Marsh (Little Offley, Hitchin) scored with a nice class of mare, by Cashier II., Mr. G. A. Cobb (Theobald's Park, Waltham Cross—who was a most successful competitor in the various classes—being second with a handsome daughter of Bar None. Amongst the Shire colt foals, confined to tenant farmers, were several promising youngsters, Mr. M. McMullen taking first with a nice foal by Iron Chancellor. Mr. C. H. Boughtwood (Great Burstead, Billericay) was third with a foal by Hulton Baron, a position which he took in the next class, open to the United Kingdom. In this latter collection was a handsome, well-grown colt belonging to Mr. M. McMullen (Hertingfordbury), which secured the special as the best foal. The corresponding class for filly foals confined to tenant farmers was equally good, but the next one, open to the United Kingdom, produced the best Shire filly, which was shown by Mr. C. S. Marsh, (Little Offley, Hitchin). Of yearling colts there was but a small entry, the chief honour going to Mr. J. H. Fielding, of Woodham Ferris, for a good-looking exhibit by Markeaton Gaffer. Mr. A. Amey (Chingford) carried off the chief honour in a big class for Shire yearling fillies open to tenant farmers, but here again the pick of the collection was found in the open class, namely, a youngster with plenty of size and substance, sent by Mr. A. J. Chingford. In the next class, Mr. A. J. Hollington (Enfield) obtained the special for Shire yearling. Mr. J. Holm (Ongar) and Mr. W. Graham (Nazeing) were the chief winners with draught geldings. Mr. S. Pigg (Furneaux Pelham) was first with two-year-old colts, and Mr. J. H. Fielding (Woodham Ferris) second, whilst Mr. G. A. Cobb took the lead with three-year-old fillies with a nice upstanding mare with plenty of width. The pairs of plough horses shown by tenant farmers constituted a grand collection, the chief honour going to Mr. S. Wallace (Essenden), who also carried off the Enfield Chase Stag Hounds prize in the open class with the same pair.

There were but few hackneys entered or eligible for the Stud Book. Mr. A. Collen (Saffron Walden) was the only exhibitor in the class "not exceeding 15 hands, with foal at foot." He sent a nice mare by Wildfire, and her foal secured the prize for the best foal, beating a choice one by Bonny Danegelt, sent by Sir Walter Gilbey, Bart. The hon. baronet had a couple of entries in the class "exceeding 15 hands, with foal at foot," Lady Dunham, by Cadet, taking the leading place. There were but three two-year-olds, Mr. A. Collen (Saffron Walden) carrying off first, and Mr. A. Johnson (Woodlands, Bishops Stortford) second. The riding and driving competitions were keen, and the contests excited a good deal of attention on the part of the visitors. The riding classes were, perhaps, in this respect the most attractive, especially the one in which the hacks were to be ridden only by ladies. There were about a dozen in the ring. A bay gelding, belonging to Mr. — Martindale, pluckily ridden by a lady, carried off the chief prize, the second prize going to Mrs. Graves (Tolleshunt D'Arcy). Mrs. Hartley Batt sent a beautiful brown mare, which was unmistakably first amongst mares or geldings over 15 hands; but this lady's Sir George had to give place to Miss Howard, belonging to Mr. E. Baxter (Brentwood), and well-known throughout the country by her achievements in the prize-ring. Mr. Baxter came to the front also in the next class, over 15 hands, with his Midnight Echo, a black, shown in harness. Perhaps the best lot in the harness competitions were those not exceeding 15 hands, and here Mrs. Hartley F. Batt's well-known Lady Wiles was placed in the first position, beating Mr. E. Baxter.

The hunters were quite equal in point of quality with the hackneys. The first to come into the ring were the mares with foal at foot. Mr. C. Kelway Bamber, of London, sent his Oxford and Reading winner, and she maintained the place she took at those shows this year. Mr. J. Hayman-Joyce was first with foals, and Lieut.-Colonel Colvin, C.B. (Monkhams, Waltham Abbey),

second with a filly by Senanus. Lieut.-Colonel R. B. Colvin's brown gelding, Monkham, was conspicuously first in the two-year-old or three-year-old class with a fine mover of grand quality. Mr. C. Kelway Bamber's Lord Marmion, second at Ipswich, was only reserved here, and was considered worthy of better treatment. There were several good horses amongst the light-weights, Mr. A. C. Cory-Wright (Totteridge) won with his Helen, a well-known mare that looks like going across country. Mr. G. C. Poole (Chelmsford) was awarded second for The Major. In the heavy weights, Mr. D. Christy, jun. (Margaretting Hall, Ingatestone) was the victor with his bay gelding (Woodman) which carries himself well and goes.

Huntingdonshire.

The Huntingdonshire Agricultural Society held their sixty-sixth annual show on Tuesday at St. Neots, in Priory Park, which was lent for the purpose by Mr. C. F. Rowley. The entries were unprecedented in the annals of the society, the total number being 629 against 608 last year. They were divided as follows:—Cart-horses 90, nags 191, beasts 58, sheep 15, butter 14, poultry 261. St. Neots gave the society a cordial welcome, and the decorated streets gave an air of general festivity to the town.

The quality of the animals in the heavy horse section was very good, the number of Shires shown this year being much in excess of those in previous exhibitions. The prize-takers in the class for mares and foals were the property of Mr. F. J. Steward (Brigstock), Mr. Hamer Toogood (Little Shelford), and Captain Duncombe respectively, being all very good animals, and in the class for two-year-old fillies Girton Charm, a splendid black filly, the property of Mr. Jacob Frohock, of Lolworth Grange, took first prize, with Mr. Hamer Toogood's Shelford Locket, and Mr. James Jones's (Doddington) Doddington Smart, a useful grey, not far behind. Yearling fillies were also exceptionally good, Messrs. Millard Bros., of Eltisley, taking the red ribbon with a grand brown filly, and Mr. F. W. Griffin, of Boro' Fen, second, and Mr. John Hunt, of Coton, third. The championship prize of ten guineas, given by the president, for the best mare, filly, or filly foal in the yard, was won by Mr. Hamer Toogood's Grey Fashion, a fine grey mare ten years old, the same animal also taking the Shire Horse Society's gold medal for the best mare or filly in the Shire classes. In the foal classes there were also some smart animals, Captain Duncombe's bay colt securing the champion prize.

The hunter section made a fairly good show, and included some handsome specimens The Hackneys were also a grand lot, and keen competition took place in some of the classes. Mr. John Rowell, as usual, showed some very fine animals, as did Mr. A. Fuller, Mr. R. G. Heaton, and other well-known breeders. In the polo pony class Messrs. Smith and Balding's exhibit was closely followed by Mr. A. Stourton's and Mr. Montgomery's animals. The polo bending race was productive of a good deal of interest, and jumping of about average quality was witnessed. The harness classes brought out some rare specimens, and in the classes for pace and action the action of the winner was remarkably fine, and the animal was easily first. There were only five entries for the trade turnout, and Mr. J. R. Purvis was awarded first prize, Mr. W. Yarnold taking second place, and Messrs. Jordan and Addington third.

The entries in the cattle section achieved a record in point of numbers, while the quality was well up to the average. In the Shorthorn classes Mr. Rowland Wood took two firsts for bulls above two years and under one year with some splendid specimens, whilst Mr. Sanders Spencer took a couple of firsts, a second, and reserve with promising animals. The heifer belonging to Captain Duncombe, which secured premier place in the class for heifers under two years old, was well placed. Mr. H. Goodman secured the red ribbon for the class open to Channel Island, Kerry or Dexter Kerry stock with a six years' old Jersey cow, there being only five entries for this class.

Edinburgh.

The nineteenth annual show of the Edinburgh Agricultural Association was held at the Hawkhill Recreation Grounds on Wednesday, and, as has been the case on many previous occasions, the weather was far from favourable to the Society. In the morning rain fell, and the outlook was most unpromising; but the rain cleared off about noon, and the remander of the day was fine, though unsettled and cold. This naturally affected the attendance of visitors, and the takings at the gates fell short of last year's total by about £20, the sum taken being £266 17s. 6d. Taken all over, the number of entries in the various classes of stock was about the same as last year, though there was a disappointing decrease in the cattle section. Horses, both Clydesdales and light-legged, were again the feature of the show, while sheep made, as in former years, an excellent display. There was also an interesting exhibition of machinery.

Clydesdale Horses.

Horses occupied the premier position in the catalogue, and, of course, the breed to first recieve attention were the Clydesdales, of which there was a very good show, all the classes being well filled, and in many classes competition was very keen. A notable feature in this section was the marked success of the produce of that remarkable sire, Baron's Pride, the offspring of Messrs. A. and W. Montgomery's fine horse securing all the three championships of the breed. The best class of the section was that for two-year-old stallions, which numbered a dozen. The Messrs. Montgomery had a capital first in King's Crest, a horse sired by Up-to-Time, which was afterwards reserve for the championship. Mr. William Renwick was second with Urieside, a Prince Thomas colt, which was first at Aberdeen as a yearling. There were a dozen yearling colts, and here Messrs. Montgomery again came well to the front with Baron Stirling, a symmetrical animal with excellent bones, Mr. Gray, Birkenwood, being second with Gartly Agnes, a sweet-looking colt, whilst the third ticket went to Mr. Renwick for a well-bred, promising colt, which was second at Aberdeen this year. Mr. St. Clair Cunningham was fourth with a Baron's Pride colt of his own breeding, which was afterwards first in the Derby. There was a capital display of geldings, some powerful draught horses being among the prize-winners. There were three brood mares forward, and the first place was given to Baron's Blossom, a big three-year-old Baron's Pride mare, with a foal at foot. Mr. St. Clair Cunningham was second with his well-known five-year-old, Maggie Holmes, who had at foot a very neat Gay Everard foal. In the yeld mare class, Mr. Alex. Guild was easily first with his splendid black four-year-old, Topsy Pride, which has had a remarkably successful career during the past three years. Although she was shown in rather fat condition on Wednesday, she was with general assent awarded the championship for the best female of the breed. Lord Rosebery was second in this class with the five-year-old brown mare, Princess of Glassnick. She combines both Darnley and Prince of Wales blood in a marked degree, and was shown in fine bloom. Mr. St. Clair Cunningham was third with the seven-year-old May Light, and Mr. Guild only got the fourth place with his well-known, prize-winning mare, Maid of Athens. A neat lot of half a dozen three-year-old fillies were headed by Mr. St. Clair Cunningham's White Heather, a daughter of Baron's Pride. She is a nice, compact little mare, and was reserve for the championship. Mr. Kerr, of Harviestoun, was second with Baron's Blossom, another Baron's Pride filly, and Mr. Curr, Merylea, was third, with Lady Peggie, also one of Baron's Pride's produce. Lord Rosebery had the best of the eight two-year-old fillies in Pyrene, a Baron's Pride filly, which was later awarded the Clydesdale Horse Society's medal as the best young filly of the breed. The reserve animal was Lady Mac, first-prize winner in the yearling filly class, shown by Mr. M'Nee, Crieff. Mr. Kerr, of Harviestoun, was second in the yearling filly class, with Favourite, a neat specimen of his own breeding, which was first in the Derby.

Hunters.

The show of light-legged horses is invariably a good one at this exhibition, and Wednesday's display was quite up to, if not above, those of previous years. Hunters were a very strong section, the class for brood mares being exceptionally good, and here Captain Clayhills Henderson was first with a six-year-old chestnut, Rosemary, a beautiful animal, which was first at the Highland Society's show last year. The pick of the hunters, however, was found in Mr. Robert Henderson's Rhona, a two-year-old chestnut filly bred by the exhibitor at Mount Hooly, Jedburgh, which was deservedly awarded the silver medal offered by the Hunters' Improvement Society as the best filly in the yard. She was shown in excellent condition. She is sired by Swillington, whose sire, in turn, was Hermit, the winner of the Derby in 1867. Mr. Henderson was also second in the class with Rud, another of Swillington's progeny, whilst the winner in the class for three-year-old mares or geldings was also sired by Swillington. This was Swindle, a stylish chestnut shown by Mr. George Dove. Mr. John Cairns' Lady Peggie, which was second in the two-year-old class at the Highland Show last year, was second. Four-year-olds were topped by Mr. George Dove's John Bell, which was also sired by Swillington out of Belle Brunnell. In a good class for five-year-olds and upwards, up to 14 stone, Mr. Fred Usher was first with Hawford, and Mr. C. A. Blom was second with Johnny, which was sired by Scene-shifter. With Core, a mare of rare quality, Mr. Fred Usher was first in the class for five-year-olds and upwards, up to 12 stone. Mr. William Armstrong being second with Coronation, and Mr. C. H. Scott Plummer third with a six-year-old bay.

Hackneys.

Hackneys, though not numerous, made a capital show, high quality being conspicuous in all classes. The winner of the premier award in the class for brood mares, Mr. Liddell Grainger's Ayton Sweet Nancy, a stylish mare of good action, and close on foaling, was selected for the Hackney Society's silver medal, although she was closely followed for this distinction by Mr. William Scott's Barony, the first-prize winner in the class for two-year-old fillies. The challenge cup presented by Mr. Liddell Grainger for the best Hackney stallion was gained by Mr. Alex. Gemmell's Cossack, which was first in this class, and which won at Ayr last month, the reserve for this honour being Mr. Charles E. Galbraith's Administrator. Hackneys to ride or drive, shown in saddle, were a remarkably fine class, the principal top animals, belonging to Messrs. John Kerr, Gilmerton, and Charles E. Galbraith, Terregles, being distinguished for their quality and style. The best of the ponies, shown in saddle, was Mr. Alexander Gemmell's Little Woman, which was acknowledged to be as fine a pony under 14 hands as has been seen in Scotland for many a day. The competitions for driving turnouts and for jumping were well contested, there being two jumping contests in the afternoon and one in the evening.

Cattle.

The cattle section was a disappointing one, the two leading breeds, Shorthorns and Aberdeen-Angus, being represented by but 18 animals—six Shorthorns and a dozen doddies. The Jerseys made the best display, and were undoubtedly the redeeming feature of this section. Mr. Duncan Stewart, Millhills, Crieff, was first for Shorthorn bulls calved before January 1, 1901, with the three-year-old Strathern Lad, which last year was champion at Perth. The second was a white bull, Charming Lad, shown by Mr. Lawrence Johnstone, of Sands, and the winner of several prizes. In the cow class Mr. Stewart was first with a very sweet three-year-old heifer, with a beautiful head, which has not been shown before. The second was an old cow, shown by Mr. James Scott, Softlaw East Mains, Kelso. For Aberdeen-Angus aged bulls, Mr. Lawrence Johnston's Buttress came to the front. He possesses very nice quality, is a good, level animal, and promises well. A well-known bull, Egmont of Pitpointie, brought to its owner, Mr. T. H. Bainbridge, Eshott Hall, Felton, Northumberland, the second prize, whilst the third fell to a useful-loking bull, belonging to the Messrs. Meiklem, Begg, Kirkcaldy, who also showed the only yearling bull. Mr. Bainbridge was first and second for cows. His first, Neat Nellie, bred by Mr. Archibald Whyte, Kirriemuir, was second at the Royal and Highland shows last year. In the two-year-old heifer class, Mr. Kerr, of Harviestoun, Dollar, led with a very sweet animal, successfully shown at local shows last year. The second prize went to Mr. Bainbridge, for a heifer which is a little higher standing than the first; while the third ticket went to Mr. Bainbridge for a good, short-legged heifer. In the yearling female class, Mr. Bainbridge was first. There were three classes of Jerseys, and they made a nice display. Mr Elliot, Clifton Park, had first for cows in milk, and for heifers in calf or in milk, Lord Hopetoun being the runner-up. His lordship, however, came in first for yearling heifers, Mr. Elliot being second.

Sheep.

The sheep were strong, both in numbers and quality. Cheviots were the best, and in this section Mr. John Elliot, Hindhope, was successful in gaining the chief awards. His first-prize aged tup, Lochiel, was first as a shearling at the Highland and Agricultural Society. His first-prize shearling is a splendid type of Cheviot, though he was run very closely for the premier award by a shearling exhibited by Mr. James Moffat, Craick, Hawick. Blackfaces were not very numerous. The top animals were of very level merit, Messrs. Cadzow, Borland, winning the chief awards. Border Leicesters were up to the average of quality seen at previous Edinburgh shows, and here Mr. T. M'Intosh, Balquharn, Brechin, had everything his own way, he showing three very outstanding animals in the shearling class. The gimmer glass was also of good quality, the first prize winners being sheep of good substance and handling well. The second prize pen was shown by Mr. Hume, Barrelwell, Brechin. There was a small display of half-bred sheep, the chief prize-winner being Mr. J. Bertram, Addenston, Lauder, who secured two first, one second, and a third prize.

Renfrewshire.

The centenary show of the Renfrewshire Agricultural Society took place at Paisley on the 5th inst., and proved to be one of the most successful of the long series. To fittingly recognise their centenary the directors and the secretary had made special efforts to invest this year's show with more than an ordinary interest for visitors as well as breeders of stock. In this direction they were

admirably supported by various of their subscribers giving handsome special prizes for competition in the more important classes. The prize-money and value of cups and medals amounted to £533 10s., an increase of about £70 over the total of last year; and it is satisfactory to be able to state that the number of entries received created a record. They totalled 915, as against 818 last year, and, excepting sheep, the increase was over all classes. Ayrshires had 270 entries, increase 47; Clydesdales, 113 females and 127 males—240, an increase of 18; hunters and roadsters 70, increase 11; hackneys, ponies, cobs, and harness horses 152, increase 12; sheep 47, decrease 5; dogs 110, increase 5; dairy produce 26, increase 9. In the matter of weather, the show was also this year specially favoured. During the early part of the day the weather was somewhat dull, with indications of rain, but as the forenoon advanced it cleared up beautifully, and the remainder of the day was all that could have been desired. As a result in great measure of the fine weather conditions which prevailed, there was a very large attendance of visitors, especially in the afternoon, when the leaping and parade of prize stock took place.

In the cattle section the Ayrshire classes were the first to claim attention, and in these there was an increase of 18; hunters and roadsters 70, in-of the classes were filled with animals of fair average quality, and but few crocks were noticed. There was an entry of 20 for the Derby for three-year-old cows. Mr. James Wilson, Boghall, was first with a brown quey, bred by Messrs. J. and A. Wilson, Boghall, which was out for the first time. She won the annual champion cup given by Lord Blythswood for the best three-year-old cow bred within the county, Mr. Bine Renshaw's silver medal for the best female, and the Ayrshire Cattle Herd-Book Society's silver medal. In the male section Mr. Andrew Clark, Fingart, won first in the aged bull class with a bull of a good type, which also won the championship of the section, and Sir John Stirling Maxwell's cup for the best male. He did not compete for the Ayrshire Cattle Herd-Book Society's medal, which was given to the second-prize old bull shown by Messrs. D. and J. Miller, Berfern. Sir M. R. Shaw-Stewart won Mr. William Reid secured Sir M. R. Shaw-Stewart's silver cup for the best yearling or two-year-old female with his two-year-old heifer in calf, whilst the silver medal for the animal with the best head and horns was awarded to Mr. Alexander Walker, Paisley. There was an interesting display of Clydesdale horses, and the female championship was awarded to the winner in the three-year-old filly class, Mr. John M'Kay's (Crossmill Farm) Miss Taylor, a mare of great quality. In the two-year-old filly class Mr. James Davie, Bogton, was first with a big-sized "Up-to-Time" filly, which was first at Barrhead. Yearling fillies were led with a nice animal shown by Mr. Holmes, which secured Sir Thomas Glen-Coats' silver cup for the best one-year-old filly bred in the county went to Mr. Holmes. Mr. James Davie secured the Clydesdale Horse Society's bronze medal for the best yearling or two-year-old filly, whilst Mr. David Whyte, Auchans, won the group medal, and Mr. Holmes the medal for mare with two of her offspring. The male section was well filled. Mr. William Clark, Netherlea, was first in the yearling class. In the Derby competition for yearling colts Mr. W. S. Park was first with a colt sired by Ascot. The silver cup for the best yearling colt or gelding was awarded to Mr. Clark's exhibit. Mr. Clark was also first in the two-year-old gelding class, and was first in the three-year-old gelding class. The turnout of light horses was of an exceptional character in respect of both numbers and quality. The silver cup for the best light-weight carrying mare or gelding carrying 11 to 13 stones was awarded to Mrs. J. George Clark, Glasgow. Mr. Andrew Wilson won the medal for the best pony stallion not exceeding 14 hands, and there were several other interesting pony classes. Miss Craig, Comedie Farm, won the ladies' driving competition. Mr. John Pollock, jun., Springside, supplied all the Leicester sheep exhibits, and secured all the awards. Mr. Andrew Fleming, Threepland, Eaglesham, was first and second in the aged tup class in the black-faced sheep section. Mr. John Stewart, Carrot, won for tup hoggs; Mr. Fleming was first and second for ewes with lambs at foot; and Mr. Stewart for ewe hoggs. Mr. Fleming won the medal for the best sheep in the section.

Stow Green Horse Fair.—This annual fair was held on Stow Green, near Billingborough, on Thursday, and attracted buyers from all parts of the country. Between 700 and 800 animals were exhibited. For the best agricultural horses there was an exceptionally good trade, the majority being bought from London and the provincial towns, at prices ranging up to 75gs. There was a slightly-improved demand for nags, and 35gs. to 45gs. were paid for the best. Similar prices were also obtained for van horses. Irish horses fetched from 20gs. to 35gs. Ponies were dear, at prices varying from £8 to £20.

COMING SHOWS.

Norfolk.

The annual summer show of the Norfolk Agricultural Association will take place at Norwich, on Wednesday and Thursday of this week, under the presidency of the Mayor of Norwich, Mr. Russell J. Colman, J.P. This is the sixth occasion on which the County Show has pitched its tents in the city of Norwich since the year 1860, viz., in the years 1860, 1865, 1874, 1882, 1893, and 1902. In 1886 The Royal Agricultural Society of England held its exhibition there, and the County Show was amalgamated with it. A very wide difference in the show now to what it was in the year 1860, when it was then in its infancy, may be gathered from the fact that in that year a sum under £100 was the total amount received for admissions, whilst in 1893 the gate-money exceeded £1,000. Provided the weather is favourable, a large muster of visitors will be sure to put in an appearance at the show this week, for the railway companies are offering every facility for the conveyance of the public from all Norfolk and other stations in the Eastern Counties, and are running excursions both days, and special trains in addition to their ordinary service.

The show ground adjoins the Ipswich road, within a short distance of the electric tramway route and not far from Victoria Station, and is situated on three meadows surrounding "The Grove," the residence of Mr. Alex. R. Chamberlin, who kindly placed them at the disposal of the society. The total acreage of the grounds extending to about 17 acres have been laid out with long ranges of shedding for the accommodation of horses, cattle, sheep, pigs, and exhibitor's stands, together with large erections for horse shoeing and butter making competitions, poultry dressing, etc., and a large grand stand from which the riding, driving, and jumping competitions can be viewed with great comfort, providing shelter from the sun or rain.

A large entry of horses, cattle, sheep, and pigs from noted breeders (including Royalty) have been received from various parts of the kingdom, whilst the implement yard covers an area of about six acres, and will be covered with implements and machinery, well-known firms in all parts having taken stands. The Technical Education Committee of the Norfolk County Council will hold competitions on the ground in horse shoeing and butter making. Under the same auspices there will be practical demonstrations and lectures in poultry dressing, cramming, and trussing, by the well-known expert, Mr. E. Brown (the secretary of the National Poultry Organisation Society); whilst Mr. H. Beswick (the expert on bee-keeping) will conduct demonstrations and exhibitions of the most practical way of dealing with the keeping of bees.

The show will open at 9 o'clock on Wednesday morning (admission 2s. 6d.), and judging in all sections will commence punctually at that hour, at which time also catalogues may be obtained on the ground at the catalogue stand near the entrance. The showyard will also open at 9 o'clock on Thursday morning (admission 1s.), and the exhibition will cose both days at 6 o'clock p.m.

Essex.

On Thursday and Friday next the Essex Agricultural Society holds its forty-fifth annual show at Romford, and it is expected that it will prove most successful, as the town is so easy of access from all parts of the country, whilst the Great Eastern Railway will issue return tickets at single fares and run special trains, so that the attendance of visitors should, providing the weather is fine, be very large indeed. The local committee were fortunate to secure such a splendid site as Marshall's Park, looking at the present time at its best. The show ground also has the great advantage of being within five minutes' walk of the High Street and ten minutes' walk of the two railway stations at Romford.

The entries in the chief sections of the show, as stated in a previous issue, are not quite so large as last year, but are much in advance of some previous years. That some really good animals will be seen in the rings may be gathered from the fact that amongst some 300 exhibitors appear the names of Lord Rothschild, Lord Rayleigh, Sir Cuthbert Quilter, Bart., M.P., Sir Edgar Vincent, K.C.M.G., M.P., Sir W. J. Farrer, Bart., Sir Walter Gilbey, Bart., Major-General Sir Henry Ewart, K.C.B., Colonel H. McCalmont, C.B., M.P., Mr. A. Henderson, M.P., Mrs. McIntosh, Colonel W. T. Makins, Colonel W. N. Tufnell, Mr. Walpole Greenwell, etc.

No formal opening of the show takes place, the public being admitted at 9 a.m. on Thursday, the judging in the various classes being timed to commence at 9.15 sharp. The public luncheon will take place on the first day at 1.30, when the president, Colonel Lockwood, M.P., will, of course, preside, and a large and distinguished company is expected to be present.

AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW 1898, 1900, 1901.

SEVEN OTHER GOLD AND SILVER MEDALS IN ENGLAND AND CONTINENT, 1901

Which automatically supplies itself with oil the whole time of hatching. 4s. extra. Testimonials. Hatching 100 per cent. Over 1,000 Letters of Thanks received for Results. Write for our Catalogue, post free.

W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY

The Largest Manufacturer of Incubators in the World.

Seasonable Notes.

Poultry keepers have been much disappointed in the weather, as we usually look forward to a lovely month, but evidently not only poultry people are disappointed at such very cold severe weather as we have had this month. It has been a very serious matter, particularly for fruit growers in Kent, and large florists in the same county in the same way have suffered loss. It has wrought great havoc among all young life, not only among flowers, animals, and birds, but with the grass and corn crops, which have been cut down almost as brown as a berry. It has been most trying all round, and, of course, poultry people have not escaped.

We would advise all breeders, whatever their position, to clear out their cockerels, or even their pullets that are hatched early, and are likely to lay early in the summer, should be cleared out and turned into money, as there will be a great demand during the Coronation festivities, and if kept, these pullets, after they had laid a little while, would shed their feathers in the autumn like old hens, and not do very much in the way of egg production just when the birds are deasest, but the later-hatched birds will produce winter layers that will take their places and do better. We particularly recommend the early-hatched pullets to be turned into money. We would point out that there would be a great demand for hens for boiling, as many thousands of those will be used for providing cold food, so those who have good, plump hens, and can spare them, we would advise to let them go for the Coronation. Also old stock cockerels, that people have finished with, no doubt will make an extra 1s. 9d or 2s. at that time. Those who buy them will know how to cook them; we need not give any information about that.

We are sorry for all poultry keepers who hatched out last month, as it was so severe. The cold and beating rain made it worse than we have ever known. We are interested in wild birds, as well as domestic fowls, and we have been watching the nests of various wild birds. Blackbirds, thrushes, chaffinches, etc., that generally reared four or five, only reared one or two this year. These birds have nests that are open at the top, and either the eggs wereunfertile, or the birds died in the shell. One variety of wild birds, however, have become great enemies to us in our yards—viz., the ordinary sparrows. They have grown so numerous that

we destroy over 2,00 a year, and on our place over 200 nests have been destroyed in one day; and they appear to be more numerous this year than ever. We are obliged to keep them down, but among all the hundreds of nests we never found more than two birds in each nest, and they were very poor and stunted. We found three very small young ones in one of the nests.

Our readers will know that an ordinary sparrow's nest is very thickly lined with feathers and closed at the top, especially on a poultry farm, where they can pick up plenty; yet the results in those beautiful, warm nests show that some of the sparrows did not have a fertile egg, and where they were fertile the young ones died off. The average of the young ones found in the nest has been two, while in ordinary years the average has been four, as sparrows frequently lay five eggs, and sometimes six. Our readers may think it cruel to destroy these little birds, but it becomes a very serious matter when the fowls are being fed economically, as the sparrows will eat more than about two birds in each nest, and they away or destroyed. A great many chickens—one, two, and three in a brood—have not grown out this year as fast as their fellows.

Usually a certain number, or at least one in a brood, show signs of general debility and do not get on, but the percentage this year is larger than normal—three out of ten are seen. Not only do they not grow, but they are devoid of feathering round the head and neck. When such chickens are examined their skin is very tight. As tightness of skin, of course, in all animals, is a sign of bad condition, this not only stops their growth, but indicates something worse, and in the case of chickens, as with other live things, the cause is internal, and in the case of chickens the skin is to be softened with vaseline, petroleum jelly, or oil of petrol. These are all preparations from petroleum of varied refinement, and will soften the skin, as petroleum will penetrate even where water will not.

As soon as a chicken becomes weakened through any organ not working properly, or nipped up with cold, worms begin to breed in the intestines, and 19 out of every 20 chickens, after they become a month old, are found infested with worms, and not one exception have we known where these weakly chickens have been examined to this rule. But our readers will want to know if a cure is possible. Yes, if they have not become too bad. But where chickens are like this they eat a great deal more than healthy ones, and yet lose flesh, because the worms take the nutriment out of the food. Not only that, but they also take the lining of the intestines, beginning with the mucous membrane, and gradually eating out to the end, if not stopped, so that gradually the intestines are denuded of their lining, and only the bare, sore entrails are left. We have taken over 500 of these worms out of one chicken, worms averaging from 1¼in. to 2¼in., out of a bird 3½ months old. Not only that, but a number of small ones grow, and pass through the bowels, and do not grow larger when they have reached a certain size.

The best remedy for all this is to let the chickens fast for 24 hours. Nothing but water should be given them to drink. Chickens a month old should have one heaped-up teaspoonful of roup powder divided among four chickens, and this should be mixed with a little fat and vinegar, either given in little pills, or all mixed up and thrown down to the birds. If there are not many, it is best to put the pills down their throats, but if a large number are affected it should be thrown down, so that they can pick it up for themselves; and some linseed should also be stewed, mixed up with ordinary chickens' meal, and in the place of the water the stewed liquid should be used. This is not only strengthening to the chickens generally, but it also helps to bring back the mucous to the stomach and intestines sooner than anything we have tried. The skin becomes loose and pliable, and the chickens begin to grow.

We always say "Prevention is better than cure." We cannot say but that we occasionally get a few of these chickens we have mentioned, but sometimes not one in 200, as we give them a little roup powder about three times a week in their meal, and occasionally a little stewed linseed in their food. This helps them to grow quicker, and is better than any other remedy we have tried. If chickens are kept strong and healthy they are less likely to breed worms.

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs and trade marks may be obtained free of charge.

12,037.—Malcolm Guthrie and Herbert Guthrie, of Chancery Lane, London, for "A new or improved apparatus for treatment of grain and hops and similar purposes."

12,331.—Martin Schichtl, of Kingston-on-Thames, for "Improvements in harrows."

12,378.—Augustus Clifford Arter, of Barham, for "Improvement in mowing and reaping machines."

Patents Sealed.

C. F. Grohmann, of Germany, for "Potato diggers."

2,993.—A. W. Molloy, of London, for "Seeds, sowing; manuring and fertilising; boxes and cases; envelopes."

Balla Fair (Co. Mayo) was held on Wednesday. There was an average supply of cattle, for which a very brisk demand was experienced, at prices considerably in advance of recent fairs. Quotations:—Calves, 2nd class, £2 10s. to £3 3s. 9d.; yearlings, 2nd class, £5 10s. to £6 10s.; 3rd class, £4 5s. to £5; two-year-olds, 2nd class, £8 10s. to £10; 3rd class, £6 to £7 10s.; three-year-olds, 1st class, £14 to £14 10s.; 2nd class, £11 to £13; 3rd class, £8 to £9; springers, 2nd class, £11 10s. to £13; 3rd class, £7 15s. to £8 10s.; lambs, 1st class, £1 1s. to £1 1s. 6d.; over 12 and under 24 months olds, 3rd class, 18s. to £1 2s.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended June 7, 1902, together with the quantities imported in the corresponding week of the previous year:—

VESTA CAKES and MEALS.

In order to enable us to supply clean Cotton Seed and a Cotton Cake of good quality we have taken over a mill lately fitted up with the very best modern machinery, which enables us to sell at the lowest possible and at the same time turn out an Undecorticated Cotton Cake practically free from LINT, DIRT, and SAND.

The Cakes are branded "VESTA" PURE.

Buyers of the "VESTA" FEED CAKES can have the Cottons shipped at same time, thus saving any delay.

Crabbet Arabian Stud.

MESSRS. TATTERSALL will SELL for WILFRED SCAWEN BLUNT, Esq.,

ON SATURDAY, JULY 5th,

AT THE FARM,

CRABBET PARK, THREE BRIDGES,

21

Horses and Mares

Some Imported, of the

PUREST DESERT BLOOD,

Among which will be found Horses suitable for the Stud, Polo, Ladies' Hacks, &c.

The Arabs from the Crabbet Stud have for twenty-three years been noted as of the highest type, and of absolute purity of lineage, and their success as prize-winners at Hurlingham, Ranelagh, the Crystal Palace, and the Great International Horse Show, Paris, shows the opinion of good judges on their merits for breeding purposes.

Catalogues on application to Messrs. TATTERSALL, Albert Gate, London; or to A. CORFE CAFFIN, Hazlewick, Three Bridges, Sussex.

RAILWAY ANNOUNCEMENTS.

LONDON AND NORTH WESTERN RAILWAY.

ROYAL AGRICULTURAL SOCIETY'S SHOW, CARLISLE.

JULY, 5th, 7th, 8th, 9th, 10th, and 11th, 1902.

The London and North Western Company's route will afford the most expeditious service for the transit of Passengers, Goods, and Live Stock Traffic to and from the Royal Agricultural Show at Carlisle.

Any information may be obtained from Mr. Frank Ree, Chief Goods Manager, Euston Station, London, or Mr. L. D. Price, District Traffic Superintendent, Lancaster.

Special Goods and Live Stock Trains will be arranged for the speedy and safe transit of Exhibits to and from the Show; and Exhibitors at the Bath and West of England Show at Plymouth, and the Royal Counties' Show at Reading, forwarding Exhibits from those places to the Royal Agricultural Show at Carlisle will find the London and North Western Company's services the best and most expeditious.

The London and North Western Company's Express Dining and Sleeping Car Train Services to Carlisle, which is on their Main Line, provide the shortest and most direct route from London, the Eastern Counties (*via* Cambridge, Peterboro', and Rugby), the Midland Counties, the West of England, Liverpool, Manchester, and all parts for Passengers intending to visit the Royal Agricultural Show

FRED. HARRISON,
General Manager.

IMPROVED STACKER OR ELEVATOR.

This Machine offers the following advantages:—

Improved Safety Screw Winding Drum which cannot run down, however careless the operator may be. The Poles or Uprights are securely stayed to the Raising Quadrant, giving great rigidity. New improved arrangement which avoids all tightening or slackening of the Chains in folding or unfolding; being self-acting in this movement, no mistake can be made in folding or unfolding. Large Travelling Wheels to facilitate turning, placing in position, and travelling on the road. The Hopper being very low can be easily attached to any Threshing Machine, and will work at any angle. They will deliver the produce into the centre of the stack when at the full height, thereby topping up the stack without any pitch pole. These elevators can be fitted with Horse Gear if required.

A NEW FEATURE IN THE AGRICULTURAL SHOW SYSTEM.

Dairy farmers have to thank Mr. Martin John Sutton for a new idea, which at the recent Royal Counties Show, caused a novel, but highly serviceable, addition to the competitive cattle classes in which they were specially interested. He suggested two additional ones for Dairy Herds, and provided the money—£50—for carrying out the object. The herds were divided into two sets: one where more than 50 cows were kept in profit, and the other for smaller ones, comprising from 20 to 30 cows. The prizes offered were £15 and £10 in either class, and the judges, previous to the show, went the round and inspected all of those that had been entered for the competition, just as the judges of farms used to do before the Royal took the backward step of discontinuing the offer of prizes for farms. The competition was wisely restricted to *bonâ fide* tenant farmers, and there were three entries in the class for the larger herds and eight in that for the smaller ones, a very creditable outcome, considering that the competition was limited to the county in which the show was held—Berkshire.

Circumstances in recent years have very much tended to enhance the importance of dairy farming, which has become the farmer's sheet anchor in innumerable cases in a tenfold degree, more than it used to be in olden times. Many are old enough to remember when those who made their chief living out of the products of the dairy were rather looked down upon as a subordinate class by others of the farming community. In those days farmers, who occupied mixed corn and grass holdings on which it was desirable and profitable to keep milch cows, let them to dairymen, whereby they relieved themselves and their wives and daughters of the sloppy, slavish labours of the milk-rooms, and still be able to breed from the cows young cattle available for grazing. This, it is true, was oftener left alone, for the bulls then employed were not often pedigree ones, or those calculated to make the progeny or dairy herds valuable for grazing.

But two things have altered all this, and absolutely revolutionised dairy farming in England. The cream separator has done away with the toilsome drudgery of the milk-room and along with it the degradation associated therewith. Dairying has become an interesting pastime, and ladies of title, and even Princesses of the Royal blood have their *recherché* temples dedicated to Unos, in which they take infinite delight in the industry of butter-making. The other change has made so many of our largest and most wealthy farmers not only owners of immense dairy herds, but purveyors of the milk they yield. The railway network covering the face of the country has knit town and country so intimately together that the latter supplies the former with milk day by day, in increasing volume. Thus Mr. Geo. Adams, who won second prize in the competition of the largest Berkshire Herds above referred to has as many as 500 cows in profit, and nearly the whole of the milk they yield is twice a day sent off to London.

Moreover, pedigree herds now very largely share in the direct milk supply trade, and several of our leading Shorthorn breeders carry on the dual industries of raising valuable young bulls for the Birmingham March Mart or for private sale from cows yielding immense quantities of milk for the Metropolis or some other large town. There is another class of herds' pedigree in all but name, and made so by the persistent employment of registered sires for many successive generations. The owners of these herds send their milk away like the others, and their male calves are exceedingly valuable for grazing purposes.

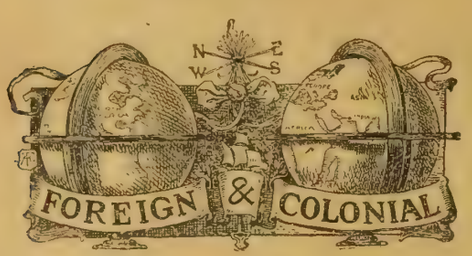
Thus it will be seen that a very large proportion of leading tenant farmers have now to do with dairying, and this being the case, it has claims on the councils of agricultural societies which cannot be gainsaid. Still, it is not chiefly on that ground that we would counsel Mr. Sutton's laudable prize system to be more generally adopted, but on the utility of stimulating improvement in ordinary herds by the emulating influence of the mode of competition indicated. The dairy herd is a production on which some of our best farmers build for large returns. Those of the humbler ones are very slight, for with mongrel cows the calves are not worth much. There has, no doubt, been considerable improvement wrought in recent years in some of the humbler ones, but nothing like what it might be. Let this Reading example, then, not be lost sight of. Often has it been said that our past show system has only affected improvement in the upper strata of cattle. Offering prizes for Dairy Herds upon such lines as at the Reading Show would be likely to do something for the rank and file.

A fire occurred on Tuesday evening on the premises of Thomas Ovens and Sons (Limited), oilcake and manure merchants, Leith, and oilcake and feeding stuffs valued at £10,000 and machinery valued at £4,000 were destroyed.

By A Man of Mark Lane.

Of interest to manufacturers of agricultural implements is a recent despatch which has been received at the Foreign Office from H.M. Commissioner and Consul-General at Zomba, and in which it is stated that the amount of land under cultivation in the British Central Africa Protectorate by Europeans is not very great in extent, and owing to the low price of coffee, planters and farmers are laying out as little money as possible on their properties. Unskilled labour being extremely cheap in British Central Africa, a large amount of manual work is done by natives, which would in most countries be more cheaply done by machinery. H.M. Commissioner adds that in the event of a rise in the price of coffee, or should the endeavours of the planters at Zomba to open a tobacco market in South Africa prove successful, there is no doubt that there would be an increased market there for the more simple descriptions of agricultural implements.

In reply to various questions with regard to the trade of the country in industrial and agricultural machinery, H.M. Commissioner reports that practically no agricultural implements made locally are in use in the country, and that very few native hoes are now made. Up till lately only coffee pulpers were imported, but recently harrows, ploughs, cultivators, and traction engines have arrived, the last being, as yet, used solely for transport purposes. It is said that any improved types of labour-saving machinery for agricultural purposes, such as machinery suitable for clearing weeds from coffee gardens, and suitable types of engines for taking heavy gradients and soft roads would be likely to sell there if properly put before the users. As regards machinery for industrial purposes, only two fixed steam engines have at present been introduced, and these are believed to have been of Scotch make. The classes of machinery not at present in use in the country which would be likely to sell there if properly put before the users, are stated to be corn mills and a good class of pumps, also cheap and effective well sinkers



---

Reports received from all over the country show that farm labourers were, generally speaking, in regular employment during May. In several districts, however, some casual labourers were not in constant work, particularly in the early part of the month, owing chiefly to the growth of crops being retarded by cold weather, with consequent delay of hoeing and weeding. Towards the end of the month, the weather was more favourable to the growth of corn crops and roots, and the demand for extra men increased somewhat.

At the present time the recent discovery in a Brussels bric-a-brac shop of a relic of the great Free Trade agitation has a peculiar in-

terest in view of the hullabaloo being organised in certain quarters against the registration duty on corn. This relic is a large-sized copper medal, bearing on the obverse a bust in relief of Queen Victoria, with the date A.D. 1849, and a legend of the names of the Ministers who in that year were members of the Cabinet, while on the reverse are engraved, in characters so small as to be only recognisable with the aid of a powerful magnifying-glass, the names of the members of the House of Commons in 1849. The article was presented by the purchaser to his friend, Mr. H. J. Reckitt, M.P. for the Brigg Division of Lincolnshire, who brought it with him to England, and sought, for some time without success, to discover its history. Ultimately it was brought under the notice of the authorities of the Medal Room of the British Museum, who pronounced it to be one of a small number of medals which were struck in commemoration of the triumph of the agitation for the repeal of the Corn Laws.

The receipts on account of Revenue from April 1st, 1902, when there was a balance of £8,566,947, to June 14th, 1902, were £27,908,756, against £23,612,287 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net expenditure was £39,909,129, against £41,304,779 to the same date in the previous year. The Treasury balances on June 14th, 1902, amounted to £6,445,409, and at the same date in 1901 to £2,159,307.

Crops in Austria.

The subjoined table, which was issued from Vienna in the year-books of the Ministry of Agriculture for 1901, gives the yield of the principal cereal crops, together with the area under cultivation:—

	Area cultivated. Acres.
Wheat	2,674,322
Rye	4,526,840
Barley	3,026,942
Oats	4,676,532
Maize	830,352

The total yield expressed in 100 kgs. of the above-named crops was as under:—

	Total yield.
Wheat	11,982,260
Rye	19,181,565
Barley	14,607,361
Oats	17,155,368
Maize	4,454,218

A comparison of these figures with the results of the preceding years shows that there was an increase in the area cultivated to the principal cereal crops in 1901. In the case of wheat it was 11,045 acres; rye, 262,562 acres. There was a decrease in the area cultivated to barley of 58,290; oats, 71,527 acres. The decrease in the case of maize was 7,122 acres. The total yield of the crops in 1901 exceeded that of 1900; in the case of wheat by 843,115 qr., or 100 kgs.; rye, 5,263,707 qr., or 100 kgs; oats, 12,510 qr., or 100 kgs.; maize, 30,5826 qr., or 100 kgs., or a total of 7,871,720 qr., or 100 kgs.

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs and trade marks may be obtained free of charge.

12,522.—Thomas Walter Hugh Clarke, of London, for "Improvements relating to hoes."

12,789.—Marie Ferdinand François Keelhoff, of London, for "Improved hay-making machine."

Patents Sealed.

3,442.—A. Jolles, of Vienna, for "Food preparations."

3,590.—R. Schrader, of Hamburg, Germany, for "Food for animals mixing machines."

By a Lobbyist.

There is no use attempting to draw consolation from the debates this week on the corn and flour duties. As a fact, there is none to be drawn. Neither the discussion or the suggested Zollverein nor the discussion on the main question of the wisdom of the policy of the budget had the redeeming quality of being inspired by sympathy with the British agriculturist. It may seem strange, but as a fact the British agriculturist was one of the last personages who intruded himself upon the attention of the debaters. The main idea inspiring the proposed Zollverein, so far as Sir Wilfrid Laurier is concerned, is to benefit the Canadian agriculturist, and not to benefit the British farmer—is, in a word, to make the illimitable fields of the Dominion a source of supply for the mother-country. The main idea inspiring the clever crusading of Sir Howard Vincent is to benefit our Sheffields rather than our Arcadias. His colleagues and comrades, Mr. Chaplin and Mr. James Lowther, are, of course, differently moved, but I am afraid that I must regard Sir Howard as a more dominant factor in the business. The British agriculturist was, I repeat, a person of no serious importance in the considerations generally influencing the debates.

If we be Protectionists, the mere decision to partially exclude Irish maize from the new duties imposed under the budget can, again, afford us little satisfaction. It shows little confidence in the principle we have espoused. It is held by the antagonists of the new principle that that principle makes for the heightening of prices—that it means rendering dearer the articles of everyday life to the Irish cottier. The exclusion of maize from the new policy is a practical admission of the truth of this contention. This admission strikes a blow at the very arguments which have been used by Protectionists to justify the duties. It has been held, in a word, that they will not in any sense heighten the cost of necessaries to the consumer, and that the only real practical result will simply be a benefit to the Exchequer. The principle of giving a bounty to agriculture—for that, in a sense, I esteemed the new duties to be—has thus been denounced by its own promoters and advocates. The duties cannot thus be accepted as a portent of the forecoming of Protection.

If I were asked—and I am repeating in this the view of some of the more strenuous advocates of Protection in the House of Commons—what is the meaning of the speeches which Sir Michael Hicks-Beach has delivered during the week, I should say that they are frankly anti-Protectionist. If I were asked to describe Sir Michael Hicks-Beach himself, I should dub him the Strephon of political economics. His head has taken him in one direction, while his legs have taken him in another. His brain induces him to a wholehearted and vigorous sympathy with Free Trade; his legs, which have proved themselves more subservient to the Chamberlain discipline, induced him to seek salvation in something at least that savours of Protection. At one time he certainly seemed to have accepted the companionship of Mr. Chaplin, Mr. Lowther, and Sir Howard Vincent (in saying this I am borrowing an idea from that subtle cartoonist, "F. C. G."); but he assuredly very emphatically in the end renounced all association or sympathy with them. The speech on the Zollverein question was as anti-Protectionist as the most strenuous Cobdenites could desire. Sir Michael seemed to have broken with the Chamberlainite influence with a very emphatic wrench. His declaration against the Zollverein—and though this policy was not inspired by any sympathy with the British farmer, it would have tended in its very trend to his advantage—was subsequently given a new force by the antagonism to that some policy of the Premier of the Australian Commonwealth. The criticism of the two men means the death of the idea—at least for a moment. But economic ambitions have always the capacity of resurrection.

A more significant evidence of the fact that Protection cannot yet be regarded as an accepted article of the Conservative charter is provided in the abstentions from the division. I doubt whether in the history of any great economic revolution—(and, if they were intended to be followed up, this is what these corn and flour duties are)—was ever accepted by so numerically weak a majority. The Parliamentary observer and critic could not but ask himself again and again during the week what had become of the Government majority? More than once it fell to a third of its strength. As significant in its way as the numerical decline was the absence of certain members. My readers know that I have heralded the advent of a man like Mr. Spears into the House of Commons as an incident of promise to agriculture. He was absent from more than one crucial division. Major "Jack" Seeley is another member of the same political kidney; that is, he is a Liberal-Unionist. He was not merely absent from the Government majority; but he spoke forcefully against the Government policy. I repeat then that all the omens of the week are against the idea of the early intrusion of a Protective policy into our national economics. It is well to admit this; it would, indeed, be folly to disguise it. Should any repetition or extension of the corn and flour duties be attempted, it would be opposed with a tenfold force and ardour. Conservatism, or, rather, Unionism, is not at this moment ripe for Protection.

Why do the Radicals now desire—and in this they are against their policy of a generation past—to make education a charge upon the local rates, rather than an Imperial charge? I am sorry to say that it is because they desire to maintain a provoked feeling against the voluntary schools. Let me explain: In every part of England men are taking oaths, which I believe they will in many cases keep, that they will suffer any disability, any inconvenience, any martyrdom (?) rather than pay the rate under the new Education Act. Their purpose in this is to kill the voluntary system, and the enhanced recognition which the Act will give to that system. If the cost of education were an Imperial charge, this martyrdom would be impossible. The cost would, in fact, be an indirecti infliction, and would be automatically and silently imposed. Education ought not to be made a kind of shuttlecock of partisans—'tis too sacred a subject. The increasing recognition of this is one of the most significant Parliamentary incidents of the moment. I doubt, however, that Major Rasch's propaganda will be immediately successful; but the time is near at hand when it will be.

By the way, Major Seely—whom I have got into the habit of regarding as a purely agricultural member; he is, I believe the Commander-Designate of the Hampshire Yeomanry Cavalry—is beset by a danger which has encompassed many another good man. He shows too great a concern to impose himself on the House of Commons. He has posed as military expert, as a South African authority, as an agricultural authority, and, finally, as an economist. I am bound to say that his appearance in the last *rôle* was infinitely to his credit. Without being called upon to agree with everything that he said, I must confess that he revealed an economic grasp and a capacity of exposition which greatly commended him to his fellows.

Agricultural Returns for the United Kingdom.

Complete returns have now been issued by the Board of Agriculture showing the acreage and produce of crops, prices of corn, and the number of live stock, with agricultural statistics for the United Kingdom, British possessions, and foreign countries, for 1901.

In the course of his introduction to the various tables, Major P. J. Cragie of the Board of Agriculture, calls attention to the decline in arable cultivation, and the consequent extension of the area under permanent pasture, which formed a most distinctive movement during the later years of the nineteenth century. He contrasts the quinquennial periods — 1867-71 and 18971901—in a table which shows that the arable area in England in 1867-71 was 13,511,000 acres, or 58 per cent. of the total cultivated area; while in 1897-1901 the arable area was 11,451,000 acres or 46 per cent. of the total cultivated area. In Wales the arabie area in 1867-71 was 1,074,000 acres or 43 per cent. of the total cultivated area; while in 1897-1901 the arable area was 897,000 acres, or 32 per cent. of the total cultivated area.

In Scotland the arable area in 1867-71 was 3,388,000 acres, or 76 per cent. of the total cultivated area; while in 1897-1901 the arable area was 3,498,000 acres, or 71 per cent. of the total cultivated area. It will thus be seen that while the land under the plough has fallen in England from 58 to 46 per cent. of the cultivated area ,in Scotland the decline has only been from 76 to 71 per cent. The variations in particular districts have, of course, been still greater. Thus in Surrey, the proportion of arable land has fallen from 65 to 45 per cent., in Sussex from 61 to 42 per cent., and in Monmouth from 40 to 20 per cent.; of the area under cultivation. In some of the principal counties, however, the withdrawal of land from the plough has been relatively much less, although the areas affected are considerably larger than where the proportionate change has been more striking. Thus in Lincolnshire, out of every 100 acres of farm land 71 were in tillage in 1867-71, and of these 67 still remained in 1837-1901.

In Suffolk and Cambridgeshire also more than three-fourths of the agricultural land is still arable counties, however, the withdrawal of land amounted to only five and eight acres respectively out of every hundred. In Scotland, also, although in a few counties, such as Fife in the east, and Inverness in the north, there has been an appreciable reduction of ploughed land, there are many others which show comparatively little change.

The total areas devoted to crops in the United Kingdom are as follows:—

United Kingdom.	1899. Acres.	1900. Acres.	1901. Acres.
Area under all crops and grass	47,796,000	47,795,000	47,761,000
Permanent pasture	28,092,000	28,267,000	28,374,000
Arable land	19,704,000	19,528,000	19,387,000
Corn crops	8,804,000	8,706,000	8,477,000
Green crops	4,274,000	4,301,000	4,231,000
Clover and rotation grasses	6,115,000	6,025,000	6,141,000
Flax	35,000	48,000	56,000
Hops	52,000	51,000	51,000
Small fruit	77,000	79,000	81,000
Bare fallow	347,000	316,000	350,000

Live Stock.

The returns of the number of live stock on the agricultural holdings of Great Britain on June 4th, 1901, were disappointing as showing a general diminution, and indicating therefore, to that extent, a decrease of farmers' capital.

The only exception to the general tendency was found in the case of horses, which showed a slight increase of less than one per cent., the increase occurring in the category of "horses used solely for agriculture and mares kept for breeding." In view of the fact that the steady decline of arable cultivation can scarcely fail to reduce the requirements for horse labour on the land, it may reasonably be assumed that the maintenance of the numbers under this head indicates that mares are retained by farmers for breeding, which would be disposed of if the necessities of farm work were the only consideration in view. In fact, it seems reasonable to infer that it is the increased attention given to horse-breeding which has served to prevent the reduction in the number of horses naturally to be expected from the economic changes in the general position of agriculture. Except on this hypothesis, it would be difficult to explain why the number of agricultural horses in the country has not only not decreased, but has appreciably increased during the past fifteen or twenty years. The demands of the Army Remount Department are alluded to by several collectors as having affected the returns of the past year, being in some cases mentioned as explaining an increase by the stimulation of breeding, and in other cases as accounting for a decrease by the sales which were effected by farmers. If the returns of unbroken horses under one year be taken as some index of progress of horse-breeding among farmers, it will be observed that the numbers under that heading showed a slight gain on the year.

A reduction by 41,000 of the total number of cattle in Great Britain is not, on the total herd of nearly 7,000,000, of much statistical importance, but it gives the first check to the progress year by year recorded since 1894. It unfortunately, however, includes a further decline in the number of cows and heifers, beyond that which was made the subject of special comment in last year's report. The decrease shown under the heading of cattle under one year may perhaps be considered consequential, and, as the losses and gains among other cattle balance one another, the actual reduction of the horned stock of the country is represented by the smaller total of milch cows, heifers, and calves enumerated in June last, in nearly every part of the country, Wales being relatively the greatest sufferer, and the most noticeable exceptions to the rule occurring in the West Riding of Yorkshire, Devon, Lancashire, and Forfarshire.

As in the case of cattle so also in that of sheep, it is a matter for regret that a distinct reduction of numbers occurred among the breeding stock. The number of ewes kept for breeding was less in 1901 than in 1900 by 188,000, or 1.8 per cent. If this be added to the previous year's loss of 111,000 the total diminution of the ewe flock in the course of two seasons reaches 300,000. On the other hand, the lambing season of 1901 appears to have been on the whole successful, and as large a number of sheep under one year was returned from the reduced number of ewes as that recorded a year previously. In Scotland this was especially noticeable, as, notwithstanding a loss of 26,000 ewes, the number of sheep under one year showed an increase of no less than 73,000. Among sheep over one year, other than breeding ewes, there was a small net loss of 23,000 in Great Britain, but this figure is the balance of remarkably diverse local changes. Thus in the East Riding of Yorkshire there was an increase of 43,000, in Cumberland of 18,000, in Norfolk of 17,000, and in the West Riding of 16,000. On the other hand 32 English counties showed a decline, amounting in Kent to 16,000, in Northampton to 14,000, and in Devon to 11,000. In Wales the reduction was greater and more universal than in England, but in Scotland the majority of counties showed increases amounting in Berwick to 12,000, in Dumfries to 10,000, and in Fife and Roxburgh to 6,000. The chief exceptions to this rule occurred in the Western and North-Western Highlands, reductions of 8,000, 6,000, and 4,000 respectively being reported from the counties of Inverness, Argyll, and Sutherland. Among the causes to which the decline in sheep is attributed, scarcity of keep in the autumn of 1900 is mentioned by some collectors, and reference is also made by others to the depressing effect on the sheep-breeding industry of the low price of wool.

Pigs showed a decrease of 202,000, or 8½ per cent., in Great Britain, the total number standing at a lower level than in any year since 1893. The effect of the restrictions necessitated by the existence of swine fever is referred to in some instances as one of the causes of this reduction. In Cheshire an explanation is offered by one of the collectors which may possibly have wider application. He remarks that "farmers are giving up cheese and butter-making and sending their milk to Manchester and Liverpool or to dairy factories. The whey produced in cheese-making was an important part of the pig-feed."

Firing a Haystack.—At the Essex Assizes at Chelmsford on Friday, Peter Wakelin, labourer, was sentenced to three years' penal servitude for setting fire to a haystack at Hornchurch, near Romford.

Dumfries Hirings.—A hiring fair was held at Dumfries on Wednesday, but business was almost at a standstill. Many farmers are still unsupplied with servants, and the girl servants who attended the fair refused to hire, though offered high rates, preferring to wait till after the Coronation. As a result farmers have not been able to secure an adequate staff for their work, causing them no little inconvenience and annoyance. Girls command up to £10 10s. for the half-year, with board, lads to £7 10s., and ploughmen to £14.

The Royal Commission appointed to consider the question of arsenical poison in beer sat again on Friday. Mr. Arthur Ling, of the Society of Chemical Industry, was called to give evidence as to the presence of arsenic in fuel. He said that in the course of a very large experience with malting fuel he had never met with a sample free from arsenic, and proceeded to give a minute description of the process of testing the fuel. Anthracite coal often, when carefully selected, contained an amount of volatile arsenic equal to from 1-20th to 1-50th of a grain per pound. Anthracite was so variable that it was difficult to select samples sufficiently free from arsenic for malting purposes. From his experience he thought that by the use of fuel treated with a base (lime and soda) the arsenic in malt could be greatly reduced. Mr. C. S. Beavem, of Warminster, gave similar evidence, and the committee adjourned.

IN PARLIAMENT.

House of Lords.

Horse Breeders and Army Remounts.

On Friday Lord Barnard asked the Under Secretary for War whether the War Office received reports from the officers engaged in purchasing remounts and other horses for military purposes at various places in this country, and, if so, whether in the interests of agriculturists and horse-breeders, those reports or summaries of them could be made public. The noble Lord said a great many farmers were ignorant on this subject, and there was a disinclination to breed horses suitable for military purposes. Nothing, however, was done to induce agriculturists to breed such horses, and it was with a view to encouraging them that he desired to obtain this information.

Lord Raglan said the question really referred more to the subject of breeding horses than to that of remounts, and perhaps the noble Lord would have got a more satisfactory answer if he had addressed his question to the Board of Agriculture. The War Office, of course, received reports from the officers and those engaged in the purchase of remounts, but these reports were entirely drawn up from the point of view of the horse-purchaser, and not of the horse-breeder. They had supplied the Board of Agriculture with information as to the specification of the horses which were required for Army purposes in peace as well as in war, and they were of course naturally anxious to do anything they could to assist in improving the system of horse-breeding in this country with any information in their power. It was impossible, however, for them to publish the reports as a whole, but if there was any particular point as to which the noble Lord would make any suggestion, he would see if the information could be supplied.

HOUSE OF COMMONS.

More Corn Tax Discussions. Reduction on Maize Offals.

On Monday the House resumed the consideration of the Finance Bill, when Mr. Flynn moved to leave out maize from the schedule of articles to be taxed on the ground that it would affect the very poorest of the poor in Ireland, and several members made speeches in support of the amendment.

The Chancellor of the Exchequer, however, declined to entertain the proposal, on the ground that if maize were exempted it would be impossible to maintain the corn duty at all, because it was estimated that the amount which the duty on maize would realise would be £600,000 a year, or not very far short of one-fourth of the total yield of the tax. It must also be remembered that the increase in the imports of maize was out of all proportion to the increase in the imports of other kinds of corn, having risen from 18,000,000 cwt. in 1882 to 51,000,000 cwt. to-day. He admitted that the use of maize in Ireland was larger in proportion than in Great Britain. It was used by the very poor, by the cottiers as food in place of other kinds of meal. But what was the position of those cottiers as compared with the very poor in our great towns? The latter were practically at the mercy of the baker, but the Irish cottier always had his land on which it was open to him to grow oats, and oatmeal, he would venture to say, for he was in the habit of using it, was as good a food as anyone could desire. In his belief, it would be infinitely better for the people of this country or for the people of Ireland who had land if they would use a little more of it for the purposes of arable cultivation, instead of allowing it to go down into that miserable grass which was called meadowing grass in Ireland, where it could not possibly produce anything like what it would under arable cultivation. He did not think the position would be so terrible as hon. members supposed, and in his belief the threepenny tax on maize would be as nothing compared with the variations in price.

Mr. T. W. Russell ridiculed the suggestion of the Chancellor of the Exchequer that the poor Irish peasantry should cultivate oats, because in some districts the only harvest reaped for three years was one of stones. The tax would only produce £600,000, and if dropped it would not seriously affect the Budget, but would only reduce the surplus which might be applied to English education.

Sir H. Fowler said he regarded its effect on Ireland as one of the most painful consequences of this deplorable tax on the food of the people. He agreed that there was nothing protective in this duty, but it was one which, to the last farthing, would have to be paid by the consumer. Were the resources of the nation completely exhausted that it was necessary to tax the food of the poorest of the poor? He repudiated that doctrine altogether, and it was a mockery to tell

the wealthy people of this country that it was necessary. They did not believe it, nor did they wish to have this tax imposed.

After speeches by several other members, Sir William Harcourt spoke, and said that the proposed tax on maize was merely a subsidiary tax, which was to be imposed simply with the object of bolstering up the tax on wheat. But for this he ventured to assert that the Chancellor of the Exchequer would never have dreamt of putting a tax on maize, having regard to its effect on the food of the people and on agricultural feeding stuffs.

Sir Michael Hicks-Beach, in reply, denied that the tax on maize was proposed in order to bolster up the tax on wheat. A duty on corn, he said, must be a duty on corn all through, or else it was useless to propose it at all. When the previous tax on corn was proposed it covered exactly the same articles as were now to be taxed. That tax existed for 20 years without any of the terrible consequences which were then prophesied, and he had no doubt that would be the experience in this case. He sympathised with what had been said with regard to the condition of the poor people in the west of Ireland, but he submitted that the way to improve that condition was not to reject the tax, which would be borne by the whole country, but to make such grants from the Exchequer as would enable the Congested Districts Board to carry out the work which had already done so much to help the inhabitants of Ireland.

Mr. Dillon ridiculed the idea of the Irish peasant farmers being advised to grow more corn so as to avoid having to pay the duty on maize. Outside Bedlam he could hardly imagine a set of lunatics governing Ireland who would make such suggestions as this.

Ultimately the Chancellor of the Exchequer moved the closure, and on a division it was carried by 248 to 165; majority 83. The committee then divided on the amendment, which was rejected by 23 to 175, majority 68. The result was received with Opposition cheers.

Mr. H. Reckitt moved to omit from the schedule locust beans, on the ground that they were not beans at all—(laughter)—and certainly not grain. The seeds were so hard that stones would not crush them.

The Chancellor of the Exchequer agreed that these beans had never before been taxed, and as there was some doubt whether the beans were beans, he did not object to the amendment. The amendment was therefore agreed to.

Mr. Reckitt moved to omit rice from the schedule, and pointed out that nearly half the rice imported into London was re-exported from London to Liverpool. A further argument in favour of the exemption of rice from taxation was that it came largely from India and Burma.

The Chancellor of the Exchequer said he was afraid he could not agree to the amendment, as it would be unreasonable to impose a duty on wheat and maize and to exempt rice, which was grain, and which was used for precisely similar purposes as the other two articles.

The committee divided, when the amendment was rejected by 250 to 167.

Mr. O. Williams moved to reduce the duty on wheat offals from threepence to three-halfpence per cwt.

The Chancellor of the Exchequer said if the committee desired that offals used for feeding stuffs should be more favourably treated, he was prepared to accept the amendment in the modified form of making the duty only half of that proposed in the Bill for feeding purposes.

Mr. Williams withdrew his amendment, and one giving effect to the concession of the Chancellor of the Exchequer was agreed to. This provides that any offals which were feeding stuffs and were proved to the satisfaction of the Commissioners of Customs not to contain more than 50 per cent. of starch should be charged at the rate of 1½d. per cwt. Offals were defined as including bran, pollards, husks, culme, and other similar bye-products.

Mr. Flynn proposed that the duty on wheat, barley, oats, and other articles in the first schedule should be 2s. 6d. per ton instead of 3d. per cwt.

The Chancellor of the Exchequer said he could not possibly accept an amendment which would have the effect of reducing the duty on all kinds of grain from 3d. to 1½d. per cwt. At the same time he promised as a concession to the wishes of the Irish members to consider whether it was possible to make a distinction between the duty on maize and the duty on other kinds of grain, and if he found it practicable he would be very glad to do so.

Mr. T. W. Russell welcomed the promise of the Chancellor of the Exchequer in view of the serious state of things prevailing in the West of Ireland, where, owing to the fact that the potatoes were actually being washed out of the ground by the continued rain, the people were likely to have to depend very largely on maize for their food in the coming winter.

Sir H. Campbell-Bannerman congratulated the Chancellor of the Exchequer on the direct sympathy which he had shown with the object of the amendment, and expressed the hope that the right hon. gentleman, after looking into the matter with a view to avoiding any possible dangers that there might be in making the suggested distinction in the case of the duty on maize, would find himself able to give this substantial relief to those who very much needed it. The amendment was withdrawn.

Mr. Kearley moved to reduce the duty on flour and meal from fivepence to fourpence per cwt. This, he maintained, was the proper correlative duty of threepence per cwt. on wheat, and a duty of fivepence amounted to protection.

The Chancellor of the Exchequer said he could not accept the amendment. Of the present imports one-eighth consisted of flour, and that was a very bad thing for this country. This country wanted to import more grain, and he frankly admitted that he had made the proposal in order to get the whole grain. The average duty upon flour ought to be more than 50 per cent. above the duty on grain, and he had therefore fixed it at 5d. as against the 3d. on grain. He did so for the reason, also, that the product of fine flour out of a cwt. of grain had been considerably altered since the days of stone milling. The hon. member was more in favour of the foreign exporter than the foreign exporter himself. He quoted from the organ of American millers to show that they were generally of opinion that the duty would have no serious effect on them.

After some discussion, a division took place, when the amendment was rejected by 216 to 145. The first schedule was then agreed to, and the second schedule having been adopted, the Bill was reported to the House for third reading.

The Tax on Maize Reduced.

Yet another long discussion on the corn tax took place on Wednesday, when the House was considering the Finance Bill on the report stages. At the outset, Sir E. Strachey moved to add the following clause:—"If it is proved to the satisfaction of the Commissioners of Customs that any article mentioned in the First Schedule to this Act, and liable to duty of threehalfpence thereunder, has been manufactured in Great Britain or Ireland from grain, having paid a duty of threepence, a rebate of twopence shall be allowed per hundredweight on such article."

The Chancellor of the Exchequer pointed out that the clause would give something to the English millers to which they were not entitled. The amendment was negatived without a division.

Then followed a lengthy speech by Mr. Morley, who moved to omit clause 1, which imposes the duties on grain and flour. The right hon. gentleman canvassed the whole policy of the tax, on concrete and practical grounds, as well as on the abstract principle, and declared that the Chancellor of the Echequer was breaking down the ramparts of the fiscal system which had developed the prosperity of the country.

Mr. Emmott, Mr. A. Elliot, Sir Charles Dilke, Mr. Chaplin, Mr. Caine, and Sir M. Stewart, Mr. Asquith, Mr. M'Kenna, and Mr. Hobhouse were among the speakers who carried on the debate, to which the Chancellor of the Exchequer replied at some length.

In the course of his remarks Sir Michael Hicks-Beach said that he could appreciate the speeches of Mr. Morley and Mr. Asquith, although he did not agree with them. Throughout his speech Mr. Asquith absolutely begged the question. He assumed without the slightest reason that this was a protective tax, and could not be justified by the necessities of the time. Surely it was a necessity of any time to pay our debts. We had incurred an enormous expenditure, and borrowed for that expenditure beyond the amount required, and it was calmly argued that it would be justifiable to get rid of taxation which had been in force for two months, and to use in place of it the money we had borrowed. He entirely demurred to that assumption. The right hon. gentleman suggested that the tax should be ear-marked for a particular purpose. That was never done, and never could be done, in the financial history of this country. As to the insinuation about the relief of rates, everybody who had looked at the Education Bill knew that not a penny could be expended under it during the present financial year. Therefore the imputation was simply absurd. They were told the tax would add 2d. in the £ income-tax on the earnings of the poor man with a large family. He had read in the "Labour Gazette" that according to figures based on 367 returns from co-operative societies in Great Britain, the mean price of the 4lb. loaf was practically the same as on June 3, 1901, and only .08 above the price of March 3 in the present year. He would not say that this was proof that the tax had no influence on the present price of corn, but that it was absurd to regard it as a burden upon the country. Mr. Morley said it was a reversal of our fiscal policy. He had never been able quite to appreciate that argument. No one for a moment suggested that it would diminish the imports of food. He did not know what more he could say to convince right hon. members opposite that the Government did not intend to change the fiscal policy. He thought the tax necessary to deal honestly with the financial affairs of the nation in the present year, and to pay our way in future with any fair regard to the allocation of taxation between the different classes of the country. It would be largely productive, easily levied, and would confer neither hardship on the people nor difficulty on commerce.

On a division the clause was carried by 251 to 178—majority 73.

On the motion of the Chancellor of the Exchequer, the schedule of the Bill was so amended that persons who had already paid the full threepenny tax on maize and maize meal might have the excess remitted on proving to the Inland Revenue Commissioners that they had paid it and had not had it returned from any other quarter. Earlier in the evening Sir Michael had announced that he would take this course, for he had been very much impressed with the views expressed in the course of the debate with regard to the effect of the tax upon Ireland, and also with regard to the effect generally as a tax upon what may be called the raw material of the agricultural breeding and stock-raising industry throughout the whole of the United Kingdom. No doubt, as the tax at present stands the percentage rate, although not large, is higher than that on other articles. Therefore altogether he thought it would be right and just to accept the amendment proposed to reduce the tax by one-half.

Sir F. Strachey, on the consideration of Schedule 1, moved to abolish the proposed duty of 1½d. per cwt. on offals, which are feeding stuffs.

The Chancellor of the Exchequer declined to accept the amendment, remarking that in committee he reduced the duty from 3d. to 1½d. per cwt. That was then accepted by the committee as a fair concession. The hon. member appeared to him to be like a famous character in fiction, always "asking for more."

After some remarks by Mr. S. Buxton and Mr. C. Grant, the House divided, when the amendment was rejected by 230 votes to 136.

Mr. Channing afterwards proposed an amendment, with the object of raising the whole question of the flour duty, and of giving the Chancellor of the Exchequer an opportunity of arriving at the proper figures, which would enable the Government to place the duty on an equitable basis as compared with the duty on wheat.

Sir M. Hicks-Beach stated that the effect of the amendment would be to reject altogether the duty on flour, although the House had already agreed to impose a tax on grain, and on a division, the amendment was rejected by 143 votes to 98—majority 45.

An amendment to exempt arrowroot, proposed by Mr. Channing, was negatived by 161 votes against 107—majority 54.

The Bill passed the report stage, and the third reading was fixed for to-day (Monday).

Horses from the War.

On Monday Mr. A. Davies asked the Secretary of State for War whether he intended to sell or return to England the horses and other animals used during the recent war.

Mr. A. Chamberlain, replying for Mr. Brodrick, said:—The disposal of the horses and other animals is now being carefully considered, and my right hon. friend is not in a position, therefore, to reply to the question at present.

Corn Tax and Government Contracts.

Mr. Hayden asked the Secretary of State for War on Monday whether the War Office had issued notice to contractors informing them that allowance would be made in payments for their contracts for the duty imposed on corn, flour, and other grains, provided contractors produced evidence that the duty was actually paid; and whether this condition would be insisted upon in view of the fact that contractors who had goods in stock in accordance with the usual custom of trade prior to the imposition of the duty must replace them with goods upon which the duty must be paid.

Mr. A. Chamberlain.—The reply is in the affirmative. It is necessary to insist on this condition, as there would be otherwise a waste of public money. The contractor is not entitled to be paid anything for duty which he has not himself paid.

A resolution that on and after June 17, 1902, the duties and customs on imported glucose should be 3s. 3d. for solid glucose and 2s. 6d. for liquid glucose was agreed to on Tuesday.

Duty on Offals.

Sir Edward Strachey asked the Chancellor of the Exchequer on Wednesday if he would state what amount he estimated would be received from the 1½d. duty upon offals which were feeding stuffs; and what did he estimate would be the cost of the collection of this duty.

The Chancellor of the Exchequer—The quantity of offals imported during the year ended 31st March last have been estimated at 3,050,000 cwts. Practically the whole of this may be taken to have been feeding stuffs, which, at the rate of 1½d. per cwt., would have produced a revenue of £19,062. I do not expect that the cost of collecting the whole corn duty will exceed one per cent., but I do not think there would be any practical saving by omitting offals.

Home Notes.

The Borough.

The hindrances to our traffic arising from preparations for the Royal progress on Friday next have not interfered with our special business, which, in view of the comparatively unfavourable reports from the country, continues to be fairly active on a market that is daily gaining increment of strength. Several lots have been withdrawn from offer, or are being held for higher figures than last week. A considerable reduction of stock of all grades have been effected within the past month, and it appears quite safe to predict that before the new crop arrives we shall see further substantial advances in value. Unfortunately, the profit accruing will be chiefly handled by intermediate men. Growers will enjoy but little benefit, and I can only hope that they will have their turn when they are bringing forward the hops whose condition they are now watching with some doubt and anxiety. Opinions concerning the prospects are

Various and Contradictory.

I have met with some observers, who claim to be experts, and whose long experience entitles them to respect, who definitely declare that we are unquestionably in front of another big crop. I am loth to accept such an estimate of the future, knowing how disastrous its fulfilment would be. I am therefore pleased to have contrary evidence, which leads me to think, according to my hopes, that we shall not be able to gather even an average harvest. Before me at this moment are many recent reports. Several of them include expressions, of which the following are representative:—"Bine is very backward." "Hops are very uneven and turning yellow." "Cold nights have retarded growth." "Foliage is losing colour." "Growth is very slow." "Slackness of bine in many gardens." "Ungenial weather, bine making little or no progress." "Growth has been seriously checked." "The plant is not strong enough to withstand an attack of blight." "Although plants are fairly healthy, they do not look so well as they did a week ago." "Owing to cold rains and average low temperature, the bine is not getting a fair chance." These are some of the details given by planters in the Southern districts, and when meeting several of the best Midland growers, at Worcester on Tuesday last, I found that their general experience is of a similar character. I was then told of backwardness and irregularity of growth, with weakness of the plants, and the increasing conviction that the 1902 crop will certainly be under an average, the prospect not having been so unfavourable since the cold wet summer of 1888, when, as I am informed, there was actually a fall of snow, immediately before the commencement of hop picking. In addition, to the abnormal climatic conditions, our plantations are everywhere visited by an

Attack of Blight

which threatens to develop into very serious proportions. The soil being so sodden with rain, ordinary washing machinery is not available, and only those advanced planters who have adopted systems of washing by steam power, can at present work effectively in preventive measures. The risks of the crop are therefore, increased, for unless the bine and foliage are able to cast off their weakness they must become victims to the myriads of insects that will settle upon them, and feed upon their enfeebled vitality. The opening of Coronation week does not appear to bring much brightness. We have certainly enjoyed a little sunshine, and been free from rain for a few brief spaces, but we are regularly disappointed, the clouds gather round us again, and undesirable showers falls too frequently, either for general comfort or profit. I do not intend to convey in my previous remarks, that all my reports are unsatisfactory, as there are a few exceptions, from which I learn that some growers in all districts are

Satisfied withthe Progress

and condition of their plantations. Sheltered grounds, with light, absorbent soils, will probably gain advantage by the climate from which the majority suffer. But, taking a general survey of the outlook, I am inclined to be responsible for the estimate, that our crop this year will be considerably under the average, and I may repeat my desire that it will not exceed 250,000 cwts., by which quantity the requirements of the market will be amply supplied, and probably remunerative prices may be obtained. Such an outlook is, under existing circumstances, rather bright than gloomy. Therefore, I cannot persuade myself to grumble at the unpleasant weather, when I consider only the interests of the hop growing industry, however keenly I lament the inconvenience and loss it may bring to myself and other members of the general community.

Colonial Hop Growing.

Returns just issued by the Board of Agriculture show that our Colonial brethren continue to give attention to our special cultivation. Victoria has 401 acres and Tasmania 624 acres under hops, which are also grown to a small extent in other parts of Australia, where the separate acreage is not given. In New Zealand there are 1,050 acres, and 1,054 acres in Ontario. I understand that about 500 acres are also cultivated in British Columbia. From these figures we may safely estimate that the industry is gradually increasing in our Colonies, and that their area approximately totals 4,000 acres, perhaps representing an average annual output of 40,000 cwt.

Foreign Notes.

Nuremberg.

Business in hops has been somewhat irregular, an active market being followed by a quiet one, and vice versa. On the whole the volume of passing trade is fully equal to the average of the season, and values are fairly well upheld. The scarcity of attractive qualities becomes more pronounced, and their prices remain very firm, but some concessions have been made by holders of the lower grades in order to secure sales. Nevertheless, arrivals are so much reduced that stocks are perceptibly diminishing, and even tis fact cannot induce further supplies, for the country districts have practically none to send to market. Calmness with sufficient strength is the present characteristic of the market, and if the immediate tendency appears to denote continued limitation of business, there is ground for expectation that the development of a higher temperature, which is now beginning to be evident, will bring affairs into a normal condition, and that the close of the season will be satisfactory to sellers.

The Growing Crop

is still favourably reported upon. The plant is generally growing rapidly and looks healthy and vigorous. Aphis blight has appeared in some districts, and is likely to increase under present climatic conditions. But thus far no alarm is felt by growers, who seem to learn from the experience of English planters that an increased crop secured by the destruction of the fly is likely to be unprofitable. They wisely prefer a moderate yield of good quality, that can be sold at a remunerative price, than a big harvest, which must be sacrificed at low figures.

Belgium.

Market values remain in about same position as when I reported last. A steady, though moderate, demand exists, and the present tendency is in favour of continued firmness, which may probably be accentuated. The plantation reports are fairly favourable. Growth is progressing, though fly increases, and some growers are getting anxious about the possible development of the attack.

America.

New York returns from September 1st to end of May last show that the receipts of hops were 80,715 bales, against 134,924 bales same time last year. The exports to Europe during this period were 40,521 bales, and last season they ran up to 58,244 bales. The evidence thus provided of the smallness of the 1901 crop, coupled with the difficulty of finding any hops remaining in first hands, causes the market to be extremely strong. Higher prices are demanded, and though brewers are very slow to follow the advance the firm position held by dealers compels their customers to yield.

Reports from the Yards

in New York State are unanimous concerning the probable lightness of this year's crop. Continuance of cold, wet weather holds back the growth, even in grounds that escaped the frost. Where the plants have advanced sufficiently for tying the vine is very brittle, so that tying is almost impossible. On the Pacific coast the aspect is more favourable. In Washington, Oregon, and California, the vine has grown vigorously from the start. The present outlook for the new crop is therefore in favour of a full yield, largely in excess of last year. Dealers are, however, still anxious to contract at full prices, while growers are reticent, as they have confidence in the realisation of higher figures than are now offered.

Serious Bog Slide in Ireland.—Great excitement was caused in the neighbourhood of Carrick-on-Shannon, county Leith, on Monday evening, when the news spread that a vast area of bog, comprising several hundred acres, split in two portions and moved a considerable distance, occasioning much destruction to property in the vicinity. A house has been swallowed up, but happily no lives were lost.

By Hordeum.

Agricultural Returns.

The heavy volume just issued by the Board of Agriculture, giving the completed returns up to date, is one of much interest and value. In the most lucid Report is one table of very special moment that would profitably reward many southern farmers if they could be taught why it is in Scotland there is an actual increase in the area of land under arable cultivation, contrasting the present time with thirty years ago. Whilst England has lost 2,100,000 acres of arable land out of 13,500,000, and Wales nearly 200,000 out of just over one million, Scotland has made an actual gain of 100,000 acres.

This cannot be accounted for by the supposition which is so general, but which is quite a fallacy, that Scotland has only a small extent of her soil under the plough. England is shown to have 46 per cent. of her total cultivated area arable; Wales has only 32 per cent.; whilst Scotland has no less than 71 per cent., and, as a consequence, Scotch farmers are mainly dependent upon the return from the arable portion of their farms.

The yield per acre

may be taken as a good indication of the ability of the cultivators at their work, plus, of course, the quality of soil and the character of climate, but the two latter are far less important than the first. Now, if we turn to our English yields of barley, a number of our good and large barley-growing counties gave to their farmers last year little more than half returned from Scotch counties. Thus Bedford made the miserable show of only 24.7 bush. per acre, and, taking the average of ten years, of 31.0 bushels, whilst every county in Scotland having a larger breadth of barley than Bedford exceeded 34 bushels for the same long average, and a number went over 40 bushels per acre last year. Edinburgh yielded no less than 46.6 bushels per acre from 5,800 acres, and Linlithgow 47.6 bushels from 3,500 acres.

Berkshire again yielded only 24.9 bushels, Bucks 25.3 bushels, and the fair county of Hampshire only 29.3 bushels. Of the English counties the highest yields are credited to Northumberland and Durham (omitting London), with 37.4 and 37.3 bushels respectively. Taking the average of ten years, Kent heads the list with 36.8 bushels, which, however, is exceeded by no less than nine Scotch counties, the top record being made by Edinburgh at 43.9 bushels per acre.

The returns enable us to look much wider afield and permit comparisons with a long list of foreign countries. The poorest return comes from European Russia of only 10 bushels per acre. This is followed by North Caucasia, with only 14.4 bushels, and by Poland, with 16.8. The acreage of these districts exceeded our own almost exactly by ten times, amounting to the large figure of over 21,000,000 acres. The best European country is Austro-Hungary, with 20.6 bushels, followed closely by France, with 19.4 bushels. But here again

Cultivation tells.

Some of the best cultivated barley lands to be found in Europe are to be seen in Hungary, and there the farmers have gained by the lessons taught at their old-established technical colleges and schools. As a consequence, they grow better grain and more of it than any of their neighbours. Turning for further comparison with our Colonies, it is pleasing to note that New Zealand outstrips our own country, the yield being 33.3 bushels per acre. This is well followed by Canada, with a yield of 28.1 bushels. Amongst the States producing small amounts, the two most highly cultivated head the list; Holland grows no less than 43.2 bushels, and Belgium 38.6 bushels per acre. It is satisfactory that Scotch counties can excel these figures, high as they seem.

One table is not given, and perhaps it would be impossible to obtain, although it would be of much advantage. This is the amount of seed-corn used. We have absurdly wide variations in our own counties, but it is impossible to con-

jecture what amounts some of the other countries and Colonies use.

The tables set out the sales in the registered markets for a century, both quantity and price, but it is a matter for deep regret that in both cases the malting, distilling, and feeding are all included in one column. It would be a very great advantage to all barley-growers and dealers if this return were split into two, giving the quantity and value of malting barley separate from grinding and distilling, and such a return made from each market would be of value in a variety of ways to many men.

The returns are, however, in their present form of very great utility, and, considering the date of some of them, reflect the highest credit upon the skill and promptitude of the Department.

Instruction in Principles and Practice of Agricultural Co-operation.

The Board of Agriculture has called the attention of clerks of County Councils in England and Wales to the fact that the Board of Education recently sanctioned instruction in the principles and practice of agricultural co-operation, under section 8 of the Technical Instruction Act, 1889. This minute, a copy of which was laid before Parliament last week, is in the following terms:—

"Read letter from Mr. C. G. Watkins (organising secretary), dated March 21, 1902, notifying that the committee to whom the Bucks County Council have delegated certain of their powers under the Technical Instruction Acts are of opinion that instruction in the principles and practice of agricultural co-operation—which subject is not included in the branches of science and art enumerated in the directory with respect to which grants are at present made by the Board of Education—is required by the circumstances of the district. The Board is pleased to sanction this form of instruction under section 8 of the Technical Instruction Act, 1889, for the County of Buckingham, and this minute will be laid before Parliament in accordance therewith."

The Board of Education has intimated to the Board of Agriculture that they are prepared to sanction this form of instruction in the case of all County Councils which may make application to them in terms of section 8 of the Technical Instruction Act, 1889, with a representation that such a form of instruction is required by the circumstances of the district, and the latter Board has suggested to the County Council clerks that the matter is one which might with advantage be brought to the notice of their Technical Instruction Committee.

GARDEN.

During the last day or two a slight improvement in the weather has taken place, and though one is afraid to be too hopeful, the prospects generally are more promising than they were. The sun shows his almost unfamiliar face again occasionally, and the sky presents a kinder appearance than for some time past. A decided change for the better may take place on or about the 21st—the summer solstice—especially as the moon will be at the full at about the same time—and it is to be devoutly hoped that this may "come off" all right.

Just now the work in the vegetable garden is chiefly of a routine character, the majority of the summer crops having been sown or planted by this time, and being now in active growth. That invaluable implement, the hoe, should be kept going almost constantly, with the double object of destroying weeds and keeping the surface of the soil in a friable and well-aërated condition. When the weather is showery the weeds had better be raked off after hoeing, as if left on the ground many of them will grow again; much the best way to dispose of anything of the kind is to throw them on a good "smother" fire, which in gardens of any magnitude should be kept going in some out-of-the-way corner. But in dry or bright periods they may as well be left as they fall—if not too large or strong—as a few hours of exposure to hot sun will wither them beyond recall, the only danger attached to this course being that some may ripen and shed their seeds, and thus reproduce themselves.

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan."

Butter Regulations in Germany.

Whatever may be said against the Germans in some other matters, they certainly show the courage of their convictions where food science is concerned. In dealing with food adulteration they act logically and thoroughly, with the result, as somebody has said, that German physique is improving, whilst the physique of Englishmen is deteriorating. The fact is that the Germans long ago recognised, whilst our own slow-coaches have but just discovered it, that it is no longer the poor little retailer who sophisticates food, but the big manufacturer who can employ the best skilled chemical assistance in his operations; and having arrived at that perception, the Germans, with their customary logical thoroughness, have set themselves determinedly to thwart the big adulterator—or sophisticator—wherever they find him. Years ago they legislated drastically regarding margarine, and we have from time to time reported how they have dealt with meat and have barred out American abominations of one kind and another. They have now dealt, as we here ought to have dealt, with the up-to-date question of the water and other constituents of butter. Some months ago it was pointed out in "The Grocer" that Government ought not only to lay down a maximum point beyond which the water in butter should not be allowed, but also should lay down a minimum for the butter fat. The German Government has gone upon those lines. It has enacted that from July 1, 1902, no butter, if in unsalted condition, that contains more than 18 per cent. of moisture, or, if salted, more than 16 per cent. of moisture, may be sold or offered for sale in the German Empire. Nor may butter of any kind be sold or offered for sale if it contains less than 80 per cent. butter fat. Meanwhile we in this country are still laboriously plodding through the bogs and pitfalls of legal casuistry to discover whether or not the plain intentions of Parliament, the plain desires and needs of the country, and the plain dictates of honesty cannot successfully be thwarted by a combination of interested people.—*The Grocer.*

MONDAY (June 16th).—The weather was again dull and rainy in most parts of Great Britain, and fog or mist was experienced at several of the English stations. The barometer was low over the North Sea and on our east coasts, and the wind was chiefly northerly, except in the south of England, where the direction was westerly. Rain was measured in the morning, except at a few places in the east of England, but the amounts were generally small. The mid-day temperatures were everywhere very low for the time of year, and at places in Scotland and the north of England the highest readings were about 50 degrees.

TUESDAY (June 17th).—The weather was rather finer than of late, but showers still occurred in many parts of England, and the temperature was everywhere very low for the time of year. The wind was generally light from between north and north-east, but a light southerly wind had set in on the south-west coast of Ireland during the day. There was still a great deal of cloud, and slight rain fell again in many parts of England. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, in the southern and eastern portions of the Kingdom, but the amounts were mostly small. The mid-day temperatures showed a slight increase, the thermometer in the shade touching 60 degrees at several places in the south and west.

WEDNESDAY (June 18th).—There was a further slight rise of temperature during the day, and the weather was finer and more settled than of late over Great Britain. Rain had only fallen at a few places in the United Kingdom since Tuesday morning, and the amounts measured were mostly small. Tuesday night was cold in parts of Scotland, and at Nairn the sheltered thermometer fell to within two degrees of the freezing point. In the south-west of England the temperature did not fall below 50 degrees. The mid-day readings exceeded 60 degrees in the south and west.

THURSDAY (June 19th).—The weather was very fine in the south-east of England, but rain again fell at many places in the west of England, as well as in Ireland and Scotland. The winds were southerly and south-easterly over the entire kingdom, and they were strong in the west. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, at most of the western stations, but elsewhere the weather had been dry. A further rise of temperature was experienced during the day, and in the midland and southern parts of England the thermometer touched seventy degrees.

FRIDAY (June 20th).—The weather was again rainy and unsettled over the greater part of our Islands, and temperature had fallen generally. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, at all the western stations, and in parts of Ireland the amounts were large. The wind was generally from between south-east and east, and it was strong at several places on our coasts. The mid-day temperatures were below 60 degrees over a large portion of the country.

SATURDAY AND SUNDAY (June 21 and 22).—Rain fell in several places during these last two days, but the weather was generally less unsettled than for some time past. The winds continue from between south-east and south-west, and they were for the most part light. Temperatures were very irregular, the nights being warm over nearly the entire kingdom, and in many parts of England the lowest readings were above fifty degrees. The days were generally cool, and it was only in the Midland and Southern districts of England that the thermometer was in agreement with the average.

The King's Fat Stock.—The King sent a good consignment of stock from the Royal farms at Windsor to the Slough Cattle Market on Tuesday. Five prime Devon bullocks fed by his Majesty fetched more than £120; 15 grass lambs from 28s. to 29s. 6d. per head; and 10 sheep from 43s. to 47s. each. Two of the bullocks will be used for the Coronation dinner to the poor of Llangollen.

Berkshire.

The weather was very cold till the middle of June, and since this month came in we have had a lot of rain; this has made a great improvement in the appearance of the crops. Wheat is strong and good on the heavy land, but on the light land it is thin on the ground. Barley and oats never looked better and promise to be a good crop. Beans look fairly well, and vetches will probably be too bulky to save for seed. The rains have so much improved the grasses that there will now be more than an average crop of hay, but fine weather is now required to secure it in good condition. Mangolds have come on well, but they are generally full of weeds, and it is impossible to do much to them this wet weather. Swedes and rape are coming on well, and the fly has not been quite so busy as usual. Meat is dearer, and consequently beasts are selling well; and there is now a good trade for sheep at higher prices. There is not so much inquiry for horses, and they are dull of sale. The Swine Fever Order prevents much knowledge of the store pig trade, but bacon about keeps its price. Labour is still rather scarce, but with the improved machinery there will be no difficulty in securing the crops, but if it should be very wet the great trouble will be with the roots.—I. L. (June 19th.)

Herefordshire (North).

We have had more or less rain most days during the month, and crop prospects have much improved, more than could have been expected, considering it is generally cold, with little or no sun—this we are much in need of now to bring the crops to maturity. Some of the clovers are heavy and want cutting, if there was any prospect of its being made. We must hope for a change in weather before long, or else the good crops growing will not be much help unless well gathered. Mangolds, though a fair plant, have not made much growth, the weather being too cold. Part of the swedes are unplanted, the land being wet; those that are up seem free from fly.

Fruit prospects are bad. The blossom was grand, and gave every appearance of a good crop, but the blight is so severe that the whole crop of different kinds is reduced to about one-third, or less. I have heard of many orchards of cherries clean gone. The hops, too, in this part are covered with blight, and the cold weather is very unfavourable for them, but a third of a crop is all that is required. Many are washing, but this will not avail much without sun. There is a great demand for store stock of all kinds, and fat has been selling well, but is a little lower, though a good price.—W. H. (June 20th.)

Notts. (North).

The weather has been more propitious, with a higher temperature prevailing. There has certainly been rain enough, which has been welcome, only the absence of genial sunshine has been a serious drawback to the growing crops making headway. But under the more favourable influences the wheat plant and the cereals will probably regain their lost colour. However, many pieces of corn are now presenting a very "off" and indifferent appearance. It is feared whatever sort of grand weather is vouchsafed they will be very light and unsatisfactory, although there is plenty of time to improve. The late frosts did an incalculable amount of harm, especially on the low-lying grounds. The fields "laid" up for mowing have failed to make any bulk, and the grass has attenuated and run up very thin; thus a late hay-time must necessarily follow in consequence. The crops may be said to be making progress now, but everything is fully a month behindhand. The same remark applies to the fruit, of which there will be only a scanty crop in too many places. The early potatoes got cut off by the late frosts, and the kidney beans suffered in a similar manner severely, and a deal of damage was done. Mangels, swedes, and turnips have certainly made a start, and most of the latter crops have been sown under favourable conditions. Live stock is doing well on the green pastures, and small pigs are scarce and dear. Labour is also very scarce and dear, making it worse for the already over-burdened farmer to pay; but corn keeps up pretty well; however, the worst of that is very few have any to sell. The outlook yet is far from being "rosy" in North Notts.—"Agrestic." (June 19th.)

Shropshir e (South).

The crop prospects in this district are much better than at this time last year. Wheat is looking well, but I have seen several fields thin owing to wireworm. Oats are a good plant and of a good colour; they look like being a much better crop than last year's. Barley looks well, but is now losing colour, owing to deficient sunshine. Clovers for hay will be a light crop. Grass for mowing much better than last year. Mangels are a good plant, where they have escaped the fly, but some of my own I have had to re-sow, owing to this pest. Swedes, where put in last days of May, a good plant, and not much troubled with the fly. Cattle and sheep have now plenty of keep in the meadows, and doing well. Beef dear; mutton not selling so well the last few weeks, owing, I think, to so many fat lambs being on the market. Weather very dull and cold for June, and what we want now is bright sunshine, which I hope we shall get before the Coronation. Wool, a worse price than any one can remember.—J. O. B. (June 16th.)

Shropshire:

We are now having much of what we have wished for, viz., warmer weather, but heavy rain continues to fall. The ground has now assumed a richer green colour, and the enquiry for stock is better, at improved prices.—J. G. (June 20).

Somerset.

Corn crops promise a good yield of straw, but the earing stage is late, and warmer weather is badly wanted for developing the grain. Mangolds are a good plant, but grow very slowly, and are badly over-run with weeds. Swedes have been sown under poor conditions, a great deal of the land being too wet to work and clean.

The grain is late, and will not be fit for mowing for another ten days or so. The crop will be about an average one, but varies a great deal.

Dairy cows and other cattle are doing well, but shorn sheep have suffered badly through the weather, and losses have occurred.

There is a free sale for all classes of live stock at moderate prices, with fat cattle in decidedly short supply.—C. P. (June 19.)

Somerset (Cheddar).

The quantity of rain that has fallen of late has covered the low land over with water, which is a very unusual occurrence at this season of the year. Should we now be favoured with warm weather all vegetation would grow fast. The prospect of a crop of hay is good on the low land; the grass is thin on the land on the uplands at present. A few have commenced to cut their hay, but the prospect of stacking it in good condition is not very bright now. Others will, now the copious rain has fallen, let it remain until the undergrowth comes on; but the quality of such hay will not be so good, as the seed from the first growth will have ripened and been shed on the land before the other is sufficiently matured to be cut, owing to the ungenial weather. Consequently, not being the usual quantity of grass on the pastures, fattening cattle and sheep are not so forward in condition as usual; consequently, butchers find some difficulty now in procuring good, matured fat cattle and sheep for their purpose, which are fetching good prices, which will also apply to the price of pork. Mangolds are a good plant, and are now being hoed. Potatoes, which are now being earthed up, are not so good or regular in the row as usual, which, I presume, is due to the cold, dry weather that prevailed a short time since.—A. L. O. (June 20th.)

Somerset (North).

On June 10, last year, we commenced mowing, while now, on the 20th, this year, we are only thinking about it, while waiting for better weather to make the hay.

The pastures are full of grass, and all kinds of stock are doing well. The corn crops, of which no great breadths are grown around here, are looking well, and so are the root crops, with promise of a bountiful season all round. The prices obtained for beef and mutton at yesterday's Bristol market was a disappointment to many. The market was more full of stock than it had been for several years. 'Tis true much of it was only half fat, but brought out in view of the big Coronation demand that was expected. But the buyers had been about weeks before, thinking to forestall this supposed great demand, and had stocked up at high prices; and now they were left with them, as the Yankees say.

I attended a meeting yesterday, called by the agent of one of the largest estates about here for the proprose of devising some plan of profitably disposing of surplus fruit when the glut in the market takes place, which usually happens every autumn. Fruit-drying, cold-storing, jam and cider-making were all discussed, and a good deal of useful information obtained from experts who were present, and, as it was admitted that when the glut came the inferior qualities suffered the biggest drop, therefor information should be spread about as to the best sorts to cultivate and the best means of marketing. In the end, a committee of three were appointed to visit preserving factories, etc., and report to an adjourned meeting. Afterwards, in company of one of the committee, I visited a large cold-storage place in the City of Bristol, and found the foreigner took full advantage of these places; and we thought it was time the British farmer did the same, as that might enable him to get over the difficulty of the glut in the markets.—R. B. (June 20th).

Staffordshire (Mid).

The weather has been so showery and, until the last few days, so cold for the time of year, that there is at present no sign of beginning the hay harvest. We have had to-day (June 20th) a very heavy fall of rain, but the temperature is decidedly higher, so that it is almost certain that the grass and clover crops will be very bulky. Also all green crops are very promising. With swedes and mangolds hoed out, farm work is so forward that next week some mowing will be done if the weather be suitable. Notwithstanding the expressed opinion of the Meteorological authorities, at the present time the change of the moon is still looked upon by the older farmers amongst us as being accompanied often with a change of weather. It is well within my recollection that a table of times of change of moon was an annual affair; and the time of change, with the direction of the wind at the change and after the change, stamped the moon's change as favourable or unfavourable to fine weather following.

On Saturday, June 21st, the early morning change of moon would have been looked upon by my father as a favourable change, according to the theory of Admiral Fitzroy.

If at midsummer we should be blessed with the setting in of sunny weather, it is fairly certain that the season will be a good time for farmers, and, possibly, may hereafter be spoken of as Coronation Year.—T. C. S. (June 20th.)

Sussex (Mid).

The spring has been very unkind in this neighbourhood; but notwithstanding the inordinate amount of wet, the wheats as a rule are looking better than might be expected. More sunshine is what is needed. Oats are looking well. Barley, none grown. Beans and peas promise well, but, like other crops, want fine weather now. There is a good crop of clover and grass; both are quite fit, or more, to be cut, but I have not seen any down yet; the treacherous weather has deterred everybody from beginning. Mangolds, although a good plant, do not seem to be enjoying themselves; they will no doubt soon pick up if the sun will but shine more. The effect of the bad time upon all fruit trees and bushes is simply disastrous. A more splendid show of bloom could not be imagined, but frost and wind, followed by a universal blight, have too effectually done their work. Gooseberries and currants, both black and red, have disappeared. Apples, pears, and plums are in the same state; their foliage looks black and most unhealthy.—F. C. C. (June 20th.)

Foreign Prospects.

FRANCE.—In spite of unfavourable weather the cereal crops are said to require nothing but plenty of sunshine to bring them to a good, if somewhat tardy, finish, in earlier districts where wheat is earing and rye blooming, heavy rain has laid many of the finest fields, but hope is still superior to apprehension, and a fair harvest is expected.

BELGIUM.—Crop prospects continue satisfactory, but sunshine is wanted.

GERMANY.—Our Berlin correspondent reports the prevalence of fine weather, and the crop outlook for all cereals is most hopeful.

HOLLAND.—Improved harvest prospects have caused a quieter feeling in the markets.

HUNGARY.—Weather changeable, but not detrimental to the crops.

RUSSIA.—Advices continue to speak favourably of crop prospects, although there are not wanting rumours to the effect that excessive heat is causing injury to the grain fields.

ROUMANIA.—With fine weather, the general crop outlook continues promising.

UNITED STATES.—With growing weather, winter wheat is heading well in the northern section of the wheat belt. Harvesting in the southern section is progressing, with some drawbacks by rain, but the rains are less copious than in the previous week. Spring wheat and maize maintain their high promise. Oats are good, but too rank, and in some places "lodging" is reported. In California the rainfall to date is 19 inches, compared with 21 inches last year.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt—A quiet trade at late rates. Barley slow. Wheat was 6d per qr. cheaper. Oats declined 9d to 1s per qr. Maize 3d per qr lower. Flour 3d per sack cheaper.—NIXON, GOWER, AND CO.

Mark Lane, Wednesday.—At Mark Lane to-day the attendance was very small, and the finer weather had a quietening effect on the market. English and foreign wheat and flour were held for Monday's prices, but demand very limited. Maize steadily held, but inactive. Oats, limited business done at late rates. Barley steady, quiet.

Mark Lane, Friday.—This was a very undecided day on the Corn Exchange, causes at present being attributable to approaching Coronation; but, although trading was kept down, sellers had no cause for complaint as a rule, and the few dealings in feeding stuffs were accomplished at a range marking occasional gains since Friday last. With the supply of English wheat here exhausted, rates remain nominal, good 63lb reds delivered up ruling at 33s. Good reds, free on rail, quoted at about 31s 6d per qr. American descriptions 6d firmer since last Friday, cargoes arriving being mostly ordered away to their destinations. Australian maintained at late rates. Californian, 32s ex ship, and Walla Walla out of offer for the present. American brands of flour show a decidedly steady course, while 3d firmer since last Friday in some cases, and stocks here continue small, but there is a good deal coming forward, although not at the moment. Top patents remain scarce, and quoted up to 25s; Pillsbury, best, Golden Lily Ceresota, fancy patents, 24s. Australian patents remain sparingly offered at 23s 6d to 24s ex store, 280lb. English moves distinctly in buyers' favour. Top price town made 30s net; No. 1 households, 22s 6d per sack cash delivered at the mill door, and extras 1s more. Cascadias, 22s 9d ex store. French of second quality, 22s ex store; and best Hungarians, 33s, being still very scarce. Grinding barley in ample supply, but sellers are not disposed to take less. Odessa, 19s 10½d ex ship, and 20s 6d ex quay. Danubian, in the former position, 19s 9d, and 20s 3d ex quay. Oats occasionally held for 3d advance since Friday last, although buyers respond slowly. English oats remain at a premium. Maize unchanged. Mixed American continues out of the market, and nominal in absence of supply.

COUNTRY.

Ashford, Tuesday.—Wheat—Trade small at late reduced prices; supply small. Barleys unaltered. Oats fairly maintained their high value. Beans and peas at nominal quotations. White wheat, 33s to 34s; brown ditto, 32s to 33s 6d. Malting barley—None; grinding ditto, 22s to 26s. Black oats, 21s to 24s; white ditto, 22s to 26s. Old beans, 33s to 38s. Grey peas, 36s to 37s.

Banbury, Thursday.—Wheat (red), 30s to 31s per qr.; beans, 36s to 38s per qr.; oats (black), 24s to 26s per qr. Trade firm, but not enough business or wheat offering to test prices.

Boston, Wednesday.—A very small show; wheat, 30s; grinding barley, 29s; oats, 24s and 26s; beans, 36s; maize, 22s 9d to 23s 3d per qr.

Braintree, Wednesday. — Wheat trade small, reds making from 31s 6d to 32s, and whites, 32s to 33s. per quarter.

Bristol, Thursday.—Very little doing since our last. There was little English wheat offering to-day. Prices unchanged. Foreign very firm, the turn in sellers' favour. Maize, owing to the reduction in duty, was 3d lower. Barley and oats unaltered. Flour very little inquiry, and consequently no improvement in prices.—GRACE, BROS.

Bury St. Edmunds, Wednesday.—The attendance was very limited, and trade generally of small dimensions. Very little corn of any sort offering, and few sales were recorded. The supply of wheat was small, being scarcely up to the average of previous weeks, and the market can be quoted as steady, at the late prevailing quotations of 30s to 31s for fine reds, and 31s to 32s for white. Maize unchanged. Offals in larger supply, and quieter. Farmers complained of damage locally by the extremely heavy rains of the last week, and fears were entertained as to securing the hay crop in good condition. The question of ensilage being again raised as a safe method of securing crops satisfactorily.

Cambridge, Saturday.—The weather this week, although showery, has shown a distinct improvement, and we have had a fair amount of sunshine. Wheat looks well, but barley requires warmth and sun. Supplies of wheat are very small, and prices are against the buyer. At this market to-day there was a very small supply of wheat, which sold readily at 6d per qr advance on last Saturday's rates. Red, 31s to 32s; and white, up to 32s per 504lb. Oats and beans are scarcely offered, and prices remain firm.

Canterbury, Saturday.—Wheat rather firmer; other articles unchanged. Ruling prices:—White wheat, 33s to 35s; red, 32s to 34s; grinding barley, 22s to 24s, white oats, 24s to 26s; black oats, 22s to 24s; grey peas, 36s to 37s; tick beans, 38s to 40s.

Carlisle, Saturday.—Small supply of oats in our market to-day; fair sale at last week's prices, 23s 6d to 24s 9d per 336lbs.—THOMAS ROBINSON.

Chester, Saturday.—English grain was sparingly offered, and maintained its price. Indian corn, lower grades, 3d per sack higher on the week. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 60lb; grinding barley, 3s 6d to 3s 8d per 60lb; beans, 5s 10d to 6s per 80lb; oats, new, 3s 2d to 3s 4d; old, 3s 4d to 3s 6d per 45lb; Indian corn, 140s to 14s 6d per 240lb.

Colchester, Saturday.—Very little wheat offering; firm trade at fully last week's prices. Practically nothing offering in spring corn.—FRANCIS AND CO.

Crowdon, Wednesday.—White wheat, 32s to 34s; red ditto, 31s to 33s. Malting barley—None; grinding, 22s to 25s. Oats, 20s to 24s. Beans, 33s to 35s. Peas, 31s to 33s. Trade for wheat quiet; no change in prices. Oats cheaper. Beans and peas remain the same.

Glasgow, Wednesday.—There was a small attendance at our market to-day. Wheat and flour are fairly steady in price, but almost nothing doing. Round maize, 1½d per 280lb easier. Grinding beans, 3d per 280lb cheaper; quiet trade. Canadian pease steady, but slow. Home and foreign oats, quiet trade, with prices about unchanged. Beans and thirds dull and unchanged. Oatmeal, 6d per sack dearer; slow sale.—GIBSON AND CLARK.

Leeds, Tuesday.—The unseasonably cold, wet weather is beginning to have its effect on the trade both in this country and in France, as it seriously endangers crop prospects. Wheat is more firmly held to-day, and meets with improved inquiry, American and Russian descriptions being 3d per qr dearer; whites unchanged. Feeding stuffs rather favour buyers.—DUNNS AND CO.

Leeds, Friday.—With American still hardening, Tuesday's prices for both English and foreign wheats are fully maintained, with a slight advance for choice lots. Maize and beans the turn dearer. Peas, oats, maize, flour, and other articles firmly held.

Leicester, Saturday.—Fair attendance, with small supply. Wheat trade slow at 31s to 34s per 36 stone. Barley and beans steady. Fine oats very firm.

Lincoln, Friday.—Small supply of English wheat. Trade slow at late rates. Reds, 31s to 32s; whites, 32s to 33s; foreign firm. Very little doing in oats, and prices were the same. Maize and beans quiet.

Maidstone, Thursday.—There was a very small attendance and trade quiet, farmers being busy at home with their hay crops and hop washing. Wheat was a trifle easier, otherwise prices were the same as last week. Quotations:—White wheat, 33s to 35s; red ditto, 33s to 34s; grinding barley, 23s; oats, 22s to 26s; peas, 38s; white ditto, 39s; maize, 24s to 26s; beans, 38s to 40s; English linseed cake, £8 to £8 10s; foreign ditto, £7 10s to £8; cotton cake, £5 to £5 5s.

Maidstone, Thursday.—Market inactive. Wheat—Trade about the same as last week, 31s to 36s per qr. Barley—Business is decidedly slow, and the cost of the article rather less than recently. Oats are not quite so dear as last week, but the decrease in price is but trifling, especially for best black descriptions, the favourite sort here. Maize is rather weak; also other kinds of corn for feeding, as the millers' offals are to be obtained at cheaper rates than of late. In other materials no alteration in value.

Manchester, Wednesday.—Hay, 6½d to 7½d; clover, 6½d to 8d; clover, Lincoln, 8d; straw, wheat, 5½d to 6½d; straw, oat, 5½d to 5¾d per stone.

Newcastle-on-Tyne, Saturday.—A fair demand for wheat, and prices in sellers' favour. Maize remains firm at late rates. Beans and peas steady; demand limited. Barley unaltered.—JOSEPH FOLLARD AND CO.

Northampton, Saturday.—Small attendance, and not much wheat or other produce on offer. A very quiet market and featureless. Small business, same as last week's:—White wheat, 32s to 34s; red, 31s to 32s; grinding barley, 26s to 26s; oats, 20s to 24s; old fine, 26s; beans, 32s to 38s; peas, 26s to 36s; flour, 22s to 24s; fine, 27s.

Norwich, Saturday.—The attendance here to-day was thin, and there was no great quantity of wheat offering; trade ruled firm at about late rates. It was noticed that business is beginning to be affected by the close approach of the Coronation holidays. Averages:—Wheat, 1333qr, 30s 11d; oats, 64qr, 21s 1d. There has been a great improvement in the weather in Norfolk since Wednesday. Up to that day it was cold and wet, but the temperature then began to rise, and yesterday and to-day were warm and summer-like. Farmers are rejoicing at the welcome change.

Nottingham, Saturday.—Wheat in very small supply, and prices were in sellers' favour. Oats and beans—But few offering, and maintained full values.—ROBT. HUBBLE.

Norwich, Saturday.—There is no quotable alteration in the wheat trade to-day, which remains firm, with a small supply. The weather of the past week has been a decided improvement, being much warmer, with bright sunshine. Wheat, red, 31s to 32s per qr, weight 63lb per bushel imperial.—J. ARTHUR MILLS.

Peterborough, Saturday.—There has been very little wheat at market to-day, and, though the demand was not active, it made, from actual scarcity, rather more money than last week. Oats and beans firm at late rates.—THOMAS HILL AND SON.

Reading, Saturday.—The supply of corn and the attendance at the exchange to-day were alike very small. Wheat continues to come to hand sparingly, and meets a fair inquiry, in which recent quotations are well maintained. Malting barley moved off very slowly at unaltered figures, and for oats, which were in good demand, late quotations were always obtainable.

Ripon, Thursday.—An average attendance, but not much showing. Trade steady. Oats firm at last week's prices. Wheat, English, new, 31s to 32s; ditto, foreign, 30s 6d to 34s; barley, grinding, 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s to 26s per qr; beans, 1s per stone.

Romford, Wednesday.—Wheat trade very slow; practically no wheat on the market. Prices merely nominal. Red wheat, 30s to 32s; white wheat, 32s to 34s per quarter.

Sheffield, Tuesday.—The attendance of buyers was small. The demand for wheat, both English and foreign, was weak, and sellers accepted 6d per qr less. Maize sold fairly well at last week's prices. Trade in beans and oats quiet at late rates. Quotations:—Wheat, white, 32s 6d to 34s; ditto red, 32s 6d to 34s per 504lb; oats, new white, 26s to 27s; ditto new black, 23s to 24s per 336lb; peas, grinding, 36s to 37s; ditto blue, 53s to 80s; beans, Egyptian, 33s 6d to 34s per 504lb; ditto English, new, 37s 6d to 38s per 532lb; Indian corn, small, 24s to 24s 6d; ditto American mixed, 28s 6d to 29s per 480lb.

Spalding, Tuesday.—A small market, and very little business doing. Prices unchanged. Wheat, 31s to 31s 6d per qr. Oats, beans, and peas sold at late rates.

Stockton, Wednesday.—There was a very short supply of English wheat, which made 32s per qr. Trade in foreign wheat keeps steady, with a fair demand from millers. Prices show no change on the week. Oats and maize unchanged.

Sunderland, Saturday.—Fair show of wheat, which sold at last week's prices. Little doing in spring corn. Arrivals:—Coastwise: Nil. Foreign: Wheat, 8,440qrs.—E. AND F. RICHARDSON.

Wisbech, Saturday.—Small attendance at market, and only a few odd samples of grain offering. Prices unchanged. Wheat, 30s to 31s. Oats, 25s to 26s. Beans, 36s to 38s.—JAMES FLETCHER.

Winchester, Saturday.—A very short supply of wheat on our market to-day, which sold readily at 6d to 1s advance on the week. Barley firm, with more inquiry for grinding descriptions. Maize unaltered. Oats generally 3d lower. Flour—Fair demand at fully late rates.—FEAR, COLEBROOK AND CO., LTD.

Wolverhampton, Wednesday.—There was not a large attendance, and business was quiet. Quotations:—Wheat, new, 12s 6d to 13s per 216lb; oats, 16s to 17s; beans, old, 16s to 17s 6d; new, 15s to 16s 6d per 196lb; barley, 35s to 40s per 448lb; maize, new, 25s 6d to 26s 6d; old, 29s 6d to 30s6d per 480lb.

Worcester, Saturday.—Small attendance and very little doing. Wheat was scarce, and sold slowly at last week's rates. Barley and oats unaltered. Beans steady.

Worksop, Wednesday.—Very poor attendance, and small show of grain. Wheat and oats were up about 6d per qr. White wheat, 31s 6d to 33s; red wheat, 31s to 32s; grinding barley, 27s to 28s; white oats, 26s 6d to 28s 6d; black oats, 25s 6d to 26s 6d; round maize, 26s 6d; old, 29s 6d to 30s 6d per 480lb.

York, Saturday.—Thin attendance, and farmers offered very few samples. Wheat was a trifle firmer on the week, making up to 32s per qr of 36st for the best. Oats were offered very sparingly, but scarcely maintained late rates, good white making 24s to 24s 6d per qr of 24st.

FOREIGN.

Hamburg, Saturday.—Unseasonable, cold weather continued during the greatest part of the week; since yesterday it is milder and sunny. Vegetation is backward, but the growing crops in general are in good condition. Trade quiet, at unaltered prices. The imports during the week amounted to 766 tons wheat, 2,658 tons rye, 3,300 tons barley, 8,054 tons maize. Wheat meets a slow sale, but is firm in value, supplies falling off. American hard winter No. 2 is held at 28s 6d; August shipment, 28s; red winter No. 2, July shipment, at 28s 7½d; Northern Duluth No. 1, 28s; Manitoba No. 1, afloat, 28s 3d per 480lb; Walla Walla, on the spot, 29s 3d per 500lb. Rye is selling at last week's prices. American Western No. 2, afloat, at 24s 3d; 9 15-20 Nikolajef, afloat, at 23s 3d per 480lb. The growing crop of barley is making slow progress, and the prospects in general are not so favourable as last year. Russian and Danubian feeding barley, being scarce on the spot, is selling at 19s to 19s 3d. Speculators are offering August-September shipments at 16s 6d to 16s 9d per 400lb c.i.f., while direct offers from reliable shippers at these rates are wanting. Maize quiet. River Plate, June-July, is offering at 20s 6d; Odessa, prompt, at 20s 3d; Danubian, afloat, at 20s 6d; mixed American, prompt, 24s 9d; December shipment at 19s 9d per 480lb c.i.f.—JOHN TATLOCK.

Paris, Wednesday.—Native Wheat.—Trade to-day was still of little importance, as much on account of the demands of farmers, who, encouraged by the rise of the last few days in the Marche de Paris, asked 1s to 1s 6d per quarter more money on the week, as to the reserve of millers who did not deem it advisable to make any purchases, in view of the good condition of the growing wheat and the poor sale of their products, all these circumstances combined were not of a nature to precipitate transactions, so much the more as purchases could be made cheaper on the Marche de Paris. In short, business was very tedious, and the total sales effected were certainly within modest dimensions. Choice Red, 39s 7d to 40s.; average, 38s 3d to 39s 2d; and White Wheat, 40s 5d to 40s 11d per 480lb. Term wheat opened weak with a decline of 5c. to 20c., and closed with a slight advance, at the following rates:—June, 40s; July, 40s to 40s 5d; July-August, 37s 9d to 40s; and Sept.-Dec., 36s to 36s 11d per 480lb. Flour.—Fleur-de-Paris.—The market opened weaker at an average declension of 5c. to 35c., but closed quiet at the following prices:—June, 29s 8d to 29s 11d; July, 29s 11d to 30s 2d; July-August, 29s 11d; and Sept.-Dec., 28s 2d to 28s 5d per 280lb. Consumption Marks Flour.—Trade among dealers and bakers was a little brisker, and rates were fully supported at the recent advance. Quotations are as follows: — Choice Marks, 32f.50 to 33f.50 (32s 11d to 33s 11d); First Marks, 32f. to 32f.50 (32s 5d to 3s 11d.); Good Marks, 31f.25 to 32f. (31s 8d to 32s 5d); Ordinary Marks, 30f. to 31f.25 per 100 kilos (30s 5d to 31s 8d per 280lbs.). Rye.—The condition of the crop still leaves something to be desired in a number of regions and the crop threatens to be considerably under an average. Trade is insignificant in the absence of offers, and prices firmly held at 26s 1d to 26s 6d per 480lb. Oats.—This cereal is quiet in the provinces. The crop, moreover, still looks fairly well. The stock diminished to-day about 3,500 qrs. Here offers were still most restricted, and consequently trade was wanting in animation, the tendency was quieter, and prices appreciably unchanged on the week. Quotations are as follows:—Grey Beauce, 23s 6d to 23s 9d; white, 22s 11d to 22s 7d; Red, 23s 2d; Black from the Central Provinces, 24s 1d to 24s 4d; White Libau is quoted 22s 7d to 22s 11d; Black, 22s 11d to 23s 2d; and Swedish, 24s 1d to 24s 4d per 320lb. Barley.—Advices concerning the crop are still satisfactory, but warmer weather is needed to stimulate vegetation. Trade in general is exceedingly quiet and reduced to its minimum, but rates are firmly held at about 17f per 100 kilos (24s 8d per 400lbs.) for Beauce, Sarthe, and Mayenne Corn. Grinding is quoted 17f. to 17f.25 (24s 8d to 25s), and Feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lb.). The position of buckwheat is firmer, and produce is now held at 29s 2d per 480lb.—*Dornbusch*.

CORN STATISTICS.

IMPERIAL AVERAGES.

Statement showing the Quantities sold and average price of British Corn, Imperial Measure, as received from the Inspectors and Officers of Excise in the week ended June 21, 1902, conformably with the Act of the 45th and 46th Victoria, cap. 37.

Wheat	25,926½ qrs.	30s.	6d.
Barley	371¼ qrs.	23s.	5d.
Oats	4,295½ qrs.	23s.	0d.

POULTRY AND GAME.

Smithfield, Saturday.—Supplies moderate, and good demand, at firm prices Fowls: Yorkshire, 2s 6d to 3s; Essex, 2s 6d to 3s; Boston, 2s 3d to 2s 9d; Surrey, 3s 6d to 4s 6d; Sussex, 3s 3d to 4s; Welsh, 2s to 2s 9d; Irish, 2s to 2s 6d. Turkeys, cocks, 5s to 6s; hens, 4s to 4s 6d. Goslings: 4s 3d to 5s 6d. Aylesbury ducklings, 2s 9d; country, 2s 3d to 2s 6d. Pigeons: 8d to 1s. Quail: 1s to 1s 6d. Wild rabbits, 6d to 8d; tame, 1s to 1s 4d each; Australian, 8s 3d to 10s 6d per dozen.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Good supplies of fruit, and fair demand. Moderate quantity of greenstuffs, and fairly good sales. Potatoes in fair request. English grapes, 2s to 4s; Belgian, 1s to 2s per lb; Valencia oranges, 12s to 20s; Denia, 14s to 26s; Murcia, 10s to 16s per case; English tomatoes, 4s to 8s per dozen lb; pineapples, 1s 6d to 4s 6d each; bananas, 7s 6d to 12s 6d per bunch; gooseberries, 3s 6d to 4s 6d per half-sieve; lemons, 8s to 18s per case; Tasmanian and Australian apples, 8s to 14s per case; cabbages, 5s to 6s.

MANURES.

Liverpool, Friday.—The trade in fertilisers is inactive, and values of nitrate of soda again favour buyers. Feeding stuffs are likewise quiet, but prices firm. Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £8 10s to £8 15s per ton; East India Bone Meal, fair to prime, in bags, £4 10s to £4 15s per ton; Kainit, prime 23 per cent., in bags, £2 7s 6d to £2 10s per ton; Palm Nut Cake, prime, in bags, £5 15s per ton; Linseed Cake, American thin oblong, prime, in bags, £7 to £7 5s per ton; Linseed Cake, English, prime, in bulk, £8 to £8 7s 6d per ton; Linseed Cake, foreign, round, prime, soft and oily, in bags, £8 per ton; Cottonseed Cake, N.A. decorticated, prime, in bags, £7 2s 6d to £7 7s 6d per ton; Cottonseed Cake, English, decorticated, prime, soft, in bags, £7 5s to £7 8s 9d per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 10s to £4 15s per ton; Cottonseed Cake (crushed), 20/25 per cent. oil, prime, in bags, £7 10s per ton; Maize Germ Meal, prime, in bags, £5 15s per ton; Corn Oil Cake, 10/13 per cent. oil, prime, in bags, £6 5s per ton; Rice Meal, Rangoon, as imported, in bags, £5 per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 12s 6d per 240lb; Linseed, fine bold feeding, in bags, £3 to £3 2s per qr, 416lb; D.N.S. Brand Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton at depot; D.N.S. Brand Superphosphate of Lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s per ton at depot; Superphosphate of Lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton at depot; Basic Slag, prime quality, 30 to 35 per cent. phos., in bags, nominal; Basic Slag, prime quality, 35 to 40 per cent. phos., in bags, nominal; Basic Slag, finest quality, 38 to 45 per cent. phos., in bags, nominal.—H. JONES LANGAR AND CO.

WOOL.

London, Saturday.—English, per pk. of 240 lb.—Fleeces, S. Dn. hggs., £7 to £8 10s; half-bred hoggs, £6 10s to £6 15s; half-bred wethers, £6 10s to £6; Kent fleeces, £5 10s to £5 15s; South Down ewes and wethers, £7 to £8 10s; Leicester do., £5 to £5 10s. Colonial, per lb.—Vic.—Fleece super., 1s 8d to 1s 11d; scoured good, 1s 9d to 1s 10d; scoured average, 1s 8d to 1s 8½d; greasy, average to fair; 11½d to 1s 0½d; N.S.W., scd., avr., 1s 5½d to 1s 6½d; greasy, average, 9d to 10d; S. Aus., greasy, avr., 7½d to 8d; N.Z., scoured avr., 1s 6½d to 1s 7½d; grease, average, 9½d to 10½d; Cape, scred. sup., 1s 6d to 1s 7d; fleece, average, 7½d to 8½d; greasy, average, 6¾d to 7½d; Natal, scoured, 1s 1½d to 1s 2½d; greasy, average, 7½d to 8d. Crossbreds—Grs.—Vic., good to supr., 11½d to 1s 0½d; New Zealand, fine, 9½d to 10½d; New Zealand, medium, 6½d to 7d; New Zealand, coarse, 4½d to 5½d.

THE BALTIC.

The event of the week has been the opening of Dover as a port of call. When the magnificent harbour is completed the importance of Dover in the grain trade will be considerable, and the place as an entrepot, as well as a port of call, may come to compete with Antwerp.

The wheat cargo trade was quiet on Tuesday, firm on Wednesday and Thursday, and 3d. dearer on Friday and Saturday, thus a progressive, if moderate, improvement has been manifested. The sales include Californian at 30s. 3d., Walla Walla at 29s. 3d., Australian at 29s. 9d., Argentine at 29s., No. 1 Northern at 28s. 3d., No. 2 Hard Winter at 28s. 3d., Secondary Manitoba at 27s. 9d., White Kurrachee at 28s. 9d., Soft Red Calcutta at 28s. 6d., and finest Bombay at 30. 3d. per quarter.

Maize is held for a slight advance. Sales include Odessa at 21s.-3d., Roumanian at 21s., Galatz at 21s. 6d., and Cinquantina at 24s. per quarter. Cargoes of flat and yellow are held above buyers' ideas, and no sales are therefore to be recorded.

Barley sales have comprised a cargo of Californian at 24s. 6d., of Nicolaiff at 18s. 9d., and of Odessa at 18s. 6d. per quarter. Oats have been firmer since Thursday. On Saturday a cargo of White Konigsberg fetched a guinea. On Friday a cargo of White Calcutta peas made 30s. 9d. per quarter.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were—20 wheat (4 Melbourne, 6 Portland (O.), 2 Port Pirie, 2 San Francisco, 1 Sydney, 2 Tacoma, 1 Talcahuano, 2 Wallaroo); 3 barley (2 San Francisco, 1 Valparaiso); 1 linseed (Buenos Ayres); total 24.

The sailings of grain and seed-laden vessels from ports-of-call for the week were—10 wheat (4 Antwerp, 2 Belfast, 1 Birkenhead, 1 Bremen, 1 Cardiff, 2 Cork, 1 Hamburg; 2 Hull, 1 Kalmar, 1 London, 1 Sharpness, 1 Sunderland, 1 Weymouth); 1 barley (Ipswich); 1 linseed (Gothenburg); total 21.

Since January 1st, 1902, the total arrivals have been 216 wheat, 5 flour, 20 barley and wheat, 3 maize, 11 barley, 2 beans, 4 linseed, 4 canaryseed; total 265.

Last year during the same time the arrivals were 161 wheat, 4 flour, 7 barley and wheat, 14 barley, 3 beans, 4 peas, 1 pease and beans, 2 locust beans, 3 carnaryseed, 3 valonea; total 202.

BUTTER.

Tuesday.—Bedale: 1s 1d to 1s 3d per 24oz roll. Gainsborough: 1s per lb. Settle: 11d to 11½d per lb. Spalding: 10d per lb.

Wednesday.—Barnsley: 11d to 1s per lb. Boston: 9d to 10d per lb. Colne: 1s 1d per lb. Goole: 10d per lb. Keighley: 1s and 1s 1d per lb. Kirbymoorside: 7d to 8d per lb. Knaresborough: 1s 1d and 1s 3d pe r24oz for 1s. Masham: 1s 1d to 1s 3d per 24oz roll. Northallerton: 1s to 1s 3d per 24oz. Stockton: 10d to 1s 1d per lb. Worksop: 11d to 1s 1d per lb.

Thursday.—Brigg: 9d to 11d per lb. Driffield: 9d per lb. Penistone: 1s per lb. Ripon: 1s 2d to 1s 3d per 24oz roll. Scarborough: 10d to 11d per lb. Wetherby: 9d to 1s per lb. Birmingham: 1s 1d to 1s 3d per lb. Kidderminster: 1s 1d to 1s 2d per lb. Wellington: 11d to 1s per lb.

Friday.—Leeds: 1s to 1s 1d per lb. Easingwold: 9d to 10d pe lb. Helmsley: 8d per lb. Leyburn: 1s to 1s 2d per 24oz. roll. Lincoln: 10d to 1s per lb. Otley: 1s to 1s 2d per lb.

Saturday.—Appleby: 8d to 10d per lb. Berwick: 8d to 10d per lb. Grantham: 10d to 11d per lb. Howden: 11d to 1s per lb. Lancaster: 11d to 11½d per lb. Malton: 9d per lb. Pontefract: 11d per lb. Retford: 10d to 1s 2d per lb. Richmond: 11d to 1s per lb. Skipton: 1s per lb. Stokesley: 9d to 10d per lb. Whitby: 9d to 10d per lb.

EGGS.

Tuesday.—Bedale: 15 to 16 for 1s. Gainsborough: 14 and 15 for 1s. Settle: 15 or 16 for 1s. Spalding: 14 and 15 for 1s.

Wednesday.—Barnsley: 12 or 13 for 1s. Boston: 15 for 1s. Colne: 1s 5d per score. Goole: 14 and 15 for 1s. Keighley: 12 and 13 for 1s. Kirbymoorside: 16 or 17 for 1s. Knaresborough: 14 or 15 for 1s. Louth: 16 for 1s. Market Weighton: 16 or 17 for 1s. Masham: 16 or 17 for 1s. Northallerton: 15 or 16 for 1s. Stockton: 12 and 13 for 1s. Worksop: 1s 3d to 1s 5d per score.

Thursday.—Brigg: 16 or 16 for 1s. Driffield: 17 or 18 for 1s. Penistone: 14 for 1s. Ripon: 15 to 16 for 1s. Scarborough: 14 or 15 for 1s. Wetherby: 13 or 14 for 1s. Birmingham: 12 to 14 for 1s. Kidderminster: 15 and 16 for 1s. Wellington: 14 to 16 for 1s.

Friday.—Leeds: 9s to 9s 6d per 120. Easingwold: 17 to 18 for 1s. Helmsley: 16 for 1s. Leyburn: 17 or 18 or 1s. Lincoln: 14 or 15 for 1s.

Saturday.—Appleby: 14 to 16 for 1s. Berwick: 9d to 10d per dozen. Grantham: 15 to 16 for 1s. Howden: 15 for 1s. Lancaster: 10 to 13 for 1s. Malton: 16 or 17 for 1s. Pontefract: 14 for 1s. Retford: 1s 4d per score. Richmond: 14 for 1s. Skipton: 14 or 15 for 1s. Stokesley: 14 or 15 for 1s. Whitby: 15 or 16 for 1s.

CHEESE.

Glasgow Wednesday.—Arrivals not so liberal. Trade fair for all grades, but business somewhat checked by the disposition of sellers not to concede prices, which remain at 52s to 56s per cwt for new Cheddars and Dunlops. Canadians quiet, s buyers continue to hold off in anticipation of cheaper rates.

Newport, Wednesday.—Quotations: Caerphillies, 38s to 45s; fancy dairies, 48s to 49s; Derbys, 56s to 59s; truckles, 60s to 65s; and Cheddars, 60s to 65s. There was a supply and a good demand, an advance of several shillings per cwt being recorded.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The past week has seen a welcome rise in the temperature, but there has again been a heavy rainfall. What is badly lodged in the clay districts. Barley is going off in colour, but oats continue to improve. Swedes, turnips, and mangolds have made a rapid and promising growth. Trefoil is in blossom, and the wheat fields are at last well in ear in all counties south of the Trent. Early peas are in bloom, and so are the winter beans. Tares have grown rapidly, but want sun. Rye is tall but rather weak in the stem. Warmth and settled weather is now urgently required by all crops, even the meadows need sunshine rather than any more rain. France, like us, is having a terribly wet June.

The publication, on June 19th, of Blue Book, Cd. 1,121, enable us to complete a table of wheat prices which for the past seven years it has been our desire to present to the readers of the MARK LANE EXPRESS.

WHEAT ACREAGES OF FOUR-AND-TWENTY CHIEF MARKETS.

Newcastle	23 9	23 3	26 9	29 4	34 7	25 10	26 8	26 8

Readers who do not file this journal or find it for reference may find it useful to cut out the above table. It is, of course, a compilation merely, but it is from eight blue books, five of which are now out of print. The Agricultural Department for Great Britain is sadly hampered for want of funds, and cannot make its blue books as full or as retrospective as those of the better endowed Irish Agricultural Department. Huntingdon has ceased to be a statute market; the present list has come down, therefore, to 195 exchanges. Sales at Huntingdon had become so small that the supersession was wise; in fact, one complaint to the agricultural minster, is of an opposite tenour, namely, that several other markets, long since practically obsolete, are retained on the list and affect the averages.

A fairly trustworthy estimate of the Argentine crops shows that the yield of wheat is about 560lb. per acre, against 1,800lb. per acre in Great Britain and 1,100lb. per acre in France. Barley is hardly grown at all. The area under maize is about 3,100,000 acres, but there are no estimates of the yield from any authorised source. About 20 bushels would give 62,000,000 bushels on the area. Linseed yields about 7,674,000 cwt., but the area is extending, and perhaps eight millions may be assumed for the last crop.

Bulgaria is gradually increasing in civilisation, and is now an agricultural country of considerable resources. About 4,000,000 quarters of wheat, 1,500,000 quarters of barley, 1,000,000 quarters of oats, 4,000,000 quarters of maize, and 160,000 quarters of buckwheat are grown. The rose is here an agricultural crop, to which 12,582 acres are devoted. The last yield of flowers was 134,000 cwt. Servia is now credited with nearly a million quarters of wheat, and with 3,750,000 quarters of maize, but no figures, not even estimates of area, are obtainable from Turkey.

Sales of British wheat last week were only 70,000 quarters at 195 markets, and in London only 80 quarters of home-grown wheat were sold. Imports into the United Kingdom were as follows:—

Wheat: 564,000qrs.; a large supply.
Flour: 152,000 sacks; a moderate supply.
Maize: 190,000qrs.; nearly a fair supply.
Barley: 48,000qrs.; extremely small arrivals.
Oats: 154,000qrs.; a full supply.

The total imports of the United Kingdom since September 1st are thus returned:—

Wheat: 13,215,000qrs.; rather more than last season.
Flour: 6,144,000 sacks; less than last season.
Maize: 8,363,000qrs.; a very small supply.
Barley: 5,830,000qrs.; a fairly good supply.
Oats: 5,139,000qrs.; less than last season.

The supplies now on passage to the United Kingdom thus compare with the totals for June 21st, 1901:—

	1902.	1901.
Wheat	3,200,000qrs.	2,495,000qrs.
Flour	405,000 sacks.	500,000 sacks.
Maize	925,000qrs.	1,010,000qrs.
Barley	260,000qrs.	320,000qrs.
Beans	20,000qrs.	40,000qrs.

The wheat comprises 1,600,000 quarters of Californian, 545,000 quarters of American, 180,000 quarters of Argentine, 65,000 quarters of Russian, 307,000 quarters of Indian, 475,000 quarters of Australasian, and 28,000 quarters "other countries." The barley is made up of 120,000 quarters Russian and Danubian, 120,000 quarters Californian, and 20,000 quarters from Turkey in Europe and in Asia.

The course of recent markets argues that when the large arrivals of wheat since May are once placed in a number of more retail hands, a process which is in steady progress, steadiness will succeed to dulness, and present prices be readily paid. The crop prospects at home and abroad will by that date, say, mid July, have become dominant influences, and further prediction would therefore be indiscreet. As eyt the weather has exerted less than an usual degree of market influence. The trade in fine malting barley is over for the season, but feeding sorts continue to meet with a certain sale at about previous rates. For oats rather less money than formerly is taken, and the Government, "unloading" on the Peace, has distinctly weakened trade. Beans, peas, and rye show very little change. The price of milling offals is generally reduced from a week ago, but the finest biscuit middlings and also best flake bran are an exception to the rule. Flour itself is not more than 3d. lower on the week for London and country sorts, while American and Hungarian are at least as dear as a week ago.

The chief shipping countries last week sent off a liberal quantity of wheat and maize, but under average quantities of barley and oats. The American shipments were 345,000 qrs. of wheat, 173,000 sacks of flour, and 31,000 qrs. of oats. Argentina sent off 108,000 qrs. of wheat, 205,000 qrs. of maize, and 18,000 qrs of linseed.

The old world's chief exporting countries were Russia and Roumania. From the first there were shipped 274,000 qrs. of wheat, 70,000 qrs. of barley, 120,000 qrs. of oats, and 125,000 qrs. of maize; while from the second, the exports were 158,000 qrs. of wheat, 15,000 qrs. of barley, 7,0000 qrs. qrs. of wheat, 15,000 qrs. of barley. India shipped 72,000 qrs. of wheat, New Zealand 5,000 qrs. of oats, and Egypt 5,000 tons of cottonseed.

The great fleet of ships which starts from the White Sea port of Archangel on June 1 has been forced to return, owing to the thickness of the ice off the North of Lapland. This argues an unusually severe and protracted winter in the extreme North.

The trade in oilseeds presents very little change on the week. There are now on passage to the United Kingdom 285,000 qrs. of linseed, 23,000 qrs. of rapeseed, and 70,000 qrs. of cottonseed, against 210,000 qrs. of linseed, 21,000 qrs. of rapeseed, and 35,000 qrs. of cottonseed, on June 21, 1901. The total im ports of linseed into London, from January 1 to June 21, were 347,000 qrs.; which is one-third more than in the same period of 1901. As prices have been stiffly supported and remain good, an uncommonly well-sustained inquiry is disclosed.

COLONIAL DAIRY PRODUCE.

London, Friday.—The demand for Canadian butter, and, indeed, for all kinds of butter, continues good, and, although imports are much larger than last year, prices are stiffening. No doubt, the cold weather we have been having has been stimulating to the consumption of butter. The butter now arriving from Canada shows unmistakable signs of genuine grass flavour, and is about the best value on the market, notwithstanding the great temptation that Siberian has in this respect. The prices of Canadian have advanced about 2s per cwt on the week, and choicest salt now brings 98s to 100s, with saltless 2s higher. The market in Copenhagen continues firm, and the official quotation remains unchanged. Tinning operations are in full swing, and will last for two or three weeks longer. The general opinion is that prices for all European butters are at their lowest. American export is still impossible owing to the high prices existing there, and there does not seem any probability of Canada being able to swamp our markets while American remains so high. Cheese—The demand for Canadian cheese is good, and arrivals go direct into consumption at about 50s to 51s for choicest. The amount of finest, selling at less money, is almost infinitesimal. Old Canadian is very irregular in price, ranging from 53s to 56s. Old New Zealand is making 50s to 54s.—WEDDEL AND CO.

THIS DAY'S MARKETS.

MARK LANE, MON

[FIRST EDITION.]

There was a **fair sale for English wheat to-day**, and supply being **small, as usual at midsummer**, holders had rather the best of the market. Foreign wheat was saleable at 3d. per quarter advance and 6d. rise was often demanded. Barley was dull for all kinds. Oats were less depressed than a week ago. Maize was not dearer on spot as the 6d. per quarter rebate on the duty wipes out the advance of 6d. in actual prices. For future shipment maize is 6d. dearer on the week. Beans were steady for English, but Egyptian tended in buyers' favour. Peas were quiet. There was a good sale for Indian, but only when low prices were accepted. Oilcakes were in buyers' favour. The market for wheat futures was not so strong as that on spot, but control of the exchanges is now passing directly under weather influences.

CLOSE OF THE MARKET.

THERE WILL BE NO MARKET ON FRIDAY NEXT, AND CONSEQUENTLY THERE ARE INCREASED RETAIL PURCHASES TODAY. ALL THE LEADING STAPLES ARE A LITTLE DEARER FROM MONDAY LAST, MORE ESPECIALLY WHERE PROMPT DELIVERY IS REQUIRED.

THE FLOUR TRADE.

MARK LANE, MONDAY.

There was a good sale of flour to-day, but prices were very irregular. London makes declined 3d. on the week, while country flour was sometimes 6d. cheaper. American and Californian sorts, on the other hand, were held for 6d. advance, with 3d. more money paid. Pollard and bran continued to show a declining tendency, but middlings have become steady at currencies. Sales included "Mayblossom" at 25s., "Security." at 23s. 9d., "Grant's Gold" at 23s. 9d., "Silver Sand" at 23s. 9d., and "Uniform" at 22s. 9d. These are all Minnesota special sorts. Kansas flour made 23s. 9d. for "Royal Lily," and 24s. 3d. for "Success." Hungarian flour was firm, with 33s. 3d. paid for "Six Anchors" grade.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
June 16 11 a.m.	5 11	6 1	6 3
4 p.m.	5 11	6 1	6 3
June 17 11 a.m.	5 11	6 1	6 3
4 p.m.	5 11	6 1	6 3
June 18 11 a.m.	5 11	6 1	6 3
4 p.m.	5 11	6 1	6 3
June 19 11 a.m.	5 11	6 1	6 3
4 p.m.	5 11	6 1	6 3
June 20 11 a.m.	6 0	6 1	6 4
4 p.m.	6 0	6 1	6 4
June 21 noon	6 0	6 1	6 4
To-day, noon	5 11	6 0	6 3

June, 5s. 11d.; August, 6s.; October, 6s. 3d. Maize made 4s. 6d. per cental for June delivery; 4s. 7d. asked for July.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the Finance Bill being passed, the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement, however, the Acts of 1876 and 1901 throw the burden on the buyer, a fact which those who operate on these prices without being members of the Term Market would do well to note.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100lb. Maize, when quoted, is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

GRAIN AND FLOUR FACTORS REPORT.

Offals.—The demand for bran has fallen off considerably, and the present dulness will probably continue for some time to come. Buyers are anticipating lower prices.—GREENHILL, BROTHERS (Belfast).

Flour.—Trade continues somewhat languid; buyers are not eager to purchase except for present requirements. No further change in prices.—GREENHILL, BROTHERS (Belfast).

Flour.—The market has improved this week, and American millers are not such anxious sellers for new crop shipment. Prices have consequently improved, but buyers here are still afraid to operate. Spot flour is a slow sale, on account of the premium asked over new crop quotations. Grain.—Maize 1½d. to 3d. per boll lower. Pease and beans slow. Oats firm. Canadian oatmeal exhausted on spot. Mill Stuffs.—Bran 2s. 6d per ton lower. Thirds unchanged.—MCKINNON AND MCDONALD (Glasgow).

Wheat and flour arrivals have again been liberal. Trade is firm. Wheat 3d. and 6d. dearer. Flour unchanged. Maize rather lower. Barley and oats unchanged.—COVENTRY (Mark Lane).

Flour has met a quiet trade to-day at 3d. to 6d. advance on the week.—T. S. MEDILL AND SONS (Mark Lane).

There is little inclination for business to-day, as millers prefer to wait on until after the Coronation festivities are over. Wheat is generally held for 6d. advance on last Monday's rates. Maize is steady, unaltered.

Middlings are quite firm, and in better demand. Bran and pollard dull and unchanged.—J. BAWCOMB AND CO. (Mark Lane).

PROVISIONS.

London, Monday.—Bacon.—The arrivals from Ireland last week were 1,973 and from foreign ports 10,383 bales of bacon. There was a very good demand for bacon throughout last week, prices being slightly against buyers. Irish, 54s to 61s, up to 68s; Danish, 52s to 61s, up to 65s; Canadian, 54s to 55s, up to 58s. Butter—The butter market was steady, with Irish 90s to 105s; Danish, 106s to 107s; French, 86s to 103s; Canadian, 94s to 100s. Lard was quiet, but a fair enquiry for American pails, from 52s to 52s 6d.

HOPS.

London, Monday.—W. H. and H. Le May report the market is very strong, and stocks are the smallest on record. The plantation reports are very unfavourable.

FEEDING STUFFS.

London, Monday.—Linseed cake trade very dull; no change in prices. Decorticated cotton cake and meal as before. Undecorticated is a moderate sale at last quotations. Linseed firm, unchanged.

CATTLE.

Metropolitan Market, Islington.

Monday, June 23rd, 1902.

	British.	Total.	June 24, 1901.
Beasts	1,430	1,430	830
Sheep and lambs	9,330	9,330	7,960
Calves	50	50	20
Milch cows	50	50	60

Quotations per 8lb. (sinking the offal)

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	3 4 ..	4 8 ..	5 4
Sheep	3 10 ..	5 2 ..	5 10
Lambs	5 0 ..	5 6 ..	6 0

Milch cows, per head, £15 to £22.

British arrivals include as follows:—Scotland, 5; Eastern counties, 348; Midland, Home, and Western counties, 598; Devon, 30; Ireland, 449.

To-day practically opens the season for grass-fed cattle from the Midland counties, consignments from Norfolk being very short, and will each week gradually get less and less. Irish arrivals were strong, and included 305 stores, which were quoted as follows:—Yearlings, £7 to £7 5s per head; two years, £10 to £11; three years, £13 to £15. Trade for fat beasts was dull and heavy, at a decline of 2d per 8lb, at which reduction a clearance cannot be made; less demand by country buyers for butchering cows and bulls.

The following are top quotations per 8lb (sinking the offal):—

	To-day.	June 24, 1901.
Devons	5s 0d to 5s 2d ..	4s 4d to 4s 5d
Herefords	5s 2d to 5s 4d ..	4s 4d to 4s 5d
Norfolks	5s 0d to 5s 2d ..	4s 4d to 4s 5d
Runts	5s 0d to 5s 2d ..	4s 3d to 4s 4d
Lincolns	4s 10d to 5s 0d ..	4s 2d to 4s 3d
Irish	4s 10d to 5s 0d ..	—
Fat cows	4s 4d to 4s 6d ..	3s 8d to 3s 10d

There was a decrease of 1,280 in the number penned in the sheep market, the supply including 2,820 from the Eastern Counties, 380 Scotch, and 1,050 Irish. For sheep, both wethers and ewes, trade was of a very slow nature, rates ruling fully 2d per 8lb in favour of the buyer. Even at this decline a clearance is not expected to be made. Choice quality lambs sold steadily at Thursday's rates, but heavy descriptions were exceptionally low in price and difficult to cash.

Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned.

	To-day.	June 24, 1901
7½ to 8-stone Downs	5s 8d to 5s 10d ..	5s 2d to 5s 4d
9-st ditto	5s 6d to 5s 8d ..	5s 0d to 5s 2d
10-st half-breds	5s 3d to 5s 4d ..	4s 7d to 4s 8d
12-st Lincolns	5s 0d to 5s 2d ..	4s 4d to 4s 6d
10-st Irish	5s 0d to 5s 2d .	
10-st Down lambs	4s 4d to 4s 6d ..	3s 10d to 4s 0d
11-st half-bred ditto	4s 2d to 4s 4d ..	3s 8d to 3s 10d
5-st Down lambs	5s 10d to 6s 0d ..	6s 2d to 6s 4d
6-st half-bred ditto	5s 4d to 5s 6d ..	5s 8d to 5s 10d

No inquiry for calves.

London (Central), Monday.—Good supplies; trade very slow. Beef carcases, 4s 6d to 4s 8d; hind quarters, 5s to 5s 2d; roastings, 6s to 6s 4d. Sheep: Ewe, 3s 8d to 4s; wether, 4s 8d to 5s; hind quarters, ewe, 4s 8d to 5s; wether, 5s 2d to 6s. Pigs: Large, 3s to 3s 8d; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 702; sheep and lambs, 1,468; pigs, 549; horses, 5. Beef, 8s to 9s; mutton, 7s 7d to 9s 4d; lamb, 9s to 10s; pigs, 6s 3d to 7s; fat and store cattle slower trade; fat and store sheep ditto; fat and store pigs fair; milch cows fair trade; prices £14 to £23.

FOREIGN CATTLE.

Deptford, Monday.—Beasts, 797. To-day's supply, compared with Monday last, showed a decrease of 503, and consisted of 666 from the United States and 131 from Canada. Owing to the lower rates prevailing at the dead meat market, combined with the warmer weather, trade was of a slower nature, at a decline of from 2d to 3d per 8lbs, sales being rather forced at following quotations per 8lbs, offal given in; 90-stone States beasts, 5s; Canadians, 4s 8d to 4s 9d. No sheep on the market. On Saturday, June 21, the supply consisted of 1,438 States beasts and 685 from Canada, for which there was a very slow trade; the best of the former were quoted from 5s to 5s 1d per 8lbs, and the latter from 4s 10d to 4s 11d. Sheep numbered 798 from the United States, and were quoted at from 4s 4d to 4s 6d, and occasionally 4s 8d per 8lbs.

Liverpool, Monday.—Demand slow for cattle, and prices lower for all sorts. Trade was irregular, owing to this being holiday week. Sheep trade slow, and excepting prime handy weights, prices were in buyers' favour. Lambs also against sellers. Beef, 7¾d to 6d per lb; mutton, 8½d to 6½d; lambs, 9d to 8d per lb. At market 214 cattle and 11,706 sheep.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are in fair request at 3d. advance from Saturday. There is a brisk trade doing in prize at the slight rise established at the close of last week. Barley is 3d. dearer from Saturday. Oats are not more than firm at currencies. Beans and peas are held for prices 6d. above buyers' ideas. The "Baltic" will be closed from 4.30 p.m., on Wednesday to 10 a.m. on Monday, and there will be no calls on the Term Market during the same period. The "Atlantic," at Liverpool, will be similarly closed.

BUSINESS DONE.

WHEAT.—Californiuan, 30s 6d, on passage; Walla Walla, 29s 9d, on passage; Australian, 29s 6d, on passage; Azoff, 28s 6d, on passage; Argentine, 28s 9d, on passage; No. 1 hard Manitoba, 29s 3d, August shipment; No. 1 Northern Duluth, 28s 6d, October shipment; secondary Manitoba, 28s, July shipment; red Kurrachee, 28s 6d, July shipment; No. 2 club Calcutta, 30s, July shipment.

MAIZE.—Danubian, 21s, on passage; Galatz, 21s 9d, on passage; Argentine, 21s, on passage; American, 27s 6d, July shipment.

BARLEY.—Odessa, 18s 9d, July shipment; Californian, 23s, August shipment; Kustendje, 18s 6d, prompt shipment; Novorossisk, 19s 9d, prompt shipment.

OATS.—Black Libau, 18s, prompt shipment; American, 17s 6d, October shipment.

LINSEED.—Calcutta, 52s, arrived.

RAPESEED.—Yellow Cawnpore, 40s 6d, on passage.

COTTONSEED.—Egyptian, £7 12s 6d, July shipment.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London

With a larger supply of fat beasts at the Islington market, trade, which was chiefly confined to Monday, was of a decidedly slower nature, with a marked downward tendency in value, business in the early hours opening with an entire absence of life, both as regards prime and second quality. Salesmen held out for the previous week's rates, but only in very exceptional cases were they obtained. Towards noon, and especially at the finish, sales had to be forced without a clearance being made. On Thursday but few transactions were recorded. For fat butchering cows there was less demand by country buyers; rates, consequently, had to be lowered fully 2d. per 8lb. With regard to bulls, no alteration in value can be noted, as the supply was very short. The arrivals from Ireland numbered 394, of which 204 consisted of stores, which were in steady demand, prices being quoted as follows: Yearlings, £6 10s. to £7 per head; 2½ years old, £13 to £14; three years, £16 to £17. At the foreign cattle market there was a more than average supply so far as numbers were concerned, but quality was rather poorer, a good many half-finished beasts being sent, doubtless attracted by the high rates obtained during the last few weeks. Trade on all three market days proved firm and steady, both in regard to tone and value, last week's rates being well upheld. The total number on offer at both markets was 5,668, as against 4,844 during the previous week. The supply consisted of 1,780 British—increase 370—and 3,888 imported—increase 454. These latter comprised 2,911 from the United States and 977 from Canada. The following were the top rates paid per 8lb. (sinking the offal): 90-stone Herefords, 5s. 6d.; 80-stone Devons, 5s. 4d. to 5s. 6d.; 90-stone polled Norfolks, 5s. 4d.; 100-stone Shorthorn ditto, 5s. 2d.; 90-stone runts, 5s. 4d.; 90-stone Dublins, 5s. 2d. to 5s. 4d.; 100-stone Waterfords, 5s. to 5s. 2d.; 85-stone States, 5s. 4d. to 5s. 5d.; 90-stone Canadians, 5s. 2d. to 5s. 4d.; 90-stone fat cows, 4s. 4d. to 4s. 6d.; 100-stone fat bulls, 4s. 2d. There was a marked increase in the sheep and lamb arrivals, the total being 15,883, as against 11,180 during the previous week. The supply consisted of 14,430 British and 1,453 American. Trade for sheep, both wethers and ewes, was of a decidedly slower nature, at a decline of fully 2d. per 8lb. Primest quality lambs were in steady request, but were bought on rather easier terms. Heavy sorts, especially if half-meaty, were difficult to dispose of, and were very low and irregular in price. Best pens of sheep made per 8lb. as follows (sinking the offal): 8-stone Downs, 6s. to 6s. 2d.; 8-stone Scotch, 6s.; 9-stone Downs, 5s. 10d.; 10-stone ditto, 5s. 8d.; 10-stone half-breds, 5s. 4d. to 5s. 6d.; 12-stone Lincolns, 5s. 2d.; 10-stone Irish, 5s. 4d.; 8-stone States, 4s. 6d.; 10-stone Down ewes, 4s. 4d. to 4s. 6d.; 11-stone half-bred ditto, 4s. 2d. to 4s. 4d.; 5-stone fat Down lambs, 6s. to 6s. 4d.; 6-stone half-bred ditto, 5s. 4d. to 5s. 8d. Calves numbered 155, and met a very dull and heavy trade, the very best being easily bought at 5s. 4d. per 8lb. No pigs on offer.

Trade in the West.

With a continuance of wet the agricultural outlook is growing more and more serious daily. Most of the grass crop is now ready for the machine or scythe, but on the face of the weather, farmers show but little disposition to begin cutting, preferring to let the crop take its chance to getting it down and then be unable to stack it. Such is the prospect at present, and a most discouraging one it is for those immediately concerned. And the growing corn is affected to a similar degree, though fortunately the elements took a little more favourable turn on Wednesday, succeeding on a very cold night in which 5 deg. of frost was registered! In spite of these drawbacks, the stock markets keep unusually buoyant, store stock from the prevailing, and fat things from the extra, demands consequent on the Coronation festivities, for which great preparations are in progress. Milch beasts have shown no falling off in demand, whilst prices keep as high as ever, good heifers, with their first calves, selling up to £22 or £23, ranging down to £17 10s.; whilst more ordinary runs and cows with calves make £17 down to £12 or £13 for aged animals, soon becoming dry. Barreners are likewise in as much request as ever, the inquiry being largely stimulated by the abundance of keep everywhere, which it is difficult to find sufficient stock for, as, with the present precarious weather, many are feeding off their pastures as far as possible, to save further risk. Should this practice become general we may expect to see hay exceedingly dear next winter. The best barreners—those soon coming for death—sell from £26 to £36 per pair, whilst ordinary runs make £19 to £24 or £25, and very old cows £16 to £18. Some of the younger bullocks still sell at what many consider beef price, very little margin being allowed for profit in these cases. Young bullocks, too, are by no means any too plentiful, hence the price they make. Up to the present store sheep are marketing very well, but if we do not soon get an improvement in the weather we doubt if the present prices will be maintained, and we have also grave fears soon of hearing of sheep being "coethed" with so much wet, especially in the low-lying lands. We hope this will not prove to be so, but there is certainly a very grave risk, which only fine weather can obviate. Fat bullocks, which still come to hand only in very limited numbers, find a very ready sale at high prices, the best steers and heifers realising 13s. to 14s. per score, and fat cows 11s. to 12s.; whilst the rougher grades make 9s. 6d. to 10s. 6d. And everything is quickly caught up as it is offered, as a result of the shortened supplies in the country. Mutton, too, is a firmer trade all round, best light-weight wethers making up to 8½d. and over well-finished animals; whilst ewes sell from 7d. to 7½d. for the best, and rough aged ewes at 6½d. Lamb, despite cold cheerless weather, is marketing fairly well, though by no means as well as would have been the case had only favourable weather prevailed instead of what we are now experiencing. The best Downs and crossbreds—those fit for present requirements—are selling from 10d. to 11d., and in exceptional cases up to 1s. where only the very best is wanted. Fat calves likewise meet a quick sale at full values; best, 8½d. to 9d. per lb.; seconds, 7½d. to 8d.; and poor-class lots, 6½d. to 7d. Considering the very exceptional character of the season, fat stock in nearly every case is bringing a fairly satisfactory return.

Trade in Scotland.

The supplies of fat cattle on offer have been exceedingly large. With plenty demand on the part of both butchers and dealers, trade has continued very dear, and an easy clearance effected at prices quite up to the extreme rates of the last two weeks. Fat cows and bulls have also maintained the late very high prices. There was a smaller show of fat sheep and lambs on offer. For the former a good trade was experienced, and young sheep would get easily sold at prices from 1s. to 2s. a head higher than those of last week. Fat lambs, which were a large and rather better show in point of quality than last week, also experienced a similar rise in prices. There was a small number of fat calves on offer, which met a fairly good trade. Fat pigs, of which there were rather more on offer, were the turn in favour of the buyer.

In the store markets there has been a fair supply of sheep, which have met with a dragging trade, the weather still being very backward. Store cattle were a large and good show, but except for the very best bullocks, in forward condition, which were inquired after, trade was very dull, and sales very difficult to effect, this being caused mainly by the high prices asked by dealers. Milch cows were rather a smaller show than last week, and met a better trade at an advance of from 10s. to 20s. a head. Quotations:—Top price of best bullocks per live cwt. from 44s. 6d. to 47s. 6d.; current from 42s. 6d. to 45s.; secondary from 40s. to 42s.; mutton from 8½d. to 9½d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

Tempted by the high rates that have been going for the last couple of weeks, the supply of both cattle and sheep at Thursday's Dublin market was largely in excess of the big one of the previous Thursday. A number of half-meated and inferior beasts were run in, owners hoping to profit by present high prices, but, as might be expected, there was general disappointment. In the first place trade had not been nearly so good during the week in England and Scotland, and secondly, the attendance of cross-Channel was much smaller, and the operations of those attending were very cautious. The consequence was that business was of a much quieter tone, and prices were on a lower basis for all grades of beef. Prime cattle did not suffer so much as inferior, but the fall may be put down as from 20s. to 40s. per head. The number of cattle offered for sale was 2,265, being 242 in excess of preceding, and 1,164 in excess of corresponding week of 1901. Best ox and heifer beef sold at from 63s. to 66s. per cwt., while some special lots of Aberdeen Angus went as high as 70s.; good, second class, 58s. to 62s.; and other classes from 48s. upward. A clearance was not effected. In the mutton department, there was also a huge supply, no less than 11,701 sheep and lambs being on offer. This supply was quite in excess of requirements, and a very large proportion remained unsold at the close of business. Choice wethers for home trade met with a good sale, at rates about the same as last day, but for inferior sheep and lambs business was very made from 7d. to 7½d. per lb.; ewe, 6½d. to 7d.; dull and disappointing. Prime wether mutton and coarse sheep, from 5½d. per lb. Hoggets sold from 28s. each for light small, up to 54s. for large heavy. Lambs made from 16s. for small, up to 38s. for large fat. Veal still remarkably scarce, prime calves making 8d. to 9d. per lb.; coarse ditto, from 4½d.; choice large springers and new milch cows brought from £17 to £20 each; inferior cows neglected. The pig market was sparingly supplied, and trade was fairly active at late rates for choice light weights; but for inferior quality, weaker. Nice medium weight pigs, 48s. to 50s. per cwt.; coarse, from 34s. to 40s. per cwt.

LONDON.

London (Central), Wednesday.—Fair supplies, but trade ruled slow and prices weak. Arrivals of beef included 40 tons of Scotch, 600 Liverpool sides, 1,500 hindquarters, and 800 forequarters American killed. Quotations:—Beef, Scotch short sides, 5s 4d to 5s 6d; long, 4s 10d to 5s; English, 4s 8d; American, Deptford killed, 4s 6d to 4s 8d; Liverpool, 4s 5d to 4s 7d; American refrigerated hindquarters, 4s 6d to 4s 10d; forequarters, 3s to 3s 3d. Mutton: Scotch, 5s to 5s 4d; English wethers, 4s 8d to 4s 10d; ewes, 3s 4d to 3s 6d; English lamb, 5s to 5s 4d. Veal: English and Dutch, 4s to 4s 8d per 8lb. Pork: Dutch, 4s to 4s 4d per 8lb.

London (Central), Friday.—Good supplies met with slow support, while prices tended downwards. A fair quantity of English, moderate of Deptford-killed American, 100 tons of Scotch, 380 Liverpool sides, 3,500 hindquarters and 2,100 forequarters American killed constituted arrivals. Prices:—Beef, Scotch short sides, 6s to 5s 4d; long, 4s 8d to 5s; English, 4s 8d to 4s 10d; American, Deptford killed, 4s 4d to 4s 8d; Liverpool, 4s 4d to 4s 7d; American refrigerated hindquarters, 5s to 5s 2d; forequarters, 2s 10d to 3s. Mutton—Scotch, 4s 10d to 5s 2d; English wethers, 4s 4d to 4s 6d; ewes, 3s to 3s 4d; Canterbury, 2s 10d to 3s; Wellington, 2s 6d to 2s 10d; Sydney and River Plate, 2s 5d to 2s 7d; English lamb, 5s to 5s 8d. Veal—English and Dutch, 3s 8d to 4s 8d. Pork—English, 4s to 4s 4d; and Dutch, 3s 10d to 4s 2d per 8lb

COUNTRY.

Ashford, Tuesday.—Trade rather slower. Beef was quoted at 1s a score less than at the last market. Mutton sold at late rates for all good qualities. Pork sold well at late rates. Veal cheaper.

Basingstoke, Wednesday.—At Raynbird and Sons Sale Yard there was a large attendance of buyers to meet a larger supply of cattle, consisting of 68 fat beasts, 130 calves, 714 fat sheep and lambs, 268 pigs, and 144 head of dairy and store cattle, for which the following prices were realised:—Prime Devon fat beasts from General Holley reached £24 10s.; shorthorn steers from G. Judd, Esq., £23s 5s; Mr. W. Street, £25 15s; from Colonel G. Ives, £20 5s; heifers from Mr. A. Follett, S. Hatton, Esq., Lord Ashburton, £21 10s, £21 5s, £23; bulls made from £16 to £20 5s; shorn wethers and young ewes made from 44s to 50s; old ewes, 32s to 38s; rams, 42s to 54s; 3 months old sucking lambs, Downs, 28s to 36s; a few extra pens up to 45s; Exmoor lambs, 23s to 28s; South Downs, 30s to 33s 6d; fat porkers, 42s to 53s; smaller, 30s to 41s; store pigs, 14s to 28s 6d; fat calves, 80s to £5 15s; smaller 20s to 52s 6d; dairy cows, £8 to £19 10s; etc, etc. There was an increase in the number of fat cattle; the show included some excellent Devons and shorthorns, for which there was an active demand. Fat bulls and cows also sold well, but second rate and half fat beasts were worse to sell. Fat sheep and fat lambs were penned in good numbers; prime quality wethers and young ewes met a good clearance at full prices. A good business done in fat lambs, but at rather lower prices. Old ewes and inferior lambs and sheep were difficult to sell, and prices lower. A good demand for all best descriptions of dairy cows at higher prices. Store cattle sold readily, with more inquiry. Fat calves met a firm trade at late rates. Fat and store pigs were easily cleared, at prices satisfactory to the vendors. Ruling values:—Prime Devon beasts, 8d to 8½d; shorthorn ditto, 7½d to 8d; bulls, cows, and inferior beasts, 6d to 7d per lb; best fat sheep, 8½d to 9d; second ditto, 7½d to 8d; old ewes, rams, and inferior sheep, 6d to 7d; choice three months old sucking lambs, 9d to 9½d; fat calves, 7½d to 8½d per lb; fat porkers, up to 11s per score.

Boston, Wednesday.—Small supply of stock. In-calvers met a quiet trade. Good show of beef at extreme prices. Sheep and lambs were inquired for. Pork dear. Store beasts, £14 to £16; useful drapes, £12 to £14; in-calf cows, £20 to £22; heifers, £16 to £18; calves, 55s to 60s; best beef, 9s and 9s 3d; cow beef, 8s and 8s 6d per stone; store sheep, 35s to 40s; best wethers, 7½d and 8d; ewes, 6½d and 7d; store pigs, 40s to 50s; suckers, 24s to 30s each; porkers, 6s 9d to 7s per stone.

Braintrse, Wednesday.—There was an excellent show of fat stock at Messrs Ball's auction mart, fat beasts making up to £28. Trade was brisk.

Bury St. Edmunds, Wednesday. — At Messrs. Simpson and Sons auction mart there was a very large supply of fat bullocks, all of exceptionally prime quality. There being a full attendance of distant county and local buyers, a good trade prevailed throughout for all descriptions, especially for the heaviest and ripest cattle, which made up to £31; most of the heavy cattle being purchased by Midland county buyers, and several to go to Surrey. Rather short supply of store beasts, which met a very sharp trade at considerably more money. Some Hereford steers, consigned from Timworth, by Mr. W. Harvey, made from £13 15s to £11 17s 6d per head. Several other lots sold equally dear. Better show of sheep than last week; but not up to the average for the time of year. Brisk trade for all descriptions at fully late rates. Short supply of store sheep, and more demand for all descriptions. Several lots of lambs sold well. Smaller supply of pigs, which sold at late rates.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s. d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	10 0
Under 10 sc. ...	... Not exceeding 2½ in. ...	9 6
Under 11 sc. 10 lb.	... Not exceeding 2⅔ in....	9 0
Under 12 sc. ...	... Not exceeding 3 in. ...	

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Beasts 606, beef 8s to 9s 6d; sheep 860, mutton 4s 4d to 5s 6d; pigs 495, pork 6s 3d to 7s 3d; horses, 20. A better show of store beasts, and all sold. Fat beasts—A large number to hand, and trade brisk. Fat sheep—A sharp trade at late rates.—Stores—

Some good lots of ewes and lambs, and all sold. Fat pigs—A large show; trade brisk at late rates. Stores not quite so good as last week.

Canterbury, Saturday.—Trade was not very brisk. A fair offering of store beasts, with yearlings selling at from £6 15s to £9 10s; better-class two-year-olds, £11 10s to £13.

Carlisle, Saturday.—The supply of Irish store cattle was rather smaller than last week's, and consisted of about 400 head of heifers. Fair attendance, and inquiry at about last week's prices. Small heifers, from £8 to £10 10s; better sorts, £12 10s to £16 10s; and exceptionally well-formed heifers up to £18 10s.

Dorchester, Wednesday.—The market was well supplied throughout, and trade ruled firm for most things, at full prices. Fat bullocks a good sale, at 11s 6d to 12s 6d for best qualities, and 10s 6d to 11s for cows. Best calves sold at 8d to 8½d, and seconds 7d to 7½d. Mutton made 8d to 8½d for best wethers, and ewes, 7d to 7½d per lb; lambs, 9½d to 10½d. Pigs were in good demand, light-weight porkers making 10s 6d to 11s 6d per score; heavier pigs, 9s to 9s 6d. Chickens, 5s to 8s per couple; and hens, 3s to 4s. Best cheese made 45s to 58s per cwt, and seconds, 25s to 42s. Butter, 10d to 1s 1d per lb. Eggs, 9d to 11d per dozen.

Dublin, Thursday.—Numbers in market: Beasts 2,265, increase, 242; sheep 11,701, increase, 1,359; calves 46, decrease, 29. Increased numbers on offer, together with worse trade across Channel, caused a dull and disappointing market this morning. All classes of cattle must be quoted in buyers' favour, from 1s to 3s per cwt., alive, according to quality. Sheep and lambs of all classes made less money. Cattle, live weight (best), 37s to 39s per cwt. Other descriptions, 32s to 36s per cwt. Mutton, dead weight, 52d to 7½d per lb.—GANLY, SONS, AND CO.

Hereford, Wednesday.—Bullocks and cows, 505; calves, 198; sheep and lambs, 2,094; pigs (fat and sows), 32; sucking pigs, 26; pigs (stores, not more than 10); 135; pigs (stores, not more than 10), 56; horses, 3; colts (sucking), 1. Prices of stock:—Beef, 6½d to 7½d; mutton, 6½d to 9d; lamb, 8d to 9d; veal, 9½d; pork, 6½d to 8d; and bacon, 5d to 6d per lb.

Ipswich, Wednesday.—Messrs. R. Bond and Sons report that a very heavy supply of fat cattle was forwarded, in view of the Coronation requirements, many coming from adjoining counties; distant and local buyers were in strong force, and notwithstanding the heavy supply, prices were well maintained throughout, making up to 9s per stone, though not quite up to the level of last week, when supplies were rather short, and very dear in consequence, in some instances being then above 10s per stone. Most attention was given to thoroughly ripe cattle, with plenty of size and weight. A good supply of fat sheep, and a good trade was experienced, ewes being in considerable request. Fat lambs were numerous, but did not make very high figures. Lambs and ewes were short, and sold without alteration. A capital entry of fat calves, for which the demand was very brisk, at higher rates; but a short supply of weaning calves. A fair number of fat swine, and the recent satisfactory prices were well maintained, competition being sharp. Well bred stores wanted, and sold freely; sows dear. Grazing cattle met a good trade. Cows were well represented, and made more money, up to £23. Numbers at market:—Beasts, 966; calves, 59; sheep, 3,157; swine, 1,272; horses, 29.

Leicester, Wednesday.—The consignments of Norfolk and Lincolnshire fed bullocks came to hand in excellent condition, but they were much in excess of requirements, and a speculative market resulted in very heavy losses. Buyers and dealers were well represented, but trade ruled sluggish, and so far from there being a scarcity as anticipated, prices declined fully £2 per head, and many lots were left unsold. Choice bullocks, 7¼d per lb; secondary, 7d to 7¼d; heifers, 7d to 7½d; cows, 6d to 6½d per lb. Sheep were a full delivery, and sold rather slowly; choice lots, 7¾d to 8d; large sheep, 7d to 7½d; ewes, 6d to 6½d; lambs, 9d; calves, 8d to 8½d per lb.

Liverpool, Friday.—The market has had a fair attendance, and wheat is firmly held for a full ¼d advance, which has checked business, but any shading in values has resulted in a fair trade. Flour—There has been a better demand for home milled flour, but no change is made in limit. Foreign, on the other hand, is a quiet trade, but sellers hold firmly at full rates owing to the small stock. Maize—Mixed rules steady, with a quiet trade at unchanged prices. Plate is in fair demand, and, owing to smaller supplies, is steadily held for a full 1d over last Tuesday. European is ¼d dearer, with a fair business passing. Barley is steady at unchanged prices for malting. Feeding slow and ¼d lower. Beans are steady at unchanged prices. Peas in quiet demand, but no change is quoted in values. Oats move very quietly, but show little change in prices, although the trading is against sellers. Oatmeal is very scarce, and full prices have to be paid. Oilcake on the spot experienced only a moderate demand, but forward a good trade is doing up to September shipment.—SEGAR AND TENNICLIFFE.

Newport, Wednesday.—Quotations were: Best beef, 8d to 10d per lb; secondary sorts, 7d to 7½d; cows, 6½d to 7d; best wether mutton, shorn, 8d to 8½d; ewes, 6½d to 7d; lamb, 9d to 10d; veal, 7d to 8d; porker pigs, 10s 9d to 11s 3d per score. A much larger supply of sheep and cattle, and with a brisk trade a clearance was effected at satisfactory prices.

Norwich, Saturday.—The supply of store cattle offering here to-day was large; trade was dull and sales were carried through with some difficulty. Fat beasts, which were in about average supply, moved off slowly at 8s to 8s 6d and 9s per 14lb. The supply of store sheep and lambs was fair; trade was dull, at barely former terms, keeping shearlings making 35s to 45s; and lambs, 16s to 28s per head. The supply of fat sheep was not large; trade ruled steady at 9s to 9s 6d and 10s per 14lb. The abundant rains which fell in the first half of the month have at any rate had the effect of ensuring good supplies of keep for the remainder of the summer.

Romford, Wednesday:—Large supply of fat beasts, trade very slow. Best animals, 5s to 5s 2d; middlings, 4s 4d to 4s 6d per stone. Large supply of calves, trade slow, at 5s to 5s 4d per stone. Average supply of sheep, trade about the same; best sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d per stone. Very large supply of lambs, trade slow, at 6s to 6s 2d per stone. Very few store beasts on offer; fair demand. Pigs in large supply, trade poor. Small porkers, 4s to 4s 4d; large hogs, 3s 8d to 3s 10d per stone.

Salford, Tuesday.—There was a larger show of cattle and a quiet demand, prices being lower. The supply of sheep and lambs was much larger. Trade for both was slow, and buyers obtained a concession from the prices of last week. A large display of calves, and a quiet trade at reduced prices. Quotations:—Cattle, 6d to 7½d; sheep, 6d to 9d; lambs, 7½d to 9d; calves, 6d to 7½d per lb. At market—Cattle, 1,736; sheep and lambs, 19,738; calves, 207.

Sheffield, Tuesday.—Not many milch beasts were offered, but those penned were of fairly good quality, and for the best lots there was good demand. Best sorts, £18 to £22; secondary, £15 to £17. The pig market was again closed.

Spalding, Tuesday.—In the cattle market there was a fair show. Best beef met with a good trade at 9s per stone; secondary, 8s to 8s 6d; sheep, 7d to 8d per lb. Lambs met with a brisk trade.

Stockton, Wednesday.—There were on offer 166 cattle, 5 calves, 432 sheep, 120 lambs, and 203 pigs. Rather a better show of best cattle, and prices were slightly easier. Best cattle, 9s 6d; rougher kinds, 6s 6d to 7s 6d; calves, 6d to 8d per lb. There were more sheep, and prices fell ½d per lb all round at 8½d for young sheep, 6½d for ewes, and 5½d for tups; lambs, 21s to 35s each. Trade quiet.

Thame, Tuesday.—Farmers, anticipating a demand for Coronation week, sent into the market a large supply of prime beef and first class mutton—in fact, it was the general opinion that this was a record market for the time of year. Trade was brisk for heifers and bullocks, late prices being fully maintained, practically every head of stock offered changing hands. Wethers, lambs, and ewe mutton showed a slight falling off on last week. Messrs. Bond and Burrows' sale comprised 147 fat bullocks and heifers and 10 store heifers, 506 fat wethers, ewes, and lambs, 120 bacon hogs, porkers, and store pigs, and 54 fat and weaning calves. Fat heifers made from £17 to £25 7s 6d; fat oxen, £17 10s to £24 15s; fat wethers, 45s to 59s; fat ewes, 38s to 58s; fat lambs, 29s to 42s; fat calves, £3 17s 6d to £6 15s; weaning cow calves, 20s to 55s; bull calves, 16s to 50s; fat hogs, 9s 6d per score. Stores dear.

Wakefield, Wednesday.—Owing to increased supply to-day trade for sheep and beasts was slower, at prices in favour of buyers. Choice heifers and bullocks were 8d per lb, and other quality was quoted at 6½d and upwards. The best sheep realised 8½d per lb, and other sorts varied from 6d. Number of sheep and lambs, 5,017; beasts, 1,542.

Wakefield, Friday.—The weather has turned more summerlike since Tuesday, without, however, checking the hardening tendency in the trade. France and America are leading the way of the upward movement, and though we cannot report an active business in wheat, this is chiefly checked by the higher pretensions of holders. We quote prices 3d to 6d higher on the week. Spring corn in small demand at rather less money. The market will be closed next week.—DUNNS AND CO.

Wakefield, Friday.—At to-day's market wheat is firm and rather dearer, with very little business passing. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LIMITED.

Wolverhampton, Wednesday.—Fair supply, and slow trade all round. Beef, 6d to 8¼d per lb; mutton, 6½d to 8¾d per lb; lamb, 8½d to 9½d per lb; veal, 6½d to 8d per lb.

Worcester, Saturday.—Fair supplies of cattle and sheep, with a brisk demand for all the better qualities. Fat lambs were wanted, and prices generally ruled firm. Beef 7d to 8d, inferior 6d to 7d. Wether mutton 8d to 9d per lb.

Worksop, Wednesday.—Fair show of stock except beef, which was scarce, and late rates fully maintained. Best beef, 7s 9d to 8s 6d; secondary, 7s to 7s 9d per stone; best South Down wethers, 7d to 8½d; ewes, etc., 6d to 7d; lamb, 10d; veal, 8½d to 9½d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies to-day consisted of shipments from the United States, and totalled 659 head, which is a decrease of 292 as compared with last Wednesday's figures. Despite quality being poorer, trade ruled steady, at 5s 1d to 5s 3d, exceptionally 5s 4d per 8lb, to sink the offal. 300 United States beasts and 798 ditto sheep were withdrawn from sale.

Yorkhill, Monday.—At the sale of American cattle held here this afternoon there were in the lairages 207 cattle landed by the Alcides (s), from Montreal, and 302 by the Norwegian (s), also from the same port. Small, neat, well-fed bullocks secured the best inquiry, but they dropped from 10s to 20s a head on last week's rates, and secondary and heavier dropped from 25s to 30s a head. Bulls met a good selling trade, and sold relatively dear. Heifers made similar prices to those ruling for the bullocks. The dead weight quotations may be given as follows —Best bullocks, 68s to 70s per cwt, and for really choice up to 72s; secondary and heavier, 66s; heifers, 68s to 70s; secondary and plainer, 64s to 66s per cwt; and bulls, 60s to 62s per cwt, according to quality and finish.

Yorkhill, Monday.—A sale of Canadian sheep was held here to-day, 412 sheep landed by the Norwegian (s), from Montreal, being offered. The shipment consisted principally of ewes, but there were also a number of tups included. The dead weight quotations may be given as follows:—Best-class ewes, 6½d to 7d per lb; secondary and heavier, 6d; tups, 5d to 5½d, according to quality.

SEEDS

London, Monday.—Messrs. John Shaw and Sons, Seed Merchants, of Great Maze Pond, Borough, London, S.E., write that the seed trade, as might be expected at this season, presents just now no feature either of interest or importance. Some little business has been passing in Chilian red clover seed, and the small parcels as they arrive are readily placed at the moderate rates now accepted. The quality of this seed proves satisfactory. Trefoil with bad crop prospects is firmly held. Tares seem no longer wanted. There is no change in either mustard or rape seed. The chief point in last week's trading was a sudden and smart advance of some shillings in the price of canary seed. Smyrna telegrams now ask 46s c.i.f. per qr; whilst the stock in Liverpool is reduced to the unprecedentedly small quantity of 350 bags. The late rise in hemp seed is well maintained. Blue peas and haricot beans command former terms.

HOPS.

Canterbury, Saturday.—Should the welcome change in the weather continue, the hop plant will soon make good deficiencies in the growth. The gardens, however, are much infested with vermin, and washing has already commenced. More trade than usual is being done, and prices are higher.

Canterbury, Saturday.—But little business is being done, as the new clip is not yet fairly on the market. Prices remain unchanged, with Kent wool at 5d. per lb.

Worcester, Monday.—Our reports from the plantations continue very unfavourable; the cold wet weather has checked the growth of the plant (already very backward), while vermin is spreading very fast; washing is being carried on where practicable, but in most places the ground is too wet to get on it. The market is rather dearer, and a little more trade doing.

HAY AND STRAW.

Whitechapel, Saturday.—Good supplies, for which moderate demand, prices being steady. Best clover, 95s to 110s; inferior, 80s to 90s; specially picked hay, 117s 6d; good, 110s; inferior, 80s to 95s; mixture and sainfoin, 95s to 105s; straw, 30s to 45s per load.

FEEDING STUFFS.

Hull, Tuesday.—Linseed—The only arrival is 1,010 qrs from Riga. Linseed has been a dull and inactive market, and prices have declined from 3d for spot seed to 1s 3d per qr for forward seed. The close is, however, a trifle steadier. Calcutta opened with sellers of May-June at 53s 6d, and closes with 52s 3d paid for the same position. River Plate shows a decline on the week of 1s to 1s 3d per qr for forward positions; spot about 6d lower. We quote spot 50s; June-July, nominally 50s 6d; December-January, 46s, sellers. Cottonseed—There has been a further decline in old crop, and down to £7 6s 3d accepted spot, passage and June loading, but since yesterday the market shows a little more steadiness, with business done spot at £7 7s 6d, and buyers at it June, also July, in which latter a little done last week. New crop remains unaltered, with, however, scarcely anything doing in it. October, £6 16s 3d; November-January, £6 10s. Market closes quieter all positions. Oils—Exports for the week ending 10th June, 1902:—Linseed oil: 7 America, 2 Austria, 3 Denmark, 4 Germany, 1 Holland, 29 Norway; total, 46 tons. Cotton oil: 149 Austria, 213 Belgium, 58 Germany, 160 Holland, 1 Norway, 6 Russia, 31 Sweden; total, 618 tons. The market is quiet. Linseed oil: 29s 9d spot, 29s 9d June-August, 28s 9d September-December. Cotton oil: 24s 6d spot, 24s 7½d June-August, 21s 6d November-April. Crude: 23s 3d spot, 23s 3d June-August, 20s 1½d November-April. Rape oil: Jamba naked, 24s 3d spot; 1st quality, 25s spot.—KEIGHLEY MAXSTED AND CO.

London, Thursday.—Linseed—A moderate business has been passing at unchanged prices. Calcutta, spot London, 52s 3d sellers, passage 52s 3d; July-August, after 53s 9d had been paid, 52s 9d has been accepted at the close. Hull is very quiet. Calcutta, afloat, 52s 3d; La Plata, spot, 49s 6d; June-July, 51s 3d; December-January, 46s; January-February, 45s 6d. To the Continent—Bombay, June-July, 57s; July-August, 57s 6d; Calcutta, June-July, 53s 3d; La Plata, June-July, 51s; December-January, 46s 6d. Azoff seed, October-November, 49s 3d c.i.f. Linseed oil has further declined in value. We quote spot in pipes, £30 5s; barrels, £30 10s; July-August, £30 5s; September-December, £29 10s. Hull naked, spot, £29 10s; July-August, £29 10s; September-December, £28 12s 6d. Linseed cakes are quiet. We today quote London made £7 12s 6d to £7 17s 6d ex mill; American Western, £7 to £7 2s 6d; Russian, £7 10s to £7 15s. Cotton cakes steady; London made, £4 10s to £4 17s 6d. Rapeseed quiet. Brown Cawnpore, June-July, 37s; brown Calcutta, June-July, 36s 3d. To the Continent we quote yellow Guzerat, 41s 6d; yellow Cawnpore- June-July, 40s 3d; brown Cawnpore, 37s 3d; brown Calcutta, May-June and June-July, 37s; Ferozepore, June-July, 37s 3d. Cottonseed continues dull. Spot London, £7 11s 3d nominal; June and July, £7 11s 3d; November-January, £6 11s 3d; Hull spot, £7 7s 6d; June, £7 7s 6d buyers; November-January, £6 10s buyers; cargoes, November, £6 12s 6d; December-January, £6 11s 3d; Bombay to Hull, June-July, £4 18s 9d.—THE PRODUCE BROKERS' COMPANY, LIMITED.

Mark Lane, Monday.—Linseed cakes: The trade still rules dull and inactive, with scarcely any country demand, but, with only limited stocks and light shipments, values are fully as dear. Russians meet a slow sale at unchanged prices. Americans remain relatively cheap at last Monday's prices. Calcutta-made in bags are also unchanged, and London-made move off slowly at about late rates. Cotton cakes: There has been a decided improvement in the demand during the past week, while arrivals have been comparatively small, and holders are inclined to advance prices. Egyptian, however, are still quoted as last Monday, which is also the case with English, while some Bombay seed cakes offer at £3 15s. Decorticated are without change, and meal at £6 10s. Rape cakes: Quiet. East India, £3 17s 6d to £4. Maize germ meal: Arrived parcels of American find very little inquiry, with sellers at slightly easier terms. English is in moderate request at £5 5s to £5 7s 6d. Rice meal: Near at hand parcels of Rangoon are firmly held at £4 7s 6d to £4 8s 9d ex ship, with shippers asking 5s per ton premium for autumn shipments.

POTATOES.

Borough, Saturday.—A light supply on offer, and fair demand at steady values. Scotch Maincrops, 90s; Lincoln Up-to-Dates, 60s to 70s per ton. New: Jersey, 7s! Teneriffe, 5s to 7s; St. Malos, 7s; Cherbourg, 6s to 6s 6d per cwt.

Spitalfields, Saturday.—Small supplies, and fair business. Best Lincoln Up-to-Dates, 70s; Wisbech, 65s to 70s; Scotch, 70s; Scotch Maincrops (grey soil), 70s; Lincoln Maincrops, 70s; Reading Giants, 60s per ton. New: St. Malo, 7s to 7s 6d; Jersey, 7s to 7s 6d; Teneriffe and Canary No. 2, 8s; No. 3, 6s 6d; Cherbourgs, 6s 3d to 6s 9d per cwt; Lisbons, 3s 9d per box.

Southwark (Waterside), Monday.—During the past week the arrivals of new potatoes have been moderate, for which the demand has been steady. Good samples of old potatoes have been scarce, with prices maintained. The following are this day's quotations:—Up-to-Dates, 60s to 75s per ton; maincrops, 60s to 75s per ton; Jersey flukes, 130s to 140s per ton; Cherbourg flukes, 120s to 125s per ton.—R. G. BROWN.

STOCK AND SHOW NOTES.

By Herdsman.

The entries have now closed for the Highland and Agricultural Society's Show at Aberdeen, on Tuesday, July 15th, and three following days. Cattle number 330, as compared with 360 at Inverness last year, and 314 at Aberdeen in 1894; horses total 254, or three less than at Inverness, and 70 fewer than at Aberdeen in 1894; of sheep there are 242 entries, as against 204 in 1901 and 184 in 1894, whilst the respective figures of pigs are 42, 22, and y4. The poultry, dairy produce, and wool entries are about the average. It will thus be seen that the entries in the leading sections, when added together, total about the average number. In the implement department there will be a very large display, the extent of space taken being close on 5,700ft. Again, as at recent shows, the jumping contests will also be an interesting feature of the Aberdeen Show. The prizes for jumping amount to £139. Entries for jumping are received in the showyard up till the evening preceding each day's competitions, and for the jumping on Wednesday and Thursday evenings up till six p.m. on these days. An interesting feature of the show will be an extensive forestry exhibition, organised by the Royal Scottish Arboricultural Society.

From the prize schedule recently issued, I see that a sum of £1,670 is offered in prizes at the Staffordshire Agricultural Society's Show at Uttoxeter, on August 27th and 28th. The amounts in the various sections are as follow:—Hunters, hacks, and harness horses, and jumping, £231; agricultural horses, £264; cattle, £325; sheep, £119; pigs, £50; cheese and butter, £113; butter-making, £33; horse-shoeing, £18; implements and carriages, £30; poultry and pigeons, £217 10s.; honey, etc., £17. The sum of £250 is also offered in prizes for green crops and skilled labour throughout the various districts of the society. The classes for hunters and harness horses are continued as last year, while in the classes for agricultural horses the prizes for aged stallions and yearling geldings are discontinued, owing to lack of competition for some years past. Special prizes are again offered in most of the classes confined to tenant farmers, and the stipulation which was enforced last year that they must not have taken a first or second prize in the open classes has been withdrawn. Additional prizes have this year been offered to the breeders of the best yearling and two-year-old Shire fillies, providing such breeders is a resident within the society's limits. The Shire Horse Society's gold medal, value £10, and the president's champion prize of £10 10s. for the best Shire mare or filly in the yard are continued, and Major Ratcliffe, M.P., offers a silver cup, value £10 10s., for the best two or three-year-old Shire filly, the property of a tenant farmer resident in the Burton Parliamentary division.

As to the cattle section, I may mention that the classes for Shorthorns and dairy cattle are the same as last year, and include the Shorthorn Society's prize of £10 for the best Shorthorn bull, confined to the county of Stafford, bred in 1901. With the object of encouraging more competition, four classes of Jersey cattle and two of Aberdeen-Angus cattle are thrown open to the United Kingdom, and the same number of classes are also offered for residents within the society's limits. The prizes for sheep remain as last year, and in the pig section two classes are this year provided for boars and sows of the Tamworth breed, the prizes for which are contributed by Sir Oswald Mosley, Bart. The various other sections are on similar lines as in past years. An excellent site has been secured for the exhibition, comprising upwards of 20 acres of good level sound land adjoining the main road leading from Uttoxeter to the Potteries. The entries for stock and produce close on July 19th, and for poultry, pigeons, and honey on August 2nd.

The local Committee appointed at Leeds in connection with the forthcoming show of the Yorkshire Agricultural Society have succeeded in raising a substantial sum. The amount already paid in or promised is a little over £1,500, in addition to three special prizes of £25 each, given by the Lord Mayor (Alderman A. E. Butler), Mr. F. W. Tannett Walker, and Mr. T. G. Mylchreest. The amount guaranteed by the local Committee has already been secured, but there are certain expenses in addition that are to be provided for. A few more contributions are expected. The preparations for the show are proceeding satisfactorily. For several weeks past a staff of workmen has been busy on the site adjoining Prince's Avenue, and passengers on the Roundhay tramcars have seen the wooden structures steadily rising from the long stretch of turf. The erection of the stalls and sheds and the familiar facade is rapidly nearing completion, though there is, of course, still a good deal of detailed work to be done. Generally speaking, the ground is being laid out on the lines of the 1898 meeting, with certain deviations which the experience of that show suggested.

The schedule has now reached me of the Royal Dublin Society's Horse Show, to be held at Ball's Bridge on August 26th and the three following days. The schedule follows the lines of previous years, the same generous list of prizes being offered. Ten of the Society's premiums for thorough-bred stallions are to be competed for. Entries close on July 24th, at single fees, and on July 31st at double fees. Applications for forms to be made to the Agricultural Superintendent, Leinster House, Dublin.

At the next meeting of the County Councils Association the following resolution will be submitted:—"That in view of the national importance of an adequate supply of sound horses, legislation should be introduced empowering county councils to prohibit the use for hire within their districts of stallions suffering from hereditary disease."

I hear that certain Russian horse dealers have been hard hit by the declaration of peace. In the belief that the war would last for many months to come, they purchased large numbers of horses for use by the British cavalry, and now they are being sold at ridiculous prices in Warsaw.

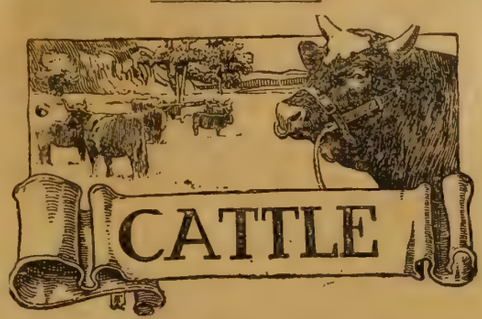
A telegram from Paris, dated the 17th inst., reports that Dr. Garnault, who made a sensational challenge to Professor Koch last year on the subject of bovine tuberculosis, innoculated himself at the Villette abattoirs with consumptive matter taken from a diseased cow, which had been seized and ordered to be destroyed. The operation was performed in the presence of Drs. Baudoin, Barlerin, and Demeurisse. Dr. Garnault anticipates no result for two or three weeks. The disease may then manifest itself in the form of a local affection, and spread finally to the lungs, or the lungs may be attacked immediately and directly. On the other hand, nothing may ensue. Should the expected development occur, Dr. Garnault will place himself at the disposition of Dr. Theodore Smith, of Boston, who first exposed the dreadful possibility of contamination from bovine tuberculosis, and pointed out various experiments which might be advantageously risked for the benefit of humanity at large.

The prospects of the Mid-Kent Agricultural Association's seventh summer show, which is to be held at Maidstone on July 2nd next, are very promising, and with favourable weather a good attendance is looked forward to. The entries are good, and among the exhibitors of agricultural horses may be found the names of Lord Hothfield, Lord A. Cecil, F. S. W. Cornwallis, Esq., Hon. R. P. Nevill, Messrs. J. and T. C. Robertson, Messrs. H. White and Son, Walpole Greenwell, Esq., G. E. Champion, Esq., A. Miskin, Esq., H. W. Tyrwhitt Drake, Esq., and other well-known breeders. In the Hunter classes animals belonging to Messrs. Walter Winans, Julian Winans, Paul Winans, S. Lee Smith, J. C. Buckland, C. Kelway Bamber, etc., will compete. The driving competitions should prove very attractive. Animals belonging to Captain R. Alexander, Hon. R. P. Nevill, Messrs. Walpole Greenwell, H. Lenay, W. T. Fremlin, F. S. W. Cornwallis, A. J. Thomas, Colonel A. C. Porton, exors. of W. Elny, J. Colman, F. Neame, C. Gordon Neame, and G. Farmer are entered in the cattle and sheep classes. Among other attractions, not the least interesting item in the day's programme, will be the jumping competitions in the large horse ring.

RICHMOND HORSE SHOW: COACHES DRIVING PAST THE STANDS.

The paragraph relating to the Mallow (County Cork) Agricultural and Show Society's exhibition at Mallow, on July 9th and 10th, was, it has been pointed out to me, misread by some. It was stated that "a liberal prize schedule has been drawn up, numerous prizes (confined to residents in County Cork) being provided jointly by the

County Cork Committee of Agriculture and the Department of Agriculture and Technical Instruction for Ireland." Of course, I did not mean to infer that the whole of the classes were confined to residents in County Cork, but only those in which the prizes were provided by the Department of Agriculture. The show is a very open one, about half the horse, cattle, sheep, and pig classes being open, as well as all those for dogs, poultry, butter, etc.



Volume sixteen of the Suffolk Flock Book has just been issued by the Suffolk Sheep Society. It contains particulars of rams Nos. 6,759 to 7,333, and details concerning the establishing and replenishing of flocks, with list of sires used in 1901. As a frontispiece to the volume is given a portrait of the late Mr. George Dobito, of Lidgate, born 1812, died 1871, who was one of the earliest and most enthusiastic supporters of Suffolk sheep, and the establishment of those sheep as a distinct breed was mainly due to his efforts.

An important shipment of Large Black pigs was made on Thursday, when a consignment of nine sows and two boars was shipped, per the Brier Holme, from London to Hobart (Tasmania), to the order of Mr. Andrew E. Mansell, the well-known breeder of Shropshire sheep, who has recently taken up his residence in Tasmania. The eleven animals now exported are typical specimens of the breed and had been selected with great care by Mr. Ernest Prentice, the Secretary of the Large Black Pig Society, from the following prize winning herds in East Anglia, viz., four sows from Mr. C. F. Marriner, Hasketon; one sow (winner of the silver medal, Beccles, 1901) from Mr. A. H. E. Wood, Sudbourne Hall; two sows from Mr. B. B. Booth, Plashwood, Haughley; one sow from Mr. John Goddard, Tunstall; one sow from Mr. J. B. Dimmock, Harleston; one boar from Mr. R. Eaton White, Boulge Hall; and one boar from Mr. Joseph Watkins, Claydon. Mr. Mansell evidently considers these animals, from their quiet, docile habits and nature, to be well suited for a country where fencing is not abundant.

The herd of pure-bred Shorthorns belonging to the Right Hon. Lord Polwarth, of Mertoun House, St. Boswells, Berwickshire, has increased so much of late years that it has now been found necessary to reduce it, and on the third day of the Royal Show at Carlisle (July 9th), Messrs. Thornton and Co. will dispose of about fifty head from the herd, at the Tower Farm, Rickerby, which is about a mile from the entrance to the Royal showyard. The catalogue will comprise about thirty females and twenty males, a choice selection from this well-known herd, and they will all be sold without reserve.

Mertoun lies away over the hills in Berwickshire, on the banks of Tweed, between Newtown St. Boswells and Kelso. It has long been famous for its Leicester sheep and Shorthorn cattle, the former having been established in 1760-70 from Mr. Culley, who had them direct from Bakewell. The herd has a high in the showyards. The bulls used of reputation and a most distinguished career the Wave and kindred families, with others from Warlaby, so that the herd has gradually assumed a type and character of its own.

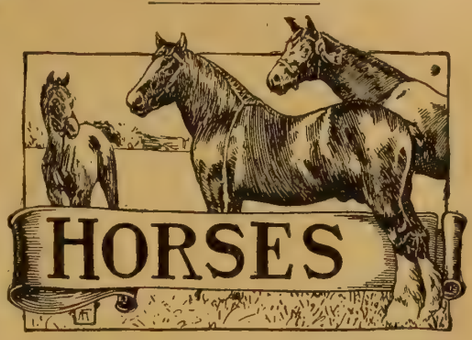
By careful breeding and able management, the Mertoun herd has become greatly distinguished, especially for its high-class bulls, and its successes in the "family classes" at the Highland Society and great Yorkshire Shows. At the National meetings of the Royal Agricultural Society of England and the Highland Society of Scotland, many prizes have been won, including the great family prize at the Highland Society's Centenary Show at Edinburgh, in 1884. The capacity of the herd for producing first-class sires has been displayed by the remarkably fine animals that have been so often exhibited. Royal champion honours were awarded in 1889, 1891, 1895, and 1896; among the most famous bulls being Ironclad (first and champion at the R.A.S.E., at Windsor, subsequently champion at the great International Show at Beunos Ayres), and Windsor Royal (first at the Highland Society, at Dundee, and first and champion at the R.A.S.E., at Doncaster). Showing has not been practised so much of late, but a small selection will be exhibited at the Royal Show at Carlisle of kindred breeding and type to those offered for sale.

Sale of Store Stock at Shrewsbury.

On Friday, the 13th of June, Alfred Mansell and Co. conducted their 21st annual June sale in the Shrewsbury, Smithfield. One thousand, one hundred and eighty-three cattle passed over the weighbridge, and, under the baton of the auctioneer, found new owners in exactly three hours. The quality of the various breeds was quite up to the standard, which with pastures filled with keep, induced buyers to out-distance all previous records for the past 20 years.

The oldest attendant of these renowned sales never before witnessed anything approaching such a number of buyers at any one sale in Shrewsbury Market; and the rapidity with which biddings were given clearly indicated a grasp of the situation. £25 each for a bunch of blue-greys was the highest price recorded—equal to 44s. 6d. per cwt. from this they graded down to useful young stirks, 10 to 12 months old, which sold from £8 10s. to £11. Mr. Logan got £19 17s. 6d. for Angus crossbreds, which worked out 44s. 1d. Mr. Condell forwarded some useful Shorthorn bullocks, which sold for £19 each, or slightly over 40s. per cwt. Mr. Brown forwarded his usual consignment of good Co. Limerick young bullocks, which made from £17 7s. 6d. each down to £15 5s. Mr. McCullock's Shorthorn heifers sold for £16, and clearly crossed the 40s. line, which seemed to be the halfway house or first stopping place for most of the ordinary class of cattle. Mr. McDonagh forwarded 113 cattle, which realised from £15 15s. down to £14 for Angus crosses, equal to 43s. 6d. down to 41s. 3d. per cwt. These were just a few of the representative lots from each class, and consignors present returned to the Emerald Isle well pleased with the day's work. The next sale is fixed for the 11th of July.

Below are some of the prices of the respective Breeds:—



Hereford Bullocks: £16 15s., £16 12s. 6d., £16, £15 17s. 6d., £15, £14 2s. 6d., £13 17s. 6d., £12 17s. 6d. Hereford heifers: £13 15s., £13 5s., £12 15s., £12 12s. 6d., £10 17s. 6d. Shorthorn bullocks: £19, £17 17s. 6d., £17 7s. 6d., £16 10s., £16 2s. 6d., £15 7s. 6d., £15 5s., £14 17s. 6d., £16, £15 15s., £14 15s., £14 10s., £14 2s. 6d., £14 15s., £14, £12 17s. 6d. Shorthorn heifers: £14, £13 12s. 6d., £13 10s., £13, £12 5s., £11 15s., £11 5s. Shorthorn barrens: £13 10s., £13, £12 15s., £10 17s. 6d., £10 7s. 6d. Black Polled bullocks: £19 7s. 6d., £17 15s., £17 12s. 6d., £16, £15 10s., £14 15s., £14 7s. 6d., £14 5s., £14. Black Polled heifers: £14 10s., £14, £13 15s., £12 17s. 6d., £12 2s. 6d. Blue-Grey bullocks: £25, £18 10s., £17, £14 15s. West Highlanders: £14 7s. 6d., £14, £12 17s. 6d., £11. Crossbred bullocks: £15 15s., £14 2s. 6d., £13 17s. 6d., £13 10s., £12, £11 15s.

NOTE.—The figures for the current Year are approximate only.

Sale of Harness and Hackney Horses at York.

Messrs. Walker and Sons, at their Repository at York, held a sale on Thursday of pedigree harness and hackney horses. There were ninety-three lots in the catalogue. The attendance of buyers was numerous, and bidding was fairly brisk, although several horses were unsold in consequence of the high reserves placed upon them. Prices ranged from 30 to 50 guineas.

The chief lots were as follows:—

	Gs.
Dark chestnut mare, 5 years, 15.3h.h.	35
Dark chestnut horse, 5 years, 15.2½h.h.	40
Black mare, 7 years, 15.2 h.h.	36
Dark chestnut gelding, 4 years, 16.1 h.h.	41
Brown gelding, rising 5 years, 15.1 h.h.	37
Mabella, bay mare, 5 years, 14.1½ h.h.	37
Black gelding, rising 5 years, 15.2½ h.h.	37
Bay gelding 7 years, 16.1 h.h.	37
Black gelding, 6 years, 15.3 h.h.	50
Chestnut harness mare, 4 years, 15.1 h.h.	50
Brown horse, 5 years, 16.1 h.h.	41
Bay mare, 6 years, 15 h.h.	40
Chestnut hackney mare, 5 years, 15 h.h.	41
Brown gelding ,5 years, 15.1½ h.h.	30
Brown mare, 4 years, about 15.1 h.h.	34
Bay gelding, 7 years, 16.1 h.h.	30
Bay mare, 10 years, 16.1 h.h.	42
Brown mare, 5 years, 15.1½ h.h.	31
Bay mare, 6 years, 15.3½ h.h.	35
Chestnut mare, 5 years, 16 h.h.	40
Dark brown mare, 5 years, 15.1 h.h.	33

Sales at Crewe Repository.

Messrs. Manley opened their June sales of horses at Crewe Repository on Wednesday, the attendance of buyers being very satisfactory. The catalogue contained over 900 horses, most of which were contributed by Lancashire and Yorkshire breeders.

Of those offered on the first day, Messrs. Bowater Bros., Baildon, sent nine excellent animals. The best of these, Young King, a brown gelding, by Chocolate Junior, secured first prize in the single harness class, and sold for 90 guineas, Mr. Egan, of Paris, being the purchaser. Mr. R. G. Fothergill, Harrogate, sold a pair of dark bay carriage geldings with black points, five years old, for 215 guineas. This pair would undoubtedly have taken first prize, but, in consequence of Mr. Fothergill being one of the judges, they were debarred. Mr. T. Macnair, Manchester, sold a pair of carriage geldings for 160 guineas. Other match pairs made from 100 to 140 guineas. The trade for a poorer class of horses was very depressed, but better class animals easily found buyers. A four-year-old by Sir Modred, dam Rosemary, made 86 guineas. A bay gelding by Lord Fitzwilliam realised 65 guineas. Numerous others made from 40 to 55 guineas.

The second day's sale included 150 noted prize-winning show cobs and ponies, small harness cobs and hacks, also 140 smart-stepping cobs 14.2 and under, and ponies 13.2 and under. There was again an exceptionally large attendance of buyers, including representatives from Berlin, France, and Switzerland.

The highest price of the day was 300 guineas for a pair of show horses, a brown mare and gelding, five and six years respectively. Mr J. Astley, Nelson, Lancashire, sold a beautiful

chestnut show gelding, four years, by Garton Duke of Connaught, for 68 guineas. The Hon. Mrs. Ward, Old Colwyn, made 90 guineas for a stylish four-year-old hackney-bred cob. Mr. F. Boyes, Burnden House, Bolton, Lancs., realised 120 guineas for a chestnut gelding by Skipps Performer, and also sold an eight-year-old chestnut gelding by Cassius for 60 guineas. Mr. L. Knowles, M.P., sold eight fashionably-bred hackneys, his best making 55 guineas. Fashionable horses again found plenty of purchasers, but for medium sorts there was little demand. Cobs and ponies made from 30 guineas to 50 guineas.

On the concluding day of the sale over 300 horses suitable for heavy town traffic, light lurry, and parcel vans were sold. The attendance of buyers was the largest of the three days, and horses easily found purchasers. The highest price of the day was 100 guineas, paid for a five-year-old black Shire gelding. Numerous others made from 60 guineas to 80 guineas. Several of the best animals were purchased for abroad, and Corporations' light lurry and parcel van horses met a good trade, making from 40 guineas to 60 guineas.

Colchester Wool Sale.

The seventh annual wool sale was conducted at Colchester by Messrs. Fenn and Co., on Thursday, when over 20,000 fleeces were put up. There was a large attendance of buyers. In accordance with the present state of the market, the prices were very full and appreciably above those of last year, being considerably in favour of the seller. In 1900, the unwashed descriptions brought proportionately the best prices, but in 1901, and at this years sale, the washed wool made the most; owing to the shortness of water during the last season, however, more unwashed wool than usual was put in.

The top figure of the sale for washed wool was 8½d. per lb., realised by the Southdown hogget from Mr. G. F. Hempson, of Ardleigh; the highest price last year was ¼d. per lb. more made by the Southdown hogget of Colonel Tyssen-Holroyd, of Donyland Lodge. The second place was secured by Mr. W. Nocton, Langham Hall, with 8¼d. per lb. for his Southdown hogget, and 8d. for Southdown ewe. This year Col. Holroyd only made 7½d. for his Southdown hogget. The highest price realised for black-faced hogget was 7½d., and those whose consignments attained this figure were Messrs. C. Morley (Stoke), H. Low (Kirby), C. S. Fairhead, and W. G. Fairhead (Messing), J. F. Wainwright, and J. Smith, jun. The top figure for black-faced ewe was 7d., and this was shared by Earl Onslow, Sir J. Johnson, the executors of Mr. J. Fairhead, and Messrs. E. A. Fairhead, C. Morley, T. Lilley (St. Osyth), S. P. Greenslade (Ulting); whilst the leading figure for half-bred hogget was made by Mr. T. B. Pertwee (Lagenhoe), 7d. per lb.

As examples of the prices made for unwashed fleeces we might mention the following:—R. F. Cross, Southdown ewe 4¾d., Southdown hogget 5d., black-faced ewe and hogget 4½d.; H. C. Baker, half-bred hogget, 4¼d.; A. Cross, half-bred ewe, 4¼d.

Wool Sales in Dublin.

This seasons sales were opened on Thursday in Dublin, and at the old-established warerooms of Messrs. Ganly, Sons and Co. a catalogue embracing some 300 lots composed of the various descriptions of Irish-grown wools was submitted to buyers, of whom there was a full representative attendance. Prices ruled low, especially for mountain, seaside and Shrop, but demand at these lower quotations must be considered as quite equal to anticiputions. Some few choice lots of well-bred hogs and wethers elicited keen competition, but the general feature in connection with this class of wool was the great irregularity in prices given.

Following are the quotations for the various kinds:—Shrops, 6¼d. to 7d.; super hogs, 6¼d to 6⅝d.; strong hogs, 5⅞d to 6d.; super wethers, 5½d. to 6d.; strong wethers, 5d. to 5½; mountain and seaside, 4½d. to 5d.; washed Scotch and cross-bred, 3⅞d. to 4¼d.; greasy black-face and Scotch, 2½d. to 3½d., low oddments of which there is an unusually large proportion this season, selling from 1½d. to 3d. The total quantity disposed of was over 1,000 packs, a great portion of which seemed to be purchased by English and Scotch buyers.

NORFOLK.

The Norfolk Agricultural Association held their show at Norwich on Wednesday and Thursday, after having been absent from the capital of the county since 1893. The town supported the society liberally, so far as money was concerned, for the prize list, but they did not go much further, for the town was but little decorated to welcome the society, and the attendance of visitors was not so large as was expected would be the case. The total number on the first day, when the charge for admission was 2s. 6d., was 2,400, and this compares favourably with previous years, but on the popular and shilling day the number who passed the turnstiles was less than at last year's show at North Walsham, the respective totals being 8,743 and 9,130. May be, the nearness of the Coronation had something to do with the falling off, for the weather was most favourable. The entries also, unfortunately, showed a considerable decline, when compared with those received when the society last visited Norwich in1893, but they compared favourably with those received at the past few shows. The following table will show at a glance how this year's totals, compared with the previous five years and the Norwich Show of 1893:—

	Horses.	Cattle.	Sheep.	Pigs.
1902—Norwich	358	132	178	75
1901—North Walsham	266	127	131	63
1900—Downham Market	320	140	249	49
1899—Diss	277	127	273	53
1898—Lynn	312	124	205	48
1897—Fakenham	321	113	196	51
1893—Norwich	447	183	270	68

The site of the show yard was "The Grove," kindly lent by Mr. Alex R. Chamberlin, and it was altogether an excellent and most convenient show yard. It adjoined the Ipswich Road, was not far from Victoria Station, and within a short distance of the electric tramway route, and ample space for shedding and judging rings was found on three meadows surrounding the pleasant residence of the proprietor. The show was, all round, a fairly successful one, but not what might have been expected, seeing that it was held in the capital of the county.

The gentlemen who officiated as judges were:—Shires.—Mr. T. B. Freshney, South Somercotes, Louth, Lincs.; Mr. Joseph Paisley, Waresley, Sandy, Hunts. Hunters.—Mr. Henry G. Lepper, Aylesbury; Mr. T. H. Hutchinson, The Manor House, Catterick, York. Hackneys (breeding).—Sir Gilbert Greenall, Walton Hall, Warrington, Lancs.; Mr. P. M. Browne, Fornham, All Saints, Bury St. Edmunds. Hackneys (riding and driving).—Sir Humphrey F. de Trafford, Bart., Hill Crest, Market Harborough; Mr. A. W. Hickling, Adbolton, Nottingham. Shorthorn, Red Polled, and Fat Cattle.—Mr. A. D. Bruce, Elvetham, Winchfield, Hants; Mr. W. Wright, Scamblesby House, Horncastle, Lincs. Jerseys.—Mr. J. T. Keddie, Blythwood Lodge, Stansted, Essex. Sheep and Pigs.—Mr. S. Treadwell, Windmill Hill, Waddesdon, Aylesbury; Mr. S. W. Slater, Dotterel Hall, Balsham, Cambs.

Horses.

The Shire horses usually make a capital display at this show, and last week's exhibition proved no exception to the rule. Though not particularly numerous, the quality was all that could be desired, many of the animals coming from some of the best studs in the kingdom. The interest of the show was very materially added to by the stalling of the prize-winners at the Norwich Spring Show in March, the pick of the horses in the district being on view. The two-year-olds came into competition on Wednesday, when Redlynch Blue Blood, belonging to Mr. Trenham J. Cresswell, again came to the front, the same promising youngster which was first at Ipswich, where he also took the tenant farmers' champion, thus following up his previous achievements, having taken first and special at Hadleigh and first at Lynn. On this occasion he also took the special given by Mr. A. W. Soames, M.P., for the best stallion in the possession of a resident or occupier of agricultural land in the county. Mr. A. H. Clark, Moulton Eaugate, was first in the yearling class, with a particularly nice youngster, whilst his Majesty the King was second for Ethelred, by Benedick, and reserved for Mr. Soames's special. His Majesty, however, did better in the next class—that for brood mares with foal at foot—for here he took the two chief prizes, first with Dorothy Drew, by Prince Harold, and second with Queen of Bohemia, by Prince William, the former carrying off the Shire Horse Society's gold medal for the best mare or filly, the latter being reserved. Dorothy Drew also took the Shire Horse Society's special prize as the winner of the Society's gold medal. Mr. Edward Rowell's Bury Heiress, reserved in the class, took the King's ten-guinea special for the best mare or filly not exceeding five years old, the property of a Norfolk tenant farmer. Mr. E. W. Bett's Tulip was reserved. The King was first and second in the class for foals. Mr. J. J. Mitchell, Hepworth, Diss, again scored with his Northall Rosie, a beautiful filly, by Prince Harold. In the class for yearling fillies, Danesfield Resound, by Prince Harold, belonging to Mr. R. W. Hudson, repeated her Ipswich achievement. Mr. A. Ransom was awarded the second prize, and Mr. John Hunt, Coton, Cambs., the third.

Hunters came next in the catalogue, and though the display was not a large one, it was, on the whole, good. Six brood mares with foal at foot entered the ring, and both first and second prizes were taken by Mr. F. B. Wilkinson, of Newark, the well-known breeder and dealer. Sir Humphrey de Trafford was rightly awarded the first prize for weight-carrying mares or geldings, his exhibit being Bright Light. Second came Mr. J. H. Stokes, of Great Bowden, with a nice free mover, but perhaps not quite the quality of the winner. The class for mares or geldings not up to 14 stone was the largest of the section, and here the winner was readily picked out in The Laird, a horse belonging to Mr. Stokes, which was second to the champion at Ipswich. Mr. Lionel Digby was second with a taking, short-legged horse of a different stamp to the winner, but quite as good in his way. The two exhibitors last mentioned occupied the same position in the next class, which was for four-year-old mares or geldings. Mr. Stokes had the red rosette for Frieston, which was seen at Ipswich, and Mr. Digby took second with Julie, by Cobbler. The young classes were not very well filled, and do not call for particular mention. The Laird brought the Hunter Improvement Society's silver medal to Mr. Stokes; Lord Albemarle's special for the best four-year-old hunter bred in Norfolk went to Mr. C. Waters, of Postwick; and Sir H. de Trafford won a silver medal with the two-year-old Milk Weed.

Then came the Hackneys, and they were undoubtedly the feature of the show. The first class was for two-year-olds, in which the first prize went to Mr. H. V. Sherringham, South Creake, Fakenham, for a big upstanding horse, Creake Matchless, which was awarded the special prize of a silver medal, given by the Hackney Horse Society. The second prize in the class went to Mr. Harry Livesey, of Rotherfield, Sussex, with Medway, a nice horse, but one that did not go like the winner. The yearling colts were only five in number, and none of them showed promise of extraordinary action, though Mr. E. C. Chapman's Alethorpe Confidence, by Manifred, was much admired. The brood mares were a grand lot, Mr. Livesey having the best in Queen of the South, which was a very fine mover indeed. Mrs. R. T. Thornton, of Middleton Hall, Brentwood, was second with Langton Lily, a fine-looking mare when standing still, but not with the action of the first-prize-taker. Of the brood mares 15 hands and under, the best was found in Spinna, belonging to Mr. A. Johnson, of Bishop Stortford, a taking, short-legged mare. The Hackney colt foals were hardly such a class as might have been expected in the county of Norfolk, but amongst the filly foals Mr. Sherringham had an exceedingly pretty animal, which took first prize. Mrs. Thornton was first in the class for three-year-old mares or geldings with Middleton Bohemian, and Mr. E. C. Chapman second with Alethorpe Olive, by Manifred, which was reserve for one of the championships. Amongst the two-year-olds, there was found the finest goer in the show next to Mr. Livesey's Queen of the South. This was Royal Victoria, belonging to Mr. G. H. K. Frances, of Mattishall, which was awarded the King's special prize of £10 for the best mare or filly not exceeding five years old, the property of a tenant farmer. In this class, however, the judges were doubtless right in putting her second, and giving the first prize to Mr. W. Oppenheimer, of Thames Ditton, for Knowle Belinda, which is an exceptionally fine young mare, taking her right through. Mr. Livesey's Queen of the South gained two specials. The classes for riding horses were well filled, and nothing was watched with greater interest than the judging of these animals in their smart turn-outs. Mr. William Miles, Woodbridge, won a first prize with Barton Prima Donna, and was similarly successful in the double harness class against several formidable competitors. Amongst them was Mrs. Hartley Batt, Elgin Avenue, London, who exhibited with so much success at Ipswich, and this lady beat Mr. Miles in the competition for tandem teams. The jumping provided exceedingly good competition and interest for the spectators.

Cattle.

Taken all round the cattle section was a good one, but the Shorthorns were not so numerous as could have been wished for; Red Polls, however, were a nice lot, and the pick of the section, Mr. L. de Rothschild's well-known Silver Mint, carried off the chief honour in the aged bull collection, beating Clipper Prince, shown by His Majesty the King, the reserve going to an exhibit belonging to Sir Thos. Gooch, Bart., Benacre Hall. Mr. Willis J. Deane was first in yearling bulls with Bapton Florist, beating Mr. Colman's Hayle Speculator, and two exhibits by the King. There were but two entries of cows, Mr. Willis J. Deane being first, and Messrs. Abbot Bros., Thurston, second. Sir Thos. Gooch, Bart., was assigned the premier place in the class for three-year-old heifers, with his Royal Jewel, taking precedence of Mr. Jeremiah Colman's Hawthorn Jem III., whilst Mr. Willis J. Deane, who was a most successful exhibitor, took the lead in the two-year-old heifers, and was first also in yearlings, the King being second; His Majesty's entry was also awarded Lord Amherst of Hackney's Special, as the best Shorthorn cow or heifer bred or owned by an exhibitor in Norfolk.

The Red Polls made a capital display, the classes being specially well filled. There was a particularly good lot of old bulls, and the best of these was Mr. Richard P. Cooper's (Ashlyns) Felix, which added another honour to his list of achievements, being not only first, but carrying off Lord Hastings' special prize, as the best Red Poll bull in the first three classes. Lord Amherst was second with his Defiance, a typical example of the breed. The two-year-old bulls were equally good in point of quality, and here Sir Walter Corbet's exhibit was placed first, beating Lord Amherst's Royal Standard, a previous prize-winner; Sir Thomas Gooch was placed third. There were but three yearlings, Lord Amherst's Recruit taking first, while the second went to the Exors. of Mr. P. K. Blofield, Quidenham, for Lord Rattler, which some thought showed rather more quality than the first-prize winner. The latter exhibitors secured the first position in the cow class with Bruna, a famous Red Poll, which this time had the advantage of Sir Thomas Gooch's Dormouse, a grand animal that had, we believe, never been beaten before. She fetched the high price of 500 guineas at the late Mr. Colman's sale, but she was not this time shown in quite the same blooming condition as on previous occasions. Bruna was subsequently awarded the Prince of Wales's silver cup for the best Red Polled cow or heifer. The three-year-old heifers were also exceedingly good. The first and second prizes were taken by the Hon. Ailwyn Fellowes, M.P., Honingham Hall. The first-prize winner was a charming animal, which has made her mark on previous occasions, the second prize winner being Anthea, purchased as a calf at the Easton sale. There were some specially good animals amongst the two-year-old heifers, but Mr. John Hammond's Davy C.C.I.V., was conspicuously first. She is a magnificent animal, and she ran the winner very close in the competition for the silver cup. Lord Amherst was second, whilst Mr. J. B. Dimmock, whose exhibit was first at Ipswich, was third, and some thought she was worthy of a higher position on this occasion. The yearlings brought together the pair which had such a tussle at Ipswich, the Hon. Ailwyn E. Fellowes' Avalanche and Shotley Duchess, belonging to Mr. Horace W. Packard. Both are very fine heifers, and ultimately the judgment at Ipswich was confirmed, Avalanche being placed first.

There were eight classes provided for Jerseys, and they were well filled. Colonel Harry McCalmont, M.P., was first in aged bulls, Lady de Rothschild second, the Bishop of Ipswich and Sir Thos. Gooch highly commended. Mr. Russell J. Colman took the lead in younger bulls, Colonel McCalmont being second. The cows formed one of the largest collections in the show, Lady de Rothschild's Charlotte VI. was first, and Earl Cadogan, Culford Hall, second, while his Lordship's exhibit carried off the Blythwood Silver Challenge bowl for the best Jersey cow or heifer, in milk, bred in Great Britain or Ireland. The heifers were equally numerous, the winners including Colonel McCalmont, whose heifer was reserved for the Blythwood challenge cup. The gallant Colonel was also first in yearling heifers, and Mr. Russell J. Colman second, and Earl Cadogan reserved.

Sheep.

The first of the sheep classes was for Southdown shearling rams, which numbered about a dozen, and the contest lay between His Majesty the King and Colonel McCalmont. The latter was the victor, also securing the Southdown Sheep Society's silver medal for the best male. The competition in the class for three ram lambs was a keen one. The chief place was assigned to the Earl of Ellesmere's pen, which included the first winner at Reading show as a single ram. Mr. C. R. W. Adeane was second. Earl Cadogan came to the front in the class for three shearling ewes with a pen sent in good form, but hardly so good in the legs as the second prize lot.

There were four classes of Oxford Downs, but they were poorly filled, Mr. T. Fulcher, Elmham, and Mr. J. P. Case, Binham Abbey, Wighton, S.O., having matters all their own way. The former won four prizes and a special, and the latter the three other prizes.

There was, however, a fairly good exhibition of Suffolks. Amongst the shearling rams were some that had met at previous shows. The first honours went to Lieut.-Colonel Baird for a sheep that was not noticed at Ipswich; while the second prize one, shown by Mr. Thomas Goodchild, met with similar treatment at the Suffolk show. The judges recommended a third prize to Mr. Goodchild for another exhibit, and some of the spectators thought that the second and third prize winners were of rather better type than the first, and were somewhat smarter in their features. The first prize pen took the cup presented by the Suffolk Sheep Society for the best pen of Suffolk sheep in the first two classes. In the competition for three ram lambs, Mr. Herbert Smith had an easy win. Lieut.-Colonel Baird came to the front again in the class for three shearling ewes of the same flock, Mr. R. Barclay, Higham, taking second. It was a close fight between the first and second prize winners. The position might have been reversed if the second prize pen had been a little more matchy. A nice lot of ewe lambs of the same flock put in an appearance. Mr. Herbert Smith's were far away the best, Mr. Sidney Traylen taking second, a very creditable performance in such company, considering that he has only a comparatively small flock. Mr. W. N. Champion offered special prizes for five Suffolk ewe lambs untrimmed, and the winners were shown by Mr. Herbert Smith, but they were perhaps scarcely so well matched as Mr. S. R. Sherwood's, which were placed in the second position.

THE PAIR OF HARNESS HORSES shown above are Mr. C. J. Wertheimer's well-known "Jubilee King" and "Hopwood Squire," who were winners of the double harness prize at the recent Richmond Horse Show. "Hopwood Squire" was bred by Mr Enson, of Strethall Hall, Littlebury, Saffron Walden, and is by "Old Times," out of a daughter of "County Member," 948. His companion, "Hopwood Squire," was bred by Mr. W. Belamy, of Copalder, Doddington, Cambs, and is a son of "Copalder Cadet" and "Lady of the Lake."

Pigs.

The pigs made one of the best shows seen at this society's exhibition for some years past. The Berkshire classes were the best. Colonel McCalmont, M.P., secured first in the class for boars, farrowed in 1900 or 1901, and second for breeding sows, Mr. R. W. Hudson being first in the latter class, and first also for three breeding pigs of the same sex. With respect to Large or Middle White, Mr. Sanders Spencer was, as usual, a most successful exhibitor, and he took the National Pig Breeders' Association silver medal for the best boar, and a similar medal for the best sow. As to the Large Blacks, Mr. F. C. Marriner, Thorpe Hall, Hasketon, who has proved a strong competitor of late with this breed, took both the principal prizes for breeding sows, farrowed in or before 1901, while Mr. J. W. Goddard, Tunstall, took the same honours in the class for three breeding pigs of the same sex, farrowed in 1902.

Miscellaneous.

The working dairy was, as usual, a great centre of attraction to the visitors. As for many years past, it was equipped and was under the direction of the Eastern Counties Dairy Institute, Ipswich. In addition to the butter-making competitions, there were lectures and demonstrations in butter and cream cheese making, milk testing, and other scientific dairy processes. The bee tent also attracted considerable attention, and the demonstrations by Mr. H. Beswick (the expert on bee-keeping) of the most practical way to deal with bees, greatly amused and instructed; albeit, they struck terror into the minds of many of the onlookers, when the demonstrator took up a handful of bees, and showed that if they were not squeezed they were perfectly harmless. The method of shifting bees from skep to skep was also shown, and the superstition that bees must be informed of a death in the house sarcastically remarked upon.

The Essex Show.

The Essex Agricultural Society's forty-fifth annual show was held at Romford on Thursday and Friday, and what promised to be a conspicuous success was unfortunately marred by rain. The first day was beautifully fine, and a large attendance of visitors was recorded. But on Friday rain fell heavily throughout the morning, with the result that the show was but poorly patronised. This state of affairs was the more regrettable in that a party of about 400 Indian soldiers in England were opposed towards the show. The site of the showyard on Friday, and naturally they saw their first English agricultural show at a great disadvantage. The display of stock was an excellent one, though not so numerous as usual, and the society, together with the local committee, had done everything possible to make the exhibition an attractive and successful one, so that it is a great pity the Clerk of the Weather was not favourably disposed towards the show. The site of the show was Marshall's Park, which was admirably suited for the purpose, being within five minutes' walk of the High Street and ten minutes of the two railway stations, whilst it lent itself to a convenient disposal of the various departments, and visitors had no difficulty in finding any section they desired to inspect. As to the entries, it will be seen from the table given below that the principal sections were smaller than usual, this doubtless being accounted for to some extent by the fact that the fixture clashed with the Norfolk Agricultural Society's Show at Norwich. The subsidiary shows helped to make up about an average total, these being well supported. The poultry and pigeon show, which was run by the parent society, had a record, over 750 entries having been made in this section, whilst the Dog Show secured over 600 entries. The Horticultural Show, promoted by the Romford and Essex Horticultural Society, was likewise a popular item.

The following table shows the entries in the main show last week and for the preceding years—

	Horses.	Cattle.	Sheep.
1902—Romford	376	189	73
1901—Colchester	415	235	108
1900—Clacton-on-Sea	257	186	103
1899—Epping	415	242	91
1898—Braintree	424	157	85
1897—Chelmsford	510	174	75

The judges in the chief section were as follows:—Horses.—Shires—Mr. A. H. Clark, Moulton Eaugate, Spalding; Mr. J. Sturley Nunn, Welmetham Hall, Bury Suffolks—Mr. Wm. Toller, Orford, Suffolk; Mr. Horace Wolton, Crescent Road, Ipswich. Agricultural Horses—Mr. J. Sturley Nunn, Welnetham Hall, Bury St. Edmunds. Hunters—Mr. James E. Darrell, West Ayton, York; Mr. Robert Lockwood, Cottles, Atworth, Wilts. Hackneys and Harness Classes—Mr. H. Moore, Burn Butts, Cranswick, Hull; Mr. Alfred Rowell, West Rudham Hall, King's Lynn. Leaping—Lieut-Col. Lockwood, M.P. (President); Mr. C. E. Ridley, Chelmsford, and Mr. E. E. Barclay, M.A.H. Cattle—Shorthorns and Red Polled—Mr. E. H. Cartwright, Keddington Grange, Louth, Lincs.; Mr. J. P. Terry, Berry Field, Aylesbury. Polled Angus—Mr. Clement

Stephenson, Newcastle-on-Tyne. Jerseys—Mr. F. Freeman Thomas, M.P., Ratton, Willingdon, Sussex; Captain A. B. Fraser, Byron Hall, Worthing. Sheep—Mr. S. R. Sherwood, Playford, Ipswich; Mr. Hugh Penfold, Selsey, Chichester.

Horses.

Seeing that the Shire horse is so popular in Essex, it was natural that the breed should occupy the premier position in the horse section, and for the benefit of tenant farmers many classes were for them only. That for Shire mare and foal contained some very good examples of the breed, but in the open class were exhibits from some of the most noted studs in the kingdom. The filly foals (open) were few in numbers, as were also the Shire mares belonging to the tenant farmers of the county. Mares from various parts of the country, however, were stronger in numbers, Mr. R. W. Hudson, Danesfield, taking the chief place with his Wern Blossom, a powerful bay by Moor's Phenomenon, though pressed closely by Rokeby Lady Love, belonging to Sir Walter Gilbey, Bart. The Essex farmers sent some specially nice two-year-old fillies, Mr. R. Barnard securing first with Thaxted Irene, which also took the special given by Mr. John Holm, for the best mare or filly in the Shire classes. The competition for the open prizes was keen, Sir Walter Gilbey taking the lead with a charming filly, Saxon Lily, by Blythwood Conqueror. The yearlings from the county constituted one of the largest collections in the show, though there were more in the open competition, Mr. A. Henderson, M.P., Buscot Park, taking first with Buscot Chloris, by Buscot Harold, and Sir Walter Gilbey the second, with Saxon Eleanor, by Markeaton Royal Harold. The aged mares presented a fine appearance in the ring, Mr. Fred. Crisp's Queen of the Shires, by Harold, adding another honour to the many she has gained previously. Sir Walter Gilbey was second with Fenland Lady, by Blythwood Conqueror, which was awarded the Shire Horse Society's gold medal for the best mare or filly belonging to a resident occupier of land in Essex.

The stallion classes were also well filled. Sir Walter Gilbey gave two prizes for the best stallion foaled in 1901, bred by a tenant farmer in Essex, and the first went to Mr. H. Murton, Southminster, for a youngster by Lockinge Albert. Mr. Henry Gifford, Harlow, was first in the two-year-old open class with Markeaton Typewriter, and the same horse took the county prize. This animal was reserved for the Shire Horse Society's gold medal for the best stallion or entire colt, bred by or in the possession of a resident or occupier of land in Essex, but the coveted medal itself went to Mr. A. J. Hollington for Bishopthorpe Duke.

Suffolk horses were well represented, and the awards at the Suffolk Show were on the whole maintained. Suffolk mares with foal at foot stood first, and the class was headed by the Suffolk winner, Court Pride, by Heywood's Sudbourn Duke, belonging to Sir Cuthbert Quilter, Bart., M.P., again taking the lead. Mr. John Symonds' Duchess, a typical Suffolk, by Everitt's Warrior, passed over at Ipswich, went into the second place here, while Mr. Alfred J. Smith's Eyke Scandal, which received similar treatment at the Suffolk Show, was reserved. There were ten two-year-old Suffolk fillies, including many Suffolk Show winners. Sir Cuthbert Quilter's Baudsey Sweet Marjorie, a beautiful mare, was again first, while Mr. R. Eaton White's Boulge Maid repeated the Ipswich honour by going into the second position. Another exhibit from the Boulge Hall Stud, Boulge Hebe, by Golden Grain, third at Ipswich, was reserved here, there being no third prize. There were but two yearling Suffolk fillies, but they were grand examples of the breed. Here there was a reversal of the Ipswich judgment, Mr. John Symonds' Dorcas, by the Suffolk champion, Saturn, first of the Suffolk Show, was placed in the second rank, having to give place to Mr. E. F. Quilter's Diana, by Border Minstrel, which was second on the occasion referred to. The three-year-olds contained some of the pick of the mares to be found in the country. The Ipswich champion, Mr. A. H. E. Wood's Sudbourn Trinket, was unnoticed at Richmond, but here she was again first. The first prize mare at Richmond, Mr. E. F. Quilter's Bentley Duchess, was this time second, a place assigned to her at Ipswich. The stallions included some of the best-known horses from various parts of Suffolk. Mr. E. F. Quilter's promising Bentley Valentine, by Prince Wedgewood, first at Woodbridge, unnoticed at Ipswich, but first at Richmond, again went into the premier place. Mr. A. H. E. Wood's Sudbourn Sheriff, second at Ipswich, took the same place this time. The reversal of the judgment in the aged stallion class created something like a sensation to lookers-on outside the ring, Mr. Alfred J. Smith's Saturn, the champion at the Suffolk Show, and the winner of the handsome cup of the Suffolk Horse Society, at Richmond, having to be content with the second place. The judges could not agree as to the relative merits of this horse and Mr. A. H. E. Wood's Sudbourn Count, and it was necessary to call in an umpire. Mr. J. Sturley Nunn responded to the call made upon him, and gave the chief honour to Sudbourn Count. The honour was not unworthily bestowed, for Sudbourn Count won almost everything in his class last year as a two-year-old, and was first at Ipswich as a three-year-old, but was beaten at Richmond in consequence of having to compete with the aged horses.

The hunters made a very fine show, the entries including many well-known prize winners. Mr. James Christy's Mainsail was awarded first prize in the class for mare with foal at foot, open to residents in Essex only, and also the Hunters' Improvement Society's gold medal; whilst Mr. Kelway-Bamber's Homely Lass took the premier prize in the open section. Mr. Christy, with Bella, won the special for the best hunter filly not exceeding three years old, and Mr. R. A. Brice, of Rivenhall, a similar prize for the best gelding. In the county class for hunters four years old, up to not less than 14 stone, Mr. Abraham Smith, of Braintree, was deservedly first with Ascot, while Mr. George Hempson took second with his fine chestnut gelding Red Letter. Nine horses were entered as weight-carriers, up to not less than 15 stone, and the judges gave premier place to Tennis Ball, belonging to Mr. J. H. Stokes, Market Harborough, which has taken prizes everywhere. The horse did not look so well up to 15 stone, however, as Mr. John Drage's Northampton, which took second prize, and the Richmond judges gave expression to this opinion by placing the two in a reverse position. Mr. G. F. Johnson's Woodcraft was reserved. In the estimation of many onlookers, several horses better than those which received prizes were sent out of the ring unnoticed, in the class for hunters not up to less than 12 stone, regularly hunted during last season in Essex. There was a big entry in the novice class. The judges gave the first prize, as also the Hunt Championship special, to a five-year-old gelding, shown by Mr. George A. Newman, and the second to Mr. R. Foster. In an open class for hunters up to not less than 14 stone, Mr. Herbert B. Cory, of Castleton, near Cardiff, won with Gendarme—champion at Richmond and many other places. Mr. A. Smith's Dewhallow was the first in the corresponding county competition, but Mr. David Christy's Woodman, placed second, seemed to be a much sharper mover. In respect to some decisions, in fact, the judging evoked somewhat more than the usual measure of criticism.

The show of Hackneys was not large, and in the class for mares, 15.2 h.h. or over, with foal at foot, Sir Walter Gilbey had a walk over with Smart Lady Denmark. In the next class, that for mares 14 hands and under 15.2, with foal at foot (open), Mr. R. P. Evans, Reigate, came first with Iris, a bay by Chocolate Junr.; Mr. George Johnson's Cornflower, formerly belonging to the Marquis of Winchester, being a close second. In the class for mare or gelding for harness purposes, foaled in 1898 or since, 15.1 hands or over, by a registered Hackney sire (open), Sir Walter Gilbey took another first, and a gold medal, with Merry Sunlight, the winner of last year's championship; second honours fell to Mr. E. Baxter for Amaze, sire Pomfret Performer. Mr. Arthur Collen, of Saffron Walden, with three fine stallions. Mr. Edward Baxter, of the Hutton Stud, Brentwood, was even more successful in the harness classes, while Mr. George Johnson gained two more first prizes with Daylesford King and Golden King, the latter bred by Mr. J. H. Coker, of Earsham. Daylesford King went with his usual dash and pace, quite eclipsing all rivals, and Golden King, though he did not quite settle down at first, went splendidly at the finish, while his quality stood him in good stead. Having already won such a prize, the horse was now ineligible for the Hackney Horse Society's gold medal, and this went to Miss Ross, of Sale, Cheshire, for Rowton Blackthorn. Miss Ross's beautiful blacks won in the tandem class, as also in that for pairs, though hard pressed by Mr. Baxter's well-known Miss Howard and Musk, while Colonel Lockwood took second prize with an interesting pair of Arab descent.

Cattle.

Taken as a whole, the shorthorn classes made a good show, though one or two were poorly supported. The cow class was a rather weak one, but amongst the two-year-old-heifers were some noticeable animals, including Mr. J. Thorley's Fairy Queen, which took the champion prize, given by Mrs. McIntosh for the best shorthorn cow or heifer. The class for bull calves was a very strong one, Mr. J. Deane Willis taking first. In the corresponding collection, confined to the county, Mr. D. Abbott Green, of Fingringhoe Hall, was first and reserve with two very fine animals. Mr. J. Deane Willis was first in yearling bulls with C.I.V., which won the champion at the Royal Counties, the Bath and West of England, beating the King's Royal Duke Champion. Mr. D. Abbott Green came to the front in the county class with Royalty, a handsome bull, which was also first in the open class, and the judges awarded him the Shorthorn Society's special prize for the best shorthorn bull in Essex and Cambridgeshire, calved in 1901, but he was a few weeks too old, and the special therefore went to Mr. Chas. Adeane, Babraham Hall, for his handsome roan Fairy Prince.

No doubt on account of the Norwich Show clashing with this fixture, the Red Polls were not up to the usual mark for the Essex Show. There was but one entry in the cow class, two in the two-year-old heifers, and a like number in the yearlings, Mr. R. P. Cooper being the chief winner. The Polled Angus showed up much better. Mr. R. W. Hudson, invariably a strong exhibitor, was first in the cow class with a handsome, compact animal. The second honours went to Essex, to Mr. W. Dannatt, of Great Waltham, but Mr. R. W. Hudson came to the front again in the three-year-old class with Star of Danesfield. Of two-year-olds, there was a very choice collection of a dozen entries. Here Mr. Hudson had to give place to Mr. C. W. Schroeter, who came off the chief winner in grand ocmapny, and to Mr. W. B. Greenfield, who was second with a typical exhibit, Mr. R. W. Hudson having to be content with a reserved and highly commended card. Only three bulls were entered in the three-year-old collection, the chief prize going to Mr. F. Crisp, of Shire horse notoriety. Of two-year-olds there was a much better entry, Mr. J. H. Bridges taking precedence of Mr. W. B. Greenfield, who was second, and Mr. R. W. Hudson, who was reserved. Mr. R. W. Hudson's beautiful cow Effulgent of Danesfield secured the silver medal given by the English Aberdeen Angus Cattle Association.

There was as usual at this show a grand collection of Jerseys. The competition was keen in the cow class confined to the county, but Mrs. Charlotte McIntosh's Gloriosa III. took the lead, and this fine animal was first also in a big open class. The chief prize-winners in the heifer classes were Mr. E. Murray Ind and Mr. J. R. Corbett. Mr. C. H. Berners, Woolerstone Park, was a comparatively new exhibitor in this department of the show. Mrs. Charlotte McIntosh's Halburton Prince came to the front amongst the two-year-old bulls, and the same lady also carried off second. Close upon a score animals were entered in the open class for yearlings, amongst the list being consignments from various parts of the country. Admiral the Hon. T. S. Brand was first with Doctor, a beautiful whole colour, the second going to Mr. A. W. Ruggles-Brise.

Sheep.

The first of the sheep classes were for Southdowns, and in this section Colonel H. McCalmont, M.P., swept everything before him, winning the first prize in each of the four classes. In the class for pen of three rams, Mr. Edward Ellis's exhibits ran the prize-winners very close indeed. The gallant Colonel carried off the Southdown Sheep Society's silver medal for the best male Southdown, as well as the society's medal for the best female. There was a capital display of Suffolks, and here there was again a little further reversal of previous judgments. The second prize ram at Ipswich was here reserved, Mr. Thos. Goodchild winning first with a ram of good carcase, while Mr. Herbert Smith's second prize winner was a fresh sheep that had not been out this year, but won first prize as a lamb in the untrimmed class last year at the Suffolk Show. There were nine exhibits only of ram lambs, a comparatively small number, due to the Essex and Norfolk Shows clashing, the result being to spoil the shows in this section at both places. The judges were some time in making up their minds between the first and second prize-winners, but they eventually awarded the premier position to Mr. Goodchild, Mr. H. E. Smith being second. Mr. Goodchild also won both first and second prizes for shearling ewes, which were a poor lot in comparison with the numbers usually seen at Essex. Nor did the ewe lambs compare favourably with last year. Here Mr. Goodchild was second to Mr. D. A. Green, but there was not much to choose between the two pens. Mr. Green came to the front in the open class with a nice pen of three ewe lambs. For six shearling ewes, open to the county, there were but two competitors, Mr. Goodchild and Mr. J. W. Eagle, who won in the order given. Mr. Goodchild was also an easy winner in the ram class, open to Essex, so that altogether this gentleman met with great success. There were three classes for Hampshire Downs, with about eighteen entries. Mr. T. F. Buxton practically swept the board, he winning the first and second prizes in each class, and the Hampshire Down Sheep Breeders' Association's special prize for the best pen of lambs, for which prize he was also reserved.

Miscellaneous.

The dairy classes were well supported, but the dog show, which forms a ver yimportant part of this exhibition, was not quite so attractive as in some former years, no application of the sweepstake principle in the apportionment of the prize money in some of the sections accounting for the absence of not a few prominent exhibitors, who have previously supported the show. The exhibition of poultry and pigeons, as usual, proved an attractive adjunct to the show, this being indicated by the large numbers who visited this department.

The entries totalled upwards of 750, but it was rather noticeable that there was not an altogether large contingent of local exhibitors, most of the birds entered belonging to fanciers living in various parts of the country. An horticultural display was also included in the programme, this being chiefly a local affair, which received its fair share of attention from the visitors. Implements, trade exhibits, although not nearly so numerous as last year at Colchester, showed a marked increase as compared with the exhibition at Romford nine years ago.

Herefordshire and Worcestershire

The hundred and fourth show of the Herefordshire and Worcestershire Agricultural Society was held in the capital of the former county, the site being the racecourse, which was in every way the best possible show yard that could be obtained in the city. The entries were excellent, a total of 600 being received, or only 21 fewer than the record obtained at the memorable show held at Worcester in 1895, the year of the amalgamation of the two counties. Cattle number 235, as compared with 174 at Evesham last year, 170 in 1900, at Leamington, and 179 at Hereford in 1898; in fact, the cattle entries were the largest received for many years, and probably broke the record. Of horses, there were 158, as against 166 last year, 173 in 1900, and 220 at Hereford in 1898; sheep totalled 77, a slight decrease on the average number; pigs numbered 17, as against 10 last year, 20 in 1900 and 1898; whilst cider and perry entries were the largest on record, being 88, as compared with 54 in 1901, 67 in 1900, and 53 when the society last visited Hereford. The quality of the exhibits was all round good, and the show in this respect was a complete success. Unfortunately, the weather was far from favourable on the first and last day, though fine on the second, and it had a bad effect on the attendances, so that the financial result of the show fell short of previous years. The total sum taken for admission and grand stand was £865 10s. 6d., as compared with £1,023 9s. 9d., at Evesham last year, and £1,011 6s. 5d. on the last occasion on which the society visited Hereford. On the first day the show was visited, in civic state, by the Mayors and members of the Corporations of Hereford, Worcester, and Leominster, and public representatives attended officially from Kidderminster, Monmouth, Evesham, and Ross. They were received by Sir John Cotterill, Bart., who gave them a hearty welcome, and the Mayors of Hereford and Worcester briefly acknowledged the reception.

The judges were:—Cattle: Herefords: Messrs. F. Evans, The Weston, Bredwardine, and Mr. T. R. Minton, Shrewsbury; Shorthorns and dairy cattle: Messrs. C. W. Brierley, The Firs, Brimfield, and F. Punchard, Kirkby Lonsdale, Westmoreland. Jerseys: Mr. George Joseph Farnham, Surrey. Horses, agricultural: Messrs. F. W. Griffin, Borough Fen, Peterborough, and H. T. Smith, Messrs R. L. Angus, Blenheim, Woodstock, and The Grove, Crosswell. Hunters and hacks: T. H. Hutchinson, Manor House, Catterick. Shropshire sheep and pigs: Messrs. W. Barrs, Odswal Hall, Nuneaton, and J. E. Farmer, Felton, Ludlow. Ryeland sheep: Mr. H. W. Taylor, Showle Court, Ledbury. Cider and perry: Messrs. F. J. Lloyd, Muscovy House, Trinity Square, London, and John Wootton, Byford, Hereford.

Cattle.

Naturally enough, Herefords occupied the premier position in the cattle section, and they made a splendid display, well worthy of the breed so closely associated with the county. The fourteen classes provided for the breed were all well filled, and in many the judges had no little difficulty in making their awards. In the first class, that for bull, cow, and offspring, the calf to be bred by the exhibitor, and not exceeding one year old, there were four entries only, but so high was the quality of all that the judges took some time before making their award. Finally, they gave first prize to the society's president (Sir John Cotterell), who showed his three-year-old bull Ricardo and a seven year-old cow named Rose, with their offspring, which was nearly four months old. Second prize went to Mr. Lawton Moore, Brampton Brian, for an excellent trio, but he had a very close rival in Mr. Britten, Worcester, whilst Mr. Edward Caddick, Ledbury, got the reserve ticket. Bulls calved last year formed one of the strongest classes of the section. So close was the competition that the judges were unable to agree, and Mr. T. Powell was called in as referee. The result was that Mr. Peter Coats's Holmer was placed ahead of Mr. Hughes's Glendower II., the winner at the Royal Counties Show. The two did not meet at the Royal Counties Show, but at the Bath and West Glendower II. was placed above her victor on the present occasion. Both animals are splendid specimens of the breed, and were shown in good condition. Mr. Turner's Marcellus, a stylish descendant of Perthshire, was a good third, and the reserve card fell to Mr. R. Green with Matterhorn, whilst Lord Llangattock had to be content with a commended card for his Hendre Albion.

The second class of bull calves of the same year also attracted a good number of promising animals, the restriction being that no exhibitor should compete who within the last ten years has won a prize for Herefords at the Royal or the Bath and West. Holmer again headed the list, and this time was an easy winner, and was followed by Captain Heygate's Cherry Stone, Mr. Lawton Moore being a good third with Bonanza.

Of the fourteen entries in the class for two-year-old bulls twelve were shown by residents of Herefordshire, and it was in this class that the champion animal was found, namely, Mr. Turner's Magnet, a bull of imposing appearance, and possessed of character and great scale. Mr. Edwards' herd at Tutley supplied the second winner in the class—a good specimen of the breed, named Evolution. The other animals in this class were not of any great merit. The class for bulls calved previous to January, 1900, brought together six fine and typical Herefords. First prize went to Mr. Barneby's Gambler, which was run pretty closely by Mr. Cave's Victor.

The class for last year's heifers was a capital one, amongst the eighteen forward being several animals of the highest quality. First prize was gained by Messrs. Firkens Brothers' Daisy, a beautiful type of Hereford, which was subsequently reserve for the female championship. The Hendre strain was well represented in Lord Llangattock's Hendre Bountiful, which was placed second after close competition with Capella, a stylish heifer, fifteen months old, from the herd of the late Mr. H. Heywood. There was a good show of heifers in the class restricted to exhibitors who have not within the last ten years won a first prize at the Royal or the Bath and West exhibitions. In this Daisy had no difficulty in asserting her superiority, and she was again followed by Hendre Bountiful. Mr. Hall's Rosalind, a useful type of heifer, was placed third. The class for heifers in pairs was not a big one, but on this account quality does not suffer. The winning couple were Priceless and Calliope, shown by the executors of the late Mr. H. Haywood. Sir John Cottrell's animals were placed second, and Mr. Davies's third. Seventeen animals turned out in the class for two-year-old heifers, and a very representative lot they were. Honours were divided between Mr. Barneby, with Mistletoe, a daughter of the well-known Happy Hampton, and Mr. R. W. Hall, who in the restricted class won with Silva IV. Heifers in milk, calved in 1899, were rather less numerous than usual, but some excellent specimens were stalled, mostly from the country herds. Mr. J. Smith won with Beautiful, a serviceable heifer rightly named, which also won the champion prize for the best cow or heifer. In the other classes in the section, which were made up of milch cows and one-year-old steers, there was nothing of particularly outstanding merit. Mr. D. Evans won in the cow class with Pretty Tulip II., aged seven years, while the principal award in the other class falls to Mr. R. Green with Whittern Brook.

Although shows in a district where very little bred, the Shorthorns attracted a great deal of attention, which they thoroughly deserved, for though not so numerous as the Herefords, they certainly were of as high quality, many noted herds in various parts of the country being represented. The society, it may be mentioned, treat the shorthorns with the same liberality as is accorded to the Herefords in the matter of championship distinction, and in addition to this the Shorthorn Society gave a prize of £10 for the best shorthorn bull born in 1901, the property of a resident in Herefordshire or Worcestershire. Mr. H. Ker Colville won the first prize in the bull, cow, and offspring class, the victory being in a large measure due to the undoubted claims of the bull Royal Seal and the smart little calf. Royal Seal attracted a great amount of attenion. Lord Tredegar came second with Snowdrop 8th, undoubtedly the pick of the collection, and Sybil, whilst third honours went to Mr. J. Powell. An old exhibitor and patron of the breed, Mr. G. Harrison, of Darlington, headed last year's bull calves with Star of Roses, which is by Lovat Star. The judges experienced some difficulty in awarding second and third honours, but ultimately second place fell to Mr. R. Stretton with Guardsman, a bull of fine type, whilst Dusky Prince, a massive specimen from the Towcaster herd, the exhibit of Mr. W. C. Cooper, was given the third prize. There was another capital competition in the class for bulls calved in 1900, and this ended in the premier honours being acquired by Mr. R. P. Cooper, of Lichfield, with Stoneyton-Archer, which has won several prizes this season, Lord Tredegar coming up very close with Jester, which carried off the second prize. Next came Mr. John Hobson's Hopeful Lad, another very good exhibit. Mr. Harrison headed the class for bulls calved previous to January, 1900, with his fine five-year-old Inspector, which was also placed reserve to the champion. Lord Tredegar and Messrs. J. Little and Sons took second and third positions respectively. Last year's heifers made quite a nice little display, and first prize was deservedly given to Mr. Stratton's Plume, which, it will be remembered, won a third prize at the recent Bath and West Show at Plymouth. On Tuesday she was reserved for the female championship. Second position in the class was taken by Rose Martin, a promising animal, shown by Mr. H. Wynne. The two-year-old heifers were not numerous, but the class contained two or three worthy of a good deal more than a casual glance. Mr. G. Harrison won with Flora 6th, by Easter Gift, an exceedingly nice heifer, full of quality, which later on was awarded the female championship. Mr. H. Ker Colville was well entitled to second place with his String of Pearls, and Mr. D. H. Mylton, of Welshpool, stood third with a stylish entry named Delight, one of the progeny of Baron Hobbs. The shorthorn dairy cows, a numerous collection, were headed by Janette 26th, the exhibit of Mr. W. S. Carless, who also showed the best pair of heifers in milk.

The Jerseys made a good show indeed by the side of their weightier rivals, the Herefords and Shorthorns. Mr. Edmund Smith, of Bromsgrove, won the old bull class with C.I.V., Lord Sherborne's Golden Shaw 2nd being second, and Mr. W. C. Cooper third with Leylands Oak. Miss Peel headed the bulls calved in 1901 with Bylett's Swell, the Marquess of Winchester running very close with Doricles. The noble marquess was,

THE WELSH BULL "GOLDSEEKER," which forms the subject of the above illustration, is the property of Mr. O. Parry Jones, Plas Llechylched, Bryngwran, Anglesey. At the Cardiff Show of the Royal Society last year "Goldseeker" was winner of first prize in his class, and was also placed reserve for the Champion Cup offered by the North Wales Black Cattle Society for the best Welsh Bull in the Show. "Goldseeker" was bred on the farm of the University College of North Wales at Llangefni.

however, well to the fore in the cows or heifers in milk, his successful entry being Pearl 4th. Mr. Edward Smith, Miss Peel, and Lord Winchester won the first, second and third prizes respectively in the class for 1901 heifers.

Horses.

Agricultural horses made one of the best collections ever seen at Hereford, the entries being both numerous and of high quality. There was a first rate muster for Shire colts foaled in 1901, and the judge selected Mr. Peter Stubs, of Newnham, Gloucestershire, to lead, with Blaisdon Harold 2nd, which was also reserved in the competition for the champion prize, presented by the president, for the best male in the agricultural horse classes and for the silver medal for the best Shire stallion, entire colt, or colt foal. He is a big colt, very true in his movements, and bears every promise if making a good sire. Mr. Henry Oakley, of Chepstow, was second, with Dewston Pioneer, which took a similar position at the Bath and West of England Show. In the class for Shire colts foaled in 1900 Lord Llangattock secured the first prize with Hendre Heirloom, and the president's champion prize for the best-made in the agricultural horse classes; also the silver medal for the best Shire stallion, entire colt, or colt foal. Hendre Heirloom won second honours at the Bath and West of England Show on the first occasion upon which he was shown; he possesses great weight and power, and was far and away the best animal in the class. Mr. Stubs' Eckington Conqueror, to which was awarded the second prize in the class, is in capital feather, but he does not possess the weight of the winner. The third prize was given to Mr. J. Powell for Bar None Victor, the winner of a first at Evesham last year. Lord Llangattock was also successful in the class for Shire fillies foaled in 1900, taking, in addition to the first prize in the class, champion honours for the best female in the agricultural horse classes, and the silver medal for the best Shire mare, filly, or filly foal with Hendre Marguerite, a filly with hard-wearing legs and good feet, and the winner of first and champion prizes at other shows. Messrs. Firkins' Paunton Rosebud was awarded second prize, and she is a useful animal in fine feather. For Shire mares with foal at foot, both first and second prizes went to Mr. Peter Coats, of Clifford, the third falling to Mr. Henry Oakley, of Dewston, Chepstow, with Chilwick Victoria, with a bay colt foal by Dromster. Duchess of York, the winner of the first prize, is a typical brown mare, and has won several prizes, whilst the second winner, Inlake Grace, also possesses great weight and size. In the local class for Shire mare with foal at foot Mr. Coates secured another win with the Duchess of York, and reserve for the silver medal for the best Shire mare, filly, or filly foal. There was a very useful lot of animals in the local class for colt or gelding foaled in 1901, and Mr. W. Darlington, with Clevedole Bar William, scored a meritorious win. The local fillies, foaled in 1901, were excellent in every respect. Paunton Jealous, the property of Messrs. Firkin Bros., which took first prize in the class, also being reserve for the special prize offered by Lord Llangattock for the best Shire mare or filly entered, the property of a tenant farmer in the counties of Hereford, Worcester, or Monmouth. The filly shown by Mr. Hodgkiss, of Holme, Lacy, took the second prize, whilst the same exhibitor secured the first prize in the local class for fillies foaled in 1900, and also took Lord Llangattock's prize for the best Shire filly shown from the counties of Hereford, Worcester, and Monmouth.

The light horses were generally up to the standard of previous shows, but were not quite so numerous as usual. In the hack class there was an exceedingly meritorious collection of animals, and they were considerably in front of the hunters. The two classes devoted to cobs and ponies were not very large, and they would no doubt have been better patronised had the weather proved of a more seasonable character. The three winners in the class confined to the counties of Hereford and Worcester, for a colt or filly foaled in 1901 showed useful quality and good breeding, and indicated every possibility of turning out excellent hunters in the future. The winner was Mr. Mynor's gelding, sired by Royal Meath, who secured second honours at the Hereford Show as a foal a year ago. The class for filly or gelding foaled in 1900, was a good all-round class, and the first-prize winner, which also secured a special, won first honours as a yearling at Ludlow. The second prize-winner, exhibited by Mr. Gough, of Bodenham, was third in the sameclass with the winner at Evesham last year. The class for filly or gelding foaled in 1899, was composed of blood animals, in which Mr. G. H. Green took first and special with Hark. Gladys, the winner in the class for filly or gelding foaled in 1898, was an animal of splendid promise, and far above the other animals against which it competed. The class for coach and carriage horses, not more than five years old, bred in the counties of Worcester or Hereford, was not quite up to the standard. It was a difficult class to judge, and all that can be said about the winners is that they were typical carriage horses. An irregular class was that devoted to mare or gelding hunters, for riders from 13st. 7lb. to 15st., and Mr. H. Cory secured first and champion honours easily. Rustic Gem, the property of Messrs. Downes, of Richard's Castle, the winner in the class for brood mare with foal at foot, the mare to be not less than 15 hands, is a capital animal of excellent substance, and it is in the matter of substance that she just beat Mr. Everall's Beauty, a twenty-one-year-old animal, which, however, shows very little signs of age. The Hunters' Improvement Society's gold medal fell to Mr. J. C. Jones's aged mare by Wild Fern, and the silver medal to Mr. P. Baldwin's Queen's Birthday.

With but one or two exceptions the hackneys and ponies show no special merit. Druid, which took first prize in the class for hackney mare or gelding not exceeding 15 hands 2 inches, was a first-rate winner at Islington, and the second, Duchess, is a promising four-year-old. Mr R. Jones, of Swansea, secured a good win in the class for cob, mare, or gelding, not exceeding 14 hands 3 inches, with My Lady, whilst the winner in that devoted to pony, mare, or gelding, not exceeding 13 hands 2 inches, was Mr. Foster's Melvalley Marvel. The harness classes opened with the tandems, and eight as pretty teams as one could wish to see were driven into the ring. The winner was Mr. T. D. John, of Cardiff, his team being made up of Heathfield Squire and Heathfield; Mr. F. J. Batchelor's Wild Agnes and Enid being second, and Mr. W. J. Tatem (Cardiff) third, with Surprise and Astonishment. The single-harness competition for entries 14.2 and over brought out nine candidates. The real competition was between Mr. Frank J. Batchelor and Mr. T. D. John. The latter was eventually adjudged the winner, with Heathfield Squire; Mr. Batchelor's Chiswick second, and Heathfield third. There were several minor honours. A very interesting competition indeed was the bending race, for ponies not less than 14 hands, and not exceeding 14.2. There were nine entries, eight of which were from the area of the society, and one from Somerset—the Keynsham Stud Company's Nondescript. From the first this latter shaped all like winning, and ultimately secured the verdict; Mr. Whiteman (Leominster) being second, with Mystery; and Mr. H. J. Stedman (Hereford), reserve, with Alacris. The jumping events were, as usual, witnessed with interest by a large company.

Sheep.

The sheep made a somewhat larger display than usual, and the quality was, taken all round, of the very best. Mr. W. F. Inge, of Thorpe Hall, Tamworth, secured first in the class for Shropshire shearling rams with a typical animal, which afterwards was awarded the championship. First honours in the class for rams of any age were taken by Mr. R. Cooper, of Lichfield. The competition in the class for pen of three ram lambs was very strong, the animals all being very forward; indeed, the class, as a whole, was much stronger than is generally the case at shows held at this time of the year. Mr. Denton Gibson, of Leamington, however, scored a somewhat easy win with three very fine lambs. In the class for pen of three yearling ewes, Mr. Inge was first, with three entirely fresh specimens. The Ryelands, though not numerous as to entries, were excellent in quality, very fine as to wool, and all of the true Ryeland type.

Miscellaneous.

Fou rclasses were devoted to pigs, and though the entries were small, the animals on view were of good quality. Mr. J. Jefferson, of Peel Hall, Chester, one of the best known of the black breeders, carried off the honours awarded in classes devoted to blacks, and Mr. Denston, of Leamington, was almost as successful in the classes devoted to whites.

As to the produce section, it may be mentioned that the entries in the classes for cider were strong, and the quality so good that each competitor received the commended award. The judges had only one fault to find—that the cider is a trifle too sweet. Butter and cheese formed an interesting show. The quality was good and the entries were all well put on. The class for potted butter was small, and the quality not of a very high standard, owing to the fact that it is a trifle too early in the year for this class of produce. Cream cheeses were excellent, though not so numerous as usual.

Glasgow.

The summer show of the Glasgow Agricultural Society has in former years been held in April, and being sandwiched between the Kilmarnock and Ayr shows, it undoubtedly, and perhaps the others, suffered somewhat from three such large affairs being held so close upon each other in such a circumscribed area. The directors, therefore, decided to make a change this year, and the show took place on Wednesday and Thursday last, and the change was attended with a gratifying measure of success. More favourable weather was experienced, and among the entries were several Kilmarnock and Ayr exhibits, which it is very doubtful would have been forward if the show had been held in April. The number of entries was about 600, a total slightly below that of last year, but this is mainly accounted for by the fact that a new rule was imposed, that winners in the hackney section could not compete in the hand and saddle classes for roadsters. There was a substantial increase in the number of Ayrshire cattle, of which there were 108, as compared with 97 last year; Clydesdale horses, however, fell from 175 to 136; hackneys numbered 40, against 44; and there were about 140 roadsters and ponies, as compared with a similar entry a year ago; sheep numbered 61, as against 77; and in the new classes there were 15 Aberdeen-Angus cattle and 7 shorthorns, whilst the entries in the dairy produce section numbered 33, about the same as last year. An alteration that was much appreciatd by visitors on the first day was that all the sections were open to view, instead of, as in former years, the cattle and sheep being shown on the second day only.

The judges were:—Cattle.—Ayrshire—Messrs. James Wilson, Boghall; William Howie, Finnoch Bog, and William Reid, Titwood. Aberdeen-Angus—Mr. A. H. Anderson, Kippendavie Estate Office, Dunblane. Shorthorn and Cross—Mr. George Sinclair, Home Farm, Dalmeny Park. Horses:—Clydesdale Mares and Fillies.—Messrs. William M'Keich, Woodend; David A. Hood, Balgreddan; and A. B. Matthews, Newton-Stewart. Clydesdale Horses and Colts—Messrs. William Park, Glenshinnoch; John P. Sleigh, St John's Wells, Fyvie, and John Hastie, Eddlewood. Hunters—Messrs. Archibald Kerr, Mouswald; David Stevenson, Crossburn, and J. S. Johnston, Crailing Hall, Jedburgh. Registered Hackneys—Mr. Richard Ford, Wakefield. Sheep—Leicester—Messrs. Andrew Smith, Longniddry; John Wallace, Auchenbrain; and Robert Clark, Oldhamstocks Mains. Blackfaced—Messrs. John Craig, Innergeldie; Alexander Cowan, Spittalhill, and John Fisher, Auchrioch.

Ayrshire Cattle.

Previous to this year the cattle classes were confined to the Ayrshire breed, but on the present occasion classes were provided for Aberdeen-Angus and Shorthorns, and they met with a fair amount of support. The section was a more varied one than formerly. Ayrshire, of course, occupied the premier position, and the change of date of the show seems to have had a marked effect here, for the entries were more numerous and the quality was, perhaps, above the average, both in the male and female sections. Aged cows in milk were headed by Mr James Lawrie's Beauty, a five-year-old daughter of Silver Heels, which later on was awarded the Glasgow Licensed Victuallers' Cup given for the best cow or quey of the breed. A very good four-year-old, owned by Mr. Samuel Hamilton, and got by King of Castlehill, was second in the class, Mr. James M'Alister's well-known four-year-old Pennylands being third. Three-year-olds in milk were scarcely up to the standard of quality reached by the aged class, but still there was a fair show. Mr. James Lawrie's Blossom, a brindled daughter of Silver Heels, which was first at Hamilton, again led. Mr. John M'Alister was second and third with two of his own breeding. In the class confined to cows or queys bred by exhibitors, Mr. Robert Wilson's broken-horned animal, which led the uncalved class at Paisley, once more showed the way. Mr. Wilson was likewise second, his representative being the leader of the three-year-olds in calf at Paisley. Four-year-old cows in calf made a fair show. Joan, a sweet, big brown cow, owned by Mr. James Kinloch, was first, a big commercial animal, belonging to Mr. Robert Wilson, coming second, and Mr. Jas. Neill was third with Exceptional. Three-year-olds in calf formed a better class. Another short-legged, thick daughter of King of Castlehill, belonging to Mr. Samuel Hamilton, was first. Mr. Robert Wilson was second with his Paisley winner; and Mr. James M'Alister's Whity II. was third. The Derby was led by Mr. James Laurie's Blossom, Mr. James Wilson's Melrose being second. In a very good class of two-year-olds in milk Mr. James M'Alister's East Kilbride winner, Beauty, by Silver Heels, easily took precedence, Mr. Robert Wilson coming next with an animal which was second at Paisley. In the yield section competition was keen. The two-year-olds, which formed, perhaps, the better of the two classes, were headed by Mr. Andrew Mitchell's recently-purchased Aileen Aroon, which has so far been unbeaten in her class this season. Mr. Robert Wardrop's beautiful Vesta Tilley followed, and the third ticket fell to an exhibit by Mr. Mitchell. In a very good lot of queys stirks, Mr. James Howie led with the sweet, stylish, upstanding heifer, Mr. Thomas Barr being second with a strong specimen, while third place was allotted a sweet heifer owned by Mr. Wardrop, and named Miss Meglerie.

The first of the bull classes was for animals calved January 1st, 1900, and the best of them was Mr. James Howie's Not Likely, which had also the distinction of securing the Glasgow Licensed

Victuallers' Cup as the best bull. This bull has had a very successful career. He gained the championship at Kilmarnock and Ayr both this and last year, whilst he won first at the Glasgow and Highland shows of 1901. In the two-year-old bull class, Mr. Andrew Mitchell lead with Surprise, which has hitherto had to be content with an inferior place. Colonel Fergusson-Buchanan's The M'Kinlay was second. Mr. Archibald M'Kay's Robin Adair, a sweet bull that took the championship at Rothesay, being third. There was, as regards quality, a very good class of yearling bulls, though the numbers were somewhat small. Mr. James Howie came to the front with Hope On, a stylish, thick-set bull, which was reserve for the championship. Mr. Robert Wardrop's Valentine, a good animal, which was first at Kilmarnock, came next, while Gentleman John, a very sweet son of Not Likely, and bred by Mr. Hunter, was third.

Aberdeen-Angus and Shorthorns.

The four new classes for Aberdeen-Angus attracted fifteen entries, the quality of which was excellent, and there is every prospect of the doddies becoming a good show in years to come. In a class of four old bulls Mr. Sharp, Bardrill was first with Rover of Morlich II., a two-year-old, sired by Rover of Craibstone, which was also the sire of the second prize heifer and the first prize cow. Mr. Sharp's bull was first at Stirling last week, but it was then beaten for the championship by Mr. Kerr's cow, Queen Marjory, but on Wednesday was placed third in the class for heifers calved after December 1, 1899, which was first at the Royal Society's Show last year. Rover of Morlich II. was awarded the cup as the best bull of the breed shown. The second prize in the bull class went to Mrs. Reid, Auchterarder House, for Envoy of Benton, a five-year-old, sired by Esmond of Ballindalloch, out of a dam by Cerberus. Mr. James Kennedy, of Doonholm, got the third ticket for Mondamin, which he purchased at the Perth spring sale last year. Only two yearling bulls were entered. Mr. Kennedy carried off the leading honour with Prileno, sire Proud Duke of Ballindalloch. Messrs. Meiklem were second with Proud Makine, a bull of their own breeding, and showing Auchorachan blood. There were half a dozen heifers forward in the class for animals calved after December 1st, 1899, and here Mr. Kennedy took the two principal tickets, although there was some difference of opinion as to the order in which they should have been placed. The first prize was given to Quines, a very neat two-year-old, bought at Mr. Eggington's sale, and out of the South Ella dam, Black Empress, which was the champion at Birmingham Fat Stock Show. Mr. Kennedy's second heifer was the yearling, Myrica, of his own breeding, and sired by Rover of Craibstone. Mr. Kennedy was also first in a small but good class of cows in calf or with calf at foot, with Jemima XXXIV. of Morlich, a five-year-old, by Rover of Craibstone, which had a very promising calf at foot. Messrs. Meiklem were second with a cow bred by Colonel Smith Grant of Auchorachan, and which has done well in the showyards for several seasons.

There was but a small show of Shorthorns, and nearly all the prizes were taken by Mr. Mathew Marshall. In the class for yearling bulls there was no competition, and the prize went to Mr. Marshall's Count Marksman, a roan bred by Mr. Grainger, Coupar-Angus. For yearling heifers Mr. Marshall was first, second, and highly commended, the highest award going to a white of his own breeding, and the others to Christmas Belle, a roan, and Sweet Maid III., a red, both bred by Mr. F. W. Christie, Cupar. In the class for cows in milk or in calf Messrs. Meiklem were first and Messrs. Andrews and Sons, Paisley, second.

Clydesdale Horses.

The Clydesdales were not so numerous as usual, but the quality was excellent, and the display all round was a capital one. In the three-year-old stallion class there were six entries, and every exhibit was deemed worthy of a ticket. Mr. William Park, Brunstane, came to the front with his splendid brown colt Marmion, of his own breeding, which has had a most successful showyard career. The second ticket went to Mr. John Pollock for King Edward, a sweet and stylish son of the champion Hiawatha, Mr. Matthew Marshall following with Marconi, also a son of Hiawatha. There were nine two-year-old colts, and they were a very good lot, six of them being included in the prize-list. Mr. Walter Park was first with Royal Chattan, a well-built colt, and almost without a fault, Mr. James Kilpatrick being second with Pearl Stone, a big, upstanding colt, bred by Principal M'Call, and which was similarly placed at the Spring Stallion Show. Mr. Walter S. Park came third with Ardlethan, which was first in his class at the stallion show. Fifteen yearling colts came before the judges, who had some difficulty in making their awards, all the animals being of high quality. Mr. Peter Dewar was first with a son of Royal Favourite; Mr. Wm. Clark, Netherlea, second, with a particularly good get of Prince Thomas; third place was taken by Mr. James Gray with another Royal Favourite colt, Gartly Again; whilst Mr. James Kilpatrick was fourth with still another son of Royal Favourite. Brood mares were a small class, but they comprised at least three well-known animals. Mr. Kerr was first with his five-year-old Baron's Pride mare, Lady Garnet, which was first at Kilmarnock and Edinburgh; Mr. John M'Millan, Strathaven, coming second with Bent Darling, a five-year-old, by Flashwood Last; while the third position fell to Mr. William Taylor for his well-known mare Legacy, by Sir Everard, which was not looking her best. The judges had no difficulty in dealing with the yeld mare class, an outstanding winner being furnished in Mr. Alexander Guild's handsome six-year-old, Lady Margaret, which was champion at Glasgow, Ayr, and Edinburgh last year. Mr. St. Clair Cunningham's Minnie of Walkinshaw, which has stood well for several seasons in the principal showyards, came second, and Mr. David Riddell was third with Scottish Peeress. In a fairly large class of three-year-old mares and fillies Mr. St. Clair Cunningham led, as at Edinburgh, with his beautiful White Heather, a daughter of that wonderfully successful sire, Baron's Pride. The second prize went to Mr. John M'Kay, Barrhead, for Miss Taylor, sired by Sir Everard; whilst Mr. David Curr, Cathcart, was third with Lady Peggie, also by Baron's Pride. The best of the two-year-old fillies was Mr. James Davie's (Bogton, Cathcart) Beauty's Pride, a daughter of Up to Time. She was followed by Mary Weir, a big, substantial filly from Townhead, Lanark, but many thought Mr. David Mitchell's Princess Roberta should have occupied the position. The yearling fillies were undoubtedly the best class in the Clydesdale section. They numbered fifteen, and their merit was such that the judges placed no fewer than eight of them. Mr. Henry Gray, Kincardine-on-Forth, had the credit of leading with the very stylish dark brown animal by Royal Favourite breeding. Mr. Peter Dewar, Arnprior, was second with a nicely-built brown filly, also by Royal Favourite. The third ticket going to Mr. John M'Nee, Crieff, for a Montrave Mac filly which won at Edinburgh; Mr. St. Clair Cunningham was fourth with the Baron's Pride, get Longland Mary; Mr. David Mitchell coming next with a daughter of Marcellus; and Mr. Cunningham following with Bell Heather, another of the numerous progeny of Baron's Pride.

The Derbies for yearling fillies and yearling colts were not judged until the second day, when also some champion awards were decided. Although there were thirteen animals nominated for the yearling filly Derby, only three were forward, and with the exception of Mr. William Wood's filly by Royal Gartly's Heir, which was placed seventh on Wednesday, none of the animals which gained prizes in the open class competed. The Braco filly was given the first ticket; Mr. William Taylor, Park Mains, being second; and Sir John Gilmour third, with the Baron's Pride filly, Montrave Rena. The Derby for yearling colts had an entry of sixteen, most of which were forward. In the absence of the first and second prize-takers in the open class, Mr. Gray, Birkenwood, was placed first with the Royal Favourite filly, Gartly Again, and Mr. Kerr's filly by the same sire, got the second ticket. There was only one entry in the class for sires of the best three yearling colts, geldings, or fillies of the Clydesdale breed. This was the five-year-old Royal Favourite, belonging to Mr. Peter Dewar, Arnprior, Port of Monteith, and sired by Royal Gartly out of a Brooklyn dam. The prize offered for family groups of mare and two offspring also drew out only one entry, but it was a highly meritorious exhibit that could have faced a deal of competition. It consisted of Mr. William Park's seven-year-old mare, Lady Rose; her well-known three-year-old son, Marmion, the first-prize three-year-old colt; and her two-year-old daughter, Floradora, both got by Mr. Park's horse, Prince of Brunstane. The competitors for the president's silver plate, given by Lord Provost Chisholm for the best male Clydesdale in the show were Mr. Walter Park's two-year-old, Royal Chattan; Mr. William Park's three-year-old, Marmion; and Mr. Peter Dewar's first-prize yearling colt. The coveted honour was awarded to Mr. Walter Park's colt, Mr. William Park's Marmion being reserve. For the Licensed Victuallers' Cup of 50gs. for the best female Clydesdale the winners in all the classes competed, but the extraordinary quality of the Royal Favourite yearling filly, belonging to Mr. Henry Gray, Hawkhill, Kincardine-on-Forth, again carried her to the front for the championship, Mr. St. Clair Cunningham's three-year-old White Heather being reserve. The Hawkhill yearling filly also gained the Clydesdale Horse Society's medal for the best female in the young classes, Mr. Peter Dewar's second-prize yearling filly, by Royal Favourite, ling filly, by Royal Favourite, being reserve being reserve, and Mr. Weir's second-prize two-year-old filly being placed next in order. Mr. Davie's first-prize two-year-old filly was not eligible to compete, having won the medal at Paisley the other day. The cup for the best gelding was awarded to Mr. William Clark's aged horse, the first-prize three-year-old, belonging to Messrs. Caulfield Brothers, Hurlford, being reserve.

Hunters.

The hunter classes were not strong numerically, but they comprised some very fair quality. There was a splendid lot of heavy weights, which probably formed as good a class as has been seen in Glasgow. Messrs. T. and H. Ward, Great Ayton, secured first prize, with a beautiful black five-year-old horse; Mr. Alexander Gemmell, Ayr, was second with Champion Royal Flush, which was first at Ayr; whilst Mr. James Kennedy, of Doonholm, was third with Patrician. In the lightweight class, Mr. Edward Hoyle, Bacup, was placed first with Bonaparte, a beautiful horse; and the second prize went to Messrs. Ward for a very nice animal. The three-year-old class was of only average merit, and here Mr. David Fleming was first with a brown animal, and Mr. Hoyle's Rosebery second. Two-year-olds were a better lot. Mr. J. A. Campbell's Ballyhough, the Ayr winner, led, and was followed by Mr. Alexander Kennedy's Ladybird II. Ballyhough has more bone than Ladybird II., but the latter is a mare of very good quality, and was awarded the Hunters Improvement Society's medal for the best hunter filly which had not previously won it this season. Mr. J. A. Campbell also exhibited two outstanding animals in the class for yearlings, and they were placed first and second. The winner was a chestnut by North Mayo, and was bred at Craigie House; while the second was Westlands, likewise a chestnut, bred at Westlands, Newcastle, and got by Carnmint.

The Hunters' Improvement Society's silver medal for the best hunter filly which has not previously won the medal in 1902 was gained by Mr. A. Kennedy, Anniesland, with his second-prize two-year-old, the same society's medal for the best hunter mare or gelding of any age being awarded to Mr. Edward Hoyle, Moorlands, Bacup, for Bonaparte, the winner in the lightweight class. The reserve was the winning yearling of Mr. J. A. Campbell, Craigie.

Hackneys.

The Hackney horses made a most interesting display, they being more numerous than last year, whilst the quality all round was good. Two very good brood mares, 15 hands and upwards, headed their class. The first was Lady Millie, belonging to Mr. A. A. Haley, Eddlethorpe, and was of outstanding quality. Mrs. Mackenzie Fraser, of Castle Fraser, owns the second, Mascotte, which was first at Kilmarnock this year. Lady Caxton, a chestnut, by Caxton, belonging to Mr. David Riddell, was third. Only one brood mare under 15 hands was forward, and this was Frodingham Flora, the property of Mr. Seton M. Thomson, and she deserved the first prize given here. There was nothing very special among the three-year-old fillies. The leading award fell to Love Knott, a nice wide, useful mare, sired by Lavengro, belonging to Mr. William Scott. Messrs. W. C. Harvie and Co. were second with Spinaway II., a bay got by Lord Seaham, and Mr. Andrew Morton was third with a dark brown get of Link's Boy. Two-year-old fillies were a very good lot, and the prize-winners were all outstanding animals. Mr. William Scott's Corydalis, by Mathias, took precedence. Mr. Scott also won the second prize with Bryony, got by the same sire. A nice, well-known filly, Bothwell Star, owned and bred by Mr. James Prentice, came third. Among the yearling fillies, Mr. George R. Watson led with a bay got by Hedon Sensation, a wonderful goer and of nice quality. The Kilmarnock winner Mr. Galbraith's Princess Mercedes, was second; whilst Ganydora, by Ganymede, belonging to Mr. David Mitchell was third. Mr. Alexander Gemmell's Cossack, the Edinburgh champion, was the only aged stallion forward, and he attracted much attention. Two-year-olds formed the largest class of colts. Mr. Galbraith's very useful Administrator, first at Kilmarnock and Ayr, again took precedence. Mr. William Scott was second with a get of Mathias called Lord Jersey, a very smart horse, though perhaps a little short as regards size; and a Hull-bred animal, Brentham Squire, owned by Mr. William Alexander, came third. Another of the Terregles stud, Roosevelt, by M'Kinlay, showed the way, as at Kilmarnock and Ayr, among the yearling colts, Mr. Haley's (Malton) a fine-looking animal, Imperialist, which made rather a bad show, coming second.

The Hackney Horse Society's gold medal for the best mare or filly in the hackney and pony classes went to Mr. A. A. Haley, Eddlethorpe, for Lady Millie, his first prize brood mare over 15 hands.

The roadsters, which were judged on Wednesday, made a very good display. In a small class of brood mares, Mr. David Riddell, Blackhall, won with Swallow, whilst in the three-year-old class Mr. George R. Watson was the only exhibitor, his exhibit being Happy Thought. Only two yearlings were entered, Mr. J. S. Cuthbertson, Kilmarnock, receiving the first prize for Sister Dora. The pony classes were well filled. Mr.

Alexander Gemmell, Chelston, Ayr, took the first prize in the class for mares and geldings under 14 hands with Little Woman, which won in her class at Edinburgh, and he was also second with Lord Dalkeith, a four-year-old pony displaying fine action. Mares and geldings under 15 hands were headed by Mr. John Kerr of Gilmerton with Lord Burnham, a successful show-ring animal, which was afterwards selected for the silver cup for the best mare, gelding, cob, or pony shown in harness, consideration being given to style, action, and neatness of turnout. Mr. William S. Miller, Dumbrock, was second with Whitesocks, which was third at Kilmarnock. Mr. John Kerr led in the saddle class for mares and geldings, 15 hands high and upwards, with Zoba, a five-year-old sired by Garton Duke of Connaught. This animal was the hackney champion at Ayr in the spring, and was reserve last week for the Hackney Society's medal. There were some very good animals in the driving classes, in which Mr. Alexander Gemmell was a successful exhibitor, horses bred by him and in the hands of other exhibitors also figuring in the prize list. He was first in the class for mares and geldings under 14 hands with Lord Dalkeith. The second prize was won by Mr. John Brown, Ardross, with Forward, a high-moving seven-year old. Mr. John Wotherspoon was first in the class under 14.2 hands with Early Bird, a chestnut animal with good action, which was the champion pony at Kilmarnock, whilst Mr. John Brown was second with Sir Thomas. In the class for harness mares and geldings under 15 hands Mr. Kerr again led with Lord Burnham, Mr. Wotherspoon coming second with Patronus. Mr. Gemmel was first in the class for mares and geldings over 15 hands with Capital, a grand six-year-old horse, which was reserve to Lord Burnham for the cup for the best harness animal. There was an interesting turnout of Shetland ponies, the neat and smart little animals in the two classes attracting considerable attention. Mr. William Mungal, Dunfermline, was the winner in the stallion class with Hector, a black ten-year-old, bred by the Marquis of Londonderry. Mrs. Wentworth Hope Johnstone, Edenbridge, winning in the mare class with Emerald. The silver cup for the best mare or gelding in the hunter, hackney, and roadster sections was awarded to Messrs. T. and H. Ward, Pinchinthorpe, Yorkshire, for their first-prize heavy-weight hunter. The reserve was Mr. Haly's first-prize hackney brood mare, Lady Millie.

Sheep.

The display of sheep was quite as good, both in point of numbers and quality, as has been seen in former years. Border Leicesters were better than usual, and Mr. M'Intosh, Balquharn, took the chief honours with some well-bred sheep. His first-prize old tup was a well-balanced three-shear, bred by Mr. Fletcher of Roschaugh, and shown for the first time. His three prize shearling rams were placed in the same order as at Edinburgh, and the first prize-taker was awarded the cup as the best of the breed. With the exception of the shearling rams, the classes for black-faced sheep were rather small, but the merit was high. In the Shorthorn section there was only one aged tup forward. He was shown by his breeder, Mr. Thomas Scott, Bogside, Carluke, and he also carried off the cup. For two-year-old tups Mr. James Veitch was first with a sheep of good frame. Mr. John Millar being second with a very fair specimen. Mr. Thomas Scott was first, second, and third for shearling tups, the winner being a particularly good, thick sheep. In the class for unshorn aged tups Mr. John Millar led with a sheep of excellent quality, but somewhat deficient in the head. Ewes lambed before January 1st, 1901, with lamb at foot, were a strong class in point of quality, and here Mr. Thomas C. Wilson won with a five-year-old of his own breeding, which was also awarded the cup for the best blackface ewe of any age.

Thorne.

The Thorne Agricultural Society were very fortunate in being favoured with one of the few bright days we have had this month for their forty-ninth exhibition, which was held on Wednesday. Consequently there was a good attendance of visitors to the show ground. A sum of close upon £400 was offered in prizes. A fair proportion of this was absorbed by poultry, pigeons, and rabbits, which were the strongest classes numerically. In point of number horses were not up to the average of recent years, but there was no perceptible falling off in quality. They numbered 163 as against 180 last year, and 174 the year before. A hundred and sixty-five dogs were benched, and they were more numerous than has been the case for the past six years. Sheep formed a very small section indeed, due, no doubt, to the fact of its being confined to local classes. Dairy produce made a very good display, the butter exhibits especially being very noteworthy. The total entries in all sections numbered 1,483, being nearly eighty in advance of last year, and coming pretty close to the Society's record year.

The entries of heavy horses were very creditable, some excellent animals being included. The winner was a first-rate quality mare by Prince Brilliant, with a filly foal by Minstrel. Foals and yearlings accounted for several very interesting classes. The Shire Horse Society's medal was won by Mr. W. Coulman, of Goole, who also secured the chief place in the pairs of agricultural draught horses.

The average of quality among the hunters was fair, nothing very startling being catalogued. Mr. C. Clark, of North Ferriby, was an easy winner with a big, upstanding chestnut full of quality and a good goer. For roadster mares and foals chief honours went to Mr. Willis Crookes, of Sheffield. The mare moved nicely, and has capital limbs and a good look-out. Similar qualities were exhibited in her colt foal, which very properly headed the foal class. One of the best youngsters out was that shown by Mr. R. H. Savory, of Chertsey, which the judges had no scruple in placing first in the yearling colt class, the second, though a good goer, being rather short of quality. In the other yearling class Mr. Robt. Whitworth, of Market Weighton, led with one of the best fillies out this year. She was placed second at London, and first at Otley, and is altogether a very promising animal. The same owner's two-year-old mare Advertisement added another to her many successes, the judges being much impressed with her good all-round qualities. In the contest of three-year-olds Mr. C. H. Hart, of Appletree Farm, York, won with a nice brown gelding, one of the old stamp. The second, belonging to Mr. C. Robinson, of Batley, was likewise a good goer, but a trifle out of its class, being a bit leggy. In the any age riding class Mr. John Robinson, of Harrogate, obtained premier honours with a well-balanced chestnut, possessing fine neck and shoulders and a good look-out. Ladies' hackneys were a small class, but the harness classes were well worth seeing, and created a good deal of interest.

As above mentioned, the dairy section was a very strong and commendable one. The butter exhibits were numerous, and of good quality. Doubtless this is owing to the classes for dairy produce being open ones. Local dairymen consequently found themselves in competition with well-known dairies, but the local competitors showed out well. Lord Rosebery sent several dairy exhibits, but in no case did he succeed in taking premier honours, having to be content with second and third places. As is to be expected at Thorne, dogs were a strong show, sporting dogs generally attracting most attention. The judges of the principal sections were:—Draught horses, sheep, and implements, Mr. F. W. Park, Retford, and Mr. H. B. Wardle, Derby; hunters and nags, Mr. Tom Mitchell, Eccleshill, Bradford, and Mr. Geo. Burton, Selby; dogs, Mr. Geo. Raper, Gomersal.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended June 14, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living.	1901.	1902.		1901.	1902.

SOCIETIES.

Hunters' Improvement.

A meeting of the Council of the Hunters' Improvement Society was held at 12, Hanover Square, W., recently, Captain H. Heywood, Lonsdale (President), in the chair. Six new members were elected.

Lieut-Colonel G. C. Ricardo reported his election as Chairman of the Finance Committee for the ensuing year, with Mr. Tresham Gilbey as Vice-Chairman. The balance at the bank on June 2nd was £682 5s. 6d. Receipts since the last meeting, £421 13s. 5d.; arrears of subscriptions, £130 4s.; accounts for payment, £373 3s. The Committee recommended that £200 be placed upon deposit This report was adopted.

Hon. Alexander Parker reported that he had been elected Chairman of the Editing Committee for the ensuing year, and Mr. J. B. Kingscote Vice-Chairman. The entry of Buttercup, belonging to Mr. J. H. Large, and awarded a gold medal at the recent Lechlade Show, was accepted, thereby confirming this award made at such show. Two inspections were placed in the hands of Lieut-Colonel G. C. Ricardo, while the entry of a Cleveland Bay mare entered for inspection was refused. This report was adopted.

Mr. J. B. Kingscote reported his election as Chairman of the Horse Show Committee for the ensuing year, with Mr. C. W. Tindall as Vice-Chairman. He stated that the Committee had that morning conferred with a Sub-Committee of the Polo Pony Society specially appointed to arrange for a fourth spring show in conjunction with the Hunters' Improvement Society in 1903. They had reported that they were in negotiation with the Royal Agricultural Hall Company for an extra day's show on the Saturday, and after fully discussing the question with them, the Committee submitted proposals and terms for the Friday's show, which were considered fair and equal to both Societies. The proposals would restrict the respective shows—the Thoroughbred and Hunter section—to the Tuesday, Wednesday, and Thursday, and the Polo Pony section to the Friday and Saturday, though the Polo Pony Society were prepared to provide one of their competitions on the Thursday afternoon after the Parade of Hunters. The alternative which the Committee suggested was—that the Council should themselves provide two jumping classes, to follow the parade of prize and reserve animals on the Thursday afternoon.

The report having been presented, Mr. Tindall formally moved, and Mr. Tresham Gilbey seconded, that there should be classes for jumping as recommended by the Committee.

In reply to Sir Nigel Kingscote's inquiry, it was unanimously decided that the competition should be open and not restricted to animals competing in the hunter classes.

Lord Middleton thought that jumping was more in accordance with the Society's programme than the Polo Pony competition suggested.

Mr. Nickisson said that the parade was most important and necessary, as it afforded the one opportunity in the show to educate the public; if it were possible, he should like to see the whole of the horses paraded, so that people might compare for themselves the prize-winners and the unnoticed animals. In the interest of members they must, under no circumstances, curtail their parade.

The Chairman, in presenting the report of the Committee for adoption, said that it was for the Council now to decide whether they would have a jumping competition to follow the parade. The stewards could parade the prize-winners and reserve animals in the hour and a half allotted, but it would be impossible to parade all the horses and to hold a jumping competition.

The motion of Mr. Tindall was then put to the meeting, and carried, and the report of the Committee was adopted.

Mr. Green asked to call attention to the desirability of rules being drawn up to insure that the young stock at the Society's show should be shown in natural condition. He did not mean that they should be shown in a starved condition, but in the ring those exhibited in a rough state did not compare favourably with those kept in warm boxes and rugged up. He did not know whether any gentleman had followed up the career of their premium winners as yearlings and two-year-olds, but he was sorry to say that few had become good hunters. It was a very difficult question to deal with, but if something could be devised—some rules or instructions by this Society to get over this difficulty, he felt sure that it would be taken up by other Societies, and do national good. Judges should be instructed to take into consideration not the condition, but the general symmetry, action, bone, and feet of young stock. Mr. Green also urged that instructions should be given to the Horse Show Committee to appoint as judges gentlemen who had bred young stock.

Colonel Sir Nigel Kingscote said that the question raised by Mr. Green was of great importance, but thought that it was impossible to lay down any definite rules. He felt sure that no instructions

would give effect to Mr. Green's wishes; they must leave them to the judges.

Mr. Joicey sympathised with Mr. Green's proposals, but doubted whether they could enforce them; the Society had taken a step in this direction by requiring all young stock exhibited to be undocked; he thought that perhaps they might go one step further, and make a rule that no horse under three years old should be exhibited clipped, or with saddle marks.

Mr. Withers thought that all these matters they must leave entirely to the discretion of the judges.

The Council eventually decided to refer the questions raised by Mr. Green to the Horse Show Committee, and adjourned till Thursday, October 23rd.

Polo Pony.

Sir Patteson Nickalls (president) occupied the chair at a meeting of the council of the Polo Pony Society, held at 12, Hanover Square, W., recently.

The minutes of the special council meeting held on May 9th having been read and congrmed, it was resolved that a general meeting of members to confirm the proposed new title—Polo and Riding Pony Society—should take place in London on the same day as the next meeting of the council, namely, November 6th.

Three new members were elected, and the names of five other candidates were presented, which were ordered to be printed for election at the general meeting to be held in the Carlisle show-yard.

Mr. Tresham Gilbey reported his election as chairman of the Finance Committee for the ensuing year. The balance at the bank on current account, £259 19s. 9d.; receipts since the last meeting, £25 19s. 11d.; arrears of subscriptions, £65; accounts for payment, including the prizes offered in the polo pony classes at the Royal Show at Carlisle, £219 6s. 5d. This report was adopted.

Rev. D. B. Montfiore reported that the Editing Committee had accepted for registration the entry of Mr. Harry Dyson's Exmoor stallion Twilight; and that of Mr. W. B. Brumby's Coleby Squire, for the polo pony section. Mr. J. H. Munro Mackenzie, the convener of the Highland section, had kindly promised to draw up a short history of the Highland pony to preface that section of the next Stud Book. The secretary was instructed to convey to Mr. Josiah Newman their sincere thanks for the presentation copy of his "International Polo Club Guide for 1902." This report was adopted.

Mr. G. Norris Midwood reported that he had been re-elected chairman of the Horse Show Committee for the ensuing year. Negotiations had been opened with the Royal Agricultural Hall Company and the Hunters Improvement Society with a view to the extension of the Society's show to the Saturday of the Hunter Show week, subject to the acceptance of the terms by the council. By this arrangement the Society would be entitled to two whole days, namely, the Friday and the Saturday, which would enable the committee to introduce several new features and classes. The committee had also considered several suggestions put forward by Mr. Dale, and they thought it desirable that the veterinary examination should be regulated by the schedule of diseases accepted by the Royal Commission on Horse Breeding, and that bigger prizes should be given for the jumping competition, and that there should be a bending class for novices; while they recommended, in the case of the award of the gold medals at Islington, that no winner should be eligible to take more than one in the same section in two successive years. The desirability of having a class for Irish ponies and one for studs, limited to four, was deferred, together with several suggestions made by the judges of the last show.

The council, in adopting the report, instructed the sub-committee to make the necessary arrangements for accommodating the Society's exhibits so that they might be able to enter the show on the Thursday evening after the boxes had been vacated by the hunters and thoroughbreds.

On the motion of Mr. G. Norris Midwood, it was resolved:—"That a committee consisting of seven members shall be appointed annually in June, to be called 'The Judges' Selection Committee.' That suitable forms be sent out to each member of the council, inviting them to nominate two suitable judges for each section. That with the assistance of such list the committee shall recommend to the council at their November meeting the names of suitable judges on the following basis:—Three judges each for breeding, and the mountain and moorland classes; three judges each for the riding and army remount classes, and the competitions. Each class shall be judged by two of the three gentlemen appointed, the selection to be determined by ballot and no two succeeding classes to be judged by the same two judges.

The following gentlemen were appointed as members of this committee:—Lord Arthur Cecil, Mr. T. F. Dale, Mr. Tresham Gilbey, Captain F. Egerton-Green, Sir Gilbert Greenall, Bart., Sir R. D. Green-Price, Bart., and Mr. G. Norris Midwood.

The report of the council to the general meeting of members at Carlisle having been drawn up, Mr. Dale thought that it was desirable that some organised effort should be made to bring the work and claims of the Society before the polo players of the United Kingdom. He thought that a letter should be written to the secretary of each polo club during the present polo season, including a statement of the work and position of the Society, together with selected extracts from the judges' reports, and that the Editing Committee be requested to decide what should be the form of this enclosure; further, he thought that the secretaries might be asked to allow the appeal to be posted in the pavilions of their respective clubs. Mr. Barker agreed, and the secretary was instructed to bring the matter before the Editing Committee with a view to this being carried out.

Royal Agricultural Benevolent Institution.

Recently this society held its annual general meeting to receive the annual report of the council for the year ended December 31st, 1901, and for the election of officers and pensioners, the Earl of Northbrook in the chair.

In presenting their forty-second annual report, the council announced that there are on the books of this Society:—248 married pensioners (124 couples), costing £4,960 per annum; 226 male pensioners, costing £5,876 per annum; 624 female pensioners, costing £12,480 per annum.

At the present election, there will be added fifteen married couples, fifteen males, and thirty females, thereby increasing the annual charge to £24,906, exclusive of octogenarians and other grantees, for whom provision is made under the rules. The trustees of the Queen Victoria Gifts Fund have again signified a kindly intention to give twenty-five grants of £10 each to the five male, the five married, and the fifteen female unsuccessful candidates who polled the highest number of votes and are not in recipt of grants from any other source. The subscriptions, donations, and church collections for the year ended December 31st, 1901, amounted to £21,862 9s. 8d., being £436 15s. 6d. in excess of the sum, received under those heads, in the immediately preceding year. As the increase is due to the larger recognition by the clergy of the claims of the institution on the occasions of their harvest offertories, the Society owe a tribute of thanks to them, and especially to his Grace the Archbishop of Canterbury, who warmly approved the purposes of the Society in a timely letter. The council have to regret the death of Mr. Thomas Duckham, who was for many years one of the governing body and an energetic local secretary.

To the honorary local secretaries, upon whom a large part of the Society's task has fallen, the council took this opportunity of expressing their grateful and deep indebtedness. But for the self-sacrificng efforts of these gentlemen, the Society could not have achieved the measure of success which is now reported. The council confidently rely upon a continuance of hearty popular support. It should not be forgotten that agriculture is the main essential industry of England, and that those who silently suffer in their endeavour to carry it on have a special claim upon the philanthropic consideration of their countrymen. The report having been carried—on the motion of the Earl of Northbrook, seconded by Mr. W. B. Parsons—the Earl of Cork, Sir Walter Gilbey, Messrs. Stephen H. Allen, Marriott Hall, and W. Hanson Sale, retiring members of the council, were re-elected, and Mr. E. B. Jay was elected in the place of Mr. Thomas Duckham (deceased).

Hampshire Down Sheep Breeders.

A meeting of the Editing Committee of the Hampshire Down Sheep Breeders' Association was held in the Council Tent at the Royal Counties Show-yard, Reading (by kind permission), on Wednesday, to go through the returns in the Shepherds' Prize Competitions and award the prizes. The lamb-rearing is divided into three classes—for flocks of 600 ewes and upwards, 300 ewes to 600, and 100 ewes to 300—four prizes of £4, £2, £1, and 10s. being given in each class, and a framed certificate to each winning shepherd. The result was that in Class I. the shepherds of Colonel Hanning-Lee, Messrs. F. Mills, T. Lavington, and C. Coles took the prizes, in the order named; in Class II., the shepherds of Messrs. C. A. Scott-Murray, A. E. Philippi, A. Parsons and Son, and John Brown were the respective winners; and in Class III., the shepherds of Messrs. H. Dampney, T. N. Bartlett, H. Clark, and W. H. Clark were respectively successful.

No fewer than 56 flocks in all competed, with an aggregate of 26,785 ewes and 31,292 lambs, or the excelent percentage of lambs reared up to May 4 of 116.82, the percentage of ewes lost or sold between December 1 and May 4 being the extremely small one of 2.34. The ewe teg flocks are divided into two classes, for upwards of 150 tegs and under 150, with three prizes in each class of £2, £1, and 10s., but as the competition produced no less than eight flocks in each class which had not lost a single teg, it was resolved to give the shepherds of these flocks 10s. each, with a framed certificate. Forty-seven flocks competed, with an aggregate of 8,836 head, the percentage of loss on the whole, either by death or sale, from December 1 to May 4 being the remarkably low one of 72.

Shorthorn.

Meetings of the committees and council of the Shorthorn Society were held at the Society's rooms, 12, Hanover Square, W., recently, Colonel Sir Nigel Kingscote, K.C.B. (president), in the chair. The minutes of the previous meeting were read and confirmed, and three new members elected.

Lord Brougham and Vaux reported that since the last meeting of the Editing Committee pedigree exportation certificates had been issued for fifty-one animals, namely, for Australia, 1; Canada, 45; Russia, 4; South America, 1.

A number of new and other pedigrees were examined by the committee with the certificates in support of their correctness, some of which were accepted for entry in the forthcoming volume of the Herd Book, and others referred back for further inquiry.

The committee recommended the registration of the name "Annagh," on the application of Mr. H. Pringle.

This report was adopted.

Lord Middleton reported that the accounts for the month of May had been examined by Messrs. Welton, Jones, and Co., and the committee, and were found to be correct; that the receipts for the month had been £40 11s. 6d., the balance of the Society's current account at the bankers' being £212 14s. 2d., and that the committee recommended that cheques be drawn in payment of prizes, rent, and salaries due at midsummer, amounting to £384 9s. 5d., the secretary to withdraw the sum of £300 from deposit if necessary.

Applications for Herd Books were considered by the committee, and the secretary instructed thereon.

The committee recommended that the names of life members whose addresses had been unknown for five years be removed from the list of members of the Society.

This report was adopted.

The draft report from the council to the general meeting of members was considered and adopted.

The next meeting of the council was fixed for Tuesday, July 29th.

Clydesdale Horse.

A meeting of the Council of the Clydesdale Horse Society was held on Tuesday at Glasgow, Mr. John M. Martin presiding.

The Editing Committee reported that they had confirmed the pedigrees which had been under discussion of two horses entered in last volume. The result of the investigation into the pedigrees of the six prize-winning geldings at the Chicago Show was submitted, and considered satisfactory. It was reported that part of Volume XXIV. of the Stud Book had been destroyed by fire, but that it had now been replaced, and it was hoped that the volume would be issued by the end of this month.

The Finance Committee reported on the income and expenditure for April and May, and authorised payments amounting to £18 10s. 6d. for June.

The following motion was adopted, and a committee appointed, Mr. Martin convener, viz.: "That a committee be appointed to consider and report as to the procedure to be adopted on receipt of applications for readmission to the membership of the Society from individuals whose names had been removed from the list of members otherwise than at their own request, or from their annual subscriptions having fallen into arrears."

Applications for affiliation were received from the Ayrshire Agricultural Association, Upper Ward of Lanarkshire Agricultural Association, Windermere Agricultural Society, and the Border Union Agricultural Society. These were granted, and intimation of award of medals was received from the Kilmarnock Farmers' Society and the Ayrshire Agricultural Association.

The next meeting was appointed to be held on Wednesday, July 16, in the Highland and Agricultural Society's show-yard at Aberdeen.

Chester Horse Fair.—The supply of high-class horses at the Chester Horse Fair on Thursday was not equal to the demand, for sales were quickly effected, but the bulk of the horses were not very attractive, and trade and prices were irregular. Generally prices were unchanged from last month's quotations. Best horses realised £60 to £75, good cart horses £40 to £50, crap horses £14 to £35, and others £14 to £30.

LITERARY NOTICES.

The second of the additional volumes of the "Encyclopædia Britannica" (Messrs. Black, Edinburgh, and "The Times," London), which forms Vol. XXVI. of the completed work, has now been issued. As in the former volume, the illustrations are plentiful and good. Among some of the longer articles may be mentioned "Brewing," by Mr. Philip Schidrowitz, Ph.D., F.C.S., which deals fully with recent methods of brewing "beer," while the contentions of the pure beer party are also summarised. The present volume is, however, especially rich in biographies, among which may be mentioned—Browning, Carlyle, Burne Jones, Ford Madox Brown, John Bright, and Beaconsfield. The latter, which is by Mr. F. Greenwood, is particularly well written, and comprehensive. An article extending over nearly 40 pages is devoted to recent developments and discoveries in chemistry. The volume extends from Austria-Hungary to Chicacole. A prefatory essay on recent political progress is contributed by Mr. E. Dicey, C.B.

Since our last notice of the first of the additional volumes of the Encyclopædia, we have been able to further examine the many interesting matters treated on our attention, of course, being more particularly directed to the lengthy and extremely useful article on agriculture. This, *the* industry of the country, has received adequate treatment from three different authorities. The largest part of the section, namely, that dealing with agriculture in the United Kingdom, is the work of Dr. W. Fream; the history of the industry in the United States of America, is written by Mr. C. W. Dabney, Ph.D., who is president of the University of Tennessee. Mr. F. C. Skinner, who is a well-known American authority, treats of agricultural machinery.

Dr. Fream's general survey of agriculture, which embraces the years from 1875-1900, is very comprehensive and minute. The review is evidently meant to serve for purposes of reference in the future, and will undoubtedly prove a very handy source of knowledge on agricultural history. A very large number of tables are also provided, and do much to elucidate the text. In such a work as this survey, statistics are very necessary, and wherever possible they have been dealt with in the ideal manner, that is to say, they have been collected into handy tables, which show the tendency of the figures at a glance. The changes that have taken place in the breeds of live stock during the last quarter of a century are fully dealt with. The early maturity developments are described and fittingly illustrated by a table giving the results of the block test at the 1900 show of the Smithfield Club. The difference between breeds of horses, cattle, sheep, and pigs, are illustrated from photographs of typical specimens. The section dealing with crops and cropping is prefaced by an appreciation of the work done by Messrs. Lawes and Gilbert, at Rothamsted. Many of the experiments which were carried out there are described. The tables in this section are of very permanent interest, being most useful for purposes of reference, and the work entailed in gathering these figures and arranging the tables must have been stupendous. On the whole, we can heartily congratulate Dr. Fream on having made such good use of the great opportunity provided him of bringing the records of agricultural history up to date. Mr. Dabney tells the story of agriculture in the United States, largely by means of figures, which is perhaps the best means of treating a very large subject in a small space. It is to be regretted that the task of writing on agricultural machinery was not entrusted to an English expert, surely such a one exists. However, no one can complain of Mr. Skinner's treatment of his subject, and it is very pleasing to notice that he writes of ploughs, and not "plows." It is explained at the commencement of the article that it is written from a purely American standpoint, and no attempt is made to treat it historically, the article simply is a survey of present day implements and methods as they prevail in the United States of America. As to the history of the implements in England, Dr. Fream treats on the subject in his lengthy article.

Mr. Alfred Welch, that most ardent advocate of the apple orchard, has issued a pamphlet on his pet subject, entitled "Institution of the Apple Orchard, with full details, and in combination with Poultry Farming." The object of the pamphlet may best be shown by quoting from Mr. Welch's introduction, in which he says: "We are paying more than one million sterling a year for imports of apples, which, and many more thousand bushels, of superior quality, could be grown in England to great profit to our country. There is no soil nor climate more suitable than our own to produce this wholesome and delicious fruit to perfection. The charm of the orchard in bloom has been the theme of the poet for centuries. We have many Landowners with hundreds of acres of good land contiguous to their residences, who could secure much profit to themselves, and incidentally to the country also, and to posterity, by devoting any number of their acres to establish such a valuable and charming domain as an apple orchard; the fragrance of the blossom of the trees, the charm to the eye, the lulling hum of bees wallowing in the flowers, the verdure of the turf, and the frollicking of the lambs on the pasture would present an earthly paradise. The cleanliness of the work, and the comparatively slight demand on the physical power required from the occupation of the apple orchard on turf land combined with poultry farm, constitute it specially adapted to woman's industry. Prime sorts of keeping apples, of which there are many kinds, are in much request from November to May—the season 1901 to 1902 quotations of wholesale prices of English apples in Covent Garden Market have ranged from 10s. to 12s. top rates per bushel." In spite, however, of his occasional outbreak into poetry, Mr. Welch is essentially practical, and he shows in detail and with many figures, cost and labour, and how to establish the orchard to gain a satisfactory result, a result which consists of the prosaic, necessary £. s. d., as well as the "fragrance of the blossom, charm to the eye, lulling hum of bees, verdure of turf, and frollicking of lambs."

An interesting article on horse breeding is contributed by Mr. Burdett-Coutts, M.P., to the July number of the "Empire Review," which appears next week. The article will especially interest the breeders of harness horses and hacks, as it deals mainly with the hackney breed, which, after a long experience, Mr. Burdett-Coutts considers to be the basis of all profitable breeding of such horses. The writer shows how it has played the chief part, either in its pure or derivative form, in the production of the fine horses which have commanded such high prices at the Brookfield Stud during the past fifteen years. The whole subject is handled from the practical, or expert's, point of view, and a full explanation is given of the various "out-crosses," by which Mr. Burdett-Coutts has created new and saleable types of harness horses and hacks. The breeding of army horses is also dealt with.

A new and revised edition of the guide to London, compiled by the late Mr. Herbert Fry, has been issued under the title of "London in 1902." It is illustrated by twenty birds-eye views of the principal thoroughfares of the metropolis, whilst there is a large sheet map of Central London. The reading matter is written in a flowing style, and gives much interesting information concerning places of historic interest in and around London. Visitors to London for the Coronation will find this work of great usefulness when they are "doing the sights." It is published at one shilling by Messrs. Simpkin, Marshall, Hamilton, Kent, and Co., Ltd., London, and Messrs. Love and Malcolmson, Ltd., Great Queen Street, W.C.

We have received a pamphlet from Mr. John Hughes, F.I.C., which contains his article on "Basic Superphosphate, its Composition and Use as a Manure," which appeared in the last volume of the Journal of the Bath and West and Southern Counties' Society.

We have received a copy of the annual report of the Governors and statement of accounts for the Munster Dairy School and Agricultural Institute, Cork, which is under the control of the Department of Agriculture and Technical Instruction for Ireland. The report is a most satisfactory one, showing that good work has been done during the past year for the improvement of Irish dairying. The balance-sheet is also satisfactory, showing a substantial balance in hand.

Professor Robert Wallace has compiled a record of students who studied in the Edinburgh University Department of Agriculture between the years 1885-86 and 1900-01 inclusive, and it has been published in pamphlet form. The class rolls for the sixteen years show a grand total of 404 students, of which about 74 received public distinction by examination, and of these 22 are now engaged in farming or in estate management. Of 57 students of agriculture who graduated, 31 secured in addition, by examination, at least one diploma. Professor Wallace remarks that only three of these diploma holders began their course of scientific study before they were nineteen years of age; and of 17 diploma holders who did not graduate, only one began to study before he was twenty. On the whole, a considerable majority of the students who have been most successful in securing by open competition certificates of merit have been twenty-one years of age before they began their course of study in Edinburgh. We may mention here that the Calendar of the College for 1902-1903, giving full particulars of all courses, is now ready, and can be had on application to the secretary and treasurer, Mr. Scott Stevenson, F.E.I.S., India Buildings, George IV. Bridge, Edinburgh.

AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR. DAIRY SHOW 1898, 1900, 1901. SEVEN OTHER GOLD AND SILVER MEDALS IN ENGLAND AND CONTINENT, 1901

TAMLIN'S . .

NONPAREIL

PATENT INCUBATOR

This is the only Incubator that ever hatched 95 per cent. in Competition for Hatching results open to the World.

Guaranteed Automatic.

Best planished Copper Tanks.

Packed ready for immediate use.

TAMLIN'S SELF-SUPPLYING LAMP Patent No. 20,182.

Which automatically supplies itself with oil the whole time of hatching. 4s. extra. Testimonials. Hatching 100 per cent. Over 1,000 Letters of Thanks received for Results. Write for our Catalogue, post free.

W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY

The Largest Manufacturer of Incubators in the World.

The Care of the Chickens.

At the present time a great deal of attention is being paid to the chickens. Unfortunately the weather during the past fortnight has been very trying for young birds of all ages, but particularly for those which have been between the ages of a week and a month. Quite a number have died from acute inflammation of the lungs, owing to chills contracted from the continual damp. We think that on the whole chickens in foster mothers have fared worse than those under hens. We are quite convinced on one point, which is that the chickens in towns have been less affected than those in the country. Town poultry-keepers are apt to think that their birds do less well than those in the country, but, for once, they have had a distinct advantage. Owing to the heavy rains the grass and weeds of all kinds have grown up very quickly, and as poultry-keepers are in the habit of allowing their young birds free access to their grass in other years, they have in many cases not made any exception this year, and the consequence has been that they have died in large numbers owing to the chills they have contracted running in the long, wet grass.

Calling on a large poultry-breeder the other day, we found him bemoaning the loss of over four hundred beautiful chicks of varying ages. He had not given the question of the wet grass a thought, and he was so vexed at his oversight as a number of the birds had been already bespoken. We have met with many similar instances, and would warn readers who have their chickens cooped on grass to take steps to avoid similar losses. Then we have found a good many chickens have been suffering from diarrhœa, and have after a few days died. When diarrhœa appears each bird should have a small dose of warmed castor oil at once and an entire change of food. There are several makes of biscuit meal on the market which cause diarrhœa owing to being over-baked; these should be avoided, and all food should be as fresh as possible. Always taste the groats and ground oats and all cereal meals given to chickens to see if perfectly fresh and sweet, as this is very essential to the progress of the chickens. When they taste hot and sharp the meals should be discarded. Whole meal (wheat finely crushed) is excellent, for young chickens, in change with biscuit meal, as they make excellent progress on it.

We find it is still necessary to draw the attention of poultry-keepers to the cleanliness of the chickens when they hae diarrhœa. The fluff round the vent becomes matted, and frequently causes a stoppage there. In addition to this, the insects corrode when the birds are in this condition. As soon as the young birds commence to make a shrill noise instead of their usual contented chirrup they should be caught and examined, as attention given then frequently prevents losses. We have found a great deal of chicken-pox amongst chickens and turkeys this season. This is a most troublesome disease, as it is very tedious to treat. A sharp lookout over the birds should be kept, and if any spots are noticed they should be immediately treated with permanganate of potash (dissolved in water), this being painted over the spots. This will very quickly remove them if the birds have a dose of Epsom salts, followed by nettle tea to drink.

Poultry-keepers should remember that nettles are very valuable for fowls as well as chickens, and that dandelions should be used at least once a week, as they are excellent for acting on the birds' livers. The nettles and dandelions should both be treated alike. After they have been washed under the tap they should be placed in a large bowl and boiling water poured over them, and the vessel should be covered with a cloth to keep the steam in. When the water is cold it should be poured off and used to mix the soft food with, and it may be given to the birds to drink with advantage in place of water. When the supply of dandelions and nettles is limited, the leaves can also be used for the birds by mixing them in the soft food. When this plan is adopted, it is advisable to chop the leaves up small before pouring the water over them. Perfect cleanliness with regard to the drinking vessels of the fowls and chickens is necessary. Colds and roup are spread by inattention to this detail more than any other. When fowls or chickens have a cold they generally have a running from their nostrils, and when they are drinking the water is contaminated, and healthy chickens following affected ones at the drinking troughs frequently contract a bad cold, and this goes all through the stock; and roup powder given does not have the same effect it otherwise would have when the birds are all drinking from these dirty vessels.

Every one should be carefully scrubbed out each day, and perfectly clean water given. Where rain water has to be used, as is the case in many country places, it should be carefully boiled.

There is another item too frequently forgotten, although often referred to—viz., sharp grit. Chickens are often cooped on grass, where they cannot get a particle of sharp grit; and others are penned up in back yards, where all the sharp grit has been extracted from the ground. It is very essential that chickens should have sharp grit, as this is the only method by which they can digest their food. When chickens have to be kept on for stock birds, it makes a difference more or less.

When chickens or fowls die, or are killed, and they are in good condition, the gizzard should be hard, and the outer skin very tight, not flabby and soft. When chickens and fowls lack sharp grit, it is not an unusual thing for the gall to overflow on the liver, and thousands of chickens die through this one thing. After they have grown a good size (sometimes more than half-grown) they droop and die. It is not always through the lack of sharp grit, as an insufficient supply of green food will bring it on. Chickens should have some fine sharp grit the first week.

Chickens reared in artificial mothers should always have a little sharp grit mixed in the food, as when they are with hens their mothers teach them to peck up the grit.

DAIRYING IN RUSSIA.

The Great Cream-Separator Trials at MOSCOW, which were protracted over three consecutive days, have recently terminated.

The HIGHEST AWARD was unanimously bestowed on the "ALFA-LAVAL," quite a ruck of would-be competitors and more or less imitating machines being classed in the rear.

The Contest was practical, organised by farmers *for* farmers, and based on practical working conditions such as occur in ordinary every-day life on the farm. The decision of the Jury was also intended to serve as a guide for cow-owners throughout Russia in the selection of a skimming machine.

The verdict of Russia is simply a re-echo of the results of *ALL* Shows and Exhibitions where *real* working Separator Trials are held.

For an "ALFA-LAVAL" Catalogue, post free for the asking, drop a post-card to the

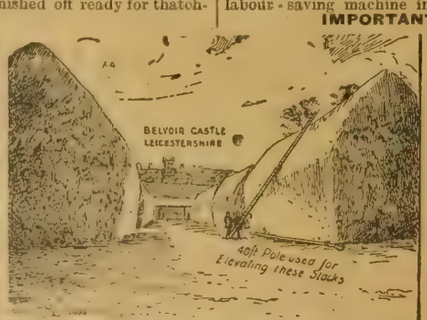
POGSON'S

PATENT HORSE PITCH FORK



OR ELEVATOR,

For Stacking Hay or Loose Corn.

This illustration, taken from a photograph, shows five large 60-ton stacks, pulled and finished off ready for thatching.

Each stack was elevated by one of **Pogson's Patent Forks.** During the last two years over 800 have been sold, and as each fork was sent on approval, and customers could have returned them unless they were perfectly satisfied—from this fact alone it may be safely said that **Pogson's Patent Pitch Fork** is the best and cheapest labour-saving machine in the market.

IMPORTANT.

Pogsons' Patent Pitch Fork is sent on approval, so that any intending customer can give it a fair trial before purchasing. Should, on trial, it not prove satisfactory, it can be returned, and carriage each way will be paid by vendor.

SCORES OF UNSOLICITED TESTIMONIALS.

For Illustrated Catalogues, with recent Testimonials and all particulars, apply to the Patentee—

MR. E. F. POGSON, FARMER, etc.,

REDMILE, NOTTINGHAM.

Simple in design, easy to erect and to work, at about half the cost of anything hitherto introduced doing the same amount of work.

Price Complete, with Recent Improvements, £6 17s. 0d.,
CARRIAGE PAID.

FOR FINE HEALTHY CALVES USE

VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal I consider it excellent in every way"

FARMS, ESTATES, MILLS, BUSINESSES, &c.

NORFOLK.—To be Let, a capital FARM of 400 acres, good house and shooting.—IRELANDS, Auctioneers, Norwich.

FARM of about 483 acres about 16 miles South of London, TO BE LET from Michaelmas next, chiefly a good mixed soil, very suitable for sheep, with farmhouse, homestead, convenient off premises, and eight cottages, adjoining a station on the L.B. and S.C. Ry. (with a siding therefrom), within short distances of several other stations, and in the centre of the great Racehorse Trainers' Quarters; good hunting district. The farm has been for many years in the occupation of a first-class tenant, who is quitting on account of failing health.—Full particulars of Messrs. DEBENHAM, TEWSON, FARMER & BRIDGEWATER, Land and Estate Agents, 80, Cheapside, London, E.C.

THE BICKLEY ESTATE, IN THE COUNTIES OF WORCESTER AND SALOP, possessing an area of about 1,420 acres, in and near the exceedingly beautiful, very fertile, and fruitful valley of the Teme, including many remarkable fruit orchards and hop gardens, with the railway station of Newnham Bridge upon the property, about 19 miles from the city of Worcester and three from the market town of Tenbury. It affords first-class agricultural investments, and offers also special attractions to any gentleman who desires a residential estate in the centre of this fine district. Messrs.

DEBENHAM, TEWSON, FARMER and BRIDGEWATER will SELL, on TUESDAY, JULY 29TH, at THREE, at the SWAN HOTEL, TENBURY, in 30 lots (unless an acceptable offer for the whole be previously made by private contract), the valuable FREEHOLD ESTATE (very small parts Leasehold and Copyhold), known as "Bickley," situate in the parishes of Knighton-on-Teme, Neen, Sollars, Milson, Nash, and Boraston, an exceedingly beautiful agricultural property of about 1,420 acres, with exceptionally good farm houses, first-class homesteads, cottages, and numerous small occupations, offering also a choice of fine sites for the erection of a gentleman's mansion, for which the extreme beauty of the locality and the facilities of access yield special attractions. The estate is intersected by excellent roads, and a portion is bounded by the River Rea and the Trapnell Brook. Every farm and all the small occupations are let to excellent tenants, producing, with the estimated value of the woods, &c., a total rent-roll of about £1,375 per annum. There is good hunting with the Worcestershire, Ludlow, Ledbury, and Herefordshire hounds, all of which are within easy distance. The estate will be divided as follows:—

Lts.	Description.	Quantity. A.	R.	P.
1	Bickley Farm	310	1	14
2	Great House Farm	192	1	31
3	Pool Cottage, outbuildings, and grounds, two heavily-timbered woods, three cottages, joiners' shop, smithy, saw-yard, gardens, &c. ...	42	2	2
4	The Field and Lowbourne Farms	209	3	10
5	Oxnall Farm	103	3	8
6	Sturts Farm	140	3	30
7	Bank Farm	57	3	32
8	Milson Wood	45	0	7
9	Underley Farm	46	3	22
10	May Hill Farm	84	0	2
11	Pasture and woodland ...	40	0	38
12	Common Wood Farm	96	2	10
13 to 30	Several cottages, woodland, and small holdings ...	49	2	8

Particulars, with plan and conditions of sale, may be obtained of Messrs. CLAUDE LEATHAM & CO., Solicitors, Wakefield, Pontefract, and Castleford; of Mr. Arthur Fawcett, C.E., Surveyor, Wakefield; and of the Auctioneers, 80, Cheapside, London.

LIVE STOCK.

FRED. HARRISON, General Manager.

Euston Station, London, N.W., March, 1902.

A SANITARY WATER PAINT

Possesses the following great advantages over all other wall coverings:—

It sets hard, Kills Vermin, and Disinfects.

It is washable in three weeks, and does not scale. Made in two qualities, for inside and outside work.

It is made in Dark Rich Shades as well as in Light Tints, contains no lead, and does not Turn Black.

It only requires the addition of Water to make it ready for use, so that anybody can apply it.

It is Cheaper, Cleaner, Healthier, and more Artistic than Wall Paper.

It makes an excellent Shading for Greenhouses, the inside quality lasting about nine months, the outside quality several years.

Sold by leading Chemists, Drysalters, and Ironmongers, and Manufactured by—

SISSONS BROS & CO., LTD., HULL,

From whom Samples, Shade Card, and other particulars can be obtained.

The Art of Advertising.

The great increase in the volume of publicity makes it more than ever necessary that everyone engaged in business should be well posted in the latest advertising methods. To ensure success nothing is more essential than a thorough understanding of the true principles of successful advertising. This knowledge may be best gained by consulting

The Advertisers' Review

a journal devoted exclusively to the interests of profitable publicity. A specimen copy will be sent on receipt of two stamps by the Publisher, ADVERTISERS' REVIEW, 74, Gt. Queen Street, London, W.C.

COLQUHOUN'S GENUINE SCOTCH TWEEDS YARNS AND HOSIERY.

The name COLQUHOUN has for the past twenty years stood for all that is genuine in Scotch Woollen Goods. They are guaranteed to be manufactured from pure wool only, and go through the various processes to the finished article in the mill, and under Mr. Colquhoun's supervision. Box of Samples post free, containing a select range of Ladies' and Gentlemen's Tweeds Rugs, Blankets, Knitting Wools, Hosiery, &c. latest style and shades, will be sent on request. Any length cut at Mill Prices. All Carriages Paid. Write for Samples.

TO WOOL GROWERS.—WHAT DO YOU DO WITH YOUR WOOL? Do you make the most of it? You can do this by sending it direct to my Mills and having it manufactured into any kind of Woollen Cloth. I have over 400 patterns, and I pay carriage on all wool sent me. I send patterns post free for patrons to select which cloth and pattern they like their wool made into.

A. COLQUHOUN

(Largest Retail Manufacturer in Scotland), Waukrigg Mill, GALASHIELS.—Agents wanted where not represented.

PRESERVED WOOD FENCING, &c.

FOR ESTATES, RAILWAYS, COLLIERIES, &c.

Established 1853. Established 1853.

ARMSTRONG, ADDISON & CO.

Timber Importers, Manufacturers and Preservers,

SUNDERLAND, and NORTHUMBERLAND DOCK-ON-TYNE.

Supply Fencing, Palings, Gates, Gate Posts, Cattle Shelters, Hay Sheds, Telegraph Poles, Sleepers, Wood Pavements, and all descriptions of Preserved and Unpreserved Wood Goods for Farms, Estates, Railways, Collieries, Bridges, Corporations, &c.

CREOSOTED FENCING, &c., will last three times as long as Unpreserved Wood, including Larch.

IMPROVED STACKER OR ELEVATOR.

This Machine offers the following advantages:—

Improved Safety Screw Winding Drum which cannot run down, however careless the operator may be. The Poles or Uprights are securely stayed to the Raising Quadrant, giving great rigidity. New improved arrangement which avoids all tightening or slackening of the Chains in folding or unfolding; being self-acting in this movement, no mistake can be made in folding or unfolding. Large Travelling Wheels to facilitate turning, placing in position, and travelling on the road. The Hopper being very low can be easily attached to any Threshing Machine, and will work at any angle. They will deliver the produce into the centre of the stack when at the full height, thereby topping up the stack without any pitch pole. These elevators can be fitted with Horse Gear if equired.

AS FIXED FOR WORK.

CAUTION

TO USERS OF

MASSEY-HARRIS MACHINES.

When you order spare parts for your machine, see they are genuine **Massey-Harris** parts. No one has the same interest to supply good fittings as the maker of the machine; but many dealers for the sake of greater gain sell imitation **Massey-Harris** spares, to your detriment.

Go to the authorised **Massey-Harris** agent, and get the genuine articles.

All **Massey-Harris** canvasses are stencilled "Made by **Massey-Harris Co.**"; all knives, sections, cultivator points, tines, &c., have the mark <M·H> or name **"Massey-Harris."** Other parts show the **Massey-Harris** spares book number.

DON'T BE MISLED.

ROYAL SHOW, CARLISLE, JULY 5th to 11th.

Up-to-Date FIRST PRIZE

DEERING BINDERS

(£10 at least cheaper in the end than any other make, besides saving in horse-flesh all the time).

Highest Grade FIRST PRIZE

DEERING MOWERS, REAPERS, & RAKES

(The First to be fitted with Roller and Ball Bearing), and

DEERING "GOAT BRAND" BINDER TWINE.

Purchasers of Deering "Ideal" Binders will during the life of the machine SAVE MORE THAN £10 IN BINDER TWINE ALONE as compared with the less economical binding mechanism of other machines; and it is well known that owing to the greater proportion of forged steel used in their construction as compared with other makes (instead of cast iron and other inferior material), combined with the perfection and simplicity of the design and construction in all the important parts, THE COST OF REPAIRS IS, DURING THE LIFE OF A DEERING BINDER, MANY POUNDS LESS THAN THAT OF ANY OTHER KIND.

As the Deering Binder is sold for no more than the leading competing machines, there should be no question that at whatever price any other make is offered,

The Deering is the Cheapest.

At the official field trials at Lodi, Italy, July, 1901, lasting several days, the Deering Machines received the very Highest Awards, as follows:—

DEERING IDEAL BINDER ... ... First Prize, Gold Medal.
DEERING IDEAL REAPER ... ... First Prize, Silver Medal.
MANUAL DELIVERY ON DEERING MOWER First Prize, Silver Medal.
(The Deering Ideal Mower could not compete.)

Machines by Messrs. Massey-Harris, Osborne, Plano, and Harrison-McGregor & Co. also competed.

At the field trial at Appingedam, Holland, July, 1901, the Deering Machines were again granted

THE HIGHEST AWARD, GREAT GOLD MEDAL,

in competition with Machines by Messrs. McCormick, Aultman-Miller, Osborne and Wood.

Thirty Honours received by Deering at, and in connection with, the Exposition at Paris in 1900, many more than conferred upon any competitor.

The Great DEERING WORKS are easily FIRST IN THE WHOLE WORLD in Magnitude, Output and Equipment,

and therefore the Paris Exposition Officials, on the recommendation of the Commissioner General of the United States of America, delegated to the Deering Harvester Company the important task of preparing the Retrospective Exhibit of Harvesting Machinery, showing the improvements in that branch of manufacturing during the past century; and the EMPEROR OF GERMANY, in consideration of the remarkable achievement of the Deering Company at Paris, conferred the

Royal Order of the Crown, a most distinguished honour.

IF YOU BUY A DEERING MACHINE, YOU UNDOUBTEDLY BUY THE MOST "UP-TO-DATE" AND THE BEST.

H.M. THE KING.
POSTPONEMENT OF THE CORONATION.

The news that His Majesty the King was seriously ill came as a thunderbolt on Tuesday last, and was received with the utmost regret by all throughout the United Kingdom, and it may be added throughout the world. That His Majesty was not in his usual state of health was evidenced when he arrived in London on Monday, but it was not expected he was in such a serious condition. A bulletin issued at noon on Tuesday stated that the King was suffering from perityphlitis, or appendicitis, and that a surgical operation had become absolutely necessary. Later in the day the news was received with general gratification that the operation had proved successful, and that His Majesty was in a satisfactory condition. This happy state of affairs has continued, and at the time of going to press His Majesty was progressing most favourably, and has been declared by his eminent medical advisers to be out of immediate danger. Of course, the Coronation ceremony was at once postponed indefinitely, as were also the various festivities; but the King, with his usual thoughtfulness, ordained that the poor should not be deprived of the dinner which he had provided for them. The heartfelt desire of every subject, of whom there are none more loyal than the farming community, is that His Majesty will make a rapid recovery, and live long to reign over us.

Mr. J. R. Dunstan, M.A., F.R.S.E., Director of the Midland Agricultural and Dairy Institute, and Director of Technical Instruction, Notts County Council, has been appointed Principal of the South-Eastern Agricultural College, Wye, in succession to Mr. A. D. Hall, who, it will be remembered, has been appointed Director of the Rothamsted Experimental Station.

AGISTMENT.

Although agisters are not insurers in the sense of being answerable for the wantonness or mischief of others, yet they are bound to take every reasonable care of the animals entrusted to them. If, owing to their negligence, the cattle be lost or injured, they will be liable to make good the loss. This liability is a serious risk, which often is not fully appreciated until the agister is rudely convinced of it by being compelled to pay. And it occasionally happens that the owner of the cattle may be able to obtain compensation from an agister for a loss for which he would have had no remedy had it occurred on his own farm.

In one case a farmer had taken a horse to agist, but it strayed out of the field with a number of other horses belonging to the farmer, and was lost. The others were merely impounded. The farmer did what he could to find it by advertising, but without result. It did not positively appear that the loss of the horse was occasioned by the defect of the fences, or that it had strayed through the gates at the time that the witnesses spoke to their being open, but evidence was given of the general bad condition of the fences on the farm, and of negligence as to leaving gates open. The judge directed the jury that if the horse had been taken from the farm, or had been lost by accidents which the farmer could not guard against, he would not be responsible; but if there was a want of due care and diligence generally, he would be liable. The question was: Were the fences in an improper state when the horse was taken in to agist, and did the farmer apply such a degree of care and diligence to the custody of the horse as the owner had a right to expect? On the evidence before them the jury found in favour of the owner of the horse, and the unfortunate farmer had to pay the damage.

Again, another farmer who had taken a horse to agist placed it in a field with a number of heifers, knowing that a bull kept on the adjoining land had several times been found in the field, and that there was no sufficient fence to keep it out. The horse was gored by the bull, and killed. The farmer was held liable, since his contract as agister was to take reasonable care of the horse, and he had failed to do so. The fact that the farmer had no knowledge of the mischievous disposition of the bull was held to make no difference.

In a recent County Court action a farmer was sued for damages for the loss of three bullocks which had been poisoned whilst under his care for agistment. Eleven bullocks had been agisted with the farmer, and the three in question had been poisoned by eating of a yew tree in a grotto adjoining the farm, which was not adequately fenced. It was alleged (but denied) that the farmer had said he knew the grotto fencing was dangerous and bad, and that he had urged the estate agent to have it repaired. The judge held that there was practically no defence, and gave a verdict for the amount claimed.

With this onerous liability resting upon them, agisters have certain rights in the agisted stock to enable them to discharge their liability. Their possession of the cattle is sufficient to enable them to bring an action in respect of the cattle in certain circumstances, as to recover them if stolen, or if they have suffered injury by the negligence of a third person. Thus, a man sent his horse for the night to a friend, who turned it out after dark into his pasture, adjoining to and separated from the field of a neighbour by a fence which the neighbour was bound to repair. Owing to the bad state of the fence the horse fell down a deep drop from one field to the other and was killed. It was held that the tenant of the first field might maintain an action to recover the value of the horse, although he was not the owner, and was merely taking gratuitous charge of it. He was entitled to the benefit of his field, not only for the use of his own cattle, but also for putting in the cattle of others; and by the negligence of the neighbour in rendering the field unsafe he was deprived in some degree of the means of exercising his right of using that field for either of these purposes. Moreover, he might himself have been held liable to the owner of the horse, and he had a right to protect himself by claiming the damages from the party whose wrongful act or omission really caused the loss. Of course, he would have to hand over the damages to the owner of the horse.

A difficult question might arise as to the liability for damage done by the trespass of agisted stock. The farmer taking in such stock would generally be liable to anyone on whose land they strayed, but we are inclined to think there would be a double-barrelled remedy in such a case, and that the action could be brought either against the agister or the owner of the stock, but not against both.

Contrary to the general belief, an agister of cattle has no lien on them at common law. He may not retain them against the price of the agistment, but is bound to restore them to their owner on demand. He must permit the owner to retake them, but is not obliged to re-deliver them himself. Such a lien might be conferred by express agreement, but in ninety-nine cases out of a hundred the question of a lien is never mentioned, at all events, until it is too late to enforce it.

It will be remembered that under the Agricultural Holdings Act agisted cattle are re-

lieved from liability to distraint for the agister's rent, except to the extent of the moneys owing for the agistment. But the exemption is limited to cattle "taken in at a fair price agreed to be paid." If an impecunious acquaintance allows us to turn our pony into his field now and again out of pure friendship we may some day find it seized to pay his rent. Neither does it apply to a contract for the sale of the exclusive right of eatage of certain land for a fixed time. In this case the payment is not for taking in cattle at a fair price, but is in the nature of a rent for use and occupation; in fact, a sub-tenancy.

SAMPLES.

By A Man of Mark Lane.

The Department of Land Records and Agriculture for the Central Provinces of India issued on May 12th, a final report on the wheat crop of those provinces, for 1902, and a copy has just come to hand. It states that the actual area under wheat amounts to 2,590,209 acres, which is 21 and 18 per cent., respectively, larger than that of last year and of the quinquennial average, and 15 per cent. below the decennial average. The recovery is most marked in the important wheat-growing districts of Saugor, Seoni, Hoshangabad, Chhindwara, Wardha, and Nagpur. There has been steady recovery for the past two years; but the area is still far short of the four million acres devoted to wheat before the commencement of the cycle of bad seasons.

The estimated yield for the whole of the Central Provinces is 84 per cent. of a normal crop. A normal out turn is reported from Mandla, Jubbulpore, and Narsinghpur, where the crop greatly benefited by the showers in January. In other districts, where wheat is of importance, the yield generally ranges between 75 to 90 per cent. In Wardha and Betul rats did considerable damage when the wheat was in ear, the out-turn being lowered to 45 and 50, respectively. Expressed in tons, the yield of this season's crop is estimated at 561,574 tons, as compared with 440,909 tons in the preceding year. The out-turn is 49 and 7 per cent. respectively, above the averages of the previous five and ten years.

Now that summer has really come the tall story season has also made a start, as evidenced by the following, which is culled from a provincial daily: — "A gentleman, who, while reading the newspaper, felt bothered by the buzzing of a wasp about his head, knocked it down. It fell through the open window, and lay on the sill as if dead. A few seconds afterwards, to his great surprise, a large wasp flew on to the window sill, and after buzzing around his wounded brother for a few minutes, began to lick him all over. The sick wasp seemed to revive under this treatment, and his friend then dragged him gently to the edge, grasped him round the body, and flew away with him. It was plain that the stranger, finding a wounded companion, gave him "first aid" as well as he could, and then bore him away home."

Mr. Hanbury has announced his intention of excluding from the operation of his Food and Drugs (Amendment) Bill, Irish brine butters. The right hon. gentleman, it is said, has been induced to come to this decision by reason of the opposition offered by the Nationalist members. The Bill is now practically limited to milk-blended butter, which will, after the Bill becomes law, have to be called "butterine."

Major Craigie, the assistant secretary of the Board of Agriculture, and who is responsible for many of the valuable and elaborate tables issued by the Board, has, I am pleased to hear, been elected to succeed Lord Avebury as President of the Royal Statistical Society, for the ensuing year. Major Craigie has for many years been Honorary Secretary of the society, and in this position he will be succeeded by his colleague at the Board of Agriculture, Mr. R. H. Rew.

AGRICULTURAL POLITICS.

By a Lobbyist.

We have all of us every reason to be profoundly thankful at the great change which has been effected in the character of the Education Bill. The principle which formerly inspired it—the principle of rate-aid—has been in a large measure abandoned. We have it confessed by this grant of nine hundred thousand pounds from the Exchequer that the cost of education should be an imperial charge. I need not examine for the moment the incidence of the new policy—I need not proceed to justify the policy of restricting the grant to four shillings when a penny rate produces ten shillings; I need not ask whether it be fair to make this huge grant to voluntary schools without insisting on new conditions. The one patent fact is that the Government has accepted the only policy under which education could ever be effective or complete in the poorer urban and the small rural centres. Of course, the old sneer of "doles" will be revived. We shall be told that the intention is simpy to put more public money into the hands of the parson. We shall be told inevitably that the Government preferred to do this rather than relieve the people's bread of a miserable tax. All this will be venomously proclaimed from the house-tops. Well, let the proclamation be made. What we have to be thankful for is the relief of the poorer rural centres—for it is they who are chiefly affected from what would have been a dire infliction.

Now, in this connection a most watchful eye will have to be maintained; and I hope that the friends of rural education will not be diverted from this duty. Certain Radicals have striven to excite Churchmen to suspicion by reminding them that they have lost their specific aid-grant. Others have sought to inspire distrust in Nonconformists by subtle questions as to what kind of rating control is to be exercised. The plain duty of the friends of rural education is not to be drawn aside by these interesting but scarcely vital matters. They must remember that the principle governing this new Exchequer grant is that a district will be relieved according to its poverty. In other words, there is to be an universal grant of four shillings, and the remainder is to be distributed by a ratio of poverty calculated on the rating assessments. The only limit of aid is that the Exchequer will never contribute more than three-fourths of the expense of the school. "Oh, the whole idea is too complex," say the critics who would find fault with aught the Government did, even though it were embodied perfection. It seems to me, however, that nothing could be simpler. All that will be required is a close observation by the individual county authorities. We all know of cases in which, where financial help has been given to town and country alike, the major portion has been absorbed by the more assertive towns. This must not be allowed to happen in the present case. Already the warning has been given by the friends of the towns that the poorer urban centres must be adequately protected. The warning is unnecessary—they will inevitably be. What I would remind the friends of education in the rural centres is that the one idea underlying the original suggestion was the relief of the country districts. The grant is primarily a measure of relief to the rural rates.

Why should it be assumed that only the local authority of the rural districts is opposed to secondary education? This, at all events, was the assumption governing the more important debate on the Education Bill this week; and I am compelled to say that both Mr. Chaplin and Mr. Lowther helped unconsciously to strengthen this mischievous view. Of course, we expect this kind of profession from politicians of the type of Mr. Hobhouse; but we have a right to expect something different from politicians who do not dwell in the serene altitude above the snow-line of common-sense. The whole of the discussion both upon Mr. Hobhouse's and Mr. Mather's amendments was naught but an arrangement of the (assumed) selfish lack of sympathy of the rural districts with an improved education. You would imagine to listen to these speeches that in every village there is an embittered, malevolent conspiracy against education, that every squire is against it, that every landlord is inevitably and inherently against it, and that education has in the past placed a burden upon local rates which no man nowadays cares to accept. Every man of moment in the local life of the villages is held to be an educational Little Englander. This is a perniciously foolish idea; and the sooner it is rebuked and abandoned the better. Why should Mr. Chaplin by the very nature of his observations accentuate this assumption?

The inclusion of Mr. Arthur Jeffreys and Mr. James Round among the Privy Councillors is a compliment to agriculture. The Right Hon. Arthur Jeffreys had shown himself a most excellent private member; but it is in the chair that his real capacity has been revealed. There be men who will seek to discover flecks upon the sun; and, of course, Mr. Jeffreys is not without his critics. For instance, it is declared that in a recent Irish scene he did not exhibit sufficient nerve, and thus allowed himself to be hurried into a false position. All this may be true, though I am prepared to dispute it, but at least it is confessed that the right honourable gentleman has honourably maintained the traditions of high-minded courtesy associated with the chair, has revealed a general appreciation of the temper of the House which is admirable, and has indicated that he possesses a most excellent sense of its forms and usages. Mr. Jeffreys has shown himself to be a strong man. I only wish he had given to purely agricultural politics the great ability he is now giving to the control of the committee work of the House.

Of course, Mr. Round has rather effaced himself in the House of Commons; but he has the ability which, were it given an assertive character, would be of grave value to agriculture. I am bound to confess that he has in his private capacity given a very practical evidence of his interest in the agricultural labourer; and that the allotments on his estate are among the best to be found in Essex. An Etonian, a Christ Churchman, a barrister of the Inner Temple, Mr. Round has the personal distinction which should have—(had he, I repeat, been assertive)—made him a considerable figure in Parliamentary life. The House loves a sportsman, and he entered St. Stephen's with the reputation of being one of the best wicket-keepers in England. He has, however, preferred the rôle of the quiet man; and he has thus rendered himself distinguished by his very modesty. Mr. Round is in this, too, a type of the agricultural member. They are all too self-restrained; and self-restraint is not a fertile political commodity. Give me your Bull of Bashan. You can judge his efficacy by the fruits of his work.

I am not holding up the pertinacity of the Irish members as altogether providing the Parliamentary M.P.'s representing rural constituencies with a desirable example; but, at all events, their very activity presents us with an interesting moral. Mr. Hanbury has been induced by them to exempt Irish brine butters from the operation of his Food and Drugs (Amendment) Bill. It is a maleficent concession; and I regret that a man like Mr. Hanbury, who does possess a backbone, should have been induced to make it. This, however, is not my point. When shall we be able to make such an announcement as this: "Mr. Hanbury has, thanks to the activity of the English agricultural members, now announced that he will extend the Agricultural Holdings Act Amendment Act in the direction suggested by Mr. George Lambert's Bill?" I believe that even at the Kalends pertinacity and pressure such as I here advise will still be only an aspiration. Our agricultural M.P.'s too sedulously harness themselves to the car of partisanism to be able to indulge in an assertive action against the official Minister.

Coronation Honours and Agriculture.

Agriculture finds representation in the Coronation honours list issued on Wednesday, three well-known men in the agricultural world—Lord Rothschild, Mr. A. F. Jeffreys, and Mr. James Round—being made Privy Councillors, whilst two breeders—Mr. Alexander Henderson and Mr. P. A. Muntz—have been made baronets; whilst the Secretary (Mr. T. H. Elliott, C.B.) and Assistant Secretary (Major P. J. Craigie), of the Board of Agriculture, have been created respectively Knight Commander of the Bath and Companion of the Bath. A brief biography of each of the recipients of such auspicious honours is appended.

Lord Rothschild has been created a Privy Councillor, a fitting honour to one who has done so much for agricultural pursuits. As is generally known, his lordship, who was raised to the peerage has on several occasions been visited by agricultural parties, and it will be remembered that

The Right Hon. Lord Rothschild, P.C.

as recently as the beginning of this month the members of the British Dairy Farmers' Conference visited the dairy, stud, and herd, and so pleased were they with what they saw that the British Dairy Farmers' Association awarded Lord Rothsin 1885, is a most enthusiastic breeder of Shire horses and Jersey and other cattle. His dairy is a model o fwhat such an important farm building should be. Lord Rothschild's farm at Tring, Herts, child the Association's gold medal "for the businesslike character of his farms and the exceptionally high dairy qualities of his several breeds of cattle." It may be further mentioned that Lord Rothschild is the senior partner in the famous banking house, and head of the English branch of the family, and is a hard-working and shrewd financier.

Mr. Arthur Frederick Jeffreys, M.P., ex-Chairman of the Central and Associated Chambers of Agriculture, has been made a Privy Councillor. It is perhaps needless to add that Mr. Jeffreys has at all times taken a great interest in matters agricultural, and may well be called an agricultural member. He represents the Basingstoke Division as a Unionist, and is a considerable landowner in Hants, farming his own property. Though called to the Bar early in the seventies, he has for many years acted the part of a country gentleman. His family hails from Denbighshire, and he boasts his descent from the tenth century. He was educated at Oxford, where he took mathematical honours. It will be recalled that a

Sir T. H. Elliott, K.C.B.
(Secretary of the Board of Agriculture).

couple of months ago he was appointed to the new office of Deputy-Chairman of Ways and Means in the House of Commons, and has given general satisfaction, even to the Irish members.

Another Privy Councillor is Mr. James Round, M.P., who has played so prominent a part for agriculturists in connection with the Education Bill. He comes from an old Essex family, one of whom sat for Colchester during five Parliaments in the last century. Called to the Bar in 1868, Mr. Round was elected for East Essex in the same year, retaining the seat until 1885, when, on the passing of the Redistribution Act, he became member for the Harwich Division, where he enjoys such widespread popularity that when a contest occurs his majority generally runs into thousands. He is a large landowner, and has numerous allotment tenants, and it is his boast that he has only heard of one malcontent. At Oxford Mr. Round was known as "the trivial Round," though triviality is the last thing he would now be suspected of.

Mr. P. A. Muntz, M.P., the well-known breeder of Shropshire sheep and Shire horses, has been made a baronet. He has represented the Tamworth Division of Warwickshire as a Conservative since 1884, prior to which he was a follower of Mr. Gladstone, but in the year mentioned he joined the Unionist ranks on account of his difference of opinion on the Irish and Egyptian questions.

The new baronets also included another Shire horse-breeder, namely, Mr. Alex. Henderson, M.P., whose stud has been so much to the front of recent years. Mr. Henderson is a Liberal Unionist in politics, and represents West Staffordshire, having been chosen by the constituency on the death of Mr. Hamar Bass. As a member of the Stock Exchange, he is well known in financial circles. He is a director of several big commercial undertakings, including the Manchester Ship Canal and the Great Central Railway.

Major Craigie, who has been made a C.B., is the Assistant-Secretary of the Board of Agricul ture, and the author of many of the valuable statistics, reports, papers, etc., on agricultural and rating, issued by the Board of Agriculture. He is the son of the late Mr. David Craigie, and was born at Perth in 1843. He was educated at Edinburgh University and St. Catherine's College, Cambridge; and, from 1861 to 1882, served in the Royal Perth Militia and the 2nd Royal Highlanders. He was Secretary of the Local Taxation Committee, and of the Central Chamber of Agriculture, from 1879 to 1890; and was appointed Assistant Secretary of the Board of Agriculture in 1897.

The Secretary of the Board of Agriculture, Mr. Thomas Henry Elliott has for some time past been

Sir A. Henderson, Bart., M.P.

a Companion of the Order of the Bath, and it has now pleased the King to make him a Knight Commander of the Bath. The honour has been well earned, for he has done good work at the Board of Agriculture for many years past.

The Education Bill: Exchequer Grant.

In the House of Commons on Monday Mr. Balfour made an important and far-reaching statement as to the financial changes the Government proposed to make in the Education Bill. The aid given to elementary schools out of the Exchequer is to be supplemented to the extent of over £900,000. At present, apart from the ordinary grants both to Board Schools and Voluntary schools, assistance is given by the State in the shape of the grants to necessitous schools of both classes, amounting last year to £860,000 in the aggregate. The amount of State aid in this form is rather more than doubled, and will take the shape of a new grant of £1,760,000 in all to the ne wauthorities responsible for all primary schools. This will be divided into two parts, a fixed amount of 4s. per child being given in every district, and the balance divided according to a sort of sliding scale as greater or less necessity is shown. The test of necessity is the produce per child of a penny rate which nowhere at present produces more than 10s. per head, and in such well-to-do districts the payment out of the new grant will be 4s. per head and no more. In the extremely poor districts the additional grant may amount to as much as 8s. 6d. per scholar. The proposals are naturally causing a good deal of discussion.

Haymaking.

Within the last ten or fifteen years the practice of haymaking has become so much modified that it is now a completely different operation, or series of operations, from that which obtained in the boyhood of men still young. The writer can remember when the scythe, rake, pitchfork and cart

Sir P. A. Muntz, Bart., M.P.

were absolutely the whole outfit needed for the work, while now nearly everyone of these—even the pitchfork—has been practically discarded, and all the labour is now done by horse-driven implements, excepting where haymaking is carried out on a small scale. To show wherein this advance has been made, it will perhaps be best to take up each operation seriatim, and point out what are now considered the most approved and advanced methods, beginning with the cutting of the grass. The mowing machine has been in use for over thirty years, but the machine of to-day is a very different article from what it was a generation ago. Without going into details, it need only be pointed out that in those early days a swathe of three feet to three feet and a half wide was the usual thing, while now five and six feet are quite common, and the work is quite as well within the power of two horses as the old size was in its time—so much more easily and more perfectly are all the details of the mechanism made to work now. The chief trouble is with the land; if the surface of the field is irregular, or if there are deep furrows in it, then the short knife bar makes the best job, but where the land is fairly even the long bar works perfectly well, while, of course, it gets over the ground much more quickly. To assist the low cutting of the grass and its removal from the knife bar, a self driven reel is now attached to the mower—this arrangement being a great help where the crop is tangled or leaning away from the machine.

Major P. G. Craigie, C.B
(Assistant Secretary to Board of Agriculture).

Paradoxical or heretical as it may seem, it is deliberately affirmed, that in nine cases out of ten more harm than good has been done to hay in turning it over. It may be perhaps necessary here to state that the writer has had a long experience in haymaking, both in England and in Scotland, in

all sorts of weather and with all kinds of crop: he has waded for a whole day up to the knees in water to save the hay-cocks from being swept away by the floods in Nithsdale, and has sweated under the blazing sun of Essex, where there is but little rain: he makes about 300 acres of hay per annum, and has handled probably 8,000 acres in his lifetime—not as a spectator, but as one taking his share of the burden and heat of the day: and he has also had the advantage of seeing how things are done in several countries abroad. And the result of all this experience is that he affirms that in the great majority of cases the hay is best left to make itself and ought not to be touched at all until it is fit to carry. The exceptional case is where there is continual wet weather, whereby the hay is battered into the ground and the grass begins to shoot up through it again. In such a case the chance should be taken of a gleam of sunshine to turn it up to keep it in evidence lest it rot. In Scotland it would turn at least yellow underneath if not moved. In ordinary, moderately fine weather, however, the most desirable course is to leave it alone after cutting it until it is partly dried and "made" on the top of the swathe, then rake it together into windrows and cock it up, when it is safe from either sun or rain. If there is much green and damp stuff in the swathes when raked up, then the windrows can be left for an hour or two before cocking up; but otherwise in the southern half of England this is all that is needed, and the writer has made thousands of tons of hay in this way.

In connection with this point it should be noted that hay lying in the swathe, as deposited by the mowing machine, is in such a position that it shoots the water off without getting very wet. The natural glaze on the stems assists this process, and thus a shower of rain or a wet day or two does little harm. On the other hand, when the hay is turned the stems are broken, thus letting the sap out and the wet in, while the clover leaves get badly knocked off, and there is a waste of labour in addition. Where there is a very heavy crop—say over two tons per acre—it may be necessary sometimes to teaze the stuff out, but usually this necessity does not arise. The writer has a tedder which is brought out to the field at the beginning of the season in case it may be wanted, but last year it was never used, and not one acre of the whole crop was turned at all.

The keynote of haymaking is cocking or "quiling." If there is continuous fine weather this may not be necessary where the carrying can keep pace with the cutting, but if the hay is likely to have to lie some time then it should be cocked to keep its colour and prevent it from becoming sunburnt. On the other hand, in broken weather if the stuff can be got to the half-dried stage, let it be put into cocks, and it is then safe from further wasting. Rain only wets the outside straws, while an occasional spell of sunshine allows of the cocks being turned over, shaken up, and *re-made*, but not shaken *out*. A properly made cock will stand a week's rain without much harm, but it must be properly made by shaking up the stuff in the first place and thatching the last layers evenly over the top.

It is remarkable what good hay can be made in bad weather by keeping the stuff in cocks, and how quickly a fieldful of cocks can be "turned" and re-made, when every man takes a row by himself, and the master sets the pace. But even with cocking, as with turning the swathe, the benefit depends much on the subsequent weather, for it often happens that hay which was let alone will dry faster and be fit to carry when the sun and the wind comes, before cocks alongside, which may be slightly clammy inside, and require to be split or turned over for an hour or so before carrying. As stated above, it is generally better to let the hay lie in the swathe untouched.

After the hay is "made," the next process is the carrying and stacking, and it is here that there has been such a tremendous evolution of labour-saving machinery within the past few years. The old way—which, of course, is still the most popular—is to have the hay ready in cocks or windrows, to pick it up with pitchforks, and to put it on to a cart or waggon, where it is piled by one or two men, roped down, and then hauled to the stack. The writer has been told by some of his men that in the old days when beer was plentiful, it sometimes took two hours to load a waggon, while in one of our standard books on farming there is an illustration of a waggon being loaded up with hay, and with three horses in it—as if this were the pattern to follow.

Having got the hay to the stack, the next process is to get it placed on it. Many devices for this purpose are in use in America, and the one the author has adopted in practice is a combination of the principle of an American stacker adapted to an English elevator. The long tines or teeth rest on the ground in the reverse way of the sweeprake, and when a load is brought up on the latter it is driven straight on to the elevator tines—the teeth of the sweeprake interlocking with these—and the load deposited by backing as above mentioned. By winding a handle with drum and ratchet attachment, the elevator tines are next wound up as required, and the load of hay gradually tipped on to the revolving web of the elevator, and carried upwards in the ordinary way; a movable reversed sweeprake thus taking the place of the hopper on the elevator. It will thus be seen that, in ordinary, fine weather, the hay is made, carried, and put on to the stack without ever being touched by hand tools at all, as it is only in the building of the stack that forks come into use at the end.

It may be objected that it is only in the case of large fields and with a large acreage of hay that this system can be adopted. But it can be carried out on a small scale with an ordinary elevator, or even a horse fork (though the latter is not so suitable for this purpose), and one sweeprake. And where the fields are small, it is only necessary to enlarge some of the gaps which usually exist in most farm fences, to make a gangway through from one field to another, and thus bring the produce of several fields to one centre. The only drawback to this modern system is that the hay must be stacked in the field where it is grown, as the sweeploads cannot be taken along a road to a stack-yard or a hay-shed. In the latter case, some of the "loaders" used on carts with frames would be the best arrangement.

The invention of the horse-rake was one of the greatest advances made in haymaking, as those will know who can remember the time when the stuff was windrowed by hand-rakes and forks. But now the horse-rake itself is undergoing a great development—has, indeed, undergone it already.

It is obvious that the system described is not applicable to Scotland, the north of England, Ireland, or any district which has a large rainfall The method of procedure and many of the implements are radically different, and by no possibility could the two styles be approximated. This difference is one wholly of climate or rainfall, owing to which there is not only a greater difficulty in getting sufficient sunshine to dry the hay, but the hay itself contains a greater proportion of moisture both before and after it is made.—Mr. P. McConnell, in the Journal of the Board of Agriculture.

Coffee Husks as an Adulterant of Feeding Stuffs.

Attention is again being directed by the Royal Agricultural Society to the use, as an adulterant of compound feeding stuffs, of coffee husks (the so-called "parchment" of the coffee berry), of which worthless material there is a large importation into this country.

The existence of this new form of adulteration was reported to the Council of the Royal Agricultural Society in May, 1898, by its consulting chemist, Dr. Voelcker, who, in his annual report for that year, thus refers to the subject:—

"The husk, or 'parchment' skin, of the coffee berry, which envelops the berry after the fleshy pericarp has been removed by the washing and macerating processes to which the fruit is subjected on the estates where the coffee is grown, and which, in turn, is removed by hand before the coffee is roasted, has hitherto been rightly looked upon as useless for feeding purposes. Lately, however, it appears to have been introduced as a convenient component of certain of those frequently very 'doubtful' articles known as 'compound' or 'feeding' cakes. The microscopical appearances presented by coffee husks are distinctive, and somewhat resemble those of earth-nut."

Dr. Voelcker has mentioned, in one of his periodical reports presented to the Council of the Royal Agricultural Society, an instance of the direct sale as a feeding substance of the material by itself, which, though sold at 20s. per ton, was quite worthless, and useless for feeding purposes.

A favourite medium for the employment of the admixtures seems to be common or undecorticated cotton cake, as the presence of the coffee husks in it is only with difficulty detected. It is not infrequently found also as a constituent of mixed feeding cakes.

Silage-making.

The Board of Agriculture desire to acquaint persons desirous of making silage that copies of a leaflet containing information on the subject of ensilage may be obtained post free and free of charge on application to the Secretary, Board of Agriculture, 4, Whitehall Place, London, S.W. Letters of application so addressed need not be stamped.

Boroughbridge Barnaby Fair.—There was a good show of cattle at this fair, held on Monday, and early in the morning trade was fairly brisk. One-year-old bullocks made £6 to £6 10s.; two-year-old bullocks, £8 to £12; two-year-old heifers, £9 to £13; three-year-old bullocks, £16; geld heifers, £14; new calven cows, £19 15s. to £22; and cows in milk, £20 to £22.

Highland.

The annual general meeting of the members of the Highland and Agricultural Society was held on the 4th inst. at Edinburgh, Sir Ralph Anstruther presiding, in the absence of the Earl of Aberdeen, president of the Society. Two hundred and forty-nine new members were balloted for and duly admitted.

The Chairman, in moving the adoption of a loyal address to the King on the occasion of the Coronation, said His Majesty had taken the liveliest interest in the affairs of the Society. He was president of the Society during the highly successful show held at Edinburgh three years ago, he was a life member of the Society, and he was not only a patron of agriculture, but a practical agriculturist himself. He thought there was no public body that could more fittingly present such an address to His Majesty.

The Right Hon. Lord Herries was elected president for next year, and the Earl of Dalkeith, M.P.; Sir Ralph Anstruther of Balcaskie, Bart.; Sir Mark John M'Taggart Stewart of Southwick, Bart., M.P.; W. J. H. Maxwell of Munches, M.P., vice-presidents.

Mr. Leith Hay, of Leith Hall, reported that the arrangements were well advanced for the Society's show, to be held at Aberdeen on the 15th July, and three following days. The town of Aberdeen had subscribed £100, besides giving a site and supply of water free of charge. It was fully expected that there would be a large display both of live stock and implements. He was sure the Society would meet with a most cordial reception in Aberdeen, there being evidence throughout the county of the greatest interest in the show.

Mr. Shirra Gibb, Boon, reported that the arrangements for the Dumfries Show of 1903 were progressing satisfactorily. An admirable field for the show had been secured at Tinwald Downs. For the Dumfries Show of 1895 a local fund of no less than £1,701 was raised, and it was confidently expected that the show of next year would receive equally liberal support from the district. The town of Dumfries had intimated a subscription of £75 from burgh funds, and it was hoped that, as in 1895, a further sum would be raised in the town by private subscriptions. The County Councils of Dumfries, Kirkcudbright, and Wigtown had taken steps for raising contributions to the local fund by means of voluntary assessments on owners of lands and heritages, as was done in 1895.

Regarding the arrangements for the show of 1904, to be held at Peerth, Sir James H. Gibson-Craig reported that the Town Council of Perth had been good enough to grant the use of the South Inch as a site for the show, and also to give a supply of water free of charge. The County Councils of Perth (Eastern Division) and of Forfar (Western Division) had taken steps for raising contributions in aid of the expenses of the show by means of voluntary assessments on owners of lands and heritages, and it was expected that, as for the Perth Show of 1896, the County Councils of Fife and Kinross would adopt the same course.

The report of the Science Committee presented by Mr. E. Hedley Smith was adopted. It stated that during the past year 137 samples of fertilisers, feeding stuffs, and agricultural products had been analysed for members of the Society, and for which the Society had paid half the cost of analysis. That was the largest number of such substances that had been analysed for members under the Society's scheme during any one year. The greatest increase had occurred under the heading of feeding stuffs, which were now being bought under a guarantee of analysis to a much greater extent that formerly, and it was found by the Society's chemist that, with very few exceptions, the quality of both feeding stuffs and manures had been very satisfactory. In addition to the above samples, there had been forty-seven samples of water analysed for members. There was good reason to believe that cases of roguery were now very rare; but there were still to be found in the market some very worthless materials that were strongly recommended and widely advertised in such a manner as to deceive the unwary, and there was still much need of local organisations to protect farmers against the injury and loss which their purchase might involve.

some parts of the country. Tall fescue also seemed to be coming more into use.

Mr. M'Alpine, the Society's botanist, reported that during the past season he had tested the purity and germination of about one hundred samples of grass and clover seeds. For the first time in his experience, the farmers were sending in samples of Burnet chicory and kidney vetch, plants which were evidently undergoing trial in

On the motion of Mr. John Wilson, seconded by Mr. Alexander Glendinning, Newmains, a committee was appointed to co-operate with the Perth County Council on the question of preferential railway rates being given for foreign, as against home produce.

Home Notes.

The Borough

presented an unusual outward attraction a week ago. Men were busy digging holes for the foundation of a triumphal arch, of which the framework was lying about, impeding the pedestrian traffic. Some ropes crossed the sky-line from side to side of the street, the sound of hammers was constant, denoting preparation for the expected pageant, but the actual decorations were practically invisible. By Monday all was changed. The classical columns of the arch were erected, above them was suspended a great crown, from which, in graceful curves, was draped a mass of crimson silk plush, bordered with bullion fringe, and bearing the legend, "South London welcomes its King and Queen." Wreaths of artificial flowers of gay colours formed a continuous canopy over the roadway. Flags and banners fluttered in the breeze, and the sunshine gave brightness and beauty to the scene. Then came Tuesday's bad news. The King was seriously ill. We stood amazed, knowing that "this sickness doth infest the very life blood of our enterprise." After a pause of suspense, the gladsome work of preparation was succeeded by demolition, and to-day (Saturday) hardly a fragment of our gay surroundings is to be seen, save the solitary and forsaken columns which rear their heads as sorrowful evidence of the disappointment we feel in the vanishment of our joyous hopes. Well, "kings do their best, and they and we must answer for the intent, and not the event"; we can only humbly accept the inscrutable degrees of Providence, and wait for the day, when, "with joy and gratitude, we see restored, crowned with success, and safe, our much-loved lord."

Under such varied and exciting outward circumstances, it is hardly possible to suppose that much attention has been given to business. It is commonly admitted that if the hop trade sees the chance of a holiday, it will be eagerly seized. Therefore, although the occasion for holiday was postponed, the offices of the merchants and factors remained closed during Thursday, Friday, and Saturday, and as, during the first three days of the week the Coronation possibilities were uppermost in our minds, we have had a practical suspension during the whole period.

When the Sun Shines

and hops are growing, the Borough is quiet. This is recognised as an axiom, and we are now feeling its influence to some extent. Should the present weather be continued our market will certainly be affected by it. Thus far recent advances in value are maintained in consequence of the scarcity of good samples and the general reduction of all stocks, which are declared to be "the smallest on record." But as we are drawing very near to the next harvest, buyers will probably be calculating upon future results, and it can hardly be wondered at if they anticipated that affairs will tend in their favour. I am therefore prepared for a slight depression of prices, which, however, may be counterbalanced by the threatened and actual spread of blight in the plantations, and the increased consumption of beer, the natural consequence of the summer heat.

Concerning the Growing Crop

there appears to be practical unanimity of opinion that the bine has made good progress during the past week. With but few exceptions, growers tell me that arrears of growth are now caught up, and that, apart from the attack of fly, the plants are as healthy as they desire. But there is no doubt that the blight is an important feature of the present position. Coming late, it has come in strength, and will probably be persistent. If not eradicated by washing, it will increase, and become unmanageable, and farmers are sorely exercised as to the best course to take. If they spend money in washing, and so secure a full average crop, they are faced with the probability of unremunerative prices, and consequent loss. Yet I can understand how hard it is for them to decide to save the money and withhold the remedy, and to see their plants going daily to the bad. I can only refer to my previous remarks, and, unpleasant as it is to tender such advice, I would repeat that the wisest course this year is to leave the crop to Nature; spend only necessary cash and save every possible sovereign. Pick only such hops as arrive at perfection; if the crop be small, be thankful; if the quality be good, be doubly thankful. At all events, let the growth look after itself, but exercise judgment and skill when the harvest has come and curing demands attention.

The Action at Law

recently heard at Worcester, in which Messrs. Jones and Attwood, engineers, of Stourbridge, were plaintiffs, and Messrs. Jones Brothers, hop growers, of Northington, defendants, has terminated in a judgment with costs in favour of the plaintiffs, both with respect to the claim and the counter claim. The action arose out of a dispute as to the execution of an order for machinery comprised in the newly-invented hop-drying patent, erected last season at Northingtown, near Worcester, and fully described in the MARK LANE EXPRESS of September 30, 1901.

Foreign Notes.

Nuremberg.

Business moves slowly, but with a fairly steady progress, which is sufficient to maintain general values at recent level. Brewers, looking at the favourable reports of the growing crop, are regulating their purchases by their immediate necessities, but it is clear that they will find it almost impossible to get through the next two months, assuming that the consumption of beer continues at the usual average.

The movements of hops through the Central Railway Station during May were comparatively unimportant, the arrivals only amounting to 955 cwts., while the quantity dispatched totalled 11,505 cwts. Examining the returns of the business done by rail from September 1st, 1901, to May 31, 1902, it appears that 185,220 cwts. arrived, while 232,696 cwts. were sent away. These figures demonstrate the important reduction of stock that must have occurred, and justify the expectation of holders that the balance on hand will realise more money before the new crop comes forward. Of the arrivals during the nine months referred to, about one-third was produced in Bavaria, and the remainder by other districts, whose supplies are approximately shown in the following figures:—

	Cwts.		Cwts.
Bohemia	42,000	Baden	12,700
Wurtemberg	25,100	Russia	3,100
Austria-Hungary	21,000	Belgium	390
Alsace	17,100	France	190
North Germany	14,300	Other countries	200

The New Growth

has suffered somewhat from the recent unseasonable weather, and a serious attack of fly blight is generally threatened, and seems likely to develop. As remedial measures against this pest are not usually adopted in Continental plantations, growers note its approach with considerable anxiety. But the tone of the majority of my reports is favourable, and I gather therefrom that the plant is in most districts making healthy progress, which will be assisted by the higher temperature we are now enjoying.

Belgium.

The hop market remains quiet, without any material change in values. The arrival of better weather, which is giving material help to the plantations, may tend to depress the market, for it hardly possesses sufficient inherent strength to resist such an influence. The hops are growing well, and have made rapid progress within the last few days. Aphides are too plentiful, but as no material damage has yet been done, it is hoped that all anxiety may be removed by the hot sunshine which is now benefiting the plants.

America.

While there is little or no improvement in the actual demand, as brewers are only buying to supply their immediate needs, the market remains strong, with a slight tendency towards further advancement of quotations. The present shortness of stocks is not alone responsible for this condition of business, but also the outlook with respect to the new crop. It appears pretty certain that the yield of New York State must be small. From Schoharie Co. it is reported that the crop will probably be the poorest and lightest for 30 years, and from Oneida Co. I hear that growers are feeling rather "blue," as there has been no substantial recovery from the effects of the May freeze, therefore a light crop is inevitable, even under the most favourable conditions.

The prospects on the Pacific Coast continue to be favourable, and it seems probable that a full average crop will be harvested. Prices are still firm at recent currency, growers having become more reserved in contracting for new crop deliveries.

By Hordeum.

The Finance Bill.

Now that the Finance Bill has passed, and all the alterations are finally agreed upon, it is well to look at it as a whole. The unprecedented methods of dealing with so grave a measure misled all those who attempted to prognosticate results, so it was more than ever necessary this year to deal with innumerable resolutions and amendments with caution.

A fact which is far too little recognised or acted upon, but which remains a very stern fact, indeed, can be expressed thus:—The true interests of agriculture are more affected by the variations in duties made through Finance Bills, than by all other classes of legislation put together. But to be able to confirm this truism one has to have the faculty of being able to read between the lines. Now, let us take as an illustration the effects of this year's Bill upon the price of materials used by brewers. Most people imagine that for once the Beer Duty, the brewers, and in fact the whole "Trade," have been left alone. But this is not so. The new Registration Duty on corn meant a rise to the brewer of a shilling a quarter on all the barley, maize, sugar, and other materials of the kind that he employs.

Few brewers rose in the House and said so, but the whole weight of the brewing interest was thrown behind the Irish members, who complained so bitterly of the gross injustice to the poorest of their poor, who had to live upon "yellow meal," and the increased cost of 3d. per cwt. meant actual starvation and ruin to them. It is very evident the Chancellor of the Exchequer gave way on this point, and made the material reduction of 1½d. per cwt., more out of consideration of the breweries, to whom it meant 6d. per quarter on glucose, than in the interest of food prices for Irish peasants. The unfairness of the competition of substitutes for barley-malt has been enhanced to the extent of 6d. per quarter by the unholy combination of the brewers with the Irish members in advancing arguments that would not have been listened to in any other legislative assembly in the world.

The astonishing way the Chancellor of the Exchequer permitted this grave interference with his whole scheme leads to very uneasy reflections. It throws into bolder prominence one of the seemingly minor points, which has so far entirely escaped comment and criticism.

Sir Michael Hicks Beach very considerately and wisely did not oppose the additional clause moved by Mr. Haldane on June 11th to admit of the use of

Duty-free

by scientists and manufacturers in all cases where pure alcohol was a necessity. In the very short debate on this point Mr. Fletcher Moulton brought before the consideration of the Chancellor a matter which has seemingly nothing whatever to do with the price of brewing materials. He stated that as well as aniline dyes, there were products of coal-tar which he inferred were overtaxed. "He trusted that the Chancellor of the Exchequer, in accepting the clause, would consult the very skilled chemist at his command to see whether at the same time burdens could not be taken off other agents of great value which were used for the purpose of manufacture."

One of these is Saccharin, the intensely sweet product of coal-tar, a large use for which is found in manufacturing lemonade and other mineral waters, and which has very extended uses for the purposes of adulterating many articles of food and drink in which sugar enters. The existing duty, heavy as it seems, is still insufficient upon this substance, and any undue favour shown it will be directly a source of reduction in the values of brewing material. The connection is much more direct than is commonly recognised, and it behoves the Chancellor of the Exchequer to be especially wary when the arguments in favour of a reduction of duty on saccharin are laid before him. All

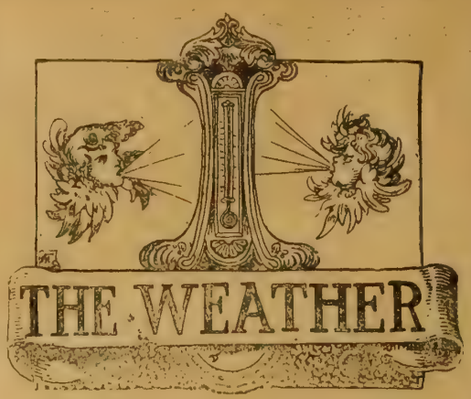
we have to guide us as to his views at present is contained in the speech he made directly Mr. Moulton had spoken, when he is reported to have said "He did not wish to enter into the subject, but he would make enquiry and see if it was possible to extend the clause in the manner suggested" (by Mr. Moulton).

GARDEN.

Mid-summer is past, and in a very few days more we shall be in July. By this time summer vegetables of most kinds ought to have made the greater part of their growth, and have now little or nothing to do but mature, form their pods, roots, hearts, or what not—"in short," as Mr. Micawber would say, "to become productive."

As far as my observations have extended of late, Pears are shockingly poor and "thin," as well as late, this year. At least, such is the case in this district, and as reports of a similar state of things have reached me from various parts of the country also, I presume it is fairly general, while the appearance of such Peas as are to be seen in the markets and shops amply support the theory. In very few gardens about here have even the most forward rows got much beyond the flowering stage—when they ought to be in full profit—while, with very few exceptions, the rows, as well as the pods, are "thin," patchy, weak, and altogether miserable-looking.

I am gradually coming to the conclusion that the average London or suburban gardener, whether amateur or professional, has only a very limited knowledge of vegetable culture generally. In many cases he is an adept in flower culture, and one frequently sees admirable examples of this phase of gardening where the choicest subjects are judiciously planted and well kept. But when it comes to growing vegetables he seems to be lost, and it is very seldom, indeed, that a really well-stocked and well-managed plot of vegetables is met with. I frequently take a walk through a large area—many acres—of allotment gardens close by—there are some hundreds of them—but with very few exceptions the results obtained are what I should consider simply wretched, though the occupiers devote a large share of time and labour to their cultivation, and the situation is beautifully open, and yet, to some extent, sheltered also. Now, as a rule both the soil and water of the metropolitan district is of excellent quality, the former being exceptionally pure, and the latter unusually fertile, so the fault must lie elsewhere.



To put the matter briefly, if one wants to see an abundance of beautiful and well-grown flowers, come to London, but in order to find vegetable gardening at its best, one must go down into the country.

Endive may be sown freely now, a good date for sowing for the main winter supplies being about the middle of July, or one sowing may be made early and another late in the month. When sown too early—before about the end of May—Endive is very liable to "bolt," or run to flower prematurely, but it is quite safe now. There are two distinct types of this useful autumn and winter vegetable—the curled-leaved kinds and the broad-leaved or Batavian type, which bears some resemblance to an ordinary cabbage lettuce. The first is the more useful subject, being largely used for garnishing purposes, as well as for salads, but some of both had better be sown now.

One more sowing of Peas, for late use, may be made, but get the seed in at once, in good soil and an open and airy position. It will be safer to select a good early variety or two now, such as English Wonder (dwarf), or Gradus, but should the autumn prove fine, a late variety, such as Autocrat or G. F. Wilson, may do well yet.

Persevere with the "summer-pruning" of hardy fruit trees of all kinds, which are making a great deal of growth this season, as a rule. If this thinning out and stopping of the young shoots is properly attended to now there will be comparatively little pruning with the knife necessary next winter, and the trees will probably be loaded with fruit-buds. It is a direct waste of material and energy to allow such trees to make a lot of strong growth during the summer, and then have to cut it nearly all away after the fall of the leaf.

Roses are beginning to expand at last, though there will be very few outdoor flowers in time for the Coronation. Keep the plants free from both the destructive maggot and the aphirs, or green fly, and if some of the long, strong shoots that are being made now—especially by plants that are carrying but few buds, or have lost them—are "stopped" presently they will break out at the axils of the leaves below, and bloom beautifully towards the autumn. Support the stems of carnations with neat sticks, and thin out the buds moderately if extra fine flowers are desired.

MONDAY (June 23rd).—There was a still further improvement in the general conditions of the weather. The winds were everywhere light, and were chiefly blowing from between west and south. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, over nearly the entire Kingdom, but the amounts were mostly small. Sunday night was warm, and at many places in Ireland, as well as in the east of England, the temperature did not fall below fifty-five degrees. The mid-day temperatures again touched seventy degrees in the Midlands.

TUESDAY (June 24th).—The weather was very fine over the greater portion of our Islands, but fog was prevalent on our coasts in the south of England, and slight rain fell in Scotland and in the north of Ireland. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, at a few places in the north and north-west, but the amounts were everywhere small. The wind was generally light, the direction being for the most part between south-east and south-west. Temperature was high during Mouday night, and in many places the thermometer did not fall below fifty-five degrees. The mid-day temperature touched eighty degrees in the Midlands.

WEDNESDAY (June 26th).—Brilliant weather prevailed over nearly the entire area of our islands, and high summer temperatures were generally experienced. No appreciable rain had fallen anywhere in England since Tuesday morning, and the amounts which were reported from Ireland and from the extreme north of Scotland were only small. The wind was easterly over the entire kingdom, and the force was light, except in places on our West coasts. Tuesday night was very warm, the thermometer in many places not falling below fifty-five degrees. The mid-day temperatures were again high over the central parts of England.

THURSDAY (June 26th).—Very fine weather prevailed over the whole of our islands, and the temperature was generally in good agreement with the average. Scarcely any appreciable rain has fallen since Wednesday morning, and no rain was reported as falling during the day at any of the stations from which the Meteorological Office receives information. A large anticyclone embraced the whole of the United Kingdom, and the winds were everywhere easterly, while they were light in force, except on our South and West coasts. The mid-day temperatures rose to about eighty degrees over the central parts of England, but over the Northern portion of the kingdom the thermometer in places only slightly exceeded sixty degrees.

FRIDAY (June 27th).—Magnificent weather was experienced again over the entire area of the British Islands, and temperatures were high over England. No rain had fallen in any part of Great Britain since Thursday morning, and in Ireland the slight rain reported was limited to the South-West. The type of weather had become rather more complex, but the greater portion of the United Kingdom remained under the influence of the anticyclone which has embraced our islands during the last few days. The winds were Easterly, and they were for the most part light. In many places the temperature during Thursday night did not fall below 55deg., and the thermometer in the shade yesterday rose to 80deg. over the central parts of England. The day was again brilliantly fine in London, and the temperature registered 81deg., which is 8deg. above the average.

SATURDAY and SUNDAY (June 28th and 29th).—Fine weather continued to prevail in nearly all parts of our islands, although on Sunday the conditions had become generally less settled than on several previous days, and slight rain occurred in places. On Saturday brilliant sunshine was experienced over nearly the entire kingdom, but there was more cloud on Sunday, and fog or mist was reported in the morning at several of our coast stations. The nights continued very warm, and in many parts of England the thermometer did not fall below sixty degrees on either night. The mid-day temperatures on both days exceeded eighty degrees over the central and south-western districts.

SOCIETY NOTES.

The question of valuation for unexhausted improvements, motor cars, and matters affecting sheep breeders were discussed at the last meeting of the West Riding Chamber. With regard to the question of valuation for unexhausted improvements, it was agreed, on the suggestion of the chairman, to draw renewed attention to the report of the committee appointed by the Central Chamber in 1884, and to suggest that it should be re-issued to the provincial chambers. As to motor cars, a resolution was passed expressing the opinion that the safety of all passengers on ordinary vehicles drawn by horses should have the first consideration, that the amount of traffic on the road and the width of the same should govern the speed allowed to motors, and that in all cases a conspicuous number should be affixed to the vehicle so as to afford a means of identification. Resolutions were adopted in favour of the doubling of the dog tax, and supporting the recommendation of the Central Chamber that sheep should be dipped at least once a year with an effective composition.

Several interesting subjects were discussed at the last meeting of the Cheshire Chamber of Agriculture. First of all the prevention of sheep scab was dealt with. The secretary (Mr. C. B. Davies) submitted a return showing the number of outbreaks there had been in the last three or four years, and said that so far as Cheshire was concerned the trouble was gradually decreasing. A member moved a resolution to the effect that the County Council be asked to make rules requiring all imported sheep (unless they came from districts quite free from the disease) to be dipped immediately on arrival and 14 days afterwards. This did not meet with general approval, it being pointed out that the rule would act harshly on the bulk of sheep breeders; but the resolution was eventually carried by seven votes to four against. Sheep worrying by dogs was next considered, and as many members have suffered loss by dogs worrying their sheep, some strong remarks were made on the matter. One member moved: "That dogs be fastened up from an hour after sunset to an hour before sunrise," he pointing out that most cases of sheep worrying occurred in the night. It was moved as an amendment that, while sympathising with the resolution, the Chamber was of opinion that so long as the dog was on the owner's premises no action should be taken against it." Seven voted for the amendment and eleven against, so that the original resolution was carried. The speed of motor cars was subsequently discussed, and after rejecting the proposal that the speed should not exceed fifteen miles an hour, the Chamber adopted a suggestion that a ("reasonable limit" should be put to the speed of motor cars.

The report presented at the annual meeting of the Warwickshire Farmers' Association showed that the association has been making steady progress. The Marquis of Hertford, who presided, said they had now 505 members, and the number was constantly growing, while, what was more, the members had been thoroughly loyal to the association, which had not always been the case. It was no use laying down a minimum rate of 7d. and 9d. per imperial gallon as the wholesale price for milk in Birmingham, and then underselling the other members at 6½d. and 8½d. per gallon. He wondered why the Warwickshire farmers did not make more cheese, as they used to do, instead of flooding the market with milk. The dairy at Coventry was also doing good work, and with more capital such creameries could be profitably multiplied in the country. He appealed to the farmers and landowners to support the society, and to foxhunters to purchase their corn and hay from the people over whose land they delighted to gallop. The Marquis of Hertford was subsequently re-elected president of the association.

The members of the Shropshire Chamber of Agriculture recently held a special meeting for the purpose of discussing the Education Bill. After a long discussion, the following resolution was agreed to: "That in the opinion of this Chamber the cost of national education should be borne by the Imperial Exchequer and not out of the rates." With but one dissentient, it was also agreed to add the following to the above: "That, failing that, this Chamber strongly urges the Government to re-consider the rating area, and respectfully points out that the substitution of the county for the parish as the rating area will throw a very unfair share of this cost on the rural as compared with the urban districts."

Cornwall.

A welcome change of weather has at last come, and an attempt will no doubt at once be made to save the hay crop. The recent rains have not done so much injury as might have been anticipated. On all sides farmers admit that corn is looking remarkably well, and, given a favourable time from now until harvest, there is every likelihood of an abundant crop. The mangold plant have come up very irregularly, and have not made much progress during the cold weather. It has been very unfavourable for hoeing. The present price of beef has caused some butchers to go in for the frozen article, and this has in some cases been strongly resented by their good customers.—E. C. B. (June 28th.)

Cornwall (West).

The weather up to this week has been very cold and wet. Everyone has been asking if summer was ever coming. It has come at last, and this week has been hot, and just what we want to ripen strawberries and get in the hay. All farmers are very busy now cutting the hay, and if it keeps fine, as it has every appearance of doing, next week will see a lot carried in fine condition. The crop is not by any means heavy, the bottom being thin. Grass is fairly good, and cattle are doing well. Mangolds are not forward, owing to the cold and wet, but will grow fast now. Wheat looks very well indeed, so does most of the oats and barley. The beef trade is good, 60s. to 65s. cwt. Lambs not so fast. The early potato crop, on the whole, has not been heavy; prices began low, and now is only about £5 per ton, which does not leave any profit for the grower, as we reckon it costs £40 per acre to grow them. A good lot of brocoli has been planted, the weather being all we could desire. The strawberry season is now in full swing. Crops are fair, but are not heavy. Prices are very good. Gooseberries are a good crop. Apples and pears are only a quarter crop. Currants and raspberries are fair. The prospects are fairly good for the season.—F. C. (June 28th.)

Essex.

Wheat in ear, and looks like being a splendid crop. Grass, heavy crop. Good plant of mangold, but it has been difficult to get them clean and singled. Stock doing well.—E. R. C. (June 27th).

Salop.

Weather keeps very dry, although the barometer has been falling for a couple of days. Now South Africa is conquered, English farmers emigrating must take with them muscle, bone and brain, and all the scientific knowledge they have acquired. They have new ground to break up. Science must test its character and its adaptation. J. G. (June 24th).

Worcester.

The continued rain we have had during this season threatened to spoil all crops, but the beautiful sunshine of the past week has put quite a different aspect on things. Wheat, as a rule, is looking fairly well, although a good many fields have lost plant and are much too thin. Oats promise to be a full crop, and barley generally is looking well. It has been impossible to hoe corn, on account of the rain, and most cornfields are full of weeds which cannot now be got rid of. The fine weather has come just in time to save crops of peas and beans, which were beginning to suffer from so much rain. It has been very difficult to clean plants of mangolds, and many fields had to be ploughed up on account of being choked with weeds.

There is an abundance of grass, and sheep and cow stock are doing well. A considerable rise in price of mutton and beef has been a great help to those who were able to hold on to their fat stock. The prospects for corn and for grazing are better this season than last, but the outlook for fruit crop is very disappointing.—R. B. (June 27th).

AGRICULTURAL SHOWS
FOR
1902.

JULY 1.—Bishop Auckland Agricultural Society, at Bishop Auckland. Entries close June 24. Secretary, W. Burkitt, Grange Hill, Bishop Auckland.

JULY 2.—Barnstaple Agricultural Society, at Pilton Park. Hon. Secretary, T. Yeo, Barnstaple.

JULY 2.—Mid-Kent Agricultural Association, at Maidstone. Entries close, June 11. Secretary, P. Champion, 3, Market Buildings, Maidstone.

JULY 2.—Scunthorpe Agricultural Society, at Scunthorpe. Entries close, June 25. Secretary, G. W. Johnson, 40, High Street, Scunthorpe.

JULY 2.—Mansfield and District Agricultural Society. Secretary, G. Cox, West Gate House, Mansfield.

JULY 2 and 3.—Leicestershire Agricultural Society, at Leicester. Secretary, H. C. Ardron, Syston, Leicester.

JULY 2 and 3.—Doncaster Agricultural Society, at Doncaster Race Common. Entries close, June 7. Secretary, F. H. Chafer, 9, Market Place, Doncaster.

JULY 2 and 3.—County Cork Agricultural Society's Summer Horse and Sheep Show, at Show Yard, Cork Park, Cork. Entries close, June 9. Secretary, E. Corrigan, 21, Cook Street, Cork.

JULY 3.—Brentwood and Mid-Essex Horse Show Society, at Middleton Hall, Brentwood. Entries close, June 21. Secretary, F. A. Thorne, Brentwood, Essex.

JULY 4.—Ripon and District Agricultural Society, at Ripon. Entries close, June 26. Secretary, B. North, 31, Market Place, Ripon.

JULY 4.—Malton Agricultural Society, at Malton. Entries close, June 14. Secretary, T. Mitchell, the Mount, Malton.

JULY 5.—West of Fife Agricultural Society, at Dunfermline. Entries close, June 21. Secretary, R. Husband, Solicitor, Dunfermline.

JULY 5.—United East Lothian Agricultural Society, at Amisfield Park, Haddington. Fntries close, June 20. Secretary, J. Stirling, Haddington.

JULY 5, 7, 8, 9, 10, and 11.—Royal Agricultural Society of England, at Carlisle. Entries close: Implements, &c., March 15; post entries, at double fees, April 1. Live Stock (horses, cattle, sheep, pigs), April 15; at post entry fees, April 30; late fees (last day), May 15. Poultry and Farm Produce, April 30, at ordinary fees; at post entry fees (last day), May 15. Secretary, Sir Ernest Clarke, 13, Hanover Square, London, W.

JULY 8, 9, and 10.—Peterborough Agricultural Society, at Peterborough. Entries close, June 14. Secretary, J. E. Little, Cowgate, Peterborough.

JULY 9.—Southmolton Agricultural Association, at Southmolton. Entries close, June 27. Secretary, J. Blackford, F.A.I., Castle House, Southmolton, N. Devon.

JULY 9.—East Surrey Agricultural Association, at Addiscombe Farm, Croydon. Secretary, Harry Fuller, 83, High Street, Croydon.

JULY 9 and 10.—Mallow Agricultural and Show Society, at Mallow. Secretary, N. F. Davin, Mallow, Co. Cork.

JULY 15, 16, 17, and 18.—Highland and Agricultural Society of Scotland, at Aberdeen. Entries close: Implements, May 12; Stock, June 9. Secretary, J. Macdonald, 3, George IV. Bridge, Edinburgh.

JULY 16 and 17.—East Kent Agricultural Society, at Ashford. Entries close, June 2; post entries, double fees, June 9. Secretary, P. M. Collard, Little Barton, Canterbury.

JULY 16, 17, and 18.—Lincolnshire Agricultural Society, at Boston. Entries close, June 10. Secretary, S. Upton, St. Benedict's Square, Lincoln.

JULY 17.—Halesworth Horse Show Society, at Halesworth. Hon. Sec., H. Brown, Halesworth.

JULY 17.—Great Chesterford Colt and Foal Society. Entries close, July 5. Secretaries, Messrs. C. Edward E. Cooke, Hinxton Grange, Saffron Walden, and W. C. Emson, Strethall Hall, Littlebury, Saffron Walden.

JULY 17.—Herts Agricultural Society, at Hatfield. Entries close, June 26. Secretary, W. A. Sherriff, Hatfield, Herts.

JULY 17.—Royal Isle of Wight Agricultural Society, at Newport, I.W. Entries close, June 17. Hon. Sec., H. J. Way, Newport, Isle of Wight.

JULY 17.—Stratton and Holesworthy Agricultural Society, at Bude. Secretary, H. J. Mackenzie, Granville Estate Office, Bude, North Cornwall.

JULY 17.—Thorney Shire Foal Society, at Thorney Park. Entries close, July 10. Secretary, H. Horrell, Thorney, Peterborough.

JULY 18.—Driffield and East Riding Agricultural Society, at Great Driffield. Entries close: Stock, July 3; dogs, July 8; poultry, etc., July 10. Secretary, T. Holtby, Exchange Street, Driffield, Yorks.

JULY 22, 23, and 24.—Gloucestershire Agricultural Society, at Tewkesbury. Entries close, June 16; post entries (double fees), June 23. Driving and Jumping, entries close, July 7. Secretary, F. J. Townsend, Cirencester.

JULY 23.—Bridlington Agricultural Society, at Bridlington. Entries close, July 12; post, July 14. Secretary, B. M. Townsend, Quay Road, Bridlington.

JULY 23.—Cambridgeshire and Isle of Ely Agricultural Society, at Chatteris. Entries close, Stock, June 30; post entries (double fees), July 5; Implements, July 5. Secretary, R. Peters, 7, Downing Street, Cambridge.

JULY 23.—Chesterfield and East Derbyshire Agricultural Society, at Chesterfield. Entries close, July 8. Secretary, T. Wardle, Auctioneer and Valuer, Chesterfield.

JULY 23.—Cleveland Agricultural Society, at Middlesbro'. Entries close, July 12. Secretary, T. S. Petch, Liverton Lodge, Loftus, R.S.O., Yorks.

JULY 23.—Wadebridge District Agricultural Association, at Wadebridge Hon. Secretary, T. Rickard, Cleveland House, Wadebridge.

JULY 23.—Chiltern Hills and Southern Bucks Agricultural Association, at Slough. Secretary, J. Bliss, 26, High Street, High Wycombe.

JULY 23.—Perry Barr and District Agricultural and Horticultural Society, at Perry Hall Park. Secretary, J. R. Ross, Perry Barr, Birmingham.

JULY 23.—Upholland Horse Show. Secretary, J. H. Wright, Sunny Bank, Orrell Port, near Wigan.

JULY 23, 24, and 25.—Northumberland Agricultural Society, at Newcastle-on-Tyne. Entries close, June 28. Secretary, W. J. Bolam, Berwick-upon-Tweed.

JULY 23, 24, and 25.—North-east of Ireland Agricultural Association's Horse and Sheep Show, at Belfast. Entries close, June 28. Secretary, K. MacRae, 37, Donegall Place, Belfast.

JULY 24.—Bedfordshire Agricultural Society, at Bedford. Entries close, June 21; post entries, double fees, June 28. Secretary, H. R. J. Swaffield, Ampthill.

JULY 24.—Maltby Horse and Foal Association, at Maltby. Secretary, J. R. Spear, 12, Carlton Avenue, Rotherham.

JULY 24 and 25.—Tunbridge Wells and South-Eastern Counties Agricultural Society, at Eridge Road, Tunbridge Wells. Entries close:—Live stock, June 18; post entries, June 23; implements, June 18; late entries, June 23. Secretary, W. Roper, 6, Kentish Buildings, Tunbridge Wells.

JULY 25.—Hutton Cranswick Horse, Foal, and Horticultural Society, at Hutton Cranswick. Entries close, July 21. Secretary, G. Rayner, Hutton Cranswick, Hull.

JULY 26.—Lauderdale Agricultural Society, at Lauder. Entries close, July 11. Secretary, G. L. Broomfield, Lauder.

JULY 28.—Shirley Horse Show, at Shirley. Entries close, July 22. Secretary, J. Clews, Shirley, near Birmingham.

JULY 29 and 30.—Devon and Exeter Horse Show, at County Ground, Exeter. Hon. Secretaries, C. J. Ross and P. Whitton, 24, Gandy Street, Exeter.

JULY 30.—Morayshire Farmers' Club, at Public Park, Elgin. Entries close, July 16. Secretary, W. Rose Black, Town and County Bank, Limited, Elgin.

JULY 30.—Burton-on-Trent and District Shire Horse Society, at Burton-on-Trent. Secretary, F. D. Winterton, Walton Warren, Burton-on-Trent.

JULY 30.—Long Sutton Agricultural Society, at Long Sutton. Entries close, July 23. Secretary, H. Garthwaite, Long Sutton.

JULY 30, 31, and August 1.—Yorkshire Agricultural Society, at Leeds. Entries close, June 21; late entries, June 28. Secretary, J. Maughan, Blake Street, York.

JULY 31.—Launceston Agricultural Society, at Launceston. Entries close, July 12. Secretary, J. Kittow, West Holm, Launceston.

JULY 31.—Lismore Farming Society, at Lismore. Entries close, July 16. Hon. Sec., E. W. Becher, South Mall, Lismore, Co. Waterford.

JULY 31.—Newport and District Agricultural Society, at Newport, Salop. Hon. Secretary, W. H. Burton, Newport, Salop.

JULY 31.—Wainfleet Foal Show Association, at Wainfleet. Entries close, July 28. Secs., C. Lucas and W. M. Epton, Wainfleet, Lincs.

JULY.—Inverness-shire Farmers' Society, at Inverness. Entries close, middle of July. Secretary, D. Gray, 36, Union Street, Inverness.

JULY.—Stranraer and Rhins of Galloway Agricultural Society, at Stranraer. Secretary, J. Bennoch, Solicitor, Stranraer.

AUGUST 2.—Craven Agricultural Society and Farmers' Club, at Skipton, Yorkshire. Entries close, July 25. Secretary, R. Wilson, Bank Buildings, Skipton.

AUGUST 4.—Wisbech and District Horse Society, at Wisbech. Entries close, July 24. Secretary, W. J. Chamberlin, Cornhill, Wisbech.

AUGUST 4.—Chepstow Agricultural Society, at Preecefield Park. Entries close, July 25. Secretary, Louis C. Wrigley, Trellick Grange, Chepstow.

AUGUST 4.—Tyneside Agricultural Society, at Hexham. Secretary, R. Ord, Beaufront, Wood Head, Hexham.

AUGUST 4.—Lutterworth and District Agricultural Society, at Bitteswell Road, Lutterworth. Entries close, July 10. Secretary, T. C. Bodycote, Lutterworth.

AUGUST 4.—Ecclesfield Farmers' Club, at Hillsboro' Park, Sheffield. Entries close, July 23. Secretary, V. Siddall, Wadsley Bridge, Sheffield.

AUGUST 4.—Oxted and Godstone Agricultural Association, at Oxted. Entries close, July 12. Secretary, J. Stanley, Tandridge, Oxted.

AUGUST 4.—Herefordshire Horse Show Society, at Edgar Street, Hereford. Entries close, July 12. Secretary, W. T. Williams, 6, St. John Street, Hereford.

AUGUST 4.—Ludlow Agricultural Society, at Ludford, Ludlow. Entries close, July 21. Secretary, E. H. Wood, 30, Broad Street, Ludlow.

AUGUST 4 (probably).—South Brent and District Dartmoor Pony, Sheep, and Horse Society, at South Brent, Devon. Secretary, Wyndham Hull, South Brent, Devon.

AUGUST 4.—Whalley Agricultural Society, at Whalley. Entries close, July 23. Secretary, J. M. Rawcliffe, Regent Terrace, Whalley, near Blackburn.

AUGUST 4.—Brentnor and Lydford Pony Society, at Lydford Junction, Devon. Entries close, July 9th. Hon Secretary, J. N. Jackman, Burnville, Tavistock.

AUGUST 4.—Gainsborough Agricultural Society, at Gainsborough. Entries close, July 29. Secretary, T. J. Dixon, 17, Morton Terrace, Gainsborough.

AUGUST 5.—Border Union Agricultural Society, at Kelso. Entries close, July 11. Secretary, A. Stevenson, Kelso.

AUGUST 5.—Welbeck Tenants' Agricultural Society, at Welbeck. Entries close, July 1. Secretary, H. W. Woods, Scotland Farm, Worksop.

AUGUST 5.—Waterford Agricultural Society at Waterford. Entries close, July 19. Secretary, M. J. Murphy, Tranmore, co. Waterford.

AUGUST 6.—Adlington and District Agricultural Society, at Alderley Edge. Secretary, W. J. Trotter, 4, Church Street West, Macclesfield.

AUGUST 6.—Badminton Farmers' Club, at Badminton, Glos. Entries close, July 7. Secretary, Ward Soames, Badminton, S.O., Glos.

AUGUST 6.—Mid-Sussex Horse Show, at Oat Hall, Haywards Heath. Entries close, July 24. Secretary, J. Wood, Broad Street, Cuckfield, Sussex.

AUGUST 7.—Alford and District Horse and Foal Show. Secretary, S. B. Carnley, Alford, Lincs.

AUGUST 7.—Madresfield Agricultural Club, at Madresfield Court. Entries close, July 10. Secretary, A. D. Melvin, Madresfield, Malvern.

AUGUST 7 (probably).— Market Bosworth Agricultural and Horticultural Society, at Bosworth Park. Entries close, July 26 (probably). Secretary, J. Thorpe, Nailstone, Nuneaton.

AUGUST 7.—Keele Agricultural Society, at Keele Park, Keele, Staffs. Entries close, July 24. Secretary, W. A. Benson, Parkfields, Silverdale, Staffs.

AUGUST 7.—Tring Agricultural Society, at Tring Park, Tring. Entries close, July 4; post entries, July 11. Secretary, F. J. Brown, 41, High Street, Tring.

AUGUST 7.—Warrington and District Agricultural Society, at Walton Park, near Warrington. Entries close, July 16. Secretary, H. Beresford Melville, Estate Offices, Warrington.

AUGUST 8.—Radnorshire Agricultural Society, at Penybont. Entries close, July 26. Secretary, J. Hamer, Greenfield, Penybont, Radnorshire.

AUGUST 26.—Cartmel Agricultural Society, at The Parks, Cartmel. Entries close, August 14. Secretary, W. Crigg, Cartmel, via Carnforth.

AUGUST 27.—Guildford Summer Show. Entries close, August 9. Secretary, E. H. Ellis, 30, High Street, Guildford, Surrey.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt—A quiet trade. Barley remains dull. Wheat advanced 3d to 6d per qr. Oats steady. Maize rather dearer on the week. Flour improved 3d to 6d per sack.—NIXON, GOWER, AND CO.

Mark Lane, Wednesday.—Attendance very limited, and the trade of a holiday character. Wheat and flour, limited business done at about Monday's prices. Maize steady, inactive. Oats quiet, small business late rates. Barley dull. Beans and peas quiet.

COUNTRY.

Ashford, Tuesday.—Wheat was the turn against sellers, and nothing was quoted above 33s 6d. Red wheat was sold at practically the same price. Very little doing in other kinds of corn, but prices unchanged.

Cambridge, Saturday.—During the week trade has been interrupted, and with brilliant weather the tendency is dull. The crops are making splendid progress. A good deal of hay is cut, and farmers are very busy. At this market to-day there was a very small attendance. Farmers, being busy with the hay crop, offered very little wheat, and prices remained unchanged. Red wheat, 31s to 32s; and white up to 32s per 504lb. Spring corn very scarce, and quite as dear.

Canterbury, Saturday.—Very small attendance, no change in prices. Ruling rates:—White wheat, 33s to 35s; red, 32s to 34s; grinding barley, 22s to 24s; white oats, 24s to 26s; black oats, 22s to 24s; grey peas, 36s to 37s per qr.

Chester, Saturday.—Splendid harvesting weather was accountable for a meagre attendance. Wheat and oats are unchanged, but beans are 3d per sack dearer. Wheat, white and red, 4s 6d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 60lb; grinding barley, 3s 6d to 3s 8d per 64lb; beans, 5s 11d to 6s per 86lb; oats, new, 3s 2d to 3s 4d; old, 3s 4d to 3s 6d per 46lb; Indian corn, 14s to 14s 9d per 240lb.

Carlisle, Saturday.—Only a few samples of oats were displayed, and trade was quiet at prices similar to last week's, viz., 24s 6d to 26s per qr.

Carlisle, Saturday.—Small supply of oats in our market to-day; good demand at last week's prices, 23s 6d to 25s per 336lb.—THOMAS ROBINSON.

Colchester, Saturday.—The market was of a holiday character. Very little grain offering. Prices nominally not altered.—FRANCIS AND CO.

Dublin, Wednesday. — Numbers in market: Beasts 1,278, decrease 987; sheep 6,198, decrease 5,905; calves 54, increase 8. Market was of a very holiday character; numbers small and buyers few. Prices still show a weakening tendency, even for the very best qualities. Sheep and lambs slow trade at last week's prices. Cattle (live weight), best, 36s to 38s per cwt.; other sorts, 30s to 35s per cwt. Mutton (dead weight), 5¾d to 7½d per lb.—GANLY, SONS, AND CO.

Glasgow, Wednesday.—There was a small attendance at our market to-day. Wheat and flour very quiet, with prices unchanged. Round maize steady. Grinding beans and Canadian pease, very little inquiry, with prices unaltered. Home and foreign oats firm, with small trade. Barley quiet. Bran and Thirds unchanged. Oatmeal steady, with practically nothing doing.—GIBSON AND CLARK.

Leeds, Tuesday.—The weather has been fine and hot the last few days. The unexpected relapse in America on Saturday, and equally quick recovery yesterday, beyond unsettling the option markets, has had no effect on the wheat trade, which, with smaller shipments and increasing uncertainty as to the French crop, remains extremely firm, prices on the week being 3d dearer, with a fair consumptive demand. Maize 6d dearer. Beans unchanged. Oats 5d lower.—DUNNS AND CO.

Leicester, Saturday.—Good attendance of buyers and dealers, with small supplies of wheat, which met a dragging trade at 31s to 34s per 36 stone. Barley quiet. Fine oats very firm.

Newcastle-on-Tyne, Saturday.—Our market quite of a holiday character. Nothing doing to test values.—JOSEPH POLLARD AND CO.

Northampton, Saturday.—A very small market indeed, very few samples of any sort of farm produce on offer. Wheat was a quiet trade, scarcely at last week's prices; flour quite as much as last week, but little or nothing doing. Supply and demand very quiet and inactive. White wheat 32s to 33s; red ditto, 30s to 32s; grinding barley, 24s to 27s; oats, scarcely any offering, and dearer; beans, 32s to 38s: flour, 22s to 23s.

Norwich, Saturday.—The attendance here to-day was moderate, and many farmers being occupied with their hay harvest. Under these circumstances the supply of wheat brought forword was much reduced. Prices showed scarcely any change. There was practically nothing doing in barley. Averages:—Wheat, 847qr, 29s 8d. The weather has experienced a very welcome change in Norfolk during the last few days, which have been gloriously fine. The effect upon the crops must be highly beneficial.

Norwich, Saturday.—Very little wheat on offer today, with no alteration in the trade. Hot weather, with brilliant sunshine, has prevailed during the past week, doing good to all growing crops. Wheat, red, 31s to 32s per qr, weight 63lb per bushel imperial. Corn inspector's return for the week ending 23rd June, 1902:—Wheat, 849, 29s 7d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Very meagre attendance and not sufficient business, passing to less values. — ROBT. HUBBLE.

Peterborough, Saturday.—There has been so little business doing to-day that it is difficult to quote values, but the two or three samples of wheat that changed made about last week's prices. Spring corn steady at late rates.—THOMAS HILL AND SON.

Reading, Saturday.—Although in this town the Coronation festivities were abandoned, and business for the most part proceeded as usual, this did not extend to the Corn Market, which was very poorly attended; business to all intents and purposes was at a standstill. In the case of the few sales that did take place, there was no alteration in values.

Ripon, Wednesday.—Owing to our market being held a day earlier, there is scarcely anything being done. No local samples on offer. Wheat, English (new), 31s to 32s; ditto foreign, 30s 6d to 34s; barley (grinding), 23s 6d to 24s 6d; oats, 24s to 26s; round maize, 24s to 26s per qr; beans, 1s per stone.

Sheffield, Tuesday.—Foreign wheat met with a steady sale at last week's quotations. English wheat and oats were scarce. Late rates prevailed for beans and corn, which were not in great demand. Flour values were unaltered. Quotations:—Wheat, white, 32s 6d to 34s; ditto red, 32s 6d to 34s per 504lb; oats, new white, 26s to 27s; ditto new black, 23s to 24s per 336lb; grinding barley, 23s 6d to 24s; malting ditto, 30s to 32s per 448lb; peas, grinding, 36s to 37s; ditto blue, 63s to 80s per 504lb; beans, Egyptian, 33s 6d to 34s per 448lb; ditto English, new, 38s to 40s per 532lb; Indian corn, small, 23s 6d to 24s 6d; ditto American mixed, 28s 6d to 29s per 480lb.

Spalding, Tuesday.—At the Corn Exchange there was a very small market owing to the Coronation. Wheat was scarce, and in demand at 1s per qr advance, at 32s. Oats, beans, and peas unchanged.

Stamford, Wednesday.—Owing to the Coronation the market was held to-day instead of on Friday, but not a single buyer or seller attended, the market being deserted.

Stockton, Wednesday.—There were two or three samples of English wheat showing, which made 33s per qr. Owing to the brilliant weather the foreign wheat trade is quiet, and with the holidays intervening, very little business was doing at late prices. Maize 3d dearer. Oats unchanged.

Sunderland, Saturday.—A holiday market, and prices of all descriptions of grain remain nominally unaltered. Arrivals:—Coastwise: Wheat, 1,353 qrs. Foreign: Nil.—E. AND F. RICHARDSON.

Wisbech, Saturday.—Small attendance at market. Wheat—Unusually short supply, consequently needy millers have to give late rates—viz., 30s to 31s. Spring corn unchanged.—JAMES FLETCHER.

Wolverhampton.—The market was of a holiday character. Quotations: Wheat, new, 12s 6d to 13s per 216lb; oats, 16s to 17s; beans, old, 16s to 17s 6d; new, 15s to 16s 6d per 196lb; barley, 35s to 40s per 448lb; maize, new, 25s 6d to 26s 6d; old, 29s 6d to 30s 6d per 480lb.

Worcester, Saturday.—The hay harvest is now in progress, and there were very few farmers at market. Wheat sparingly offered, and trade dull at unchanged prices. Little doing in barleys. Oats and beans were firm, with a fair demand.

Worksop, Wednesday.—Small attendance, and very little doing. White wheat, 31s 6d to 32s 6d; red wheat, 31s to 32s; grinding barley, 28s to 29s; white oats, 27s. to 29s; black oats, 25s to 27s; round maize, 25s to 26s per qr.

York, Saturday.—Farmers have practically no wheat left, and very little offering sells slowly at last week's prices. Feeding barley, 22s to 26s per qr of 32 stones. Oats very scarce and firm. Rye, 9d per bushel; beans, 1s ditto.

FOREIGN.

Hamburg, Saturday.—Trade quiet, without material alteration in prices. Wheat maintains its value, but the demand is not brisk. Hard winter No. 2, July, is offering at 28s 3d; Duluth No. 1 has been sold at 28s; red winter No. 2, July shipment, is held at 28s 6d per 480lb; Walla Walla at 29s 6d per 500lb; 61lb new Halstein wheat, for September-October delivery, was sold at 28s 9d per 504lb, duty deducted. Rye, near at hand, is in demand. 9 18-20 South Russian, now loading, was sold at 23s 3d; American Western No. 2, about due, at 24s 3d; 9 15-20 Nikolajef, August-September, is offering at 21s per 480lb. The growing crop of barley is making satisfactory progress, and looks promising in most of the growing districts. Russian feeding barley for prompt delivery continues in demand at 19s to 19s 3d; August-September shipments are offering at 16s 6d per 4001b. There is a fair trade doing in maize, Odessa and Danubian on the spot selling at 20s 3d to 20s 6d per 480lb; floating and August-September shipments are held at the same price. For mixed maize, prompt, 25s 6d is asked; December shipment is offering at 19s 6d per 480lb c.i.f.—JOHN TATLOCK.

BUTTER.

Tuesday.—Bedale: 1s 2d to 1s 3d per 24oz roll. Gainsborough: 1s per lb. Settle: 11d to 11½d per lb. Spalding: 15 for 1s.

Wednesday.—Barnsley: 1s to 1s 3d per lb. Boston: 9d and 10d per lb. Brigg: 9d to 10d per lb. Colne: 1s 0½d per lb. Driffield: 9d per lb. Keighley: 1s and 1s 1d per lb. Kirbymoorside: 7d to 8d per lb. Knaresborough: 1s 1d to 1s 3d per 24oz roll. Leyburn: 1s 3d to 1s 4d per 24oz roll. Louth: 9d per lb. Market Weighton: 10d per lb. Masham: 1s 1d to 1s 3d per 24oz roll. Northallerton: 1s 1d to 1s 3d per 24oz roll. Penistone: 1s per lb. Ripon: 1s to 1s 3d per 24oz roll. Scarborough: 11d to 1s per lb. Stockton: 10d to 1s 1d per lb. Wetherby: 9d to 1s per lb. Worksop: 11d to 1s per lb.

Friday.—Leeds: Yorkshire, 1s to 1s 1d per lb. Helmsley: 7d to 8d per lb. Lincoln: 10d to 1s per lb. Otley: 1s to 1s 2d per 24oz roll.

Saturday.—Appleby: 8½d to 9½d per lb. Berwick: 8d to 10d per lb. Carlisle: 9d to 10d per lb. Doncaster: 11d per lb. Grantham: 10d to 1s per lb. Howden: 9d to 1s per lb. Lancaster: 11d to 1s per lb. Malton: 8d to 9d per lb. Pontefract: 11d per lb. Retford: 10d to 1s per lb. Richmond: 10d to 11d per lb. Stokesley: 9d to 10d per lb. Whitby: 10d per lb. York: 10d to 1s per lb.

EGGS.

Tuesday.—Bedale: 15 or 16 for 1s. Gainsborough: 14 for 1s. Settle: 15 or 16 for 1s. Spalding: 15 for 1s.

Wednesday.—Barnsley: 12 or 13 for 1s. Boston: 15 for 1s. Brigg: 15 or 16 for 1s. Colne: 1s 6d per score. Driffield: 17 or 18 for 1s. Keighley: 12 and 13 for 1s. Kirbymoorside: 16 for 1s. Knaresborough: 14 or 15 for 1s. Leyburn: 18 for 1s. Louth: 16 or 17 for 1s. Masham: 15 for 1s. Northallerton: 16 for 1s. Penistone: 14 for 1s. Ripon: 15 or 16 for 1s. Scarborough: 14 for 1s. Stockton: 12 or 13 for 1s. Worksop: 1s 1d to 1s 4d per score.

Friday.—Leeds: Yorkshire, 8s 6d to 9s per 120. Helmsley: 16 for 1s. Lincoln: 14 to 15 for 1s. Otley: 14 or 15 for 1s.

Saturday.—Appleby: 14 to 16 for 1s. Berwick: 9d to 10d per dozen. Carlisle: 14 for 1s. Doncaster: 14 for 1s. Grantham: 15 or 16 for 1s. Howden: 16 to 18 for 1s. Lancaster: 13 for 1s. Malton: 16 to 17 for 1s. Pontefract: 14 for 1s. Retford: 1s 4d per score. Richmond: 14 and 15 for 1s. Stokesley: 14 or 15 for 1s. Whitby: 15 or 16 for 1s. York: 14 for 1s.

CHEESE.

Glasgow. Wednesday.—Market generally quiet. There were some further fresh arrivals this week of new Cheddars and Dunlops, and floors are now well covered. However, few concessions were made, and prices remain at 52s to 58s per cwt. Only a retail inquiry for Americans and New Zealand descriptions at late rates.

Newport. Wednesday.—Quotations:—Caerphillies, 44s to 50s; fancy dairies, 51s to 52s; doubles, 55s to 56s; Derbys, 59s; truckles, 65s; and Cheddars, 60s to 65s. There was a short supply.

POTATOES.

Borough. Saturday.—Supplies very small, but demand slow, and only small business. Scotch maincrops, 90s per ton. New: Jersey, 7s to 7s 6d; Teneriffe, 5s to 7s; St. Malos, 7s to 7s 6d; Cherbourg, 6s to 6s 6d per cwt.

Spitalfields. Saturday.—Arrivals very light, and good demand. Best Lincoln Up-to-dates, 70s to 75s; Blackland, 65s; Wisbech ditto, 70s; Scotch, 70s; Scotch maincrops (grey soil), 70s; Lincoln maincrops, 70s per ton. New: St. Malo, 7s 6d; Jersey, 7s 6d to 8s; Teneriffe and Canary, 8s 6d; Cherbourgs, 6s 6d to 7s per cwt; Lisbons, 3s 9d per box.

THE BALTIC.

We congratulate Mr. W. P. Wood on being elected president of the London Corn Trade Association for the second time. This office resembles that of the Lord Mayor in being annual and in the holder being scarcely ever re-elected. As in the case of the Lord Mayor, too, the honour is a very special and distinctive one.

The Hull Corn Trade Association have fixed the price of 28s. 7½d. for white Kurrachee, and of 28s. for red Kurrachee cargoes. London values would be 4½d. and 3d. higher for the two grades.

The "Atlantic" at Liverpool quotes 5s. 11d. per cental for American red winter wheat July and 6s. 2d. September delivery.

Trade at the "Baltic" has been much interrupted by the vexatious compulsory holidays, which could not be cancelled after the occasion for them had unhappily disappeared. The feeling is universal that in the future greater adaptability of Government orders to modern conditions will have to be arranged.

Such cargo sales as can be ascertained have been as follows:—

	On passage.	July shipment.	Autumn shipment.
Californian wheat	30s 3d	30s 0d	29s 6d
No. 1 Northern do.	29s 0d	28s 6d	28s 3d
No. 2 Calcutta do.	30s 0d	29s 9d	—
Galatz maize	21s 9d	21s 6d	22s 0d
Russian barley	18s 6d	18s 3d	17s 3d
Smyrna beans	30s 0d	—	28s 6d

Linseed cargoes come firm and dearer. Calcutta: Spot, 52s. 9d. nearest; near, 52s. 9d. paid; June-July, 53s. buyers; July-August, 53s. 9d. sellers, 53s. 6d. buyers. River Plate: Spot, 49s. 6d.; June-July to Hamburg, 53s. 9d. buyers; July-August, 54s. buyers, shippers ask 55s.

Rapeseed cargoes are steady. Ravison to Hull, September, 28s. buyers. Jamba: July-August to Hull, 31s. 6d. Brown Cawnpore afloat to Havre, 37s. 9d. o-t paid; June-July, 37s. 9d. sellers, 37s. 6d. buyers; July-August, 37s. 9d. o-t asked; 38s. 9d. n-t sellers, 38s. 3d. buyers; August-September, 37s. 9d. o-t sellers. Yellow Cawnpore: June-July, 39s. 9d. buyers. Brown Calcutta: June-July, 36s. 6d. sellers; to Hamburg, 37s. to 37s. 3d. n-t sellers. Ferozepore: June-July, 37s. 9d. o-t sellers to Antwerp or Hamburg; 38s. 9d. n-t sellers.

The Roumanian Rapeseed Crop is estimated as yielding 100,000 tons above home requirements.

Poppyseed is firm. Bombay: June-July to Antwerp, 45s. 6d. sellers.

Cottonseed to London is steady. Spot Egyptian, £7 15s.; July, £7 17s. 6d.; August, £7 18s. 9d. sellers; November-January, £6 12s. 6d. sellers. Bombay, little offering. To Hull: June-July, £5 sellers, £4 18s. 9d. buyers; July-August, £5 2s. 6d. quoted; December-January, £4 13s. 9d. buyers. Cottonseed is dearer at Alexandria, which cables July, 80p. 25 (£7 4s.); November-January, 67p. (£6 3s. 2d.) per ton.

A small cargo of Russian sunflowerseed for September shipment has realised 11s. per cwt.

HOPS.

Canterbury. Saturday.—There has not been much business on the hop market this week, but trade is firm. The plant is making better progress, but it continues to be infested with vermin, and washing operations are necessitated.

Worcester. Saturday.—The change to very hot weather during this week has had a beneficial effect upon a few of the very best grounds where washing has taken place, but the majority of the plantations are so badly blighted, and the plant is so weak, that it is almost impossible for some of them to recover, while the others can only produce a very short crop under the most favourable conditions. There has been a fair trade doing during this week, but very few hops are being offered by growers. —PIERCY AND CO.

POULTRY AND GAME.

Smithfield. Saturday.—Supplies fair, and met better demand at firmer prices. Fowls: Yorkshire, 2s 6d to 2s 9d; Essex, 2s 6d to 3s; Boston, 2s 3d to 2s 9d; Surrey, 3s 9d to 4s 6d; Sussex, 3s 6d to 4s; Welsh, 2s 3d to 2s 9d; Irish, 2s to 2s 6d; turkeys, cock, 5s to 6s; hen, 3s to 4s; goslings, 4s to 5s; Aylesbury ducklings, 3s to 3s 6d; country, 2s 6d to 3s 3d; Bordeaux pigeons, 9d to 11d; feathered, 7d to 9d; quail, 10d to 11d; wild rabbits, 6d to 8d; tame, 9d to 11d each; Australian, 8s 3d to 11s per dozen.

FRUIT AND VEGETABLES.

Covent Garden. Saturday.—Fairly good supplies of fruit and vegetables, and fair demand at steady prices. Tasmanian apples, 10s to 14s per case; English tomatoes, 5s to 8s; Channel Islands, 4s to 5s per dozen lb; Valencia oranges, 14s to 24s; Denia, 16s to 26s per case; gooseberries, 3s to 4s per half-sieve; pineapples, 1s 6d to 3s 6d each; bananas, 7s 6d to 12s 6d per bunch; lemons, 10s to 20s per case; French apricots, 9d to 1s 6d per box; French cherries, 5s to 8s per half-sieve; cabbages, 4s to 6s per tally; spinach, 2s to 3s; beetroots, 2s to 3s per bushel; carrots, 3s 6d to 5s 6d; turnips, 4s to 5s; radishes, 8d to 10d per dozen bunches; horseradish, 1s 6d to 2s; asparagus, 9d to 3s per bundle; mushrooms, 5s to 9s per dozen lb; lettuce, 9d to 1s 6d per score; peas, 5s to 6s per bushel; potatoes, 50s to 90s per ton; New Jersey, 7s to 8s; Canary, 7s 6d to 8s 6d; Teneriffe, 7s to 8s; St. Malo, 7s to 7s 6d; Cherbourg, 6s to 7s per cwt.

WOOL.

Canterbury. Saturday.—Holders do not seem disposed to take present prices, and are waiting the results of the next Colonial wool sales. Values are nominally: Kent fleeces, 5d; Down fleeces, 6½d to 7½d; cross-breds, 5d to 5½d; lambswool, 3½d to 4d; locks, 2d per lb.

FEEDING STUFFS.

Hull. Tuesday.—Linseed—The only arrival is 500 qrs from Riga. A dull and inactive market, though prices are a shade steadier. Calcutta, 52s 3d afloat and May-June. River Plate, spot 49s 6d sellers, 49s 3d buyers; December-January, 46s 9d first-hand sellers, 46s 3d buyers. Cottonseed—In the past week the market has shown some improvement, and old crop on spot sold at up to £7 10s, sellers now asking £7 11s 3d. A fair quantity June changed hands at £7 10s to £7 11s 3d. July made £7 11s 3d to £7 12s 6d, also same paid August. New crop has scarcely been dealt in, buyers declining to pay the advance of £6 17s 6d October, £6 11s 3d November-January. The market closes quiet to-day. Oils—Exports for the week ending 17th June, 1902:—Linseed oil: 1 America, 1 Denmark, 7 Germany, 8 Holland, 24 India, 15 Norway, 43 Russia, 4 Turkey; total, 103 tons. Cotton oil: 30 Austria, 123 Belgium, 18 Denmark, 101 Germany, 136 Holland, 4 Norway, 12 Sweden; total, 424 tons. The market is quiet. Linseed oil: 29s 9d spot; 29s 9d June-August; 28s 9d September-December. Cotton oil: 24s 10½d spot; 24s 9d June-August; 21s 7½d November-April. Crude: 23s 6d spot; 23s 6d June-August; 20s 4½d November-April. Rape oil: Jamba naked, 24s 3d spot; 1st quality, 25s spot. Oil seed cakes—Linseed cakes: A steady demand at previous prices. Cotton cakes are 2s 6d per ton cheaper, with steady demand for the time of year.—KEIGHLEY MAXSTED AND CO.

Mark Lane. Monday.—Linseed Cakes.—The trade still rules extremely dull and inactive, but while the Continent continues to absorb the greater part of the foreign supplies, values are firmly held up. Russians are only in moderate supply, and fully as dear. Americans sell quietly, being relatively cheaply offered. East India seed in bags offer at late rates. London-made move off slowly, and are without change. Cotton Cakes.—There has been a slightly improved demand during the past week, but with fairly heavy stocks and some further arrivals of foreign, prices remain steady, while English are not quotably dearer. Decorticated cake and meal are a dragging trade, and, if anything, the turn in buyers' favour. Rape cakes unchanged. Maize Germ Meal.—American is the turn dearer on account of scarcity, while English may still be bought on the same terms. Rice Meal.—Arrived parcels of Rangoon are obtainable on very favourable terms, while a premium of 5s per ton has been paid for autumn shipments.

MANURES.

Liverpool. Wednesday.—As usual, the trade in fertilisers and feeding stuffs at this season is extremely limited, and is more so at the present time, owing to the Coronation holidays—marred, as they must be, by the untimely illness of our Sovereign—and the produce markets close this evening for the week. Current rates are as per subscribed, but in the absence of business in many instances are purely nominal. Nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £8 10s to £8 15s per ton; East India bone meal, fair to prime, in bags, £4 10s to £4 15s per ton; kainit, prime, 23 per cent., in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, £5 15s per ton; linseed cake, American thin oblong, prime, in bags, £7 to £7 5s per ton; linseed cake, English, prime, in bulk, £8 to £8 7s 6d per ton; linseed cake, foreign round, soft and oily, in bags, £8 per ton; cottonseed cake, N.A. decorticated, prime, in bags, £7 2s 6d to £7 7s 6d per ton; cottonseed cake, English, decorticated, prime, soft, in bags, £7 5s to £7 8s 9d per ton; cottonseed cake, English, undecorticated, prime, in bulk, £4 10s to £4 15s per ton; cottonseed cake (crushed), 20 to 25 per cent. oil, prime, in bags, £7 10s per ton; maize germ meal, prime, in bags, £7 15s per ton; corn oil cake, 10 to 13 per cent. oil, prime, in bags, £6 5s per ton; rice meal, Rangoon, as imported, prime, in bags, £5 per ton; Indian meal, coarse to fine grinding, prime, in bulk, 12s 6d per 240lb; linseed, fine bold feeding, in bags, £3 to £3 2s per qr., 416lb; D.N.S. Brand superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per cwt. at depot; D.N.S. Brand superphosphate of lime, guaranteed 30 to 31 sol., in bags, £2 10s to £2 12s per ton at depot; superphosphate of lime, guaranteed 35 to 36 sol., in bags, £3 to £3 2s per ton at depot; basic slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, nominal; basic slag, prime quality, 35 to 40 per cent. phos., in bags, nominal; basic slag, finest quality, 38 to 45 per cent. phos., nominal.—H. JONES LANGAR AND CO.

COLONIAL DAIRY PRODUCE.

London. Wednesday.—Butter.—The demand for Canadian butter is quiet, but there is no change in prices. Saltless Canadian butter is still in good demand, and the quality on the whole shows an improvement of last year. At the time of writing the Copenhagen official quotation for next week has not been declared. Danish prices, however, on London markets keep well up, although Russian continues to come forward in large quantities. Some of it is of very high quality—especially late arrivals of genuine grass butter. The season in Siberia is reported to be a very gooo done. In the United States prices remain high, and imports from there are consequently low. The season there also is a very good one, but it will be another month before prices will fall low enough to make exporting profitable. Cheese.—The demand for Canadian is sluggish, and prices are about a shilling lower on the week. New Zealand is now in very small compass, and values are about 2s. lower than last week.—W. WEDDEL AND CO.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Wheat has improved in colour since the fine weather arrived, and the sunshine should do much to repair the injury wrought by heavy and flooding rains from the early weeks of May to the third week of June. That entire reparation can be wrought we think unlikely, and we shall certainly be very lucky if we get a thirty bushel yield. Oats are promising, they did not mind the heavy rains, and now they are exulting in the stimulating heat. The growth of barley is unsatisfactory and the colour very poor. Peas have come on at a tremendous rate, soaking moisture, followed by strong heat, being peculiarly forcing to this crop. There seems to be a good undergrowth of meadow grass. The root crops are coming on splendidly, but the hoe is needed to keep down the weeds, and hoeing makes an ugly addition to the labour bill. The promise of the orchards is rather better than the cold May might have led us to expect.

The growing crops of wheat are now regarded as promising, above an average in Russia, Roumania, Spain, and Italy, as indicating a full yield in Germany, Austria, Hungary, and Dalmatia, and as threatening a deficient yield in France. The American advices indicate a sharp divergency, winter wheat being below, but spring wheat above an average.

Official returns of what constitutes an average wheat yield show that New Zealand attains as high a yield per acre, 30 to 32 bushels as the United Kingdom. Germany, with 23 to 24 bushels, is better cultivated than France with 17 to 18, Canada, with 20 to 22, is "smarter" than the United States, with 13 to 15, and Roumania, with 16 to 18 bushels, does markedly better than the Austro-Hungarian Empire, with 14 to 15 bushels only. The four countries possessing the unenviable position of giving less than ten bushels to the acre in an average year are Argentina, Australia, Russia, and Persia. In India the average wheat yield, as estimated by the Council, is 11.20 bushels to the acre.

The average wheat crop of the United Kingdom for the past nine years is officially returned at 30.32 bushels, which, on an average acreage of 1,888,000 acres, gave an average yield of 57,250,000 bushels.

Imports of the United Kingdom last week were as follows:—

Wheat: 463,000 qrs.; a heavy supply.
Flour: 149,800 sacks; a moderate supply.
Maize: 281,C00 qrs.; a heavy supply.
Barley: 80,000 qrs.; much below the mean.
Oats: 110,000 qrs.; a very moderate arrival.

Stocks of wheat on the 28th inst. were thus estimated:—

	Qrs.
In farmers' hands	780,000
In merchants' hands	3,278,000
Total	4,058,000
A month ago the total was	3,655,000

The quantity of wheat now on passage to the United Kingdom is considerable, but it shows a decided decrease from May 17, when a total of four millions was nearly reached; the exact figure was 3,994,000 qrs. The high-water period of supplies on passage may be said to have extended from March 15, when 3,820,000 qrs. were recorded to May 31, when 3,876,000 qrs. were on passage. The present return (for June 28) is as follows:—

	Qrs.
Californian	1,580,000
American	456,000
Argentine	175,000
Russian	70,000
Indian	330,000
Australasian	365,000
Various	15,000
Total	3,011,000

An average quantity on figures of the last ten years, is 2½ million qrs.

Of maize, there are 900,000 qrs. on passage, against 1,035,000 qrs. a year ago. Of present expectations, 500,000 qrs. are round, 360,000 qrs. are yellow, and only 40,000 qrs. are flat corn. Of barley, the following is the quantity now on passage:

	Qrs.
Russian	60,000
Roumanian	15,000
Turkish	10,000
Chilian	6,000
Californian	110,000
Total	201,000
A year ago	260,000

Of oats, about 120,000 qrs. are on passage, or rather less than half an average quantity.

Wheat prices abroad are unsettled, for France shows a decided advance, while Germany indicates an equally decided decline. The markets of New York and Antwerp are fairly steady, but Austria-Hungary shows markets favouring buyers. The following are June prices in English money per quarter.

	New York.	Paris.	Berlin.	Buda-Pesth.	Antwerp.
4 June	26s. 6d.	38s. 10d.	37s. 6d.	30s. 0d.	23s. 7d.
11 June	26s. 6d.	39s. 9d.	37s. 9d.	28s. 6d.	23s. 6d.
18 June	27s. 0d.	41s. 0d.	38s. 9d.	29s. 0d.	30s. 0d.
25 June	26s. 9d.	41s. 9d.	35s. 6d.	28s. 9d.	23s. 3d.

The flour trade in England has been adversely affected by the hot weather which set in at the summer solstice, but there has been a good sale to bakers of sound second quality and spring wheat patents, and at 22s., 25s., and 28s., London sorts of the household, white, and top grade respectively would probably sell well too. As, however, these types are held for 23s., 26s., and 30s., the baker naturally is rather shy of them. The French sorts are a little dearer on the week in sympathy with the rise at Paris. Hungarian flour is steady and Cascadia is firm. Wheat at the recent markets has been steady for the scanty remainder of the home crop, and firm for Australian and Indian discriptions. For the Canadian, Manitoban, American, and Californian types a little less money has sometimes been accepted. Very little Russian or Roumanian is on offer. With respect to maize, prices for round and flat are unchanged, but yellow has declined 6d. per quarter with increased supplies at hand. Oats are a little lower at most markets. Feeding barley is neglected, and malting is scarcely offered. Beans make 41s. to 42s. per five sacks, while peas have sold well for the blue sorts.

The market for oilseeds is strong, considering the time of year. Fine Bombay linseed touches 57s., and 53s. is paid for cargoes of Calcutta. Arrived Egyptian cottonseed makes £7 15s. per ton, and the same price is paid for the finest samples of English linseed cake. East Indian rapeseed cake at £3 17s. 6d. is about the cheapest cake in the market, for cotton cake makes £4 15s. for London ordinary, and £6 10s. for good decorticated. Linseed oil in casks costs £30 10s. per ton, cottonseed oil £25 crude, and £27 10s. refined.

The chief shipping countries last week were fairly, but not extraordinarily, busy. America shipped 278,000 quarters of wheat, 133,000 sacks of flour, 12,000 quarters of oats, and 6,000 quarters of maize; while Argentina sent off 108,000 quarters of wheat, 205,000 quarters of maize, and 18,000 quarters of linseed. Russia did a very good export business on the whole, but nearly all her shipments were to France, Italy, and Spain. The totals sent off were—wheat 235,000 quarters, flour 10,000 sacks, barley 77,000 quarters, oats 125,000 quarters, and maize 80,000 quarters. Roumanian exports were limited to wheat, 80,000 quarters, and maize, 251,000 quarters; the latter, of course, was an unusually large quantity:—

THIS DAY'S MARKETS.

MARK LANE, MONDAY.

[FIRST REPORT.]

English wheat to-day was so scarce that no price modification could be recorded. The trade in foreign wheat has not yet recovered from the holiday feeling, and with very brilliant weather, is in buyers' favour. Maize was a dull market; firm for flat, slow for round, and 3d. to 6d. cheaper for yellow corn. Barley was not in request either for malting or feeding. Oats were 6d. lower for all kinds. Beans were a slow sale, but not as a rule quotably lower. Peas were a fair business, particularly for the better sorts. Prices as on Monday last. Oilcakes keep up in value despite the fine weather, and there is a decidedly strong feeling in the market for oilseeds.

CLOSE OF THE MARKET.

THE MARKET WAS DECIDEDLY WEAK AT ITS CLOSE FOR BREADSTUFFS, BUT MAIZE, OATS, AND FEEDING BARLEY WERE HELD WITH MORE CONFIDENCE THAN THE BRILLIANT WEATHER MIGHT HAVE LED ONE TO EXPECT.

THE FLOUR TRADE.

MARK LANE, MONDAY.

The retail consumption for bread is now at its lowest, for the hot weather causes a large demand for green vegetable food, and the wet weather, which prevailed till within ten days of the present date has caused the supply of such food to be large, cheap, and good. Bakers expected to-day to get all sorts of flour at 6d. less money than on the 23rd. Resistance to this decline was irregular, but, on the whole, the tendency of the market was in buyers' favour. Bran and pollard were put on sale at 2s. 6d. per ton below even the low prices of the 23rd. Maizemeal, oatmeal, and ricemeal also tended to be quoted rather lower from a week ago.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls	A. June. s. d.	A. Aug't. s. d.	B. Oct. s. d.
June 23 11 a.m.	5 11	6 0	6 3
4 p.m.	5 11	6 0	6 3
June 24 11 a.m.	5 11	6 0	6 3
4 p.m.	5 11	6 0	6 3
June 25 11 a.m.	5 11	6 0	6 3
4 p.m.	5 11	6 0	6 3
To-day, noon	—	6 2	6 3

A parcel of No. 1 Northern for July delivery was sold to-day for 6s. per cental. Maize made 4s. 8d. per cental for September delivery, but there were no buyers for July or August.

By the letter A is signified duty to be paid by *buyer*, by B duty to be paid by *seller*. On the Finance Bill being passed, the members of the Term Market unanimously agreed to adopt the new duty as a sellers' obligation from the new cereal year (September 1). Up to that date it will fall on the buyer. In default of agreement, however, the Acts of 1876 and 1901 throw the burden on the buyer, a fact which those who operate on these prices without being members of the Term Market would do well to note.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100lb. Maize, when quoted, is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

GRAIN AND FLOUR FACTORS REPORT.

Business has been considerably interrupted this week by the holidays. Flour.—The market is steady, but the demand is only moderate. Grain.—Maize steady, and in fair demand. Peas and beans slow. Foreign oats more plentiful, but still firm in price. Barley unchanged. Mill Stuffs.—Bran slow of sale. Thirds in good demand.—McKINNON AND McDONALD (Glasgow).

The wheat market has been very quiet, millers being indisposed to operate except for the supply of their more immediate needs, and last Monday's prices are with difficulty maintained. Maize steady, unchanged. Oats and barley firm, and occasionally rather dearer.—W. S. WOOD AND CO. (Mark Lane).

Supplies of wheat and flour continued to be liberal. At to-day's market demand was restricted and prices were unchanged. Maize, barley, and oats met a fair demand at prices of last week.

Middlings in fair demand at late rates. Bran and pollard dull, but unchanged.—JOHN BAWCOMBE AND CO. (Mark Lane).

SEEDS

London, Monday.—Nothing is passing in the trade for farm seeds worthy of report. The trefoil and trifolium crops cannot fail to benefit by the present favourable weather. Canary seed continues to advance, following the rise in Turkey.—JOHN PICARD AND CO.

PROVISIONS.

London, Monday.—Bacon—The arrivals last week from Ireland were 1,647 and from foreign ports 6,845 bales of bacon. There was a very good demand for bacon last week, and prices in consequence were some 1s to 2s higher on Danish, and Irish and Canadian were receiving more attention. Butter—The butter market was quiet, without alteration in prices. Lard—Lard was steady, but quiet.

FEEDING STUFFS.

London, Monday.—Linseed cake, no change on the week. Market quiet. Cotton cake—The position is without alteration. Linseed—Market better. Russian and La Plata scarce.

ROBERT AND JOHN HEWETSON.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Trade has not yet recovered from the paralysis of last week, but wheat, maize, and oats have opened in buyers' favour, while barley is neglected. Only oilseed cargoes are rather better from a week ago. Cargoes of rye, beans, peas, and locust beans find a few buyers at old terms.

BUSINESS DONE.

WHEAT.—Walla Walla, 29s 9d, arrived; South Australian, 30s, arrived; Victorian, 30s, arrived; No 1 hard Manitoba, 29s, July shipment; No. 2 hard winter, 28s, July shipment; soft red Calcutta, 28s 6d, July shipment; Californian, 30s 3d, July shipment; Russian winter, 28s, September shipment.

MAIZE.—Danubian, 21s, July shipment; Galatz, 21s 3d, July shipment; Argentine, 20s 9d, July shipment; Argentine, 20s 3d, August shipment.

BARLEY.—Taganrog, 20s, July shipment.

OATS.—Riga, 14s 9d, October shipment; Viatka, 17s 3d, July shipment; Danubian, 14s 6d, September shipment.

LINSEED.—Calcutta, 53s, July shipment; Argentine, 46s 9d, December shipment.

RAPESEED.—Yellow Cawnpore, 39s 9d, July shipment; brown Calcutta, 36s 3d, July shipment.

BEANS.—Egyptian, 30s 3d, August shipment; Smyrna, 28s 6d, August shipment.

Early Potato Crops.—In Scotland the early potato crops are being lifted, the first potatoes of the season being lifted last week on the farm of Mr. Dougan Straid, six miles south of Girvan, and despatched to market. The consignment consisted of 70 barrels of Puritans. In view of the backwardness of the season, the crop is not unusually late. The total quantity of early potatoes sent from Girvan railway station last season was about 12,000 tons. The general crops of potatoes in Scotland are looking well.

CATTLE.

Metropolitan Market, Islington.

Monday, June 30th, 1902.

	British.	Total.	July 1st, 1901.
Beasts	1,070	1,070	1,020
Sheep and lambs	5,650	5,650	8,080
Calves	5	5	—
Milch cows	45	45	60

Quotations per 8lb. (sinking the offal).

ENGLISH.	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	3 4 ..	4 8 ..	5 4
Sheep	4 0 ..	5 6 ..	6 4
Lambs	5 8 ..	6 4 ..	7 0

Milch cows, per head, £17 to £23.

British arrivals include as follows:—Scotland, nil; Eastern Counties, 148; Midland, Home, and Western Counties, 476; Devon, 30; Ireland, 416.

We note to-day a great falling-off in the supply of fat beasts, especially from Norfolk, arrivals from the Midland counties, consisting of Herefords, runts, and Lincoins being, however, stronger. Trade proved slower, but late rates were upheld, owing to the smaller number on offer. Fat butchering cows and bulls were more difficult to cash, even at less money, though the supply was very short. 280 Irish stores were quoted as follows:—Yearlings, £7 per head; 2½ years, £12 to £13; and 3 year olds, £14 to £15. The following are top quotations per 8 lbs. (sinking the offal):—

	To-day.	Monday, July 1st, 1901.
Devons	5s 2d to 5s 4d ..	4s 4d to 4s 5d
Herefords	5s 3d to 5s 4d ..	4s 4d to 4s 6d
Norfolks	5s 1d to 5s 2d ..	4s 4d to 4s 5d
Runts	5s 2d to 5s 3d ..	4s 3d to 4s 5d
Lincolns	4s 10d to 5s 0d ..	4s 4d to 4s 5d
Irish	4s 10d to 5s 0d ..	—
Fat cows	4s 2d to 4s 4d ..	3s 6d to 3s 8d

There was a decrease of 3,680 in the number penned in the sheep market, among which was a fair proportion of lambs, the choicest of which made fully 8d. per 8lb. more money. Wether sheep were in good request, even at an advance of 4d. The same remark also applies to ewes, of which an early clearance was made. The total supply included 1,650 from the Eastern counties, 230 Scotch, and 710 Irish. The season for Yorkshire sheep is closed this year earlier than usual.

Undermentioned quotations are at per 8lb. (sinking the offal), and are for the best of each class penned.

	To-day	Monday, July 1, 1901.
7½st to 8st Downs	6s 2d to 6s 4d ..	5s 2d to 5s 4d
8st Downs	6s 0d to 6s 2d ..	4s 11d to 5s 0d
10st Half-breds	5s 8d to 5s 10d ..	4s 7d to 4s 8d
12st Lincolns	5s 7d to 5s 8d ..	4s 4d to 4s 6d
10st Irish	5s 7d to 5s 8d ..	—
10st Down ewes	4s 8d to 4s 10d ..	3s 10d to 4s 0d
11st Half-bred ewes	4s 6d to 4s 8d ..	3s 8d to 3s 10d
8st Down lambs	6s 10 to 7s 0d ..	6s 2d to 6s 4d
6st Half-bred lambs	5s 10 to 6s 0d ..	5s 6d to 5s 8d

Calf trade nominal. No pigs on the market.

London (Central), Monday.—Fair supplies; weather hot; trade slow. Beef carcasses, 4s 6d to 4s 8d; hindquarters, 5s to 5s 2d; roastings, 6s to 6s 4d; sheep, ewe, 3s 8d to 4s; wether, 4s 8d to 5s; hind-quarters, ewe, 4s 8d to 5s; wether, 5s 8d to 6s; pigs, large, 3s to 3s 8d; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 332; sheep and lambs, 2,053; pigs, 388; horses, 35. Beef, 8s 3d to 9s 3d; mutton, 7s 7d to 9s 11d; lamb, 10d; pork, 6s to 7s. Fat beasts sharp trade; fat sheep fair; store cattle and sheep slow; fat and store pigs fair; milch cows fair prices, £15 to £23

FOREIGN CATTLE.

Deptford, Monday.—Beasts, 1,144. To-day's supply, compared with Monday last, showed an increase of 347, and consisted of 300 from the United States and 844 from Canada, trade for which was of a rather slower nature, with a downward tendency in value, sales being more forced at following quotations per 8 lb—offal given in:—Best States beasts to dress about 680lb, 4s 11d; seconds, 4s 9d; best Canadians, 4s 8d to 4s 10d. Sheep, 609, consisting of shipments from Canada. These, however, did not include all arrivals, 791 from the United States being held back. Trade was of a dull nature, best pens being quoted at 4s 8d per 8lb. On Saturday the supply of beasts consisted of 1,428 from the United States and 200 from Canada, trade for which was firm and steady; the best of the former were quoted at from 4s 10d to 5s, and the latter from 4s 9d to 4s 10d. Sheep numbered 794 from the United States, and met a slow sale at from 4s 4d to 4s 6d per 8lb.

Liverpool, Monday.—Smaller supply of cattle; demand good, and prices about same as last week. Sheep supply larger; trade slow, and prices again in buyers' favour. Lambs met a better trade. Beef, 6d to 7¾d per lb; mutton, 6d to 8d per lb; lambs, 7¼d to 8¾d per lb. At market, 598 cattle and 12,516 sheep.

HOPS.

London, Monday.—Messrs. W. H. and H. Le May report the market was closed the latter half of last week, and opens to-day with a very fair inquiry. The plantation reports speak of the continued attack of aphis blight.

Mash as a Food for Poultry.—Mr. A. G. Gilbert, poultry manager to the Canadian Experimental Farms, states in his annual report for 1901 that the experience of the poultry department, after many years' trials, points to the conclusion that the "mash," as part of the daily ration of poultry, is beneficial when judiciously used. When fed in too great quantity to one and two year old hens, it is apt to create an over-fat condition. In the case of the latter, if of the heavy breeds, the over-fat condition is likely to be fatal. If fed in too great quantity as a morning ration, it is likely to make the hens disinclined for exercise. It is a valuable aid to moulting hens, and is a convenient form of utilising much of the farm and farm-house waste. Where hens have a comparatively free run, its beneficial effect in egg production has been noticeable.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London

The beast trade this week at Islington was entirely confined to Monday, as Thursday was declared a Bank Holiday owing to the expected Coronation, notwithstanding which, a market was held; but no beasts were shown on open market; trade for both prime and second quality was of a decidedly slower nature at a decline of fully 2d. per 8lb., at which reduction a clearance could not be made, about 50 being turned out unsold. Consignments from Norfolk were much shorter, whilst those from Ireland were stronger. Included in these latter, were 305 stores, which were quoted as follows:—Yearlings, £7 5s. per head; two-year-olds, £10 to £11; three-year-olds, £13 to £15. For fat butchering cows and bulls there was a slacker demand by country buyers; prices in consequence ruled easier. At Deptford markets were held on Monday, Wednesday, and Saturday. Trade on all days was extremely dull, rates on the first day proving 4d. per 8lb. lower, with a gradual decline on other days, this being chiefly due to the hot weather and general dislocation of business. The total number of beasts on offer at both markets was 4,558, as against 5,668 during the previous week. The supply consisted of 1,430 British (decrease 350) and 3,128 imported (decrease 760); the latter comprised 2,797 from the United States and 331 from Canada. The following were the top rates paid per 8lb. (sinking the offal):—80 to 90 stone Devons, 5s. 2d.; 90 to 95 stone Herefords, 5s. 4d.; 95-stone runts, 5s. 2d.; 90 stone Norfolks, 5s. 2d.; 100-stone Shorthorns, 5s.; 110-stone ditto, 4s. 10d.; 90-stone Irish, 5s.; 85-stone States, 4s. 10d. to 4s. 11d.; 80-stone Canadians, 4s. 9d.; 90-stone fat cows, 4s. 6d. The sheep trade, which is practically confined to the Islington Market, was of a dull and heavy nature, at 2d. per 8lb. less money for both wethers and ewes; lambs also were very difficult to sell, except the very choicest, which were exceptionally scarce; heavy breeds were fully 6d. per 8lb. lower in value. The total number on offer at both markets was 10,704, consisting of 9,910 British and 794 from the United States. Best pens made per 8lb. as follows, sinking the offal:—7½ to 8 stone Downs, 5s. 10d.; 8-stone Scotch, 5s. 10.d; 9-stone Downs, 5s. 8d.; 10-stone Irish, 5s. 2d.; 10-stone Downs, 5s. 6d.; 10-stone halfbreds, 5s. 4d.; 10-stone ewes, 4s. 6d.; 11-stone Hampshires, 5s. 6d.; 12-stone Lincolns, 5s. 2d.; 5-stone fat Down lambs, 6s.; 6-stone halfbred ditto, 5s. 6d. For calves there was practically no demand, and the supply was limited to 64 head. No pigs on offer.

Trade in the West.

The festivities incident to the Coronation in this district, as, indeed, throughout the country at large, so thoroughly dislocated business of all kinds for the time, that we have very little indeed to report.

Sales, except to meet hand-to-mouth requirements, may be truthfully described as almost nil, the extra purchases made prior to the Coronation proving sufficient to tide over most purveyors till the jubilation was over and things had once more settled down into their ordinary groove. Beef hardly maintained its price during the sales just prior to the Coronation, but this may be ascribed as much as anything to the extra demands there were for the time for veal, lamb, and all the more dainty grades of meat so popular at holiday seasons. Calves found an exceptionally good sale at almost every market, prices in many cases going up to 9d. per lb., and even the more ordinary grades fetched 7d. to 8d. A similar result was experienced as regards lamb, some of the choicest of which made 11d. to 1s. per lb., and the more general runs 9d. to 10d. (or up to 40s. 6d. each for ripe, well-finished Downs). The demand in the way of pigs was largely restricted to porkers and baconers of the best type, the latter realising 11s. per score, if not over, and baconers 9s. to 10s., according to quality, as it was only the best qualities wanted of late—nothing coarse or weighty. In store things the few transactions passing, either in barreners or milch beasts, have been at extreme quotations, milch beasts selling from £17 to £22 5s., and barreners from £24 to £31 10s. for best and £17 to £23 for plainer kinds.

Trade in Ireland.

Owing to Thursday having been fixed as Coronation Day, Dublin market was held on Wednesday, when despite an enormous decrease in supplies of both cattle and sheep, business was of a very disappointing character. There were only 1,278 cattle sent in for sale, a falling off of nearly 1,000 head. Buyers were also in small attendance, and a quiet tone pervaded, so different from the animated state of things a fortnight or three weeks ago. It could not be said that there was any decided fall in price, but it was hard to clear the limited supply on market, and many lots of half-finished stock were left unsold. Prime bullock and heifer beef made from 63s. to 66s. 6d., while some extra good lots fetched up to 68s., and in a few cases 70s. per cwt.; good second-class, 58s. to 62s.; and inferior sorts from 50s. up. The number of sheep and lambs in market was only 6,198, a falling off of very close on 6,000 on the previous week. Trade opened sluggishly enough, but short supplies told towards the close of market, when better business was done, and best classes of wethers made from 1s. to 2s. a head more money. There was a fair inquiry for good hoggets for the export trade, but, taking the market all round, there was really no change in price to note. A large number of rough ewes on offer, which were hard to place, and most left over unsold. Prime wether mutton made from 7d. to 7½d. per lb.; ewe, 6½d. to 7d.; rough sheep, from 6d. per lb. Light hoggets rated from 28s. to 38s., and heavy up to 54s. each. With warmer weather, the trade for lambs was much brisker, with an all-round advance of 2s. per head. Small lambs were worth from 17s. to 26s., and large heavy made up to 38s. and 48s. each. Veal calves continue scarce and dear, so far as really well-fed quality goes. This is worth from 8d. to 9d. per lb., but rough can be had from 5d. up. Milch cows in moderate supply, and quiet demand at late figures. Store cattle, owing to the collapse of the beef market, and to discouraging reports from across Channel, have got a check, and prices were easier at the large sales held by Messrs. Ganly during the week. Cattle in forward condition, however, brought satisfactory figures. Lord Ardilaun got nearly £16 per head for a fine lot of Aberdeen-Angus cross bullock three-year-olds. The highest price was paid for some grand polled bullocks sent in by Mr. Russell, of Westmeath, which made £18 12s. 6d. a head. Over 1,200 head were offered for sale, and most were bought for exportation to England and Scotland. There was a very small supply of pigs, and the market was quickly cleared at smart prices.

LONDON.

London (Central), Wednesday.—Dull, and prices in buyers' favour. Arrivals of beef included 75 tons Scotch, 600 Liverpool sides, 2,100 hindquarters, and 200 forequarters American refrigerated. Beef: Scotch, short sides, 5s to 5s 4d; long, 4s 4d to 4s 6d. English, 4s 8d; American, Deptford killed, 4s 4d to 4s 7d; Liverpool, 4s to 4s 4d; American refrigerated hindquarters, 4s 4d to 4s 8d; forequarters, 2s 2d to 2s 4d. Mutton: Scotch, 4s 4d to 4s 8d; English wethers, 4s to 4s 4d; ewes, 2s 10d to 3s 2d. English, lamb, 4s 4d to 5s. Veal: English and Dutch, 3s 6d to 4s 4d. Pork: English, 4s to 4s 4d; and Dutch, 3s 8d to 4s per 8lb.

COUNTRY.

Ashford, Tuesday.—Trade slow, with a reduction in prices all round, except for beef, which was nominally the same as a week ago, and made up to 13s per score.

Basingstoke, Wednesday.—At Raynbird and Sons sale yard the attendance of buyers was small to meet a supply of 25 fat beasts, 36 calves, 240 fat sheep and lambs, 115 pigs, and 106 head of dairy and show cattle, for which the following prices were realised:—Fat beasts, £14 15s to £19 10s; fat calves up to 85s; sucklers up to 42s 6d; fat wethers and young ewes, 45s to 58s; old ewes, 32s to 38s; Dorsets 36s 6d; three-months-old suckling lambs, 30s to 36s; Exmoor do, 21s to 26s; fat

Bridgwater, Wednesday.—There was only a very small supply of fat sheep and lambs and fat and store cattle, and these met a fairly good clearance, but prices ruled in favour of buyers. There was only a small supply of store sheep, but a clearance was not effected.

Boston, Wednesday.—The market was extremely dull, with practically nothing doing. Very few stare beasts were on offer. There was a small show of incalvers, and little trade was done at last week's prices. porkers up to 51s 6d; store pigs, 1os 6d to 21s; dairy cows up to £19 15s. The demand for the short supply of fat beasts was not sufficient to test quotations, and prices remain nominally as before. A clearance nearly made of the short supply of fat sheep and lambs, last week's prices ruling in most instances. There was a good demand for all best-class milch cows. Store cattle showed a slower trade, the inquiry of last week not being maintained. Fat calves met a dull trade. Fat and store pigs sold readily at late rates. Ruling values:—Best fat beasts, 7½d to 8d; secondary ditto, 6½d to 7d; bulls, cows, and inferior, 6d to 6½d per lb; best fat sheep, 8½d to 9d; secondary ditto, 7½d to 8d; old ewes, rams, and inferior sheep, 6d to 7d; choice fat lambs, 9d to 9½d per lb; fat calves, 7d to 8d per lb; fat porkers, 9s to 10s score.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s. d.
6 sc. 10 lb. to 9 sc. 10 lb.	2½ in. and under	10 0
Under 10 sc. ...	Not exceeding 2½ in. ...	9 6
Under 11 sc. 10 lb. ...	2¾ in. ...	9 0

—C. & T. Harris & Co., Ltd.

Cambridge, Monday.—Beasts, 699; beef, 8s to 9s 3d; sheep, 648; mutton, 4s 4d to 5s 8d; pigs, 533, pork, 6s 6d to 7s 3d; horses, 3. A larger show store beasts, and nearly all cleared. Fat beasts a good show, and made not quite so good. Fat sheep a good brisk trade. Stores only a few lots to hand, and made a little better. Pigs a larger number to hand, and trade brisk. Stores a fair trade all round.

Canterbury, Saturday.—There were a few lots of Irish bullocks and home-bred yearlings on offer; the latter failed to find purchasers, and for the others there was a slow sale at recent values.

Carlisle, Saturday.—About 350 heifers constituted the supply of Irish store cattle, the number being rather less than a week ago. The weather having undergone a rapid change to heat, there was more inquiry, and beasts changed hands at £8 10s up to £16 10s, according to size and quality. A few young pigs met a slow sale at 24s each.

Leicester, Wednesday.—The consignments of Lincolnshire and Norfolk fed bullocks, although smaller, were more than equal to requirements. Buyers and dealers were well represented, but trade ruled very sluggish, and quotations showed a further fall of £1 0s to 2 per head, an unprecedented decline of £3 10s per head in eight days. Choice bullocks, 7d per lb; secondary, 6½d; heifers, 6½d to 7d; cows, 5½d to 6d per lb. Sheep were a very small supply, but trade ruled sluggish at 7½d to 8d for choice qualities; large sheep, 6½d to 7d; ewes, 6d; lambs, 8½d to 9d; calves (depressed), 6d to 6½d per lb.

Newport, Wednesday.—Quotations were:—Best beef, 7½d to 7¾d per lb; secondary sorts, 6½d to 7d; best wether mutton, shorn, 8d to 10d; ewes, 6½d to 7d; lamb, 8½d to 10d; veal, 7d to 8d. Porker pigs, 10s 6d to 11s per score. A short supply, but trade not so brisk as last week.

Norwich, Saturday.—The supply of store beasts here to-day was large, but was scarcely so heavy as that of last week. Trade was slow at late rates, a number of the lots on offer being left on hand. The supply of fat beasts was moderate; the business done was effected at 8s 6d to 9s and 9s 6d per 14lb. The supply of store sheep and lambs was not particularly large; trade was steady at former terms, keeping shearlings making 35s to 44s; and lambs, 16s to 30s per head. Fat sheep, which were in small supply, moved off at 8s 6d to 9s 6d and 10s per 14 lb. Keep prospects are still good in Norfolk, the sub-soil having previously accumulated a good reserve of moisture.

Salford, Tuesday.—There was a smaller supply of cattle, and trade was dull, and prices lower, our top quotations being an extreme figure got in a few cases only. The supply of sheep and lambs was also smaller. Notwithstanding this, the demand for sheep was very slow, and prices, though not quotably lower, were in favour of the buyer. The lamb trade was slow at late rates. About the same number of calves on offer, but trade worse than last Tuesday, and prices lower. Quotations: Cattle, 6d to 7½d; sheep, 6d to 9d; lambs, 7½d to 9d; calves, 5d to 7½d. At market:—Cattle, 1,473; sheep and lambs, 17,645; calves, 163.

Sheffield, Tuesday.—Brisk demand for the only moderate stock on offer. Prices realised for best animals £18 to £22; secondary, £13 to £17.

Shrewsbury, Tuesday.—Store cattle and calves a fair trade. Beef firm at late rates. Pigs slower at lower prices. Mutton trade slightly worse. Quotations:—Lamb, 8d to 9½d; beef, 6½d to 8d; mutton, 7½d to 8d; and veal, 7d to 8½d per lb. Porket pigs, 9s to 10s; and bacons, 8s 6d to 9s 6d per score; cows with calves, up to £23. Number offered, 907 lambs, 822 cattle, 63 cows, with calves, 1,189 sheep, 153 calves, 22 fat, 89 porket, and 385 store pigs.

Spalding, Tuesday.—Beef, 7s. 6d. per stone, against 9s. a fortnight ago. Store beasts met with a slow sale, and several lots were unsold. In the sheep market prices were not quite so good. Lambs sold fairly well.

Stockton, Wednesday.—There were on offer 115 cattle, 14 calves, 327 sheep, 73 lambs, and 164 pigs. A small show of best cattle, and customers were few. Prices showed a slight reduction. Best beef, 9s to 9s 6d; rougher kinds, 6s to 7s 6d per stone; calves, 6d to 7d; young sheep, 8½d; ewes, 7d; tups, 5d per lb; lambs, 20s to 30s each.

Thame, Tuesday.—The sales came too close to the Coronation-holidays, and, although well supplied for regular buyers, the absence of many purveyors made trade slow. Messrs. Bond and Burrows's sale comprised 30 fat beasts, 262 sheep, 66 fat and store pigs, and 49 fat and weaning calves. Fat bullocks made from £20 to £21; fat heifers, £17 10s. to £21; fat wethers, 48s to 53s 6d; fat ewes, 40s to 45s; fat lambs, 28s to 35s 6d; fat calves, £3 to £4; weaning cow calves, 30s to 60s; bull calves, 20s to 60s; store pigs, porkets, and bacon hogs, slower trade. Telegram into market of King's indisposition cast a gloom over the market.

Wakefield, Wednesday.—Market of a holiday character, and little business done at last week's figures, although there was a downward tendency. Beef, 6½ to 8d; and sheep, 6d to 8½d. Numbers:—Beasts, 1,268; sheep, 3,417.

Wolverhampton, Wednesday.—Fair supply of stock and very slow trade all round. Beef, 6d to 8d per lb; mutton, 6½d to 8½d per lb; lamb, 8d to 9d per lb; veal, 6½d to 8d per lb.

Worcester, Saturday.—There was a good average supply, but a considerable falling-off in the demand all round. Beef favoured buyers, and mutton sold slowly at late rates. Pigs easier. Beef, 6d to 7½d; mutton, 7d to 8½d; lamb, 8½d; and veal, 8d per lb. Pork pigs, 10s 6d; bacons, 9s 6d per score.

Worksop, Wednesday.—Fair show of stock, prices all round fully up to late rates. Best beef, 7s 6d to 8s 4d; secondary, 7s to 7s 6d per stone; best wethers, 7d to 8½d; ewes, 6d to 7d; lamb, 10d; veal (scarce), 10d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies, 703 head, a decrease of 45, as compared with last Wednesday's figures, and consisted of shipments from the United States. Trade ruled slower at 4s 6d to 4s 8d, exceptionally 4s 9d to 8lb. to sink the offal; 442 beasts were not shown.

Yorkhill, Monday.—The usual weekly sale of American cattle, was held this afternoon, when there were in the lairages, 301 cattle, landed by the "Tritonia" (s.), from Montreal, and 300 ex "Saimatian" (s.), also from the same port. The cattle, as regards quality, were up to the usual standard, many of the bullocks being prime beasts. Buyers were forward from all parts of the city and surrounding districts, and trade was of a satisfactory character. The dead weight quotations may be given as follows:—Best bullocks, 66s to 68s per cwt., and for really choice up to 70s.; secondary and heavier, down to 64s; heifers, 66s to 67s; secondary, down to 63s.; bulls, 58s to 60s., and in a few cases a little more, all according to quality and finish.

Yorkhill, Monday.—A sale of Canadian sheep was held to-day, when there were penned in the sheds 294 sheep, landed by the "Tritonia" (s.), from Montreal. The consignment consisted principally of ewes and wedders, but there were also a number of hogs and tups included. All the sheep were clipped, and up to the average quality. A fair trade was experienced, and the previous week's values fully maintained. The dead-weight quotations may be given as follows:—Best ewes, 6½d. per lb.; secondary and heavier, 6½d.; wedders, to 7½d.; secondary, down to 7d.; hoggs, 7½d.; and tups, od to 5½d., according to quality and finish.

Bullock-Feeding Experiment.

An experiment was carried out in 1900-01 by the Midland Agricultural and Dairy Institute with the object of comparing the feeding value of undecorticated cotton cake, linseed and cotton cake mixed, and linseed decorticated meal and maize meal mixed.

Nine bullocks under two years old were chosen and divided into three lots of three each. From December 12th to December 27th they all received the same daily ration, viz.:—5lb. undecorticated cotton cake, 56lb. swedes, with hay, barley straw, and chaff, ad lib. The experiment proper commenced on the 28th December each bullock receiving the same amount of roots, hay, and straw; but lot A had in addition 3lb. undecorticated cotton cake and 3lb. linseed cake; lot B had 1lb. linseed cake, 1½lb. decorticated cotton meal, and 3lb. maize meal; while lot C got 6lb. undecorticated cotton cake. The quantity of all these artificials was increased by a third on January 25th, and again by the same amount on February 22nd. On April 8th, 15th, and 22nd, one bullock was chosen from each lot, the live weight recorded, and the carcase weight taken three days after. The bullocks were sold at 7s. 6d. per stone, and their value per head worked out as follows:—Lot A, £17 0s. 10d.; lot B, £17 2. 6d.; lot C, £16 12s. 2d. The daily gain had been 2.18, 2.10, and 1.73 lb. per head respectively; while lot C showed a somewhat higher percentage of carcase. The cost of the food was, however, lowest in the case of lot C, and substracting the original value of the bullocks on December 12th, and the cost of the food from the final value on April 15th (average of the dates when they were killed) there was shown a nett profit per head of 3s. 5d. in the case of A, 7s. 7d. in the case of lot B, and 5s. 11d. in the case of lot C. The butcher's report was that lot A were good cutters and nice quality; lot B were first class, full of quality, and the meat was extra; lot C was a little short of meat, and required more help.

The conclusion drawn from this experiment was that the profit from such winter feeding is very small, as after debiting rent and labour, and crediting value of manure, the receipts and expenditure nearly balance; and the difference in the profits obtained is not great enough to warrant any distinct inference being drawn.

Irish Peat and Electrical Energy

A movement is on foot to turn the Irish peat bogs to economical account, it being maintained that a great impetus would be given to certain industries in Ireland were the turf converted into electrical power at convenient spots. It is thought that by canalising the bogs the fuel could be delivered at those points cheap enough to compete with coal. This is by no means an original suggestion, but savours of the opinions held by prominent Irish geologists some 75 years since. An important factor, however, is that in those days there were no railways, and water carriage was the only feasible method of getting the turf from the bogs to more convenient centres. There is no doubt that peat is a valuable asset in Ireland. Except here and there, it has been practically untouched, and that it could be utilised with advantage is unquestionable. We must also recognise that as the country roads are so frequently made on a peat foundation, no heavy loads can be dragged along many of them. Consequently, even light traction engines cannot be brought into requisition, except in very few localities. But whilst we thoroughly agree that more of the fuel could be used to greater advantage than at present, and may be made suitable for the generation of electrical energy, the solution of the carriage problem seems to us to lie rather with the further development of light railways than in the construction of waterways. It is maintained that by the use of turf as fuel we shall see provision made for the generation of electrical energy applicable to every form of industrial activity, not only for railways, tramways, factories, heating and lighting of towns, etc., but also not improbably in the near future to most agricultural operations. Without being quite so sanguine about all these things coming to pass and without endorsing the opinion that the quantity of peat in Ireland is practically inexhaustible, we may concede that if the question of carriage could be satisfactorily disposed of, the material would be in much greater demand in industrial centres than it is at present.—The "Builder."

Gamekeeper's Right to Shoot a Dog.—A case of interest to game-breeders was heard at Beaconsfield Petty Sessions on Monday, when Henry Lloyd, gamekeeper to Mr. Henry White, First Secretary to the American Embassy, was summoned for wounding a dog belonging to Mr. Frederick Rolfe, a local farmer. The defendant admitted shooting the dog while it was chasing pheasants, added that, as it was wounded, he followed it and again hit it.—The Bench held that while the defendant was justified in his first shot for the protection of his game, the second one was not justifiable, and they fined him £1 inclusive.

Farmers and Footpaths.

The other day I heard a farmer deploring the fact that there was not a single field on the whole of his two-hundred-acre holding that had not got a footpath running through it. Of course, this is an exceptional case, but when you come to look into it, I wonder how many miles of footpaths there are intersecting fields and woodlands in the country. Who made them no one knows, and in some cases their uses are almost equally mysterious. For instance, you often observe a stile set in the hedge, and a path runs first inside the field and parallel to the road for a certain distance, when it again emerges into the highway, without saving a single yard. Of course, people make use of such a path purely from force of habit, or else owing to an inherited desire to regain the useless right of way. There is no doubt about the fact that the public is particularly jealous of its footpaths. Try and shut one up, and you will soon find this out, even though you may offer another road which is more convenient. One can make a fair guess at the origin of many of the poothpaths that just cut across the corners of fields, and bisect parks, very much to the annoyance of the owners, who have no remedy except making the best of it.

The roads in the old days were not so good as they are now, and people, of course, did not travel on bicycles or motors. Neither was trespass a word with a very terrible meaning, and therefore our pedestrian forefathers were doubtless in the habit of making short cuts across the country in order to arrive at desired points. The broader tracks in time became roads, the narrow ones remained only as footpaths, but they grew to be public property, and nowadays the average Englishman—who, by the way, does not own the land over which they run—thinks as much of the footpaths as he does of his birthright, and will stand at nothing in the way of obstacles when any ill-advised land-owner conceives the idea of closing one. There is no such thing as a modern footpath. They are all handed down to us from former generations, just as we shall pass them on to posterity, to be a blessing or a nuisance to our grandchildren, according to the circumstances under which they are placed.

From the pedestrian's point of view, who has no particular interest in agriculture, footpaths are a blessing for which he is indebted to his forefathers, and is, or ought to be, truly thankful. What a relief it is, on a hot sunny day, to be able to leave the dusty highway and strike into green fields, where the turf is soft to the feet and you can enjoy the odour of sweet-scented flowers, knowing all the time that by this pleasant change you are shortening your walk a mile or two. Again, we have to thank the originator of footpaths for many a pleasant country ramble. Without this undisputed right of way the public would never enjoy the privilege of passing through fields, parklands, wood, and coppice. Not a bit of it; they would have to stick to the highway, for, generally speaking, landowners are not particularly willing to allow their less fortunate neighbours the privilege of crossing their domains unless there happens to be a narrow trodden track over which they have no control. As a convenience, again, footpaths are a blessing to the pedestrian. He may see the place he wants to get a mile or two away, and in order to reach it by the road he must pass along two sides of a triangle. To avoid this he naturally looks for a footpath, and generally finds one, for the persons who originally made it doubtless had the same object in view.

But there are two sides to every question—even that of footpaths, and we must now look at the other side. With the farmer who has to put up with there being a right of way though every field he is holding, including the fruit orchard, we can agree that it is possible to have rather too much of a good thing, but one can sympathise even more with the farmer who has to tolerate the inconvenience of having a footpath run right through his farmyard. This sounds like carrying a privilege too far, and can only be accounted for by the fact that the farmyard must have been formed on the site of the footpath, and the public, with its characteristic tenacity in this respect, would not give up its right. Our forefathers were certainly expert in the art of making short cuts. They apparently would not do so much as go round a churchyard even, as may be observed in the cases of many hallowed acres that are intersected by footpaths. There is no fear of this generation giving up the right of way, because it is well known that if established paths are lost there will be no replacement, as new footpaths are commodities unknown.

It is a curious fact that many footpaths have a knack of running alongside hedgerows, and in these cases farmers are everlastingly repairing the fences. It is so easy for the stick-picker to break off a rail or pull up a pile when passing, with a view to replenishing the household fire, and if the farmer comes along the article is quietly dropped, and the individual passes by unconcerned. If he were trespassing the farmer would have a hold on him, but he is on the footpath—a public right of way—and as for disturbing the fence, he can deny that, of course, unless he happens to be caught red-handed, and so the farmer has to repair it with the best grace he can muster. The public are very jealous of their footpaths, but they are by no means so particular about sticking to them. In a field of mowing grass or standing corn the crop is invariably trodden down for several yards on either side of the path, and the farmer has to stand the loss, for the pathway is included in the rent account, and has to be paid for like the rest of the field. There is a very poor chance of preserving mushrooms in the pasture with a footpath through it. The individual who seeks the tasty fungus fails to see that his right does not extend beyond the narrow beaten track, so he saunters off it, and sidles back if he observes anyone approaching, apparently under the impression that the fact of a footpath running across the field gives him the right to perambulate the whole of it. But the man who has a footpath through his orchard claims my sympathy. He has no power to keep the people out, and it is curious what an incentive there is for the youngster to pass that way to school, though a may be half a mile further, just at the time when the fruit is ripening. But there, you know, schoolboys are only human.

It is a little tantalising to the intending house-builder, after finding just the site that serves his purpose, to find that it is crossed by a footpath which he has no power to divert, and in many cases owners of pretentious mansions have to put up with pedestrians crossing the park almost under their windows. But footpaths are no respecters of persons. We find them everywhere, intersecting the best fields, and winding about in the most unlooked-for places. They are a privilege of the people and a boon to many, and if everybody knew just how far his rights extended there would be little need for the farmer whose holding is intersected by footpaths to grumble.

RUSTICUS.

Breeding Stock for South Africa.

The official journal of the Cape Department of Agriculture states that there can be no doubt that the opportunity to get possession of cattle of first-class breed would be eagerly seized by many stock-breeders in Cape Colony. "Throughout South Africa," the journal states, "there are numerous well-to-do farmers, who, if the chance were given them to inspect high-priced animals of good pedigree, landed at Cape Town, Port Elizabeth, or East London, would willingly take the trip and pay the price. For the enterprising breeder oversea there is a good thing to be done in this way, if he will venture, gradually at first if he chooses, to approach our markets with his samples. To him we would offer excuses for any timidity shown by our farmers in reference to sending orders abroad 'on spec.,' for they have been so beset by diseases and 'political' troubles that 'Wacht een beetje' seems to have become a kind of industrial creed for the nonce. Still, we think they will yield readily to temptation if presented in the way suggested."

The General Purposes Committee of Carlisle Town Council have agreed that the Council be recommended to ask Prince Christian to unveil the Carlisle Memorial to Queen Victoria during the Royal Show week; and to present His Royal Highness with the freedom of the city and an address. A meeting of the Council in Committee will be held to-day (Monday) to consider the recommendation.

Mr. Percy Crutchley, the hon. director of the Royal Agricultural Society, visited the show ground at Carlisle last week, and expressed himself highly satisfied with the arrangements, and with the forward state of the work generally. The railway companies, who have conveyed horses and lorries to Carlisle from London, Liverpool, Manchester, and other large centres, have been busy for several days past taking implements into the yard, but as yet considerably less than half the space is occupied.

Sheep Maggot Fly.—The question of keeping the maggot fly off sheep is fully dealt with by Tomlinson and Hayward, Limited, manufacturing chemists, Lincoln. For several years past farmers, especially in the North of England, have used Hayward's "Yellow Paste" dip, which is a really effective preparation. The sheep are dipped previous to the period when the fly is prevalent, and this saves the shepherd and his helpers a lot of work, and undoubtedly is of considerable gain to the farmers. Tomlinson and Hayward, Limited, have been manufacturers of sheep dip and veterinary preparations since 1842, and their name is well known in all sheep and stock-raising countries.

STOCK AND SHOW NOTES.

By Herdsman.

The proposal to establish an agricultural society for the four Northern Counties of England and the three South Scotland counties appears to be meeting with general favour, and a large number of agricultural societies in the area concerned have appointed representatives to attend the meeting to be held in Carlisle on Wednesday of the Royal Show week, and vote in favour of the show being held.

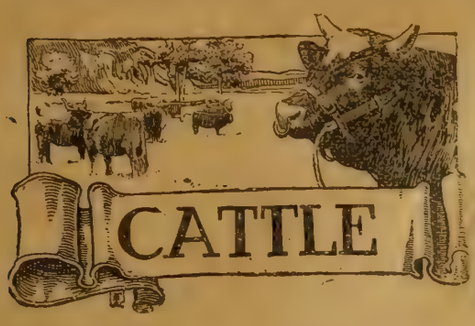
At a recent meeting of the Finance Committee of Aberdeen County Council the clerk stated that the voluntary assessment imposed upon proprietors for the purpose of giving a contribution to the Highland and Agricultural Society, whose show is to be held in Aberdeen next month, amounted to £585 8s. 11d., and of that sum there had been collected £570 6s. 3d. Payment of £13 2s. 6d. had been refused. It was agreed that the £570 6s. 3d. should be handed over to the society.

The fourteenth volume of the Oxford Down Flock Book has just been issued from the offices of the association, at 16, Queen Street, Oxford. The volume contains entries of rams Nos. 3575-3798, and of ewes Nos. 1397-1436. The book is prefaced by the annual report of the Council for 1901 and the show record of registered flocks of Oxford Down sheep during the same period.

Dealing with the ravages caused by the recent drought, the "Sydney Morning Herald" describes a visit paid by the New South Wales Minister for Lands to a place where sheep brought from the interior of the State were being hand-fed in the hope of keeping them alive. They had come long distances, from places where the severe drought had destroyed all fodder for them, and they were being nurtured at a cost which probably will never be recovered. In some cases they were valuable brood ewes. The "Sydney Herald" says: "They (the sheep) were three days and nights without anything to eat or drink. Early this morning men began the work of unloading them from the railway trucks. The poor beasts were weak and famishing, and 150 of them were found to be dead. . . . As quickly as possible those that could stand on their feet were driven to the bed of the river, where tons of chaff were spread about to save the animals from starvation. . . . . Emaciated, and almost living skeletons, the poor animals followed the buggies under the impression that they were food carts. Some had lain down to die, and the crows were at work picking their eyes out. Others lay in the muddy water, struggling to get out of the bog, but were unable to do so through weakness."

Messrs. John Thornton and Co. announce that they have received instructions to dispose of Mr. Thomas Dudney's entire flocks of Southdown sheep, at North House, Portslade, on Friday, September 12th. This old-established flock of Southdown sheep is one of the noted Hill flocks in Sussex, the father of the present owner having started the flock in 1868 from the stock of Mr. G. Hodson, the previous tenant of the North House Farm. Rams have been used from Mr. H. Rigden, Mr. H. Webb, Mr. Hugh Penfold, Mr. Carew Gibson, Mr. J. J. Colman, Mr. J. Morris, and other well-known breeders. Mr. Dudney's hundred wether lambs, sold each year at Lewes Fair, have been known for many years as a feature at that meeting, where they have usually realised the top price, and the hardy constitution and true type and character of the flock are well known to breeders. The flock, which will be unreservedly sold, comprises about 600 ewes of various ages, and 200 yearling ewes and 200 ewe lambs.

The last important American stock sale during May was that held at Linden Grove on the 30th and 31st of that month, when a large number of Jerseys, imported by Mr. T. S. Cooper, of Coopersburg, Pa., were disposed of. These are the figures:—168 head sold for a total of £11,634, an average of £68. Of this number 112 were under three years old, 44 were calves under twelve months old. These facts lend additional emphasis to the average. Imported cattle to the number of 126, the majority of them under three years old, sold at an average of £85. Other Jersey sales have resulted in larger averages, but none approaches this in the number sold, the quality of the consignments, the attendance in number and representative character, and the territory over which the cattle were scattered.



THE DEVON COW "FERN OF HALSDON," which forms the subject of the above illustration, is the property of and was bred by Messrs. W. R. and A. Trible, Halsdon Barton, Cookbury, North Devon. It was born on 1st March, 1896, its sire being "Lord Blagdon," 2999, and its dam "Duke of Halsdon," 2961. At the Bath and West and Southern Counties Society's Show at Plymouth, "Fern of Halsdon" was first in the class for Devon cows in milk, calved before 1899.

Sixty buyers took cattle with them to eighteen States and to Ontario. Highest price was made by the champion bull Flying Fox, which went to Mr. T. W. Lawson for £1,500.

Of the sales during the present month we may mention the very successful sale of Aberdeen-Angus cattle which took place at Chicago on 10th and 11th inst. The animals sold were consigned by various breeders. The top price was £400, which was given by Mr. Silas Igo, Iowa, for the seven-year-old Heather Bloom cow Belle Bloomer 2nd, consigned by Messrs. Cantine Brothers and Stevenson. Another Heather Bloom cow, from the same breeders, the four-year-old Edgewood Bell, went to the same purchaser for £301. The highest price for a bull was £200, which was given by Mr. Webster, Pleasant Hill, Illinois, for Black Jam Junior, a yearling, consigned by Messrs. Lantz. A great sale of Shorthorns, the property of the well-known breeders, Messrs. C. C. Bigler and Sons, Hartwick, Iowa, took place on 5th and 6th June, at Victor, Iowa. The top price of the sale was given for the Bates cow Wild Eyes 61st, by Airdrie D. of Hazelburst, which was taken out by Messrs. G. W. Brown and Randolph Bros., Indiancia, at £608. Cherry Folumnia 2nd, a seven-year-old, by Spartan Hero, a bull bred by the late A. Cruickshank, was taken out by Messrs. J. W. Smith and Sons, Allerton, at £340, while Golden Feather, a three-year-old red, by Royal Prince, a Scotch bred bull, made £350.

Mr. Ernest Prentice, secretary of the Suffolk Sheep Society, has sent me a pocket-card containing a list of the principal sales of Suffolk sheep during this year. The first sale takes place to-day (Monday), when will be held the annual lamb sale at Newmarket, which will be followed by similar sales at Stowmarket (Haverhill), Great Bentley, Sutton (Woodbridge), Saxmundham, Kesgrave (Ipswich), and two special sales at Ipswich, all of which take place during July, whilst there are a number of important sales fixed for August and a couple in September. Fuller particulars can be had on application to Mr. Prentice, whose address is 64, Orford Street, Ipswich.

The tenth annual sale of Kerry and Dexter Cattle belonging to Messrs. Robertson and Sons, of La Mancha, Malahide, Dublin, and Church Farm, Babraham, will take place at Babraham on Wednesday, July 16th. As readers of this journal are aware, animals from Messrs. Robertson's herd have been most successfully exhibited at our leading shows, and their successes being so well known, I need not give any details here. I, however, will mention one great honour achieved by the herd, and that is the winning outright of the two fifty-guinea Challenge Cups presented by Lord Ashburton for the best Kerry bull at the Royal Counties Show, these cups having been won three years in succession. The catalogue of the forthcoming sale includes the animals which have been prize winners, amongst them being the Kerry cow Vesta, first at the Bath and West Show at Plymouth, and the Dexters Little Emblem, first at Belfast, Violet, first at the Royal Dublin Show, Tess, first at the Royal Counties at Reading, and the handsome bull Boss, first and reserve number for the Challenge Shield for the best Dexter animal at the same show, as well as a choice lot of very promising young breeding animals suitable for future exhibition. There will also be offered some cross-bred cattle in good condition for showing at the winter fat-stock shows. Messrs. J. Thornton and Co. will be the auctioneers, and from them catalogues, etc., can be had. I may mention that the train service given in the catalogue has since been corrected. The down train will leave Liverpool Street at 9.10 a.m., and the up train, leaving Cambridge at 4.55 p.m., will stop at Whittlesford.

Mr. Cornwallis's Sussex Cattle.

A sale of Sussex cattle belonging to Mr. F. S. W. Cornwallis, of Linton Park, near Maidstone, took place at Tolehurst Farm, Frittenden, near Staplehurst Station, on the 20th inst., and the weather being favourable, there was a good attendance of buyers. The animals were a nice lot, and they made satisfactory prices, the average per head, including the few calves and steers, working out at £19 13s. 9d., the total proceeds being £910 5s. 6d. Yearling heifers sold exceedingly well, and there was a good demand for both bull and heifer calves. The highest price paid for a single heifer was 29 guineas, which was given in two cases—viz., by Mr. Taylor, for Valerian,, a two-year-old, and by Mr. Budd for the yearling Mabel of Linton 2nd. There were only three bulls, and Herondale Prince, a very wide animal, three years old, made top price, 30 guineas, the purchaser being Mr. W. Reynolds. A list of the principle prices realised, purchasers' names, etc., is appended:—

Particulars of Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At the fair held at Milford, Co. Donegal, on Monday, there was but a small supply, and an improved demand. Prices: Calves, third class, £1 15s. to £2; yearlings, second class, £4 17s. 6d. to £5 5s.; third class, £3 2s. 6d. to £4; two-year-olds, second class, £7 15s. to £9; third class, £5 to £7 5s.; three-year-olds, third class, £8 10s.; springers, second class, £10 15s. to £12; third class, £6 15s. to £8 17s. 6d. Sheep: Over 12 and under 24 months old, third class, 12s. to 15s.; two years old and upwards, third class, 17s. 6d. to 19s. Young pigs, eight to 10 weeks old, sold at from 14s. to 18s. each.

Wicklow Fair, held on Tuesday, was also a small one, and here demand was slow, except for cattle in forward condition. Prices: Yearlings, second class, £5 2s. 6d. to £7; third class. £4; two-year-olds, first class, £12 to £14; second class, £7 12s. 6d. to £10 15s.; third class, £6 17s. 6d.; three-year-olds, second class, £12 10s.

The Hackney.

The following extracts are from the article contributed by Mr. Burdett-Coutts, M.P., to the July number of "The Empire Review":—

The chief characteristics of the Hackney are type, or shapes, and action. The Hackney type is the correct one in relation to the draught of carriages. There are two forces by which draught can be effected by animal power. The first is the application of weight to weight. Of this an obvious instance is the cart horse. A cart horse by simply leaning the greater part of his weight in front of his centre of gravity will move a load. The second is nervous or muscular energy. Of this we used to see plenty of instances in the streets of London, when omnibuses were drawn by tall, weedy, hunter "misfits" by thoroughbred stallions; and it is found all over the south of Europe, where light shelly horses are seen struggling and fighting with the weight behind them. A very distressing spectacle it is. The only proper method of draught, and that which is least exertion to the horse, is the combination of these two forces, or the mean between them. That you have in the Hackney, when applied to harness work. He has substance enough not to put an undue strain upon his muscular energy, and he has energy enough to make full use of his substance.

There is, moreover, the æsthetic side of the question, an important factor in the price of all commodities that appeal to the eye, still more of *articles de luxe*. A pair of Hackneys on short legs with depth and quality look better in front of a carriage, which implies the necessity of substance, than the lighter shapes of the thoroughbred. It seems to be making an unfair demand upon the shapes of the thoroughbred, an unworthy use of his nervous energy, to make him draw weight.

We will pass to action. The essential property to make harness horses pay is action; and action is the essential property of the Hackney breed. The idea that the action of the Hackney is manufactured or increased by artificial means is all nonsense. Some dealers have various dodges for that purpose which they try to apply to horses that are not Hackneys. But action has been handed on in the Hackney breed from generation to generation. It is ingrained in the blood, and the simplest of all proofs is that afforded by the fact that when you first turn a Hackney mare with her pure-bred Hackney foal a week old out of their box, the Hackney foal will trot alongside of its dam, stepping like a made park-horse, while the thoroughbred foal will canter.

It may be well to give a definition of the right sort of action in the Hackney. It should be not only lofty at the knee, but free at the shoulder and with good delivery of the foot, the hocks at the same time being vigorously flexed to support and propel the weight of the body. With such action, the highest goer will stand any amount of road work, and is a far safer horse to drive than the daisy-cutter, where stone, not daisies, lie. The old prejudice that action knocks a horse's legs to pieces was founded on the "up and down" stepping of a certain type of English Hackneys, and still more on that of the "foreigners" which pump their knees up and round the foot back to the same place, and drag their hocks behind them. The prejudice has been exploded by experience of the truer sort of Hackney action in work; while the merest tyro in horse-flesh cannot have a moment's doubt as to which style is the more beautiful.

Indeed, it is a charm of the Hackney that every æsthetic virtue has its material value. There is a material value, for instance, underlying this delightful attribute of movement, which becomes more obvious when we consier his hind action. An especial feature in Hackney action is the flexing of the hocks underneath the horse. There is no breed that has anything like it in the trot, and its importance for harness purposes cannot be exaggerated. Without it the whole weight of the horse's carcase is thrown on to the joints and tendons of each foreleg as it touches the ground, whereas good hind action secures one hind leg being always underneath the centre of gravity, receiving and lifting the weight, and so lessens the strain on the forelegs and leaves them full and airy play. Consequently a horse with good hind action will last twice as long as one with bad hind action. Moreover, good hind action is of infinite importance on the slippery pavements so common now in cities. In the ordinary "mistakes" that horses may make with their forefeet on town pavements, they are saved from disaster by good hind action. If a horse who has his hocks outside him slips in front he has no support, he cannot "get" his other foreleg in time, so down he pitches. If, on the other hand, he is flexing his hock underneath him at the moment of slipping, his centre of gravity is at once supported by the hind leg, and he is saved from a fall. For many years I have driven high-stepping and high-couraged Hackneys of my own breeding in London, and in many parts of it where people rarely drive themselves. It is literally true that I have never had a horse down.

Action therefore does not interefere with utility. High action, provided always it is the right sort, will not prevent a horse going a long or a fast journey. The only effect of such work on the action will be to lower the height to which the knee is raised. If he has action to start with he will soon convert the superfluous energy, which is expended in raising his knee to a great height, into throwing his foot forward, and he will certainly clear the ground in his stride. In the true Hackney the process of resolving high action into fast action, or of controlling fast action into high action, while dependent on the use to which the horse is put, is a perfectly natural one. That is why he is at once both the best road horse for the country and the finest harness horse for the town.

We must pass over somewhat hastily three other important properties of the Hackney, soundness, tractability, and long life, which are all hereditary. I believe the Hackney breed to be the soundest breed of horses that exists in these islands. That is my experience. The Hackney breed is the most tractable of all light horses. They are easily handled and broken, and in all my long experience in breaking hundreds of horses I do not remember half a dozen cases where I found any insuperable difficulty in breaking a Hackney to harness. A Hackney in regular work and fairly treated lasts longer than any other horse I have had to deal with, except possibly the Yorkshire Coach Horse. More noticeable still is the longevity, unimpaired, of the great sires of the breed. Fireaway and Denmark in Yorkshire, and old Confidence in Norfolk—the great triumvirate of Hackney potentates at the time of the formation of the Society—lived to the ages of 31, 26, and 25 respectively. Fireaway left plenty of foals behind him at the age of 30.

Finally we come to the most important question of all, from the utilitarian point of view, endurance. This I must preface by one observation. High-stepping horses are not trained for long distances. Many of the finest horses of the Hackney breed are undoubtedly kept all their lives for "show" harness purposes. To ask a horse kept and used for luxury to perform a long journey is obviously unfair, and if he cannot perform the journey it is no argument against him.

Endurance is an original property of the Hackney breed, as evidenced both by the old tests, and by the work they used to perform. The work they used to perform before railways existed, 30 miles to market and 30 miles back in the day at high speed, proves plenty of endurance; and hundreds of instances of great staying power and speed combined in the Hackney, both in former and recent times, could be quoted.

Too little space remains to discuss the Hackney as a valuable out-cross with other breeds. For this purpose it is necessary to state two propositions, the first of which need hardly be argued. The characteristics of the Hackney are fixed by heredity. The second flows from the first logically. Prepotence is in proportion to heredity. That is to say, the older the back-blood of the type, the more certain the type is to be handed on. If it has been received through a long line of forbears, repeating itself in each individual for successive generations, then its prepotence or power of reproduction in the future is almost certain. The Hackney is not a chance horse. He is a horse of very old breeding, and therefore a horse for breeders to trust. This applies to both sexes of the breed. For this reason foreign countries, who foster horse-breeding with all the resources, financial and scientific, of a Government department, have imported the breed for half a century, until at one time this country was almost depleted of the best strains. It required all the care and capital available to re-establish the breed on its old basis.

From that time, by careful selection and systematic breeding the type has been greatly improved within itself, that is, by pure Hackney blood on both sides. When the Brookfield Stud was founded nearly 20 years ago the average height of the Hackney was 15 hands to 15.1. The necks were too heavy, and the quarters, particularly in Norfolk strains, inclined to be "carty" with the tail set too low down. Pure Hackneys are now bred at Brookfield 15.2½ in height, and even 16 hands and over; the "quality" at both ends has

been greatly improved, and blood-like harness-horses with depth and short legs are the result.

The out-crosses I have pursued, for the definite purpose of obtaining fine harness horses and hacks, are of two kinds. First, in order to produce the 16-hand horse, with more height, length of neck, and sweeping top line, than the Hackney, and more substance, action, and shorter legs than the Yorkshire Coach Horse (an old breed standing 16.2 and supplying the typical "Barouche" or "State Coach" horse), I cross the two breeds. This cross has produced practically a new type, and many of the highest-priced carriage horses at Brookfield during the past ten years have been derived from it. Secondly, I cross the Hackney with the Thoroughbred, losing perhaps some of the high action of the former, but gaining quality and courage from the latter. Many beautiful riding horses have been the outcome of this cross. Both these crosses, pursued on anything like a system, are original in my stud. Scientifically, the experiment of crossing the Hackney and the Coach Horse was almost certain to succeed. It is a law of breeding, constantly violated with disastrous results to the breeder, that you must not join two extremes to obtain the mean. The Hackney and the Coach Horse, though differing in size, and to a certain extent in type, are both essentially harness breeds; there is no strong or characteristic antipathy between them. The same remark applies to the cross of the Hackney with the American Trotter. Both are harness breeds, and breeders in the States are following this cross with admirable results.

It only remains to add that for breeding army horses for cavalry and mounted infantry, the Hackney in my opinion is a very valuable factor. The sire should be a Thoroughbred, big-boned, short-legged, and well-coupled. But it is very difficult to find this combination in a breed whose sole *métier* has been speed on the top of the ground, and for a mile or two only. The beauty of form, the substance, bone, short legs, good coupling, above all the action which lifts his weight from the hocks and clears the ground in front, are to be obtained from the Hackney because they are all hereditary in the breed. Courage, resistance, speed, elasticity, can all be improved by the Thoroughbred. Breeders in all countries know well that these are the varied points for which military buyers search, too often without success. The mating of the Hackney and Thoroughbred has the same virtue of congruity just referred to. For the Hackney possesses many riding characteristics, and on the hard road where the trot is essential there is no better hack than a cob with good shoulders, blood-like neck, and regular clockwork action. I believe that this cross, ranch-bred in our colonies or in the States at a cost that would leave a handsome profit, would produce a better type of cavalry horse than is to be found elsewhere in the world.

Contagious Diseases of Animals.

NOTE.—The figures for the current Year are approximate only.

Diss Lamb Sale.

The twenty-fifth annual sale at Diss took place on Tuesday, under the most favourable circumstances, the auctioneer being Mr. T. W. Gaze. The sheep were not so numerous as last year, but the attendance of buyers was most satisfactory, and a good trade was done, lambs selling at advances of from 2s. to 3s. per head on the prices realised at Norwich market on the previous Saturday. Below we give some of the prices realised, which will give an idea of how business ruled.

The sale opened, as usual, with Mr. T. W. Gaze's own consignment of first-cross lambs, of which 100 ewe averaged 28s. 3d. (best 50, 30s.); 100 wether, 28s. 6d.; and 150 mixed, 23s. 8d.; whilst 60 Black-faced wether made 30s., and 21 ditto 20s. 6d. Mr. George Holt Wilson's 39 ear-marked, Black-faced ewe lambs fetched 39s., and 40 eligible for registration 26s. 6d., 50 wethers 30s., 80 mixed, 22s.; 200 half-breds averaged 28s. 6d. (best 100, 30s. 6d.), and 120 more 22s. 4½d. Mr. William Brothers, Wattisfield, averaged 28s. 1½d. for 400 first-cross lambs (best 100, 32s. 6d.), 60 more going for 20s.; and from the Hon. Charles Hanbury, 65 Black-faced lambs from registered flock realised 21s., and 295 first-cross mixed ranged from 22s. to 12s. From Mr. Edward Mann, Thelveton, 100 first-cross ewe lambs averaged 28s. 9d. (top 50, 31s.), 100 wether 29s. 6d., 150 mixed 22s. 6d., and eight ram lambs nearly 49s. Mr. Jonathan Boyce, Tivetshall, had 100 half-bred lambs, which made 33s., one of the best prices of the day, 219 more going at from 29s. 6d. to 17s. 3d. Mr. William Jaggard, from his Thelnetham farm, had 70 Black-faced ewe lambs, which brought the leading figure of the sale, 34s. 6d., another pen of 70 mixed making 29s. 6d., and 140 more from 24s. 6d. to 23s. A consignment of 150 first-cross from Mr. Charles Goodrich, Palgrave, were a feature of the day, and, sold in fifties, went at 33s. 6d., 28s. 6d., and 27s., and 33s. 6d. was also the figure given for 60 half-bred from Mr. R. H. Amies, Bressingham, 30 more going at 26s. 6d.

The shearling ewes were a nice lot, but 70 Black-faced from Mr. A. Neave, Stokesby, easily came to the top, three score averaging 52s. 2d. (best score 56s. 6d.), 10 43s.; 20 from Mr. S. Baker, Shelfanger, 51s. 6d.; 24 from Mr. Fred Gowing, 46s. 6d.; 20 from Mr. L. Lewin, Marlingford, 43s. 6d., 15 42s. 6d.; 20 from Mr. Charles Tacon, 33s. 6d., 16 25s.; 24 from Mr. J. W. Smith, Pulham St. Mary, 31s. 6d.; and 29 three-shear from Mr. H. Hardesty, 39s. 6d. Six score first-cross from Mr. R. H. Hammond ranged from 48s. 6d. to 41s.; 80 from Mr. Frank Hammond, 45s. to 40s.; 20 from Mr. James Leatch, 33s. 6d.; and 110 half-bred from Captain R. B. Clarke, 27s. 6d. to 20s. 6d.; and 47 from Mr. A. R. Stammers, Livermere, over 36s.

The receipts on account of Revenue from April 1, 1902, when there was a balance of £8,566,947, to June 21, 1902, were £30,833,756, against £26,020,287 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net eexpenditure was £43,501,930, against £44,567,529 to the same date in the previous year. The Treasury balances on June 21, 1902 amounted to £6,803,108, and at the same date in 1901 to £7,239,557.

At Vaas, Co. Kildare, on Wednesday there was a small fair, at which a good demand for well-conditioned cattle, but young and thin animals were rather hard to sell. There was a moderate supply of sheep, consisting chiefly of three-year-old mountain wedders and lambs, the former being in fair demand. Prices: Calves, second class, £3 10s. to £4 7s. 6d.; yearlings, second class, £5 5s. to £6 15s.; two-year-olds, first class, £11 10s. to £13 10s.; second class, £8 to £10 10s.; third class, £6 10s. to £7 5s.; three-year-olds, first class, £14 10s. to £14 15s.; second class, £11; springers, second class, £14 to £15. Lambs, second class, £1 2s. to £1 4s.; over twelve and under twenty-four months, second class, £1 2s.; two-year-old and upwards, second class, £1 2s. to £1 10s.

Keighley Society.

The annual show of the Keighley Agricultural Society was held on Saturday, in most beautiful weather, with the result that the attendance of visitors was very large, and the society should be able to make good some of the loss sustained at some previous shows, which unfortunately were marred by bad weather. The entries numbered 1,509, as compared with 1,033 last year, 996 in 1900, in both of which years, however, there were no pigs shown. The increases occurred chiefly in the sections not strictly agricultural, dogs being the most notable, for here the entries number 594, or more than double those received at the three previous shows. Horses numbered 108, against 88 last year, and 105 in 1900; cattle, 29, 28, and 14 respectively; sheed, 34, as compared with 37 last year, and 19 in 1900, and pigs 16. The horses were up to the usual high standard, the youngsters including the progeny of such well-known sires as Rosador and Garton Duke of Connaught, whilst among the winners in the mature classes were Blucher, with which Mrs. Fred Holmes, of Shipley, has taken quite a trophy of prizes, Kempton Cannon, owned by Mrs. Robinson, of Harrogate, and St. Thomas, a son of Garton Duke of Connaught, with which Mr. Hall, of Langton, led a nice class of hackney stallions. To Silver Ness, owned by Mr. Inman, of Huddersfield, was awarded the Hackney Society's medal. It may be mentioned here that objections were laid against the winners of first and second prizes in the local class for horse or mare over 14.2 hands in harness. In the cattle section, Mr. Samuel W. Hackney, of Leeds, Mr. Rayner, of Seacroft, Mr. W. Walsh, of Bingley, Mr. Haggas, of Keighley, were the most successful exhibitors, whilst the sheep awards went to local exhibitors. Objection was taken to the winner of the first prize in local class for three Lonk ewes to be suckling lambs.

In the pig section Mr. Dewhurst, Bradford, won four firsts and two second prizes, Mr. J. Veevers, Brierfield, Colne, securing the other two seconds. The shows of dogs, poultry, pigeons, and rabbits were good ones, and received considerable attention from the large company present.

The judges of horses were:—Mr. John Harrison, Bawtry; Mr. H. P. Webster, Brompton; and Mr. T. A. Atkins, of Leeds; of cattle and sheep, Mr. Thomas Leake, Swillington; whilst Mr. Edward Smith, Cowling, judged the pigs. Dogs: Mr. J. R. Anderson, Leeds; Mr. T. H. Stretch, Ormskirk; Mr. H. Croft, Bradford; and Mr. George Roper, Gomersal. Poultry: Mr. W. H. Robinson, Keighley; Mr. D. Butterfield, Morton; and Mr. P. Proud, Formby. Pigeons: Mr. G. B. Goodfellow, Stockport; Mr. S. Shackleton, Keighley; and Mr. T. H. Stretch, Southport. Rabbits: Mr. J. H. Roberts, Armley. Butter and eggs: Mrs. Pinder, Howden Park.

The horses, cattle, and sheep awards were as follows:—

HORSES.

Draught or Agricultural.—Best horse or mare (local)—1, T. Taylor and Co.; 2, F. Whitaker. Best horse or mare (open)—1 and 3, A. Sheard; 2, T. Edwards. Draught or Agricultural Entire (open)—1, W. Tillotson; 2, S. Terry.

Hackneys.—Mare in foal, or with foal at foot, or having had a foal during 1902—1, J. W. Astley; 2, A. A. Haley. Foals, Colt or Filly, foaled 1902—1 A. A. Haley; 2, J. W. Astley; 3, J. Burton and Sons. Yearlings, Colt, Gelding, or Filly, foaled 1901—1, W. Mathieson. Two-Year-Old Colt, foaled 1900—1, G. Hall; 2, C. Robinson. Gelding or Mare, not to exceed 14.2 h.h., to be ridden (local)—1, H. Wilkinson; 2 and 3, J. Davy.

Gelding or Mare, not to exceed 14.2 h.h., to be ridden—1, J. H. Jones; 2, T. T. Campion; 3, G. E Franklin Gelding or Mare, over 14.2 h.h., to be ridden—1, Mrs. Robinson; 2, T. Hall; 3, T. C. McKibbin. Gelding or mare, not to exceed 14.2 h.h., in harness—1, J. H. Jones; 2, T. C. McKibbin; 3, G. E. Franklin. Gelding or mare, over 14.2 h.h., in harness—1, Mrs. Fred Holmes; 2, G. Tyson; 3, T. Hall. Best Groomed Gelding or Mare and Gears (without vehicle)—1, T. Taylor and Co.; 2, W. Moore; 3, F. Whitaker.

Hackney Stallion—1, T. Hall; 2, C. Robinson. Best Horse or Mare, not to exceed 14.2 h.h., in harness (local)—1 and 2, J. Davy.

Pony in harness, not exceeding 13.2 h.h. (local)—1, H. Wilkinson; 2, J. A. E. Mitchell; 3, J. W. Anderton.

CATTLE.

Laying-off Cow, due to calve from August 1 to November 30, 1902 (Open)—1, M. Raynor; 2, E. Farrow. Cow for dairy purposes, the property of a farmer regularly supplying milk into the borough of Keighley—1, T. Bushby, 2, C. Smith, Howden. Two Cows in milk, or due to calve before November 30, 1902 (open)—1, S. W. Hackney; 2, W. C. Walsh; 3, E. Farrow. Bull, any age (open)—1, T. Miller; 2, W. Walsh. Heifer for breeding purposes, under 2 years (open)—1, R. and T. Harrison; 2, Mrs. Cass. Fat Beast (Local)—1, H. Haggas; 2, H. Wright.

SHEEP.

Leicester, or any other Long or Short-wooled Ram, except Mountain (open)—1, C. Smith; 2, J. Wrathall; Long-wooled Tup Lambs, except Mountain (open)—1 and 2, C. Smith, Lonk or Mountain Tup Lamb (open)—1 and 2, J. Blackburn. Three Lonk Ewes to be suckling lambs—1, C. Smith; 2, J. Bailey. Three Lonk Gimmer Lambs (open)—1, Blackburn and Ashworth; 2, F. Ormerod. Lonk Gimmer Lamb (Local)—1, T. Snowden; 2, J. Hollingdrake. Three Half-bred Lonk ewes or Gimmer Shearlings (open)—1, J. Blackburn; 2, W. Walsh. Three Half-bred Lonk Gimmer Lambs (Local)—C. Smith.

PIGS.

Boar, any breed—1, A Dewhirst; 2, T. Veevers. Sow, any breed—1, A. Dewhirst; 2, T. Veevers. Store Pig Segs and Sows not to compete—1 and 2, A. Dewhirst. Pen of 3 Pork Pigs—1 and 2, A. Dewhirst.

SOCIETIES.

Scottish Chamber.

A meeting of the directors of the Scottish Chamber of Agriculture was held at Edinburgh on the 4th inst., Mr. Thomas Elder, Stevenson Mains, Haddington, presiding.

The Secretary (Mr. Isaac Connell, S.S.C.) read a communication from the County Council of Perth asking the support of the Chamber to a movement having for its object the ascertainment of facts pointing to undue and unequal railway rates being charged, and the making of a representation to the Board of Agriculture on the subject.

Mr. Hutcheson, Beechwood, Perth, moved that the Chamber accede to the request, and the motion being adopted, a committee was appointed to co-operate with the representatives of County Councils in getting at the desired information, and to submit it to the Minister of Agriculture.

The Secretary said it was proposed to make a special effort this year in favour of the funds of the Royal Scottish Benevolent Institution. As showing the success which had attended the institution since it was founded in 1897, he said it had provided life pensions to no fewer than 50 aged or infirm necessitous representatives, male and female, of the agricultural class in Scotland. There were at present on the roll of pensioners 40 names, 10 pensioners having died, but there were as many as 19 eligible applicants who had had to be refused assistance on account of want of funds. He thought the credit of Scottish agriculturists was involved in a matter of that kind, and he would not be satisfied until a strenuous effort had been made to put it right. (Hear, hear.) He accordingly asked the meeting to pass a resolution, strongly urging the directors and members to give their loyal and substantial support to the institution.

On the motion of Mr. Geo. Prentice, Strathore Thornton, a resolution in these terms was unanimously agreed to.

Mr. Prentice drew attention to the subject of the breeding of horses. He said the Government gave certain encouragement to the breeding of light-legged horses, a number of horses being sent through the country for the purpose of breeding that class of horse. The Government no doubt looked to the fact that if they encouraged breeding in that direction they would have a source from which to draw army remount horses. But the whole was a failure, and for one reason. They all understood the difficulty of the farmer, and his disinclination to breed light-legged horses when he could breed Clydesdale or work horses which he could use. If the farmer bred light-legged horses, the Government required him to keep them till they were four years old, and to break them. Now, most farmers were not in a position to keep that class of horse for that length of time, and few of them could properly break them, while the Government could only offer for such animals as other people would not buy. He was firmly convinced that success would attend the efforts of the Government in this direction if they would take these horses from the farmer unbroken at three years old. But the Government must send them horses that would breed the class of horses they required. At present they had too many broken-down racehorses sent, and horses they could breed a hunter or a coach horse from; but there was far too much "daylight" in them. He suggested that a committee be appointed to communicate with the Minister of Agriculture on the subject.

Mr. David Cunningham, Dalachy, Aberdour, seconded, and the motion was adopted.

Yorkshire Union.

A meeting of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture was held at York on the 12th inst., Mr. J. Allen, of Waplington Grange, presiding.

A communication was received from the Monmouth Chamber of Agriculture on the subject of Army remounts, and forwarding a resolution passed by them, to the effect that the President of the Board of Agriculture "should open up negotiations with the War Office as soon as possible, with a view to securing for the British agriculturist the supply of all the horses that the War Office may require."

Major Dent, who has had much to do with the question, opened a discussion. He said the Government could obtain enough horses in England in peace time, but they required to keep in touch with those countries from which they obtained their horses in time of war. It was quite impossible that Great Britain could supply all the horses required in a war like that in South Africa. The ordinary peace supply of horses was 2,000 a year; in the late war we had been using up that number weekly. The Government's attitude in time of peace had been in reality that recommended by the resolution.

Mr. Ridsdale considered that the price which the Government paid was inadequate. Farmers could not afford to rear four and five-year-olds and sell them at between £30 and £40, and until the Government gave a better price the average farmer would not be able to do anything in breeding remounts.

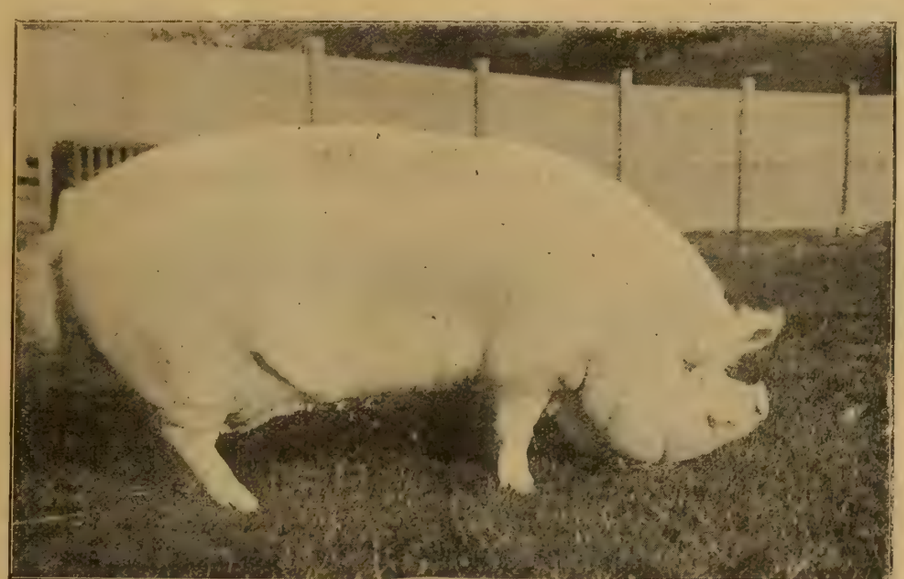
Colonel Legard concurred with Major Dent, and added that from his experience in the Artillery, the horses which the Government required for the Army were practically a special and particular class. He believed that we could not breed these horses in the United Kingdom for the price which the Government offered.

Major Dent, replying, said he was convinced that in Yorkshire it would never pay to breed remounts as such. He advised them to breed first-class hunters and harness horses, and sell their misfits for remounts. The present price was from £40 to £42, rising four years old. While it would not pay them to breed at that price, it would not pay the Government to give English horse-breeders more when they could buy the horses they wanted abroad at a lower price. At present the remount officers had attended certain markets, but the farmers had not responded to the appeals in a way which might have been expected. They had taken some misfits and some horses manifestly unsound, and they expected to get £40 a piece for them. The officers rejected them, and the farmers seemed to have been very disappointed.

The Chairman also expressed the opinion that it would not pay the Yorkshire farmer to aim at breeding remounts.

No resolution was adopted, but it was understood that the matter will be raised at the next meeting.

The Parliamentary Committee reported that they had considered the Education Bill, chiefly in its financial aspect as affecting agriculture. They were of opinion "that inasmuch as education is a national object, the large additional charges which will be thrown upon county authorities under the Bill should be met by a corresponding increase in the local taxation grants, instead of falling upon the rates, which are levied on one class of property alone." The Committee's resolution was adopted, on the motion of Mr. Newton, seconded by Colonel Legard, and Lord Herries and Mr. Liverside, jun., were appointed to join the deputation.



In the report of the General Purposes Committee it was stated that they had considered the following resolution of the North Cotswold Farmers' Association, referred to them by the general meeting of the Union, viz.: "That in the opinion of this Association, compulsory dipping of sheep is desirable, being the best means of stamping out sheep scab, and that the Board of Agriculture be requested to issue an Order to that effect"; and had come to the conclusion "that compulsory dipping of healthy sheep is not desirable." And they did not recommend the Union to adopt the resolution.

A discussion took place on the subject of sheep-worrying by dogs, and a resolution was passed, with some dissentients, in favour of the dog tax being increased, all dogs being required to wear identification collars, and be fastened up from an hour after sunset to an hour before sunrise; that all stray dogs found without a collar should be destroyed, and owners of sheep authorised to shoot dogs found worrying them.

Polo Pony.

A general meeting of the members of the Polo Pony Society will be held in the Royal Showyard at Carlisle on Tuesday, July 8th, at 2.30 p.m. The report of the Council to be presented at that meeting states that there has been a steady accession of new members, the total number now upon the Society's books being 530, composed of 3 honorary, 498 annual, and 29 life members. As compared with the report presented at the corresponding meeting last year, it indicates that the membership has increased by 115 during the intervening period. The third London show was, it states, as successful as the other two. After increasing the prize-money by no less than £70, the Council were able, due to the excellent entry received, to carry through the show at a total outlay of £268, the actual loss being £117 less than in the preceding year.

Negotiations are pending for a two-days' show in London in the spring of 1903, viz., the Friday and Saturday of the Hunter Show week. The additional time placed at the disposal of the Council will be utilised to provide new classes and to improve the bending and other competitions, and thus enable the Council to make the show still more attractive to the public. Suggestions for a produce class, classes for Irish ponies, and for studs limited to four ponies, bigger prizes for jumping and bending class for novices are under consideration.

THE LARGE WHITE SOW illustrated above is "Walton Topsy 6th," sire "Walton Topsman," 3623 dam "Walton Eclipse," 3621, the property of and bred by Sir Gilbert Greenall, Bart., Walton Hall, Warrington. At the Bath and West and Southern Counties Society's Show at Plymouth recently, "Walton Topsy 6th" won first prize in the class for large white breeding sows, farrowed before 1902, and reserve for the championship.

The Council refer to the fact that it is proposed to alter the name of the society from the "Polo Pony Society" to the "Polo and Riding Pony Society," "established to promote the breeding of Ponies for Polo, Riding and Military purposes, and for the encouragement of Native Breeds," subject to the confirmation by the members at a special meeting to be held at the Society's Office, 12, Hanover Square, on November 6th next. Members are reminded that the entries for Vol. VII. of the Stud Book and the Annual Supplement for 1902 will close on October 1st next. The various entry forms, on the back of which are given the conditions, have been issued, and can be had on application to the secretary, Mr. A. B. Charlton, 12, Hanover Square, W. Applicants should state the nature of their entry, for separate forms are provided for stallions and mares for the Stud Book, whilst another form is used for the Supplement.

Leeds Smithfield Club.

The annual meeting of the Leeds Smithfield Club was held on Monday, at which the principal question discussed was as to where future shows should be held. For years past the committee have lamented the want of a permanent hall in some central position, because each year it involves them in the necessity of erecting a wooden structure on their own account, and as they had to demolish it last year earlier than usual—the ground being wanted for other purposes—they had no chance of recouping themselves by letting, which means a loss on the year of between £400 and

£500, the actual loss on the show being £430 19s. 3d.

Mr. A. Edmanson, chairman of the Committee, who presided, regretted that they had the same old story, a loss, but that loss was likely to continue, he said, until they could get a permanent building, or be successful in letting that which they erected for the show. It was very disheartening for the members of the committee to give time and money to the enterprise if they must face such a financial result. The Corporation obtained the necessary powers to erect a permanent hall some time ago, and it only wanted a resolution of the Council to proceed with the business. But, he continued, I am sorry we have not more enterprising men on our Leeds Corporation to take hold of this matter and put it through.

To show that such a structure would be a paying concern to the Corporation, Mr. Edmanson spoke of the uses to which it could be put, apart from the three days that the Smithfield Club would be renting it. Exhibitions and other shows would keep it occupied pretty well all the year round. Bingley Hall, Birmingham, paid a big dividend. They ran four shows a year there, and thousands of people were brought into the city. One gentleman paid £100 a week for 12 weeks, and said he would have paid £70 a week in Leeds if he could have had the building during March and April. Glancing at a suggestion that the committee should hold the show in the market building at Copley Hill, Mr. Edmanson said they had to consider the question of distance from the city. From the public point of view the show had always been a success; but unless they could work on a different basis they would follow a long line of similar societies, and die a natural death.

The report was adopted.

Some discussion followed as to where the next show should be held, but the matter was left open for the decision of the committee.

Diseased Beef at the Central Market.—At the Guildhall Police Court on Tuesday John Fitter, meat salesman, of 134, Central Meat Market, was summoned for being in the possession of and selling certain forequarters of beef which were in an unfit state for food, knowing the same to be unwholesome.—Mr. Ricketts prosecuted on behalf of the Borough of Finsbury, and said that a sanitary inspector named Billins saw the meat carried out of the defendant's shop and placed in a cart which belonged to a butcher, of Enfield Highway. Some of the forequarter seized was found to be green, decomposed, and suppurating on the flanks. The inspector called upon defendant and spoke to him about it. Defendant said he had the fellow forequarter, and pointed it out to the inspector, who found that this also was green and mouldy in parts. Defendant then said he supposed "the whole of the Danish beef was in bad condition as it was delayed in transit." The meat was so bad that anybody could see its condition. The person who bought it has no opportunity of seeing what it was, because it was artfully wedged in with some other beef.—A fine of £10, with £3 3s. costs, was imposed.

Good Prices for Polo Ponies and Hunters.—Several hunters and polo ponies were offered at Messrs. Tattersall's sale at Albert Gate on Monday, and some good prices were realised, there being a very large and distinguished company present. The best price for a polo pony was obtained by that well-known player Mr. W. S. Buckmaster, who secured 570 guineas for Rufus, a beautiful bay; whilst for another bay, named Mullata, he got 400 guineas. In all he sold a half dozen animals for 1,715 guineas, or the excellent average per head of nearly £286 guineas. Mr. R. L. Agassiz also disposed of half a dozen polo ponies, but these did not sell so well as expected, only two going at three-figure prices, and both of these realised 145 guineas. Mr. A. Rawlin obtained much better prices for his five ponies, Sequel, a chestnut, realising 270 guineas; Sweetheart, a bay, and Circe, a chestnut, 220 guineas each; whilst Santel, a brown, bought from 7th Hussars, and a bay named Shamrock, sold at 135 and 95 guineas respectively. Lord Cowley disposed of 13 horses that had been regularly hunted with the Quorn, Belvoir, Mr. Fernies, and Cottesmore Hounds, and only one of the 13 failed to reach a three-figure price—and this by only three guineas. Four hundred guineas was got twice, for Exchange and Volunteer, both bay geldings. The next highest price was 280 guineas, and this was also secured on two occasions, the animals being, Paris, a brown gelding, and Brother Pat, a chestnut. Lord Southampton secured capital prices for his hunters, Theorist, a brown gelding, by Theosophist, realising 400 guineas; Prince, a bay gelding, by Brown Prince, 280 guineas; Grey Leg, a brown gelding, by Pythias, and Bohemian, a bay, by Ishmael, 270 guineas each; Jena, a brown gelding, by The Penman, 240, and Willy, a bay, 210 guineas. The best price for the dozen Belvoir Hunt horses sent up by Sir Gilbert Greenhall, Bart., was 290 guineas, given for Fielder, ten guineas less being got for Sandsfield, whilst six others went at prices well over the 100 guineas.

Agricultural Imports for 1901.

Later Information.

In previous years, says Major Craigie, C.B., in the Journal of the Board of Agriculture for June, it has been impossible in many cases to exhibit full particulars, especially as regards the countries from when the imports came, down to a later date than the year before that to which the other information in the volume mainly relates, and I have to acknowledge the courtesy of the Statistical Department of H.M. Customs, in placing fuller details at an earlier date at the disposal of this Board, which must enhance the value of the statistical matter.

Live Animals.

The number of cattle imported alive in 1901 was 495,634, or almost exactly the same as in the preceding year, the arrivals of 1900 having been 495,645. These totals, it may be observed, show only a very insignificant decline from the aggregate of 503,504 head of cattle imported in 1899, when the ports were continuously open to South American live stock. With the exception of the usual small number of Channel Islands cattle, the supplies came only from the United States and Canada, sources which proved adequate to furnish an equivalent for the Argentine quota contributed during the months of 1900 in which that trade continued. The total number of sheep imported was 384,000 in 1901 as compared with 314,000 in 1900, any deficiency from other quarters being far more than made good by the largely increased arrivals from the United States and Canada. In this connection it is not without interest to observe that the imports of live cattle into the United Kingdom were nearly as great in 1883 as at the present time, while those of sheep have fluctuated considerably from a maximum of 1,124,000 head in 1882 to a minimum of 63,000 head as lately as 1893.

Dead Meat.

The relative unimportance of the live stock import trade is, however, again suggested by comparing it with the rapidly growing trade in dead meat imports, which year by year of late have risen by more or less material annual increments. In this case the aggregate increase of 1901 over 1900 is greater than was then recorded over the twelve months immediately preceding. The remarkable expansion of this trade since so recent a date as 1893 must be recognised when it is observed that the quantity of beef, mutton, and pigmeat of all kinds imported, has very nearly doubled in this interval, rising from a total of 465,000 tons to 919,000 tons—a rate of development much outstripping that of population, as may be shown by the growth of these imports per head of the people of the United Kingdom from 27lb. in 1893 to 49½lb. in 1901.

It is, however, a matter of much interest to trace the sources of this large and growing section of the animal food of the country in recent years. The supplies from foreign countries—wherein the contribution of the United States of America has always been the dominant factor—furnish much the largest quota of the sea-borne meat consumed—or 756,000 tons in 1901, as compared with 163,000 tons from Colonial sources. For similarly contrasted periods, the dead meat annually landed in this country from the Canadian Dominion, from the Commonwealth of Australia, and from New Zealand, which are the three Colonial sources of supply, gives the following comparison:—

Period.	Canada.	Australia.	New Zealand	Total.
	Tons.	Tons.	Tons.	Tons.
		17,000		
1881-85.	11,000			28,000
1886-90.	18,000	7,000	30,000	55,000
1891-95.	16,000	37,000	51,000	104,000
1896-00.	34,000	70,000	75,000	179,000
1901.	30,000	46,000	87,000	163,000

Analysing more closely the elements of which the meat imports are composed, it may be observed that fresh beef increased by 19,000 tons to a total of 225,000 tons, which may be regarded as the equivalent of a herd of over 700,000 fat cattle. Fresh mutton rose once again, to a total of over 180,000 tons, the aggregate weight imported representing some 7,000,000 carcases of sheep and lambs. Both of these descriptions of imported meat have, in fact, doubled in bulk within the past seven years.

Dairy Produce.

The importation of butter, which appeared to receive a slight check in 1900, more than recovered its former position in 1901, the total quantity received being 185,000 tons, or an increase of nearly 10 per cent. To Denmark alone was attributed a total of nearly 80,000 tons, the advance in this case on the year accounting for a considerable portion of the increased quantity received. Treating the exports of the several Australasian colonies as a unit, their contribution comes next in bulk to that of Denmark with an aggregate of 20,775 tons, while the Russian butter exports to this country have exhibited the most remarkable extension in the year, the receipts rising from 10,500 to 18,900 tons, or very little below the Australasian quota. Canada and the United States practically recovered the ground which they lost as butter exporters in the preceding year. The imports of Cheese fell below the large total of 1900, a reduction being shown from all the principal sources except Canada, whose supremacy in this trade has become still more marked, the Canadian supplies last year accounting for three-fifths of the total quantity received at our ports.

Grain.

The total quantity of wheat and flour, expressed in its equivalent of grain, imported last year slightly exceeded 5,000,000 tons, or more than in any previous year since 1893. Of this quantity nearly one-fifth, or 975,000 tons, was furnished by British Possessions, but the proportions due to each source of supply fluctuate considerably. The large diminution in the supplies shown to have come from Argentina is the most striking feature of the past year, but the reduction in this respect has been more than made good by the increase attributable to the United States. It may be added that the importation of flour, which fell off somewhat in 1900 from the level of the preceding year, nearly reached again in 1901 the total recorded in 1899.

The imports of barley amounted to 22,000,000cwts., or about 5,000,000cwts. above those of either of the two years immediately preceding, though less by nearly 2,600,000cwts. than the total for 1898. Oats also were received from abroad in considerably larger quantities than in 1900, and in both these cereals the augmented supplies came mainly from Russia, although in the case of barley, Roumania was responsible for a considerable increase. The net addition of some 7,200,000cwts. to the imports of barley and oats, it may be observed, very much more than counterbalanced the diminution, which ultimately proved less than half this figure, in the arrivals of maize, the gap left by the reduction of the United States' supply of that cereal being filled by Roumania and Argentina.

International Conference of Sheep-Breeders.

The third International Conference of sheep-breeders, held by the National Sheep Breeders' Association, will take place on Saturday next, July 5th, at the Town Hall, Carlisle, kindly lent for the occasion by the Mayor and Corporation of Carlisle. The chief item on the agenda is the reading of a paper by Mr. Mansell, on "The Deleterious Effects produced by the Use of Substitutes for Wool in the Manufacture of so-called Woollen Articles in England, America, and on the Continent; their Injurious Effect on the Prices of Wool, and the desirability of Legislation to prevent the Sale of such goods as Woollen Goods." This paper should prove a most interesting one to sheep-breeders, and, seeing that the conference will be held on the first day of the Royal Agricultural Society's Show at Carlisle, there will doubtless be a large attendance. A discussion on the paper will take place, and the other business to be transacted will be the consideration of communications and replies in connection with the business of the conference, and any other matter that may arise.

The report presented at the annual meeting of the Galloway Cattle Society stated that the sum of £40 10s. was being offered as special prizes during the current year, including two ten-guinea cups, at the Royal Show at Carlisle. Rev. Dr. Gillespie (Mouswald), the secretary and treasurer, in submitting the report, stated that the Society was going on smoothly and doing its work fairly well. It had now been twenty-five years in existence, having been started in June, 1877. He hoped that the Society would go on flourishing and to prosper. They had, no doubt, a splendid breed—a breed which was being more and more valued for many purposes. He appealed to the owners and admirers of Galloways to bring them out, both at the breeding and fat stock shows, and trusted that there would be a large and meritorious show of Galloways at the Highland Society's show at Dumfries next year. The report was adopted, as was also the financial statement, which showed that there was a balance in hand of £234. The Duke of Buccleuch was re-appointed president and Sir Robert Jardine vice-president, and Dr. Gillespie was again elected secretary and treasurer.

The Irish Export Trade

The Department of Agriculture and Technical Instruction for Ireland has just issued a full statement, covering the year 1901, of the proceedings which were taken in the course of that year within its jurisdiction under the Diseases of Animals Acts This statement has just been laid on the table of the House of Commons, and it is certain to be read with much satisfaction by all who are interested in the cattle trade of Ireland, at least so far as the question of disease is concerned, says the "Irish Times." At the outset of the return an interesting table is printed to show in succinct form the incidence during 1901 of outbreaks of the different diseases scheduled under the Diseases of Animals Acts among the several classes of stock in Ireland. This table may well be given here:—

Kind of Stock.	Total Number kept in Country.	No. of Outbreaks of Scheduled Diseases in 1901.	Description of Disease.
Cattle ..	4,673,323	.. 2 ..	Anthrax
Sheep ..	4,378,750	.. 545 ..	Sheep Scab
Swine ..	1,219,135	.. 221 ..	Swine Fever (220), Rabies (1).

Commenting on these figures, the official statement says that an analysis of them reveals some interesting features. It will be noticed, we are told—

(a) That the immunity which Ireland has now so long enjoyed from oversea invasion of the more serious animal plagues has been preserved unbroken throughout 1901, the outbreaks of scheduled diseases recorded as occurring among the stock of the country during the year having been limited to anthrax, sheep-scab, swine fever, rabies, glanders, and parasitic mange.

(b) That, while three of these six diseases—viz., sheep-scab, swine fever, and, in a less degree, parasitic mange—were sufficiently prevalent to demand constant vigilance, no one of them can be said to have been exceptionally so when regard is had to the large stocks of animals kept in the country.

(c) That of the remaining three diseases, glanders and anthrax were merely occasional in their appearance, while rabies, which has given so much trouble in the past, sank to an unprecedentedly low level, and, it is hoped, has been finally suppressed.

(d) That the cattle of the country, the most numerous and by far the most important of its live stock, have during the year enjoyed an almost complete freedom from the maladies scheduled under the Diseases of Animals Acts.

These facts, the Department claims, constitute an effective testimony to the utility of the Acts, through the operation and administration of which such encouraging results have been obtained.

Speaking of the foot-and-mouth disease, the statement points out that no case of this disease has occurred in Ireland for close upon 18 years. At the beginning of 1901, however, the foot-and-mouth disease outbreaks, which commenced in England in the early part of the previous year, though prevented by the effective measure taken by the Board of Agriculture for Great Britain from gaining any widespread hold, had not altogether ceased, and there was still undeniable ground for fear that an extension of the malady to Ireland might unfortunately take place. The prohibition against the importation into Ireland from any part of Great Britain south of the Scotch border of animals liable to that malady—that is to say, of ruminant animals and swine—was consequently still strictly maintained; but as the year advanced, and as the position of England improved, it was found practicable to narrow the area from which importations were strictly excluded to a portion of the south-east of England, embracing 14 counties, and, later on, when it became apparent that the disease had been stamped out, all special prohibition against importation was definitely cancelled, and the normal regulations were then reverted to.

The effect of this altered condition of things is strikingly shown by the importation statistics, for whereas only 162 cattle, 1,911 sheep, and 5 swine were imported from Great Britain into Ireland in the year 1900, during the greater portion of which prohibitory regulations were in force, the corresponding figures for the year 1901 were 611 cattle, 31,245 sheep, and 47 swine. This freer admission of animals, which, in the interests of the country at large, it had been needful to postpone so long as it seemed liable to be attended by any risk of introduction of so dreaded a scourge as foot-and-mouth disease, has been a welcome concession to many. Breeders of stock in Ireland have thereby been enabled to introduce fresh blood into their herds from leading British strains, and the usual large autumn movement of sheep from Scotland to the North of Ireland for grazing purposes has been carried on unimpeded, this latter traffic being one of considerable moment, not only to pasture owners but to shipping companies trading between Ulster ports and Scotland.

Passing to the question of pleuro-pneumonia, we are informed that the records for the year are again nil. The history of this disease, which, after much effort and expense, was eradicated from the United Kingdom, clearly illustrates the advantages that result to Irish cattle owners from the insular situation of their country and the absence of any import trade in foreign animals, inasmuch as, owing to these favourable conditions, the possibility of re-introduction of infection is reduced to a minimum.

This statement of the Agricultural Department is not, however, without its regrettable side. In 24 of its pages we have detailed statistical information given to us in a number of tables respecting the exportation and importation of animals from and into Ireland. The remarkable feature about these tables is the great decline in the cattle export trade of 1901 as compared with 1900. The total decrease was as much as 103,048. The decrease amounted in the month of September alone to 22,603. The next greatest monthly decrease was in July ,when the number was 20,046. In the month of June the decline registered was 19,263.

This great falling off in the export trade of cattle to Great Britain in 1901 was due to the shortage of grass and roots in Great Britain, and the consequent disinclination of the farmers of that country to purchase stock when fodder and feeding stuffs were at a high price. It appears that in the cross-Channel trade in cattle between Ireland and Great Britain 883 animals were killed or injured in 1901, as against 904 so killed or injured in 1900.

Taking the totals of the cattle exports we find that the figures for 1901 were:—Cattle, 642,638; sheep, 843,325; and swine, 596,129, or a total of 2,082,092. The figures for the preceding year were:—Cattle, 745,519; sheep, 862,263; and swine, 715,202, or a total of 2,322,984.

From a table giving the expenditure during the year ending December 31st, 1901, in connection with swine fever and rabies we learn that the gross expenditure in Ireland was £17,831 5s. 6d. As, however, a sum of £2,929 8s. 2d. was realised by the sale of carcases the net expenditure was £14,901 17s. 4d.

PRACTICE WITH SCIENCE.

West of Scotland Agricultural College Farm.

The opening demonstration at the West of Scotland Agricultural Farm took place at Holmes, Kilmarnock, on the 7th inst. There was a large turnout of the directorate and farmers in the district, about seventy being present. Dr. Gillespie, chairman of the governors, referred to the educative value of the college farm, and considered that by its experimental work the West of Scotland Agricultural College had conferred innumerable benefits on the farmers in the South-West of Scotland. This year the experiments would be on a more reliable scale than in the previous year, and should be even more educative than in 1901. In carrying out these experiments Dr. Gillespie considered that the college did not receive money from the public funds as it was entitled to do. He made a comparison with the grants given to Ireland for this purpose, and considered that in this, as in many other things, the Irishmen were too liberally dealt with. He also referred to the fact that an application had been made by the governors to the Board of Agriculture for a grant, but they had refused to subsidise the college. Nevertheless he hoped that in the near future a satisfactory grant would be received.

In referring to the new movement of the governors—the establishment of a thoroughly-equipped dairy school—Dr. Gillespie paid an excellent tribute to the landlords and other who had maintained the dairy school in the past. It would take £4,500 to equip the proposed building, and he hoped that the landowners and others who had so liberally contributed in the past would again take the deepest interest in the matter. He (Dr. Gillespie) had a most interesting interview with Lord Balfour of Burleigh and Sir Henry Craik the other day, and they expressed their deepest appreciation of the proposed scheme, and he considered that the grant received from the Education Department would largely depend on the amount subscribed by the landowners, public societies, and others.

Principal Wright then gave some interesting notes of the experiments which are being conducted during the present year. Thereafter the company adjourned to the experiment field, which extends to 22 acres, and the visitors were highly delighted with what they saw and the lucid explanations given by Principal Wright and Professor M'Alpine.

Judging Shorthorns.

SIR,—Many writers in the MARK LANE EXPRESS and other leading agricultural journals have for years pointed out with justice the advantage the Shorthorn possesses over other breeds, in that the same animal may with equal facility be profitably turned either to the production of milk or of beef; and many breeders—myself among them—have striven to breed animals of pleasing character, possessing both good milking (not fatty) udders and good backs. Animals of this combined character are not produced in a year, but only after long and careful selection. A few of such animals are to be seen at some of the shows this year, but they do not seem to find favour in the sight of the judges; why, it is hard to say, for there are three or four really good specimens among them.

At the two shows I have attended, the prize for the pedigree dairy Shorthorn was awarded to animals of the "lean," or Jersey, type, and the prizes for the best Shorthorn cow or heifer were given to animals of a distinctly beef type, and animals almost equal in point of udder to the former and practically equal in symmetry and flesh to the latter, received but scant notice. Does all this indicate that we are to have two distinct types of Shorthorns or two separate herd books? I hope not, for, in addition to the confusion that will arise, the breed will lose that premier position the combined qualities for milk and beef production have gained for it, and the purely beef-producing Shorthorn will have to compete with the Devon, the Sussex, and the Hereford, and will probably be worsted in the bout, while the lean-fleshed milker will hardly beat the Jersey, Guernsey, etc. It is to be hoped that at the Royal, at any rate, this policy of encouraging two distinct types of Shorthorns will be checked, and that the judges will give to animals possessing both a good udder and a good back, and thereby do something towards preserving the characteristics that have made the pedigree Shorthorn so famous.

A BREEDER.

Education, Reformation, Taxation.

Sir,—The Cumberland and Westmorland Chamber of Agriculture met in time to press the plea, through local M.P.'s, for more money from the Treasury on behalf of more and better education. The argument in favour of Imperial taxation in major part—was, as I put it, twofold—

1. America and Germany have three times the population of Great Britain, spend more, per capita, on education, and turn out, in consequence better products, living or dead. As further consequence, these counties are running off with our trade on sea and land.

2. Get more money from taxation, and more control must, in time, be given to the taxpayers. This involves "reformation." All our Government offices need overhauling.

The meeting was held in Carlisle on Saturday, and presided over by Colonel Irwin, vice-president.—Yours truly,

H. W. KENNEDY,
Vicar of Plumpton.

Cumberland, June 27th, 1902.

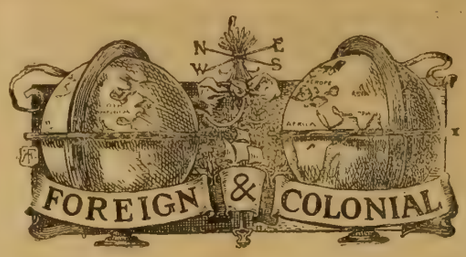
LITERARY NOTICES.

The Countess de Maurovich, who is perhaps more widely known as Nellie Reid, has published a book entitled "Instruction in Riding and Training Horses." Although, as was to be expected, this popular equestrienne has something to say about trick-riding, the book contains many practical hints for ladies who would shine on horseback. Several photographs adorn the book, which is issued by Messrs. C. W. Bradley and Co., at two shillings and sixpence.

In "War Horses, Present and Future," Mr Sydney Galvayne deals with the vexed question of Army remounts. It will be remembered that Mr. Galvayne was employed by the Remount Department in South Africa, and therefore has a knowledge of facts. The book contains many interesting incidents, some of them being somewhat

of a startling nature, which should interest everyone connected with horses. It also appeals most strongly to farmers, breeders, dealers, and importers of horses, who may gather from it information of a most valuable nature. The book is published by Messrs. R. A. Everett and Co.

The June number of the Journal of the Board of Agriculture opens with an illustrated article by Mr. Primrose McConnell, B.Sc., F.G.S., on haymaking, which is followed by a most useful article on "The Purchase of Feeding Stuffs." A capital coloured plate is given to illustrate the article on "Black Dry Rot in Swedes," which is contributed by Messrs. T. H. Middleton, M.Sc., and M. C. Potter, M.A. Other articles which go to make up a very interesting, useful article are "Farmers' Co-operative Societies," "Agricultural Credit Banks" (by Mr. C. H. Devine), "Feeding Trials with Dairy Cows," "Domestic Animals in the United States." "Cattle Insurance in Bavaria," "The Poultry Exhibition at Madrid," and the usual agricultural and miscellaneous notes and official tables and returns.



The 1902 edition of the Royal Lancashire Society's Annual Journal contains but four articles of general interest, and they are: "Horse Breeding and the Treatment of the Mare and Foal," by T. F. Hutchinson, M.R.C.V.S.; "Water in Butter," by Miss M. Macqueen, Lancashire County Council Farm; "The Digestibility and Manurial Value of Purchased Feeding Stuffs," by Alfred Smethan, F.I.C., F.C.S.; and "Agricultural Experiment Stations; Their Function, Object, and Future Development in Great Britain," by John Stewart Remington, Consulting Botanist to the Society. The remainder of the Journal—which consists of over two hundred octavo pages—is taken up with details of the society, description of, and the prize awards at, last year's show, the long list for this year's show at Preston in September, and proceedings at meetings, etc. Numerous illustrations of prize winners at the St. Helens Show last year are given.

Messrs. Rud. Sack, of Leipzig-Plagwitz, have favoured us with a copy of an export edition of their catalogue of agricultural implements, which is fully illustrated, the descriptions and text being in English. Perhaps one of the most notable implements enumerated in this catalogue is the Universal Steel Plough, which is capable of being converted into a number of implements for different uses, in all, twenty-six changes can be effected. The sole English agents for Rud. Sack's are Messrs. H. and F. Bönten, 8, Elder Street, Norton Folgate, Bishopsgate Street Without, London, E.C., from whom catalogues and all information can be obtained.

The Great Eastern Railway Company have issued a pretty booklet, entitled "Holidays in Denmark and Scandinavia." It is fully illustrated, and contains many pictures and descriptions of the scenes where our Queen passed her childhood.

There has come to hand a copy of the eighth annual report on the field and other trials carried out by the Agricultural Department of Reading College during 1901 in co-operation with the County Councils of Berkshire, Buckinghamshire, Dorset, Hampshire, and Oxfordshire. Professor Douglas A. Gilchrist, B.Sc., F.R.S.E., Director of the Department, compiled the report, in which it is stated that, during the past year the scope of the trials has been considerably extended. The effects of manures on hay and pasture in different districts and on different classes of soils have been fully dealt with in this and previous reports, as well as the effects of manures throughout a rotation of crops. Trials have been made of seeds mixtures for from one to three years' ley, and some striking results have been given by the inclusion of lucerne and other plants in a mixture for a three years' ley. The trials on different varieties of barley for malting purposes on various classes of soil have already given interesting results, and the continuation of this work should lead to results of great practical value to growers of malting barley.

The report also deals with preliminary trials on the growth and composition of different varieties of mangels and sugar mangels, different feeding rations for milch cows, as well as the results of trials in the British Dairy Institute of the effects of variations in the ripening and churning of cream on the butter produced. The landowners and farmers at the different centres have readily given facilities for carrying on the experimental work by placing land at the disposal of the College, and by giving every assistance in the cultivation of the plots. Appended to the report are sections giving concise information on the more important manures and suggestions as to the manuring of various crops.

Colonial and Foreign Statistics concerning Agriculture.

The colonial and foreign statistics issued this year by the Board of Agriculture have been again extended in their scope by the addition of details for the Colony of Natal, for the several States of what is now the Australian Commonwealth, and for the Provinces of the Canadian Dominion, which supply official returns. The recently-established annual statistics of Belgium have allowed the supply of fuller particulars respecting the distribution of the crops in a country in which the position of the agricultural industry more closely resembles that of England than any other in Europe in relation to the density of population. At the eastern extremity of the Continent, the details now furnished for Northern Caucasia bring also a new section of Russian territory under review, while the recently-compiled results of the census of live stock taken in 1900, for the Russian Empire as a whole, have supplemented in an important particular the official information we possess as to the agricultural conditions of the largest, but perhaps least densely people, of Continental States, says Major Craigie, C.B., in his summary in the June number of the Journal of the Board.

Later returns of the numbers of live stock also this year become available, as the results of special enumerations where annual records are not forthcoming on this head from countries such as Austria, Germany, Belgium, Switzerland, Servia, and Roumania. In all the instances in which a more recent survey can thus be made of the animal wealth of our Continental neighbours, increases, more or less material, in the number of their cattle are accounted for.

Live Stock in Foreign Countries.

Much the largest addition to the recorded herds of Europe appears in the Russian Empire. Omitting Poland, where a slight decrease appears, the fifty European Governments of Russia proper returned in 1900 close upon 33,000,000 head of cattle, as against 24,600,000 at the last enumeration in 1888. Germany, where 19,000,000 cattle are now accounted for, possesses the next largest of European herds, and continues to exhibit a continued development in her stock of cattle, which are now more numerous than in 1883, by 20 per cent. Very noticeable also is the increase in the number of pigs shown in nearly all the European States in recent years, and this is more especially visible in Germany, where not far short of 17,000,000 head are now returned.

On the other hand, the continued decline in the numbers of sheep, to which attention has been frequently drawn in earlier reports, is once again emphasised by the latest Continental returns. Except in Russia proper, where, owing to the unfortunate circumstance that goats are now included with the ordinary flocks—a practice not adopted in the earlier figures—there is a slight uncertainty as to the comparability of the latest totals, the returns for 1900 exhibit further losses. The last recorded reduction in the flocks alike of France, of Germany, and of Roumania respectively, will be found to exceed 1,000,000 head in each instance, and they amount altogether to a considerable figure elsewhere. In extra-European countries, although a later estimate from Uruguay than has been previously available shows some increase in the flocks of that part of South America, the very serious losses reported in recent years in the sheep of our Australian Colonies are continued in the latest figures, the aggregate decline apparently exceeding 28,000,000 head in the last decade. The flocks of New Zealand have not participated in the Australian reduction, although their growth since 1895 has been relatively inconsiderable to the extension of earlier years.

American Statistics.

Although the issue of the present statistics has been somewhat delayed, in the hope that the important results of the Agricultural portion of the twelfth census of the United States of America might be incorporated, with full official confirmation and with such corrections of the earlier records as the new investigations might involve, it has not been found practicable thus to embody the new data in the tables. It has been, therefore, necessary to retain for the present the earlier statistics, as supplied in official form by the Government of the United States, although the totals of the census figures semi-officially communicated in the case of live stock are given among the international comparisons supplied for the most recent dates in the four closing tables of this volume.

In successive years I have felt it my duty in submitting these international comparisons to recommend the exercise of some degree of caution in accepting data of this nature as strictly parallel in every instance as between one country and another, owing to the diversity of the methods adopted by the various States of the world, the different degrees of accuracy secured in practice in the collection of their agricultural statistics, and the varying length of the periods permitted to elapse between one enumeration and another. This subject has been once more under consideration by the International Statistical Institute, and, as the result of the latest deliberations, in which I have been permitted to take part at the Congress held at Buda-Pest in October last, a detailed explanation of the systems in use by various countries is now being formulated.

As a rule, however, in such tables as are furnished in this volume, whatever degree of uncertainty may attend the international comparability of the absolute figures, it has been generally assumed to be safe to regard as legitimate such comparisons as are suggested between the acreage or live stock of different periods within the limits of a single country, wherein approximate continuity of statistical method may be assumed. It is therefore necessary on this occasion to extend the scope of the caution above referred to and to invite attention to the explanation in the report of the Chief Statistician for Agriculture to the Director of the latest American Census (Bulletin No. 156, April 14, 1902), that the total of the animals now shown as existing in the United States on June 1, 1900, includes such young animals as may have been born in the spring of the census year. This course would not appear to have been followed on earlier occasions. The scope of the data collected in 1900 would also appear to have been enlarged. The use of an individual farm schedule to be filled up by the "operators" of farms, plantations, and ranges in all parts of the country, was supplemented by a second schedule for the recording by special agents of the statistics of the larger ranches of the Western and South-Western States, and by a further enumeration, not previously attempted, of the number of domestic animals not upon farms and ranges, especially in cities, towns, and villages. The aggregate results of the census of 1900, thus obtained, may be summarised as under:—

Live Stock enumerated June 1, 1900.	On Farms or Ranges.	Not on Farms or Ranges.	Total.
Dairy cows	17,140,0 0	973,000	18,113,000
Other cows	11,592,000	76,000	11,668,0 0
Calves under 1 year old	15,333,000	262,000	15,595,000
Other cattle	23,757,000	306,000	24,063,000
Total cattle	67,822,000	1,617,000	69,439,000
Sheep (including lambs)	61,606,000	231,000	61,837,000
Swine	62,876,000	1,818,000	64,694,000
Horses	18,280,000	2,937,000	21,217,000

Although no exact comparison of these results with any previously issued figures is practicable, it may be added that, notwithstanding the large apparent excess which these totals exhibit over the official estimates of earlier years, the Census Statistician, in the bulletin above quoted gives it as his opinion that, taking into account the deficiencies of former enumerations, the cattle and sheep of the United States were, in fact, somewhat less numerous in 1900 than in 1890. The decrease, he estimates, was "probably not more than seven per cent." in the case of cattle, and about two per cent in the case of "wool-bearing sheep" on farms and ranges. On the other hand, the totals of swine on farms and ranges are, he states, greater by 10 per cent. in the decade, while the horses, exclusive of colts under one year, have increased 11 per cent.

The precise results of the final census enumeration of crop areas in the United States have not yet been received, and although the forecasts which are current in the Press suggest here, also, very large modifications of the older official figures, which, if ultimately confirmed, would add several million acres to the areas both of wheat and of maize, appearing in the annual figures of the Washington Department, it is necessary to reserve on this occasion any comments on the effect which the American statistics in this respect may have on general estimates of production.

COMING SHOWS.

Northumberland,

The following gentlemen have agreed to act as judges at the Northumberland Agricultural Society's Show, to be held at Newcastle-on-Tyne on Wednesday, July 23rd and two following days:—

CATTLE.—Shorthorn: Mr. John Vickers, Kirby Lonsdale, and Mr. J. C. Coppin, Musgrave Hall, Penrith. Aberdeen-Angus: Mr. W. Whyte, Hatton of Eassie, Glamis. Galloway: Mr. A. Montgomery, Nether Hall, Castle Douglas.

SHEEP.—Leicester: Mr. John H. Laurie, Hardens, Duns, and Mr. M. Ridley, Peel Well, Haydon Bridge. Cheviot: Mr. H. Thompson, Cleughbrae, Otterburn, and Mr. R. Thornton, West Kielder. Blackfaced: Mr. J. S. Paterson, Potholm, Langholm, and Mr. J. J. Macmillan, Glencrosh, Thornhill. Half-bred: Mr. W. Robinson, Snipe House, Alnwick, and Mr. R. D. Little, North Charlton, Chathill. Oxford: Mr. W. Elliot, Hollybush, Galashiels.

HORSES.—Agricultural (males): Mr. W. Clark, Nether Ice, Cathcart, and Mr. T. Ewart, Dunsmore, Rugby. Agricultural (fillies and mares): Mr. Matt. Marshall, Stranraer, and Mr. J. Noble, Amerside Law, Chillingham, Belford. Hunters: Mr. T. Calder, Swinton Hill, Coldstream, and Mr. T. H. Tomlinson, Willington, Derbyshire. Hackneys and ponies: Mr. H. Moore, Barnbutts, Cranswick, Hull, and Mr. George Dove, Whitehouse, St. Boswells.

"Mark Lane Express" Diary.

July.

1. Bishop Auckland Agricultural Society's Show.
2. Barnstaple Agricultural Society's Show.
2. Mid-Kent Agricultural Society's Show, at Maidstone.
2. Scunthorpe Agricultural Society's Show.
2. Mansfield Agricultural Society's Show.
2 and 3. Leicestershire Agricultural Society's Show, at Leicestershire.
2 and 3. Doncaster Agricultural Society's Show.
2 and 3. Co. Cork Agricultural Society's Summer Horse and Sheep Show, at Cork.
2. Sale of Mr. J. Garne's Shorthorns.
2. Sale of Mr. R. Thornton's pedigree hackneys at Middleton Hall, Brentwood, Essex.
3. Brentwood and Mid-Essex Horse Show, at Brentwood.
4. Ripon and District Agricultural Society's Show.
4. Malton Agricultural Society's Show, at Malton.
4. Sale of pedigree hackneys and harness horses, at Peterboro'.
4. Sale of pedigree Sussex cattle, the property of Major Best, at Bonley, Maidstone.
5. West of Fife Agricultural Society's Show, at Dunfermline.
5. United East Lothian Agricultural Society's Show, at Haddington.
5. 7, 8, 9, 10, and 11. Royal Agricultural Society of England's Show, at Carlisle.
5. Sale of Arabian horses belonging to Mr. Wilfrid Scawen Blunt, at Crabbet Park, Three Bridges.
7. Meeting of the Shropshire Sheep Breeders' Association, at Carlisle.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended June 21, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living.	1901.	1902.		1901.	1902.

Farmer's Tragic Death.—Thomas Shelley, 28, a farmer from Shifnal, residing near Cheswardine, Shropshire, early on Thursday morning requested his wife to fetch up the cows, and when she returned she was horrified to find her husband lying dead on the bedroom floor. Shelley had evidently loaded his gun, fastened a cord round the trigger, connected it with his foot, and blown out his brains. Deceased had recently served with the Shropshire Yeomanry in South Africa.

IN PARLIAMENT.

HOUSE OF COMMONS.

The Corn Tax Again.

More discussion on the Corn Tax took place on Wednesday, on the motion for the third reading of the Finance Bill.

Mr. Lough moved, as an amendment, that the third reading should be postponed for six months. He complained that the Bill broadened the basis of taxation, contrary to the policy by which the country has grown prosperous. The corn tax would be a profound interference with the development of trade in this country. Too much had been said about the big and little loaf. They ought to avoid dragging in questions of high principle, and go in for expediency. (Ministerial laughter.) Having referred to what he characterised as the unfair treatment of Ireland under this Budget, he concluded by moving the rejection of the Bill.

Mr. Fitzallan Hope seconded the motion, and argued in favour of protection. He called attention to the growing disparity between our exports and imports. The balance of imports over exports had long been considerable, and was growing every year. Moreover, shipping freight had fallen very greatly during the last few years. This disparity was due to the fact that we were, so to speak, exporting our capital. He welcomed the grant in the cause of education, but all this meant an additional charge upon the Imperial Exchequer. Everyone admitted that expenditure could not be increased. For purposes of revenue, first put your revenue on the foreign producer and next on luxuries, but not until last on industry. Then per cent. on the foreign producer would not only give them their revenue, but it would also give them a weapon of offence and defence, and he did not think the people would suffer thereby. Nor did he think the people would stand in South Africa, after all we had suffered there, that those who had opposed us in every way should be permitted to enjoy equally with us the advantages of our sacrifices. He believed that the doctrine of Free Trade was becoming a sentiment, and he believed that the Chancellor of the Exchequer would soon come to realise that this old and dead policy must go the way of all these dead illusions.

Mr. Bryce welcomed the reduction of duty on maize, and thanked the Chancellor of the Exchequer for the fair consideration he had given to the questions raised. Yet they contended that the luxuries of the rich were too lightly taxed, whilst necessaries were too heavily burdened. Taxes on beer, spirits, and tobacco, for instance, would bear more than the necessaries of life. He warmly deprecated the tax upon bread, which hit the poorest, and it was the least calculated to bring home the responsibilities of war upon those who paid it, because it bore on a class who had little or no influence as voters. The tax marked a new departure, and was a reversion of the policy of 1869. The tax, moreover, although imposed for revenue purposes, yet operated as a protective one, and it would be used as an argument in favour of similar enactments upon other articles of food. As to the colonies, they could not give protection to one colony, but must give Protection all round. He felt bound to repeat his emphatic protest against the measure.

Mr. H. Craig opposed the grain tax.

Sir H. Vincent pointed out that this was in no sense a Protectionist measure. Our system was not free trade at all, but free imports without reciprocity. There was no serious agitation in the country against the reimposition of the registration duty on corn.

Mr. Robson said that in framing this taxation the right hon. gentleman had not put one penny on property, and not only had he not done that, but he had put the bread tax on labour in order to relieve property. (Ministerial cries of "No.") The right hon. gentleman had left untouched scarcely a single article of food of the labouring poor. (Opposition cheers.)

Sir T. Wrightson maintained that the foreign exporter, rather than lose his market, would pay the shilling duty on corn. He believed that the raising of revenue by a moderate tax of this kind was absolutely sound.

Sir E. Lees believed unless some such tax upon the necessaries of life as this was imposed upon the great mass of the electors there was nothing to prevent them from thinking that they might have all the excitement and glory of war without contributing in the slightest degree towards its cost.

Mr. Cremer supported the rejection of the Bill. He objected to the tax proposed on bread, which he contended would seriously affect the poorest of the people. Instead of reimposing the registration duty on corn, the Chancellor of the Exchequer could have obtained the money by doubling the duty on public-house licences and increasing the duty on spirits.

The Chancellor of the Exchequer said he approached this question as a Free Trader, and he still believed in Free Trade—(Ministerial and Opposition cheers)—though he had been denounced for Protectionist principles. But he had never believed that the United States or countries like Canada or Australasia, with their almost limitless extent and resources and great variety of climate, might not prosper exceedingly under a policy of Protection. (Hear, hear.) As a matter of fact, they had so prospered. But when he came to consider the circumstances of this country, he confessed that to his mind the adoption of Protection in the United Kingdom would be the beginning of grievous social and fiscal dangers. (Opposition and Ministerial cheers.) He was astonished to hear the hon. member for the Brightside Division (Mr. Hope) suggesting asone of the best means of raising revenue an interference with our foreign trade. The hon. member was grieved at the disparity between our imports and exports, and desired to initiate a policy of retaliation. The answer to that could be given in a single sentence. He referred the hon. member to the growth of our income-tax returns and to the many obvious proofs of the improved condition of every class in the country. (Hear, hear.) The policy advocated by the hon. member was not a policy which this country ought to adopt. The hon. member wanted to impose duties of considerable amount in all foreign-manufactured goods, but he did not say where the line was to be drawn between raw materials and manufactured goods. (Hear, hear.) There was a variety of opinion exhibited also on the other side of the House, but he believed that there was a general feeling that taxation under the existing circumstances ought to be continued, and that the sole objection to this Budget was the nature of one of the particular taxes—the corn duty—which the Budget imposed. (Hear, hear.) If anyone could show for a moment when this tax previously existed that it was practical Protection, or that it increased the price of corn or stimulated its production in this country or kept out foreign corn, he would have shown an argument against this Budget, but no attempt had been made to show anything of the kind. (Ministerial cheers.) It was said the Government had made a new departure, and were reversing their fiscal policy by changing their policy of Free Trade to one of Protection, but if that were so would the country have remained quiescent, would the benches opposite be empty, would the Press of the whole country display such a lack of interest in the matter? (Hear, hear.) The fact was, there had been an attempted agitation on this question, but it had failed. There was really no truth in this talk of a reaction in their policy, and as he had already told the House, it was merely necessary to increase the heads of our indirect taxation. The ordinary expenditure of the country, to say nothing of the cost of the war, had grown so enormously that it was impossible to keep taxation on the same narrow basis as before. He began the broadening policy last year. He knew that gentlemen opposite thought that no taxes should be levied on such things as corn and sugar. They talked about the effects on the poorest of the poor, but it was impossible to impose any indirect taxes without to some extent affecting the very poorest. The duty on corn had been attacked as bitterly and unfairly as the export duty on coal was assailed last year. The agitation had, however, failed. (Ministerial cheers.) As soon as the Bill became law the agitation would cease, and no long time would elapse before it was found that the corn duty, while yielding largely to the Exchequer, inflicted no hardship on the masses of the people. (Cheers.)

Sir W. Harcourt said their objection to this tax was that it was protective in character and re-opened a question which they all believed ought to have been by this time closed. (Opposition cheers.) This new departure in the fiscal policy of this country raised very embarrassing questions of preferential treatment with regard to the colonies. The right hon. gentleman had avoided that in his speech, because he could not answer it. This Budget was to be condemned on the ground that it raised questions of a fiscal and commercial character which were most dangerous and injurious in their nature. (Opposition cheers.) He wished to enter his strong protest against the right hon. gentleman's proposals at this the last stage of the Budget.

Mr. Harwood vigorously opposed the grain tax.

Mr. J. Wilson (Falkirk) said that in spite of the right hon. gentleman's promises last year he had made no alteration in the coal tax, which was levied in a most unjust way, and was felt severely in Scotland.

Mr. B. Langley was exceedingly pleased that the Chancellor of the Exchequer had in clear and unmistakable language given the Government view on the question of Protection

Mr. J. Wilson (Durham) asked what the Chancellor of the Exchequer had done since he had

been in office to prove that he was a Free Trader. The essence of Free Trade was the removal of taxation from the necessaries of life, and yet the Chancellor of the Exchequer had taxed coal, sugar, and bread. He said, without fear of contradiction, that throughout the North of England there was a protest against the taxes on coal and grain. Taxation should be put upon those who were best able to bear it, and he argued that there was plenty of wealth in this country to bear taxation if that taxation were properly applied.

The House divided

The Bill was then read a third time

Registration of Motor Cars.

On Tuesday Mr. Scott-Montagu brought in a Bill to provide for the registration of motor vehicles, and to amend the Locomotives on Highways Act, 1896.

On Wednesday Sir Howard Vincent asked the President of the Local Government Board if his attention had been called to instances in which motorists, having brought about carriage accidents, had driven away at full speed, without affording an opportunity for their indentification; and if his Majesty's Government would introduce legislation without delay to compel all motors to bear a conspicuous number, lettered by counties, on their vehicles, as in France, the United States, and other countries.

Mr. Long: My attention has been called to some instances of the kind referred to by my hon. and gallant friend. The question of securing the identification of motor cars is under my consideration, but I cannot undertake to propose legislation on the subject during the present session.

Organised Co-operation in Agriculture.*

Co-operation amongst farmers and agriculturists generally is steadily, though slowly, gaining ground. Many other countries, notably France, Norway, and Sweden and Denmark, are far and away ahead of us, and are profiting accordingly. The agricultural co-operative movement that was started in Ireland in 1899 has spread and succeeded in a wonderful manner, and has been the means of putting thousands of pounds into the pockets of Irish farmers. In 1895 five societies clubbed together in a certain district in Ireland, where a good deal of artificial manure was used. The members of these five societies purchased £14,000 worth. A calculation was made at the time that the amount purchased in the usual manner hitherto in vogue would have cost over £19,000. But the saving of £5,000 was small, compared with the fact that they knew for the first time in their lives what they were getting for their money. This was owing to the provisions for analysis being practically a dead letter, as far as the individual farmer was concerned. The result of the co-operative movement in Ireland has had, according to Mr. Plunkett, the effect of reducing the price of manures throughout the country by some 25 per cent., a total saving to the Irish farmer of at least £100,000. The progress of agricultural co-operation in England has been hampered by much misunderstanding and ignorance. In the first place, many persons, perhaps the large majority, associate co-operation with extensive buildings, large stocks of goods, and a staff of employees. This is a great mistake. It is true that co-operative stores on these lines have been most successful, and are of very great benefit in large centres of population, but it is not co-operative undertakings of that character that are advocated in the interests of farmers in country districts. No outlay on buildings is necessary, no stocks, and no staff of paid employees are required for simple forms of co-operative purchasing. All that is necessary is that not less than seven persons should agree to form themselves into a co-operative society under proper rules, and register the society under the Industrial and Provident Societies Act. One of

the first points to be clearly grasped

is the difference between co-operative undertakings under the Industrial and Provident Societies' Act and those formed as joint stock companies. In the former case no articles of association and other more or less heavy initial expenses are needed, and none of the profits are required for the payment of interest to shareholders, but the whole of whatever profits there may be after the payment of bare working expenses go to members, in proportion to their dealings. Co-operative undertakings may be of many and various kinds, ranging from a small circle of seven or eight members combining to buy feeding-stuffs, manures, or some machine, say a reaper and binder for the use of members, up to the large co-operative societies such as are to be found in Ireland and abroad, or the co-operative stores that are now to be found flourishing in most large towns.

What co-operative societies may do.

Broadly speaking, agricultural co-operative societies may be divided into the following classes:—

1. Co-operative societies such as creameries or cheeseries, where farming products are collected and worked up into marketable form and sold.
2. Co-operative societies for the purpose of purchasing goods for its members.
3. Egg and poultry societies, also those for improving the breed of cattle and horses.
4. Co-operative credit banks.

Though there might be some places in Lancashire where classes 1 or 3 might answer—and I feel that in time, when the methods and advantages of co-operative credit banks become better understood by the public, they also will answer and be of the greatest benefit in many places—there is no doubt that it is the second named class that is calculated to take root and be of material benefit to farmers in Lancashire at the present time. I shall therefore confine my remarks to this class. The work of

purchasing and distributing farming requisites

is admirably adapted for co-operative societies, formed on purely co-operative principles, under the Industrial and Provident Societies Act. Of course, the larger and more regular are the purchases such a society makes for its members, the more favourable will be the terms it will get; but as long as its purchases are large enough to be able to procure manure or other articles, in reasonable quantities at a time, it will be able to secure for its members the benefit of lower prices than they would have to pay if each member bought his lot separately. The cost of an occasional analysis is an inappreciable addition to the total cost when articles are bought in large quantities. Members of the Co-operative Society can have the enormous benefit of having their manures, etc., analysed from time to time, and so making certain that they are getting value for their money, without any expense worth mentioning. A farmer who buys £5 worth of manure may hesitate to add the 5s. or 10s. to the price for an analysis, but if his £5 worth was only part of a £50 order, a 5s. analysis would only add 6d. to his £5 share of the order. Making sure, however, of getting full value for his money should be considered of greater importance than being able to get the article at a slightly lower price. Further, by combining orders and buying in quantities, considerable saving can be made in railway carriage. The waste in paying high railway rates for small lots is a regular waste all round, and does no good to anybody. The railway companies themselves would far sooner convey goods at lower rates by the truck-loads than at higher rates in limited quantities.

co-operation v. individual effort.

As it might be thought by some that there is no need to form a co-operative society to secure the foregoing advantages, and that it would suffice for two or three or more persons to agree together to combine orders when purchasing. I had better say a word or two to show that it is impossible to secure the full advantages to be derived from combining for purchasing purposes except by means of a properly organised co-operative society. A co-operative society, when properly constituted, becomes a body that can sue and be sued, and the advantages of this is so well known to the trade that a co-operative society can almost always get lower quotations than can individuals. Moreover, it is possible for a co-operative society to purchase direct from the manufacturers, should they desire, whereas many manufacturers, by the rules of their trade, are unable to sell direct to individuals on the lowest terms possible. I should mention, also, that the Joint Stock Banks recognise co-operative societies registered under the Industrial and Provident Societies Acts, and are prepared to give the same terms as to a joint stock company. Further, such societies offer considerable advantages to manufacturing firms by saving them the trouble of collecting small accounts, and thereby offer inducements to them to quote the lowest possible terms.

I will now try to put shortly and clearly what steps have to be taken when forming a co-operative society on the simplest possible lines for purchasing purposes.

1. No less than seven members must sign properly drawn up rules.

Model rules can be obtained from the Agricultural Organisation Society, through our secretary, also advice and assistance in adapting them to suit the special requirements of any locality.

2. The rules then are sent to the Agricultural Organisation Society in London, who will examine and see that everything is in order. If this is so, the secretary of this Society will forward the rules and applictaion form to the Registrar of Friendly Societies. After he has examined them and seen that everything is in accordance with the Act of Parliament, he will issue the certificate of registration, and the Co-operative Society from that moment commences its existence and becomes a corporate body capable of trading.

3. The original seven or more names that signed the rules continue in office as the committee until the first general meeting of members takes place.

4. It is most advisable to secure some one of position and business knowledge as chairman.

5. Societies begun in this way (and this is the style that has been so successful in Ireland, in France, and elsewhere) do not entail much secretarial work. At first, probably some suitable person will be found to be hon. secretary, and if the secretarial work develops, it has often been found that the local schoolmaster makes a very efficient secretary. In such a case a small stipend would, of course, be necessary.

6. It must be understood that a Co-operative Society formed on these lines is a complete and independent body, and nobody can become a member unless he signs a member's application form, and is subsequently elected by the members themselves.

7. Though no capital is required in this method of co-operation for buildings, stock in hand and employees, a small amount of capital is required to enable orders to be paid for on delivery, without having to wait the few days that may elapse before the money is collected from the various members who may have shared in an order. This may sound to some as if it might lead to a risk of bad debts, but it must be remembered that no member should be allowed by the rules to give another order, unless his last order was paid for; also that the Society can sue him for what he owes, and I have it on excellent authority that there has never been known an instance of a loss from this cause where a Society has been carefully managed in accordance with its rules.

There are different ways of raising the small amount of capital necessary to start trading in this way, but probably the simplest and best is by an issue of 10s. shares to members, 2s. 6d. to be paid up, and the rest at the convenience of members. As a fully paid up share would bear interest, some will probably be paid up, and supplemented by a small loan, or a guarantee to the bank, would suffice to raise the £50 or so, which would be ample for a start. During the first few months of its existence a reserve fund should be built up, out of the trading profits, and then the need of any loan or guarantee will cease. The value of the shares, the conditions to be laid down as regards the amount of the first and subsequent instalments, and all such details are matters to be arranged to suit the particular circumstances and the wishes of the members in each case when a Co-operative Society is started.

The Agricultural Organisation Society referred to in the paper is, for the first time, as far as England is concerned, making a comprehensive and systematic attempt to apply the practice of co-operation, with its educative principles of self-help, as a remedy for the great depression which has so long existed in the agriculture of this country. The Society is only too willing so far as its too limited funds will permit, to aid in every way possible the formation of Co-operative Agricultural Societies. It has been calculated that for every £1,000 spent in propagating co-operation in agriculture in Ireland the farmers have benefited to the extent of £60,000. I have merely endeavoured in this paper to put as shortly and clearly as I can the main advantages of agricultural co-operation for purchasing purposes, and to point out how to set about an Agricultural Co-operative undertaking on the simplest and most manageable lines.

* A paper read by Mr. Fitzherbert-Brockholes before the Lancashire Farmers' Association

New Agricultural Patents.

Specially compiled for MARK LANE EXPRESS by Mr. G. D. Howard (Hughes, Son and Co.), Patent Agent, 38, Chancery Lane, London, of whom all information relating to patents, designs and trade marks may be obtained free of charge

13,071.—Edward Oberlin Adcock, of Norwich, for "An improvement in hoe, for hoeing land."

13,162.—Jemima Lucinda Hope Johnstone, of Bradford-on-Avon, for "A trowel hoe."

13,249.—John Marshall, of Glasgow, for "Improvements in machines for distributing artificial manure."

Patents Sealed.

3,818.—A. E. Heck, of West Virginia, U.S.A., for "Chaff-cutters."

4,248.—T. C. Sargeant, of Northampton, for "Seeds, sowing; manuring and fertilising."

Horncastle June Fair.—At this fair, held on Monday, there was a large show of horses, but few buyers. Trade was very slow, except for best nags and cart horses. Good horses were scarce. Nags sold at £30 to £35; good heavy animals for town dray work, £55 to £70; good riding and driving horses, £40 to £60; three-year-old cart horses, £33 to £38; trappers, £22 to £37; Welsh drove horses, £18 to £28; ponies, £10 to £26; and cobs, £12 to £21.

Economy in the Power Plant and its Connections.

The flour trade has been, and still continues to be, very dull and lifeless, and a drop of 1s. per sack since these notes last appeared has had no effect in bringing more business. The uncertainty attaching to the grain tax the partial expectation that, in the event of peace being declared, it would be taken out of the budget no doubt had a great deal to do with the state of the trade some little time ago, but when the Chancellor decided to let the tax remain there was no improvement in trade. Had the duty been removed, more difficul- grain tax—the partial expectation that, in the event of peace being declared, it would be taken out of the budget—no doubt had a great deal to do with this, and now that the Chancellor of the Exchequer has definitely decided to let it remain a fresh impulse will in all probability be given to trade. Had the duty been removed, more difficulties and greater confusion than ever would have been the result; such a course would have entailed the refunding of money, and it would have resulted in disputes between corn merchants and millers, as well as between the millers and bakers. As it is, matters have very nearly settled down on the old lines, and most members of the milling trade are fully aware that the discrimination in the duty placed on wheat, as against flour, places them in a good position in regard to their competitors abroad.

Offals have not gone off quite so well of late, while they are gradually going down in price; for all this, however, the writer does not believe that the price will be as low this year as is usually the case during the summer months. The reduction of the tax on imported stuff will help the British farmer, while it will not injure the British miller, who, in the opinion of the writer, would do well to hold bran, where there is convenient storage. Having regard to present wheat prices, especially English, and the sluggish trade in flour,

the Fall-Off in the Offal Trade

is distinctly against the miller at the present time. At any rate, there is a great deal of grumbling, although some millers still manage to make a very good thing out of milling. This will be generally found in those establishments where the commercial, manufacturing, and clerical departments are all in competent hands. To ensure a profit all the sections of the business must be carefully watched and regulated. The raw material must be bought to the best advantage, both as regards quality and price; it must be prepared for reduction by skilled hands, under a competent head miller; it must be milled with care and the flour divided to the best advantage; and last, but not least, the manufactured products must be distributed at the cheapest cost, consistent with paying results. Many millers never realise what a large amount small leakages come to in the course of a year; in some mills they are sufficient to put the balance on the wrong side of the book.

The question of power, too, is an all-important one, because loss of power means loss of money. Many millers are content to go on taking their power from an old worn-out engine, forgetting that the installation of an up-to-date prime motor would pay for itself in a very short time. If a miller wishes to make his mill a money-making concern—and this is what every mill should be, or it ought to be shut down—he will pay particular attention to this question of power, because it is one of the most important with which he has to deal. All the modern appliances, such as feed-water heaters, water softeners, and automatic stokers, which have been devised to cheapen the cost of power, and so of production, should find a place in modern mills. The feed-water heater, especially, which raises the temperature of the water to nearly boiling point before it enters the boiler, is

Particularly Economical.

But even if the engine is all which it ought to be power can be wasted in many other ways, among others by neglecting to keep all shafting in line and all connections in good order, by failing to keep all machines in the mill well braced, and by improper attention to lubrication. All shafting will absorb a certain amount of power on account of friction in the bearings and the resistance of the air to pulleys, etc. All shafting, too, is subject to two strains, a tortional strain and a bending strain, the former on account of the rotative power transmitted through it, and the latter owing to its own weight, and the weight of the pulleys on it, taken in conjunction with the pull of the belts. It is the latter which principally causes the friction in the bearings, which friction should be avoided as much as possible by the arrangement of the belts and efficient lubrication.

The strength of shafting to resist the tortional strain varies according to the cube of its diameter. It may not be generally known—but it is a fact to be learnt from this rule—that a two-inch shaft is only one-eighth as strong as a four-inch shaft, and only about one-fifth as strong as a shaft five inches in diameter. It may here be pointed out too that when a belt is too small to transmit the power required it will run unsteadily on the pulleys, or it will slide off altogether. The pulleys too often become very warm when the belt is too small for the work it has to do.

Coming back to the engine, it may be stated that for ordinary mills the best and most efficient type is the horizontal, compound condensing engine, fitted with Corliss gear and used in connection with the power-saving appliances already mentioned. If it makes from 60 to 80 revolutions per minute it gives the main shafting

a Very Suitable Speed for Driving the First-line Shaft.

The very large mills, however, now use vertical engines of the marine type, with triple expansion. These are a great success, but for smaller establishments nothing can beat the type of engine already mentioned.

A question is often asked as to the amount of power required to make a sack of flour. This principally depends on the engine, but with such a type as has been described, from 8 to 9 h.p. should be sufficient, although many mills are using from 12, 15, or even more i.h.p. Boilers in good condition, and when in connection with the most modern engines, should make a sack of flour for about 3lb. of coal. If all the conditions are good, of course the cost of making a sack of 280lb. will depend on the price of coal. Some mills, however, are independent of steam, and take their power from a water-wheel or turbines; and, of course, there is a great saving in these cases.

The Millers' Conference.

The Millers' Conference, which concluded on Friday, the 6th inst., was very successful; business meetings were mixed up with pleasure trips, and a very pleasant an useful time was passed. There are quite a number of subjects which are under the consideration of the trade at the present time, the chief of which are:—Local associations, technical education, fire insurance reform, and improved seed wheat, and all these were under discussion at the Conference. Some time ago the Millers' Association voted £50 to spend in experiments with a view to growing stronger wheats, and a committee was appointed to go into the question. Experimental plots have been sown in several parts of the country, and it will be interesting to know the results.

MILLER FARMER.

What is Cheese? An Hygienic View

What is the matter with the cheese? Simply this, answers the "Dietetic and Hygienic Gazette," that it has come to be an almost universal belief that coagulated casein and butter fat, which are its constituents, must be "cured." This "curing" process is chiefly accomplished by time. It is not considered fit to eat until it is old enough and rank enough—from gradual processes of decomposition—to be buried. The average palate has been gradually educated to relish cheese after it has undergone butyric acid fermentation, and is, in fact, putrid. This is plain English, and it flies in the face of reigning authorities on gustatory standards. Certain brands of the stuff, as Roquefort, Limburger, and several other varieties, sell at enormous prices simply because they represent the ideal degree of rankness—putridity. This butyric fermentation has its proper bacillus, and in case of the special varieties present in Limburger and other delectable brands the characteristic odour is vile enough and strong enough to bar attempts at counterfeiting or substitution. The flavour comports with the smell, and either one would cause a respectable canine to drop his astonished tail and sneak out of the rankest soap factory or tan-yard on the face of the earth. Every normal stomach rebels at it, and every normal palate repudiates it at sight, taste, or smell.

Years ago, when all the small dairymen made little cheese for their own use, if not for the market, they began to eat it before it was a fortnight old, ate it as freely as they did bread, and never thought of it as being difficult of digestion. Nor was it. To put such compressed casein before a lover of Limburger would be to offer him an unpardonable insult. And yet, from a health standpoint, it is the only cheese that can be approved. Of the semi-putrid, rank smelling, and acrid tasting stuff now sold for cheese any person cannot partake with impunity; and those who do eat it are compelled to be very sparing in their indulgence, making it a relish or condiment rather than a food. This is because it belongs with "embalmed beef," mouldy bread, and gangrenous "game," for which some palates either profess or possess a gu to.

Preston Cheese Fair

The monthly cheese fair held at Preston on Tuesday in brilliant weather was well supplied and largely attended. Business was slow, and prices were fully 5s. per cwt. lower than last fair. Common made from 40s. to 45s., medium 47s. 6d., best 50s. to 52s. 6d., with one or two lots ranging up to 56s. per cwt.

Messrs. Sutton and Sons' Annual Excursion.—The usual annual excursion which this well-known firm of seed merchants provide for their employees was carried out on Tuesday, the 17th inst. The programme arranged for was of even more than the usual generous character. The arrangements made included a special train to convey the large party to Portsmouth, the chartering of the fine steamer the Duchess of Kent for the day, and the gift to every employee of a sum of money amply sufficient to cover all expenditure on refreshments, etc. In addition to this, the announcement was made just before leaving Reading that two days' holiday would be given on the 26th and 27th, the days on which the Coronation was to take place, while each employee would receive an extra week's salary as a Coronation gift.

Spalding June Cattle Fair.—The annual June Fair at Spalding took place on Tuesday, and was attended by buyers from all the principal centres, but business was slow. Beef realised 7s. 6d. per stone, some of the best bullocks fetching £24 10s. per head. The store beasts on offer consisted principally of young cattle, for which the sale was slow. Cows and in-calvers in demand at high prices. In the sheep market there was a small show, but trade was fairly brisk. From 7d. to 8d. per lb. was the quotation. A small number of horses. Anything useful sold readily.

AWARDED THREE PRIZE MEDALS FOR THE BEST INCUBATOR, DAIRY SHOW 1898, 1900, 1901.

W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY

The Largest Manufacturer of Incubators in the World.

Hatching and Rearing Pheasants.

Farmers who hatch these eggs as a rule use ordinary hens, as they make far better mothers than pheasant hens do. The latter do not do well confined in a coop, as they are too restless; therefore, those who hatch a lot of pheasants should always be prepared with a good class of hens for sitting. Experienced pheasant keepers usually look out and get a hen which has only four toes on each foot, as when a hen has five she often crushes the young birds when hatched, a great deal more than those which have four. Fowls with a lot of feathers on the legs should be avoided as much as possible. Half-bred Dorkings make splendid sitters and mothers for pheasants, especially those which come with four toes.

Of course, early in the season all those who hatch pheasants are wise to get any broody hens they can lay hands on, but where they are bred especially for sitting purposes we like Orpington-Game, Plymouth Rock-Game, Game-Cochin, and Game-Brahma. When any variety is crossed with a Minorca, Leghorn, or some other non-sitting variety, they will often commence laying at from eighteen to twenty-one days after the birds are hatched, and are liable to peck their young family, instead of protecting and taking care of them. It is always well to get Game blood if possible in a broody hen, as they are such splendid birds to keep to their young ones, and do not come on to lay as a rule so soon as other breeds after the period of incubation.

Some people do not like heavy hens for hatching pheasant eggs, but it is not weight so much as breed. Cochins and Brahmas in their pure state are big, heavy, clumsy birds, but when they are crassed with other breeds, especially Game, they are very careful in going on the nest. It is not always the heaviest birds which break the eggs or kill the chickens. The best hens to use for sitting on pheasants' and partridges' eggs are Silkies. They are small hens, and are very careful both with the eggs and young ones, which makes them very valuable for sitting purposes; in fact, where partridges are reared these hens should always be kept. If a good-sized Silky cock can be obtained and crossed with small Indian Game hens or Black-breasted Red Game hens, the pullets they produce are the best sitters of any breed we know of, but there are so few people who will take the trouble to breed them.

The next thing is the number of eggs which should be put under the hen. Opinions differ in this respect, but as a rule we do not put less than twenty under a fair-sized hen. Fifteen or seventeen under a small hen is sufficient, but in case of an extra-large hen, she should never have more than twenty or twenty-three. Of course, the hen might cover more, but the eggs are more liable to roll on the top of each other, and are liable to get crushed. A hen should always be dusted well with insect powder when sitting, and at the same time should be allowed a dust bath, but no lime should be put in the dust. During the hatching season there should always be slack-lime put in the bottom of the nest and fine hay on the top of that before a hen is set, as vermin breed very fast while the hen is sitting. These small lice are the same colour as the skin of the pheasant, so it is only those who are experienced and know where to look for them are able to find them, as they run very fast.

When setting pheasants eggs it is always best to make the nest with soil, then a thin coat of lime and some fine hay on the top of that. The pheasants usually hatch out much better if the nests are made with damp soil. When they make their own nests it is in almost every case on the ground. The warmth from the pheasant's body draws the moisture from the ground, which softens the inner membrane of the egg. If there is not a good thickness of soil when the hen is sitting upon pheasant eggs, it is well to sprinkle a little water on the eggs the last four days, so that the water runs to the bottom of the nest, then the warmth from the hen's body draws the moisture round the eggs, making it warm by the heat which comes from her body. As a rule, pheasant's eggs are very fertile, and hatch out better than hens' eggs. These eggs take twenty-four days to hatch, but occasionally they will come out on the twenty-third day, and in a few cases go twenty-six days, but that is unusual.

It is often a mystery to people when pheasants lay from fifteen to nineteen eggs in a nest. As a rule they hatch out well, because it is always thought the eggs require turning. That is quite right, and both pheasants and partridges turn their eggs over when they go to lay an egg in the nest. This can easily be told by marking the eggs. When pheasant's eggs have to be kept any length of time, it is best to keep them on the small end. They will keep from fifteen to twenty-eight days, and hatch out well; but of course it is much better to set fresh.

Many pheasants are hatched for selling, and also to turn down for shooting purposes. This practice is becoming very common in England at the present time. Years ago pheasant-rearing used to be confined to just a few large breeders, but now in some parts of the country even cottagers rear these birds and sell them, particularly in Buckinghamshire. The young birds require much care the first few weeks of their existence. They are more healthy and do much better when the stock birds have not been fed upon maize. When first hatched they should have hard-boiled egg, chopped up fine and the shell mixed with it. They should not be allowed much water. If they drink twice a day, that is quite sufficient.

Groats, hempseed, and fine biscuit meal are the best foods which can be used for young pheasants. There are several good meals, already prepared, which these birds do well upon. If young pheasants are looked after and fed well for the first three weeks or a month they are usually out of danger, but the principal thing is to keep them out of the wet grass very early in the morning when it is covered with dew.

When the young birds are first hatched, they often get out of the coop and run away from the hen, and cannot find their way back again Keepers and those who understand pheasants usually have a frame in front of the coop. This should be about six or eight inches high, and from three to four feet long. Two feet six inches would do, but the greater length is better. Small mesh wire should be placed over the top of the frame, otherwise the young birds would get out at the top and run away. They should be kept in this way for at least a week or ten days, and the coop moved every day, so that they are on fresh ground. By this time the young pheasants are calmed down and well accustomed to the hen.

When they are brought up in a wood, with good shelter, where there are large trees and high-standing underwood, and no grass, if the weather is dry, after the young birds are ten days old, it is well to let the hen out to scratch for them. She will get a lot of maggots and insect life for her little brood, and if the coop is put ready she will usually go back to it every night.

Green mustard is a good thing for young pheasants when they are first hatched. It should be chopped up fine. The meal should be mixed with skim milk, new milk as a rule is too rich for young pheasants.

British Dairy Farming.

A meeting of the Council of the British Dairy Farmers' Association was held at 12, Hanover Square, London, W., on Wednesday, Mr. George Barham, J.P. (vice-president), in the chair when eight new members were elected.

The Finance and General Purposes Committee brought up the usual monthly report upon the Society's accounts, and on their recommendation cheques amounting to £64 15s. 2d. were passed for payment. A return was presented showing the imports of milk and cream into the United Kingdom in the four weeks ended May 31. From this it appeared that only 23cwts. of fresh milk were imported, and none in the corresponding period of last year; while 273cwts. of cream were received, against 475cwts.; of condensed milk, 74,759cwts., compared with 67,726cwts.; and of preserved milk, 237cwts., against 365cwts. The report was adopted.

The Conference Committee submitted a report upon the very successful Dairy Conference of 1902, commencing on the evening of Monday, June 2, and ended on the fololwing Friday. It was mentioned that all the proceedings passed off without a hitch, and the Committee desired to place on record their appreciation of the arrangements made and carried out by the secretary. The report was adopted, with a special vote of thanks to the chairman for his services during the conference, and after a conversation it was resolved that the gold medal of the Association be awarded to Lord Rothschild for the business-like character of his farms and the exceptionally high dairy qualities of his several breeds of cattle; and also to Dr. Watney, in recognition of his valuable work in developing the butter-making qualities of his Jersey herd.

Professor Long, as Chairman of the Show Committee reported that, in reply to a circular addressed to exhibitors of Cheddar, Cheshire, and Stilton cheese, forty-six had expressed themselves in favour of allowing each cheese to be bored once before exhibition, and twenty-two against such permission. The Committee recommended that liberty be given to cheese-makers to bore their exhibits once before the show. The Committee also presented a list of judges whom they suggested should be invited to act in the several classes. The report was adopted, and the Council revised the proposed schedule of prizes, of which proofs had been previously circulated.

The following report from the examiners (Messrs. F. Ashcroft, T. C. Candy, and F. J. Lloyd) of candidates for the Society's diplomas and certificates at the British Dairy Institute, Reading, on May 22, 23, and 24, was submitted and endorsed: "We consider that all the practical work at this examination was very well done. The butter-making, without an exception, was uniformly good, and the cheese examiner (Mr. Candy) thought the work in the cheese dairy decidedly better than anything he had previously seen at the Dairy Institute. The paper work was not so even, and several candidates had to be rejected. We make the following awards: Diploma to Miss Forman; butter and cheese-making certificates to Mr. J. H. McLaine and Miss Kate A. Baynon; butter and cheese-making certificate to Miss Emily Milne; Cheddar cheese-making certificate to Miss M. F. B. Merriman; butter-making certificates to Miss Bertha Bachelor, Miss Helen L. Young, Mrs. M. A. Bourne, and Miss A. E. Pearson."

POGSON'S
PATENT HORSE PITCH FORK
OR ELEVATOR,
For Stacking Hay or Loose Corn.

This illustration, taken from a photograph, shows five large 60-ton stacks, pulled and finished off ready for thatching.

Each stack was elevated by one of **Pogson's Patent Forks.** During the last two years over 800 have been sold, and as each fork was sent on approval, and customers could have returned them unless they were perfectly satisfied—from this fact alone it may be safely said that **Pogson's Patent Pitch Fork** is the best and cheapest labour-saving machine in the market.

IMPORTANT.

Pogsons' Patent Pitch Fork is sent on approval, so that any intending customer can give it a fair trial before purchasing.

Should, on trial, it not prove satisfactory, it can be returned, and carriage each way will be paid by vendor.

SCORES OF UNSOLICITED TESTIMONIALS.

For Illustrated Catalogues, with recent Testimonials and all particulars, apply to the Patentee—

MR. E. F. POGSON, FARMER, etc.,
REDMILE, NOTTINGHAM.

Simple in design, easy to erect and to work, at about half the cost of anything hitherto introduced doing the same amount of work.

Price Complete, with Recent Improvements, £6 17s. 0d.,
CARRIAGE PAID.

VESTA CAKES and MEALS.

In order to enable us to supply clean Cotton Seed and a Cotton Cake of good quality we have taken over a mill lately fitted up with the very best modern machinery, which enables us to sell at the lowest possible and at the same time turn out an Undecorticated Cotton Cake practically free from LINT, DIRT, and SAND.

The Cakes are branded "VESTA" PURE.

Buyers of the "VESTA" FEED CAKES can have the Cottons shipped at same time, thus saving any delay.
